New York: National Academy of Design.—The sixty-eighth annual exhibition of the National Academy (March 27 to May 18) contained about 450 works of the usual average. The three Hallgarten prizes of \$300, \$200, and \$100, respectively, which had not been awarded since 1889, were voted to C. Morgan McIlhenny for his "Gray Morning," Edward A. Bell for "The Five Dreamers," and Henry Prellwitz for "The Prodigal Son." These gentlemen received

the prizes for the three years. The Thomas B. Clarke prize of \$300 was given to Charles C. Curran's "Sirens." The Norman C. Dodge prize of \$300 for the best picture painted by a woman was awarded to Miss Cecilia Beaux's portrait of a lady in gray (Mrs. Isaiah Stetson.)

A loan exhibition was held also (June 15 to Nov. 1) in the Academy galleries, at which 400 pictures of exceptional quality were shown, together with a fine collection of tapestries, embroideries, miniatures, carvings, etc.

American Fine Arts Society.—This association, composed of the Society of American Artists, the Architectural League of New York, and the Art Students' League, opened its new home in West 57th Street, in December, 1892, with an exhibition of works by members of the first-named society, and a collection of etchings and other prints belonging to George W. Vanderbilt. To this gentleman the society is indebted for the splendid gallery in the rear of their building, built by him at a cost of \$100,000. It is modeled after the well-known gallery of Georges Petit in Paris.

A grand loan exhibition of the best works of art obtainable in this country, comprising masterpieces of most of the great schools of painting and sculpture, and other works of art, was opened in February, 1893. Among the objects of special interest were several fine Rembrandts belonging to H. O. Havemeyer and Morris K. Jesup, and excellent examples of Velasquez, Pieter de Hoogh, Franz Hals, Adrian Van Ostade, Reynolds, Gainsborough, Turner, Constable, and many later masters. Conspicuous was a model of D. C. French's colossal statue of "The Republic" which adorned the basin of the Court of Honor at the World's Fair at Chicago. The gross receipts were \$15,699.

The fifteenth annual exhibition of the Society of American Artists was held at the Fine Arts Building from April 17 to May 13. The Webb prize for the best landscape was awarded to Henry G. Dearth for "The Deerfield Valley," and the Shaw fund to Edmund C. Tarbell for his picture entitled "The Bath," which was purchased by S. T. Shaw for \$1,500.

The Blakeslee collection, consisting of 149 pictures, chiefly of the French school, sold at Chickering Hall, April 4 and 5, realized \$136,630. Troyon's "Approaching Storm" brought \$29,250; C. F. Daubigny's "Apple Orchard," \$11,100, and his "Spring," \$5,500; L. G. E. Isabey's "Return of Royal Hunting Party—Chateau de Chambord," \$6,300; Jules Dupre's "Old Oak," \$5,100; Schreyer's "The Stampede," \$4,550; and J. F. Millet's "Sheep at Pasture," \$4,500.

The collection of Robert L. Cutting, consisting of 91 oil paintings, sold at Chickering Hall in March, realized \$111,130. The highest price, \$16,000, was paid for "The Return to the Convent," by Zamacois.

The collection of oil paintings and water colors belonging to the estate of the late R. Austin Robertson was sold in April. The 156 paintings brought \$270,380. Troyon's "Le Paysage du Bac" sold for \$27,000; Delacroix's "Lion Hunt," \$13,000; and "Arab Cavalier attacked by a Lion," \$6,350 (Potter Palmer, Chicago); Diaz's "Le Parc des Bœufs," \$12,500; Millet's

"*Paysage d'Auvergne*," \$12,000; Rembrandt, "*Homme d'Armes*," \$9,000; Rousseau, "*Forest in Winter*," \$9,000.

A Columbus monument, by the Sicilian sculptor, Gaetano Russo, presented to New York by Italian citizens, was dedicated in the circle at the Eighth Avenue entrance to Central Park, in October, 1892. It consists of a tall column of gray granite, ornamented with the beaks of galleys in bronze, surmounted by a colossal statue of the discoverer in marble. Two reliefs in bronze, representing the departure of Columbus and his landing, decorate the pedestal, which sustains also a marble figure with a globe on one side, and a bronze eagle with the arms of New York and of Genoa on the other.

A life-size bronze statue of Ericsson, by J. S. Hartley, was erected at the Battery, New York, in April, 1893.

The pictures by Gustave Doré, formerly in the Doré Gallery, London, and later on exhibition at the Carnegie Music Hall, were displayed in a new Doré Gallery at 810 Seventh Avenue, New York, in June.

The Sculpture Society, for the promotion of good sculpture, was organized in New York in June, with J. Q. A. Ward as president.

The figure of Diana, by St. Gaudens, formerly on the tower of the Madison Square Garden, and later sent to Chicago to decorate the dome of the Agricultural Building at the World's Fair, has been replaced by another one of better proportion, only 13 feet high. The original one was 18 feet.

The Washington Memorial Arch is finished, excepting the four spandrels, which are to be filled with sculptured figures of Victory, Peace, Fame, and another, by William MacMonnies, the designer of the Columbus Fountain in the Court of Honor at the World's Fair, Chicago.

A bronze statue of Alexander Hamilton has been erected by the Hamilton Club in front of their clubhouse in Brooklyn.

On October 19, was dedicated at Trenton, N. J., a monument to mark the site of the battle of Trenton, fought by Washington, Dec. 26, 1776, the corner stone of which was laid in December, 1891. It consists of a fluted Doric column elevated on a square pedestal, and surmounted by a colossal statue of Washington. The base and shaft, which rises 150 feet above the street, are of Maine granite. The base contains a room for Revolutionary relics, and an elevator gives access to an observatory on the summit overlooking the entire battle field. The statue, which is bronze, and 13 feet high, represents Washington with outstretched hand ordering Alexander Hamilton to begin the attack. The monument is the design of John H. Duncan.

A bronze statue of Nathan Hale (known as "the patriot spy"), larger than life, by William MacMonnies, was unveiled on Nov. 25, Evacuation Day, in City Hall Park, facing Chambers Street, on the traditional spot of the martyr's execution, Sept. 22, 1776. The figure is ideal, there being no portrait extant of Hale. It was erected by the Sons of the Revolution.

A bronze statue of Roscoe Conkling, by J. Q. A. Ward, was erected in December at the southeast corner of Madison Square. It represents him as speaking.

FLORIDA, a Southern State, admitted to the Union, March 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; and 391,422 in 1890. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, Henry L. Mitchell, Democrat; Comptroller, William D. Bloxham; Treasurer, C. B. Collins; Attorney-General, W. B. Lamar; Superintendent of Public Instruction, W. N. Sheats; Commissioner of Agriculture, L. B. Wombwell; State Board of Health, W. B. Henderson, James Y. Porter; State Health Officers, James P. Talliaferro and Dr. W. E. Anderson; Chief Justice of the Supreme Court, George P. Raney; Associate Justices, Milton H. Mabry and R. F. Taylor.

Taxes.—The value of property, with gross amount of State taxes for the year 1892, including licenses and auction tax, was as follows: Total value of real estate, personal property, railroads, and telegraphs, \$98,868,014.64; total receipts at treasury from all sources, \$769,225.76; general school tax, 1 mill; Board of Health tax, one fourth mill; receipts from license tax, \$161,333.41.

Valuations.—The assessment rolls for 1892 show the following property assessed: Acres, 25,097,278; acres improved and cultivated, 935,152; valuation (except town and city lots) of all improvements, \$48,140,493; valuation of town and city lots and all improvements, \$22,250,778; aggregate value of telegraph lines, \$192,192.95; number of horses, asses, and mules, 46,644; neat stock and cattle, 470,880; sheep and goats, 120,414; swine and hogs, 197,900; cash value of animals, \$5,371,373; value of personal property, \$11,690,106; value of real estate, \$65,391,271; value of railways, railroads, and rolling stock, \$15,676,072.67.

Phosphates.—Among the companies organized in 1893 is the Florida Mining and Chemical Company, whose object is the mining and the manufacture of high-grade superphosphates, cotton-seed oil, etc. From Punta Gorda the tonnage has exceeded that of the preceding year. In November, 1893, the aggregate was 9,200 tons—4,000 domestic and 5,200 foreign. The tonnage from Tampa for the same month was 12,370, and from Fernandina 10,000. The demand from European buyers has been steady, and the market shows an upward tendency for 1894.

Legislative Session.—The fourth regular session of the Legislature under the Constitution of 1885 was held at Tallahassee, beginning on April 4, 1893. Few bills of general importance were passed. Among those that became laws were the following:

To provide for the redemption and cancellation of tax-sale certificates held by the State for taxes due for 1890 and previous years.

To amend sections 2421, 2423, and 2425, and to repeal section 2422 of the Revised Statutes of the State of Florida, relating to the carrying of concealed weapons.

To provide for the service of nonresident defendants and others in chancery causes, being an act to amend section 1413 of the Revised Statutes.

To limit the time within which appeals in chancery may be taken.

To amend sections 1429 and 1443 of the Revised Statutes concerning masters in chancery.

To prohibit wrongful combinations against workmen.

To prohibit manufacturers from the wrongful use of the name of the city in which such articles are manufactured.

Preventing the shipment of partridges and quails killed or entrapped in Florida.

To regulate the carrying of firearms.

Prescribing that a scroll or scrolls, printed or written, shall be as effectual as a seal.

To confer on married women in certain cases the right to dispose of real or personal property.

In aid of societies for the prevention of cruelty to animals, and to increase their efficiency.

To suppress the illegal sale of spirituous, vinous, and malt liquors.

To punish the setting up or drawing of lotteries, or aiding by writing or printing in the setting up of lotteries.

To empower the Governor, Treasurer, and Comptroller to borrow money for State purposes.

To authorize the Governor, Comptroller, and Treasurer to deposit the public moneys with banks in this State.

In relation to foreign building and loan associations.

To amend sections 891, 893, 897, 898, 899, 900, 902, 906, 907, and 910, and to repeal sections 892, 894, and 901 of the Revised Statutes relating to the inspection of fertilizers.

To authorize the appointment of a State inspector of illuminating oils and fluids.

To encourage and promote immigration in the various counties of Florida, and to provide for the assessment and collection of revenue for these purposes.

To punish the larceny, killing, wounding, or injuring of dogs.

To amend section 6 of an act entitled "An Act to amend an Act to provide for and encourage the organization of a corps of volunteer militia and enforce their discipline," approved June 11, 1891; and further to provide for and encourage the organization and discipline of said corps.

In relation to the liability of insurance companies in the State.

To enable owners of swamp, low or overflowed lands to drain and reclaim them.

To amend sections 568 and 570 of the Revised Statutes concerning annuities for disabled soldiers and sailors of Florida.

To prescribe rules and regulations for licensing teachers, to provide for uniform examinations, to secure fairness in examinations and in issuing teachers' certificates, and for other purposes.

To declare the first Monday in September of each year Labor Day and a legal holiday.

To regulate the hours of labor of trainmen on railroads in this State.

To define the duties of all common carriers in the State.

To prevent discrimination in the carrying of passengers and freight by railroad, steamboat, and other transportation companies.

For the protection of discharged employees, and to prevent black listing.

For the protection of the manatee or sea cow.

To protect the diamond-back terrapin.

For the protection and preservation of the natural or public oyster beds within the jurisdiction of Santa Rosa County.

To prevent fishing in the lakes of the State with seines or nets or any set device for a term of years.

To provide for the establishment and maintenance of an agricultural station for the State, and to grant certain lands for its endowment.

To authorize the municipality of Jacksonville to issue bonds and to provide for the payment thereof.

To authorize the town of Quincy to issue bonds to an amount not to exceed \$20,000 for water works and sewerage.

To incorporate a charitable and educational institution in the counties of Duval and Nassau and other counties in the State under the name of St. Joseph's Convent.

To create charitable, philanthropic, and educational institutions in the counties of Pasco, Gadsden, and other counties in the State under the name of Holy Name Academy.

To establish a general hospital in the city of Fernandina.

To incorporate the Florida Conference College.

To incorporate the Terra Ceia College and University Association.

To incorporate the Florida annual conference of the Methodist Episcopal Church, South.

To incorporate the Protestant Episcopal Church in the missionary jurisdiction of southern Florida.

To aid in the maintenance and support of a home for disabled and indigent ex-Confederate soldiers and sailors.

Several acts incorporating railroad companies.

To provide for a levy by the county commissioners annually of a tax to pay interest upon and raise a sinking fund to meet the principal of county bonds issued for the purpose of erecting courthouses, jails, armories, or other county buildings.

Several acts declaring certain streams navigable.

To incorporate the city of Bartow.

Joint resolutions proposing amendments to the Constitution of the State.

Joint resolution relating to duty on foreign pine-apples.

Concurrent resolution requesting the Senators and members of the House of Representatives from Florida in the Congress of the United States to procure an investigation by Congress of the conduct and judicial acts of Justice Swayne, of the United States District Court for the northern district of Florida.

A memorial to the Congress of the United States, asking for an appropriation for the better equipment and support of the agricultural colleges of the United States.

A memorial to Congress asking for an appropriation for the improvement and deepening of the channel of St. John's river between Jacksonville and Palatka.

FRANCE, a republic in western Europe, proclaimed on Sept. 4, 1870, after the overthrow of the third empire. The Constitution of June 16, 1875, as revised and amended in August and November, 1875, December, 1884, June, 1885, and July, 1889, vests the legislative authority in two Chambers, forming together the National Assembly, which elects the President of the republic by an absolute majority for a term of seven years. The executive power is vested in the President and a body of ministers, who are responsible to the Chamber of Deputies. The President can make treaties, nominate all civil and military officers, and can dissolve the Chamber of Deputies with the consent of the Senate; he can not, however, declare war without the consent of both Chambers. All his acts must be countersigned by a minister. The Senate is composed of 300 members, elected indirectly by special commissions of the departments for a term of nine years, one third retiring every three years. The Chamber of Deputies consists of 581 members, elected by direct universal suffrage in each *arrondissement*, in the proportion of 1 Deputy to every 70,000 inhabitants, for a term of four years. Laws may be framed or initiated by either Chamber, but financial measures must first be introduced in and voted by the Chamber of Deputies. Before a bill can be brought before either Chamber it must be submitted to a

special bureau or committee, which reports to the Chambers. The Deputies receive 9,000 francs, and the Senators 15,000 francs, annually. The President gets 600,000 francs salary, and an equal amount for his expenses.

The President of the republic is Marie François Sadi Carnot, born in 1837, elected on the resignation of Jules Grévy, Dec. 3, 1887. The ministry at the beginning of 1898 was composed of the following members: President of the Council and Minister of the Interior, M. Ribot; Minister of Foreign Affairs, M. Develle; Minister of Finance, M. Tirard; Minister of Public Instruction and Worship, M. Dupuy; Minister of Justice, M. Bourgeois; Minister of War, Gen. Loizillon; Minister of Marine and Colonies, M. Burdeau; Minister of Public Works, M. Viette; Minister of Agriculture, M. Viger; Minister of Commerce, M. Siegfried.

Commerce.—The value of the imports in the general commerce in 1891 was 5,938,000,000 francs (1 franc=19½ cents), and that of the exports 4,730,000,000 francs. The special imports, which embrace only those intended for home consumption, amounted to 4,768,000,000 francs; and the special exports, consisting of merchandise of French production, were valued at 3,570,000,000 francs. Of the special imports, 1,653,000,000 francs represent food products, 2,419,000,000 francs raw products, and 650,000,000 francs manufactured goods. Among the exports, food products were valued at 809,000,000 francs, raw products at 835,000,000 francs, and manufactured goods at 1,926,000,000 francs. The principal special imports and their values in 1891 were as follow: Cereals, 532,000,000 francs; wine, 401,000,000 francs; raw wool, 340,000,000 francs; timber and wood, 251,000,000 francs; raw silk, 249,000,000 francs; hides and furs, 215,000,000 francs; raw cotton, 204,000,000 francs; oil seeds, 200,000,000 francs; coal and coke, 190,000,000 francs; coffee, 149,000,000 francs; woolen textiles, 75,000,000 francs; silk textiles, 69,000,000 francs; cattle, 60,000,000 francs; foreign and colonial sugar, 55,000,000 francs; fruits, 51,000,000 francs; flax, 49,000,000 francs; cotton textiles, 45,000,000 francs. Of the total special exports the principal ones were: Woolen textiles, 327,000,000 francs; silk textiles, 246,000,000 francs; wine, 246,000,000 francs; small wares, 152,000,000 francs; leather goods, 139,000,000 francs; linen and linen cloth, 133,000,000 francs; raw silk and silk yarn, 109,000,000 francs; raw wool and woolen yarn, 109,000,000 francs; leather, 107,000,000 francs; cotton textiles, 101,000,000 francs; cheese and butter, 92,000,000 francs; metal goods, tools, 89,000,000 francs; skins and furs, 79,000,000 francs; spirits, 75,000,000 francs; chemical produce, 52,000,000 francs; refined sugar, 50,000,000 francs.

Of the total imports of the general trade, merchandise to the amount of 4,298,000,000 francs came by sea, 1,658,000,000 francs by French, and 2,640,000,000 francs by foreign ships, while 1,640,000,000 francs came by land. Of the exports, 3,206,000,000 francs went by sea, 1,740,000,000 francs by French, and 1,466,000,000 francs by foreign ships, while 1,525,000,000 francs went by land.

The following table shows the special trade with the leading countries in 1891, in francs:

COUNTRIES.	Imports.	Exports.
Great Britain.....	589,000,000	1,013,000,000
Belgium.....	487,000,000	500,000,000
United States.....	484,000,000	243,000,000
Germany.....	387,000,000	864,000,000
Spain.....	412,000,000	181,000,000
Algeria.....	187,000,000	207,000,000
Argentine Republic.....	198,000,000	62,000,000
British India.....	250,000,000	
Switzerland.....		225,000,000
Russia.....	312,000,000	
Italy.....	124,000,000	126,000,000

Navigation.—The number of vessels entered at the ports of France during 1891 was 99,854, of 21,717,185 tons, of which 81,331, of 20,188,398 tons, were with cargoes, and 18,523, of 1,578,787 tons, came in ballast. The total number cleared was 100,775, of 22,118,847 tons, of which 74,964, of 15,255,595 tons, were with cargoes, and 25,811, of 6,863,252 tons, in ballast. Of the vessels entered, 22,803, of 10,896,789 tons, were foreign, 9,353, of 4,703,818 tons, were French vessels in the foreign trade, and 67,698, of 6,116,578 tons, were French vessels in the coasting trade. Of those cleared, 23,101, of 11,001,896 tons, were foreign vessels, 9,976, of 5,000,373 tons, were French vessels engaged in the foreign trade, and 67,698, of 6,116,578 tons, were French vessels in the coasting trade.

The commercial navy on Jan. 1, 1892, numbered 18,890 sailing vessels, of 426,207 tons, with 68,823 men in their crews, and 1,157 steamers, of 521,872 tons, with crews numbering 14,860. Of the total, 280 sailing vessels, of 58,526 tons, and 250 steamers, of 165,985 tons, were engaged in the European trade, while 324 sailing vessels, of 136,574 tons, and 187 steamers, of 815,279 tons, were engaged in ocean navigation.

Mails.—In 1890 there passed through the post-office 810,991,000 letters, 32,628,000 registered letters and money orders of the declared value of 3,083,770,000 francs, 48,230,000 postal cards, and 973,092,000 samples and printed inclosures. The internal traffic was 685,144,000 letters, 42,626,000 postal cards, 864,314,000 samples and printed inclosures, and 30,721,000 registered letters and money orders, of the declared value of 2,825,766,000 francs.

The Army.—Service in the army is compulsory for every Frenchman physically fit to carry arms. His liability to serve begins with the age of twenty and ceases when he has attained the age of forty-five. The army is organized into the active army, the reserve of the active army, the territorial army, and the territorial reserve. The active army consists of all the young men, enlisted annually for a term of three years, at the end of which they form part of the reserve of the active army for a term of ten years, then are transferred to the territorial army for six years, and finally belong to the reserve of the territorial army for another term of six years. Part of those belonging to the active army may be released after one year's service, their number being fixed annually by the Minister of War and the individuals released being determined by lot. Men who are supporting a family may also be released after one year's service, while such as are unable to read and write must serve at least two years. Those unable to serve and those serving less than three years in the active army pay a

military tax of 6 francs. The men of the active army or its reserve are drawn from and distributed over the whole country, while the territorial army or its reserve is confined to fixed localities.

For the purpose of military organization France is divided into 18 regions, each region embracing 8 subdivisions. Each region is occupied by 1 army corps. The following table shows the strength and distribution of the army, including officers and men, in 1893:

DESCRIPTION OF TROOPS.	France	Algeria	Tunisi	Total	Remain.
General staff.....	3,976	870	74	4,490	3,918
Military schools.....	3,964	3,864	3,348
Unattached.....	2,360	768	101	3,229	465
Gendarmerie.....	21,574	1,067	154	22,815	11,469
Garde Républicaine..	8,050	8,050	740
Total.....	34,924	2,225	829	36,978	18,965
Infantry.....	238,520	85,908	3,760	328,188	7,330
Cavalry.....	67,564	3,280	2,082	72,926	66,194
Artillery.....	76,117	3,719	693	79,529	85,288
Engineers.....	11,181	747	825	12,753	1,392
Train.....	7,806	3,121	1,013	11,938	8,790
Administrative.....	11,807	3,528	498	15,833
Total army corps...	467,794	54,273	13,840	535,912	121,924
Grand total.....	502,118	58,503	13,669	573,290	140,879

The officers of the army corps number 20,655. Deducting vacancies, sick, and absent, the total effective for 1893 is 459,771 for the active army, and 25,604 for the gendarmerie and Garde Républicaine. The territorial army numbers 37,000 officers and 579,000 men. The total war strength of the republic is about 2,500,000 men, including only the active army and the various reserves. A general levy would put some 3,750,000 drilled men into the field.

(For information concerning the French navy, see the "Annual Cyclopaedia" for 1892, page 282.)

Finances.—The budget for 1893 estimates the total revenue at 3,348,158,622 francs. Deducting from this sum 64,289,854 francs, representing receipts *d'ordre*, and 48,855,020 francs, being the revenues from Algeria, the total ordinary revenue amounts to 3,235,013,748 francs. Of the total ordinary revenue, 118,522,206 francs are derived from the land tax, 77,565,248 francs from the building tax, 87,500,937 francs from the personal-property tax, 56,797,110 francs from the tax on doors and windows, 121,804,802 francs from trade licenses, 1,055,500 francs from the tax on notices, and 31,568,660 francs from the tax on carriages, horses, and other special taxes, making the total direct taxes 494,814,463 francs. Receipts from registration fees amount to 540,276,500 francs, stamps to 163,487,500 francs, customs to 491,536,000 francs, sugar duty to 195,983,400 francs, a 4-per-cent. tax on movables to 70,393,000 francs, and other indirect taxes to 582,250,100 francs, the total amount received from indirect taxes is therefore 2,043,876,500 francs. State monopolies are estimated to yield 615,619,050 francs; domains and forests, 45,883,300 francs; and various other revenues, 34,820,435 francs.

The rectified budget estimates for 1892 made the total ordinary revenue 3,177,741,344 francs, and the grand total 3,291,882,688 francs. The land tax for 1892 was estimated at 118,508,647 francs; building tax, 79,452,795 francs; personal-

property tax, 86,371,490 francs; tax on doors and windows, 56,153,762 francs; trade licenses, 120,775,120 francs; tax on notices, 1,054,350 francs; tax on carriages, horses, and other special taxes, 30,768,600 francs; registration fees, 537,131,925 francs; stamps, 163,670,300 francs; customs, 450,141,700 francs; sugar tax, 181,000,000 francs; tax of 4 per cent. on movables, 67,733,300 francs; other indirect taxes, 587,072,600 francs; state monopolies, 610,018,100 francs; domains and forests, 47,527,160 francs; various other revenues, 35,366,495 francs.

The expenditures for 1893 are estimated at 3,347,691,488 francs, including 64,948,129 francs for Algeria. Of the total ordinary expenditure, amounting to 3,282,743,359 francs, 1,298,146,159 francs are for the public debt, 13,235,520 francs for the President, the Senate, and the Chamber, 34,819,500 francs for the Ministry of Justice, 43,736,057 francs for the Ministry of Worship, 15,564,800 francs for the Ministry of Foreign Affairs, 65,236,824 francs for the Ministry of the Interior, 19,534,220 francs for the Ministry of Finance, 585,018,698 francs for the ordinary and 60,136,000 francs for the extraordinary expenditure of the Ministry of War, 224,395,000 francs for the Ministry of Marine, 72,624,747 francs for the Ministry of the Colonies, 183,829,965 francs for the Ministry of Public Instruction, 8,090,055 francs for the Ministry of Fine Arts, 20,843,010 francs for the Ministry of Commerce, Posts, and Telegraphs, 29,202,130 francs for the Ministry of Agriculture, 78,847,924 francs for the ordinary and 136,628,650 francs for the extraordinary expenditure of the Ministry of Public Works, 349,779,500 francs for the Régie and for expenses of collecting taxes, etc., and 43,542,600 francs for repayments.

The rectified estimates for 1892 place the total ordinary expenditure at 3,217,825,525 francs, of which 1,284,191,374 francs are for the public debt, 13,094,440 francs for the President, the Senate, and the Chamber, 37,505,816 francs for justice, 44,057,157 francs for religion, 15,078,800 francs for foreign affairs, 69,634,702 francs for the interior, 19,967,490 francs for finance, 585,118,197 francs for ordinary and 85,402,500 francs for extraordinary expenses of the Ministry of War, 212,903,414 francs for marine purposes, 55,125,467 francs for the colonies, 178,512,914 francs for public instruction, 8,140,955 francs for fine arts, 19,599,636 francs for commerce, industry, posts, and telegraphs, 36,072,650 francs for agriculture, 86,478,000 francs for ordinary and 110,647,000 francs for extraordinary expenses of the Ministry of Public Works, 183,154,944 francs for the collection of taxes, and 13,025,700 francs for repayments.

The interest on the public debt in 1893 was 1,298,146,159 francs, consisting of 456,127,962 francs of 3-per-cent. perpetual *rente*, 305,540,276 francs of 4-per-cent. *rente*, 314,201,954 francs of terminable annuities, and 222,275,967 francs of pensions and other life interests. The capitalized value of the consolidated debt is calculated at 21,251,700,000 francs, that of amortizable *rentes* at 7,185,700,000 francs, the floating debt on Jan. 1, 1887, at 998,600,000 francs, the guaranteed debt at 1,765,321,000 francs, and the debts due the Banque de France at 444,000,000 francs, making a grand total of 31,645,821,000 francs.

The Panama Scandal.—The Panama Canal Congress, which met at Paris, May 15, 1879, approved the project of Ferdinand de Lesseps for a tide-water canal across the Isthmus of Panama and the estimates of experts who reported that it could be built in twelve years at a cost of 1,200,000,000 francs, and would yield when completed an annual income of 90,000,000 francs, giving a dividend of 7 per cent. to ordinary shareholders, as the expenses would not exceed 5 per cent. of the receipts. M. de Lesseps, after a visit to the isthmus in 1880, reduced the estimates for cost of construction to 848,000,000 francs, and promised to complete it by 1887. The 500-franc shares of the *Compagnie Universelle du Canal Interocéanique de Panama* were eagerly taken by all classes of Frenchmen, especially by the peasants. The share capital was 800,000,000 francs. Couvreur and Hersent contracted to do the work for 512,000,000 francs, it was represented, though the contract was, in fact, to work by the piece, and the contractors soon withdrew with a large indemnity. New contracts were made at a higher figure. Loans were floated by the aid of bulling operations of the directors. Large sums were paid out for puffery or as hush money, 1,362,000 francs in 1882 alone to newspaper proprietors, who jealously chafed about the market value of the influence of their respective organs. The successive loans, obtained by means of purposely deceptive estimates, were loaded with more and more oppressive conditions; yet interest had to be paid regularly on the nominal sums. In 1886 the company applied to the French Chamber for permission to raise a lottery loan, representing that works amounting to 471,000,000 francs had been executed, though the true amount was 171,000,000 francs. A great number of signatures had been obtained to petitions circulated through France in favor of this loan, but the committee of the Chamber recommended the rejection of the bill; whereupon M. de Lesseps withdrew the proposed loan, and issued instead an ordinary loan for 600,000,000 francs, with which he promised to complete the canal. The promoters of the canal, anxious to save from failure the crowning achievement of Ferdinand de Lesseps, the "great Frenchman," had now to treat with lobbyists and legislators, as well as with the newspaper organs of active politicians of all parties. They still clung to the promised sea-level canal, although M. Rousseau, who was sent out by the Government in 1886 to examine the route, and even their own engineers, pronounced it financially impracticable. Charles Balfaut, then Minister of Public Works, demanded 1,000,000 francs as pay for his support of the lottery loan, and received a check for 375,000 francs. In 1887 a fresh loan was necessary, not only to carry on the work of construction and pay excessive interest on the loans already raised, but to satisfy the exorbitant demands of those who had the power to ruin the enterprise. This was only half taken up. In 1888 there was a second application for a lottery loan bill, which M. Tirard, Minister of Finance, refused to entertain. It was renewed, supported by popular petitions with 158,000 signatures, and a plan for a canal with locks was at last presented, which was made alluring by the announcement of a

contract with M. Eiffel for the employment of machinery of 450,000 horse power, and the loan was authorized by the Chambers. To float the loan Baron Reinach was given 6,000,000 francs, and circulars and prospectuses containing deliberate misstatements, stump speeches, and glowing articles in subsidized papers, all failed to secure subscriptions enough to produce 600,000,000 francs, with which Charles de Lesseps promised to complete the canal in three years, though it was known that 980,000,000 francs would be required. For each of these loans there were enormous sums charged in the books of the company to syndicates and the expenses of advertising. Although the loan of 1886 did not succeed, the syndicate that undertook to place it pocketed 11,000,000 francs. In 1888 the banker Oberndörffer, who suggested the lottery loan, received 2,000,000 francs for the idea; 2,000,000 francs were paid for publicity, 2,900,000 francs for syndicate expenses, and 1,400,000 francs were set down to warrants to bearers, which were distributed among journalists and politicians.

When bankruptcy came and the Government appointed an official liquidator, M. Brunet, who was succeeded on his death by M. Monchicourt, it was found that 1,800,000,000 francs had been spent, while only 700,000,000 francs of assets remained. The sum expended on the works was something over 500,000,000 francs. The expense of loans was 160,000,000 francs, and 440,000,000 francs had been consumed in extravagant salaries and profits of contractors. The official accountant who examined the books in 1893 discovered that the disbursements were 1,494,000,000 francs, including 249,000,000 francs for interest on coupons. The sum expended on the works was 550,000,000 francs, of which 107,000,000 francs were paid direct to workmen and 443,000,000 francs to contractors. Of four of the contractors the profits were 77,000,000 francs. M. Eiffel's share was 33,000,000 francs, but after paying bonuses and commissions to the intermediaries who helped him to obtain the contracts he had only 20,000,000 francs left, from which he refunded 8,000,000 francs on the demand of the liquidator. There had been warrants payable to bearer to the amount of 7,000,000 francs, the purposes and beneficiaries of which were concealed from the liquidator.

In 1887 M. Rouvier, the Prime Minister, accepted 50,000 francs of the Panama money to meet certain expenses incurred in fighting Boulangism, expecting to pay it back out of the secret-service fund. Baron Reinach, who was able not only to ruin the Panama enterprise but to break down the Government, then engaged in the struggle with Boulangism, by disclosing his bribery of Republican politicians, became more extortionate in his demands. Charles de Lesseps had from the first disapproved the Panama enterprise, and sought to dissuade his father from engaging in it; but the old man considered it his duty to lend the influence of his name to an undertaking that would prove a greater triumph of French engineering than the Suez Canal. The underwriting syndicates that undertook to float the Panama bonds took no risk, paying only 2½ francs per bond, while they received from 5 to 20 francs as commission for selling each bond. Reinach did not even ad-

vance the 2½ francs. Reinach received 3,390,000 francs under the head of commissions, besides 2,590,000 francs for advertisement. This was outside of the large sums that he at first received to pay for political and newspaper influence, and latterly extorted and applied to his private uses. He was believed to have been in turn the victim of Herz, whose demands upon him caused his death and the subsequent investigations. The accounts of his estate showed that he had paid over to Herz more than 11,000,000 francs. Reinach had received about 10,000,000 francs in 1884, and in 1888 he demanded 10,000,000 or 12,000,000 francs more for the alleged purpose of satisfying the extortionate demands of Herz, declaring that the Panama enterprise would be ruined if he did not obtain it. Charles de Lesseps supposed it to be a plot concocted between them, and refused to pay out any more. At this the three chiefs of the Radical party, Ministers Floquet and de Freycinet and Dr. Clémenceau, sent for him and besought him to satisfy Reinach's demands, if he could, and thus avert a financial crash that would aggravate the political crisis.

Toward the close of 1892, in the course of a business dispute between Cornelius Herz and Baron Reinach, the manipulator of the corruption fund, the former threatened to reveal the secret history of the Panama loans. Reinach either took poison or died from apoplexy, brought on by fear of prosecution. The Opposition Deputies and newspapers demanded an investigation of the affairs of the Panama company. M. Ricard, the Minister of Justice, set the police to work, and when the counterfoils of checks drawn by Reinach were discovered with the names or initials of prominent politicians upon them, he insisted, against the wishes of most of his colleagues, on bringing everything to light. There were 26 checks of the aggregate amount of 3,390,000 francs. The Procureur-Général was unwilling to prosecute, and was replaced by M. Tanon, who applied to the Chambers for leave to prosecute five Senators and five Deputies. Of the persons inculpated five had been members of former ministries, one had been Governor-General of Algeria, another Prefect of the Seine. A criminal investigation had already been opened against Charles de Lesseps, Marius Fontane, and Henri Cottu, directors of the company, and Sans Leroy, an ex-Deputy. The accused Deputies were Emmanuel Arène, Dugué de la Fauconnerie, Antonin Proust, Jules Roche, and Rouvier, who had retired from the Ministry of Finance a few weeks before. The impugned Senators were Béral, Albert Grévy, Léon Reault, Devès, and Thévenet. Dugué de la Fauconnerie was a Bonapartist, the others all Republicans.

At the beginning of the judicial investigation of the cases against the directors, in January, 1893, Charles de Lesseps made a clean breast of his transactions, acknowledging that he had submitted to the extortions of Reinach, Balhaut, and other blackmailers, winked at the fictitious syndicates under cover of which they worked, and connived at the bribery of the press and the corruption of Deputies and Senators. He absolved his fellow-directors from all responsibility, saying that they had acted only under his directions. During the trial the police made great

efforts to arrest one Arton, an intermediary between Reinach and the bribe-takers, who had shown a list containing the names of 173 legislators and public functionaries, 104 of them Deputies and Senators, who were said to have received bribes. Dr. Cornelius Herz, an American citizen, distinguished as an electrician, who had been intimate with Boulanger and other eminent Frenchmen, was believed to have been deeply involved in the business, and an application was made for his extradition from England, which was refused. Ex-Minister Rouvier, who had resigned the portfolio of Finance as soon as the scandal first came out on the death of Reinach, defended in the Chamber the act of taking 50,000 francs of Panama money when there was no appropriation available for combating the enemies who sought to destroy the republic, and he was compelled to apply to his friends for aid, as "any statesman worthy of the name" would have done.

The examining magistrate absolved from accusation ex-Ministers Jules Roche and Thévenet and Deputy Emmanuel Arène. True bills for bribery and corruption were found against Charles de Lesseps, Fontane, Blondin, and Arton, and against Senator Béral, Deputies Dugué de la Fauconnerie and Proust, and ex-Deputies Balhaut, Sans Leroy, and Gobron. Ex-Deputy Pesson, whose name was found on Reinach's list, had died, and ex-Deputy Le Guay was in prison on another charge. Barbe, the former Minister of Agriculture, who was set down on the list for 450,000 francs, was also dead.

The trial of the directors and Eiffel on the charge of fraud was concluded on Feb. 9. Ferdinand de Lesseps, who was a paralytic, unable to appear at the trial, was sentenced to five years' imprisonment and a fine of 3,000 francs; his son received the same sentence, and Fontane and Cottu were sentenced to two years' imprisonment and 3,000 francs fine. Gustave Eiffel was convicted of breach of trust, having, after receiving 120,000,000 francs for the construction of 10 locks, which were to be completed before 1890, taken no steps to fulfill his contract before the collapse of the company. He was sentenced to imprisonment for five years and a fine of 20,000 francs. The day before these severe sentences were pronounced Godfrey Cavaignac delivered a speech, which the Chamber acclaimed as the expression of its views and ordered to be placarded throughout France, in introducing a resolution "to sustain the Government in the repression of all acts of corruption and to prevent the recurrence of governmental practices which it reprehends." This resolution, though implying a stricture on the Government for having neglected to bring to light all the facts regarding the bribery of members and the secret relations of former ministers and the Panama corruptionists, was accepted by M. Ribot to avoid a defeat. In his speech Cavaignac dwelt on the spectacle of a minister accepting money for bringing in a bill, the unsuspected activity in French politics of international financial agents, the distribution of large sums for illusory advertising, marking as "damaged merchandise" the press which was looked upon as the guardian of French liberties, the phenomenon of men of social position re-

ceiving enormous sums under the pretense of a syndicate, and especially the allegation that 104 members of Parliament had been bribed, which was allowed to go unchallenged, and the doctrines that had been propounded that it was a necessary feature of French politics that "financiers should now and then offer their alms and gifts to the Government, or that leading statesmen should interfere with the distribution of the funds of financial corporations for state reasons."

The bribery trial began on March 8. Baïhaut had made a confession, as well as Lesseps and Fontane, but he asserted that the temptation had come from them. Blondin had acted as go-between. Sans Leroy, whose change of vote had carried the lottery bill after M. Cantagrel had refused a bribe of 500,000 francs, and who was found to have deposited 200,000 francs in the bank immediately afterward, and was on Reinach's list as the recipient of a check for 300,000 francs, offered to show that the deposits represented his wife's dowry. Gobron offered to show that the check for 20,000 francs in his name was payment for shares in a tanning company. Proust, who at first denied having any relations with Reinach, claimed that the 25,000 francs paid to him represented his profits in the syndicate. Dugué de la Fauconnerie explained the receipt of the same amount in the same way. Senator Béral, who made a speech in favor of the lottery bill and received 40,000 francs, asserted that he had inspected Russian mines for Baron Reinach. On the third day of the trial Madame Cottu appeared and testified that immediately after her husband's arrest, in December, the director of the detective department, M. Soinoury, had sent for her and intimated that the proceedings against Cottu would be dropped if he would only furnish documentary evidence implicating some member of the Right in the scandal. The police official did not deny that he had sought to obtain from Madame Cottu such evidence, but declared that he had acted on his own authority and had held out no promises. Minister Rouvier came into court to deny with indignation that he had connived in such proceedings, and on the same day, not wishing the suspicion of an act that would be contrary to his honor to remain, he resigned his portfolio. On March 13 independent Republicans interpellated the Government, demanding a full explanation of the incident, and M. Bourgeois declared that the Minister of the Interior, M. Loubet, had granted the police official leave to receive Madame Cottu and allow her to visit her husband, supposing that she had requested it, and intimated that the woman and her Royalist friends had planned to entrap the Government. After a stormy sitting the Chamber passed a vote of confidence, and enabled M. Bourgeois to resume the portfolio of Justice, by a vote of 297 to 228, thus defeating a coalition of the Left Center, part of the Moderate Left, the Boulangists, and the members of the Right who had rallied to the republic, whose success would have led to the transfer of power from the Radical Left to Conservative Republicans who had accepted M. Cavaignac as their leader.

The jury on March 21 found Charles de Lesseps guilty, with extenuating circumstances, and

he was sentenced to one year's imprisonment, to run concurrently with his other sentence. Blondin was found guilty, with extenuating circumstances, and was sentenced for two years. Baïhaut, in whose case no extenuating circumstances were found, was sentenced to serve for five years, with civic degradation, to pay a fine of 750,000 francs, while the three were ordered jointly to pay to the liquidator the 375,000 francs received by Baïhaut. Fontane, Gobron, Béral, Dugué de la Fauconnerie, Sans Leroy, and Proust were acquitted.

On June 15 the Court of Cassation quashed the judgment in the first trial on the ground that the acts had been committed more than three years before the institution of proceedings, reversing the ruling of the trial court that a preliminary investigation begun in 1891 suspended the three years' prescription. Fontane and Eiffel were set at liberty, but Charles de Lesseps had still to serve out the sentence for corruption.

The name of the beneficiary of a check for 500,000 francs, who was also the payee of others, had been obliterated from the counterfoils which furnished the incriminating evidence on which the bribery trial was brought when the documents fell into the hands of the police. M. Andrieux, ex-Prefect of Police, who had been instrumental in first bringing the scandal to light in the interest of the Boulangists, knew this name and many other secrets which he would not divulge.

Expulsion of Foreign Journalists.—On Jan. 15 M. Ribot ordered the arrest and expulsion from France of M. Selecky, who as correspondent of the "Hirlap," of Buda-Pesth, had repeated the rumor that Baron Mohrenheim, the Russian ambassador, had received Panama money. Richard Alt, correspondent of the "Corriere," of Naples, and a German correspondent named Weddell, received notice to quit the country. On March 28 Otto Brandes, correspondent of the Berlin "Tageblatt," left Paris in obedience to a decree of expulsion. He had reproduced a story implicating Ernest Carnot, son of the President of the republic, in the Panama bribery scandal, and when his family were on the way to the station at Asnières they were hooted by the populace.

Reconstruction of the Ribot Cabinet.—The Panama revelations made necessary the elimination from the Cabinet of the two members who had endeavored to prevent the scandal by intervening between Reinach and Herz. Rouvier had resigned at once, in December, 1892. M. de Freycinet, whose great work of military reorganization had made him an indispensable Minister of War in many successive governments, could not step out so easily. Before the reassembly of the Chambers a reformation of the Cabinet involving his retirement and that of Loubet, who was known to be opposed to the trials, was seen to be requisite to reassure the public of the earnestness of the Panama prosecutions, and on Jan. 10 Premier Ribot announced to President Carnot the collective resignation of the ministers, and was intrusted with the task of reconstruction. The new Cabinet was announced on the 12th, as follows: Premier and Minister of the Interior, A. Félix J. Ribot; Minister of Foreign Affairs, Jules Develle; Minister of Finance, Pierre Emmanuel Tirard; Minister

of Justice, Léon Bourgeois; Minister of War, Gen. J. L. Loizillon; Minister of Education, Charles Dupuy; Minister of Agriculture, Albert Viger; Minister of Commerce, Jules Siegfried; Minister of Public Works, François Viette. The Ministry of Marine and the Colonies, which M. Burdeau had refused to resume and Admiral Gervais to take, was accepted by Admiral Rieunier, being thus transmuted from a political office, as well as the War Ministry, and like it restored to professional management.

The Chamber met on the same day, and Floquet, who was also involved in the Panama affair, offered himself for re-election as president, but withdrew his name when he saw that he would be defeated. Casimir Perier was elected. The Government, which made no fresh declaration, carried the order of the day by 320 votes, including 27 from the Constitutional Right, otherwise called the Rallied or Catholic Republicans, led by Robert Mitchell and M. Piou, against 187 votes given by 91 Reactionaries, 81 Boulangists, and 65 Radicals and Socialists. M. Tirard carried a measure permitting the Bank of France, which was reduced to the necessity of paying out coin, to increase its note circulation from 3,500,000,000 to 4,000,000,000 francs. A bourse tax was proposed in the form of a stamp duty of 10 centimes per 1,000 francs, or $\frac{1}{100}$ of 1 per cent. on all transactions except purchases for cash. This tax, calculated to produce 12,000,000 francs a year, and a higher tax on alcohol, were necessary to meet the deficit caused by the repeal of duties on wine, beer, and cider. Robert Mitchell's proposal of a tax of 20 francs on liveried servants, though condemned by the budget committee, was approved by the Chamber. A law was enacted for the suppression of anarchistic publications. Another gives magistrates summary jurisdiction in cases of attacks in the press on foreign sovereigns and ambassadors. An amendment to include attacks on the President of the republic, suggested by foolish attempts of the Opposition press to implicate M. Carnot in the Panama scandal, because, as Minister of Finance, he signed Bihaut's bill for a lottery loan in 1886, was withdrawn at the request of M. Ribot. The Boulangists, who were supposed to be financially aided by the Monarchists, and who first stirred up the Panama scandal in the hope of forcing the President as well as the ministers to resign and bringing on a revolution, attacked the savings banks in pursuance of this plan, publishing warnings against confiding savings to the care of a government of thieves. The Bonapartist press joined in the assault on the credit of the savings banks, which have 3,900,000,000 francs of deposits, mostly invested in *rentes*. These tactics naturally caused a run on the banks, and drove the Government to depart once more from the party standpoint regarding the liberty of the press, and bring in a bill making incitement to the withdrawal of savings-bank deposits punishable with two years' imprisonment and a fine of 1,000 to 20,000 francs, like corners in articles of food, in order to avert a disastrous run that might occur should the conditions of a real panic be present. The bill was passed by a vote of 327 to 128. On Feb. 16 the Radical Opposition and Boulangists called the ministry to account on the

charge of allowing an alliance of the Conservative Republicans, based on the support of the clergy and financiers, to undermine its position, with the object of changing the educational, military, and financial policy of the country, and also of shielding guilty politicians implicated in the Panama scandal. The Government was sustained in a vote of confidence by 315 Deputies against 186. On the retirement of M. Le Royer from the presidency of the Senate, on account of failing health, Jules Ferry, the advocate of Conservative Republicanism, whom the Radicals, under cover of the Tonquin losses, had hunted from public life and subjected to the execration of the masses, was elected in his stead. On assuming the office, Feb. 27, he spoke of this vindication, which put an end to a long ordeal, as deciding "that ostracism should have no place in our liberal and tolerant democracy." In less than a month Ferry died, and Challemeil-Lacour was elected to the post. A conflict between the Senate and the House of Deputies over an amendment to the liquor law imposing a new tax on spirits brought about the fall of the Ribot Cabinet only a week after it had been upheld by 314 Deputies against 200 on Lucien Millevoye's motion in favor of a dissolution based on the course of the Government in the Panama business. The Chamber had attached to the budget a rider relating to the form of the liquor law, and one for the taxation of bourse transactions which the Senate had stricken out on the ground that they ought to form the substance of separate bills. The Cabinet, compelled to take one side or the other in the dispute, preferring to fall by an adverse vote in the Lower House on a budget question to being overturned sooner or later as a result of its proceedings in the Panama cases, was defeated, March 30, by 247 votes against 242. The ministry resigned, and M. Carnot sent for M. Méline, author of the protective tariff. He was unable to obtain the co-operation of M. Peytral or M. M. Poincaré, to whom he offered in turn the portfolio of Finance, and gave up the task, which Charles Dupuy then undertook, with better success.

The Dupuy Cabinet.—The Cabinet was gazetted on April 4 as follows: Premier and Minister of the Interior, Charles Dupuy; Minister of Foreign Affairs, Jules Develle; Minister of Finance, Paul Louis Peytral; Minister of Justice, Eugène Guérin; Minister of Instruction, Raymond Poincaré; Minister of War, Gen. Loizillon; Minister of Marine and the Colonies, Admiral Rieunier; Minister of Commerce, Louis Terrier; Minister of Public Works, François Viette; Minister of Agriculture, Albert Viger. The only members of the preceding Cabinet who had a reputation as statesmen—Ribot, Tirard, and Bourgeois—were replaced by untried men in this Cabinet, presided over by a man who never held a Cabinet office till he entered the Ribot Cabinet as Minister of Education.

M. Dupuy, in the ministerial declaration, said that the profound tranquillity of the country gave proof that the painful incidents of the last few months, despite certain efforts to make political capital out of them, have not injured the vigorous growth of the republic or the country's traditional reputation for probity and honor. One lesson issuing from the ordeals had sunk

into the national conscience—that is, that “ease and fortune are acquired only by work, and are preserved only by correct morals and a worthy life.”

The question of the separation of the liquor tax from the budget, which served as a pretext for the overthrow of the Ribot Cabinet, was made a Cabinet question by the new Cabinet also, and the Chamber now voted what they had before refused. The bourse tax was passed in a separate bill, as was the bill to repeal the duties on wine, beer, and cider and increase the spirit duties. Owing to short crops of fodder caused by drought, the import duties on hay and oats were suspended and those on barley and maize reduced by one half for six months from June 30. A public-health bill renders vaccination compulsory in infancy and in the tenth and twenty-fifth years, whereas before it was only compulsory in the case of children entering the public schools. A bill based on the report of the Panama committee of investigation appointed by the Chamber before judicial proceedings were instituted gave special facilities to civil suits against the directors, the contractors who pocketed 25 to 50 per cent. profits, and others chargeable with the division of the money contributed by the Panama shareholders and bondholders. In the report, M. Floquet, who wanted to know whether the enormous advertising fund was used to aid the Boulangists in the elections of 1889, and M. de Freycinet were exonerated, but Rouvier was blamed for accepting private money for public purposes. The Chamber passed a bill for the abolition of *octroi* duties on articles of food and drink brought into towns. A bill was passed to tax bicycles 10 francs a year, and another imposing an internal-revenue duty of 5 francs on pianos. The legal existence of the next Chamber was extended to May 31, 1898, in order that the general election may be held in the spring, which is a more convenient time than autumn.

A number of bills were brought forward in the Chamber with the object of checking the increase of the foreign population, which has doubled in numbers in thirty years, while the native population has remained stationary. Since 1851 the Belgians have increased from 120,000 to 465,860, the Italians from 63,307 to 296,042, the Germans from 67,000 to 100,000, the British from 20,000 to 39,687, the Spaniards from 30,000 to 80,000, the Swiss from 25,485 to 83,117, the Dutch from 13,000 to more than 40,000, the Americans from 5,000 to nearly 12,000, including 4,800 from southern countries. The birth rate among foreigners is 1.39 per cent., while it is 1.02 per cent. among French people. A large proportion of the counterfeiters, murderers, and other classes of criminals are aliens. Foreigners are also a heavy charge on the poor funds, the municipality of Paris spending 8,000,000 francs annually in relieving indigent foreigners. Of 180,000 alien residents of Paris not over 16,000 have independent means of support: there were 1,130,211 in France altogether in 1891; these, with the exception of 65,665 who live on their incomes, while exempt from military service, underbid native labor, and absorb 1,000,000,000 francs in wages annually, one sixth of which is taken out of the country

by those who return to their own land. These were the motives of the bill that was passed by both houses, which requires a foreigner coming to France for the purpose of carrying on a trade, profession, or industry to send within a week a declaration to the mayor, accompanied by proofs of his identity, on which he receives a certificate. If he removes to another place he must have this certificate indorsed within two days. By neglect or refusal to obey the law or for a false declaration a fine of 50 to 200 francs is incurred, with or without permanent exclusion; and if an expelled foreigner returns without permission he may be punished with imprisonment from one to six months, followed by expulsion. Another bill gives an alien born in France of a French mother the option of embracing either French or foreign nationality at his majority, but empowers the Government to withhold French nationality from persons deemed unworthy, subject to appeal to the Council of State. A resolution passed just before the close of the session, on July 23, provides that a bill that has passed the Chamber prior to a dissolution may be sent up to the Senate by the new Chamber if that is the wish of at least 40 Deputies.

The “Cocarde” Forgeries.—A professional swindler and forger, who went by the name of Norton, playing upon the passion for vilification displayed by the Boulangists, offered to sell to the editor of the “Cocarde” copies of a secret correspondence proving prominent French politicians to be guilty of treason, which as a clerk in the British embassy he had had an opportunity to copy. Norton was a mulatto, the son of a negro of Mauritius, and pretended to be actuated by hatred of England. Edouard Ducret, the editor, with the aid of money furnished by the Marquis de Morès, paid 10,000 francs as an installment of the 25,000 francs demanded, and after getting hold of the papers, on June 21, announced in the “Cocarde” that he had become the possessor of important documents stolen from the British embassy, patriotism impelling him to become a party to the theft. The documents had been shown to M. Dupuy and M. Develle, and for a day or two they believed them to be genuine: but they had convinced themselves of the fraud before M. Millevoe, on June 22, interpellated the Government on the article in the “Cocarde.” The Boulangist Deputy began his speech with a scornful denunciation of M. Clémenceau, whom he and M. Déroulède had scored three days before on account of his relations to Herz and heaped insults upon amid the plaudits of the Chamber. Now the Chamber jeered M. Millevoe till he was stung into reading, contrary to his promise to the ministers, French translations of the forged documents. These were pretended letters from Sir Thomas V. Lister, of the British Foreign Office, to Austin Lee, of the British embassy in Paris, written in a clumsy colloquial style, and containing a jumble of ignorant allusions to international affairs and French politics interspersed with names of French politicians spoken of as hired spies and intriguers. There was also a list of bribes purporting to have been paid out by the English Government, in which the “Journal des Débats” was set down for £2,000, M. Burdeau for £2,000, M. Rochefort for £3,000, M. Edwards for £1,500,

and M. Clémenceau for £20,000. When he had read this M. Millevoye was hooted down, and the Chamber, by 389 votes to 4, passed to the order of the day, "stigmatizing the odious and ridiculous calumnies brought forward at the tribune, and regretting to have wasted the time of the country for a whole sitting." Millevoye and Déroulède, whom M. Develle described as victims of an abominable mystification, left the Chamber in dudgeon, announcing the resignation of their seats. Norton and Ducret were tried in August under the press law for publishing false news and fabricated documents, and were sentenced, the former to three years' imprisonment and the editor for one year.

The Labor Exchange.—M. Dupuy as Minister of the Interior pursued a more repressive policy toward Labor agitators than his predecessors, thereby inviting the hostility of the Parisian populace. On May day the Government closed the Labor Exchange, the hall erected at public expense as a general employment bureau and meeting-place for trade unions in Paris. M. Baudin, one of the most prominent Labor leaders, attempted to make a violent speech on the steps, and was stopped by the police after a struggle. Leave was asked of the Chamber to prosecute him, which was granted by 250 votes to 191, and he was convicted of disorderly conduct and sentenced. The Municipal Council having voted 50,000 francs toward supporting the Labor Exchange, double the subvention of the previous year, the Government vetoed the grant, and refused to allow the trade unions to receive public money unless they complied with the act of 1884 requiring societies to register a copy of their rules and list of members. The Radicals demanded to know why religious congregations were not registered; the Catholics, why Freemason lodges were not. Some of the unions obeyed the Government decree. The majority did not, and were given a month to submit; otherwise the Exchange would be closed. The Municipal Council upheld its vote, but the prefect of the Seine would not allow money to be paid to the Labor Exchange after July 1. A vote of 10,000 francs to the cabmen on strike was also vetoed. The officers of the Labor Exchange protested against the dissolution of the trades unions by administrative authority, claiming that under the statutes of incorporation, and under the act of 1884 itself, judicial authority alone had the power. The question was afterward judicially determined, and the court fined the recalcitrant unions, and ordered the dissolution of these and of the executive committee of the Labor Exchange unless they registered, which they eventually did.

Riots in Paris.—Senator Berenger, the author of an act whereby sentence is suspended in the case of any person convicted of a first offense, carried through Parliament a bill to check licentiousness and indecent exhibitions, and after it became law watched its execution and interpellated the Government when the police were remiss. The art students in their annual "*bal de quadré-arts*," in which models masquerade in artistic pageants, took pains, out of contempt for Berenger's crusade, to have the costumes more startlingly immodest than usual. Although it was a private entertainment, attended only by

artists and their friends on invitation, the Government, spurred on by Senator Berenger, instituted proceedings against the managers of the ball and the models who had shown themselves half naked. They were condemned, and the students of the Latin Quarter broke forth in noisy demonstrations. When the police tried to stop them they resisted, and annoyed and exasperated the police. On July 1 the police were for a time powerless to quell a riotous disturbance near the Sorbonne, and when at last they gained the upper hand and proceeded to clear the streets and *cafés*, a young man named Nuger was struck on the back of the head by a matchbox thrown by a policeman, and so injured that on the following morning he died. This aroused the quarter to the highest pitch of excitement. A deputation of students went around to several Deputies to ask them to interpellate the Government. M. Millerand undertook to present the case against the police. He made the most of the facts in arguing for a resolution expressing confidence in the Government, but condemning practices introduced at the prefecture of police. Crowds of students thronged the place in front of the Chamber, who in their meetings had called for the resignation of M. Lozé, the prefect, or of the Prime Minister. The Chamber passed without a count of votes a resolution to rely on the purpose of the Government to ascertain where the responsibility lay for the deplorable events. After that the disturbances were renewed. Students hissed the police, smashed the windows of the Prefecture and the Palais de Justice, and tore down kiosks and lamp posts. In the Place St. Michel they overcame a platoon of police that made a charge, and belabored them with their own swords wrenched out of their hands, wounding some so that they were taken to the hospital.

The police had betrayed such want of discipline and fortitude, and committed so many outrages besides the homicide of Nuger, that the citizens of Paris were generally incensed. The Radical and Socialistic majority that sided with the municipality in its quarrel with the Prefecture was inclined to seize the opportunity to gain a political advantage and make the most of the blunders and excesses of the police to advance the cause of the commune against the Government. In the first serious collision the students were led or encouraged by more experienced disturbers, and after it occurred excited mobs filled the streets, while the students began to retire from the contest that they had stirred up, and their committees placarded manifestoes recommending them to cease demonstrating and to remain quiet on the occasion of Nuger's funeral. When the Parisian mob took up the combat and the throngs in the streets increased, the police took harsher and rougher measures to maintain their authority, and arrested and injured onlookers as well as disturbers. A procession that was marching late at night to the Ministry of the Interior was stopped in the Faubourg St. Honoré and driven back to the boulevards, after a fierce struggle in which upward of 100 persons received bodily injuries. Policemen who patrolled the streets singly or in squads were pelted and maltreated. By early morning on July 4 a vast concourse was assembled round the Charité

Hospital where Nuger's corpse lay. The students came in a body with banners and funeral wreaths. The mounted Republican guards, who were cheered, maintained order where the police were powerless. When they were hissed the police entered the hospital and arrested some of the doctors. This caused a tumult and a serious collision, in which 12 persons were hurt badly and taken into the hospital. After the place was cleared a large crowd proceeded to the Place St. Germain des Prés. The police attempted to disperse them, and after several ineffectual charges the cavalry rode at the crowd, pressing the people back or driving them to the sidewalks. The mounted guards charged repeatedly, and the demonstrators, many of whom were trampled, finding that they had no chance, stopped the street cars, omnibuses, cabs, and carriages that were passing along the boulevard, and, after the passengers had descended, overturned them to build a barricade across the boulevard, by which the horsemen were checked completely. A similar conflict took place later at the corner of the Rue de Buci and the Rue de Seine, and there also vehicles were used by the rioters to make a barricade. When the municipal guards gained possession of the Boulevard St. Michel and other streets of the Latin Quarter the lamp posts were lying on the ground, the kiosks burned, many of the shops, which remained closed, were damaged. A mob erected barricades in the Luxembourg Gardens, and after they were removed by infantry and the boulevard cleared by a charge of cavalry, they returned and built one still stronger of seats and the timber of kiosks, started bonfires to scare the horses, and held the passage for some time against the soldiers. During the day the rioters threw up barricades of street cars, omnibuses, and paving stones in the Rue St. Michel and other streets, and held the whole district between the Rue St. Germain, the Rue de Seine, and the river, which presented the appearance of a city taken by storm. In attempting to rush across the bridge to the Boulevard du Palais they were met and driven back by cavalry, and many students and others were trampled, and many horsemen hit by flying stones. Gen. Saussier, the military governor, strengthened the garrison with several regiments drawn from the provinces, and prepared to send out the troops, if necessary, but he was reluctant, because the soldiers or the officers could not be trusted to fight the people. M. de Freycinet, in his efforts to secure a homogeneous army, had given Republican officers to regiments recruited from the Royalist departments, and placed aristocratic officers over Democratic regiments. There were several instances of insubordination on the part of officers who were ordered to attack the rioters. The military drove away the people who had congregated about the Labor Exchange. The workmen, several thousand strong, had planned to stay in the building all night, to prevent the Government from closing it, but it was occupied by soldiers. There was a sanguinary encounter in the Rue des Écoles, where the Republican Guard charged on the mob with drawn swords and the police opened fire with revolvers. Several conflicts occurred in the neighborhood of the markets between the police and men out of

work. During the day several policemen were thrown into the river and drowned.

In the Chamber the Radicals proposed to discuss the riots, and when the Prime Minister refused to allow debate or answer questions until the disturbances were completely suppressed, a wild uproar followed. Finally the Chamber agreed to postpone discussion for three days by 377 votes to 133. The riots had nearly run their course before the morning of July 5, and the more energetic and determined method pursued by the police checked all attempts to renew them. The street cars and omnibuses were not allowed to run, and the *cafés* were closed. An attempt to barricade the Rue Cujas was frustrated. There was a fight in the Rue des Écoles, but no students were engaged in it, for they had publicly repudiated any further alliance with the disorderly element. In the evening there was fighting in the St. Michel Quarter and in the neighborhood of the Labor Exchange, and the demonstrators were getting the best of it, when the military came to the rescue of the police. On July 6 the Government closed the Labor Exchange. There was no more rioting.

The Government was charged in the Chamber with fomenting civil war, and the impeachment of the Prime Minister was called for. The whole Right voted with the Moderates to uphold the Government by a vote of confidence. The Radicals then brought up the question of religious congregations, and, after the ministry had obtained another crushing vote of confidence, demanded that they should be allowed to interpellate the Government on the legal position of religious bodies, carrying with them a large part of the Republicans. M. Peytral interpreted the small majority of 26 as an indication that the ministers had lost the confidence of the Republicans, and handed in his resignation lest he should be accounted a "prisoner of the Right." He was induced to remain, but only on condition that M. Lozé, who had been prefect for seven years, should be retired. On July 11 Louis Lépine was appointed prefect of police. M. Lozé in November was appointed ambassador to Austria-Hungary, succeeding M. Decrais, who was transferred to London to fill the place made vacant by the retirement of M. Waddington.

General Election.—In the electoral campaign M. Dupuy upheld the policy of Republican concentration, the kind of opportunism that has prevailed since the defeat of the reactionary *coup d'état* in 1875, whereby Moderates govern by means of concessions to the Radicals. The programme of the Prime Minister embraced labor legislation which would temper with humanity the harshness of economic laws, fiscal reforms proportioning the burdens of taxpayers to their means, and a law on association to regulate the relations of civil and religious society in a spirit of tolerance. Ex-Premier Goblet took the lead of a Socialist-Radical party designed to supplant the Opportunists and carry out the principles of legislation on which Radicals and Socialists agree, such as a progressive income tax, a new body of labor laws, including the eight-hour working day and a superannuation fund, decentralization of authority, purchase of railroads by the state, liberty of association with

restrictive clauses against religious associations, home rule for Paris, revision of the Constitution curtailing the powers of the Senate, and gradual separation of church and state. Constans, whom M. Carnot persistently declined to restore to power, advocated a broad, tolerant, conservative, pacific republic, in which the ideas of the Right on labor questions, religious liberty, and the like should prevail over those of the Radicals. Léon Say looked forward to the assumption of power by Conservatives rallied to the Constitution, which is now badly worked by unfit and inefficient hands. Piou, as spokesman of the Rallied, called for a national union for the support of an honest, tolerant, and open republic, administered not by the political oligarchy then in power but by better men and other methods; advocated a religious peace secured by making religious education optional in the primary as in the secondary schools, and limiting the military service of seminarists to surgical and ambulance training; and suggested concessions to Socialism as the only bar to subversive doctrines. Cardinal Lecot deprecated useless protests against the educational and conscription laws, which the five French cardinals had declared in 1892 that the Catholics would never accept. M. d'Haussonville, in March, had drawn from the Comte de Paris a proclamation denouncing the Government as corrupt and weak, lacking courage to resist socialism, or power to preserve order, or authority to defend a national policy abroad, and calling on all upright men to join the Royalists. Now the leader of the Royalists, confounded by the acceptance of the republic by all the influential Churchmen, was at a loss for a cry or a programme, being left almost without a party. The Bishop of Seez and a few other irreconcilable clericals, who pretended that the Pope approved only a Catholic republic for France, and the Comte d'Haussonville, the Duc de Broglie, Paul de Cassagnac, and the rest of the Monarchists, were rebuked by the Pope in a letter to Cardinal Lécot, Archbishop of Bordeaux, in which the pontiff spoke of the absurd pretensions of some men who boast that they have more solicitude for the Church than the Pope, and arrogate to themselves the right of speaking in its name "against the teachings, instructions, and precepts of the protector and head of the Church." Casimir Périer advocated a fairer division of taxes, and such extension of institutions for the public relief of the poor as will abolish misery. Peytral, the Radical Minister of Finance, proposed an income tax and a progressive succession duty graduated according to the amount of the inheritance and the degree of relationship. Yves Guyot, once a Socialist Radical himself, opposed as a Moderate candidate the views of René Goblet. The bitterest contest took place in the Var, where the multifarious enemies of Clémenceau endeavored by every trick and device to unseat him, especially by representing him as a secret friend of England and an opponent of the Russian alliance.

The election took place on Aug. 20 and the balloting on Sept. 3. M. Clémenceau was defeated; so was ex-Premier Floquet, a victim of the Panama scandal; so, after a fierce campaign, was Paul de Cassagnac, the uncompromising foe of the republic; and so were M. Piou, the leader

of the Rallied, and the Comte de Mun, the eloquent expounder of Catholic socialism. Most of the orators who had a reputation in the last Chamber lost their elections. Goblet, in one of the commercial districts of Paris, triumphed over Yves Guyot. M. Wilson, who disappeared from public life in consequence of the scandal over the sale of decorations, obtained a seat. Neither M. Millevoye nor Paul Déroulède was a candidate. The Boulangist faction almost disappeared. A good number of the Rallied lost their seats, their constituents preferring more tried and trusted Republicans. The Socialist leader, Jules Guesde, was elected, while Drumont, the anti-Semite leader, was defeated.

The new Chamber contains 581 Deputies, or 3 fewer than the last, there having been a decrease in population in certain departments. The Moderate Republicans and the Socialists gained at the expense of the other parties. In the new Chamber there were some 292 regular supporters of the Government, ranging from Moderate Republicans to Advanced Radicals; 187 Socialists, Socialist Radicals, and Revolutionaries; 35 Rallied Conservatives; 58 members of the various reactionary factions; and 29 independents.

Visit of the Russian Fleet.—The Russian squadron destined for the Mediterranean entered the naval harbor of Toulon on Oct. 13, to return the visit of the French fleet at Cronstadt in 1891. This return demonstration had been delayed so long that political observers were convinced that the Franco-Russian *entente* went no further than a temporary understanding limited to mutual diplomatic support, as evinced in Egypt, Bulgaria, and China. The visit paid by the Russian grand dukes to M. Carnot at Nancy dispelled the suspicion that the Czar had decided to draw back from the *rapprochement*; yet a military alliance between the Czar and a republic built upon a fallen monarchy, in which open sympathizers with Russian revolutionists have often had a voice, an alliance, too, that might compel France to aid in establishing Russia as a Mediterranean power, seemed to conservative thinkers impossible. The Czar seemed, indeed, to be reluctant to run the risks of a public reception of his officers in France, which might be marred by hostile revolutionary demonstrations against himself, or, more likely, by a Chauvinistic exhibition of the passion for *la revanche* which would lead to a misconstruction of his pacific policy. After many cautions on his part and reassurances from the French Government he gave orders to the Russian fleet to repair to Toulon. Immediately after the arrival of the ships President Carnot sent a message of warm thanks, to which the Czar replied in terms that seemed too cold to bear out the supposition of an alliance. Two French ships had been sent to Copenhagen, where the Czar was visiting, to convey the compliments of the French navy, and when the Czar not only went on board the "Isly," but ordered a salute to be fired by the imperial yacht, the newspapers of Europe noted the departure from his previous reserve. Chancellor Caprivi had already accepted the Russo-French understanding as the manifestation of an existing state of things, an indication of the establishment of "a European equilibrium such as formerly existed." The organ of Prince Bismarck, the Hamburg "Nach-

richten," explained that "the triple alliance as such does not threaten Russia or her policy, but as soon as a suspicion arises that its influence is to be exercised for the defense of England's anti-Russian interests, Russia's resentment is aroused." The naval and municipal entertainments that were prepared for the Russians at Toulon were magnificent. The city, decked with Russian and French flags, was filled with enthusiastic visitors from every part of France. The Russians received addresses of welcome from public bodies of every sort, all inspired with the discreet propriety that marked the speeches of President Carnot and Admiral Rieunier. The articles of the press dwelt effusively on the friendship of the two nations, the end of the long isolation, and the power of the new league, which gave France again a weighty voice in European affairs and was a guarantee of a long peace, and mentioned war only as a remote and dreaded contingency. Admiral Avellan, the Russian commander, and 60 of his officers, were conducted to Paris by President Carnot and M. Humbert, the President of the Municipal Council, who once had been a galley slave at Toulon as a convicted Communist, and had made himself conspicuous as a eulogist of the Nihilist murderers of Alexander II. There they were fêted with a round of balls, dinners, luncheons, illuminations and fireworks, a torchlight procession, a gala performance at the opera, and everywhere in the lavishly decorated city, which stopped its ordinary business to welcome them, were greeted with exuberant manifestations of popular friendship and delight, to which they responded with equal enthusiasm. Returning to Toulon loaded with presents, they witnessed the launch of the "Jau-réguiberry" on Oct. 27, and then sailed away. The organs of public opinion in Russia reflected a popular delight over the French alliance scarcely less enthusiastic than that of France. The Czar, whose misgivings were banished by the unanimous welcome of the Russian officers by all classes and parties of Frenchmen, from Socialists to Royalists, sent the following dispatch to President Carnot:

At the moment when the Russian squadron is quitting France I am anxious to express to you how much I am touched by and grateful for the warm and splendid reception which our sailors have everywhere found on French soil. The testimonies of warm sympathy which have been once more manifested with so much eloquence will add a fresh link to those already uniting the two countries, and will contribute, I hope, to the strengthening of the general peace—the object of their efforts and of their most constant wishes.

To this M. Carnot replied as follows:

The telegram, for which I thank your Majesty, reached me at the moment I was leaving Toulon in order to return to Paris, after visiting the fine squadron on which I had the warm satisfaction of saluting the Russian flag in French waters. The cordial and spontaneous welcome which your brave sailors have everywhere met with in France signally affirms once more the sincere sympathies uniting our two countries. It marks at the same time a profound faith in the beneficial influence which can be exerted together by two great nations devoted to the cause of peace.

The French Government extended to the new Russian squadron the privilege of using all the

facilities of the French naval harbors in the Mediterranean, and the officers of every harbor were ordered to perform any service for the Russians that they would for French ships. The effect of the *rapprochement* had been gradually to transfer the German investments in Russian securities to French hands. Owing to the financial support of the French people, who already held nearly 4,000,000,000 francs of Russian securities, the credit of Russia stood higher than ever, and the Russian Government was in possession of means to develop the military and naval systems and the resources of the country.

The Cabinet of Casimir Périer.—When the new Chamber met, on Nov. 14, Casimir Périer was again elected President. The Moderate and the Radical Republicans having both been strengthened and the Monarchists almost extinguished, there was a contest between the Radicals anxious to impose a progressive policy on the Government and the Moderates who wished to break with Radicalism and combine with the right. The Cabinet was not reorganized to suit either view, and clinging to Republican concentration put forth a programme containing no concessions to the Radicals. The result was a defeat on a vote of confidence. President Carnot summoned M. Raynal, who declined, and then M. Spuller, who attempted to form a Cabinet. He could not get together a homogeneous Cabinet without including M. Constans, who was obnoxious to M. Carnot, and on Nov. 30 gave way to M. Casimir Périer. After a week's interregnum the list was completed on Dec. 2, as follow: Prime Minister and Minister of Foreign Affairs, Casimir Périer; Minister of the Interior, David Caynal; Minister of Justice, M. Dubost; Minister of Finance, Auguste Burdeau; Minister of War, Gen. Mercier; Minister of Marine, Admiral Lefevre; Minister of Commerce, M. Marty; Minister of the Colonies, Théophile Delcassé; Minister of Public Instruction, Eugène Spuller; Minister of Agriculture, M. Viger; Minister of Public Works, M. Journaud. M. Dupuy was elected to succeed M. Casimir Périer as President of the Chamber of Deputies.

The new Premier in the ministerial declaration said that the country had shown by the elections its aversion both to reaction and socialism. Socialism the Government intended to combat by real reforms and the amelioration of the condition of the working classes, especially by a radical reform in the system of direct taxation, a remodeling the land laws, the creation of a pension fund for old and disabled workingmen, and the organization by the Government of agricultural credit and insurance. On a socialist proposal for amnesty to political and strike offenders the ministry narrowly escaped a defeat, as 100 Deputies abstained from voting.

Franco-Italian Labor Riots.—The ancient city of Aigues-Mortes gives employment every summer to a considerable number of laborers in the salt marshes. The Italians are generally disliked in the south of France, as the Belgians are in the north, because they work for lower wages than the French laborers and will not join the labor unions. The French salt workers, for the most part a lawless set of vagabonds, felt this jealousy for the Italians who underbid them. On Aug. 17, after the men had been paid off and

were excited with drink, some Frenchmen maltreated an Italian whom they caught washing clothes in their drinking-water. The Italians retaliated, and a fight ensued, in which the Italians were driven out of town, and about 200 were besieged in a farmhouse until they were released by troops. There were 7 Italians and 1 Frenchman killed, and the wounded numbered about 40. The Prime Minister expressed regret to the Italian Government and suspended the Mayor of Aigues-Mortes, who had issued a proclamation urging the men to prove how well they had succeeded and how completely their demands were satisfied by ceasing from demonstrations and going quietly to work again. The incident was made the occasion in Italy of anti-French demonstrations by labor agitators hostile to the Government. In Rome they stoned the French embassy building, and the Government suspended the prefect and the chief of police for not preserving order when the disturbances were renewed two days later. In Naples, Milan, Turin, Como, and Bologna public demonstrations were made against the French. In Messina the escutcheon in front of the French consulate was torn down and burned. In Genoa, whither the wounded from Aigues-Mortes were taken, a mob destroyed the cars of a French street railroad company. The Italian Government took severe measures to repress the anti-French manifestations, and the newspapers of the country generally approved this action. Several persons were arrested at Aigues-Mortes who took part in the riot, and in Italy a great number of rioters were arrested. The good will shown by both governments removed all obstacles to a satisfactory termination of the incident.

Coal Strike.—The miners of the Pas de Calais and the Nord, deciding to make common cause with their fellow-workmen in England, went on strike in September, and persuaded a part of the Belgian miners to join in an international contest with the mine owners, such as had been discussed and recommended at the international miners' congresses. Deputy Basly and Jules Guesde assumed the lead in the movement. The demands were an increase of 10 per cent. in wages, making 7.15 francs a day the usual pay; the fixing of 5.50 francs as minimum wages; that no workman over forty years of age shall be discharged; and none shall be dismissed who has incurred the penalties of the law so long as the company is not a sufferer. In a local strike in the early part of the year some Belgian miners who took the strikers' places were hunted away by the French workmen. Now the Belgians, whose wages are lower than in France, after voting in a referendum in favor of a simultaneous strike, tried to act in harmony with the French miners, but only a third of the miners of the Borinage and Charleroi districts took part in the referendum and the subsequent strike, but later the strike became more general. In France the strike was sudden, general, and determined, except at Anzin, where a strike had recently been overcome and the unions driven out, and in the Loire. The men generally remained tranquil. If they had not, there was an abundant force of gendarmes and soldiers drafted by the Government into the mining districts to quell lawlessness. In Belgium the strikers gained

an increase of wages. In France they gained nothing, but suddenly decided to submit after remaining out for seven weeks, declaring that they must bow their necks to the despotism of capital, expecting no improvement in the worker's lot and cherishing no hope of justice save by social revolution.

Anarchism.—In May, 1893, the Paris police arrested a group of 5 anarchists, named Léveillé, Marchand, Vinchon, Bondon, and Spannagel, in whose possession were found bombs of the most dangerous kind, a large quantity of materials for explosive mixtures, and burglars' tools, with documents proving their connection with an association that defends theft as a means of propaganda by deeds. Others were arrested from time to time in various cities. On Nov. 14, a young anarchist named Leo Lanthier, a shoemaker out of work, stabbed a special envoy of Serbia, Georgevich, in a Paris restaurant, for no other reason than that, wearing good clothes and the decoration of the Legion of Honor, he seemed to be one of the hated *bourgeoisie*. On Nov. 15, some one managed to steal past the sentries, enter the house of Gen. Mathelin, commander of the Fifteenth Army Corps, in Marseilles, and deposit an infernal machine, which exploded with a terrific noise, tearing a hole through the walls, but killing no one. An unexploded bomb was found, which from its unscientific composition indicated that professional anarchists were not the authors of the crime. Some Italian workmen were suspected and placed under arrest. The police of France and other countries were incited to vigilance at this time in response to suggestions of the Spanish Government. The French police, acting on the supposition that anarchism was an exotic growth, arrested Germans and other foreigners suspected of holding anarchistic opinions, and watched the Belgian frontier to intercept any foreign anarchists that might be seeking to escape from the Belgian police. In Marseilles three anarchist adepts—Bossy and his wife and Charregon—were arrested, and a tunnel was found dug beneath the street, in which were tubes and fuses and several kinds of highly explosive substances.

An infernal machine of clumsy construction was sent from Orleans addressed to Chancellor von Caprivi, probably by some German anarchist as a terroristic demonstration. On Dec. 9, Auguste Vaillant, who had obtained admission to the visitors' gallery in the House of Deputies, attempted to throw a bomb at M. Dupuy. A woman seized his arm, spoiling his aim, and the bomb, which was filled with nails and bits of iron, struck the cornice of the public gallery and exploded, wounding himself and many others in the galleries and 4 Deputies. After the explosion M. Dupuy immediately called the House to order, and business went on without interruption. On the following day the ministry brought in bills to modify the press law by making incitement to crime a felony, to forbid the association of enemies of society, and to increase the penalties for unlawful possession or manufacture of explosives.

Algeria.—This dependency is administered, as far as possible, as an extension of France. The head of the administration is a Governor-General. Jules Cambon has held the office since

April, 1891. There are 3 departments, each of which elects 1 Senator and 2 Deputies. To each is attached a military department, administered under the direction of the commandant of the Nineteenth Army Corps. The combined area of the departments of Algiers, Oran, and Constantine is 184,474 square miles, and the population in 1891 was 3,636,967 in the civil and 487,765 in the military departments. While the military jurisdiction is continually being extended farther into the desert, portions of the military territory are from time to time brought under civil jurisdiction and added to the civil departments. The total population in 1891 comprised 272,662 born or naturalized French people, 47,667 naturalized Algerian Jews, 3,567,223 indigenous French subjects, and small colonies of Tunisians, Moors, Spaniards, Italians, Maltese, and Germans. The public revenue is derived from direct taxes levied on the natives and from customs and *régie*. The French Government pays the cost of the army and a part of the expenses of public works. In the budget for 1892 the revenue was estimated at 46,330,898 francs, and expenditure at 44,928,731 francs. In that for 1893 the revenue is placed at 48,318,020 francs, of which 12,318,000 francs proceed from direct taxes, 11,143,000 francs from customs, 12,127,250 francs from indirect taxes of various kinds, 5,235,700 francs from monopolies, and 8,231,270 francs from domains, etc.

The expenditures for 1893 are estimated at 64,948,129 francs, of which 26,520,000 francs are for public works, 18,793,167 francs for collection of revenue and *régie*, 11,906,637 francs for the interior, 5,397,539 francs for public instruction, 3,988,646 francs for justice and worship, 1,799,190 francs for agriculture, 622,250 francs for other departments, and 920,700 francs for repayments, etc.

The principal products are wheat, barley, mutton, wool, alfalfa, wine, tobacco, olives, flax, colza, cotton, ramie fiber, and silk. There was a population of 3,262,478 engaged in agriculture in 1891, of whom 187,000 were Europeans. The product of iron ore in 1889 was 351,900 tons, valued at 2,457,190 francs. The value of the general imports in 1891 was 277,770,289 francs, nearly three fourths of which came from France. The exports, four fifths of which went to France, were valued at 235,725,130 francs. The special imports were valued at 269,021,767, and exports at 222,844,445 francs. There were 1,910 miles of railway in operation in 1891, and 4,310 miles of telegraphs, with 10,000 miles of wire. The Trans-Saharan Railroad, which is to be extended to Timbuctoo, has been built to within 80 miles of the oasis of Figuig.

A remodeling of the system of administration, suggested by the strictures of Jules Ferry, has been approved by the French Government. The Arabs suffer injustice under the laws passed in France without a true understanding of the habits and customs of the people. The official staff is too large, and the officials occupy themselves with unnecessary forms and troublesome proceedings which the natives think are invented for their annoyance. The fines collected for infractions of the forest laws, for instance, are nearly four times in amount the actual value of the forest products. In the civil territory the

French colonists and officials discourage any attempt to elevate the natives. The proposition to establish schools for them has been met with persistent opposition. The result of their being kept disfranchised and degraded is that they cherish the hope of regaining the mastery, and the effect of the heavy taxation and troublesome fines imposed on the native population is to impoverish many and drive them to robbery. Jules Ferry's recommendation to extend the powers of the Governor-General so as to make Algeria resemble a colony instead of a French department was approved by the Senate, and a bill was framed embodying this principle.

Tunis.—The regency of Tunis is nominally still a vassal state of the Ottoman Empire and a hereditary monarchy ruled by the Bey, Sidi Ali, who was born Oct. 5, 1817, and succeeded his brother, Sidi Mohammed es Sadok, Oct. 28, 1882. Since its occupation in 1881 it has been technically called a French protectorate, but has been really governed by the French Minister Resident under the direction of the Ministry of Foreign Affairs, which has a special bureau for Tunisian affairs. The French Resident since 1890 has been M. Massicault. There is an army of occupation of about 10,000 men maintained by the French Government at its own expense. The area is about 45,000 square miles, and the population, consisting mostly of Bedouin Arabs and Kabyles, is about 1,500,000. The revenue for 1892 was estimated at 21,443,900 francs, of which 7,728,900 francs were derived from direct and 10,132,200 francs from indirect taxes, 713,000 francs from posts, telegraphs, and navigation dues, and 2,869,200 francs from various sources. The expenditures were estimated at 21,484,768 francs, of which 6,327,920 francs were required for interest and amortization of the debt, 4,950,888 francs for financial administration, the civil list, etc., 4,739,000 francs for public works, 2,629,861 francs for the general administration, 595,370 francs for war, 776,000 francs for the post-office, and 1,415,728 francs for other purposes. The debt was consolidated in 1884 into a perpetual 4-per-cent. *rente* of 6,307,520 francs, and this in 1888 into a 3½-per-cent. loan to be extinguished in ninety-nine years.

The value of the imports in 1891 was 38,115,090 francs, and of the exports 44,465,689 francs. The principal imports are silk and silk manufactures, mixed silk, cotton, and wool goods and woollens, flour, iron manufactures, and wine and spirits. The chief exports and their values in 1891 were: Wheat, 15,261,120 francs; barley, 9,808,600 francs; olive oil, 6,430,080 francs; dry vegetables, 1,990,390 francs; esparto grass, 1,734,016 francs; tan bark, 1,658,400 francs. There are 260 miles of railway and over 2,000 miles of telegraphs belonging to the Government. A railroad from Tunis to Sfax has been authorized. A joint commission for the delimitation of the frontier between Tunis and Tripoli was unable to agree, and the negotiations with the Turkish Government were suspended in April, 1893.

West Africa.—By the agreement with Great Britain arranged on Aug. 5, 1890, the French sphere of influence includes the entire region north of a line drawn from Say, on the middle Niger, to Barraua, on Lake Chad. By an

agreement made with Germany in 1885, regulating the boundary of Cameroons, France promised to undertake no political enterprises west of 15° of west longitude. The French have been active in establishing protectorates with the purpose of uniting their possessions in Algeria, Senegal, and the Congo. They possess the coast from Cape Blanco to the Portuguese district north of the mouth of the Congo, except the British colonies of Gambia, Sierra Leone, the Gold Coast, the territory of the British Niger Company, Portuguese Guinea, Liberia, and the German possessions of Togoland and Cameroons. The interior, from Algeria to the French Congo and from Senegambia to Lake Chad, is conceded to France, with the exception of the region east of the British Niger territory and Cameroons. In that region the English—through the Royal Niger Company—and the Germans endeavor to defeat the French project of uniting their possessions, for that would shut them off from extension into the Central Soudan and the territories north of the Congo State, the only parts of Africa that have not yet been occupied or divided into spheres of influence. The French Sahara has an area of about 1,000,000 square miles. The territories of Senegal, the Rivières du Sud, the French Soudan, and the settlements on the Guinea coast cover about 550,000 square miles. The French Congo and Gabon have an area of 250,000 square miles. The Sahara is mostly unexplored desert, and the population is unknown. Senegal and the Rivières du Sud have a population of 174,000, the annexed territories about 1,100,000, the French Soudan 860,000, the protectorates of the Soudan 2,500,000, and the Congo and Gabon about 6,900,000. The revenue of the French Congo and Gabon for 1892 was 2,168,287 francs. Senegal is administered by a Governor-General, assisted by a Colonial Council, and sends a Deputy to the French Chamber. St. Louis, the capital, has a population of 20,000. There is a railroad 246 miles in length, which is being extended toward the middle Niger. The revenue in 1893 was 3,280,692 francs, exclusive of the expenditure of the French Government for military and exploratory purposes, which amounted to 6,183,898 francs in 1893. The exports are groundnuts, India rubber, gums, woods, skins, etc. The value of the imports for 1889 was 29,000,000 francs; of the exports, 16,500,000 francs. The Rivières du Sud, which became a separate colony in 1890, and was united for administrative purposes with the Gold Coast and Bight of Beniu settlements in 1892, cost the French Government 33,000 francs in 1892. The settlements on the Gold Coast are Grand Bassam, Assinie, Grand Lahou, and Jackeville; and those on the Bight of Benin are Porto Novo, Kotonu, Grand Popo, and Agoué. The imports of the two colonies for 1889 were 3,692,510 francs, and the exports 2,742,278 francs in value. The French Government contributed 943,500 francs for this administration in 1893. In 1893 the French colonies on the coast of Guinea were definitely constituted into three separate possessions: French Guinea, the Ivory Coast, and Benin, each having its own governor.

A dispute with the Republic of Liberia concerning 100 miles of coast adjoining the French Gold Coast was settled by a joint commission

in December, 1892. The agreement delimits the inland frontier of Liberia as well. Liberia regains possession of her settlements on the Grain Coast, and abandons her claim to the coast east of the Cavally, which river forms the boundary up to the junction of the Fireduguba, beyond which the frontier follows the watershed of the Fireduguba basin, passing to the south of Musardu and Mohammadu, until it reaches the English frontier of Sierra Leone. A dispute arose in the spring of 1893 regarding the limits of the British colony of Gambia. British officers raised the English flag at Panchang and Niambuntang, claiming that these points were within 10 kilometres of the river, and that that was the limit of British jurisdiction. French officers came and hauled down the flags, and the question was then reserved for diplomatic settlement.

The French Soudan, comprising the region of the middle Niger and the upper Senegal, was formerly administered, under the direction of the Governor-General, by the superior military commandant, who has his headquarters at Kayes. A revenue of about 400,000 francs is raised. The cost to the French Government in 1893 was 5,189,622 francs. There is a railroad from Kayes to Bafoulabe, 94 miles.

In 1893 Col. Achinard, the military commandant, was made Governor. In order to establish French rule in this region it was necessary to overcome the native tyrants Ahmadu and Samory. Ahmadu, the ruler of a large part of the empire founded by his father, El Hadj Omer, when expelled from Segu by the French, still maintained his power in the kingdom of Massina, while his brother, Agibu, ruled independently in Dingiray, on the opposite side of the region occupied by the French and bordering on Futa Jallon, which is a protectorate that is under the command of the Governor of French Guinea. The operations against Ahmadu were continued until Massina also was occupied, and Agibu was installed by the French as king in Bandiagara, the capital. Close to the borders of this country and commercially dependent upon it is Timbuctu, the great town of the Tuaregs, access to which by way of the Niger is now in French control, as well as the northern caravan routes. The Algerian Government has established good relations with the eastern members of this large and warlike tribe of Berbers, and the Governor of the French Soudan therefore hopes to induce the chief of Timbuctu to accept a French protectorate. In the spring of 1893 Capt. Blachère endeavored to capture Ahmadu, who fled eastward, and escaped with his family after his force was exterminated.

Samory's forces were broken up in the spring of 1893 by Col. Combes, who occupied Erimankono and Faranna. Objections were raised by the British authorities of Sierra Leone. One band with 700 rifles was put to flight by Col. Combes, another consisting of 1,200 men, surrendered to Capt. Dargelot, and the rest were pursued by Capt. Briquelot, while Samory fled and concealed himself from his own followers.

Dahomey.—At the beginning of 1893 the forces of Gen. Dodds held Abomey, the capital of Behanzin, whose army had dwindled to 2,000. With this force he was afraid to give battle. His credit with the European traders who had

supplied munitions was exhausted, and he was cut off from the coast and was deserted by the chiefs of southern Dahomey, who willingly accepted the French flag. The French built roads, and commerce and production resumed their normal course. The blockade of the coast, which had lasted six months, was raised on Dec. 19, 1892. The campaign against Behanzin cost 9,000,000 francs, and 5,000,000 francs more were estimated to be necessary to complete the organization of the conquered country. In the north the Dahomeyans still continued to attack the French outposts, and the populations from Yoruba to Togoland acknowledged in some sort the supremacy of the king. German traders established at Whydah were expelled on the charge of selling repeating rifles, cannon, and ammunition to Behanzin to enable him to begin the war anew, as was an English trader of Porto Novo for giving him information and encouragement. King Behanzin addressed a manifesto to all civilized nations protesting that the French governors Bayol and Ballot had begun hostilities without provocation. Gen. Dodds was called home to report on the situation. Just before he set out, Behanzin, who had been told that his life would be spared if he surrendered, offered his submission on condition that he should be allowed to reside at Cana or Abomey in a manner suited to his former royal rank. The general replied that a residence would be given him in Senegal or elsewhere, but not in Dahomey. The French Government proposed to maintain an army of 2,000 or 3,000 men in Dahomey until the ex-king was vanquished and the country pacified. There was much dissatisfaction in France on account of the duration and costliness of the operations, and the ministers were gratified when Behanzin showed an inclination to treat; but when Gen. Dodds arrived, in May, he dissuaded them from discussing terms with the wily savage. Behanzin organized another army, and several skirmishes took place, in one of which 3 French officers were severely wounded, one of them mortally. In June Behanzin announced his intention of sending some of his principal chiefs and counselors as plenipotentiaries to conclude a peace with the authorities in Paris, writing to President Carnot that he had twice been the victim of the treachery of the French troops. Later he asked for a safe conduct to negotiate in person with Col. Dumas, the French commander, who looked for him in vain on July 25. Gen. Dodds returned to Dahomey with large re-enforcements, and in October resumed the aggressive. Behanzin's envoys set out from Acheribe in September, and arrived in Paris on Nov. 10, departing again on Nov. 16, when they found that there was no chance of being received by the President or the ministers. Gen. Dodds and Col. Dumas advanced at the head of separate columns as soon as the floods abated. Behanzin fell back from Acheribe to the Ueme, and Gen. Dodds sailed up that river to Zaganado, Behanzin's intrenched camp. All the tribes of the country occupied made their submission. The chiefs and fetic men who had clung to Behanzin, including his brothers and uncles, made terms, surrendering 4 Krupp cannon, a machine gun, and 480 magazine rifles. Behanzin, with the remnant of his

army, fled into the jungle, and a small force was sent to pursue him, while Gen. Dodds encamped at Zunetu.

The Race for Lake Chad.—After the signing of the Anglo-French agreement of 1890 Lieut. Mizon set out on an expedition for Lake Chad by way of the Benue river, Commandant Monteil left St. Louis for the same goal, and Paul Crampel started northward from the French Congo. Crampel was killed by the natives. Mizon, finding it impossible to reach Lake Chad, turned his face southward after sojourning some time with the Sultan of Yola, and effected a junction with Lieut. de Brazza on the Sangha river. Commandant Monteil, with Adjutant Badaire, reached Segu, on the upper Niger, on Dec. 20, 1890, and struck across the great bend of the river for Say, which he reached on Aug. 19, 1891, having made a treaty with the powerful Chief Ibrahim of Uro Guelajio, whose friendship secured for him a favorable reception at Say and a treaty with the local chief. Traversing Kabbi, the ruler of which has for his capital the fortified town of Argungu, with 20,000 inhabitants, he arrived on Oct. 18 at Sokoto, when he made a treaty with the sultan, although this kingdom is included in the British sphere. Delayed at Kano some months, he entered Bornu in March, 1892, passed through Kargin, Bosari, and Kililua, encountering many difficulties, was received by the Sheikh Malam Adam at Kuka on April 12, and spent four months on the shores of Lake Chad. In August he set out across the Sahara, and after a journey of severe hardship emerged at Tripoli late in 1892.

After the assassination of Crampel, M. Dybowski continued the work of extending French influence northward from the Ubangi. From a station established by him on the Kemo, one of the affluents of the Ubangi, M. Maistre set out with 5 European companions and a force of natives in July, 1892, followed for a part of the way Mizon's route in the opposite direction, entered Bagirmi, traversed the southern part of that country, made treaties with chiefs on the Shari and the Logone, reached Adamawa after encountering many difficulties and having some battles, and emerged at the mouth of the Niger in March, 1893.

Lieut. Mizon left France in August, 1892, to return to Adamawa at the head of a considerable expedition of an ostensible scientific and commercial character. When he arrived at the mouth of the Niger, with two river steamers containing among other stores 2 mountain guns, a Hotchkiss gun, 150 rifles, and 100 revolvers, the officials of the British Niger Company would not let him proceed, on the grounds that the passage of such large munitions of war under the charge of an uncontrolled adventurer would be a breach of the Brussels act, and calculated to do mischief to the natives beyond the company's territory; that it would be unpatriotic and unfair to a friendly power to facilitate such an expedition, inasmuch as Lieut. Mizon had claimed credit for his intention to prevent the extension of the English and German spheres; and that, as the company had displeased Mohammedan emirs by refusing to furnish them with arms or to assist them in slave raids against the pagan tribes, and by forcibly preventing such raids, it

would be impolitic to allow Mizon to present himself to these emirs as an ally possessing cannon and rifles. The French Government protested energetically against the closing to its explorers of the Niger and Benue, which are free to the navigation of all nations under the Berlin act. Mizon, with his 6 European companions and a force of Senegalese sharpshooters, proceeded up the Benue to within 120 miles of Yola. There his vessels grounded on a shoal, near the territory of the Sultan of Muri. He had to remain there nine months, until the waters rose again. He made a treaty with the Sultan of Muri, and three weeks afterward, on Dec. 25, 1892, bombarded and captured the town of Kwana, belonging to the pagan enemies of the sultan. He also established 2 factories in the sultan's dominions. The Niger Company, though not on friendly terms with the sultan, had once made a commercial treaty with him and possessed a post on the confines of his territory, which was assumed to be included in the British sphere, on the ground that he is a vassal of the Sultan of Sokoto. They threatened to send a force as soon as the waters rose to sink Mizon's ships, destroy his factories, and seize his goods. The British Government having made complaint that Lieut. Mizon had raised the French flag within the British sphere, a dispatch was sent from Paris recalling Mizon, and directing Albert Nebout, the second in command, to proceed with the scientific and commercial expedition to Yola. M. Hoellé was sent out later with full instructions and orders to relieve Mizon, but when he arrived at Akassa the British officials, pleading an order from the British Government forbidding the passage of any Frenchman, refused to let him ascend the river. This gave new cause to the French Government to complain against the violation of the neutrality of the Niger. It seemed as though the English, in transmitting the dispatch of recall and stopping Hoellé, were aiming to keep the Mizon mission out of Yola, and this was regarded as an unfriendly act, because the Niger Company was instructed at the same time to give every facility to a German expedition sent to forestall the French in concluding a treaty with the Sultan of Yola. Mizon, as soon as he had repaired his vessels after the rains, did repair to Yola, and afterward descended the Benue; but he was stopped, and his vessels and goods were confiscated, including the ivory that he had bought, on which he refused to pay duty. M. de Brazza, at Bania, stole a march on the German expedition of Baron von Stetten by sending, in December, 1892, M. Ponel, who reached Adamawa and concluded treaties with the Emir of Ngaundere and the Sultan of Yola. The French protectorate over Yola was announced to the British and German agents on Sept. 3, 1893. In the meantime Lieut. von Stetten had come and made a treaty with the Sultan of Yola, who promised to allow only German stations to be established in his country. The Niger Company sent an armed force to Muri, which tore down the French flag and demolished the factories, seizing their contents. All the members of the French mission were summoned before the company's tribunal to answer to charges of opening factories without a license and of polit-

ical interference in its territory, but they disregarded the summons. M. Ponel, on leaving Yola, in April, sought to descend the Benue, but the agents of the British Company refused to allow him to buy food or hire boats, and therefore he was obliged to retrace his steps to the Congo. The German and British governments were said to have agreed on a frontier northwest of the Cameroons up to Lake Chad.

Madagascar.—France assumed a protectorate over the island of Madagascar by virtue of a treaty of peace concluded with the Hova Government in 1885, which provided that a French Resident should be maintained at Antananarivo, attended by a guard, and should control foreign relations. The Hova Government has never acknowledged that the treaty established a French protectorate. The protectorate was recognized by Great Britain in the Anglo-French agreement of Aug. 5, 1890, but in the Hova capital British commercial and missionary influences have predominated, and the political relations between the Government and the French Resident were suspended when the exequatur question arose. The Queen's Government insisted on granting exequaturs directly, and refused to receive the application of the German consul through the medium of the French Resident in 1891. Queen Ranavalona III was born in 1862, succeeded to the throne in 1883, and married Rainilairivony, the Prime Minister and Prince Consort. The Government is an absolute monarchy, in which the Prime Minister is the virtual ruler.

The area of Madagascar is estimated at 228,500 square miles, and the population at 3,500,000. The Hovas, who have been the dominant race for half a century, number about 1,000,000; the Sakalavas, 1,000,000; the Betsileos, Sakaras, Ontatiavas, and Bavas, 1,400,000; and Arab, Creole, French, and other foreigners settled on the coast, 100,000. Antananarivo, the seat of the Hova Government, has 100,000 inhabitants. About 20,000 per cent. of the Hovas, and a considerable proportion of the neighboring tribes in the center of the island, are Christians. The revenue is derived from customs and a poll tax. There is a standing army of some 20,000 men, mostly armed with modern rifles. An English military officer has the chief command; another commands the artillery, which is equipped with rifled Armstrong cannon.

The industries of the island are cattle-raising, and the cultivation by the labor of African slaves of rice, sugar, coffee, cotton, and sweet potatoes. The people are skilled in the weaving of cloth from silk, cotton, and the fiber of the rafia palm, and in the working of copper and iron. The island is covered with forests abounding in valuable woods. European companies are engaged in cutting the timber on the northeast coast. There are rich gold and copper mines, which have recently been developed by English enterprise. Iron, galena, sulphur, and graphite are found. The principal imports are cotton goods from England, rum from Mauritius, hardware, and crockery. The exports are hides and skins, India rubber, rafia, wax, cattle, hemp, sugar, lard, coffee, vanilla, copal, rice, and seeds.

The French colony of Diego Suarez was founded by the French at the north end of the

island after the termination of the Hova war. The garrison in 1892 numbered 1,286 officers and men. The export trade is insignificant. In the neighboring seas France has Nossi-Bé, Mayotte, the Comoro Islands, and Sainte-Marie. The expenditure of France in 1893 was 2,244,092 francs for Diego Suarez, and the local revenue for 1891 was 128,410 francs. The islands produce sugar, rum, coffee, rice, and vanilla. Their combined imports amount to about 2,800,000 francs, and their exports are about the same. Their local revenues amount to some 450,000 francs, and the expenditure of the home Government to 225,000 francs a year.

The French Government has desired to avoid conflicts with the Hova Government, while extending French interests and influence on the coasts and in the northern part of the island. The Hovas also have been content to oppose a passive resistance to the French protectorate, except a party holding intimate relations with the missionaries and other English residents of Imerina, the leader of which has been Rajoelina, a son of Rainilairivony, who was ambitious to supplant his father as Prime Minister. In the summer of 1893 there was much activity among the Hovas, who received arms and ammunition from England. Large numbers were called from productive pursuits into the army. In the neighborhood of Fort Dauphin hostility was shown toward the French. In August, Rajoelina, Dr. Rajaona, a court physician and a son-in-law of the Premier, and the Premier's grandson and aid-de-camp Ralaikizo, husband of the Queen's principal maid of honor, were arrested on the charge of having conspired to remove the Premier by violent means, if necessary, in order that Rajoelina might take his place. All were sentenced to be decapitated, but the sentence was commuted to banishment in chains for life, and they were interned in a village, where the sentence was considerably mitigated in execution. Abraham Kingdon, an English merchant, who was Rajoelina's partner in a valuable gold-mining concession obtained from the Premier, was accused of complicity in the plot. He was ordered to leave the country in twenty-four hours. The French Resident pointed out that a foreigner could not be summarily banished, according to the treaties. The British vice-consul was then asked by the Prime Minister to try the case. He refused to do so unless the documents were forwarded to him through the French Resident; but this the Malagasy Government declined to do, as it involved a recognition of the French protectorate. Some letters stolen by Kingdon's servant from his master had revealed the plot to Rainilairivony. The conspirators and their English sympathizers were known to have cherished the plan of placing Rajoelina in power ever since the death of Rainiharovony, the Prime Minister's heir.

Réunion.—The old colony of Réunion, in the Indian Ocean, has an area of 965 square miles, and a population of 165,915. The sugar plantations are cultivated by the labor of Indian coolies and African contract laborers. The fixed population consists mainly of creoles, who are represented by a Senator and 2 Deputies in the French Parliament. The exports, besides sugar, are coffee, cacao, vanilla, and spices. The value

of the imports for 1890 was 21,262,867 francs, and of the exports 18,901,601 francs. The revenue for 1892 was 8,857,700 francs, and the expenditure 8,853,689 francs. The expenditure of the French Government in 1893 is 4,554,745 francs. The island of Kerguelen, in the Indian Ocean, was occupied by a French man-of-war in the beginning of 1893. It is supposed to contain valuable deposits of coal.

Indo-China.—The French possessions in Farther India, consisting of the colony of Cochinchina and the protectorates of Cambodia, Tonquin, and Annam, were united into a customs union and placed under the direction of a Governor-General in 1887. J. L. de Lanessan became Governor-General in July, 1891. Cochinchina was ceded to France by the Emperor of Annam, part in 1861 and part in 1874. The King of Cambodia accepted in 1863 a French protectorate over the dominions that Siamese and Annamite aggressions had left to him, and in 1884 the French assumed the practical government of his country. Tonquin was ceded to France after a long struggle in 1884 by the Emperor of Annam, who was forced to repudiate the suzerainty of China and accept a French protectorate. This arrangement the French had to defend in the war with China, which came to an end in 1886. In Cochinchina the administration, which is in charge of a Lieutenant-Governor, has long been conducted by French officials, and so it is practically in Cambodia, where King Norodom still has his court. In Tonquin the Resident-superior and the Residents of the 5 provinces share their functions, in such matters not of political importance as depend on native customs, with an Annamite viceroy called the *Kinh Luoc*, and the local mandarins. In Annam the French Resident-superior interferes as little as possible with the prerogatives and dignity of the *Amurath*, or Emperor, and the ancient and majestic ceremonial of the court, but the French have been careful since the overthrow of Tu Duc to put on the throne a prince amenable to their political guidance. The reigning Emperor, the fifth since Tu Duc's death, in 1883, is Thanh Thai, a boy of fifteen. Ham Nghi, whom the mandarins set up in opposition to the French, was captured and is now interned in Algeria, Dong Khanh being placed on the throne, who, after three years, was succeeded in 1889 by the present Emperor. A sufficient garrison in Hué is a guarantee of French supremacy. In each of the 12 provinces are French Residents who have charge of political and police affairs.

The total area of French Indo-China is about 240,000 square miles. Cochinchina has less than 2,000,000 inhabitants, Cambodia less than 1,000,000, Tonquin perhaps 12,000,000, and Annam proper between 3,000,000 and 4,000,000. The imports of the customs union for 1890 were 60,248,460 francs, and the exports 56,995,119 francs in value. The receipts from customs amounted to 25,294,497 francs. The imports of French products were 11,286,781 francs, and the exports of native products to France 2,022,379 francs. The policy adopted in 1887, which abolished free trade in Saigon and established a uniform discriminating tariff for the whole of Indo-China, has therefore failed to develop the interchange of products with France that was its

object. The import trade is largely in British and German hands, while the export trade and the internal commerce is almost monopolized by the Chinese, whose immigration is not checked by a heavy capitation tax. Production and commerce have been greatly stimulated under French dominion, though other nationalities reap the benefits. The foreign trade of Tonquin increased from 10,000,000 francs in 1876 to 48,000,000 francs in 1892. In 1893 it was expected to reach 62,000,000 francs. The staple product of the deltas of the Red river and the Mekong is rice, of which two crops are gathered in the year. The fertility of the country, owing to its rich alluvial soil and moist, hot climate, is extraordinary. Indian corn, tobacco, and indigo are cultivated for export, and beans, yams, and onions for food. The areca palm, bamboo, banana, cocoanut palm, tamarind, litchi, bread tree, mulberry, mango, orange, lemon, and pineapple abound. The cultivation of cotton, tea, coffee, and sugar has been introduced. Tonquin is exceedingly rich in coal, and elsewhere antimony, the precious metals, and other valuable minerals are found. French companies have recently been formed for working the coal deposits, and mills for manufacturing paper, matches, and cotton cloth have been started at Hanoi. There is a railroad 215 miles in length, from Saigon to the mouth of the Mekong, which is operated at an annual loss to the Government of 600,000 francs. In Tonquin a line is being constructed from Phu-Lang-Thuong, at the head of navigation on the Red river, to Langson, on the Chinese frontier, but the work has been much hampered by attacks of the pirates. The Annamite court has agreed to share the expense with the French Government of the construction of a railroad, 400 miles long, from Hué to Hanoi.

Cochin-China and Cambodia raise enough revenue for their administration, and a surplus, which is taken against their will to diminish the annual deficit in Tonquin. This deficit, which was 27,000,000 francs in 1887, was reduced to 6,000,000 francs in 1891. It is caused by the military operations necessary to combat the pirates of the Red river, for which the French Government is obliged to bear the chief part of the expense, contributing in no year less than 25,000,000 francs. The military estimate for 1892 was just that figure. The robbers, who are called pirates although they have been driven from the river and the coasts, descend from the mountainous districts near the Chinese frontier to seize food for themselves and women and children to sell as concubines and slaves in China. The military administration, which was abolished in 1888 on account of the cost in lives and money of incessant fighting, has been partly restored by M. de Lanessan in the districts north of the Delta, which have been placed under military commandants who also exercise civil powers. In the districts of the delta European troops have been replaced by a native civil guard. M. de Lanessan went to Indo-China, having previously made an official investigation for the purpose of putting into operation the policy that he suggested of governing with the aid of native officials, and with special regard to the customs and feelings of the inhabitants. This plan has worked well, and the delta is now completely pacified.

The European soldiery in Tonquin and Annam in 1893, consisting of some regiments of the regular army belonging to the foreign legion, some regiments of marine infantry, and several batteries of marine artillery, number 7,600 men. There is a well-disciplined force of 14,000 Annamite *tirailleurs*, organized like French troops and commanded by 177 French officers. The native militia or civil guards number 2,500 in Annam and 4,800 in Tonquin. The naval division of Indo-China has been withdrawn, and a few gunboats now constitute the naval force.

FRIENDS. Iowa Yearly Meeting.—The Iowa Yearly Meeting met in Oskaloosa, in October. Twelve quarterly meetings in Iowa, 1 in Minnesota, 1 in South Dakota, 2 in Nebraska, and 1 in California, with more than 100 churches in Wisconsin, Colorado, Texas, Louisiana, and Jamaica, were represented. Two or three quarterly meetings sending an excess of delegates, it was decided that in reducing the number the resultant delegations should be equally divided between the sexes. Heretofore the men's meetings and the women's meetings have been held separately, although in the Ohio and New York Yearly Meetings the two had already been united. Propositions for union in this meeting also, which had been under discussion for several years, were again considered, with a final affirmative result. Joint sessions were held during two days, and it was decided to meet in 1894 as one body, with a single presiding officer and assistants of both sexes. In accordance with recommendations from the General Conference of Friends, which met in Indianapolis, Ind., in 1892 (see "Annual Cyclopædia" for 1892), committees were appointed to co-operate with committees from other yearly meetings in measures for the foundation of a central publishing house and the formation of a general board of missions, which last body is, however, intended to be little more than a Bureau of information. A favorable report was made of the Bible schools (Sunday schools), which are now organized under a department with a yearly meeting superintendent. The Department of Education includes Penn College, with several academies. The evangelists laboring under the department of evangelistic work had held 109 series of meetings, at which 1,337 persons had professed conversion, and 700 had united with the Friends; while several new churches had been organized. The meeting resolved that "no political party that in any way upholds or is committed to the interests of the liquor traffic is entitled to or should receive the support of Iowa Yearly Meeting or the Church at large; and our duty as a Church is to stand for the enforcement of every prohibitory liquor law." The statistical report showed that there were connected with the Yearly Meeting 103 churches, of which 66 were regularly organized, with monthly meetings, and 37 were small congregations and missions, with 11,415 members. Of the whole number of churches, 85 had "pastors" receiving partial or entire support.

London Yearly Meeting.—The reports presented at the London Yearly Meeting showed that there were in Great Britain 343 meetings or congregations of Friends, or 3 more than in 1892. In those meetings were 16,244 members,

showing an increase of more than 2,000 in the past twenty years; 6,216 attendants who have not yet reached the stage of membership; and nearly 400 recorded ministers, besides some hundreds who were not yet recognized. The report from Scotland showed a marked increase in Ayrshire, and many earnest inquirers were mentioned in Glasgow. In the discussion upon the state of the society, the chief interest settled upon the tendencies toward agnosticism and toward what was called ultra-evangelicalism. The process of the trial of an appeal from a member against the action of his meeting, which had disowned him, and of the quarterly meeting, which had confirmed its decision, illustrates one of the peculiarities of Friends' discipline. A court

was constituted of one member from each quarterly meeting, except the one appealed against, before which both parties were heard; at the close of the hearing, each party signed a statement that he had been fully and fairly heard; the court then gave its decision, which the Yearly Meeting always accepts as final. In matters of faith and doctrine the whole Yearly Meeting is constituted a court of appeal. The judgment of the Yearly Meeting was expressed against certain methods adopted by the Home Mission Committee, which had been objected to by many Friends as inconsistent and un-Quakerly; and it was decided that a mission committee should be appointed by popular elections in the various quarterly meetings.

G

GEOGRAPHICAL PROGRESS AND DISCOVERY.

But little of note occurred during the year to extend our knowledge of the surface of the globe. Wide fields for exploration still remain, not only in the polar regions, but in South America, Australia, New Guinea, and the interior of Africa, while great areas in Asia, including the northern half of the Tibetan plateau, much of the Kuen-Lun range, the valleys in the Sulimani range, and the sources of the great rivers, together with very extensive tracts in Arabia, are yet unknown. Perhaps one fourth of the land surface of the globe is still unexplored. The arctic expeditions of Dr. Nansen and Lieut. Peary have been followed with interest, but their outcome is still in the future. Some expeditions for discovery have been made in Asia and Africa, but the interest in those continents has centered in the French operations in Siam and the fighting in Matabeleland.

What will perhaps hardly be regarded as progress in this direction is the news from the Royal Geographical Society at London. A vote taken in August on the question of admitting women as fellows of the society on the same footing as men, was decided against the policy by a vote of 172 to 158. It was, however, shown by a plebiscite of the members of the society that but 500 were against the admission of women, while 1,200 were in favor of it.

Polar Regions.—The second expedition of Lieut. Peary sailed north in the summer. Its object is understood to be exploration of the archipelago lying north of Greenland, and a survey of the unknown parts of the northern and northeastern coasts of the island.

Dr. Nansen sailed for Bering Sea in the summer with his vessel, which is so built that pressure in the ice will raise it instead of crushing it. His study of the arctic currents has led him to believe that within three years the ship will be carried very near the pole. Starting from the point near the New Siberian islands, where the "Jeannette" was wrecked, Dr. Nansen hopes to make progress by drifting with the ice diagonally across the region of the north pole into the East Greenland Sea between Spitzbergen and Greenland, and that in this way he will pass by or near the pole, and so pass to that point, on the coast of Greenland, where articles from the

"Jeannette" were found, indicating the direction of the currents.

An arctic exploring party is partly made up for an expedition in the summer of 1894. It will be led by Robert Stein, of the United States Geological Survey, and will have for its main object scientific study of Ellesmere Land and the mapping of its western part. The eastern shore is fairly well known.

At the same time search will be made for traces of the Norwegian students J. A. Bjorling and E. Kalstinius and their three assistants, who disappeared somewhere near the mouth of Smith Sound, having gone there in 1892 to make natural-history collections for the University of Christiania. They were poorly equipped with supplies, and made the journey from Newfoundland in an old schooner, the "Ripple." This was found wrecked on one of the Cary islands in June, 1893. Near it was a grave containing the body of a man supposed to be one of the Newfoundlanders taken as assistants by the young men, and some documents, from which it was learned that they had found a *cache* of supplies left there in 1875 by the Nares expedition, and had gone in a whaleboat to Foulke Fjord, expecting to winter among the natives, as Dr. Hayes did, apparently ignorant of the fact that the Eskimos have not lived so far north for many years. They went as far north as Northumberland island, where they were within easy reach of Peary's house, Red Cliff: but, not knowing this, they returned to the Cary islands, and then set out for Cape Clarence or Cape Faraday in Ellesmere Land, to winter among the Eskimos. There were Eskimos there at the time of Nares's expedition, but it is believed that Ellesmere Land is now deserted. Nothing has been heard of the young men since.

From accounts during the past two years it seems that exploration will soon be renewed in antarctic regions. The International Geographic Congress at Bern, in 1891, warmly advocated the renewal of south polar research. An Australian-Swedish expedition is promised, and interest is aroused in England, which may lead to some results. The winter of 1892-'93 was marked by an enormous fleet of icebergs from antarctic seas. They were seen nearly as far north as the Cape of Good Hope, towering to

a height of 250 to 300 feet above the surface, and every foot above the water means 6 feet below it, the thickness of the great antarctic sheet may be gauged accordingly. Wherever approached, its face has not, as in the arctic regions, been at the head of a fjord, but is an enormous flat-topped precipice, stretching east and west as far as ships have traced it. This edge forms the great southern barrier.

Africa.—An account was given in the "Annual Cyclopædia" for 1892 of a journey by Dr. Oscar Baumann in Eastern Africa, in the course of which he discovered a salt lake hitherto unknown, called Eiassi, southeast of the Victoria Nyanza. On an expedition later in the year, accounts of which did not appear till 1893, he explored the highest sources of the Kagera, which Speke recognized as the most considerable tributary of Victoria lake, and therefore the ultimate source of the Nile. He also followed up its most southern tributary. These remote sources are in about 4° south latitude, so that the Nile in its whole course crosses more than 35 degrees of latitude.

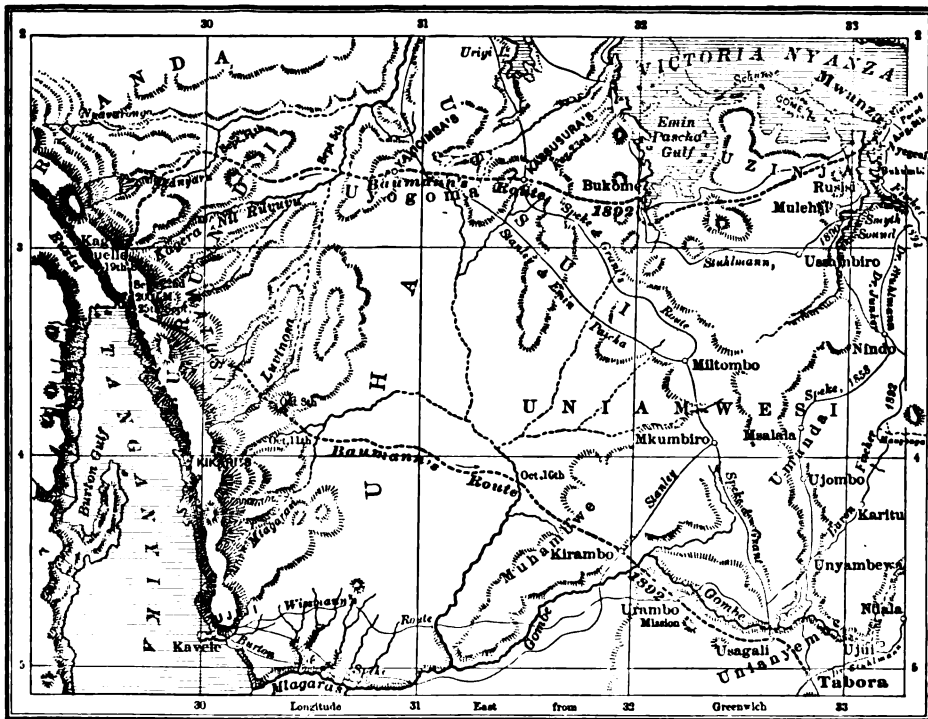

A map is here given of the journey between Victoria and Tanganyika lakes.

Following are extracts from Dr. Baumann's account of his expedition, dated from Tabora, Nov. 8, 1892:

On Aug. 28 I crossed the route of Speke at the village of Kassusura, the present ruler of East Usui. I went on through a well-watered, mountainous country, with ridges stretching to the north-northeast, to

Ujagoma or West Usui, whose inhabitants have a large mixture of the Warundi, while East Usui has a population almost purely Wazinka. The chiefs are everywhere Wahima (Watusi). Sept. 5 we crossed the Kagera, here called the Ruvuvu, and reached Urundi. The people thought I was a descendant of their former race of kings of the Mwesi, the moon, and they greeted us with great enthusiasm, gathering in vast crowds. The route lay farther through grassy steep mountain land to the Akanyaru, which is not a lake, but a river, forming the boundary of Ruanda. The Warundi are accustomed to call every large mass of water "Nyanza," and every lake—as the Victoria, Albert Edward, Urigi—"Tanganyika," which gives rise to errors regarding the lakes. The Mvovongo, here called Nyavarongo, is a river flowing into the Akanyaru northward from my route. I found people in Ruanda who were well acquainted with the Mfumbiro, the Rusizi river, the Victoria and Albert Edward lakes; they all declared that there was no lake in all Ruanda reaching the size of the Urigi, and that the Akanyaru was the greatest river of Ruanda.

Passing southwest and crossing the river a day's journey below its sources, I again entered Urundi. Here lives a bandit tribe of the Watusi, with whom I had a bloody fight in the mountains. Sept. 19 we reached the head of the Kagera (Ruvuvu), which has its source in the high wooded ridge forming the watershed between it and the valley of the Rusizi. The Kagera, as the main tributary of Victoria lake, may be regarded as the principal branch of the Nile, and its source as the source of the great river. This place is the burial ground of the kings of the Warundi. They call the mountains *Mwesi a Mwesi*, "Mwesi's Mountains," as the general name of Urundi is "Land of the Mwesi," or "Moon-land."

MAP SHOWING BAUMANN'S ROUTE.

GERMAN STATION ON THE SLOPE OF KILIMANJARO.

Sept. 22 we crossed the water divide, over 2,000 metres in height, to the broad Rusizi valley, extending northward from Tanganyika and inclosed on both sides by lofty mountains. Judged by the direction of the valley, the Rusizi seems to come from the northwest; I was told that it comes from a water, possibly a lake, called Kiva, which is navigated by canoes, and lies southwest of the Mfumbiro mountains. Perhaps the Kiva is identical with the lake Oso of the maps, but I could not find out. Three days later we reached Tanganyika at Usige, where we saw flourishing oil palms and green parrots. The lake is manifestly subsiding.

From Usige we again ascended the height of the watershed of the Urundi mountains and took a direct southeasterly course toward Uha. On the way we had bloody combats with the Watutsi (Wahima), and carried away over 200 head of cattle. The country is mountainous, traversed by southerly branches of the Kagera, the most easterly of which, Luviroa creek, rises in 4° south latitude. Oct. 8, we ascended the divide from the Mlagarasi, which forms a remarkable climatic boundary; for while west of it rain falls almost daily, the land east of it we found to be completely dry, not a shower having fallen for weeks. The Mlagarasi rises only a day's journey north of Ujiji, forms a curve toward the north, and incloses the well-wooded land of Uha. On the other side is Mubambwe, and thence the route lay through light uninhabited woodland to Kirambo, the boundary district of Unyamwezi, and then through level wooded regions by way of the mission Urambo to Usagali and Tabora. Gombe river is only a succession of pools. Mr. Shaw, of Urambo, who has lived in the region for ten years, says the rivers are becoming smaller every year. May not this be connected with the falling of Tanganyika, since Mr. Shaw notices no great decrease in the rainfall.

In Unyamwezi are many Watutsi, mostly emigrants from Usui and Urundi. They speak pure Kirundi, called the Kitutsi. I find that the name "Unyamwezi" is not national, but is applied to the country by the people on the coast, apparently be-

cause the Arabs supposed that there was in this part of Africa a "Moon Land."

The map also shows the route taken by the late Baron Fischer from Tabora to Victoria lake, a route followed by no other European.

The expedition of W. A. Chanler and Lieut. Ritter v. Höhnelt, in 1892-'93, in the country eastward of Mount Kenia, has led through some hitherto unexplored regions. They passed up Tana river to the mouth of its tributary, the Mackenzie, followed that to its source, then traveled north and northwest until they struck the Guasso-Njiro, and followed it to its ending in a swampy region called Lorian, at 89° 38' east longitude. It has been supposed that this river was tributary to the Tana. This whole region seems to be uninhabited. Most of the land passed over is hilly, and extinct volcanic craters were observed. The Mackenzie is described as a charming little stream, rising in mountains called the Djambeni chain. This region is inhabited by a large population of farming people, the Wa-Embe. On the west of the mountains are the Wa-Msaara; at the southern foot of the chain the Wa-Daitscho live toward the east, the Ooti toward the west, and between them and the Wa-Msaara the Djanjai. The north is uninhabited. All these tribes speak Bantu dialects, varying from one another, and yet nearly related to the Kikuyu. Lieut. v. Höhnelt estimated the entire population at about 30,000. The Djambeni mountains are of nearly uniform height, only a little higher in the south, estimated at about 2,100 metres.

The Guasso-Njiro flows through a deep bed of gneiss, scarcely observable at any distance, so that the travelers were obliged to follow all its

windings. On one side the landscape is a desolate volcanic region, but in places are parklike stretches where the valley widens out, and other trees besides the monotonous doom palm come into view. In one place it flows between high perpendicular walls of basalt, and forms two falls from 12 to 15 metres in height. These were named Chanler Falls. Farther down it passes along the foot of a remarkable plateau, 130 to 150 metres in height. This is flat, like a table, and falls away steeply on all sides. At points around it are bastionlike rocks, and the whole plateau has the appearance of a fortress. It is volcanic, and is called by the natives Mariss el Logworambo. Remains of old kraals of the Wa-Ndorobbo were found in this deserted region.

Retracing the march up the Guasso-Njiro, the travelers took a return route farther west in order to visit the country of the Wa-Msaara, who were found very unfriendly, unlike the Wa-Embe, who had furnished guides to the lower river. The Djambeni mountains were here seen to be a chain of volcanic origin, running south-south-west and north-northeast, and outlying Mount Kenia toward the northeast, much as the Djulu chain is situated with regard to Mount Kilimanjaro. Numerous craters are found at the northeastern foot of Kenia. The ridge connecting it with the Djambeni is the water divide between the valleys of the Tana and the Guasso-Njiro.

The Msaara were hostile, refusing to provide supplies, and the attempt of Chanler's men to take some sheep and cattle led to a sharp encounter, in which the expedition lost 3 men, while several others were wounded. The main object of the expedition thereafter was to reach the country of the Borana-Galla.

Later advices are to the effect that Lieut. v. Höhnel was dangerously wounded by a rhinoceros Aug. 22, at Seja, at the southern end of the Boroghi range, about 180 kilometres north of Mount Kenia, and was obliged to give up the rest of the intended journey, and go to a mission station for treatment.

The report of the journey of Joseph Thomson in 1890-'91 appeared this year, having been delayed by his illness. Its most important point is that regarding Lake Bangweolo. He confirms the supposition that the southern part of the basin can not be regarded as lake proper, but that in the rainy season it is a great swamp region, called "Lunda," covered in places with water. Mr. Thomson could not visit the point where Livingstone died, in 1873, but determined its location by the aid of his interpreter.

The rapid development of Mashonaland is one of the most remarkable of recent geographical changes. While it had been visited six years ago by not more than 2 or 3 white men, it has at present more than 3,000 white settlers, attracted by the gold fields. A railroad in process of construction will connect it with the coast at the mouth of the Pungwe river, where there is a fine harbor. This is about 115 miles below the Zambezi delta. The harbor is about 2 miles wide and 6 miles long, and on its northern shore has arisen the town of Beira, where 500 Europeans, half of them British, are now living. Probably no white man six years ago had ever seen the barren promontory of sand now occupied by this town. Salisbury stands 5,000 feet

above the sea level, on a *kopje* rising from a large plain. Its neighborhood has been drained by the South Africa Company. Other towns are Victoria and Umbali. The country contains, according to Mr. Bent, about 40,000 square miles suitable for colonization, as having an improving climate, and as producing, even under native cultivation, excellent rice, tobacco, tomatoes, sweet potatoes, chillies, and groundnuts. But it is on its gold mines that the future of Mashonaland depends.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population in 1890 was 1,837,353, of whom 858,996 were colored. Capital, Atlanta.

Government.—The following were the State officers during the year: Governor, William J. Northen, Democrat; Secretary of State, Philip Cook; Comptroller-General, William A. Wright; Treasurer, Robert U. Hardeman; Attorney-General, Joseph M. Terrell; Commissioner of Agriculture, Robert T. Nesbitt; State School Commissioner, S. D. Bradwell; Railroad Commissioners, Allen Fort, L. N. Trammell, and Virgil Powers; Chief Justice of the Supreme Court, Logan E. Bleckley; Associate Justices, Thomas J. Simmons and Samuel Lumpkin.

Finances.—The Comptroller's report for the year ending Sept. 30, 1893, shows the condition of the treasury to be as follows: Balance, Oct. 1, 1892, \$748,051.63; receipts from Oct. 1, 1892, to Sept. 30, 1893, \$2,855,974.24; amount, \$3,604,025.87; total payments by Treasurer, \$2,464,188.42; balance in treasury Oct. 1, 1893, \$1,139,837.45. Of the receipts, \$1,926,863.20 was from the general tax for 1892, and \$82,417.21 from that of 1891. The insurance tax for the year amounted to \$48,772.62, and the liquor tax to \$112,053.84. The railroad tax was \$143,547.29, and the rental from the Western and Atlantic Railroad, \$385,011. For convict hire in 1892 the State received \$25,000.

Among the larger items of disbursements were: On account of the civil establishment, \$119,383.86; of the fund for maimed soldiers, \$185,000; of the lunatic asylum, \$197,500.02; of the public debt, \$280,230; of the school fund, \$952,199.08; of colored schools, \$6,000; of widows' pensions, \$243,600; of special appropriations, \$195,488.80.

The total amount of valid interest-bearing bonds of the State is \$3,149,500, and the total interest to be paid on them in 1894 is \$368,835.

The school fund amounts to \$1,063,657.81. Of this, \$600,000 comes from direct assessment, and the remainder is made up from half the rental of the Western and Atlantic Railroad, the tax on liquor dealers, the net hire of convicts, the fees for inspection of oils, the lease of oyster lands, and other sources.

The assessed value of the whole property of the State subject to taxation amounted in 1893 to \$452,644,907, of which \$42,000,154 was of the taxable property of railroads. The property of railroads that is exempt by their charters from *ad valorem* taxation, and is therefore not included in the statement above, is estimated at \$20,000,000. Of the valuations of real estate, \$122,540,587 is of city and town property, and \$131,214,047 of agricultural lands. The property

owned by colored taxpayers is assessed at \$14,960,675, having increased to that amount from \$5,182,398 in 1879. The whole assessment of taxable property amounted in 1879 to \$234,959,548.

Education.—When the present system of common schools was inaugurated, in 1871, the school fund amounted to only \$174,107.02, not including the poll tax, which is kept in the counties and does not go into the State treasury. In 1893 the fund, not including the poll tax, was \$1,058,532.52. The enrollment in 1871 was 49,578, of whom 6,664 were colored. In 1892 the total enrollment was 415,647, of whom 161,705 were colored. The number of schools in 1871 was 1,573, of which 221 were colored. In 1892 there were 5,047 white and 2,093 colored schools. During the same period the school population has increased from 314,973 to 604,971. Only since 1889 has any portion of the school fund been raised by direct taxation. In that year the amount raised by direct tax was \$165,000; in 1893 it was \$688,560. The educational tax proper is 1-4 mill. The expenses of the department of education in 1893 were \$5,125.29. There were in 1892 teachers to the number of 7,929, of whom 2,685 were colored. The percentage of illiteracy in the State is given as follows in the superintendent's report: White illiteracy, 11 per cent.; colored, 27 per cent.; average, 18 per cent.

The Normal-School act of 1891 provided for the acceptance of the Rock College building and 6 acres of land near Athens. With this gift was included the Gilmer fund of \$15,000, left by the late Gov. Gilmer for training teachers; and out of the Peabody fund for the year was \$800 set aside for an institute at Athens. In addition to this, 5 counties agreed to hold their county institutes there during the summer of 1892. In these ways a fund of \$1,925 was raised for the Normal-School work. A continuous session was held for seven weeks, during which time instruction was given to teachers from 32 of the counties. During the week of the county institutes there was an enrollment of 213, and the remainder of the session 112. No appropriation was made for 1893, and the means collected from available funds and by private subscription were only sufficient to provide for the expenses of a six weeks' term, with 9 instructors. There was a total enrollment of 116 students from 35 counties, with an average enrollment of 75, and an average daily attendance of 60.

The Technological School, which is in its seventh year, opened in September with 150 students.

The ninety-third session of the University of Georgia opened Sept. 20, with an attendance the largest for many years.

Railroads.—The year has been unusually hard for railways. Two thirds of the property of those in Georgia is said to be in the hands of receivers. The Atlanta and Florida was sold under foreclosure. The Georgia Central was put into the hands of a receiver in 1891, and a decree has been issued for its sale. It has been operated by the Richmond and Danville road.

A bill was filed in the United States court, Dec. 15, by the Central Trust Company of New York, praying for the foreclosure of a mortgage against the Chattanooga, Rome and Columbus

Railroad, and also the Savannah and Western Railroad. The complainant alleges that a principal of \$2,090,000 is due on the bonds of the two railroads, which are under the same management and practically one company, in addition to the interest up to Sept. 1, amounting to \$52,250, and the interest on both amounts since that time and up to the filing of the bill.

The gross earnings of the Georgia Southern were reported to have been \$768,445 in 1892, and \$817,321 in 1893; but under the receivership the expenses were increased during 1893 by \$115,567. The road earned net, in 1892, \$243,000, and in 1893, \$176,000. The reason of the apparent increase in expenses under the receivership is due to the law of the interstate commission, which requires all expenditures of the road, except court costs and taxes, to be charged to operating expenses.

At a meeting of the directors of the Southwestern, Dec. 27, the board authorized the president to take the road from the control of the Central and put it on an independent footing. It also declared that "it is the purpose of this company to provide the funds necessary to meet any liability that may be adjudged against it upon the so-called tripartite bonds." The president and treasurer were authorized to execute a mortgage or deed of trust, and issue bonds payable in gold after fifty years and bearing interest not exceeding 5 per cent.

The Savannah extension of the Florida Central and Peninsular Railroad was completed in December. The distance between Savannah and Jacksonville by this route is 138 miles, while by the older route it is 172.

The annual report of the Western and Atlantic shows the total receipts to have been \$1,396,800.42; total expenses, \$955,640.95; net earnings, \$440,650.47; rental, \$420,012; taxes, \$9,948.23; balance, \$10,699.24.

Prisons.—Convicts to the number of 102 were admitted to the Penitentiary in 1892. During the last three months of that year 181 had been sent to the camps. The report for October, 1892, showed that the number of convicts amounted then to 1,940, of whom 194 were white males and 1,690 colored males, 2 white females and 54 colored females. This does not include criminals in the chain gangs. There are 277 under sentence for life, 15 of whom were under seventeen when admitted, and 60 under twenty-one. Of the whole number of convicts, 130 were under seventeen when sentenced, and 632 under twenty.

The Governor urged the Legislature to establish a reformatory for youthful criminals, but a bill introduced for that purpose failed to pass.

Atlanta.—The capital city completed on Dec. 28 the first fifty years of its existence, having received its charter in 1843. Its first name was Terminus, the place having been fixed as the terminus of the Western and Atlantic Railway, which was then building, though it was not until 1845 that railway connection was carried to that point. When the charter was applied for, in 1843, the name Marthasville was chosen, suggested by the name of a daughter of Gov. Lumpkin; but when a new charter was granted, in 1847, the present name was substituted. A celebration had been planned for this year, but ow-

ing to the stringency in money affairs it was postponed until May, 1894. By the addition of West End the population of the city was increased to 120,000—according to the estimate of an Atlanta newspaper.

Augusta.—An exposition was opened in Augusta in December, which was well attended and highly successful. It was estimated that 30,000 visitors were present on the 12th.

The Cotton Spinners' Southern Association was organized in Augusta, Dec. 13. It was resolved to make it a permanent organization as soon as the number of 200,000 spindles shall be subscribed. The principal work proposed by the association is the arranging of freight rates. Weekly reports will be circulated regarding sales, output, and prices of yarns.

Crawfordville.—A statue of Alexander H. Stephens was unveiled May 24 at his grave at Crawfordville, his home and birthplace, in the presence of a large gathering of Georgians and amid great enthusiasm.

Brunswick.—Yellow fever broke out in this city in August, and the Mayor issued a proclamation advising all who could to leave the city, and free passes over the railroads were furnished to many otherwise not able to go. Refugees left in large numbers. Most of the cities of the State were quarantined against them, but Atlanta allowed free entrance, though precautions were taken to detect and isolate any possible cases of the disease. It was estimated that 1,000 citizens of Brunswick were there at the time trains were stopped running from the infected city. The stoppage of business caused great distress among those left behind, and help was freely sent from other cities. Four thousand people were dependent on the supplies thus received.

Storms.—A cyclone swept over Greenville, La Grange, and other towns in western Georgia, on the evening of March 3. Eighteen persons were reported killed, and a great number injured. Three fourths of Greenville was devastated, and the little villages of Piedmont and Odessa were almost completely destroyed. The storm of Aug. 27 and 28, that swept the southern Atlantic coast and caused great loss of life and property, was very severe at Savannah and on the Sea Islands, though its greatest fury was spent on the South Carolina coast. In Tybee roads and Savannah river large vessels were blown across the marshes and landed on the islands. At Savannah the streets were impassable from the *débris*. Twelve barks and barkentines that were anchored at quarantine station were blown upon the marsh, and some of them were carried across the marshes to an island 2 miles from the station. One vessel at Tybee was completely capsized, and 3 of the clubhouses on the island were blown down. Others were flooded, and the people sought shelter wherever they could. The ruin at quarantine was complete. Nothing was left standing where one of the finest stations on the south Atlantic was, except the doctors' house.

The "City of Savannah," a steamer of the Boston line, was wrecked and thrown ashore on Hunting island. The number of lives lost in Savannah was estimated at 40 to 50.

Legislative Session.—The annual session of the Legislature began Oct. 25, and ended Dec. 13, having lasted fifty days. More than 1,300 bills

and resolutions were acted upon. The most important measure of the session was a bill to create State banks of issue, called the Veach or Calvin-Veach bill. The general plan and purpose of the bill was thus described by Mr. Veach, its author: All the capital stock of the bank must be fully paid in lawful currency or coin of the United States. One half of this must be deposited in the vaults of the bank as a fund for the redemption of bills, and can be used for no other purpose, under penalty of imprisonment in the Penitentiary. The other half shall be invested in United States, State, county, and municipal bonds worth not less than par of their face value. These bonds are deposited with the State Treasurer as security for the bills of the bank. On the money so deposited in the vaults of the bank, and the bonds deposited with the State, such bank is allowed to issue and circulate bills to an amount equal to 3 times the fund required to be kept on deposit in the vaults of the bank.

A law was passed to do away, if possible, with mob violence and lynching. It authorizes any sheriff who may have reason to believe that violence of that character is contemplated to summon a posse of citizens, who must respond or be punished for a misdemeanor. It is also made a misdemeanor for a sheriff to fail to call a *posse* together in such an emergency; and these citizens so responding are authorized to carry weapons for the purposes of duty. To participate in a mob, or to band together for the purpose of inflicting punishment upon any citizen of the State is made a felony, punishable by one to twenty years in prison; and should death result from the violence of the mob, each participant is subject to indictment for murder.

A large number of convicts will be released from prison by the operation of a law providing that the Governor may order the release of any convict who has served what would now be the maximum sentence for his crime.

Two important bills for constitutional amendments provide that the General Assembly shall meet in June, instead of November, and for the increase of the supreme bench from 3 justices to 5. These proposed amendments are to be submitted to the people at the next general election.

Several bills relating to schools were passed, among them one reducing school boards from 5 to 3, and paying the members a regular salary; one abolishing monthly teachers' institutes, leaving the annual sessions as before; one providing for coeducation in the Normal School at Athens—a measure which was strongly opposed but finally passed; and one providing for payment of the school tax directly to the treasury. In 1892 the schools received but \$209,391.62 from the poll tax, while there were at least 400,000 voters, with 285,000 polls returned. By the new law, all money belonging to the common-school fund, beginning with the taxes for the year 1894, including poll tax and specific taxes, is to be paid direct into the State treasury.

Four of the bills passed concerned the State militia. The first was for the reorganization of the Governor's staff. The next is for the reorganization of the State militia itself. The third permits the Governor to appoint second lieutenants of volunteers from first-merit graduates of State

colleges giving military instructions. The fourth is that creating a battalion of naval militia.

A bill in relation to the dismissal of cases by the Supreme Court provides that no case shall be dismissed on account of errors in the record, or because too much or not enough of the record has been sent up. In such event time is to be allowed in which to make the necessary corrections.

Public executions were prohibited—a measure that met with general commendation.

A joint resolution for the codification of the laws was passed after a prolonged struggle.

Legislation affecting the city of Atlanta provided for the extension of the city limits, taking in the new water works for police purposes, and annexing West End, a suburb whose citizens had voted in favor of annexation, to go into effect Jan. 1.

The city was authorized to borrow annually \$200,000, instead of \$150,000. Certain officials heretofore chosen by vote of the council will now be elected by the vote of the people.

Resolutions were adopted declaring it to be the sense of the Legislature of Georgia that it is "to the interest of the people of the United States that the Government should coin both gold and silver as the money of final payment, without discriminating against either metal, the dollar unit of coinage of which shall be of equal intrinsic and exchangeable values." That it is "the constitutional right of the several States to enact their own banking laws, by which banking corporations within their borders shall be empowered to issue bank bills for circulation among their people for the necessary transaction of business, and that there is no constitutional right in the General Government to lay upon the States a prohibition against the exercise of such right, or to restrict, regulate, or control the exercise of such right." That "taxation, whether direct or indirect, is only justified as a means of raising revenue for the support of the Government, and that, therefore, customs duties should be laid for the purpose of revenue only; and we indorse the present Administration and the present Congress in their efforts so to readjust the tariff laws that they shall be upon a strict revenue basis only," and favoring a graduated income tax.

Other measures passed were these:

To create a board of pharmaceutical examiners.

To make all laws regulating the business of insurance in this State by companies apply to individuals, associations, and corporations in like business.

To permit foreign executors to transfer stocks, etc.

To provide for granting corporate powers to banking, insurance, railroad, canal, navigation, express, and telegraph companies.

To amend the general road law.

To make it penal to threaten to destroy property by fire.

To punish larceny of election returns.

To permit Confederate soldiers to peddle without license.

To extend certain privileges to all Confederate soldiers.

Requesting a continuance of Federal appropriations to the experimental station.

To require the Commissioner of Agriculture to publish statistics.

To prohibit commercial notaries public from issuing garnishments.

To amend the law relative to time of residence of applicants for divorce.

To allow county authorities to condemn land for drainage.

To forbid the sale of liquor in any prohibition county.

For the relief of holders of real-estate security for debt.

To define newspaper libel.

To amend the law in regard to pensions of widows of Confederate soldiers, designed to provide for such as have become widows since 1890, and soldiers' wives who may be widowed hereafter.

Claim against the United States.—Under an act of 1802, Georgia ceded to the General Government territory now embraced in Alabama and Mississippi, for which the sum of \$1,250,000 was to be paid to the State "out of the first net proceeds of the sales of the lands thus ceded, which net proceeds shall be estimated by deducting from gross amount of sales the expenses incurred in surveying and incident to the sale," as a consideration for the expense incurred in relation to the territory; "and, for the better securing as prompt a payment of the said sum as is practicable, a land office for the disposition of the vacant lands thus ceded shall be opened within twelve months." It is claimed that while \$1,000,000 or more has been paid, the records do not show that a complete settlement has ever been reached, the Government claiming certain offsets to whatever balance was left. The State has tried several times to secure a settlement. The subject is now brought up again, and a resolution was passed in the Legislature calling for an investigation.

GERMANY, an empire in central Europe, constituted at the close of the Franco-Prussian War, when the states of the North German Confederation, the Kingdoms of Bavaria and Württemberg, and the Grand Duchies of Hesse and Baden offered the crown and dignity of German Emperor to the King of Prussia. The proclamation of the empire took place at Versailles on Jan. 18, 1871. The Constitution of April 16, 1871, provides that all the states of Germany form a perpetual union for the protection of the *Reich* and the welfare of the people. The *Deutscher Kaiser*, or German Emperor, is the chief commander of the military forces; he can make treaties, declare war, and conclude peace; but for an offensive war he must obtain the consent of the Federal Council. All diplomatic representatives are accredited to him. The Bundesrath, or Federal Council, is composed of 58 plenipotentiaries, appointed by the sovereigns of the states forming the empire. Alsace-Lorraine is represented in the Bundesrath by 4 commissioners, appointed by the Statthalter, who have no vote. The Bundesrath can legislate, together with the Reichstag, upon all matters concerning military and naval forces, finances, commerce, domicile, communications, and justice. The Reichstag consists of 397 members, elected by universal suffrage for the term of five years. The Emperor has the right to prorogue or dissolve the Reichstag with the consent of the Bundesrath. All bills must receive an absolute majority of the Bundesrath and Reichstag, and bills thus passed can not be vetoed by the Emperor, but in order to become effective must have his consent and be countersigned by the Chancellor of the Empire.

The reigning sovereign is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III, whom

he succeeded as German Emperor and King of Prussia on June 15, 1888. The heir apparent is Prince Friedrich Wilhelm, born May 6, 1882. The Chancellor of the Empire is Gen. Count Georg von Caprivi, appointed March 20, 1890. The Secretaries of State, who do not form a ministry or cabinet, but act independently of each other, under the supervision of the Chancellor, were the following, in the beginning of 1893: Foreign Affairs, Freiherr Marschall Bieberstein; Imperial Home Office and Representative of the Chancellor, Dr. von Boetticher; Imperial Admiralty, Herr Hollman; Secretary and Admiral, Freiherr von der Goltz, Commander-in-Chief; Ministry of Justice, Herr Hanauer; Imperial Treasury, Freiherr von Maltzahn; Post-Office, Dr. von Stephan; Railroads, Dr. Schultz; Imperial Exchequer, Herr von Wolff; Invalid Fund, Dr. Rösing; Imperial Bank, Dr. Koch; Imperial Debt Commission, President, Herr Meinecke.

Area and Population.—The area of Germany is 208,738 square miles, and the population on Dec. 1, 1890, was 49,428,470. The following table shows the area in square miles and the population of the different states comprising the German Empire, according to the definite results of the census of Dec. 1, 1890:

STATES.	Area.	Population.
Prussia.....	184,468	29,957,867
Bavaria.....	29,389	5,594,989
Württemberg.....	7,528	2,086,522
Raden.....	8,821	1,637,867
Saxony.....	5,757	2,502,684
Mecklenburg-Schwerin.....	5,185	573,849
Hesse.....	9,965	992,883
Oldenburg.....	2,479	354,968
Brunswick.....	1,494	408,778
Saxe-Weimar.....	1,888	326,091
Mecklenburg-Strelitz.....	1,181	97,478
Saxe-Meiningen.....	928	288,889
Anhalt.....	906	271,963
Saxe-Coburg-Gotha.....	755	206,518
Saxe-Altenburg.....	511	170,564
Lippe.....	469	128,495
Waldeck.....	438	57,381
Schwarzburg-Rudolstadt.....	368	55,868
Schwarzburg-Sondershausen.....	389	75,610
Reuss-Schleiz.....	319	119,811
Schaumburg-Lippe.....	181	89,168
Reuss-Greiz.....	129	62,754
Hamburg.....	156	692,530
Lübeck.....	115	76,455
Bremen.....	99	180,448
Alsace-Lorraine.....	5,668	1,608,506
Total.....	208,738	49,428,470

Of the total population, 24,230,832 were males and 25,197,638 were females. In 1890 the population was divided according to religion as follows: Protestants, 31,026,810; Roman Catholics, 17,671,929; other Christians, 148,532; Jews, 567,884; no religion, 13,315. The number of marriages in 1890 was 395,356; births, 1,820,264; deaths, 1,260,017; excess of births, 560,247. The population of the principal towns on Dec. 1, 1890, was as follows: Berlin, the capital, 1,579,244; Hamburg, 569,260; Leipzig, 357,147; Munich, 350,594; Breslau, 335,186; Dresden, 289,844; Cologne, 231,681; Magdeburg, 202,324; Frankfurt on the Main, 179,985; Hanover, 163,593; Königsberg, 161,666. In 1891 the number of emigrants was 120,089, of whom 113,046 were destined for the United States, 3,779 for Brazil, 2,130 for other American countries, 599 for Africa, 97 for Asia, and 438 for Australia.

Finances.—The expenses of the Government are covered by revenues derived from customs, certain excise duties, posts, telegraphs, and state railroads. The deficit remaining is made up by the individual states in proportion to their population. The ordinary revenue for 1892-'93 was estimated at 1,047,497,000 marks (1 mark = 23.8 cents), and the extraordinary revenue at 154,422,000 marks, making the total revenue 1,201,919,000 marks. The ordinary expenditure was estimated at 1,062,805,000 marks, and the extraordinary expenditure at 154,422,000 marks, giving a total expenditure of 1,217,227,000 marks. Of the total revenue for 1893, 603,834,000 marks were derived from customs, 37,109,000 marks from stamps, 21,222,900 marks from posts and telegraphs, 19,824,800 marks from railroads, 1,253,200 marks from the Government printing office, 4,772,700 marks from the Imperial Bank, 12,064,000 marks from receipts of the various departments, 25,164,600 marks from interest of the invalid fund, 295,000 marks from interest of imperial funds, 1,096,900 marks from various other sources, 154,422,000 marks from extraordinary receipts, and 320,859,700 marks from matricular contributions of the different states. Of the total expenditure, 423,200 marks were for the Reichstag, 150,400 marks for the Chancellery, 9,901,200 marks for the Foreign Office, 19,896,800 marks for the Home Office, 427,285,200 marks for the army, 45,298,800 marks for the navy, 2,048,800 marks for the Ministry of Justice, 356,059,700 marks for the imperial treasury, 308,200 marks for the railroads, 60,865,800 marks for the debt of the empire, 625,700 marks for the Audit Office, 42,646,500 marks for the Pension fund, 25,164,600 marks for the Invalid fund, and 226,552,100 marks for extraordinary and nonrecurring expenses. The funded debt of the empire amounted to 1,317,797,700 marks on March 31, 1891, bearing 3, 3½, and 4 per cent. interest.

The following table shows the budgets of the different German states, and their debts, in marks, in 1893:

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine.....	50,717,080	47,415,815	25,522,700
Anhalt.....	11,762,000	11,762,000	1,774,383
*Baden.....	69,128,447	76,469,126	880,806,649
Bavaria.....	806,292,271	806,292,271	1,828,840,157
*Bremen.....	16,718,749	22,493,778	80,253,600
Brunswick.....	13,010,000	18,010,000	27,886,588
*Hamburg.....	58,058,000	62,801,100	280,341,181
Hesse.....	27,016,985	26,664,238	86,246,151
*Lippe.....	1,101,909	1,076,489	810,398
*Lübeck.....	8,564,546	8,564,846	9,843,861
Mecklenburg-Schwerin.....	4,128,600	4,128,800	82,604,600
Mecklenburg-Strelitz.....	6,006,000
Oldenburg.....	6,997,151	6,671,181	86,719,202
Prussia.....	1,851,115,697	1,851,115,697	6,061,747,916
Reuss-Greiz.....	1,225,541	1,225,541	109,000
*Reuss-Schleiz.....	1,771,220	1,764,841	1,040,550
*Saxe-Altenburg.....	3,822,554	3,822,559	887,470
Saxe-Coburg-Gotha.....	1,647,800	2,074,408	3,455,299
*Saxe-Meiningen.....	6,898,750	5,716,250	12,394,127

Schwarzburg-Rudolstadt.....	2,542,950	2,542,950	4,018,688
Schwarzburg-Sondershausen.....	2,764,455	2,764,455	8,547,880
*Waldeck.....	1,186,802	1,186,802	2,188,400
Württemberg.....	66,193,657	66,193,657	426,286,558

* Budget estimates for 1892.

The Army.—Service in the army is compulsory on every able-bodied German citizen between the ages of seventeen and forty-five. Every young German, after finishing his twentieth year, is called upon to present himself for the medical examination, which is held twice a year, and those who are found fit for active service are assigned to a regiment in any part of the country to which they thenceforward belong. The recruits report for active duty in the fall of the year, and have to serve with the colors for three years, except those who by superior education have been able to pass a rigid examination, and these are called volunteers, because they may choose the regiment in which they desire to serve, their service lasting only one year. Owing to the limited amount of money granted by the Reichstag for the army a large number of able-bodied recruits can not be received in the active army, and they are therefore placed among the *Ersatztruppen*, in which the term of service is twelve years. Having served three years in the active army, or where proficiency has been gained in two years, the men are transferred to the reserve, where they remain for four more years. The active troops together with the reserve form the standing army. Passing out of the standing army, the men belong to the first ban of the Landwehr for another five years, and to the second ban of the Landwehr until they have reached the age of thirty-nine years. All men not belonging to any of the above branches of the army between the ages of seventeen and forty-five form part of the Landsturm; those between the ages of seventeen and thirty-nine belong to the first ban, and those from thirty-nine to forty-five years of age to the second ban of the Landsturm.

According to the laws of Jan. 27 and July 15, 1890, the army is composed of 20 army corps, of which Prussia has 15, Bavaria 2, Saxony 1, Württemberg 1, and 1 corps, the guards, is common to all states. Each army corps consists of 3 divisions of infantry and cavalry, 1 brigade of field artillery, 1 regiment or 1 battalion of foot artillery, 1 battalion of pioneers, and 1 battalion of train. Every division is composed of 2 brigades of infantry and 1 brigade of cavalry. Each brigade has 2 regiments; a regiment has 3 battalions, and a battalion has 4 companies of 134 men each in time of peace, which number is increased to 250 in time of war. The peace effective for 1893 was as follows: 173 regiments of infantry, numbering 10,574 officers and 817,354 men; 19 battalions of rifles, numbering 410 officers and 11,164 men; 277 Bezirkskommandos, numbering 570 officers and 5,211 men; 2,192 surgeons, instructors, etc.; 93 regiments of cavalry, numbering 2,350 officers and 66,145 men, with 63,620 horses; 43 regiments of field artillery, numbering 2,369 officers and 49,109 men, with 26,104 horses; 14 regiments and 3 battalions of foot artillery, numbering 728 officers and 17,256 men, with 30 horses; 20 battalions of pioneers; 2 railroad regiments, consisting of 1 balloon detachment, 1 railroad battalion, and 2 railroad companies, numbering in all 588 officers and 12,321 men; 21 battalions of train, numbering 299 officers and 6,905 men, with 3,906 horses; and 2,636 officers and 3,113 men in special formations and unattached; giving the grand total

of 20,524 officers, 491,220 men, and 93,750 horses. The war strength of the German army is estimated at 2,234,631 men, 3,358 guns, and 439,759 horses. Adding the men of the Landsturm, about 700,000, Germany could put nearly 3,000,000 men into the field.

The Navy.—The German navy, on April 1, 1892, consisted of 15 seagoing ironclads, 17 coast-defense ironclads, 8 frigate cruisers, 9 corvette cruisers, 6 cruisers, 8 gunboats, 8 avisos, 9 schoolships and boats, 8 vessels for miscellaneous purposes, 6 torpedo gunboats, 8 torpedo dispatch vessels, 1 torpedo ship, 1 tender, and 116 torpedo boats. The navy was commanded in 1892 by 12 admirals and 960 officers; the noncommissioned officers, marines, and sailors numbered 17,290.

Posts and Telegraphs.—The imperial post-office and the separately administered royal post-offices of Bavaria and Württemberg in 1891 carried together 1,146,989,460 letters, 376,847,420 postal cards, 457,311,140 pieces of printed matter, 28,564,880 samples, and 861,449,999 newspapers. The money remittances amounted to 22,555,537,807 marks. The receipts of the united postal and telegraph offices in 1892 amounted to 265,464,036 marks, and the expenses to 246,423,643 marks, leaving a surplus of 19,040,393 marks.

The length of the telegraph lines of the empire, in 1891, was 67,536 miles, with 238,355 miles of wire. There were transmitted over the wires 28,114,373 messages, of which 19,461,174 were inland telegrams and 8,653,199 were foreign. There were 147,303 persons employed in the united postal and telegraph offices in 1891.

Commerce.—The general commerce for 1891 was valued at 4,970,754,000 marks for imports and 3,731,759,000 marks for exports. The value of the special commerce was 4,408,404,000 marks for imports and 3,339,755,000 marks for exports.

The following table shows the imports and exports of the special commerce for 1891 of the various classes of merchandise, in marks:

MERCHANDISE.	Imports.	Exports.
Animals.....	244,885,000	22,708,000
Animal products.....	120,491,000	22,549,000
Articles of consumption.....	1,266,474,000	414,226,000
Seeds and plants.....	40,409,000	25,973,000
Fuel.....	116,234,000	135,230,000
Fats and oils.....	244,970,000	25,685,000

The value of horses imported in 1891 was 73,525,000 marks; of swine, 71,996,000 marks; of wheat, 163,412,000 marks; of rye, 137,155,000 marks; of barley, 103,916,000 marks; of coffee, 219,320,000 marks; of petroleum, 65,391,000 marks; of raw hides, 98,890,000 marks; of raw cotton, 234,006,000 marks; of wool, 245,507,000 marks; of woolen yarn, 85,357,000 marks; of raw silk, 94,492,000 marks. The value of hops exported in the same year was 26,228,000 marks; of

sugar, 227,808,000 marks; of coal and coke, 148,808,000 marks; of aniline dyes, 44,287,000 marks; of wooden goods, 47,123,000 marks; of paper, 54,938,000 marks; of leather goods, 108,653,000 marks; of cotton cloth, 56,300,000 marks; of mixed silk and cotton cloth, 114,790,000 marks; of woolen fabrics, 148,140,000 marks; of hosiery, 87,155,000 marks; of ribbons and trimmings, 113,289,000 marks.

The commerce with the different foreign countries and the German free ports in 1891, in marks, is set forth in the following table:

COUNTRIES.	Imports.	Exports.
German free ports	17,854,000	54,472,000
Great Britain	874,511,000	694,000,000
Austria-Hungary	740,520,000	847,800,000
Russia	740,520,000	962,000,000
Netherlands	275,000,000	20,000,000
France and Algeria	700,000,000	387,000,000
Belgium	21,100,000	158,210,000
Switzerland	124,000,000	184,010,000
Italy	151,000,000	62,000,000
Norway and Sweden	2,000,000	118,541,000
Denmark	75,000,000	74,000,000
Russia-Polonia	3,000,000	100,185,000
Spain	54,000,000	40,000,000
Portugal	1,000,000	16,102,000
British India	187,001,000	24,000,000
Rest of Asia	67,000,000	64,000,000
Africa	58,000,000	39,771,000
North and Central America	474,000,000	890,000,000
South America and West Indies	611,000,000	182,227,000
Australia	38,100,000	50,187,000
Other countries	75,000,000	10,000,000
Total	4,608,404,000	3,808,760,000

Navigation.—During 1891 there were 66,747 vessels, of 14,799,937 tons, entered at all the German ports, and 68,652, of 14,795,738 tons, cleared. Of the vessels entered, 58,304, of 12,558,073 tons, were with cargoes, and 10,543, of 1,241,864 tons, came in ballast; of those cleared, 49,113, of 9,965,804 tons, were with cargoes, and 10,539, of 4,829,934 tons, went in ballast. Of the vessels entered, 5,484, of 4,440,819 tons, were British; 6,232, of 830,016 tons Danish; 8,069, of 644,496 tons, Swedish; 1,299, of 204,444 tons, Dutch; 1,104, of 450,816 tons, Norwegian; and 569, of 160,513 tons, Russian; while 43,620 vessels, of 7,529,700 tons, were flying the German flag. Of the vessels cleared, 5,483, of 4,450,133 tons, were British; 6,332, of 830,006 tons, Danish; 8,062, of 650,956 tons, Swedish; 1,250, of 202,002 tons, Dutch; 1,106, of 451,455 tons, Norwegian; and 630, of 161,808 tons, Russian; while 48,562, of 7,514,002 tons, sailed under the national colors.

The merchant navy, on Jan. 1, 1892, consisted of 8,639 vessels, of 1,468,985 tons. There were 809 sailing vessels, of 172,524 tons, and 387 steamers, of 154,905 tons, belonging to the Baltic ports, while 1,889 sailing vessels, of 531,750 tons, and 554 steamers, of 610,106 tons, belonged to the North Sea ports. The total number of sailors in the merchant navy in 1892 was 40,899.

Railroads.—The length of the German railroads open for traffic in 1892 was 20,627 miles, of which only 3,057 miles belong to private companies, and of these the Government worked 233 miles. The capital expended on railroads up to 1891 amounted to 10,510,850,000 marks; the receipts to 1,307,416,000 marks; the running expenses to 805,839,000 marks. In 1890-'91 there were 213,211,000 metric tons of goods and cattle

transported, paying 838,100,000 marks, while 426,056,000 passengers were conveyed, paying 343,832,000 marks.

The Prussian Landtag.—During the session of the Prussian Reichstag for 1892 additional measures were introduced to carry out the reforms in taxation which Dr. Miguel began two years before, when a new income-tax bill was passed (see "Annual Cyclopaedia" for 1891). It went into effect at once, and its results exceeded the most sanguine expectations. It was estimated to yield 80,000,000 marks annually. Its actual yield exceeded 124,000,000 marks for the first year, which amount will be increased as the workings and requirements become better understood and enforced. A second bill, forming part of the financial reforms, passed in the same year, but not taking effect until Jan. 1, 1893, completely transforms the system of taxation on trades. According to this measure petty traders whose annual profits do not amount to 1,500 marks, or whose working capital is less than 3,000 marks, are free from taxation. Commencing with annual profits of 1,500 marks and a stock in trade or working capital of 3,000 marks, a progressive scale of taxation is provided for, divided into 4 classes, graduated according to annual profits and working capital up to 50,000 marks and 1,000,000 marks respectively. The highest class pays 1 per cent. in each case upon actual profits. The object of this measure was the relief of small traders and the heavier taxation of large undertakings.

The third link in Dr. Miguel's scheme of financial reforms was introduced and passed in 1893. The income tax having once been established, it was found equitable to deal differently with incomes derived from funded capital and those from unfunded capital, especially with a view of relieving incomes dependent upon the exercise of physical and intellectual abilities. Dr. Miguel called his bill supplementary to the income-tax bill, although in fact it is nothing less than a property tax. The bill fixes the rate of taxation on the capital value of all property at $\frac{1}{4}$ of 1 per mille, which, taking 4 per cent. as a normal rate of interest, is equivalent to $\frac{1}{4}$ per cent. on the funded income represented by such capital. An approximate basis for this tax is derived from a calculation of the proportion of a man's average earnings, which during the thirty years of his life when he may be credited with the maximum power of productive work, he must set aside in order to secure, at compound interest, a capital producing the same funded income as he has previously derived from his earnings. A man having an unfunded income of 14,457 $\frac{1}{4}$ marks must set aside 4,457 $\frac{1}{4}$ marks annually at compound interest of 4 per cent. to have at the end of thirty years a capital of 230,000 marks yielding him a funded income of 10,000 marks, the same which he enjoyed during the thirty years of active life, deducting the 4,457 $\frac{1}{4}$ marks set aside annually; so that an unfunded income of 14,457 $\frac{1}{4}$ marks is equivalent to a funded income of 10,000 marks. Owners of property amounting in the aggregate to 6,000 marks, are exempt from the property tax. Due allowance being made for such exemptions, the total value of ratable property in Prussia is estimated at 73,800,000,000 marks, and the annual

yield of this tax is estimated at from 35,000,000 to 36,000,000 marks. Not only did Dr. Miguel insist that the property tax was advisable, but declared it absolutely necessary to enable him to carry out his last scheme of reform, which is that of a radical change of the system of local taxation. By this last measure the state relinquishes to the communes the whole of the direct taxes heretofore levied on real property, which yielded an annual revenue of 102,000,000 marks. This source of revenue is in future to be subjected only to local taxation as the requirements of local expenditures may appear. As a return for this concession the state will retain the whole amount of the surplus accruing to Prussia from the imperial duties on grain and cattle—about 45,000,000 marks—which was formerly in part granted in aid of the communes. This whole system of taxation reform in Prussia, when fully developed, is regarded as the most equitable and just mode of taxation in Europe.

A bill was introduced and passed which had in view a reform of the election laws. The electoral system in Prussia is of a highly plutocratic type. There are three distinct classes of electors in each district, as many of the largest taxpayers as together pay one third of the total amount of direct taxes forming the first class, as many of the smaller taxpayers as together pay the second third forming the second class, and the smallest taxpayers who together pay the remaining third of direct taxes forming the third class. These three groups each have an equal number of votes in returning the representatives of the district, who in turn elect the member of the Diet. The new bill does not by any means intend to abolish this, as Prince Bismarck called it, "most miserable of all electoral systems," but only introduced certain modifications which became necessary in view of the financial reforms. The only alterations made in the former system are that the contributions of the first, second, and third classes shall in future stand in the proportion of 5, 4, and 3. Instead of making only the direct state taxes the basis for the division of the three classes, the communal and provincial taxes will be included. A fictitious contribution is to be ascribed to every person who does not pay any income tax to the state, so that those persons who are not assessed will form the third class, and consequently five ninths of the total amount of direct taxation will fall on the first, and four ninths on the second class.

General elections were held on Oct. 31, 1893, for the lower house of the Prussian Diet. The elections went off quietly, the only parties carrying on an active campaign were the Conservative and the Radicals. The Conservatives made a strong propaganda on the ground of agrarian interests, and received the full support of the Agrarian League. The split in the Radical party showed itself to be as fatal in this election as it had been in the elections for the Reichstag. The final results show comparatively small changes. The Conservatives carried 148 seats, against 125 in the former Diet; the Free Conservatives, 62, against 66; the National Liberals, 88, against 87; the Ultramontane Center, 94, against 99; the Radicals, 20, against 29; the Poles, 18, against 15; the Danes, 2; and 1 member belongs to no party.

The Army Bill.—The all-absorbing question in German politics during the first half of the year 1893 consisted of the parliamentary struggle against the Army bill. The Government, considering an increase of the military forces necessary, introduced a bill into the Reichstag increasing the peace footing of the army from 486,983 men to a yearly average of 492,068 men. This increase on its face would not seem to be very important, but inasmuch as in the new peace effective noncommissioned officers and the one-year volunteers are excluded from its list—and, furthermore, taking into account the reduction of the time of active service from three to two years—the actual number of recruits every year demanded by the new bill was nearly 88,000. The additional expense for carrying the proposed plans into effect was estimated at 69,000,000 marks annually. The Government, in offering the two-year service for the former three-year active service, was unwilling, however, to make this provision legally binding, but wanted to make it optional with the Government to dismiss such men as it might think proficient in military drill after two years with the colors, and retain those for a third year who through bad behavior or inefficiency were not entitled to dismissal.

At the first reading of the bill it became apparent that the measure was opposed by considerable forces in the Reichstag. The only parties which pledged their support to the bill were the two branches of the Conservative party, and even these parties were dissatisfied with the bill on account of the two-year service clause. The National Liberals, the Radicals, the Social Democrats, and other smaller factions opposed the bill. The numerically strongest party by far in the Reichstag—the Centrum or Clerical party—did not commit itself either way at the first reading, but the speeches of the leaders of the party showed that the sentiment was strongly against the measure. In spite of this strong opposition, the Government hoped to secure a majority for the bill, and pointed out and urged the necessity for the increase of the military forces in order to put the army on an equal footing with that of France, which under existing circumstances was numerically stronger. The Opposition insisted that the people were unable to stand the increased taxation, and that the present taxes were already unbearable. The bill was referred to a committee, and discussed in detail and at length. Chancellor von Caprivi defended his measure heroically, and declared that the Government would not recede from its position, and would not agree to any compromise. Several compromises were offered, of which the most important were the one advanced by Dr. von Benningsen, the leader of the National Liberals, who offered to increase the army by 48,000 men, but insisted on the positive adoption of the two-year service clause; the other compromise offered originated with Eugen Richter, the leader of the Radicals, who offered to leave the army at its present strength, with the term of active service legally fixed at two years. Both compromises were rejected. Dr. von Benningsen's offer was rejected mainly because the National Liberals did not hold the balance of power, and even had his offer been accepted it would not have reconciled the Centrum, which held the

balance of power in the Reichstag. The committee on the Army bill finally rejected the important sections of the bill, and handed in its report. Shortly before the second reading of the bill, in the beginning of May, 1893, Freiherr von Hüne, a member of the Centrum, arrived at an agreement with Chancellor von Caprivi regarding a compromise. The compromise as agreed upon increases the army by 54,000 men for the first year, and progressively in installments up to 70,000 men, instead of the 83,000 which the Government wanted to add in a more rapid manner. The estimates of the additional expenses would thereby be reduced to 60,000,000 marks. The two-year term of service is legally fixed for five years, during which the new bill will be in force.

The Government hoped by accepting this compromise to win over a number of the more moderate members of all the opposing parties, and relied also upon members from the Centrum following Freiherr von Hüne. The Government was doomed to disappointment, however, as far as the Centrum was concerned. In a meeting held by the members of that party, on May 3, the Hüne compromise was rejected by a large majority. Count von Ballestrem, the leader of that party, resigned his leadership, and Count von Preysing-Lichtenegg-Moos, of Straubing, was elected to succeed him. It was then decided that the members should vote according to their individual convictions. On May 6 the final vote on the second reading of the bill was taken, and the Reichstag rejected the measure by a vote of 210 to 162. The minority supporting the bill was composed of the whole Conservative, Free Conservative, and National Liberal parties, reinforced by the Polish group, by 12 dissident members of the Centrum party, by 6 Radicals, and by a few members belonging to no recognized organization, among them the notorious Ahlwardt and 2 other professed Anti-Semites. Although the National Liberals had at first opposed the bill and their offer of compromise had been rejected, yet when it came to a vote they supported the Government to a man; the Polish group, consisting of 17 members who had formerly been identified with the Centrum, gave their votes for the Government by reason of certain concessions made to them in regard to educational matters. The Opposition majority was comprised of the whole Social Democratic vote, the great bulk of the Clerical party, the majority of the Radicals, 3 Anti-Semites, 4 clerical members from Alsace-Lorraine, and a few other unattached members.

As soon as the result of the vote was announced in the Reichstag, Chancellor von Caprivi arose from his seat and read an imperial message decreeing the dissolution of the Reichstag. New elections were ordered to be held on June 15.

The Elections.—Although the dissolution of the Reichstag was the result of the rejection of the Army bill by that body, yet that fact was largely lost sight of in the campaign. The different parties fought the election battles on party lines and principles, taking up the question of the Army bill only in cases where the voters demanded an exposition of the candidate's views. In their programme of elections, the German Conservatives, National Liberals, and

the Reichspartei favored the bill, while the Clericals and the Freisinnige, or Radicals, expressly declared against it. The large number of parties was further augmented by a split in the Radical party, and that in the Centrum or Clerical party. On June 15, on which day the elections took place, a decisive result was obtained in only 217 districts, while in 180 districts a second ballot became necessary, inasmuch as no candidate had received the required absolute majority of votes. The final distribution of seats among the different parties was as follows: Centrum, 100; German Conservatives, 68; Reichspartei, or Free Conservatives, 27; German Reform party, or Anti-Semites, 17; Poles, 19; National Liberals, 52; Radical People's party, 22; Radical Union, 13; Social Democrats, 43; South German Volkspartei, 11; Alsations, 8; Bavarian Farmers' Alliance, 4; Guelphs, 2; Danes, 1; and 5 members who are not connected with any party. An interesting feature of the elections was the decline of the Freisinnige or Radical party, which had split after the dissolution of the Reichstag and formed the Volkspartei and the Radical Union. Together the parties had held 68 seats, but in the new elections they only carried 35 seats together, of which 22 went to the Volkspartei and 13 to the Radical Union. Of the Volkspartei not a single candidate was elected on the first ballot. The Social Democrats gained 8 seats; they worked harder than any other party, and had their own candidate in almost every district. Among the prominent members of the old Reichstag who were defeated were Freiherr von Hüne, the originator of the compromise on the Army bill, and Dr. Stoecker, the leader of the Anti-Semites.

According to official statistics, the following were the total polls of the different parliamentary parties in the order of their aggregate numerical strength: Social Democrats, 1,786,738; Ultramontane Centre, 1,468,501; Conservatives, 1,088,358; National Liberals, 999,980; Advanced Radicals, or Volkspartei, 666,439; Free Conservatives, 438,435; the Anti-Semitic party of German Reform, 263,861; Dissident or Radical Unionists, 258,481; Particularists, 234,927; Poles, 229,531; South German Democrats, 166,757. The Social Democratic poll shows by far the largest absolute increase since 1890, viz., 359,440. The Center poll, after due allowance for the normal increase of population, remains stationary. The same condition exists as regards the Conservatives, with the qualification that they are credited in these returns with at least 200,000 Anti-Semitic votes which were cast in favor of candidates calling themselves Conservative Anti-Semites. The Radicals of both sections show an aggregate increase of 100,000, although the split cost them nearly half their seats, while the National Liberals have actually lost about 180,000 votes. A slight reduction is to be noted in the Particularist and the South German Democratic vote. Next to the Social Democrats, the Anti-Semites record the largest gains; and if the votes given to the Conservative Anti-Semites, as explained above, are added to those given to the more Radical faction of the so-called German Reformers, the Anti-Semitic vote will be found to have multiplied almost tenfold within the last three years.

As a plebiscite on the Army bill, the returns show that the people as a whole were against that measure. If the Conservatives, the Free Conservatives, the National Liberals, the Anti-Semites, the Dissident Radicals, and the Poles be counted as supporters of the bill, and the other parties as opponents, the latter obtained 4,323,362 votes, as against 3,225,641 of the former. In view of this fact, it is astonishing that, in spite of this popular feeling against the bill, the Government should have succeeded in passing the identical measure in the new Reichstag and obtaining a majority of 15 votes.

The Adoption of the Army Bill.—The new Reichstag was convened for July 4, 1893, and was opened in person by Emperor Wilhelm. In his opening speech the Emperor again called the attention of the Reichstag to the necessity of strengthening the military forces of the empire, and announced that a bill similar to the Hüne compromise would be introduced, which he asked the Reichstag to pass without unnecessary delay. The measures dealing with taxation were still under consideration, and would not be submitted until the fall session. He promised that the wishes regarding taxation, manifested during the debate on the former bill, should be complied with as far as was feasible without endangering the object in view. Accordingly, a bill was introduced by Chancellor von Caprivi by which the peace footing of the German army is to consist of 538 battalions and 173 half battalions of infantry, 465 squadrons of cavalry, 494 batteries of field artillery, 87 battalions of foot artillery, 23 battalions of pioneers, 7 battalions of railroad troops, and 21 battalions of train. The law was to go into effect Oct. 1, 1893, and to last for five years. Two years of active service are legally fixed as the term for five years. The discussion over the bill did not occupy much time, the arguments pro and con having been exhausted in the former session; and on July 15 the bill was adopted by a vote of 201 against 185. After the vote was taken the Reichstag immediately adjourned.

Political Parties.—The political parties in Germany have been growing in numbers to such an extent, and with so little difference in principles among some of them, that it is almost impossible to distinguish them. There are, however, 6 leading groups in the Reichstag, of which 2 are again subdivided, thus making 8 in all. None of these groups come near forming a majority, and the Government has to depend upon a coalition, formed through compromise, to carry on business. The foremost party and numerically the strongest is the Centrum, also called the Clerical or Ultramontane party. It consists of Roman Catholics, chiefly from south Germany and the Rhine provinces. During its struggle against Prince Bismarck on account of the Kulturkampf it gained success only by its unity and harmony, but since the death of its leader, Dr. Windhorst, it commences to show signs of disintegration. The numbers steadily increased from 63 in 1871 to 117 in the election of 1890, but at the election on June 15, 1893, it lost 17 seats, succeeding in electing only 100 members. The Conservative group is subdivided into German Conservatives and Free Conservatives or Reichspartei. The two parties, although formerly fol-

lowing practically the same principles, have of late years gone further apart than ever, so that to-day the Free Conservatives can hardly be distinguished from the National Liberal group, its principles having more in common with that party than with the German Conservatives. The Free Conservatives form the main support of the Government against parliamentary rule; they desire maintenance of the present relation of state and Church on the basis of the Protestant religion; they support the confessional character of the public schools, and the authorization of the Church to control religious instruction; they demand the reform of the state and local taxation system to the exemption of real property and building from taxation. Their numbers steadily decreased from 88 in 1871 to 20 seats in 1890. In the elections of June 15, 1893, they gained 7 seats, so that they will form a group of 27 members in the new Reichstag. The German Conservatives are equally strong adherents of the monarchy, and as such pledge themselves for the strengthening of the German empire, but inside of that unity demand that the independence and peculiarity of the various states be preserved; they further demand participation of the nation in legislation; local self-government on the basis of natural groups and organizations of the people; a confessional Christian school; an independent Protestant Church; and protection of the agricultural interest by a high protective tariff for cereals. In a convention held in 1892 Anti-Semitism was adopted in their platform. Their number in the Reichstag has varied between 21 in 1874 and 78 in 1887; they have since lost a few seats. In the elections of 1893 they carried 68 seats. The National Liberal party, standing for moderation, progress, independent thought, constitutional liberty and rights, and, as its name indicates, liberal tendencies, has seldom had the courage to stand up for its convictions. It once had a commanding number of deputies, namely, in 1874, when it held 150 seats. In the last Reichstag this number had dwindled down to 41, while in the elections of 1893 it carried 52 seats. The Freisinnige or Radical party is divided again into the Freisinnige Volkspartei or Radical People's party, and the Freisinnige Vereinigung or Radical Union. The larger of the two is the Volkspartei, following Eugen Richter. The principles of the two parties are practically the same; they stand for constitutional and parliamentary government, manhood suffrage, a secret ballot, freedom of speech and of the press, parliamentary control of finances, and a ministry responsible to the Reichstag. The Freisinnige party was formed in 1884 by the union of the Fortschrittspartei or Progressists and the Liberal Unionists, and consisted then of 64 members, in 1887 their number was reduced to 32, but in 1890 they succeeded in electing 66 of their members, while in the elections in 1893 both branches carried only 35 seats, of which 22 belong to the Volkspartei and 13 to the Radical Union. The Social Democrats now form quite a considerable party in the Reichstag; their principles are sufficiently indicated by their name, and their number increased from 2 members in 1871, and 11 in 1889, to 35 in 1890, and in 1893 they carried 43 seats. The last of the parties which require attention is the Anti-

Semites; their principles are set forth in their name. Although only a small party in the former Reichstag, they succeeded in electing 17 members to the Reichstag in the elections that were held in 1893.

The Agrarian Movement.—Ever since the retirement of Prince Bismarck, in 1890, the farming element of the empire has had cause to complain. Prince Bismarck's policy was that of protecting home produce, and of high duties on all cereals, so as to enable the German farmer to compete with the importers of foreign grain. The German soil, although fertile, requires careful preparation, and good results can only be acquired by hard work and at great expense, while the vast grain fields of Hungary, Russia, and India, not to speak of those of the United States, are comparatively virgin soil, yielding large crops with little outlay. As long as the protective tariff was kept up prices were fair; but since the so-called new *régime* negotiated the commercial treaties in the beginning of 1892, especially those with Austria-Hungary, by which the tariff on cereals was reduced in exchange for industrial advantages, large quantities of grain were put on the market at prices which threw the German farmer out of competition. In the fall of 1892 negotiations for a commercial treaty with Russia were opened, and the prospects of further concessions at the expense of the agrarian interests aroused the German rural economists to action. Farmers' alliances and leagues were formed in every part of the empire, and on Feb. 18, 1893, some 8,000 delegates from all parts of Germany gathered in Berlin to found a German Agrarian League.

The new league professes itself ready to receive co-operation from all parties except Radicals and Social Democrats. Its object is to protect and strengthen the German agrarian interests. Its programme is as follows: 1. Sufficient tariff protection for the produce of agriculture and its side branches. 2. No reduction of existing tariff duties; no commercial treaties with Russia or other countries by which agrarian duties may be reduced, and a corresponding regulation of the relations with the United States. 3. Indulgence with the agricultural trades respecting taxation. 4. Exclusion of animal imports from countries suspected to be infected with plagues. 5. Adoption of bimetallicism as an effective protection against the retrogressive prices of agricultural produce. 6. Lawfully regulated representation of agrarian interests by the formation of chambers of agriculture. 7. Revision of the laws dealing with domicile, the right of emigrating without paying duty, and breach of contract on the part of workmen. 8. Revision of the laws dealing with the protection of workmen, abolition of the stamp duty, and cheaper administration. 9. Closer control of the grain exchange by the Government, to prevent the arbitrary fixing of prices. 10. Improvement of private and public rights as well as of the mortgage system of the real-estate and home-stead laws. 11. Disincumbrance of the branches of rural local administration. By a resolution adopted in the same meeting, it was determined that in future parliamentary elections no candidates should receive the support of the league who did not pledge himself to its programme, and

promise to subordinate all other considerations to the defense of agrarian interests.

After the elections for the new Reichstag, on June 15, it was found that of the 392 members constituting the body, 130 belonged to or had joined the German Agrarian League. Of these, 60 belonged to the German Conservative party, 25 to the Reichspartei, 19 to the National Liberals, and 26 to the Anti-Semites and the Wilden or Independents.

Session of the Reichstag.—The regular session of the new Reichstag was opened on Nov. 16, 1893. In his speech from the throne Emperor Wilhelm thanked the members of the Reichstag for passing the Army bill, and for their patriotism in providing for the development of military institutions, which, for the security of the empire, had become necessary. He then announced the introduction of measures which are to regulate the financial relations between the empire and the single states, and to provide for the additional expenditures occasioned by the increase of the military forces. The Emperor concluded by expressing the hope that, with God's aid, the blessings of peace would be in the future preserved to Germany. The bill dealing with the regulation of the financial relations between the empire and the single states was submitted to the Reichstag shortly after the opening of the session. Hitherto the states supplied the deficiency in the imperial treasury by matricular contributions, while the Federal Government turned over to the states the surplus of the customs over and above the amount of 130,000,000 marks. Under the new bill the credit to the single states in the annual accounting is fixed at 40,000,000 marks. Any surplus over and above that sum shall be devoted to the formation of a fund to provide for deficiencies which may occur in other years, and for creating a sinking fund for the public debt of the empire. In case the new sources of revenue should prove inadequate to cover the ordinary expenditures of the Government, the imperial treasury is empowered to levy additional percentages on the excise duties.

The bills dealing with the opening up of new sources of revenue to the Government provide for taxes on tobacco and wine, bourse taxes, and taxes on lotteries, and on receipts, check stamps, and bills of lading. It is estimated that the tobacco tax will yield 45,000,000 marks, wine, 17,000,000 marks; bourse taxes, 11,000,000 marks; lotteries, 5,400,000 marks; receipts, 7,000,000 marks; check stamps, 800,000 marks; and bills of lading, 9,000,000 marks.

On Dec. 1 Count Hompesch, a member of the Clerical party, moved the revocation of the decree ordering the expulsion of Jesuits from Germany, which was issued in 1872. The motion was opposed by the members of the National Liberal party, the Free Conservatives, the bulk of the Conservatives, and a section of the Radicals. The Centrum, the Poles, Alsations, Socialists, most of the Radicals, and two Conservatives supported the motion, which, being put to a vote, was carried by 173 to 138.

Commercial Treaties.—During the summer of 1892 the Russian Government approached the German Government for closer commercial relations. Delegates of both empires met at Berlin

and endeavored to arrive at an understanding. Russia finally proposed a provisional treaty until Dec. 31, 1893, and in the meantime to appoint another committee to arrive at some definite understanding. The Russian proposals were not acceptable to Germany, and, as a consequence, Russia declared her maximum tariff in force against Germany, beginning with Aug. 1, 1893. This maximum tariff raised the duties 15, 20, and 30 per cent. over the ordinary tariff. Germany retaliated by raising her tariff 50 per cent. on all Russian imports. Russia, in reply, raised her duties another 50 per cent. and added 1 ruble per ton on the lackage of vessels under the German flag entering Russian ports and harbors. Although in some respects Germany suffered under this tariff war, yet it had not the effect expected by Russia, inasmuch as the principal import from Russia, viz., grain, was procured from other sources, principally the United States. The German industry suffered somewhat, but, on the whole, Russia seemed to be the heaviest loser. In the meantime negotiations were taken up again, and an agreement was finally arrived at between the two governments. Germany grants the same concessions to Russian grain which Austria enjoys, and a reduction of taxes on oats and rye is conceded. Russia reduces her tariff on iron, zinc, and steel 10 per cent., and on agricultural machinery 20 per cent. A reduction of the tariff on coal is also granted; however, the tariff on sea-borne coal and steel rails is not reduced. The bitter opposition to the Russian treaty inaugurated by the Agrarians and taken up by the Conservatives makes the adoption of this treaty by the Reichstag uncertain, and a union formed between the Conservatives and the Clericals to oppose the treaty, formed on Dec. 30, 1893, might determine its fate adversely.

Commercial treaties with Spain, Roumania, and Servia were concluded and adopted by the Reichstag, Dec. 15, 1893, in spite of the opposition of the Agrarians.

International Sanitary Conference.—An International Sanitary Conference was held in Dresden in March, 1893, and formed the sequel or development of that held in Venice in 1892 (see ITALY, "Annual Cyclopædia" for 1892). The work accomplished may be divided into two sections. The first section contains preventive measures to be taken against cholera as regards passenger and goods traffic. The second section deals with the sanitation at the mouth of the Danube, similar to the regulations adopted at the Venice Conference for Alexandria and the Red Sea. The first section contains provisions for the interchange of official information between the signatory powers as to the appearance, progress, and preventive measures adopted by the several states. In future old clothes, bedding, soiled linen, and rags shall alone become immediately liable to exclusion; importation of other articles shall only be prohibited under special regulations. Land quarantine is regarded as futile by the conference, while quarantine upon arrivals by sea is fixed within certain limits. Ships are to be regarded as infected only if cases have actually occurred on board during the last seven days of the voyage, and as suspect where cases have occurred prior to the last seven days. Other ships, although arriving

from infected ports, are not to be detained as long as they are free from suspicious cases, subject to the right of the local authorities to impose reasonable measures of disinfection and a term of medical observation not to exceed five days from the date of sailing. The term of five days' medical observation from the date of landing is fixed for passengers and crews arriving on infected ships or such as are classed as suspect. The following countries were represented at the conference: Germany, Russia, France, England, Italy, Spain, Portugal, Sweden and Norway, Denmark, the Netherlands, Belgium, Austria-Hungary, Montenegro, Servia, Turkey, Greece, Roumania, Switzerland, and Egypt.

The Duke of Saxe-Coburg-Gotha.—The death of Duke Ernest II of Saxe-Coburg-Gotha, on Aug. 23, 1893, brought to the throne of that duchy an English prince. Duke Ernest was born June 21, 1818, and succeeded to the throne on the death of his father, Jan. 29, 1844. He was a brother of Prince Albert, the husband of the present Queen Victoria of England. According to the latter's marriage settlement, their second son was to succeed to the throne of Coburg in case Duke Ernest should die childless. This event having taken place, Queen Victoria's second son, the Duke of Edinburgh, ascended the throne of Coburg on Aug. 23, 1893. Alfred Ernest Albert, Duke of Edinburgh, was born at Windsor Castle, Aug. 6, 1844, studied modern languages at Geneva, entered the naval service in 1858, and after long years of distinguished service was promoted in 1882 to the rank of vice-admiral of the British fleet, which position he resigned on becoming Duke of Saxe-Coburg-Gotha. In 1862 he was offered the throne of Greece, but declined the offer. On Jan. 23, 1874, he married the Grand Duchess Marie Alexandrovna, only daughter of Czar Alexander II of Russia. Of the marriage there are issue surviving one son, Prince Alfred, and four daughters. The Duke of Edinburgh took the oath of allegiance to the Constitution on Aug. 23, 1893, in the presence of the whole ministry and Emperor Wilhelm II of Germany.

Foreign Dependencies.—Since the year 1884 Germany has extended her territory beyond that of Europe, and although she has not what might be properly called colonies, yet the German Government has established a protectorate over areas in Africa and the western Pacific. All told, Germany's foreign dependencies may be estimated at 966,150 square miles, having a population of 5,510,000. Togoland, Little Popo, and Porto Seguro have an estimated area of 16,000 square miles, being inhabited by about 500,000 people. The budget of 1892-'93 for Togoland places the receipts at 116,000 marks, of which 112,000 marks is derived from customs and other taxes, and 4,000 marks from different administrative sources. The expenses amount to 116,000 marks, of which 8,700 marks were for the administration—i. e., salaries, etc.—48,800 marks for materials, 160,000 marks for extraordinary expenses for public works, and 2,500 marks went to the reserve fund. The imports into Togoland in 1891 amounted to 1,374,950 marks, and the exports to 1,946,656 marks. The principal articles of export and their values were: Palm seeds, 1,181,000 marks; palm oil, 493,000 marks;

ivory, 267,000 marks; corn, 43,000 marks. In 1891 the number of vessels which entered and cleared the ports of Togoland was 167, of 161,820 tons; of which 72, of 74,847 tons, were German.

The Cameroons, on the Bight of Biafra, has an estimated area of 130,000 square miles, and a population of about 2,600,000. The protectorate was established in 1884, and the country is governed by an imperial governor, assisted by a chancellor, two secretaries, and a local council of three representative merchants. The country is fertile; cacao and tobacco are cultivated advantageously, and ivory and palm oil form the chief articles of trade. The revenues and expenditures for 1893 amounted to 566,000 marks. The imports for 1891 amounted to 4,547,406 marks, while the exports amounted to 4,306,625 marks. The principal articles of export and their values were: India rubber, 1,234,000 marks; palm oil, 1,181,000 marks; palm seeds, 1,155,000 marks; ivory, 597,000 marks; tobacco, 53,000 marks. In 1891 there were 82 vessels of 92,882 tons, entered and cleared at the ports of the Cameroons. In the beginning of 1893 Baron von Stetten was sent on a mission into the *Hinterland* of the Cameroons. He set out from Balinga on March 23, and went to Kifi, whence he was summoned by the Emir of Adamawa to Yola. In his report of this interview Baron von Stetten states that the Emir of Adamawa expressly acknowledged the predominant German influence over his territory, and that only Germans would be allowed to acquire any rights or build any stations in his territory. This declaration on the part of the Emir is important, on account of the endeavors of the French to gain influence over that section of the country; and when Lieut. Mizon, in behalf of the French Government, arrived at Yola some six weeks later, an interview with the Emir was denied him; and, furthermore, Baron von Stetten communicated to him the results of his negotiations with the Emir. Lieut. Mizon gave a written acknowledgment of the receipt of the communication. Baron von Stetten returned to the coast in October. The frontier question between Germany and Great Britain, regarding the frontier between the Cameroons and the Oil Rivers Protectorate, was finally settled by an agreement signed by the two powers on April 30, 1893. By the Anglo-German agreement of 1886 the boundaries between the British and German spheres of influence gave to Germany both banks of the Rio del Rey, which was then believed to be a river. Since then it was discovered that the so-called river was nothing but a creek about nine miles long, and a new delimitation became necessary. In 1890 a provisional boundary was established, running from the northernmost point of the Rio del Rey creek to the rapids of the Cross river, and thence to Yola, on the Benue. The new agreement is officially declared to be for the settlement of various questions affecting the fiscal interests of Germany and Great Britain in their respective territories in the Gulf of Guinea.

The agreement consists of the three following articles:

I. That the point named in section 2, Article IV, of the Anglo-German agreement of July 1, 1890, as the head or upper end of the Rio del

Rey creek, shall be the point at the northwest end of the island lying to the west of Oron, where the two water ways named Urifan and Ikankan on the German Admiralty chart of 1889-'90 meet.

II. From this upper end of the Rio del Rey to the sea—that is to say, to the promontory marked West Huk on the above-mentioned chart—the right bank of the Rio del Rey water way shall be the boundary between the Oil Rivers protectorate and the colony of the Cameroons.

III. The German colonial administration engages not to allow any trade settlements to exist or be erected on the right bank of the Rio del Rey creek, or water way. In like manner, the administration of the Oil Rivers Protectorate engages not to allow any trade settlements to exist or be erected on the western bank of the Bakassy peninsula from the first creek below Arsibon's village to the sea, and eastward from this bank to the Rio del Rey water way.

This agreement was made mainly for the purpose of enabling the German and British administrations to cope with the widespread smuggling which was carried on in the district.

German Southwest Africa extends for about 930 miles along the coast. It has a total area of 340,000 square miles, and the population is estimated at 250,000. The southern half of the territory is called Deutsch Namaland, and the northern half Deutsch Damaraland. The budget for 1893 places receipts and expenditures at 297,000 marks. On July 10, 1893, an engagement took place near Naos in Damaraland, between the German colonial troops and the followers of the chief Hendrick Witbooi, who had been engaged in destroying German property since the storming of his stronghold Homkranz, on April 12, by Capt. von François, the German Imperial Commissioner for Southwest Africa. Witbooi's followers were routed, but the troops were unable to capture the chief. The German Government decided to adopt strong measures to free the country from the depredations of Witbooi and his followers.

(For German East Africa, see EAST AFRICA.)

The German possessions in the Pacific are: Kaiser Wilhelm's Land, the Bismarck Archipelago, the Solomon Islands, and the Marshall Islands, altogether with an area of about 251,420 square kilometres, and a population of about 400,000.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes, of \$5,000 each and upward in amount or value, that were made, became operative, or were completed in the United States during the year 1893. The known value of all exceeds \$29,000,000.

Alexander, Mrs. Charles, of New York city, gift to the College of New Jersey, a new commencement hall, cost more than \$300,000, completed in 1893.

Alumni and Friends of the College of New Jersey, gift to the college, a hospital, to be known as Isabella McCosh Infirmary, completed in 1893.

Alumni Association, School of Mines of Columbia College, gift for establishment of a Trowbridge fellowship in engineering, \$10,000.

Alumni of Yale University, gift of a gymnasium, cost \$220,000, formally presented Jan. 23, 1893.

Anonymous friend, through Prof. Hewett, gift, to Cornell University, the library of 18,000 volumes on

philology and linguistics, of Prof. Zarucke, of the University of Leipzig.

Argentine Republic, Government of, gift to the School of Biology of the University of Pennsylvania, the collection of native woods exhibited at the World's Fair; estimated value, \$150,000.

Ashmead, Clara B., of Philadelphia, Pa., bequests to charitable, religious, and Lutheran Church institutions \$61,000, and to Germantown Hospital and Lutheran Orphan Home, improved real estate.

Babcock, George H., of Plainfield, N. J. (died Dec. 16, 1893), bequests for establishment of the Plainfield Public Library, \$10,000; for the support of the Babcock Scientific Library, three brick houses; and to the trustees of the Seventh-Day Baptist Memorial fund, for schools and institutions, \$200,000.

Bachman, Mrs. Margaret, of Hudson, N. Y., bequest to the Board of Church Extension of the Lutheran Church, \$6,500.

Ballentine, Robert F., of Newark, N. J., gift to Rutgers College, New Brunswick, N. J., of a gymnasium building and apparatus, cost \$50,000.

Beck, Charles Bathgate, of New York city (died Oct. 11, 1893), specific bequests to charitable and educational institutions, \$163,000; and residuary estate, expected to aggregate \$3,500,000, to Columbia College, the Board of Home Missions of the Presbyterian Church, the Presbyterian Hospital, the New York Hospital, and the Society for the Prevention of Crime.

Beckwith, Henry T., of Providence, R. I., bequests to institutions of the Prot. Episcopal Church, \$13,000.

Bemis, George, bequest to Harvard University, for a professorship of international law, made available by the death of Mrs. Sarah W. Bemis, \$50,000.

Benham, Sarah, of Greenport, N. Y., bequests to societies of the Reformed Church, \$25,000, and, conditionally, 14 per cent. in addition.

Billings, Edward C., United States District Judge for Louisiana, bequest to Yale University for establishment of the Emily Sanford professorship of English Literature, \$70,000. See OBITUARIES, AMERICAN.

Blake, Rev. John, of New York city, specific bequests to institutions of the Protestant Episcopal Church, \$55,000, and residuary estate to specified charitable societies of that Church in New York city.

Bliss, George, of New York city, gift to St. John's Protestant Episcopal parish of Northampton, Mass., a granite church building furnished, \$100,000.

Boardman, Judge, A. M., widow and daughter of, gift to the Law School of Cornell University, in Boardman Hall, Feb. 14, 1893, the law library of the late Nathaniel C. Moak, of 13,000 volumes, said to have cost him \$75,000. For sketch of Mr. Moak and description of his library, see OBITUARIES, AMERICAN, in "The Annual Cyclopaedia for 1892."

Bradbury, Mrs. Sarah O., of Saco, Me., bequests to Hon. Hampden Fairfield, as trustee, for distribution among specified religious, benevolent, and educational institutions, her entire estate of \$200,000.

Brokaw, Isaac V., of New York city, gift to the Madison Avenue Reformed Church, a mission building to accommodate the industrial school and day nursery of the church, and also to contain a chapel, meeting, and reading rooms.

Brown, Mrs. Anna E., of Quincy, Ill., bequests for the establishment in Quincy of a Home for Friendless Aged People, her residence property and \$55,000; to the Quincy Humane Society, her diamonds and \$5,000; to Illinois Humane Society, \$25,000; to Connecticut Humane Society, \$15,000; to Louisiana Humane Society, \$15,000; to Massachusetts Humane Society, \$5,000; and to local orphanages, \$10,000.

Brown, Mrs. Harriet E., of Baltimore, Md., bequests to Presbyterian Church charities, \$42,000.

Burrage, Alvah H., of Boston, Mass., bequest to the New England Hospital for Women \$10,000, and the Leominster Public Library, \$5,000.

Cape, Mrs. Margaret A., of Boston, Mass., bequests to benevolent institutions in the State, \$50,000.

Carlston, James H., of Haverhill, Mass., bequests to religious and educational institutions, \$131,800.

Carnegie, Andrew, of New York, gift for relief of the needy in Pittsburg, Pa., a duplication of the amount otherwise raised for that purpose; value of pledge on Dec. 28, \$60,794.90.

Carpenter, Mrs. George W., of Philadelphia, Pa., gift to the Academy of Natural Sciences of a collection of birds, minerals, and fossils, the life work of her husband.

Collins, William, of Brooklyn, N. Y., bequests to congregations and institutions of the Methodist Episcopal Church, \$150,000.

Converse, E. S., of Malden, Mass., gift to the Young Men's Christian Association for a new building, \$10,000 if the cost is fixed at \$40,000, and \$5,000 for every \$10,000 additional cost up to \$80,000. He had previously given the city a costly park and a library as a memorial of his son, and bore half the cost of the new Baptist church.

Corean Government, gift to the Peabody Academy of Sciences, Salem, Mass., of its World's Fair exhibits of musical instruments and other articles.

Crerar, John, of Chicago, Ill. (died Oct. 19, 1889), bequest, residue of his estate, estimated at \$2,500,000, to trustees for erection and endowment in Chicago of the John Crerar Public Library, from which sensational and skeptical works are to be excluded. The will was contested on account of this bequest, but was sustained by the Supreme Court, June 20, 1893.

Cutler, Henry, of North Wilbraham, Mass., gift to Colorado College, \$7,500.

Dahlgren, Mrs. John Vinton, of New York city, gift to Georgetown University, Washington, D. C., of the Chapel of the Sacred Heart, cost of building and furnishings, \$50,000.

Dales, Rev. John B., D. D., of Philadelphia, Pa., specific bequests to institutions of the United Presbyterian Church, \$11,500, and his residuary estate to the Board of Foreign Missions of that Church.

Dougherty, Catharine L., of Philadelphia, Pa., bequests, subject to the life interest of a sister, to benevolent institutions, principally of the Presbyterian Church in Philadelphia, \$8,500.

Drexel, Anthony J. See OBITUARIES, AMERICAN.

Eckert, Emily, of Philadelphia, Pa. (died December, 1891; will executed February, 1893), bequests to city, State, and Presbyterian charitable and benevolent institutions, \$271,000, and to the Presbyterian Hospital and the Presbyterian Home for Women, her residuary legacies, \$206,218 each.

Elbridge, Mrs. Ellen Battell, of Yarmouth, Mass., bequests to Yale University for a professorship of music, \$20,000; for graduate scholarships, \$24,000; for the library, \$10,000; and to religious organizations, \$50,000.

Feenan, Mary, of Salem, Mass., bequests to Roman Catholic institutions, \$27,000, and to the city of Salem, to furnish coal for the poor in South Salem, \$6,000.

Field, Marshal, of Chicago, Ill., gift to found the Columbian Memorial Museum of Natural History, in Chicago, \$1,000,000, on condition that other citizens subscribe \$500,000, and that holders of World's Fair stock contribute \$2,000,000 of their holdings.

Fish, Hamilton. See OBITUARIES, AMERICAN.

Fiske, Josiah M., of Newport, R. I., bequests to the Hahnemann Homoeopathic Hospital, the Ladies' Christian Union, and the Society for Relief of the Ruptured and Crippled, New York city, \$5,000 each.

Fiske, Mrs. Josiah M., of Newport, R. I., gift to Barnard College, for the endowment fund, \$5,000.

Forster, Mrs. Nancy S., of Chicago, Ill., gift to the University of Chicago, for a woman's dormitory, \$10,000 added to a previous gift of \$50,000.

Freeman, Mrs. Clarissa A., of Stoneham, Mass., bequests to benevolent institutions, principally in Massachusetts, \$14,000.

French Government, gift to the State of New York, the French educational exhibit at the Columbian Exhibition.

Friends of the Teachers' College of New York city, gifts, including building lots valued at \$125,000 from George W. Vanderbilt, and pledge from a lady whose

name is withheld, to build and equip quarters for a department of mechanic arts and of farm study and drawing (to cost \$200,000), \$500,000.

Friends of Tufts College, College Hill, Mass., pledge to build and equip a new structure for the Emergency Hospital of the College, to cost \$100,000.

Gage, Alva, of Charleston, S. C., gift to the Unitarian church, a brick parish house, cost over \$11,000.

Gardner, Dr. Joseph, of Bedford, Ind., gift to the American Red Cross Association, for a national base of supplies, a stocked farm of 700 acres in Indiana.

General Theological Seminary, New York city, friends of the, gift to the seminary of the Copinger collection of Latin Bibles, comprising 543 editions in 1,304 volumes, believed to be the largest collection of its kind in the world.

German Government, gift to the States of New York, Pennsylvania, and Wisconsin, portions of its educational exhibit at the World's Fair.

Gerry, Elbridge T., of New York city, gift to the Commissioners of Charities and Correction, a solarium for the benefit of the inmates of the Charity Hospital, on Blackwell's Island, as a memorial to a dead daughter; cost, equipped, about \$7,000.

Gilles, William, of New York city (died March 4, 1893), bequests to the American Bible Society and the American Tract Society, \$5,000 each, and to the Howard Mission and the American Missionary Association, \$150,000, in equal parts.

Glover, Henry E., of Cambridge, Mass., bequests to institutions in the Baptist Church, \$26,500.

Goldthwaite, Willard, of Salem, Mass., bequest to Tufts College, for establishment of a professorship of rhetoric, \$25,000; to the same, his residuary estate, to enable needy students to obtain an education.

Gratz, Hyman, of Philadelphia, Pa., bequest to the Mickos Israel Congregation, to perpetuate the memory of his sister Rebecca, a sum exceeding \$100,000; bequest became operative in October, 1893.

Green, Mrs. John O., of New York city, bequests to the Lawrenceville (N. J.) Preparatory school, John C. Green foundation, \$100,000; the New York Society for the Relief of the Ruptured and Crippled, \$50,000; the New York Female Bible Society, \$20,000; and the University Place Presbyterian Church, \$10,000 and her pew, valued at \$1,000.

Gurney, Mrs. Lillie, of Waterville, Me., bequest, of residue of estate to Colby University, \$275,000.

Hart, Mrs. Dr. E., of Hartford, Conn., bequest to the medical school of Yale University, \$25,000.

Hecker, John V., for the Hecker-Jones-Jewell Milling Company, of New York city, gift, for distribution among the needy under the direction of the Charity Organization Society, 25,000 bags of flour.

Hitchcock, Hiram, of New York city, gift to Dartmouth College, a hospital comprising three buildings and a surgical operating theater, erected in memory of his wife, and dedicated May 3, 1893.

Hubbard, Thomas H., of Boston, Mass., gift to Hallowell, Me., a public library building, cost \$50,000.

Hunt, Mrs. E. K., of Hartford, Conn., bequest to the Medical School of Yale University, \$25,000.

Hussey, Curtis G., of Pittsburg, Pa., bequests for the destitute women of Pittsburg and Allegheny, \$50,000; to the Peace Association of the Society of Friends in the West, the Hussey School in Matamoros, Mexico, the Asylum for Colored Children in Allegheny, and the Foreign and Christian Missions Societies in Mexico, \$5,000 each.

Ickelheimer, Isaac, of New York city, bequests to local Hebrew benevolent institutions, \$10,000.

Ingalls, David, Springfield, N. Y., bequests to Presbyterian Missions, \$350,000; and to Presbyterian Board of Relief, \$50,000; will contested and sustained.

Jeanes, William O., of Philadelphia, Pa., bequest to the Wills Eye Hospital, \$25,000.

Johnson, Mrs. Catharine, of California, bequest to Archbishop Riordan, of San Francisco, for the endowment of a free hospital in that city, one third of her estate of \$2,000,000.

Keeney, Mrs. Mary Jeanette, of Hartford, Conn., bequests to Christ Church, \$30,000; to Trinity College, \$25,000; to the Wadsworth Atheneum, as a fund the interest of which is to be used for the purchase of art works, \$25,000; to six local institutions, \$10,000 each; and to the new building fund of Trinity Church, \$10,000.

Kennedy, John Stewart, of New York city, gift to a board of trustees representing the Children's Aid Society, the New York City Mission and Tract Society, the Association for Improving the Condition of the Poor, and the Charity Organization Society, a building for the joint use of the societies, on the corner of Fourth Avenue and Twenty-second Street, to be known as the United Charities Building, which cost, with the ground, \$700,000. Dedicated March 6, 1893.

Keeler, Henry, of Philadelphia, Pa., bequests to institutions in the Methodist Church, \$80,000; also to the Methodist Hospital his residuary estate.

Laftm, Thomas, colored, of New Orleans, La., bequests to local and State charitable institutions, in sums of \$5,000 to \$20,000, the greater part of his estate, estimated to be worth from \$400,000 to \$600,000.

Leiter, L. E., of Chicago, Ill., gift to the Columbian Memorial Museum, \$100,000. See FIELD, MARSHAL.

Lippincott, William V., of Philadelphia, Pa., bequests to the Protestant Episcopal Church of St. Mathias, \$33,500; the Hospital of the Protestant Episcopal Church, \$15,000; to sixteen denominational and public institutions, \$5,000 each; to four institutions, conditionally, \$5,000 each; and to the Protestant Episcopal Hospital, the residue of his estate, if any.

Lord, Helen A., of Philadelphia, Pa., bequests for specific charitable endowments, \$10,500.

Low, Abiel Abbott, of Brooklyn, N. Y. See OBITUARIES, AMERICAN.

Low, Seth, President of Columbia College, gift to the Phillips Brooks Memorial fund of Harvard University, \$5,000.

Lyman, E. H. R., of New York city, gift to the city of Northampton, Mass., an Academy of Music costing \$100,000, accepted Feb. 7.

March, Mrs. Mary T., of Poughkeepsie, N. Y., bequests to Porter Academy, Charleston, S. C., \$10,000; Bellevue Hospital, New York city, \$10,000; Louise Home, Washington, D. C., \$10,000; and Grace Church, New York city, for erection of "John Payne March Memorial Hospital," residue of her estate.

Metcalf, Jesse, of Providence, R. I., gift to the Rhode Island School of Design, a new building; dedicated Oct. 24, 1893.

Montgomery, Alexander, of San Francisco, bequest to the Presbyterian Theological Seminary of the Pacific, greater part of estate, estimated at \$3,000,000.

Page, Mrs. Thomas Nelson, of Washington, D. C., gift, to the Chicago Institute, the gallery of pictures collected by her first husband, Henry Field; value, \$300,000. The paintings are to be kept together in a special "Henry Field Memorial Room."

Palmer, Potter, of Chicago, Ill., pledge, to the Board of Lady Managers of the World's Columbian Exhibition, to erect a permanent Women's Memorial building at a cost of not less than \$200,000, as soon as a site is obtained.

Pardee, S. W., of Hartford, Conn., bequests to Trinity College, \$25,000, and contingent interest.

Peddle, Mrs. Sarah Ogden, of Newark, N. J. (died May 29, 1893), bequests to the Peddie Institute in Hightstown, N. J., \$100,000; the Peddie Memorial Baptist Church in Newark, \$50,000; the New Jersey Baptist Home, \$10,000; and local institutions, \$6,000. The Peddie Institute and Peddie Memorial Church were founded by her husband, Thomas B. Peddie.

Perkins, Katherine Page, of Boston, Mass., bequests to Harvard University, for a dormitory, as a memorial to Daniel, Richard, and William Foster Perkins, \$150,000; to the Boston Homeopathic Hospital, \$12,000; to various religious and charitable organizations in Boston, \$13,000; and to the Massachusetts Institute of Technology, Boston Museum of Fine Arts, Women's Educational and Industrial Union, and the Harvard

Annex (now Radcliffe College), the residue of her estate.

Perry, Mrs. Frances D., of Southport, Conn., bequests to Trinity Episcopal Church, \$10,000 in cash and \$24,000 as a fund, for charitable purposes, and to the Methodist Episcopal and Congregational churches, all of Southport, \$10,000 each.

Pierson, Mrs. Martha A., of Philadelphia, Pa., bequests to Presbyterian institutions, \$4,500, and to the Hahnemann Medical College, \$1,000.

Plumb, Horace S., of Bridgeport, Conn., gift for the purchase of a lot and the erection of a library in Shelton, Conn., in memory of his brother, David W. Plumb, \$25,000.

Pond, Mrs. Harriet H., of Hartford, Conn., bequests to the Connecticut Prison Association, \$15,000; to missionary, educational, and benevolent organizations, \$20,000; and to Center Church, for a home for indigent men of American birth, the reversion of \$30,000.

Pulitzer, Joseph, of New York city, gift to the new building fund of Columbia College, \$100,000.

Pullman, George M., of Chicago, Ill., gift to the city, a bronze memorial group commemorating the Fort Dearborn massacre in 1812; unveiled June 22, 1893.

Reckesser, John D., of Chicago, Ill., gift to the University of Chicago, for the equipment fund, \$150,000.

Rogers, George F., Prohibition candidate for Governor of Connecticut, bequests, to prohibition, temperance, and Congregational organizations, \$11,000.

Rogers, Henry H., Jr., Rogers, Mary H., Rogers-Duff, Mrs. Clara, Rogers-Benjamin, Mrs. Annie E., children of the late Henry H. Rogers, of New York city, united gift to the town of Fairhaven, Mass., of a free public library, as a memorial of their sister, Millicent G. Rogers; estimated cost, \$185,000.

Rosenberg, Henry, of Galveston, Texas, (died May 12, 1893), bequests to the Benevolent Administration Waisenamt Bilten, Canton Glarus, Switzerland, for educational and charitable purposes, \$50,000; to the Gemeinde Bilten, same place, for the same purposes, \$30,000; to the Island City Protestant and Israelitish Orphan Home in Galveston, for building, \$30,000; to Grace Church parish (Protestant Episcopal), Galveston, for a new church, \$30,000; to the Ladies' Aid Society of the German Lutheran Church, Galveston, \$10,000; to procure and furnish a women's home in Galveston, \$30,000; to purchase or erect a building for the Young Men's Christian Association of Galveston, \$65,000; for the erection in Galveston of a monument to the memory of the heroes of the Texas revolution (1836), \$50,000; for the erection of at least ten drinking-fountains in Galveston for man and beast, conditionally, \$30,000; and for the endowment of a free public library and free lectures on practical subjects in Galveston, at the end of two years after his death, the residue of his estate, which, it was thought, would amount to \$275,000.

Rothschild, Max M., of Chicago, Ill., bequest to local charities, \$100,000, carried out by his widow.

Rowland, Mrs. Anna, of Boston, Mass., bequests to Roman Catholic charitable and educational institutions, \$6,500.

Ruppner, Antoine, M. D., of New York city (died July 30, 1892; will declared valid April 20, 1893), bequests to the town of Alletten, Canton of St. Gall, Switzerland, for distribution of bread to the poor twice a year, \$25,000; to the Medical School of Harvard University, \$10,000.

Russell, Henry E., of New York city (died Jan. 26, 1893), bequests to the Berkeley Divinity School, Middletown, Conn., \$5,000; to the Bishop Seabury Mission, Faribault, Minn., \$5,000; to the Society for Donations and Bequests for Church Purposes of Connecticut, \$10,000; to Trinity College, Hartford, Conn., for establishment of the H. E. Russell fellowship, \$10,000; and to the Society for Donations and Bequests for Church Purposes, the income to be used for St. Mark's Church, New Britain, Conn., and the whole fund, if desired, for a new church edifice, \$10,000.

Ryerson, Martin A., of Chicago, Ill., gift to the University of Chicago toward a fund for general

equipment of \$500,000, conditional on \$400,000 being raised, \$100,000; time extended to July 1, 1894.

Sage, Russell, of New York city, gift for himself and wife to the Troy (N. Y.) Female Seminary, a dormitory to cost \$100,000, to be erected in 1894.

Sampson, O. T., of North Adams, Mass. (died in Sept., 1893), bequests to the Baptist Home Mission Society, \$100,000; the Baptist Missionary Union, \$100,000; and to various Baptist churches, societies, and educational institutions, in sums ranging from \$10,000 to \$50,000 each, \$295,000.

Scott, Charles, of Washington, D. C., bequest to Trinity College, Hartford, Conn., \$10,000.

Seaton, Edward F., of San Francisco, Cal., gift to the regents of the University of California, for an art school and museum, the Hopkins mansion on California Street, valued at \$1,500,000; also \$5,000 per annum for five years toward its support.

Shepard, Elliott F. See OBITUARIES, AMERICAN.

Sibley, Hiram W., of Rochester, N. Y., gift to Cornell University, for a new building for Sibley College, founded by his father, \$50,000.

Simonds, Susan W., of Boston, Mass., bequests to national and local missionary societies, \$5,000.

Smith, Elizabeth J., of Brooklyn, N. Y., bequests to missionary and charitable organizations, \$8,000.

Smith, Horace. See OBITUARIES, AMERICAN.

Spaulding, Lucy, of Nashua, N. H., bequests to Dartmouth College, \$10,000; the American Board of Commissioners for Foreign Missions, \$10,000; the New Hampshire Bible Society, \$10,000; and the New Hampshire Orphans' Home, \$10,000.

Spicer, Elihu. See OBITUARIES, AMERICAN.

Spinney, Joseph S., of Brooklyn, N. Y. (died May 3, 1893), bequests to specified institutions, \$30,000; to Wesleyan University, on the death of his sister, reversion of \$25,000; and to Wesleyan University, the American Seaman's Friend Society, and his sister, his residuary estate. He left an estate estimated at \$2,000,000.

Stanford, Mrs. Leland, of San Francisco, Cal., gift to Sarah B. Cooper, President of the Golden Gate Kindergarten Association, of San Francisco, for free kindergarten work in that city, \$174,000.

Stanford, Thomas Weldon, of Melbourne, Australia, brother of the late Leland Stanford, pledge to give to the endowment fund of Leland Stanford Junior University, the legacy of \$300,000 left him by his brother.

Starr, Charles J., of New York city (died in November, 1893), bequest to Middlebury College, Vt., \$150,000. He had given it in life \$85,000.

Starr, Lydia, of Philadelphia, Pa., bequests to Catholic religious and benevolent institutions, \$18,954.

Stewart, Mrs. Mary Rhinelander, of New York city, bequest to charitable institutions, \$25,000.

Stickney, John H., of Rockville, Conn., bequests to Congregational Church societies, \$12,000.

Stickney, J. Henry, of Baltimore, Md. (died in May, 1893), bequests to the American Home Missionary Society, on condition that the name be changed to Congregational Home Missionary Society, \$150,000; Massachusetts Missionary Society, \$15,000; American Missionary Association, \$15,000; American Congregational Association, \$10,000; New West Education Commission, \$25,000; Congregational Sunday and Publishing Society, \$20,000; Colorado College, \$20,000; Beloit College, \$10,000; Howard University, Robert College in Constantinople, Talladega College, and Washburn College, \$5,000 each; for memorials of the New England Pilgrims, chiefly in Plymouth, \$70,500; to various institutions in Baltimore, \$89,000; and to the Congregational Church Building Society the residue of his estate.

Stroud, William E., of Philadelphia, Pa., bequest for establishment of the Eliza Cathcart Home for Incurables, \$200,000.

Stuart, Mary Macrae, of New York city (died Dec. 30, 1891), widow of Robert L. Stuart, from her unconditional bequests to the Boards of Home and Foreign Missions of the Presbyterian Church, applica-

tion by a joint committee of the boards of \$670,000 for the purchase of ground on Fifth Avenue, and of \$1,000,000 for the erection of a building; also from bequests to the College of New Jersey, a new dormitory, cost about \$100,000, named Hodge Hall, dedicated Sept. 22, 1893.

Taylor, Mrs. Moses, of New York city, bequest to the church in Elberon, N. J., \$100,000 and her summer residence there.

Todd, William O., of Atkinson, N. H., gifts to the public library in Newburyport, Mass., on condition that the city appropriates to it annually \$400 for the purchase of newspapers, \$10,000; also to the Boston Public Library the first of an annual gift of \$2,000 for the purchase of newspapers from all parts of the world for its reading-room; pledged himself to give the latter library "sooner or later," to secure forever this annual payment, \$50,000.

Trock, Mrs. Christina, of Newark, N. J., gift to the German Hospital in that city, a building for the School for Trained Nurses, cost \$20,000.

Trowbridge, Ezekiel Hayes, of New Haven, Conn. (died Nov. 24, 1893), bequest to the Divinity School of Yale University, \$5,000.

Vanderbilt, Cornelius, of New York city, gift, for himself and wife, to Yale University, a new building for students' rooms on the college campus, as a memorial to their son, William H. Vanderbilt, a former student, estimated cost \$500,000.

Walker, Joseph, of Portland, Me., bequest to trustees, to be applied to charitable and educational purposes, \$250,000; will contested and sustained.

Ward, Mrs. Ellen Eliza, of Roslyn, Long Island, bequests to the Protestant Episcopal Diocese of Long Island, \$20,000; the New York Protestant City Mission, \$15,000; the trustees of the estate belonging to the diocese of Long Island, in trust, \$12,500; and other religious and benevolent organizations, \$15,000.

Waterston, Rev. Robert Cassie, of Boston, Mass. (died Dec. 19, 1893), bequests to the Massachusetts Historical Society, \$40,000, and, after his widow's death, his collections of books, pamphlets, manuscripts, and autographs; and to the Society of Natural History, for a publication fund, \$10,000, and his collections of birds, shells, fossils, and minerals.

Webb, William Henry, of New York city, gift of grounds and building on Fordham Heights, to be known as Webb's Academy and Home for Shipbuilders, estimated cost and endowment, \$1,000,000. The grounds comprise thirteen acres. The institution was informally opened Oct. 26, 1893.

Weld, William F., of Brookline, Mass., bequest to Harvard University, \$100,000. He gave it \$90,000, in 1887, with which to found a professorship.

Westmore, Charles D., of Jamestown, N. Y., gift to Harvard University, a new dormitory, to be known as Claverly Hall, cost \$150,000.

Wharton, Joseph, founder of the Wharton School of Finance and Economy of the University of Pennsylvania, gift to the school, \$75,000; aggregate gifts to it, \$200,000.

Whiteland, Henry, for many years President of the Essex Institute, Salem, Mass. (died Feb. 27, 1893), bequests to the Essex Institute, his private library, historical specimens and papers, and \$15,000.

Wheeler, Mrs. Esther G., of Boston, Mass., bequest to the Central New York Protestant Episcopal Diocese, several large tracts of land in and near Mannsville, N. Y., with all buildings thereon, and \$9,000.

Wheeler, John, of New Haven, Conn., gift to St. John's Protestant Episcopal Society, a building lot valued at \$10,000, for a new church edifice.

White, A. J., M. D., of New York city, gift to Yale University, a new dormitory, cost \$140,000.

White, Robert G., of Philadelphia, Pa., bequests to institutions of the Presbyterian Church and other organizations, \$12,000.

Williams, Henry W., M. D., of Boston, Mass., gift to Harvard University, for endowment of a full professorship of ophthalmology, \$25,000.

GOLF. Within the year this ancient and honorable game has fairly obtained a footing in the United States. The first club, indeed, was established in San Francisco two or three years ago, but until quite recently the game has not fairly attained popularity. It has long been played in Canada, and its authentic history in Scotland goes back to the fifteenth century. It was then so popular that the Parliament, fearing its effect on the efficiency of Scottish long-bow-men, passed an act prohibiting golf on Sundays and substituting archery. The name is probably from the German *Kolb*, club, becoming *Kolf* in Dutch, Celtic, and Icelandic. A game somewhat similar was played long ago in the Netherlands and in Belgium, but it is quite uncertain where it first assumed its present form. Within a generation it has spread into England. The St. Andrew's Club in Fife is the recognized headquarters for golf, whence have emanated the rules that govern almost all clubs, and where disputed questions are sent for settlement.

A game of golf is in effect a "constitutional" of moderate length with a definite end in view. It may be brisk or leisurely, according to taste, and it is so constituted that it is both social and solitary. It is played on what are technically called "links," the Scotch equivalent for "downs" or "dunes"—namely, sandy tracts alternately level and broken, such as are found almost everywhere along the seacoast, but it can be played on any kind of ground, or even along a country road. To prepare the links for play, a series of holes, 4 inches in diameter and about 5 deep, are cut in the turf. If the soil is of such a nature that it caves in, the holes are necessarily lined with tin or some similar substance. The holes are from 100 to 600 yards apart, according to the contour of the land. A short link has 9 holes, a long one 18, but any number of holes may be taken, according to agreement among the players.

The object of the game is to drive a ball by striking it with a suitable "club" from one of these holes to the next in regular succession until the entire round as agreed upon is completed, and the ball returned to the place whence it started. The person or side completing the round with the least number of strokes wins.

One against one, or two against two, is the usual arrangement for a game. In either case each side has one ball, and in the latter the partners take turns in striking. Inasmuch as the links are of considerable extent, it is obvious that several parties can play at once, a second party "playing off" as soon as the first has made one or two holes. The overlapping of different parties is provided for in the rules.

Thus the scene on links, when games are in active progress, is one of great animation, and since the organized clubs usually indulge in uniforms, the lady members preferably wearing English "pink," the spectacle is very pretty.

Golf has a peculiar and voluminous vocabulary of its own, the growth of centuries, and inseparable perhaps from its advanced age. The list is too long for reproduction here (see glossary of terms, Badminton Library, volume on Golf). For the rules of the game, too, the reader is referred to the same authority, or to any of the several pamphlets issued by dealers in sporting goods.

The essential equipment for playing is a set of gutta-percha balls, $1\frac{1}{4}$ inches in diameter, painted white so as to be visible on broken ground, a set of "clubs," and a number of small red flags attached to wires, these last to be set in the ground to mark the positions of balls, or other points in play not visible from a distance. A set of clubs may mean from three to a dozen. They are carefully made with hickory or lance-wood handles about 4 feet long, and bound with leather at the grip. They are usually finished with a piece of iron or steel, the shape of which is variously adapted to some particular kind of play. By a singular confusion of terms this tip, which is at the lower end of the club, is termed the "head"; its outer end is called the "toe," and its inner end the "heel."

The four clubs most in use are the common or "play" club, used where the ground is fairly smooth, and the ball lies open to a fair stroke; the "spoon," used when the ball is in some depression and can not readily be reached; the "iron," when the ball is in sand or gravel; and the "putter," when it is near a hole. From these types spring the almost endless variety of scientific clubs used by devotees of the game, many of whom have their own special models.

A game is opened by playing off from the "teeing" ground, a "tee" being a small heap of earth scraped together, upon which the ball is placed so as to afford opportunity for a fair first stroke. Each side has its own ball, and it is decided by lot which shall lead, or "play off." The ball is driven a longer or shorter distance, according to the policy of the player. If not visible from the "teeing" ground when it stops, it is flagged, so that the opposite side may know where it lies. Then the other side plays. If the second ball stops short of the first, it must be driven again, and if still short, yet again, until it is nearer the first hole than is the opposing ball. The player who leads scores one at the first stroke. The one that follows, if he comes short, scores at his second stroke "two more"; at his third stroke, if still short, "three more"; and so on. When at last he gets nearer the hole than his opponent it again becomes the first player's turn, and his score becomes "one off three," "two off three," and so on. This method of scoring keeps itself with little danger of losing count through inattention.

A "bazard" is any natural obstacle, such as grass, water, whin, molehill, or other bad ground. Strict rules are laid down in regard to them. A ball must not be moved from the point where it stops unless by common consent it is conceded to be unhittable; then it may be picked up by the player, held at the back of the head, and dropped to a new "lie."

Where golf is played with an elaborate outfit a "caddie" is needed to carry the large assortment of clubs, but he may be dispensed with if the players are content with the really necessary implements. It will naturally occur to any American country boy that he can play golf quite satisfactorily on land or on ice with an ordinary hockey stick and a rubber ball. He may not be treated with great consideration by such golf players as own full sets of clubs and employ caddies to carry them, but he can probably have quite as much fun with his comparatively rude

appliances. There is every reason why the game in its simpler form should become popular in this country. It affords a free range and an almost infinite variety of incident, and enables the players to pair off in a most satisfactory manner. Every rural neighborhood has its pastures and other open tracts where permission to play can be procured without difficulty, and where there is any danger to passengers or live stock the holes need not be so large and deep as the regulations require.

GOUNOD, CHARLES FRANÇOIS, a French composer of music, born in Paris, June 17, 1818; died at St. Cloud, near Paris, Oct. 18, 1893. His father, a painter, died when the boy was but five years old, and his mother, a musician, educated him. She chose the law for his profession, but when he reached the age of eighteen years, and while he was still pursuing his classical studies, she consented to his request that he

CHARLES FRANÇOIS GOUNOD.

take up music. He had learned to play upon the pianoforte under her guidance, and had studied harmony with Reicha, so that he was well equipped for his special course of study when he entered the National Conservatory in 1836. He joined the classes of Halévy, Lesueur, and Paër, and a year after matriculation carried off a second prize in composition and won exemption from military service. In 1839 he was successful in the competition for the Grand Prix of the Institute of France, which carried with it a two years' residence in Rome as pensioner of the Institute and one year of travel in Germany. He had a strong leaning toward the priesthood, and the teacher to whom he owed most, Lesueur, was chiefly distinguished as a church musician. It was therefore not surprising that—though, as he said about a year before his death, he was an ardent admirer of Mozart's "Don Giovanni" and Beethoven's symphonies, and knew them by heart—his years in Rome were principally occupied with ecclesiastical music. Moreover, his last months in Rome were spent

in a seminary for priests, and his first post on his return to Paris was that of precentor of the Missions Étrangères, whose seminary he also entered as an *elève*. Now he not only gave himself wholly to the study of theology and the composition of church music, but also put on conventual robes. This fact is to be noted for the bearing which it has on his later life story. Before leaving Rome, in 1841, he conducted a performance of a requiem mass of his own composition, and this work he was privileged to repeat a few months afterward in Vienna. In the Austrian capital the young musician was befriended by Otto Nicolai, conductor of the court opera; in Berlin he visited at the home of Fanny Hensel, whose acquaintance he had made in Rome. The center of musical influence in Germany at that time was Leipzig, and thither young Gounod went next with a letter from Madame Hensel to her brother Felix Mendelssohn-Bartholdy. He was cordially received by the composer, who devoted himself almost exclusively to him for four days, gave a special performance of the "Scotch Symphony" for his benefit, played music by Bach for him on the organ in St. Thomas's Church, which had once answered to the touch of the great master himself, and looked over the manuscripts that he had brought with him from Rome. Among them was the mass that had been sung at Rome and Vienna. Referring to one of its numbers written for five voices a *capella*, Mendelssohn said, "*Mon ami*, that might be signed by Cherubini."

Except in Vienna, where Nicolai introduced him into operatic and instrumental circles, the influences that had been brought to bear upon the peculiarly impressionable nature of the young musician were churchly, and, as has already been intimated, he was apparently only following the path marked out for him, when he sank himself in the work and study of the Missions Étrangères on returning to his native city. He surely contemplated taking holy orders, and probably entered upon some kind of novitiate, for in 1846 there appeared in print a set of church offices composed by "L'Abbé Charles Gounod." He had been wholly forgotten in Paris, when attention was drawn to his music by an article published in "The Athenæum" of London. This was in 1851. The article was translated into French. It is likely that Louis Viardot, the husband of Viardot-Garcia, was responsible for the article either as author or instigator. At any rate, the Viardots enlisted themselves in the service of Gounod, and succeeded in securing for him a commission for an opera from the Academy. This opera was "Sapho," which was produced in 1851. For thirty years thereafter the man who had seemed to have planted at least one foot firmly in the Church gave himself almost wholly to the theater. In eight years he reached the high noon of his success in the opera of "Faust," his masterpiece, and the work that will provide the stoutest props for his posthumous fame. When the sun of his creative genius began to set he turned again to the mystical enthusiasms of his youth, pondered religious questions, and took up church compositions. His operas are these: "Sapho," performed in 1851; "La Nonne Sanglante,"

1854; "Le Médecin malgré lui," 1858; "Faust," 1859; "Philémon et Baucis," 1860; "La Reine de Saba," 1862; "Mireille," 1864; "La Colombe," 1866; "Roméo et Juliette," 1867; "Cinq Mars," 1877; "Polyeucte," 1878; "Le Tribut de Zamora," 1881. At various times during the last fifteen years of his life he worked upon operatic scores that he never finished, the subjects of which were Charlotte Corday, Abélard and Héloïse, and Molière's "Georges Dandin." In the forms not connected with the theater or church Gounod composed little. His masses, written first and last, number a dozen; his songs might reach a hundred, but scarcely more than a dozen of them have attained lasting popularity. In the instrumental field he made few ventures, and of them but one was successful, a humorous trifle called "The Funeral March of a Marionette." He wrote a short oratorio called "Tobie," some hymns and motets, a "Stabat Mater" and a "Te Deum," but these have seldom been thought of for years. The most ambitious of his efforts after he abandoned the theater was the composition of two oratorios for the Birmingham festivals—"The Redemption," in 1882, and "Mors et Vita," in 1885.

It does not seem likely that posterity will materially change the judgment pronounced upon Gounod by his contemporaries. All his works had been tested by time before he died. He was an artist of high ideals and sincere purposes. His style was eclectic, and he did much to advance musical composition in France by precept and example. He touched the supreme heights of success but once, but that one instance is one of the most remarkable in the annals of music. No opera ever written has had so universal and so constant a success as "Faust." Its popularity on the day of his death was as great as ever it was. In Paris alone it had had upward of one thousand representations before its composer died. Its music illustrates every charm that its creator possessed—his amiability, grace, tenderness, warmth of sentiment, dreaminess, ecstasy, and fluency of passion. The score of "Le Médecin malgré lui" has been much praised, and many musicians are inclined to consider "Roméo et Juliette" as the peer of "Faust," but the decision of the public in the case has been correct beyond peradventure—"Faust" is heard with ever new and naive delight, the few of his other works that keep the stage with feelings ranging from respect up to gentle pleasure. Gounod's models in dramatic composition were Mozart, Von Weber, and Wagner. For the early works of the last he had full appreciation and sincere admiration. He yielded to Wagner's influence in introducing into his scores a flexibility of form that made dramatic expression freer than it had been in French opera up to his time, and he followed him in a measure in some of his external devices; but his nature would not permit him to accept the logical outcome of Wagnerian principles in the manner of their exponent. With all the liberality of thought and affection that led him to introduce innovations in constructive form which are entitled to much of the credit for his success, he still believed that Mozart's masterpiece, concerning which he wrote a monograph full of lovely enthusiasm, fulfilled all the conditions of lyro-

GOUNOD'S HOUSE AT ST. CLOUD.

dramatic art. He did not see that the drama could ask more than the beauty of pure music and the just expression of human truth. In his search for the latter element he was stopped short of what the Germans call characteristic beauty by his devotion to sensuous charm. He was an emotionalist, a mystic, a dreamer. Upon his essentially feminine nature faith and affection took stronger hold than reason. It cost him no effort to believe anything that presented itself to him in a garb that pleased his æsthetic sense. His life was the counterpart of his music: it was amiable and winning, full of emotional ecstasies, but neither strong in its embodiment of

morals nor steadfast. The climax of his genius is found in two scenes, which are much alike in their emotional contents—the garden scene of "Faust" and the balcony scene of "Roméo et Juliette." For these scenes, as well as their prototypes in the plays of Goethe and Shakespeare, ecstatic utterance is the natural idiom, and Gounod's truest musical speech was that of passionate ecstasy. His gamut, however, was limited, and for that reason he was more generally admirable as a lyrist than as a dramatist. In spite of the wondering regard in which he was held because of his "Faust," his contemporaries were forced to recognize the fact that a composer who

produced twelve operas of which only one was an unequivocal success either with critics or people was not a strong dramatic writer.

As in religion Gounod was a mystic, so his religious music is characterized by gentle aspirations rather than profundity and strength of proclamation. The spirit of his religious songs—some of which, like “There is a green hill far away,” have enjoyed extraordinary vogue, especially in England and the United States—is indistinguishable from the sentimentality of his amorous lyrics. While listening to such music, and even much in his masses and oratorios, it is easy to understand the feelings of the man who wished to compose his mass to the memory of Joan of Arc in the Cathedral at Rheims where the maid had knelt at the feet of him whom she had caused to be crowned king. When, after a long series of operatic failures, he resolved to devote the concluding years of his life to the composition of religious music, it seems likely that his mind reverted to some of the lessons learned from Mendelssohn in Leipzig forty years before. It is obvious at a glance that Gounod rests the structure of his “sacred trilogy, The Redemption,” upon the passion music of Bach. All the formal factors of the sturdy old German Protestant’s creation, except the *recitativo secco*, are found again in the work of the modern French Catholic, though modified in manner. Despite the advantage given to Gounod by the increased power of expression acquired by his instrumental medium, the modern orchestra, however, it is marvelous to note how vastly he falls short of his model in dramatic power and eloquence. But who shall stand when Bach appeareth? Gounod inscribed the score of “The Redemption” with the words *Opus ritae meae*—another evidence of his sentimental nature and want of the faculty of self-criticism. His “Mors et Vita” was written to order for the Birmingham festival of 1885, its norm being a requiem that he had composed before he wrote “The Redemption.” Its success was short-lived.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe. The reigning sovereign is Queen Victoria, born May 24, 1819, who ascended the throne, June 20, 1837, and who was proclaimed also Empress of India, Jan. 1, 1877. The heir apparent to the crown is Albert Edward, Prince of Wales, born Nov. 9, 1841. His eldest son and presumptive successor is George, Duke of York, born June 3, 1865, who married on July 6, 1893, the Princess May of Teck, his second cousin, born in 1868. The legislative power of the British Empire is vested in a Parliament consisting of the House of Lords and the House of Commons. The upper house consists of hereditary peers, peers created by the sovereign, English bishops, who are peers by virtue of their office, Irish peers elected for life, and Scotch peers elected for the duration of Parliament. The roll bore the names of 562 members in 1892. There are 20 Scotch and 64 Irish peers who are not peers of Parliament. The House of Commons has 670 members elected for the duration of each Parliament, of whom 253 represent English county constituencies, 237 represent English boroughs, and 5 represent English universities; Scotland has 39 county, 81 borough, and 2 university representatives, while

Ireland has 85 county, 16 borough, and 2 university representatives. In 1892 the total number of registered electors in the United Kingdom was 6,161,456, of whom 4,810,237 were in England and Wales, 606,403 in Scotland, and 744,816 in Ireland. The reform bill of 1884 added nearly 3,000,000 electors to the roll of the United Kingdom, and now about one sixth of the population are electors.

The executive Government, nominally vested in the Crown, is practically administered by a Cabinet, which remains in office only so long as its policy is sustained by a majority in the House of Commons. The Prime Minister usually is the leader of the lower house and holds the office of First Lord of the Treasury. In the event of an adverse vote upon a Government measure the Cabinet either resigns or Parliament is dissolved and an appeal to the electors is had. The Prime Minister has the dispensation of most of the Crown patronage. The present Cabinet, which came into office Aug. 18, 1892, is constituted as follows: Prime Minister, First Lord of the Treasury, and Lord Privy Seal, William Ewart Gladstone, born in 1809; Lord High Chancellor, Lord Herschell, formerly Sir Farrar Herschell; Lord President of the Council and Secretary of State for India, the Earl of Kimberley; Chancellor of the Exchequer, Sir W. V. Harcourt; Secretary of State for Foreign Affairs, the Earl of Rosebery; Secretary of State for the Home Department, Herbert H. Asquith; Secretary of State for the Colonies, the Marquis of Ripon; Secretary of State for War, H. Campbell-Bannerman; First Lord of the Admiralty, Earl Spencer; Chief Secretary to the Lord Lieutenant of Ireland, John Morley; President of the Board of Trade, A. J. Mundella; Chancellor of the Duchy of Lancaster, James Bryce; President of the Local Government Board, Harry H. Fowler; Secretary for Scotland, Sir G. O. Trevelyan; Postmaster-General, Arnold Morley; First Commissioner of Works, G. J. Shaw-Lefevre; Vice-President of the Council of Education, A. H. Dyke Acland.

Emigration.—The number of emigrants from the United Kingdom in 1892 was 321,397, against 334,543 in 1891 and 315,980 in 1890. Of the native emigrants in 1892, who numbered 210,042, against 218,507 in 1891 and 218,116 in 1890, there were 133,815 of English, 23,325 of Scotch, and 52,902 of Irish origin. Of the native emigrants in 1892, 130,039 went to the United States, 23,254 to British North America, and 15,950 to Australasia. The emigration to Australasia was the lightest in any year since 1872. The number of alien emigrants in 1892 was 93,801. The total number of immigrants was 143,747, against 151,396 in 1891 and 115,910 in 1890. The net emigration was 177,650, compared with 183,174 in 1891 and 160,070 in 1890.

The Army.—The strength of the regular army, exclusive of the forces in India, as provided for by the estimates for the year ending March 31, 1893, was 7,498 commissioned officers, 1,004 warrant officers, 15,971 sergeants, 3,684 musicians, and 125,916 rank and file, making a total of 154,073 of all ranks, an increase of 377 over the previous year. The total number of horses was 14,568. The effective force, exclusive of staff and auxiliary forces, maintained in the

United Kingdom in 1892 was 103,891 officers and men, consisting of 12,759 cavalry, 17,663 artillery, 5,338 engineers, and 68,181 infantry and special corps, with 13,670 horses and mules and 282 field guns. There were stationed in England and Wales 72,927 men, with 10,141 horses and mules and 226 field guns; in Scotland, 4,023 men, with 322 horses and mules and 4 field guns; in Ireland, 26,941 men, with 3,207 horses and mules and 52 field guns. In Egypt were stationed 3,350 officers and men, with 857 horses and mules, which force was strengthened early in 1893 by 2 battalions, or about 900 men. A force of 29,586 men, with 625 horses and mules, was stationed in the colonies; there were on passage 3,143 officers and men. The British troops in India numbered 71,620, with 11,478 horses and mules and 318 field guns. Including these, the total effective was 211,590 officers and men, with 26,180 horses and mules and 600 guns. There are besides four classes of reserves and auxiliary forces, which had at the beginning of 1893 an effective as follows: Army reserve class, 68,933; militia, 118,999; yeomanry, 10,768; volunteers, 222,046. These figures added to those of the active army give 627,336 as the fighting strength of the nation. On Jan. 1, 1892, the regular army consisted of 158,181 Englishmen, 15,993 Scotchmen, 26,788 Irishmen, 6,032 natives of India and the colonies, 128 foreigners, and 1,096 whose nativity was not reported.

Under the various army laws Great Britain and Ireland are divided into 14 military districts. For the infantry there are 102 subdistricts, commanded by line colonels; for the artillery, 12 subdistricts, commanded by artillery colonels; and for the cavalry, 2 districts, commanded by cavalry colonels. As a rule the brigade of an infantry district consists of 2 line battalions, 2 militia battalions, the brigade depot, rifle volunteer corps, and infantry of the army reserve. Of the two line battalions it is a part of the system that one should be abroad and the second at one of the home stations. An artillery subdistrict contains, besides the royal artillery, that of the militia, the volunteers, and the army reserve; while a cavalry colonel has command not only of the cavalry regiments in his district, but over the yeomanry, volunteers, and reserve cavalry. The issue of the magazine rifle was nearly complete early in 1893, when 346,000 had been manufactured, 56,000 of which were in the hands of the troops, and 70,000 in India. The cavalry are being armed with the new carbine, and 86 batteries have been armed with a new 12-pounder gun.

The Navy.—The naval estimates for 1892-'93 provided for 46,031 seamen, including 14 flag officers and 2,714 commissioned officers on active service; 8,443 boys, including those under training; 14,379 marines afloat and on shore; 4,200 coast guards; and 1,049 officers for various services, making a total of 74,100 of all ranks. Provision was also made for 23,501 officers and men in the navy reserves, and 3,010 pensioner reserves. Including 94 officers on salary, not above specified, the total of officers and men provided for was 100,705.

There were 278 naval vessels in commission Nov. 1, 1892, against 277 in the previous year. There were 9 first-class battle ships, against 17 in

1891, but this decrease was due to a change in the classification of armor-plated ships. There were 8 second-class battle ships, a decrease of 2, caused also by change in classification; 8 third-class battle ships, an addition of 7 due to the changed classification; 4 coast-defense ships, an addition of 3 to this class; and 11 first-class cruisers, an addition of 1; making 40 armored ships, an increase of 1 over the previous year. There were 137 unarmored ships, as follow: 45 second and third-class cruisers; 1 torpedo ram; 18 sloops, an increase of 1; 4 gun vessels, a decrease of 1; 51 gunboats, an increase of 1; 16 special-service vessels; 2 dispatch vessels; 7 troop and store ships; 4 Indian troop ships; 4 royal yachts; 7 surveying ships; 11 torpedo boats; and 12 other ships. There were also 26 sailing vessels, comprising 6 training brigs, 18 coast-guard tenders or revenue cruisers, and 2 other ships; and 35 stationary vessels, including 21 training and drill ships. According to the programme of construction to be completed in 1894, the fleet will comprise 77 full-armored, 88 protected, and 386 unprotected vessels, making a total of 501 ships of all classes, of 1,127,049 tons, against 373 effective ships, of 679,144 tons, in 1889.

Of 137 vessels on foreign service in 1892, there were 28 in the Mediterranean and the Red Sea; 8 in the Channel squadron; 12 in North American and West Indian waters; 10 on the East Indian and 20 on the China station; 24 at the Cape of Good Hope and on the west coast of Africa; 8 in the Pacific; 12 on the Australian station; 4 on the southeast coast of America; 10 on particular service; 4 on surveying service; and 10 constituting the training squadron.

Loss of the Victoria.—While the Mediterranean fleet, commanded by Vice-Admiral Sir George Tryon, was manœuvring off Tripoli on June 22, the "Victoria," which was the flagship of the squadron, was struck by the ram of the "Camperdown," Rear-Admiral A. Markham commanding, and sunk in about 70 fathoms of water. The manœuvre that brought on the collision required the fleet, proceeding in two columns, led respectively by the "Victoria" and "Camperdown," to reverse the sailing direction by turning inward toward each other, each ship to follow its leader in the movement. By the orders of the admiral the distance between the columns was 6 cables, or 3,600 feet. The "Victoria" was leading the starboard and the "Camperdown" the port column, and when the admiral's order to turn inward was signaled from the "Victoria," the "Camperdown" did not begin to turn, but signaled that the order was not understood. It was known by experiment that the "Victoria" at ordinary speed could turn around in a circle a little less than 1,800 feet in diameter, and that, with one wheel going ahead and the other backing, that circle could be reduced to 1,200 feet. The "Camperdown's" turning capacity was approximately the same; so that had the engines of both steamers been run to make the short turn there was a margin of 1,200 feet for the performance of the evolution, as the sea was perfectly calm. It appears, however, that there was no understanding on either ship that the engines were to be run other than in the ordinary way. As soon as the "Victoria" began to make her turn inward Rear-

Admiral Markham, believing it to be the intention of Admiral Tryon to ease the helm of the "Victoria" and circle round the second division, ordered the helm of the "Camperdown" put over to begin the turn of 16 points ordered by the admiral. The "Camperdown" was a little behind the "Victoria" in the evolution, and made a bad turn. Her ram struck the "Victoria" at an angle of about 80 degrees on the starboard bow, about 20 feet forward of the turret, and crashed through nearly to her center line. The doomed ship was headed for shore, but within twenty minutes she gave a great lurch to starboard and went down, bow foremost, turning over as she sank. The court-martial, which was convened at Malta to investigate the disaster, exonerated Capt. Bourke, of the "Victoria," and Rear-Admiral Markham, and thereby by implication placed the responsibility for the disaster upon the admiral of the fleet. The evidence taken shows that the evolution was dangerous.

The court-martial accompanied its acquittal of Rear-Admiral Markham with an expression of regret that he had not disobeyed an order the carrying out of which seemed certain to result disastrously.

The "Victoria" was an armored steel battle ship of the first class, her armor belt, varying in thickness from 16 to 18 inches, extending over only 182 feet of her total length of 340 feet. She had a breadth of 70 feet, and drew 26 feet 7 inches of water, her displacement being 10,400 tons, and her indicated horse power 12,000. She carried 2 11-ton guns in a single turret, and had also 1 29-ton and 12 5-ton guns, 12 quick-firing 6-pounders, 9 3-pounders, several machine guns, and 8 torpedo tubes; she also had a powerful ram, and her speed was 17½ knots. With her were lost Vice-Admiral Tryon and more than 430 officers and men.

Finances.—The Government revenue for the year ending March 31, 1892, exclusive of extra army and navy receipts and India's contribution for military charges, amounted to £90,994,786, which was £564,786 in excess of the budget estimate; and the total expenditure was £89,927,773, being £996,263 less than the estimate. The revenue is derived mainly from taxation, including customs, excise, and stamp duties, the income, property, and land taxes, and the house duty. The customs receipts amounted to £19,828,309, of which £9,948,809 were from tobacco, £3,418,162 from tea, £2,335,174 from rum, £1,423,836 from brandy, £668,921 from other spirits, £1,291,052 from wine, £177,206 from coffee, £175,225 from raisins, £113,994 from currants, and £275,957 from other articles. The excise receipts were £25,717,425, of which £15,693,631 were from spirits, £9,457,749 from beer, £232,069 from licenses, £324,984 from railways, and £8,392 from other sources. The receipts from stamps, exclusive of fee stamps, were £13,730,183, of which £2,811,187 were for probate duty, £2,823,162 for legacy duty, £1,304,080 for estate duty on personalty, £98,640, for estate duty on realty, £1,200,347 for succession duty, £160,831 for company capital duty: for stamps on deeds, £2,370,678; on receipts, £1,136,303; on bills of exchange, £712,830; on patent medicines, £240,062; on licenses, etc., £163,772; and on marine-insurance policies, £152,542; other

stamp duties, £550,749. The income and property tax amounted to £13,853,016, the house duty to £1,442,848, and the land tax to £1,038,337, making the total receipts from taxation £75,610,118. The receipts from the post-office were £10,188,290; from the telegraph service, £2,484,098; from Crown lands, £526,340; from fee stamps, £828,830; from the civil departments, £942,373; from the revenue departments, £120,462; from the Bank of England, £168,878; from post-office savings banks, £65,663; interest on Suez Canal shares, £222,111; receipts from other sources, £276,869; making the total for the year £91,428,532, of which £90,994,785 had been actually paid into the exchequer up to March 31.

The expenditure for the year on account of the consolidated-fund charges was £29,009,498, of which £25,000,000 were for charges on the debt, £200,000 for Suez Canal bonds, £1,428,571 for the naval defense fund, £409,592 for the civil list, £347,329 for annuities and pensions, £509,129 for judicial salaries, £84,173 for other salaries and allowances, £325,000 for constructing barracks, £400,000 for gold coinage, and £305,705 for various other purposes. The debt charges itemized comprised £15,893,049 interest on the funded and £820,292 on the unfunded debt; £6,557,637 for terminable annuities, £187,233 for management of the debt, and £1,541,789 for the new sinking fund. The expenditures for the army and navy were respectively £17,259,000 and £14,150,000; for the civil services, £17,500,709; for collecting the customs and inland revenue, £2,691,948; for the post-office, £6,126,481; for the telegraph service, £2,489,000; and for the packet service, £701,130, making a total for the supply service of £60,918,274.

The budget for 1892-'93 estimates the revenue at £90,453,000; and the expenditure at £90,253,000; but some of the estimates have been increased by supplementary votes.

One half of the probate duty, the additional beer and spirit duty, and a large proportion of the license money collected by the Government, are required by recent acts of Parliament to be paid over to local authorities for the relief of local taxation. For the year ending March 31, 1892, the amounts so applied were: From additional beer and spirit duties, £1,394,751; from licenses, £3,391,627; from probate duty, £2,811,187; making a total of £7,597,565; of which England and Wales received £6,426,860; Scotland, £795,712; and Ireland, £359,260. The balance in the exchequer on March 31, 1892, was £6,255,169. The amount raised for local expenditure in 1890 was £69,317,683. The total for England and Wales was £57,860,957; for Scotland, £7,573,504; for Ireland, £4,383,222. The expenditures for the year were: In England and Wales, £55,375,027; in Scotland, £7,403,657; in Ireland, £4,403,512; total for the United Kingdom, £67,182,196, against £66,253,476 for the previous year. The expenditure for poor relief was £10,406,638; for police and sanitary and other public works, £32,837,568; and for schools, £7,100,911.

The funded debt amounted on March 31, 1892, to £577,944,665, the unfunded debt to £35,312,994, and the estimated amount of the terminable annuities was £64,421,912, making the total national debt £677,679,571. The Russian-Dutch

loan of £531,359, the deficiency of savings banks and friendly societies, amounting to £1,566,279, and £764,558 of liabilities under the imperial defense act of 1888, swell the gross liabilities, £680,541,767; but from this amount is to be deducted for sundry assets the sum of £5,209,428, leaving the total net liabilities £675,332,339.

Agriculture and Other Industries.—The wheat crop in Great Britain in 1892 was 58,561,000 bushels, against 72,127,000 bushels in 1891, and upward of 73,200,000 bushels in each of the two previous years; the yield of barley was 70,502,000 bushels, which was below the average for the three preceding years; the yield of oats was 116,295,000 bushels, which exceeded that of any of the three preceding years except 1890. In Ireland the yield of wheat in 1891 was 2,615,000 bushels, which was about the average for the three preceding years; the crop of barley was 7,428,000 bushels, which exceeded the average; the crop of oats was 54,086,000 bushels, nearly 4,000,000 bushels in excess of the average. The crop of potatoes was 3,037,000 tons, against 1,810,000 tons in 1890; and the crop of turnips 4,349,000 tons, against 4,256,000 tons in 1890. In Great Britain the crop of potatoes in 1891 was 3,053,000 tons, and the crop of turnips 25,392,000 tons, which was somewhat below the average. The farm animals in the United Kingdom in 1892 consisted of 2,067,549 horses, of which Ireland had 539,788; 11,519,417 cattle, Ireland's share being 4,531,025, nearly equaling that of England; sheep, 33,642,808, of which 4,827,702 were in Ireland; and 3,265,898 hogs, of which 1,115,888 were in Ireland.

The output of coal during 1891 was 185,479,126 tons, valued at £74,099,816, against 181,614,298 tons, valued at £74,953,997, in 1890; and that of iron ore 12,777,689 tons, valued at £3,355,860, against 13,780,760 tons, valued at £3,926,445, in 1890. The total value of the metallic minerals raised, including iron, lead, tin, copper, zinc, bog iron, copper precipitate, silver, gold, iron pyrites, and antimony, was £14,614,386. The quantity of iron produced was 4,528,312 tons, valued at £11,886,819. The total number of persons employed in the coal mines in the United Kingdom in 1891 was 648,450.

Raw cotton to the amount of 1,994,885,312 pounds was imported into the United Kingdom in 1891, and 1,812,877,284 pounds were retained for home consumption, against 1,578,853,360 in 1890. The imports of wool were 720,014,070 pounds, of which 335,789,414 pounds were retained for home consumption, against 292,315,828 pounds in the preceding year. In 1890 the number of textile factories in England and Wales was 6,180, with an aggregate of 50,211,216 spindles and 722,406 power looms; in Scotland, 747 factories, with 2,413,735 spindles and 71,471 power looms; in Ireland, 263 factories, with 1,016,111 spindles and 28,612 power looms; making a total in the United Kingdom of 7,190 factories, 53,641,062 spindles, and 822,489 looms. These factories employed 298,828 men, 610,608 women and girls over thirteen years old, and 86,963 boys, all working full time, besides 40,558 boys and 45,941 girls working half time; the total number of all classes being 1,084,631. The number of factories working upon cotton was 2,536; upon wool, 1,798; upon shoddy, 125;

upon worsted, 753; upon flax, 375; upon hemp, 105; upon jute, 116; upon hair, 42; upon cocoanut fiber, 24; upon silk, 623; upon lace, 403; upon hosiery, 267; upon elastic, 54. Since 1885 the number of textile factories had decreased 275; but the number of spindles increased 560,950, and of power looms, 48,785; while the number of persons employed increased 49,720.

Commerce.—The total imports of merchandise in 1892 amounted to £423,892,178, against £435,441,264 in 1891. The exports of domestic produce amounted to £227,600,224, against £247,285,150 in 1891, and the exports of foreign and colonial products to £84,400,420, against £61,878,568 in 1891; making the total volume of commerce £715,352,822, against £744,554,982 in 1891. In 1891 the share of England and Wales in the trade was 90.9 per cent.; of Scotland, 7.7 per cent.; of Ireland, 1.4 per cent.

The following table gives a summary of the imports of the United Kingdom for the year ending Dec. 31, 1892, compared with the preceding year:

ARTICLES.	1891.	1892.
Animals, living, for food	£9,246,898	£9,360,715
Articles of food and drink, free	148,510,208	149,115,913
Articles of food and drink, dutiable	27,004,932	26,411,266
Tobacco, dutiable	8,415,400	5,574,194
Metals	23,040,124	21,068,887
Chemicals, dye stuffs, and tanning substances	7,314,397	7,707,390
Oils	7,889,994	7,076,085
Raw materials for textile manufactures	89,215,655	77,681,573
Raw materials for sundry industries	40,085,485	40,977,069
Manufactured articles	65,082,129	65,440,678
Miscellaneous articles	14,985,548	14,968,562
Miscellaneous, by parcel post	561,069	135,248
Total imports	£435,601,279	£423,892,178

The following table gives a summary of the exports for the year ending Dec. 31, 1892, as compared with the preceding year:

ARTICLES.	1891.	1892.
Animals, living	£271,812	£269,540
Articles of food and drink	10,699,250	10,457,166
Raw materials	21,382,224	19,325,985
Yarns and textile fabrics	106,996,484	100,065,975
Metals, and manufactures of except machinery	99,210,022	88,057,789
Machinery and mill work	18,517,515	14,798,716
Apparel and articles of personal use	11,881,470	10,419,149
Chemicals and medicinal preparations	8,577,712	6,587,506
All other articles, manufactured or partly manufactured	82,208,658	26,676,795
Miscellaneous, by parcel post	1,095,468	1,201,560
Total British products	£247,293,150	£237,060,224
Foreign and colonial products	61,796,568	64,400,420
Total exports	£309,081,748	£291,460,644

The quantity of wheat imported in 1892 was 12,979,360 quarters (1 quarter = 8 bushels), of which 6,776,348 quarters came from the United States, 2,498,088 from India, 872,597 from Russia, 775,996 from Canada, 457,511 from Chili, 403,869 from Australasia, 147,558 from Roumania, and 98,836 from Turkey. The quantity imported in 1891 was 13,262,592 quarters; in 1890, 12,094,836. The imports of flour in 1892 were equivalent to 4,421,202 quarters, of which 3,893,478 quarters came from the United States.

Of the total value of the imports for 1891, £104,409,050 came from the United States, £44,777,460 from France, £32,234,398 from India, £31,261,571 from Australasia, £27,301,657 from Holland, £27,031,748 from Germany, £24,110,251 from Russia, £17,252,365 from Belgium, £12,606,415 from British North America, £10,658,288 from Egypt, £10,523,875 from Spain, £8,500,651 from Sweden, £7,936,787 from Denmark, £6,254,428 from South Africa, £5,356,856 from the Straits Settlements, £5,442,881 from Turkey, £5,038,091 from Roumania, £4,713,508 from China, £4,249,909 from Brazil, £4,168,998 from Ceylon, £4,130,356 from Chili and Bolivia, £3,451,228 from the Argentine Republic, £3,419,281 from Italy, £3,363,629 from Norway, £2,952,965 from Portugal, £2,421,227 from the Philippine Islands, £2,166,486 from Greece, £1,901,961 from Java, £1,776,862 from British West Africa, £1,558,152 from the British West Indies, £1,464,106 from Austria, £1,400,130 from Central America, £1,201,486 from the Channel Islands, £1,152,585 from Japan, £1,101,702 from Hong-Kong, £969,814 from Peru, £885,606 from British Guiana, £673,970 from Algeria, £611,445 from Morocco, £586,155 from West Africa, exclusive of British possessions, £493,453 from Mexico, £476,081 from Tunis and Tripoli, £374,261 from Uruguay, £320,244 from Colombia, £290,997 from Venezuela, and £268,066 from Mauritius. Of the exports of British products, £27,544,553 went to the United States, £31,177,968 to India, £25,500,194 to Australasia, £18,804,329 to Germany, £16,429,665 to France, £9,463,300 to Holland, £8,290,039 to Brazil, £7,957,878 to South Africa, £7,849,495 to Belgium, £7,245,771 to British North America, £6,456,593 to China, £6,296,560 to Italy, £5,407,402 to Russia, £4,977,473 to Spain, £4,246,700 to the Argentine Republic, £3,789,238 to Egypt, £2,988,449 to Sweden, £2,882,964 to Japan, £2,617,220 to Denmark, £2,531,328 to Hong-Kong, £2,463,543 to the Straits Settlements, £2,246,700 to the Argentine Republic, £2,217,802 to the British West Indies, £2,205,655 to Java, £2,018,597 to Portugal, £2,000,550 to Chili and Bolivia, £1,901,897 to Norway, £1,695,774 to Mexico, £1,678,190 to West Africa, £1,676,964 to Roumania, £1,481,881 to the Spanish West Indies, £1,279,708 to Colombia, £1,227,967 to Austria, £1,205,655 to Java, £1,165,052 to Uruguay, £1,144,948 to Central America, £1,124,571 to Greece, £1,037,455 to Peru, £1,017,637 to West Africa, exclusive of British possessions, £1,016,573 to Ceylon, £896,013 to Malta, £821,326 to Venezuela, £786,581 to the Philippine Islands, £759,425 to the Channel Islands, £692,348 to British Guiana, £592,767 to Morocco, £469,396 to Persia, £387,086 to Algeria, £320,998 to Hayti and Santo Domingo, £290,614 to East Africa, and £259,871 to Ecuador.

The imports of gold coin and bullion in 1892 were £21,470,832, against £30,275,620 in 1891; the exports, £14,832,122, against £24,167,925. The imports of silver coin and bullion were £10,746,382, against £9,315,598 in 1891; and the exports, £14,078,568, against £13,000,366 in 1891.

The values of some of the principal imports in 1892 were as follow: Grain and flour, £58,176,451; raw cotton, £37,888,356; wool, £26,827,098; meat, £22,359,162; sugar, £19,770,837;

butter and margarine, £15,678,168; wood and timber, £17,180,739; silk manufactures, £11,289,692; flax, hemp, and jute, £9,029,930; tea, £10,090,106; woolen manufactures, £9,468,958; animals, £9,360,715; oils, £7,076,035; chemicals, dyes, etc., £7,707,390; seeds, £7,049,425; fruits, £7,105,962; leather, £6,397,831; wine, £6,035,929; cheese, £5,417,777; copper, £5,542,937; iron ore, £2,715,420; bar iron, £692,259; iron manufactures, £3,034,692; lead, £1,976,436; tin, £2,743,814; zinc and its manufactures, £1,565,622; eggs, £3,793,018; coffee, £3,970,203; tobacco, £3,547,194. The values of the chief domestic exports were as follow: Cotton manufactures, £56,269,618; cotton yarn, £9,696,122; woolen manufactures, £17,902,841; woolen and worsted yarn, £4,056,734; linen manufactures, £5,167,295; linen yarn, £866,393; jute manufactures, £2,561,645; jute yarn, £286,329; apparel and slops, £4,845,349; iron and steel, £21,763,190, of which £5,384,058 represent tinned plates, £2,247,641 railroad bars, £3,343,423 hoops and plates, £1,144,162 bar, angle, bolt, and rod iron, £4,360,428 cast and wrought iron of all sorts, £1,976,490 pig and puddled iron, and £2,233,932 wrought and unwrought steel; hardware and cutlery, £2,206,563; copper, £3,765,509; machinery, £14,798,716; coal and other fuel, £16,811,070; chemicals, £8,587,506.

Navigation.—The number of vessels entered from foreign ports in 1891 was 61,380, of which 24,017 were foreign; and the number cleared was 62,202, of which 24,569 were foreign. The total tonnage of the vessels in the foreign trade entered at British ports was 36,859,000 tons, of which 26,637,000 were British and 10,222,000 foreign. The clearances amounted to 37,954,000 tons, of which 27,320,000 were British and 10,633,000 foreign. The total tonnage entered and cleared was 74,813,000 tons, of which 53,957,000 were British and 20,855,000 foreign. Of the foreign tonnage, 5,045,588 tons were Norwegian, 4,400,474 German, 1,943,854 Dutch, 1,889,871 Danish, 1,851,100 French, 1,762,705 Swedish, 1,233,328 Spanish, 952,263 Belgian, 503,798 Russian, 476,722 Italian, 306,044 American, and 133,941 Austrian. The entries of vessels with cargoes amounted to 28,101,000 tons, of which 20,347,000 tons were British and 7,754,000 foreign; and the clearances to 34,213,000 tons, of which 25,188,000 were British and 9,026,000 foreign. The number of vessels that entered coastwise was 310,770, of 48,833,622 tons; and the number cleared was 278,600, of 43,188,500 tons. The total number of vessels entered at the ports of the United Kingdom in 1891 was 372,150, of 85,692,637 tons; and the total number cleared was 340,902, of 81,142,105 tons.

In 1891 there were engaged in the home trade 8,675 sailing vessels, of 556,968 tons, employing 36,714 men; 2,211 steamers, of 354,714 tons, employing 25,107 men. The number of sailing vessels engaged partly in the home and partly in the foreign trade was 312, of 40,248 tons, employing 1,796 men; and the number of steamers 236, of 166,813 tons, employing 5,169 men. In the foreign trade exclusively there were engaged 2,127 sailing vessels, of 2,250,285 tons, employing 42,679 men; and 3,632 steamers, of 4,795,513 tons, employing 129,015 men. The total number of vessels was 17,243, and the aggregate tonnage

7,915,336. The total number of sailors was 240,480, of whom 30,267 were foreigners. The total number of vessels registered as belonging to the United Kingdom and the Channel Islands was 21,543, of 8,279,297 tons, of which 13,823, of 2,972,093 tons, were sailing vessels, and 7,720, of 5,307,204 tons, were steamers.

Railroads.—The length of the railroad lines open to traffic on Jan. 1, 1892, was 20,191 miles, of which England and Wales had 14,156 miles, Scotland 3,172 miles, and Ireland 2,863 miles. The total paid-up capital in shares and loans was £919,425,121; and the total receipts for 1891 were £81,860,607, of which £35,130,916 were from passengers and £43,230,717 from freight. The number of passengers carried was 845,463,668, exclusive of holders of season tickets. The total working expenses were £45,144,778, which was 55 per cent. of the gross earnings.

Posts and Telegraphs.—The number of letters delivered in the United Kingdom in 1892 was 1,767,500,000; of post cards, 214,600,000; of book packets, 495,300,000; of newspapers, 162,800,000; of parcels, 49,400,000. There were issued 8,906,576 inland money orders for the total sum of £24,383,569; and, including colonial and foreign orders, the whole number was 10,346,630, amounting to £28,429,694. The postal orders numbered 52,659,545, of the total value of £20,563,750. The revenue of the post office, exclusive of telegraphs, was £10,190,967, and the working expenses were £7,142,269. At the beginning of the fiscal year 1892-'93 there were 33,054 miles of telegraph lines and 202,286 miles of wire, including 22,781 miles of private wires, but excluding the wires of the railroad companies. The number of messages in 1892 was 69,685,480. The gross receipts for 1892 were £2,508,138, and the working expenses £2,506,989.

The Parliamentary Session.—The second session of the thirteenth Parliament of Queen Victoria was opened on Jan. 31, 1893. The Queen's speech announced that in connection with the approaching evacuation of Uganda by the British East Africa Company a commissioner had been authorized to examine on the spot into the best means of dealing with the country, and, regarding Egypt, that a slight augmentation had been made in the number of British troops stationed there, which measure did not indicate any change in the policy of the Government in dealing with that country. Calling attention to the wide prevalence of agricultural distress, the hope was expressed that the matter would receive the attention of Parliament. Among the measures recommended, the leading place was given to a bill amending the provisions for the government of Ireland, which had been prepared with the desire to afford contentment to the Irish people, relief to Parliament, and additional securities for the strength and union of the empire. Measures were recommended for amending the registration in Great Britain, for shortening the duration of Parliaments, and for equalizing the franchise by the limitation of each elector to a single vote. In the interests of labor, bills were promised in relation to employers' liability, the hours of labor for railway servants, and the amending of the law of conspiracy. Further recommendations were of measures for the creation of parish councils, for enlarging

the powers of the London County Council, for the prevention of the growth of new vested interests in the ecclesiastical establishments in Scotland and Wales, and for direct local control over the liquor traffic.

The promised Irish Home-Rule bill was introduced and explained by Mr. Gladstone on Feb. 13. After a preamble reciting that it is expedient that, without impairing or restricting the supreme authority of Parliament, an Irish legislature should be created, the bill provided that such legislature should consist of the Queen and of two Houses, a legislative council and a legislative assembly. This legislature would have power to make laws in matters relating exclusively to Ireland or any part thereof, subject to the limitations that it may not legislate in any matter that relates to the Crown, a regency, or the vice-royalty; in matters of peace and war, public defense, treaties, and foreign relations, dignities, titles, treason, or alienage; in matters of external trade, quarantine, or navigation; in matters relating to coinage, legal tender, the standard of weights and measures, trademarks, or copyright; and that it may not in any manner restrict religious or personal liberty, abridge educational privileges, or interfere without due process of law with the rights of personal or corporate property. The legislative council was to consist of 48 members, to be chosen by electors who own or occupy in the constituency land or a tenement of the ratable value of more than £20; and such councillors are to hold their seats for eight years, regardless of a dissolution. The legislative assembly was to consist of 108 members returned by the parliamentary constituencies now existing, and elected by the parliamentary electors; and the assembly might, unless sooner dissolved, continue five years from the day on which it is directed by the summons to meet. The constituencies for returning councillors were set forth in a schedule of the act, and the constituencies for members of both Houses of the Legislature, and the distribution of members among the constituencies and the qualifications of the electors must remain for six years as fixed by the act; thereafter these might be altered by the Irish legislature, provided that in any redistribution of members due regard was had to the population of the constituencies. For the purpose of meeting a deadlock between the two Houses, it was provided that in case a measure passed by the assembly was rejected by the council and again passed by the assembly, after a dissolution, or after a lapse of two years, then, in case of another disagreement by the council, the two branches must meet in joint session and decide the question by a majority of votes. All appropriation or tax bills must originate in the assembly, but the appropriation of any part of the revenue or the laying of any tax, except upon recommendation from the Lord Lieutenant, was prohibited. The executive power remains vested in the Queen, and the Lord Lieutenant, in her behalf should exercise the prerogatives of the Crown, and summon, prorogue, and dissolve the legislature. There was to be an executive committee of the Privy Council of Ireland to aid and advise in the government: said committee being of such numbers and comprising persons holding such

offices under the Crown as the Queen might think fit, or as might be directed by act of the legislature; and the Lord Lieutenant, on the advice of the executive committee, was to give or withhold the royal assent to bills passed by the legislature, subject, nevertheless, to any instructions given by the Queen. The term of office of the Lord Lieutenant was fixed at six years, and any subject of the Queen would be eligible, without reference to his religious belief. Ireland would continue under the act to be represented in the Imperial Parliament, but such representation be reduced to 80 members, and the constituencies from which they should be returned are defined in a schedule of the act. With regard to such representation the Irish legislature was inhibited from making any change in the election laws or the qualification of electors, but not prevented from dealing with officers concerned in the issue of writs of election. In the matter of finance the clauses of the bill were numerous and complicated. In effect they provided that the imperial exchequer should take the net proceeds of the customs revenue collected in Ireland, stated by Mr. Gladstone to be £2,370,000, as Ireland's contribution to imperial expenditure. Ireland was to take over £1,000,000 of the constabulary charges, the civil administration charges, amounting to £3,210,000, the inland revenue charges of £160,000, and the postal service, costing £790,000, which would make a total of £5,160,000; and against this she was to receive the excise duties, amounting to £3,220,000; the proceeds of local taxation, covering stamps, income tax, and licenses, amounting to £1,495,000; postal revenue, £740,000; Crown lands, £65,000; and miscellaneous, £140,000; making a total of £5,660,000, leaving her a working surplus of £500,000. An Irish exchequer and a consolidated fund were provided for, and the legislature was empowered to provide for the public service by the imposition of any taxes other than the existing taxes, and to regulate all matters concerning the miscellaneous public revenue connected with the civil charges of government. Detailed provisions were made for the disposition of the Irish consolidated fund, and defining what should be preferred charges thereon. Two of the judges of the Supreme Court in Ireland were to be exchequer judges, appointed by the Crown, paid out of the consolidated fund of the United Kingdom, and removable only by the sovereign; and legal proceedings to which the treasury or commissioners of customs or any of the officers are parties, or which relate to the election of parliamentary representatives, or any matter not within the powers of the Irish legislature, should, if so required by any party to such proceedings, be heard and determined before these judges; and in any such proceeding an appeal would be from any court of first instance to the exchequer judges, the decision of such judges being subject to appeal to the Privy Council only. The exchequer judges would have power to appoint an officer to execute any judgment of theirs in case the sheriff or other proper officer refused or neglected such execution. Appeals from the courts of Ireland were to be no longer to the House of Lords, but to the Privy Council; but this provision would not affect the jurisdiction

of the House of Lords in the matter of Irish peerages. The Privy Council, through its Judiciary Committee, was, upon application of the Lord Lieutenant or a secretary of state, to hear and determine as to the validity of any act of the Irish legislature. Mr. Gladstone said that this judicial committee was recognized by him and his colleagues as the only approach they could make to the Supreme Court of the United States, and that in the composition of the committee due regard must be had to different elements of nationality. Elaborate provision was made for protecting the tenure of office and the salaries, allowances, and pensions of judges and other officers of the Crown serving in Ireland. Regarding the constabulary or police, the act provided that the Irish legislature might empower the local authorities in counties, municipal boroughs, or other larger areas, to establish local police forces; and whenever the Executive Committee of the Irish Privy Council should certify to the Lord Lieutenant that an adequate police force had been established in any area, he should within six months direct the withdrawal of the royal Irish constabulary from police duties in such area, and make such reduction in the numbers of said constabulary as to him seemed necessary; and upon its being so certified to him within six years that adequate local police forces have been established in every part of Ireland, the Lord Lieutenant would be required within six months after such certification to retire the whole of the royal Irish constabulary and the Dublin metropolitan police. The Irish legislature was inhibited from creating any forces organized or armed like the two forces thus disbanded. The Irish legislature was prohibited from passing any act respecting the relations of landlord and tenant during three years from the passing of the act.

Debate upon the bill was begun at once, and continued to occupy much of the time of the House until the Easter adjournment. Meantime other Government measures, the local veto bill, for regulation of the liquor traffic, the employers' liability bill, the registration bill, the Welsh suspensory bill, and the parish councils bill had been introduced, and a motion by Mr. Gladstone giving precedence to Government business after the Easter recess to the end of the session, was carried just before adjournment by a vote of 163 against 75. On April 6 Mr. Gladstone moved the second reading of the Home-Rule bill, and the debate on that motion was continued to April 29, when the vote was taken. The chief points of attack of the Opposition were the alleged uselessness of the bill, as Ireland was entirely tranquil under present conditions; the financial scheme, which was declared to be impractical and absurd; the lack of any sure guarantee of imperial supremacy; failure of the bill to protect property interests or the minority in Ireland; uncertainty in dealing with the land question; and the unreliability of the majority of the Nationalist party, who would carry out doctrines in regard to land, property, and government which were wholly inconsistent with any government whatever. The motion for the second reading was carried by a vote of 347 to 304, the normal Government majority of 43. On May 8 the House went into committee on

the bill. During the progress of the bill, clause by clause, through the committee, the debate became more and more bitter, leading in some instances to enforced withdrawals and apologies. The financial scheme was entirely remodeled in committee, but the declared purpose of it underwent but little change. The following statement, based on the approximate figures of 1892-'93, illustrates the effect of the amended clauses: The Irish revenue embraces customs, £2,402,000; excise, £3,058,000; stamp duties, £707,000; income tax, £552,000; Crown lands, £65,000; total, £6,784,000, two thirds of which, or £4,522,000, would be retained by Ireland, and this amount is augmented by £138,000 of miscellaneous receipts, making the total retained by Ireland, £4,660,000. Against this is placed Irish expenditures: Civil government charges, inclusive of local charges met out of local revenues, £3,123,000; two thirds of the constabulary charges, £973,000; and the estimated deficit on postal account, £52,000; total, £4,148,000 of expenditure, which deducted from the revenue would leave a surplus for Ireland of £512,000. The figures representing customs and excise were readjusted to make allowance for the duties paid in Ireland on articles consumed in Great Britain. The acrimonious feeling engendered during the debates in committee culminated at 10 o'clock in the evening of July 27, the hour fixed by the Government for closure of debate on the bill in committee. Mr. Chamberlain was speaking on the Opposition side as the hour approached, and amid much disorder on both sides was denouncing Mr. Gladstone and his followers. An allusion to Herod brought forth from the Nationalists a cry of "Judas." Meantime the clock struck 10, and the chairman, Mr. Mellor, attempted to put the closure, and gave directions to clear the House for a division. The Conservatives refused to quit the House, and in the disorder a fight arose in which members were knocked down and otherwise roughly handled. The committee finished its labors upon the bill on the following day. During the month of August the measure passed its final stages by the usual majority, and was sent to the House of Lords, where it was rejected on Sept. 8, by a vote of 419 to 41.

The House passed the North Sea fisheries bill for suppressing the liquor traffic among the fishermen; also the bill regulating the hours of service of railway employees. The employers' liability bill, the second reading of which was moved on Feb. 20, was framed to carry out and give legal effect to the principle that one who for his own profit sets in motion agencies involving danger to others ought to be civilly responsible for the consequences, and thus to abolish the doctrine of common employment. The registration bill, introduced on Feb. 20, providing for a general simplification of the registration machinery and for changing the residence qualification by substituting for an occupation for twelve months, expiring July 15, the uniform period of three months, ending June 24 in each year, applying to all elections; the right to vote not to be affected by any change of residence within the same electoral area. The Welsh suspensory bill, suspending the creation of new interests in churches in Wales, is regarded as the

first practical step toward disendowing and disestablishing the Church there. The bill establishing the eight-hour day for miners passed its second reading on May 3 by a vote of 279 against 201. These 3 bills, the local veto bill, and the parish council bill were pending when, on Sept. 22, Parliament adjourned until Nov. 2.

Colonies.—Gibraltar is a Crown colony in Andalusia, Spain, at the entrance to the Mediterranean. The Governor and Commander in Chief is Gen. Sir Lothian Nicholson, who exercises all the functions of government, legislative and executive. The area of the rock is 1.9 square miles, and the population in 1891 was 25,896, including a garrison of 5,896 men. The local revenue in 1891 was £61,136, the expenditure £62,885; and the military expenditure of the home Government £259,231.

Malta, an island in the Mediterranean, 58 miles from Sicily, is 17 miles long, with an area of 95 square miles, and had in 1890 an estimated population of 165,662. The chief town and port is Valetta. The government is partly representative, the Governor being assisted by 20 councilors, of whom 14 are elected. The present Governor is Gen. Sir Henry Augustus Smyth. The revenue in 1891 was £275,125, and the expenditure £281,870.

Cyprus, the third island in size in the Mediterranean, is administered by Great Britain under a convention with Turkey. The area of the island is 3,584 square miles, and the population in 1891 was 209,286, exclusive of the military. The government is administered by a High Commissioner, assisted by an Executive Council. The Legislature consists of 18 members, 6 of whom are officeholders and 12 members elected for five years, 8 by Mohammedan and 9 by non-Mohammedan voters. The High Commissioner is Sir Joseph Suddall, appointed in 1892. The revenue for 1891-'92 was £217,162, and the expenditure £112,742. There is no public debt, but a sum of £92,800 is payable annually to the Sultan under the convention. The imports for the year were valued at £344,125, and the exports, mainly agricultural, at £432,419.

Aden, a volcanic peninsula on the coast of Arabia, having an area of 70 square miles, and forming an important coaling station on the Suez Canal route to the East, with the small island of Perim, at the entrance to the Red Sea, had in 1891 a population of 41,910. The administrative officer is the Political Resident, who is also commander of the troops, and is subordinate to the Government of Bombay. The principal exports are coffee, gums, hides, cloths, and tobacco, which come from the interior of Arabia. The Somali Coast Protectorate, opposite Aden, with an area of 80,000 square miles and a population of 240,000, the island of Socotra, with an area of 1,382 square miles and a population of 10,000, and the Kuria Muria Islands, 5 in number, leased for guano, are attached to Aden.

Ceylon, an island in the Indian Ocean, has an area of 25,346 square miles, and in 1891 had a population of 3,008,466. The government is administered by a Governor and an Executive Council of 5 members. There is a Legislative Council of 17 members, comprising the members of the Executive Council, 4 other offi-

cials, and 8 unofficial representatives of the different races and classes. Sir Arthur Elibank Havelock is the present Governor. The revenue for 1891 was 17,962,710 rupees, of which 4,187,542 were derived from customs, 1,178,788 from land and the tithe on grain, 1,966,173 from liquor licenses, 1,258,434 from stamps, 1,328,619 from the sale of Government timber and salt, and 732,030 from harbor dues. The expenditure was 16,435,079 rupees, of which 2,964,308 were for the civil and judiciary establishments, 1,932,804 for other establishments, 1,195,182 for contribution toward military expenditure, including the cost of volunteer force, 681,577 for pensions and retiring allowances, 1,720,406 for interest on loans, etc., and 2,378,889 for public works, including 846,623 rupees for irrigation. At the end of 1891 the public debt amounted to £2,510,759. The debt was incurred for public works, including 191 miles of railway. The harbor of Trincomalee, on the east coast of the island, is the chief station of the British fleet in Indian waters. The area of land under cultivation is 2,625,016 acres. The principal crops are rice and other grains, which in 1891 occupied 685,839 acres; coconuts, which occupied 759,605 acres; and tea, which occupied 261,179 acres. There were also 55,924 acres under coffee, 12,127 under cinchona, 40,447 under cinnamon, 9,082 under tobacco, and 19,471 under cacao. Disease has reduced the production of coffee. The value of the imports in 1891 was 66,635,392 rupees, against 63,091,988 in 1890; and of the exports, 58,799,744 rupees, against 51,127,339. The principal articles imported were cotton goods, salt fish, rice and paddy, coal and coke, spirits and wines. The values of the principal exports were: Tea, 80,473,267 rupees; coffee, 5,731,467 rupees; plumbago, 4,005,401 rupees; coconuts, etc., 8,177,123 rupees; areca nuts, 907,193 rupees; and cinchona, 669,656 rupees.

The Straits Settlements, a Crown colony, comprise Singapore, an island at the southern extremity of the Malay Peninsula, with an area of 206 square miles; Penang, an island off the west coast of the Malay Peninsula, area 107 square miles; Province Wellesley, a strip on the mainland, area 270 square miles; the small island of Pangkor, with a small strip of territory on the opposite mainland, the whole being known as the Dindings; Malacca, another peninsular strip; and the Cocos Islands and Christmas Island. The total number of inhabitants in 1891 was 506,577, of which Singapore had 182,650; Penang, Province Wellesley, and the Dindings, 232,977; and Malacca, 90,950. The trade is carried on principally by the Chinese, who outnumber the Malays. In the administration of the Government, the Governor is aided by an Executive Council and by a Legislative Council of 10 official members and 7 unofficial members. The present Governor is Sir Charles B. H. Mitchell, late Governor of Natal, appointed in June, 1893. There are 5 native states, occupying a large portion of the peninsula, which are under British protection, and whose political residents are under the direct control of the Governor of the Straits Settlements.

The territory of British North Borneo, administered by the British North Borneo Company, was taken under the protection of Great

Britain in 1888. It has an area of 31,106 square miles, and the population in 1891 was about 175,000, mostly Mohammedan settlers on the coast and aboriginal tribes inland. Charles Vandeleur Creigh is the Governor, and Richard B. Martin Chairman of the Court of Directors in London. The exports are mostly tobacco, jungle and sea products, wax, edible birds'-nests, coconuts, gutta-percha, sago, and seed pearls. There are 17 estates engaged in tobacco-growing. Coal and gold have been found. Brunei and Sarawak are adjacent territories on the island of Borneo under British protection. Brunei has an area of about 3,000 square miles, and is ruled by a native sultan. Sarawak has an area of about 45,000 square miles and a population of about 300,000. The ruler is Sir Charles Johnston Brooke, who in 1868 succeeded his uncle, Sir James Brooke, as Rajah. The products of both these territories are similar to those of North Borneo.

The island of Hong-Kong, now a Crown colony, was ceded to Great Britain by China in 1841. It is the center for British commerce with China and Japan and a military and naval station of great importance. It is situated off the southeast coast of China, at the mouth of the Canton river, and has an area of about 29 square miles. The opposite peninsula of Kowloon belongs also to Great Britain. The population of Hong-Kong in 1891 was 221,441, of which 212,896 were colored; the males outnumbered the females more than 2 to 1. The Governor is Sir William Robinson, appointed in 1891. The imports from Great Britain in 1891, consisting principally of cottons, woollens, iron, lead, and copper, amounted to £2,531,328; and the exports, consisting largely of tea, silk, and hemp, amounted to £1,101,702. There is no custom-house at Hong-Kong from which official data can be obtained, but the above figures are believed to represent about half of the entire trade. The number of vessels entered in 1891 was 4,351, of 5,188,627 tons; and there were besides these 22,806 junks, of 160,645 tons.

The Andaman Islands, in the Bay of Bengal, are used mainly as a convict settlement for India. The area of these islands is estimated at 1,760 square miles, and the inhabitants are a race of degenerate savages, variously estimated at from 2,000 to 10,000. The convict population in 1891 was 11,738, of whom 3,049 were self-supporting.

The island of Mauritius, in the Indian Ocean, has an area of 705 square miles, and had in 1891 a population of 371,655, over two thirds being Hindus. The colony is administered by a Governor. The Council of Government consists of the Governor and 27 members, 10 of whom are elected, 9 appointed by the Governor and 8 official. Sir Charles Cameron Lees has been Governor since 1889. The revenue in 1891 was 7,595,651 rupees, and the expenditure 8,192,265 rupees. The debt was £777,749. The imports in 1891 amounted to 16,433,133 rupees, and the exports to 23,705,288 rupees. They were as follow: Unrefined sugar, 21,119,674 rupees; aloe fiber, 453,530 rupees; rum, 389,926 rupees; vanilla, 211,314 rupees; coconut oil, 180,568 rupees. A large part of the trade is with British India, South Africa, and Australia. There are 2 lines of railroad, having, with their branches, a total length of

92 miles. The Seychelles group, Rodrigues, the Chagos group, and other islands, are dependencies of Mauritius, and have a total area of 173 square miles. Garcia, the largest of the Chagos group, is 12½ miles long by 6½ miles wide, and has 700 inhabitants, mostly negroes. It is an important coaling station, and exports annually 50,000 gallons of cocoanut oil.

St. Helena, in the south Pacific, has an area of 47 square miles, and in 1891 the population was 4,116. The island is used as a recruiting station for the West African squadron, and is the headquarters of an American whale-fishing fleet, the product of which in 1891 was £17,428. The Governor is William Grey-Wilson.

Ascension Island, northwest of St. Helena, has an area of 35 square miles, and a population of about 360. It is used as a coaling, victualing and store depot for the West African squadron.

The Falkland Islands, in the south Atlantic, have an area of about 6,000 square miles, and had 1,789 inhabitants in 1891. The Governor is Sir Roger Tuckfield Goldsworthy, appointed in 1891. There is an Executive Council and a Legislative Council. The revenue in 1891 was £11,551, and the expenditure £18,302. The imports amounted to £87,877, and the exports to £130,752, including wool for £103,318, frozen mutton for £9,138, and skins for £7,616.

The Bermudas, a group of 360 small islands in the north Atlantic, of which 18 or 20 are inhabited, are situated 580 miles east of North Carolina and 677 miles from New York. They have an area of 20 square miles, of which 4,000 acres are under cultivation, and had in 1891 a population of 15,123. The colony is administered by Lieut.-Gen. Thomas Casey Lyons. There is a Legislative Council, appointed by the Crown, and a Representative Assembly of 36 members, chosen by 1,167 electors. The revenue for 1891 was £33,531, the expenditure £32,029. The imports amounted to £325,976, and the exports to £129,808. They were as follow: Onions, £31,556; potatoes, £27,360; lily bulbs, £12,612. On account of the mildness of the climate the colony is a winter resort for Americans.

British Honduras is a Crown colony in Central America. It has an area of 7,560 square miles, and had in 1891 a population of 31,471. The Governor is Sir C. Alfred Moloney. The revenue in 1891 was \$357,634, and the expenditure \$348,233. The imports amounted to \$1,853,365, and the exports to \$1,909,930. There were exported 5,717,402 cubic feet of mahogany. Logwood, fruits, and sugar were also exported; as were also India rubber, coffee, and sarsaparilla, mainly in transit. Banana culture is increasing. The colony is suffering for want of adequate internal communications, and from the fact that the land is mainly owned by a few persons who are nonresidents.

British Guiana, in South America, has an area of 109,000 square miles. The government is administered by a Governor and an Executive Council. In legislative business the Governor is assisted by a Court of Policy of 7 official and 8 elective members, and a Combined Court containing, besides the above, 6 financial representatives elected by the registered voters, of whom there are 2,046. The revenue in 1891-'92 was \$560,201, and the expenditure £331,099. The

imports in 1891 amounted to £1,707,770. They consisted mainly of flour, rice, pork, butter, and lumber. The exports amounted to £2,532,554, the chief articles being sugar for £1,662,741, molasses for £44,269, rum for £266,966, and gold for £375,290.

The Gold Coast, Gambia, Sierra Leone, and Lagos constitute the West African colonies. The Gold Coast has a length of 350 miles along the Gulf of Guinea, and an estimated area of 15,000 square miles. The population is estimated at 1,905,000, of whom about 150 are Europeans. The revenue in 1891 was £186,021, and the expenditure £133,407. The imports amounted to £650,192, and the exports to £684,305, of which the principal articles were palm oil and palm kernels. Gold is found in many parts of the colony. The Governor is Sir W. B. Griffith, who is assisted by an Executive and a Legislative Council. Gambia, at the mouth of the river of that name, has an area of 2,700 square miles, and a population of about 50,000. The settlement proper had in 1891 a population of 14,266, including 62 whites. The revenue in 1891 was £31,038, and the expenditure £27,697. The imports amounted to £172,118, and the exports to £180,051. The chief products and exports are groundnuts, hides, beeswax, India rubber, etc. R. B. Llewellyn is Administrator of the colony, aided by an Executive and Legislative Council, both appointed. Sierra Leone, with the island of Sherbro and the attached territory on the mainland, has an area of about 15,000 square miles, and a population of about 180,000. Sierra Leone proper has an area of 400 square miles, and the population in 1891 numbered 74,895, including 224 whites. Freetown, the chief town, had 30,033 inhabitants, and is the most important seaport on the coast, and the headquarters of the British forces in West Africa. Sir Francis Fleming is the Governor. In 1891 the revenue of the colony was £30,869; the expenditure, £77,965. The imports amounted to £453,378, and the exports to £477,656, of which £157,457 was for palm oil, £77,383 for rubber, and £43,004 for kola nuts. The kola tree grows freely, and begins to bear seven years after planting. Its nut, used largely by the natives, possesses the property of enabling one to endure long-sustained effort, either physical or mental, even without food; it also clears foul water very quickly. Lagos, an island lying to the east of the Gold Coast, has, with the protectorate on the mainland, an area of 1,071 square miles, and a population of about 100,000. Yoruba, with an area of about 30,000 square miles, and a population estimated at 3,000,000, is attached to Lagos. The colony is administered by a Governor, assisted by 2 appointed councils, 1 executive and 1 legislative. The revenue in 1891 was £78,625, and the expenditure £66,388. The imports amounted to £650,192, and the exports to £717,643, of which £341,340 was for palm kernels, and £252,958 for palm oil. Early in 1893 the Governor, Gilbert Thomas Carter, made an important treaty with the Egba chiefs whereby they acknowledged friendship with the British Government, and agreed to communicate directly with the Governor in case any difficulty should arise. Entire freedom of trade was also agreed upon. Some trouble arose in the Yoruba

country in March, but through the efforts of Gov. Carter the hostile camps were evacuated and tranquillity restored. In August the Colonial Secretary concluded a treaty with the Ibadans, by which they agreed to receive a British Resident and a force of constabulary in their country, to provide land for the occupation of the officers, and to provide land for a railway.

GREECE, a constitutional monarchy in southeastern Europe. The legislative authority is vested in one chamber, the Boule, elected for the term of four years by direct manhood suffrage. The reigning sovereign is Georgios I, born Dec. 24, 1845; elected King of the Hellenes by the National Assembly at Athens, March 18, 1863. The heir apparent is Prince Konstantinos, Duke of Sparta, born Aug. 2, 1868.

The ministry in the beginning of 1893 was composed of the following members: President of the Council and Minister of Finance, C. Tricoupis; Minister of Foreign Affairs, E. Dragoumis; Minister of Justice, A. Simopoulos; Minister of the Interior, G. Theotokis; Minister of Public Worship and Instruction, K. Kassonakos; Minister of War, N. Tsamados; Minister of Marine, St. Skouloudis.

Finances.—The budget for 1892 estimated the revenue at 103,550,792 drachmai or francs, and the expenditure at 99,986,128 drachmai. The revenue for 1891 was 96,541,462 drachmai, of which 12,845,129 drachmai were derived from the land tax, 3,040,000 drachmai from trade licenses, 2,375,000 drachmai from the cattle tax, 2,218,500 drachmai from the house tax, 430,000 drachmai from the tax on joint-stock companies, 23,328,900 drachmai from customs, 3,728,295 drachmai from tobacco, 350,000 drachmai from spirits, 10,565,500 drachmai from stamps, 2,445,000 drachmai from posts and telegraphs, 1,098,000 drachmai from exemption from military service, 560,000 drachmai from consular dues, 2,277,710 drachmai from other dues, fines, etc., 10,722,500 drachmai from state monopolies, 3,330,321 drachmai from national establishments, 2,920,869 drachmai from the sale of lands, and 21,515,068 drachmai from other sources. The total expenditure was 100,411,479 drachmai, of which 33,516,566 drachmai were for the public debt, 4,911,156 drachmai for pensions, 1,325,000 drachmai for the civil list, 774,113 drachmai for the Chamber of Deputies, 130,399 drachmai for subventions, 2,135,134 drachmai for the Ministry of Foreign Affairs, 4,883,534 drachmai for the Ministry of Justice, 7,482,958 drachmai for the Ministry of the Interior, 4,888,088 drachmai for the Ministry of Public Worship, 16,638,375 drachmai for the Ministry of War, 6,445,653 drachmai for the Ministry of Marine, 5,045,690 drachmai for the Ministry of Finance, 8,139,463 drachmai for the administration, and 3,720,000 drachmai for various other purposes. The public debt on Jan. 1, 1892, amounted to 582,119,958 gold drachmai and 168,209,773 paper drachmai. The consolidated debt, bearing from 4 to 5½ per cent. interest, amounted to 155,000,000 gold drachmai and 31,847,750 paper drachmai. The amortizable loans, bearing 4 and 5 per cent. interest, amounted to 393,766,500 gold drachmai and 37,750,258 paper drachmai; while the floating debt amounted to 33,353,459 gold drachmai and 98,611,765 paper drachmai. The foreign debt, raised main-

ly in London and Paris, amounts to 564,000,000 francs, not including 73,000,000 francs due to France, Great Britain, and Russia since the war of independence, and involving a charge on the revenue of 600,000 francs per annum.

The military demonstrations made on the Turkish frontier raised the war expenditure from 22,000,000 drachmai in 1884 to 41,000,000 in 1885 and 51,000,000 in 1886. In addition to this the Government borrowed largely in London and other financial centers, increasing the permanent charges of the debt, and at the same time issued an excessive amount of inconvertible paper money, causing a progressive rise in the premium on gold. As most of the debts are payable in gold, this premium added nearly an equal percentage to the annual charges of the debt. The Government, with a view to increasing the taxpaying capacity of the country, invested some of the borrowed funds in public works, which did not prove productive. The imposition of new taxes increased the revenue, but not sufficiently to offset the loss by exchange on the debt charge. The additions to the navy had augmented the expenditure under this head to 6,500,000 drachmai from 2,500,000 or 3,000,000 drachmai. Tricoupis, in the elections of 1892, was confirmed in his position as Prime Minister, obtaining an enormous majority in the Boule. The people believed him capable of dealing with the financial situation. In his budget, by reducing the standing army he cut down the military expenditure by 4,000,000 drachmai, and in like manner effected a reduction of 2,500,000 drachmai in the naval expenditure, while a saving of the same amount was effected in the department of public works, and other branches of expenditure were reduced. The monetary disturbance and economic depression were rather increased than lessened by these economies, and a rise in the premium on gold to 40 per cent. swelled the debt charge, while revenue fell off. The actual receipts for 1890 were taken as the estimates for 1893, though taxes on petroleum, beasts of burden, stamps, etc., had been raised and the budget showed a surplus of 6,000,000 or 7,000,000 drachmai on this basis, but did not take account of the premium on gold; so that either a foreign loan or a temporary advance was necessary to enable the Government to pay the next coupons. Being authorized by the Chamber, Tricoupis applied in London and Paris for a loan of 100,000,000 drachmai to carry out his plan for the regeneration of Greek finances, which was to pay off the advances of 16,800,000 drachmai in gold recently obtained, and retire within two years 88,000,000 drachmai of banknotes. Theotokis, the Minister of Finance, was unable to obtain the desired assistance in London. Tricoupis then invited the English and French governments to send experts to examine into the solvency of Greece. The experts came, and after a couple of months reported their conclusions, which differed essentially. Maj. Fitzgerald Law, the English agent, reckoned the revenue at 3,000,000 drachmai less than the conservative estimate of Tricoupis, but thought that Greece would be able to meet all her engagements by a more thorough collection of the taxes, in which there was laxity due to party politics, and recommended a loan that would

pay the coupons falling due and redeem 60,000,000 drachmai of superfluous currency, secured on the revenues payable in gold the collection to be supervised by 1 French and 3 English directors. The French objected to Egyptianizing Greece in this manner, and their financiers were willing to aid in a conversion of the debt at a lower rate.

The Army and Navy.—Service in the army is compulsory. The term of service is nineteen years, of which two years are spent in the active army, seven years in the reserve, and ten years in the militia. The peace footing of the army in 1892 was 28,114 officers and men, of which 16,361 belonged to the infantry, 1,608 to the cavalry, 3,382 to the artillery, 1,469 to the engineers, 3,759 to the gendarmerie, and 1,535 to administrative and special services. The war effective was 350,500 men, of whom 100,000 were in the standing army, 104,500 in the reserve, and 146,000 men in the territorial army.

The navy consists of 3 armorclads, besides 3 more building, 29 torpedo boats and launches, including 2 Nordenfeldt submarine torpedo boats, and 41 unarmored vessels. The navy was manned in 1892 by 3,478 officers and men.

Commerce.—The special commerce in 1891 amounted to 140,359,675 drachmai for imports, and 107,489,700 drachmai for exports. The imports of cereals were valued at 33,688,395 drachmai; yarn, 26,383,070 drachmai; minerals and metals, 13,945,434 drachmai; timber, 7,274,611 drachmai. The exports of currants amounted to 66,502,353 drachmai; ores, 15,208,488 drachmai; olive oil, 8,711,689 drachmai; wine, 6,241,648 drachmai; tobacco, 2,054,799 drachmai; sponges, 1,953,480 drachmai; figs, 1,760,952 drachmai; olives, 1,013,012 drachmai.

The following table shows the trade with the principal foreign countries in 1891, in drachmai:

COUNTRIES.	Imports.	Exports.
Great Britain.....	40,825,075	49,774,500
France.....	19,628,825	25,554,025
Russia.....	97,166,100	3,178,450
Turkey and Egypt.....	21,490,775	8,404,400
Austria-Hungary.....	18,526,600	7,328,625
Germany.....	7,188,600	2,797,925
United States.....	8,898,550	4,026,725
Italy.....	4,220,275	1,828,850
Belgium.....	3,537,925	926,800
Holland.....	854,025	2,998,400
Other countries.....	1,728,425	777,000

The merchant navy of Greece numbered 88 steamers, of 60,376 tons, and 1,334 sailing vessels, of 281,024 tons, in 1892.

Communications.—The railroads in 1892 open for traffic had a length of 560 miles, and 270 miles were under construction. At the end of 1891 there were 4,686 miles of telegraph lines, with 5,563 miles of wire. During that year 821,233 inland and 346,559 international dispatches went over the wires. The receipts amounted to 1,122,518 drachmai, and the expenses to 1,924,640.

The post office in 1891 handled 8,139,000 letters, 271,000 postal cards, and 6,560,000 newspapers, samples, etc. The receipts amounted to 1,332,037 drachmai, and the expenses to 2,029,538 drachmai.

Change of Ministry.—Tricoupis and Theotokos contracted with the banking house of Hambro, of London, for the issue of a loan of 109,500,000 francs on the terms suggested by

Maj. Law. They believed that they had power to conclude the arrangement under the act passed by the Chamber, but when Ralli and his followers raised an outcry against such a sale of the independence of the Government to foreigners without the consent of Parliament, which had been adjourned for a couple of months, the King wished the Chamber to be called in order that it might decide the question. The ministers communicated their intention of submitting the loan convention to the Chamber to the English financiers, who would not agree to such a proceeding. The King still insisted on a discussion of the arrangement by the representatives of the people, but Tricoupis, though his majority in the Boule had been 170 to 37, would not consent, and on May 10 offered his resignation, which the King accepted.

The King commissioned Soteropoulos, an ex-Minister of Finance who shared the views of Ralli, but was not a member of the Chamber, to form a new Cabinet, which was completed on May 15, 1893, as follows: Prime Minister and Minister of Finance, Soteropoulos; Minister of the Interior, Ralli; Minister of Foreign Affairs, Kontostavlos; Minister of Justice, Kanakares; Minister of War, Lieut.-Col. Korpa; Minister of Marine, Capt. Kriezis; Minister of Education, Marin Eutaxias. The new Prime Minister was a member of no political party; most of the rest belonged to Ralli's third party. The financial programme was based on the principle of a prompt and full payment of external obligations, which necessitated the raising of 11,000,000 drachmai for coupons falling due on June 15. The chief feature was the creation of a tobacco monopoly. The new Government resumed negotiations with Greek financiers of western Europe. On June 11 a preliminary convention was signed with C. J. Hambro & Son, the Constantinople Bank, and others, for a loan of £14,000,000 sterling at 6 per cent., the proceeds of which would provide for the redemption of the floating debt, the payment of coupons for two and a half years, and the reduction of the forced currency by 12,000,000 drachmai yearly, the loan to be secured on the gold receipts of the treasury, which should be transmitted through the national and Ionian banks, the obnoxious stipulation of a foreign control having been withdrawn. No provision having been made for the coupons falling due in 1893, the Government was compelled to pass them. This circumstance aggravated the financial situation and increased the gold *agio*, which rose, with frequent fluctuations, to 60, and then to 70 per cent., causing a commercial panic. Although the currant crop was abundant and excellent in quality, purchasers were shy and prices were lower than ever before. The crops of wheat and olives were also fine, and yet Government bonds declined and the premium on gold continued to rise.

The Return of Tricoupis.—The Boule was opened on Nov. 8 by the King, who announced the scheme for funding the interest on various loans that had been rendered necessary by the failure of the negotiations in London. This convention would grant a respite until a settlement of the public debt could be effected that, in conjunction with the retirement of the redundant paper currency, would restore econom-

ic order in the country. A new land tax and a more efficacious system of collecting taxes would increase the revenue. In the ballot for a president the candidate of Tricoupis obtained 187 votes, while the ministerial candidate received 50, and Delayannis's candidate 21. Thereupon Soteropoulos handed in his resignation, which was accepted, and King Georgios commissioned Tricoupis to form a ministry. On Nov. 11 the new Cabinet was announced as follows: Prime Minister and Minister of Finance, Tricoupis; Minister of the Interior and Minister of Foreign Affairs *ad interim*, Stevenao; Minister of Public Instruction, Kailfreonas; Minister of War, Col. Tsamados.

The Corinth Canal.—The canal cut through the Isthmus of Corinth was opened on Aug. 6, 1893. It was begun in May, 1882, by a French company, which failed to complete it. A Greek company was afterward formed, and the undertaking was carried to completion under the direction of M. Matsas, a Greek engineer, with the energetic co-operation of its projector, Gen. Türr. The canal is $6\frac{1}{2}$ kilometres long, 22 metres wide, and 8 metres deep, having the same cross section as the Suez Canal, which is over 25 times its length. The voyage between Athens and Cephalonia is shortened by 325 kilometres, and ships are spared the dangerous passage round the southern headlands of Greece. The voyage of steamships plying between the various ports of western Europe and those of Greece, Turkey, and the Black Sea, is made sixteen or seventeen hours shorter.

Earthquakes in Zante.—After a succession of about 300 slight shocks felt during five months, several severe shocks occurred on Jan. 30 that destroyed houses and villages and killed a number of persons on the island of Zante. Two days later the island was shaken by a more violent earthquake, accompanied by a tidal wave. The city of Zante, where 100 houses fell down and many people were killed or injured, was almost deserted by its inhabitants, who went into the fields to sleep, exposed to frosts and storms worse than had been experienced for many years. More villages were destroyed. Further shocks occurred on Feb. 6. A British war-ship and other steamers first brought tents and flour to the shelterless and starving people, to whom the King and Queen soon came to distribute succor. On Feb. 11 occurred further seismic disturbances, and after a period in which only slight tremors were felt and the work of restoration was well begun, an earthquake exceeding in violence all that had gone before, on April 17, laid in ruins almost every building on the island that was still standing. Shocks recurred during that day and the next two days to add to the terrors of the inhabitants, who began to emigrate from the island. The distress was greater than it would have been at another time because the people had suffered from a partial failure of the currant crop in the previous season, and this is now their only dependence, the groves of olive and almond trees having been cleared away to make room for the currant plantations.

GUATEMALA, a republic in Central America. The Constitution, as proclaimed in December, 1879, and as amended in October, 1885, November, 1887, and October, 1889, vests the legislative power in a Congress composed of a National Assembly of 69 members, elected for four years by universal suffrage, and a Council of State of 13 members, partly elected by the National Assembly and partly nominated by the President. The executive authority rests with a President, elected for six years by the direct vote of the nation. The President for the term ending in April, 1893, is J. M. Reyna Barrios. The Secretaries of State early in 1893 were: Government and Justice, F. A. Villela; Foreign Affairs, E. de Leon; War, Gen. C. Mendizabal; Instruction and Public Credit, F. Aguilar.

Area and Population.—The area of Guatemala is estimated at 46,800 square miles, and the population on Dec. 31, 1890, numbered 1,460,017. The number of marriages registered in 1891 was 5,001; births, 70,219; deaths, 51,197. The returns of deaths are inaccurate, the death rate being considerably higher. Of the total births of the white population nearly 50 per cent. were illegitimate, and 25 per cent. of the Indian children were illegitimate. In 1891 the net immigration was 482.

Finance.—The public debt amounted to 17,356,768 pesos on March 15, 1893.

The standing army numbered 3,718 officers and men in 1891. There is a militia numbering 67,300 men.

Communications.—The existing railroads connect the city of Guatemala with San José, 72 miles, and Retalhuleu with Champerico. Various other lines from the coast to the coffee and sugar growing, cattle-grazing, and forest districts have been authorized, and the Government promises a subsidy of about \$8,000 a mile. There are 2,278 miles of telegraphs. The number of dispatches in 1891 was 505,806.

Suspension of the Constitution.—During the vacation of Congress President Barrios, who had been authorized to remodel the fiscal code, ordered that all duties on imports, which had been paid always in silver pesos, should henceforward be collected in gold. The Permanent Commission of Congress came to the conclusion that he was overstepping his constitutional limits by practically imposing new duties, and intimated its desire to call an extraordinary session of Congress, to which no objections were raised by the Administration. The members were summoned accordingly. The opponents of the President came, but not enough others to make a quorum, and he was so advised officially when the Deputies assembled on Oct. 10, 1893. Thereupon he issued a decree dissolving the Chamber, and ordered elections to take place in the same month for a new one that shall meet on March 20, 1894. For the meantime he suspended the Constitution and assumed a dictatorship. The members of the dissolved Chamber were ordered not to leave the capital; and, to make sure of their obedience to this decree, they were commanded to report in person to the authorities every second day.

H

HARRISON, CARTER HENRY, Mayor of Chicago, born on an estate known as Elk Hill, in Fayette County, Ky., Feb. 15, 1825; assassinated at his own home, in Chicago, Oct. 28, 1893. He was the only son of Carter Henry Harrison and Caroline Evelyn Russell, daughter of Col. William Russell, U. S. A. The Harrison ancestry in this country dates from about 1620. The family seat was in Virginia until 1806, when Robert Cabell Harrison, grandfather of

CARTER HENRY HARRISON.

Carter H. Harrison and nephew of Benjamin Harrison, the signer of the Declaration of Independence, moved to Kentucky. On the maternal side Carter H. Harrison traced his descent from the Norman conquest through the De Russells, represented in the peerage by the Dukes of Bedford. The first of this branch of the Russell family in America was William, who came to Jamestown, Va., with Sir Alexander Spotswood, in 1710.

Carter H. Harrison's father died when the boy was eight months old. At fifteen he began preparation for college under Dr. Lewis Marshall, brother of Chief-Justice John Marshall, and entered the sophomore class at Yale in 1843, being graduated in 1845. In 1855 he was graduated at the Transylvania University Law School, was admitted to the bar, and the same year married Miss Sophonisba Preston, of Henderson, Ky., by whom he had ten children, four of whom survive. She died in Gera, Germany, in 1876. In August, 1882, he married, in London, Miss Marguerite E. Stearns, daughter of Marcus A. Stearns, of Chicago. She died in 1887.

Throughout his life he was fond of travel. After graduation at Yale he engaged in farming in Kentucky, but traveled much in the South and Southwest. In 1851 he went abroad, spending more than two years in Europe, visiting Syria and Asia Minor, in company with Bayard Taylor, who was collecting material for his

"Lands of the Saracen." In 1855, immediately after his marriage, he traveled much in what was then the Northwest. At this time he first came to Chicago and determined to make it his home, which he did in 1857. Immediately after the opening of the Union Pacific Railroad he traveled through the West, visiting California. In 1874, and again in 1876 and 1882, he traveled in Europe. In 1867 he made a trip around the world, occupying sixteen months. He published an account of this trip in a book entitled "A Race with the Sun." "A Summer Outing" is the title of another book, the result of a trip in 1890 to the Yellowstone National Park, the Puget Sound region, and Alaska.

His active political life did not begin till after he was forty-five years of age. As a young man he was a Whig and an emancipationist, and when twenty-three years old was a delegate to an emancipation convention held in Lexington, Ky. In 1860 he became a Democrat and a supporter of Stephen A. Douglas. In 1869 he was a candidate for State Senator on the Democratic ticket, but was defeated. His first public office was that of county commissioner of Cook County, to which he was elected immediately after the great Chicago fire of 1871, on what was called the "Fire-Proof" ticket. In 1872 he was nominated for Congress from the Second Illinois District, but was defeated. Two years later he was elected, and in 1876 he was re-elected. In the spring of 1879 he was elected Mayor of Chicago, and again in 1881, 1883, 1885, and 1893. The canvass in several of these elections assumed proportions of national interest and importance. This was notably true of that of 1893. The Columbian Exposition was to be held in Chicago during the summer of that year, and the contest as to who should be "World's Fair Mayor" of the city attracted the attention of the whole country. His opponent was Samuel W. Allerton, the Citizens' and Republican candidate. The entire press of Chicago, with the exception of the "Times," which he owned, and one other paper, opposed Mr. Harrison. But by a campaign of public meetings unprecedented in the history of the city, during which he made from three to ten public addresses every day for more than a month preceding the election, he was elected by a majority of more than 21,000. It is a singular fact that one of his elections to Congress and at least two of his elections as mayor were obtained in spite of the unanimous opposition of the press of the city.

When he was first elected mayor, the financial condition and credit of the city were at the lowest ebb. The great fire had imposed heavy burdens on the municipality for public improvements, and the panic of 1873 had prevented to an unprecedented extent the collection of taxes. A decision of the Supreme Court of the State had declared the entire tax levy for municipal purposes for one year invalid. Another decision had invalidated an issue of \$249,000 of what were known as Hayes-Coivin certificates. The limit of bonded indebtedness un-

der the new State Constitution had been reached. Under the statutes the taxes to meet municipal expenditures were not collectible until the next year after that for which they were levied. All these things had made necessary the issuance of "scrip," warrants drawn on a treasury in which there was no money. The city's paper was subject to heavy brokerage, and prices for public improvements were consequently high. Even city employees were paid in scrip. To meet the interest on its bonded indebtedness the city was obliged to hypothecate the interest coupons when due, and pay a heavy commission for carrying them until taxes could be collected, these commissions aggregating each year from \$50,000 to \$70,000. In 1878 nearly \$2,500,000 of scrip had been issued. Mr. Harrison addressed himself to the task of remedying this deplorable state of affairs. He introduced the most rigid system of economy in all departments. None but absolutely indispensable public improvements were undertaken, and in these the greatest efforts were made to secure the lowest prices. The city was largely unpaved, and in consequence had muddy streets, sometimes impassable. But such paving as he permitted was with reference almost solely to the necessity of enabling the fire department to reach, on good roads, all parts of the city. The police force, though not too large before, was reduced. The result of these economies was that, from the beginning of his administration, the city employees were paid in cash, the receipts from such sources of revenue as fines, licenses, and water rates being sufficient to do this, pending the collection of taxes, and interest on bonded indebtedness was met from the same source, thus effecting a further saving, and strengthening the credit of the city. Limiting public improvements to absolutely essential ones reduced the issue of scrip during the first year of Mr. Harrison's administration to a million dollars less than it had been the year before. As at the beginning of the year the whole amount of the city's estimated revenue from all sources had been appropriated among the several departments, the economies practiced effected considerable savings in all of them. These unexpended balances, instead of being reappropriated the next year, as had been the practice under previous administrations, were retained, at Mayor Harrison's suggestion, in what has since been known in Chicago's financial system as the General Fund. And the creation of this general fund for the purposes which it has served was the strong feature in Mr. Harrison's financial administration. These savings from appropriations, carried as a general fund, served as a bank balance, which, with the revenue outside of taxes, reduced the scrip issue during the second year of his administration to \$500,000, and has made any issue of scrip since then unnecessary. During the eight years that he was continuously Mayor this general fund grew to \$3,600,000, an amount almost equal to the present tax levy for municipal purposes. This improvement in the city's finances was made easier by an act of the Legislature legalizing the tax levy that had been declared invalid by the Supreme Court. The money derived from this levy, coming into the treasury during the two years of his first ad-

ministration, materially aided in putting the city on a cash basis, though much of it was required to meet the \$249,000 of Hayes-Colvin certificates, which, with interest, amounted to \$275,643, and which, though they were declared invalid, the city ultimately paid in order to preserve its credit.

The finances of the city having been put on a sound basis, Mayor Harrison turned his attention to other features of municipal improvement. Public works of the greatest importance were undertaken on the most comprehensive plan. Wooden block pavement was replaced in the business portion of the city by granite. The telephone alarm and call-box system, since adopted by other cities, was introduced by him. The health department, acting under his direction, greatly mitigated the very serious menace to health that arose from the extensive industries connected with the live-stock slaughtering and packing business in the southwestern part of the city.

In 1884, while serving his third term as mayor, he was nominated by the Democrats for Governor of Illinois and made the canvass on national issues, delivering addresses in each of the 101 counties of the State. He was defeated, but the Republican majority of 40,000 in 1880 was reduced to 14,000. In 1887 he was nominated for mayor a fifth time by a unanimous convention; but when it was intimated to him that the Democratic Administration at Washington did not favor his candidacy, he withdrew. In 1891 he contested the mayoralty nomination with De Witt C. Cregier. Through what he believed unfair methods at the primaries, he was defeated, and at the solicitation of friends decided to be a candidate independently. The result was the election of Hempstead Washburne, the Republican candidate, by a small plurality. In November, 1891, he purchased the Chicago "Times" newspaper, and to its management he gave a great deal of time and attention, until his election as mayor.

As World's Fair mayor he was called on to extend municipal hospitality and welcome to the city's and nation's guests on many occasions. Notable among these guests whom he received were the President of the United States, the Duke de Veragua, and the Princess Eulalie. On Saturday, Oct. 28, he had welcomed the visiting mayors and officials from a large number of cities. Soon after he returned home a total stranger was admitted to the house by the servant, on the plea of urgent business with the mayor. As Mr. Harrison came from the dining-room to meet the stranger the latter fired at him with a revolver, inflicting five wounds, from which he died within a few minutes. The assassin fled, but shortly afterward gave himself up to the police, and in December was placed on trial for murder. The plea of the defense was insanity, but the jury promptly convicted the prisoner of murder, as indicted. Mr. Harrison's body, after it had lain in state at the City Hall for twenty-four hours, during which time it was viewed by more than 100,000 of his fellow-citizens, was buried the following Wednesday in Graceland Cemetery. The funeral was both military and civic, and was most imposing in the numbers that attended it.

HAWAII, a country, organized under a constitutional government, in Polynesia, occupying the volcanic group in the middle of the northern Pacific formerly known as the Sandwich Islands, but now commonly as the Hawaiian Islands.

(For area and population, and a map of the Hawaiian Islands, see "Annual Cyclopædia" for 1892, pp. 333, 334.)

When the English, under Capt. James Cook, discovered the islands they were occupied by a quarter of a million barbarians of a higher type than most savage races. There were four distinct kingdoms, the people forming three classes—chiefs, priests, and serfs. There was no middle class of freemen, as on other islands of the Pacific. A chief's position was partly political and partly religious. He was descended from the gods, his life was charmed, and he was worshiped after death. The priests used sorcery as well as drugs, and held sway over both chiefs and serfs. The latter had no rights that the others were bound to respect, and more than one third of the avails of their labor went to support the chiefs. They were united under Kamehameha I, who conquered the other three chieftains; but the wars that brought about this result swept off a large number of the people. In 1792, 1796, and 1801 English writers speak with sorrow of the vices and diseases that, brought by the rougher element of foreigners, were decimating the islands and bringing misery to those who remained. In 1805 cholera swept off half the inhabitants of Oahu.

Kamehameha I died in 1819, and so much influence had the better class of Europeans exerted, that when Liholiho came to the throne the taboos were abolished, the idols burned, and their temples destroyed. At that happy moment, in 1820, the American missionaries arrived, and the people readily accepted Christianity. Morality and intelligence took the place of vice and heathenism so rapidly, that in 1825 Kapiolani, a chieftainess whom Tennyson makes the heroine of a poem, walked fifty miles to Mauna Loa, and there refused to sacrifice to Pele, the goddess of the volcano, and thus broke up the worship that had demanded constant sacrifice of human life. The serfs were freed, made landowners in fee simple, and given the right of suffrage. A form of constitutional government was established, composed of mixed native and Anglo-Saxon elements. When British and French naval officers seized the islands the Government of the United States protested vigorously, and, after the promulgation of a constitution by Kamehameha III in 1840, the 3 powers agreed, in 1844, to respect and guarantee the independence of the native Government. The form of government established by that instrument and remodeled in the amended Constitution of 1852, and the new one proclaimed by Kamehameha V in 1864, was a constitutional monarchy of the British pattern. The King had a Cabinet of ministers and a Privy Council, and the Legislature consisted of 20 Nobles appointed for life by the King, and 88 Representatives elected by all male citizens able to read and write and receiving an income of \$75 a year. Americans and sons of American missionaries were commonly chosen to the chief offices of state and took a prominent part in legislative proceedings, framing laws that were

modeled on those of the United States. When private property in the soil was introduced in 1845 the bulk of the land was allotted to the chiefs, and great tracts were reserved for the Crown and the state, leaving only 27,830 acres to be distributed among the common people, who gradually were evicted from the lands of their chiefs when these passed into the possession of foreigners, who introduced new cultures. The Constitution of 1864 curtailed the royal prerogative, but still left extensive powers to the King, who had the right to make treaties not involving changes in the tariff or the law, was commander in chief of the military forces, possessed the veto power, could appoint and remove Cabinet officers and privy councilors, and in default of an heir could appoint his successor. Kamehameha V died in 1873 without heirs and without naming a successor. A popular election was taken, and Prince Lunalilo was chosen King. He died in the following year, and David Kalakaua was elected by the people, obtaining a large majority over the dowager Queen Emma.

In 1875 a reciprocity treaty was negotiated with the United States, under which sugar grown in the Hawaiian Islands was admitted into that country free of duty. This stimulated the production of sugar enormously, until the amount of the duty remitted on Hawaiian sugar reached \$5,000,000 a year. American capital flowed into the country, and all the lands suitable for growing the sugar-cane passed into the hands of foreigners. The Kanakas, or native Hawaiians, though more vigorous, intelligent, and industrious than other Polynesians, were not employed by the new owners, who introduced the system of contract labor, and, being unable to supply themselves from the Polynesian islands, imported Chinese coolies and Japanese under treaties with their governments, and also Portuguese from the Azores and Madeira. The early planters employed the Kanakas as laborers and lived among them on their estates, which earned but moderate and precarious profits. After reciprocity the estates were converted into joint-stock companies, and influences were brought to bear on the King and the Legislature to remove the restrictions on Chinese immigration and introduce the kind of semislavery known as the contract-labor system. Between 1876 and 1887 the immigration was 35,926, including 23,268 Chinese, 2,777 Japanese, and 10,216 Portuguese. The missionaries, whose sagacious and unselfish counsels gave an enlightened political system to the country and fostered civilized arts and customs, industry, commerce, education, religion, and justice, were succeeded by more selfish and ambitious statesmen, mostly their children, accomplished men of affairs, who now reaped rich benefits from the tide of prosperity that flooded the country. The king had shown a determination to return to despotism, revived sorcery, removed the ban from the sale of liquor, and so instigated race hatred that distrust of the leaders permeated native society, and became acute when the Kanakas found themselves left comparatively destitute amid the sudden expansion of national wealth, of which the thrifty among the Portuguese and the Chinese and Japanese settlers obtained a share, while they alone were excluded. From this cause a

Native party sprang up, raising the cry "Hawaii for the Hawaiians," and disappointed or disgraced politicians, foreign intriguers against American influence, and speculators more unscrupulous than any in the Missionary party leagued themselves with the malcontents when they saw that the majority of the electorate and the King sympathized with the movement. When the Native party obtained a majority in the elective part of the Legislative Assembly friction arose between the King and his ministers. So long as practical accord had subsisted between the sovereign, the ministry, and the Legislature occasions had not arisen for exercising the royal prerogatives of dismissing ministers or vetoing bills, and hence the ministers now claimed that the principle of ministerial re-

measures for defense. Not trusting the loyalty of the regular troops nor the efficiency of the raw native militia, Kalakaua discreetly submitted to the demands of the revolutionists that he should appoint a Prime Minister of their choice and proclaim a new Constitution that they had draughted. This stripped the King of nearly all that remained of the royal prerogative, by making the ministers responsible to the Legislature, and requiring every act of the King to be countersigned by one of them. The Nobles were made elective under a high property qualification, and foreign white residents were admitted to the franchise. Officeholders were made ineligible to seats in the Legislature. Conspiracies and intrigues for the restoration of absolutism were constant, and were aided by the ex-Queen Liliuokalani.

THE GOVERNMENT HOUSE, HONOLULU.

sponsibility was established by prescription. At last, in 1883, there was an absolute majority of the Native party in the Assembly, and the King cut loose from the Missionaries, and appointed an American named W. M. Gibson as Premier, and 8 Kanakas to the other posts in the Cabinet. The new Government was formed largely of white renegades willing to carry out behests that had become infamous. The Americans objected most to the creation of an opium monopoly, believing that the importation of opium ought to be prohibited. In 1887, having matured their arrangements by means of a secret political society, and raised and trained a large body of volunteers, the Americans, joined by the better class of natives and foreigners of every nationality, marched upon the palace. The King and his Prime Minister had begun too late their

When the reciprocity convention with the United States was renewed, in 1887, a supplementary section conveyed to the United States the right to use Pearl Harbor, in the island of Oahu, as a coaling and repair station for vessels. To make this capacious harbor available for the purpose it will be necessary to cut a channel through the coral reef at its entrance—an operation calculated to cost \$700,000, for which the United States Congress has not yet made an appropriation. When the American party was again firmly established in authority, in 1888, members of the Native party, secretly encouraged, it was said, by the King and his sister Liliuokalani, attempted a counter-revolution for the purpose of restoring the old Constitution. On July 2 of that year they seized the palace and Government buildings, fortified

them, and planted artillery, but could not use the guns effectively, and were no match for the trained white militia, who without the loss of a man captured the buildings and drove out the defenders, killing 7 and wounding 12. Kalakaua died in 1891, and was succeeded by Queen Liliuokalani, born Sept. 2, 1838, married to John O. Dominis, an American, who was Governor of Oahu and died Aug. 27, 1891. Her heiress presumptive was Princess Kaiulani, born Oct. 16, 1875, the daughter of the Queen's deceased younger sister and A. S. Cleghorn, a Scotchman, who was Governor of Oahu after the death of Dominis, and collector of customs at Honolulu.

Commerce and Production.—Of the total capital invested in productive enterprises in the Hawaiian Islands three fourths is owned by Americans living either on the islands or in the United States, while the native Hawaiians own less than 1 per cent. of the real and personal property of the country. The capital invested in business interests of all kinds, as returned for purposes of taxation, is divided as follows: American, \$24,541,000; British, \$6,741,000; Japanese, \$2,933,500; German, \$2,574,800; Portuguese, \$2,331,600; Chinese native, and other, \$14,653,600. The sugar industry preponderates greatly over all the other business activities of Hawaii, and the only others of commercial importance are the cultivation of rice and the raising of bananas for export. The capital valuation of the sugar plantations and mills exceeds \$7,000,000, of which Americans own about 77 per cent., British subjects 16 per cent., Germans 5 per cent., and natives and others less than 2 per cent. The sugar and rice industries were started and built up under the reciprocity treaty of 1875, which gave growers an additional profit on sugar exported to the United States equal to the duty of 2½ cents a pound. This advantage ceased when the McKinley tariff went into effect, which reduced the gains of the Hawaiian planters by \$5,000,000 a year; but still they were able to derive a good profit from the better situated and equipped estates, which in fertility, improved machinery, cheapness of labor, general management, and access to market are not surpassed by those of any country. A yield of 7 tons to the acre is common. Under the contract-labor system Chinese and Japanese laborers have earned \$10 or \$15 a month and kept themselves. The fruit industry, which sprang up under the former tariff, received a heavier blow when the McKinley bill imposed a duty of 30 per cent. Rice is grown mostly by Chinese on land for which they pay a rent of \$20 to \$35 a year. Coffee culture has not been successful, plants having been attacked by the blight. The average value of the domestic exports before 1876 was \$1,500,000 a year. In 1889 their value was \$13,810,070. Yet, deducting sugar and rice, the exports amounted to only \$370,000, so completely had the conditions of production and commerce been transformed by the protection afforded by the reciprocity arrangement; and further deducting bananas, the value remaining was only \$135,000. During the fifteen years of reciprocity the profits of the corporations engaged in sugar planting were from 20 to 80 per cent. a year. In 1890 the domestic exports amounted to \$13,023,304, in which sum sugar

stands for \$12,159,585, rice for \$545,239, bananas for \$176,351, hides for \$70,940, wool for \$35,396, coffee for \$14,737, molasses for \$7,603, goat skins for \$3,182, tallow for \$1,140, betel leaves for \$1,050, sheep skins for \$1,004, and all other articles for \$7,067. The export of sugar in that year was 259,793,462 pounds; of rice, 10,579,000 pounds; of bananas, 97,204 bunches. In 1891 the total value of the domestic exports was \$10,259,000. The export of sugar was 274,983,580 pounds; of rice, 4,900,450 pounds; of bananas, 116,660 bunches; of wool, 97,119 pounds. Nearly all the imports come from the United States, with which country 91 per cent. of the foreign trade is done. The principal imports are provisions, breadstuffs, clothing, timber, machinery, hardware, and cotton goods. The total value of imports was \$7,439,000 in 1891, against \$6,962,000 in 1890, \$5,439,000, in 1889, \$4,541,000 in 1888, and \$4,944,000 in 1887.

Navigation and Communications.—In 1891 there were 310 vessels entered at Hawaiian ports, their aggregate tonnage being 284,155. The vessels registered in the country number 51, of 13,42½ tons. A fleet of 22 steamers, built in the United States, and 28 sailing vessels carries on the interisland traffic.

There are 56 miles of railroads on the islands of Hawaii, Oahu, and Maui. These islands are supplied with telegraphs and connected by a cable. The number of letters and the inclosures carried in the mails during the two years ending March 31, 1890, was 3,159,034. The depositors of the postal savings banks in 1890 numbered 2,641.

Finances.—The budget is voted every two years, as the Legislature meets biennially. The revenue for 1891-'92 was \$4,408,033, and expenditure \$4,095,891. The bonded debt in 1892 amounted to \$2,314,000, consisting chiefly of a loan of \$2,000,000, bearing 6 per cent. interest, contracted by virtue of the law of Sept. 1, 1886, with Skinner & Co., of London, of which \$1,984,000 remained unpaid on April 1, 1890. On some smaller debts interest as high as 12 per cent. is paid. The Government savings banks owed depositors \$903,162 on April 1, 1892.

The revenue is derived mainly from customs and internal revenue duties. The import duty is 10 per cent. on all articles except liquors and opium, which bear high rates. The real-estate taxes are low. Personal taxes are levied for roads and schools, \$2 for each purpose, and a \$1 poll tax.

The Queen's Coup d'État.—The elements that were behind King Kalakaua in his conflict with the dominant white class, and that encouraged the native voters in their efforts to maintain a preponderance in the Legislature, continued as active in the reign of Liliuokalani, who was more devoted than her brother to the restoration of monarchy. She was a woman of shrewdness and education, but of dissolute life and under the influence of the medicine men. In the turmoil and agitation incident to this state of things the Legislature was split into factions, and bills were passed that were obnoxious to the Americans, especially one licensing a gigantic lottery company, which they considered to be a measure not only demoralizing to Hawaii but unfriendly to the United States, where the lottery

had recently been suppressed. The project of an opium monopoly was revived also. Not being able to check the tendency to loose, corrupt, and wasteful legislation, the Americans who had accomplished the revolution of 1887, men who had taken a leading part in the political and commercial development of the country, and were connected with or upheld by principal sugar-planting and other property interests, took up again the project of annexation to the United States, which they had harbored in 1887 until they forced Kalakaua to comply so easily with their demands. The Queen, yielding to pressure from one quarter and from another, changed her ministers several times, and at last angered the Reform party by choosing a Cabinet that was favorable to the lottery, which would uphold her, she was led to suppose, in her design to restore the old Constitution. This Cabinet was as follows: Premier and Minister of Foreign Affairs, Samuel Parker; Minister of the Interior, John F. Colburn; Attorney-General, A. P. Peterson; Minister of Finance, W. H. Cornwell.

The natives have always outnumbered the whites in the Legislature, but were formerly led usually by the most influential section of the whites. The economic changes that had taken place since 1876 altered this relation, and created a sharp political and race antagonism between them and the element that once ruled by influence, and since 1887 sought to rule by coercion, on the ground that those who paid the taxes and surpassed the rest of the community in intelligence, ought to control the expenditure of public moneys and the making of laws. The Reform or Missionary party was still strong enough, standing as it did for economy and good relations with the United States and the civilized world, to overturn in succession the Cabinets appointed by the Queen.

On Saturday, Jan. 14, 1893, the Legislature was prorogued, and on that day the Queen signed the lottery bill, which was suspected to have been passed for the benefit of the owners of the lottery that had been abolished in Louisiana. Minister Stevens denounced the act as a direct attack on the United States Government.

For some months the Native—or, more properly, the Royalist—party, composed of natives and whites, had urged the Queen to proclaim a new Constitution, which would restore the status existing before the revolution of 1887—that is, disfranchise nonnaturalized aliens and transfer the power of making Nobles from the white voters back to the Crown. A draught of such a Constitution was in the hands of the ministers, and the Queen was determined to promulgate it, and was expected to do so on Jan. 14, after the closure of the Legislature, when a great crowd of the Native party assembled before the palace. Summoning her ministers, she requested them to countersign the Constitution. They refused, and when she grew excited and spoke of the threatening attitude of the natives, they left her. Lorin A. Thurston, leader of the Reform party, whom Colburn had applied to for aid and counsel in the morning when the Queen had announced her intention of promulgating the Constitution at once, met all the ministers in the office of the Attorney-General and advised them to declare the Queen in revolution and the throne

vacant. The Minister of the Interior and the Attorney-General, when the ministers were summoned back to the Queen, would not go, but consulted Thurston as to what armed support they could rely on from the merchants and traders of the town in an effort to resist the Queen. Thurston went about it, and soon had 80 men pledged to support the Cabinet against the Queen by force. The ministers afterward returned to the Queen, and after a stormy interview she gave them an assurance that she would not proclaim the Constitution for the present. She addressed the assembled natives outside, explaining how the ministers had prevented her keeping her promise to them and compelled her to defer its execution, and adjuring them to return to their homes and maintain the peace. The ministers would have nothing more to do with the revolutionary movement that they had invoked, but continued to labor with the Queen until they finally got her to put her name to a proclamation, in which she explained that she had yielded to pressure put upon her by her native subjects, and gave the assurance that "any changes in the fundamental law of the land will be sought only by methods provided in the Constitution." The members of the diplomatic body were invited to examine this declaration intended to avert the threatened revolution, and with their approval it was published on Monday morning. The representatives of England, France, Japan, and Portugal were at the meeting, but not the minister of the United States, who declined to be present. He was formally presented with a copy of the document.

The Committee of Safety.—A meeting of 50 to 100 prominent citizens met in the office of W. O. Smith on the afternoon of Jan. 14. Colburn and Peterson, the Queen's ministers, were present, and the former counseled armed resistance to the revolutionary purpose of the Queen, which they had not yet persuaded her to abandon or defer. These citizens appointed a committee of public safety, composed of 13 members, to consider the situation and devise ways and means for the maintenance of the public peace and the protection of life and property. The committee decided to depose the Queen and establish a provisional government, and on the following morning invited Colburn and Peterson to take charge of it; but the ministers, who had meanwhile induced the Queen to recede from her purpose, declined. The committee resolved to abrogate the monarchy and treat for the annexation of the islands to the United States. In the afternoon of Jan. 16 two mass meetings were held, one by the supporters of the Committee of Safety and one by the friends of the Government. The former voted the following resolution:

We do hereby ratify and appoint and indorse the action taken and report made by the said Committee of Safety, and we do hereby further empower such committee to further consider the situation and further devise such ways and means as may be necessary to secure the permanent maintenance of law and order and the protection of life, liberty, and property in Hawaii.

In the other meeting it was resolved as follows:

That the assurance of Her Majesty contained in this day's proclamation is accepted by the people as

A VIEW IN MAIN STREET, HONOLULU.

a satisfactory guarantee that the Government does not and will not seek any modification of the Constitution by any other means than those provided in the organic law.

Before the first meeting, Marshal Wilson, the head of the police, went to the Committee of Safety and demanded that the meeting should not be held, promising at the same time that the Queen would not issue a new Constitution, even if he had to use force to prevent her. Mr. Thurston declined to accept such a guarantee, and said that the Americans would stand it no longer, and purposed settling the matter once and for all. Wilson reported to the Cabinet, and advised arresting the committee, but the Cabinet refused to allow it. After the adjournment of the first meeting the Committee of Safety sent a petition for protection to the United States minister, who had arrived on the man-of-war "Boston" from another part of the islands on Saturday. It was couched in the following terms:

We, the undersigned citizens and residents of Honolulu, respectfully represent that, in view of recent public events in this kingdom, culminating in the revolutionary acts of Queen Liliuokalani on Saturday last, the public safety is menaced, and lives and property are in peril, and we appeal to you and the United States forces at your command for assistance.

The Queen, with the aid of armed force, and accompanied by threats of violence and bloodshed from those with whom she was acting, attempted to proclaim a new Constitution, and, while prevented for the time from accomplishing her object, declared publicly that she would only defer her action.

This conduct and action were upon an occasion and under circumstances which have created general alarm and terror.

We are unable to protect ourselves without aid, and therefore pray for the protection of the United States forces.

Minister Stevens addressed a written request to Capt. Gilbert C. Wiltse, of the "Boston," the commander of the American naval force, as follows:

In view of the existing critical circumstances in Honolulu, indicating an inadequate legal force, I request you to land marines and sailors from the ship under your command for the protection of the United States legation and the United States consulate, and to secure the safety of American life and property.

Capt. Wiltse concurred in the views of Mr. Stevens, and ordered a detachment of marines to land under the command of Lieut.-Com. Swinburne, to whom he gave these instructions:

You will take command of the battalion, and land in Honolulu for the purpose of protecting our legation and the lives and property of American citizens, and to assist in the preservation of public order. Great prudence must be exercised by both officers and men, and no action taken that is not fully warranted by the condition of affairs and by the conduct of those who may be inimical to the treaty rights of American citizens. You will inform me at the earliest practicable moment of any change in the situation.

The Committee of Safety regretted that they had been so hasty in asking for the intervention of United States troops, and sent a committee to Minister Stevens to prevail on him to delay the landing of the men. But the troops, 160 strong, had already landed. A few were accommodated at the American legation and at the consulate. Capt. Wiltse had expected them to be quartered in the opera house; but the agent of the hall refused to let Mr. Stevens have it for the men, on the plea that it might suffer damage, and finally Arion Hall was secured. When Mr. Thurston and 2 other delegates of the Committee of Safety told Minister Stevens that they were not prepared to have the troops land so

soon, he said to them, "Gentlemen, the troops of the 'Boston' landed at five o'clock this afternoon, whether you are ready or not." The Queen's Minister of Foreign Affairs sent the following protest to Minister Stevens:

I have the honor to inform your Excellency that the troops from the United States steamer "Boston" were landed in this port at 5 o'clock this evening, without the request or knowledge of Her Majesty's Government.

As the situation is one which does not call for interference on the part of the United States Government, my colleagues and myself would most respectfully request of your Excellency the authority upon which this action was taken. I would also add that any protection that may have been considered necessary for the American legation or for American property and interests in this city would have been cheerfully furnished by Her Majesty's Government.

Another protest came from the Governor of the island, who wrote:

It is my duty to solemnly protest to your Excellency against the landing this evening, without permission from the proper authorities, of an armed force from the United States ship "Boston."

Your Excellency well knows that, when you have desired to land naval forces of the United States for the purpose of drill, permission by the local authorities has been readily accorded.

On the present occasion, however, the circumstances are entirely different, and ostensibly the present landing is for the discharge of functions which are distinctly responsible duties of the Hawaiian Government.

Such being the case, I am compelled to impress upon your Excellency the international questions involved in this matter and the grave responsibilities thereby assumed.

Mr. Stevens, on the following day, sent this answer to Mr. Parker:

Yours of yesterday, in regard to the landing of the United States naval forces in Honolulu, duly received and its import considered.

In whatever the United States diplomatic and naval representatives have done, or may do, at this critical hour of Hawaiian affairs, we will be guided by the kindest views and feelings for all the parties concerned, and by the warmest sentiments for the Hawaiian people and the persons of all nationalities.

In answer to Mr. Cleghorn he wrote:

My responsibility as the United States minister plenipotentiary at this critical time in Hawaiian affairs it is impossible for me to ignore. I assure you that whatever responsibility the American diplomatic and naval representatives have assumed, or may assume, we shall do our utmost to regard the welfare of all persons and interests concerned.

The Queen, on the 17th, addressed the following communication to Minister Stevens, which was countersigned by all the ministers:

The assurance conveyed by a royal proclamation by myself and ministers yesterday having been received by my native subjects, and by them ratified at a mass meeting, was received in a different spirit by the meeting representing the foreign population and interests in my kingdom. It is now my desire to give to your Excellency, as the diplomatic representative of the United States of America at my court, the solemn assurance that the present Constitution will be upheld and maintained by me and my ministers, and no changes will be made except by the method therein provided. I desire to express to your Excellency this assurance in the spirit of that friendship which has ever existed between my kingdom and that of

the Government of the United States of America, and which I trust will long continue.

An hour after this had been delivered to the American minister the members of the Queen's Cabinet called on him to ask him to assist the authorized Government in suppressing the revolt, or, if he did not wish to do that, to remove the United States troops back on board the "Boston," as the Government had ample forces. He answered that the troops were there for the specific purpose of protecting American life and property, and could not take sides either with the monarchy or with those who were creating a new government. The minister and naval commander, in landing troops without the request, and keeping them on shore against the protests of the established authorities, acted on standing instructions first issued by Secretary of State Bayard and the Secretary of the Navy in 1887, according to which American troops should be landed in Hawaii when necessary for the protection of American life and property and for the preservation of public order.

Establishment of a Provisional Government.—The Committee of Safety that evening met in the house of Henry Waterhouse and proceeded to organize a government that could officially assume and systematically administer the public affairs of the country on the abrogation of the monarchy. The first thing to do was to select a commander for the volunteers that had pledged themselves to fight for the revolution, and the post was offered to John H. Soper.

The Committee of Safety met again, on the morning of Tuesday, the 17th, at the office of W. O. Smith, to complete their plans, and in the afternoon, one of the committee, Cooper, an American citizen, at twenty minutes before three o'clock read a proclamation ending with the following declaration:

We, citizens and residents of the Hawaiian Islands, organized and acting for the public safety and the common good, hereby proclaim as follows:—

The Hawaiian monarchical system of government is hereby abrogated.

A provisional government for the control and management of public affairs and the protection of the public peace is hereby established, to exist until terms of union with the United States of America have been negotiated and agreed upon.

During the reading, S. A. Damon and W. O. Smith grew apprehensive lest the Government authorities should seize their persons, and the former sent across the street to the barracks to ask Lieut. Swinburne if he was not going to send some one over to protect them. Lieut. Swinburne replied: "Capt. Wiltse's orders are to remain passive."

After the reading of the proclamation the committee adjourned to the office of the Minister of the Interior to formulate their plans and get themselves into working order as a provisional government. While they were there, Parker and Cornwell came in to hold a conference with them. Minister Stevens, having sent his aid, and Capt. Wiltse having sent an officer, to examine the Government building and see if the Provisional Government was in actual possession, formally recognized the Provisional Government as the *de facto* Government of the country, in compliance with the following request of

the Executive and Advisory Councils of the Provisional Government:

Such Provisional Government has been proclaimed, is now in possession of the Government departmental building, the archives, and the treasury, and is in control of the city. We hereby request that you will, on behalf of the United States of America, recognize it as the existing *de facto* Government of the Hawaiian Islands, and afford to it the moral support of your Government, and, if necessary, the support of American troops to assist in preserving the public peace.

Between four and five o'clock Minister Stevens sent a reply to a note of inquiry from the Queen's Cabinet informing the 4 ministers that he had recognized the revolutionary Govern-

ment not willfully blind. Without sleep for two days and nights on the "Boston," without stopping to change dress, as soon as possible I sought to co-operate with the English minister, to get access to the Queen, and to try by friendly advice to arrest the revolution. It was too late, the mob of royal retainers were already gathering at the palace to aid the Queen to carry out her plan of overturning the Constitution.

In a note acknowledging and expressing deep appreciation for Minister Stevens's communication recognizing the Provisional Government, Sanford B. Dole, its President, requested that the United States forces should preserve order, saying:

We have conferred with the ministers of the late Government, and have made demand upon the mar-

THE ROYAL PALACE, HONOLULU.

ment. In his dispatch of Jan. 18 to Secretary Foster describing the revolution, he says:

The Committee of Public Safety forthwith took possession of the Government building, archives, and treasury, and installed the Provisional Government at the head of the respective departments. This being an accomplished fact, I promptly recognized the Provisional Government as the *de facto* Government of the Hawaiian Islands.

In regard to this revolution, Mr. Stevens says:

When Capt. Wiltse and myself, on the "Boston," arrived in the harbor of Honolulu, in the forenoon of Jan. 14, I was completely taken by surprise at what the Queen, the palace associates, and the lottery gang had accomplished in ten days. The remonstrances of the Chamber of Commerce, of the numerous petitions of some of the best people of the island, both whites and natives, and the earnest pleadings of those who had previously adhered to the monarchy, had been defiantly disregarded. I found the city in great excitement, and learned that for many hours there had been an anxious desire for the return of the "Boston," and this desire was strong among the thoughtful supporters of the monarchy as well as among the great body of the responsible citizens. The surging, irresistible tide of revolution was then obvious to all per-

sonal to surrender the station house. We are not actually yet in possession of the station house, but, as night is approaching and our forces may be insufficient to maintain order, we request the immediate support of the United States forces, and would request that the commander of the United States forces take command of our military forces, so that they may act together for the protection of the city.

It has been claimed that at this time the Queen had a well-armed force of 700 men commanded by her favorite, Wilson. But Minister Stevens pertinently says:

The representation that Wilson had sufficient force in the limited area of the police station to sustain the monarchy is notoriously absurd to all honest persons acquainted with the facts. If the Queen had this force, why had it not been exerted while the outraged people were openly holding their great mass meeting and making their arrangements for the establishment of a new Government? Why did Wilson and his so-called force wait until the outraged citizens gathered with their rifles and bottled them up in the police station house? Why did the Queen's representatives call at the United States legation on the 17th and ask the aid of the United States forces to support her?

The Queen's Surrender.—After receiving the official recognition of the United States minister, Mr. Damon and another representative of the Provisional Government went over to the station house, where the Queen's ministers were with her armed forces. Mr. Damon and J. O. Carter, representing the Provisional Government, and the four ministers accompanied the Queen to the palace, where a conference was held, at which two young princes, H. A. Widemann, Paul Neumann, and E. C. McFarland were present also. Mr. Damon informed the Queen that she was deposed and a provisional government established, and asked her to submit quietly and sign an abdication. The ministers counseled this course, but she refused, and was at first upheld by Judge Widemann and Paul Neumann. Damon told the Queen that she could surrender under protest, and assured her that her case would be reviewed and adjudicated upon by the Government at Washington. Carter suggested that peaceful submission to force would help her case. Her legal counselors advised her to surrender under protest, Judge Widemann predicting that the result would be the same as in 1843, when Great Britain restored the Hawaiian sovereign and flag. At last she gave way, and signed a paper reserving all her rights as Queen under the Constitution, protesting against all acts done against herself and the Constitutional Government by "certain persons claiming to have established a provisional government," declaring that she yielded "to the superior force of the United States of America," whose minister plenipotentiary "has caused United States troops to be landed at Honolulu, and declared that he would support the said Government," and resigning her powers in the following terms:

Now, to avoid any collision of armed forces and perhaps the loss of life, I do, under this protest, and impelled by said force, yield my authority until such time as the Government of the United States shall, upon the facts being presented to it, undo the action of its representative and reinstate me in the authority which I claim as the constitutional sovereign of the Hawaiian Islands.

Mr. Damon accepted this agreement as containing the best terms he could make with the Queen, and took it to Judge Dole, the President of the Provisional Government, who indorsed it.

The station-house and barracks were still in the possession of the Queen's forces. When a demand was made that Marshal Wilson should surrender the building, arms, and ammunition and disband his force, he refused to do so except upon the written command of the Queen. The order was then prepared and her signature obtained, and when this was taken to the Marshal he surrendered the station house and military barracks, about half past seven o'clock.

After the surrender of the Queen's Government the Provisional Government was formally recognized as the existing *de facto* Government within two or three days by the French, Portuguese, British, and Japanese representatives.

Proclamation of an American Protectorate.—Agitation on the part of whites opposed to annexation, coupled with the efforts of one English and two native newspapers to block the efforts of the Government, created a situ-

ation of danger which the new rulers felt unable to meet. They were therefore impelled to ask for the direct assistance of the United States Government in the preservation of public security and order. At their invitation, Minister Stevens and Capt. Wiltse decided to establish a protectorate over the Hawaiian Islands, and when the flag of the United States was raised at nine o'clock on Feb. 1, the United States minister issued the following proclamation to the Hawaiian people:

At the request of the Provisional Government of the Hawaiian Islands, I hereby, in the name of the United States of America, assume protection of the Hawaiian Islands for the protection of life and property and occupation of public buildings and Hawaiian soil, so far as may be necessary for the purpose specified, but not interfering with the administration of public affairs by the Provisional Government. This action is taken pending and subject to negotiations at Washington.

Early in the morning a force of United States marines was drawn up before the Government building, and after the flag was hoisted over it the proclamation was publicly read. In a dispatch announcing the assertion of a protectorate, Minister Stevens said:

The Hawaiian pear is now fully ripe, and this is the golden hour for the United States to pluck it.

On the receipt of his dispatch Secretary Foster wrote, Feb. 11, disavowing the minister's action so far as it implied "the establishment of a protectorate, which is in fact the positive erection of a paramount authority over or in place of the duly constituted local Government, and the assumption by the protector of the especial responsibilities attached to such formal protection," or so far as it impaired "in any way the independent sovereignty of the Hawaiian Government by substituting the flag and the power of the United States as the symbol and manifestation of paramount authority."

You are authorized, upon the receipt of these instructions, to arrange with the commanding naval officer for the continued presence on shore of such marine force as may be practicable and requisite for the security of the lives and property interests of citizens of the United States, and the repression of lawlessness and public disturbance threatening them, whenever in your judgment it shall be necessary so to do, or when such co-operative measures may be sought for good cause by the Government of the Hawaiian Islands; being, however, always careful to make due discrimination between those functions of voluntary or accorded protection and the assumption of a protectorate over the Hawaiian Islands by the United States. No step should be taken by you, or will be sanctioned by this Government, which might tend to derogate in any way from the independence of the Government of the Hawaiian Islands, which the United States have recognized as sovereign, and with which they treat on terms of sovereign equality.

The flag was kept flying and the American garrison maintained until after the Democratic Administration came into power at Washington. Capt. Wiltse was recalled, and Rear-Admiral Skerrett, who had landed troops in Honolulu in 1874, being appointed commander of the Pacific squadron, was ordered to Hawaii by command of President Harrison. Secretary of the Navy Tracy told him, before he took his departure, that the Government would "be very glad to

annex Hawaii, but as a matter of course none but the ordinary legal means can be used to persuade these people to come into the United States." In Hawaii there was fear of British interference, and when the British cruiser "Garnet" arrived, shortly after the American flag was hoisted, preparations were made for defense.

The Treaty of Annexation.—On Jan. 19 the commissioners sailed on a specially chartered steamer for San Francisco, bringing the draught of a treaty of annexation. The Queen's attorney, Paul Neumann, applied for passage on the same vessel, in order that he might present her case to the American Government, but it was refused. The annexation commissioners arrived in Washington on Feb. 8, and discussed the treaty with the Secretary of State. They had another interview on the 11th, when the terms were practically agreed upon, and on the 14th the treaty was formally concluded.

The treaty provided that, until Congress determines otherwise, the existing Government and laws of Hawaii will continue, subject to the paramount authority of the United States. A resident commissioner will be appointed with power to veto any acts of the Government. Until the necessary legislation has been enacted the existing foreign and commercial relations will be continued. The further immigration of Chinese will be prohibited, and the Chinese now in Hawaii will not be permitted to enter the United States. The United States will take over the public debt, amounting to \$3,250,000, and will pay an annual allowance of \$20,000 to Queen Liliuokalani, and a lump sum of \$150,000 to Princess Kaiulani. The sugar producers will not take part in the bounty under the McKinley law unless Congress so enacts.

In accordance with international law, treaties between two countries expire if either contracting party ceases to be an independent state. The treaties concluded by Hawaii will, therefore, terminate upon annexation.

Among the documents accompanying the treaty, as it was submitted to Congress, was a

letter from the deposed Queen to President Harrison, praying that no action should be taken until her envoy could be heard, and defining her position in the following language:

Some of my subjects, aided by aliens, have renounced their loyalty and revolted against the constitutional Government of my kingdom. They have attempted to depose me and to establish a provisional government, in direct conflict with the organic law of this kingdom. Upon receiving incontestable proof that his Excellency the minister plenipotentiary of the United States aided and abetted their unlawful movements and caused United States troops to be landed for that purpose, I submitted to force, believing that he would not have acted in that manner unless by the authority of the Government which he represents.

This action on my part was prompted by three reasons: The futility of a conflict with the United States; the desire to avoid violence, bloodshed, and the destruction of life and property, and the certainty which I feel that you and your Government will right whatever wrongs may have been inflicted upon us in the premises.

In due time a statement of the true facts relating to this matter will be laid before you, and I live in the hope that you will judge uprightly and justly between myself and my enemies. This appeal is not made for myself personally, but for my people, who have hitherto always enjoyed the friendship and protection of the United States.

The treaty was laid before the Senate for its action on Feb. 15. President Harrison, in his message, submitting the treaty, which was based on the statement of facts embodied in a report of Secretary Foster, said:

It is deemed by the Government more desirable to annex the islands than to proclaim a protectorate over them. The United States in no way promoted the overthrow of the monarchy, which originated in what seems to have been a reactionary revolution against the policy of Queen Liliuokalani, imperiling foreign interests. It is evident that the monarchy was effete, and that the Queen's Government has been a prey to designing persons. The restoration of the monarchy is undesirable, if not impossible. It is essential that none of the other great powers shall secure the islands, as this would be inconsistent with our safety and the peace of the world.

A VIEW IN THE ISLAND OF HAWAII.

In conclusion, the message declared that no Government had protested against the projected annexation. Prompt action was desirable, and legislation on the subject should be characterized by great liberality and a high regard for the rights of natives and foreigners.

Secretary Foster had received assurances from the representatives in Washington of the leading powers and from American ministers abroad, that convinced him that annexation on the part of the United States would be regarded with satisfaction, or at any rate would meet with ready acquiescence. The statement in the message that "the overthrow of the monarchy was not in any way promoted by this Government" was based on the dispatches of Mr. Stevens. The statements of the Hawaiian commissioners were authority for the following passage:

At the time the Provisional Government took possession of the Government buildings no troops or officers of the United States were present or took any part whatever in the proceedings. No public recognition was accorded to the Provisional Government by the United States minister until after the Queen's abdication, and when they were in effective possession of the Government buildings, the archives, the treasury, the barracks, the police station, and all the potential machinery of the Government.

After President Cleveland assumed office he withdrew the treaty from the Senate for further consideration, March 9. The Hawaiian commissioners returned to their country, all except Mr. Thurston, who in May was commissioned Hawaiian minister at Washington, succeeding J. Mott Smith, who had been recalled.

The Mission of Commissioner Blount.—As a protest from the Queen accompanied the treaty, stating that she yielded to the force of the United States and reserved her case for the decision of the President of the United States, and as doubts were raised regarding the agency and effect of the presence of the United States troops and the prompt recognition of the Provisional Government by the United States minister, also as to whether the Queen had committed an illegal act, and whether annexation and the Provisional Government had the support of the great body of the Hawaiian nation, President Cleveland, on March 7, three days after his inauguration, sent James H. Blount, of Georgia, long chairman of the Committee on Foreign Affairs in the House of Representatives, to Hawaii as a special commissioner, to investigate the facts attending the subversion of the constitutional Government and the installment of the Provisional Government, and to report as to the expediency of annexation. His open instructions from Secretary Gresham, dated March 11, were as follow:

You will investigate and fully report to the President all the facts you can learn respecting the condition of affairs in the Hawaiian Islands, the causes of the revolution by which the Queen's Government was overthrown, the sentiment of the people toward existing authority, and in general all that can fully enlighten the President touching the subject of your mission.

To enable you to fulfill the charge, your authority in all matters touching the relations of this Government to the existing or other government of the islands and the protection of our citizens therein is paramount, and in you alone, acting in co-operation with the commander of the naval forces, is vested full

discretion and power to determine when such forces should be landed or withdrawn. You are, however, authorized to avail yourself of such aid and information as you may desire from the present minister of the United States at Honolulu—Mr. John L. Stevens—who will continue until further notice to perform the usual functions attaching to his office not inconsistent with the powers intrusted to you. An instruction will be sent to Mr. Stevens, directing him to facilitate your presentation to the head of the Government on your arrival, and to render you all needed assistance.

The withdrawal from the Senate of the recently signed treaty of annexation for re-examination by the President leaves its subject matter in abeyance, and you are not charged with any duty in respect thereto. It may be well, however, for you to dispel any possible misapprehension which its withdrawal may have excited touching the entire friendliness of the President and the Government of the United States toward the people of the Hawaiian Islands, or the earnest solicitude here felt for their welfare, tranquillity, and progress.

Historical precedents and the general course of the United States authorize the employment of its armed force in foreign territory for the security of the lives and property of American citizens and for the suppression of the lawless and tumultuous acts threatening them, and the powers conferred to that end upon the representatives of the United States are both necessary and proper, subject always to the exercise of a sound discretion in their application. In the judgment of the President, your authority, as well as that of the commander of the naval forces in Hawaiian waters, should be and is limited in the use of physical force for such measures as are necessary to protect the persons and property of our citizens, and, while abstaining from any manner of interference, to use your friendly offices in the interest of a peaceful settlement of the troubles within the limits of sound discretion.

Should it be necessary to land an armed force upon Hawaiian territory on occasions of popular disturbance, when the local authority may be unable to give adequate protection to the life and property of citizens of the United States, the assent of such authority should first be obtained, if it can be done without prejudice to the interests involved. Your power in this regard should not, however, be claimed to the exclusion of similar measures by the representatives of other powers for the protection of the lives and property of their citizens or subjects residing in the islands.

While the United States claim no right to interfere in the political or domestic affairs or in the internal conflicts of the Hawaiian Islands otherwise than as herein stated, or for the purpose of maintaining any treaty or other rights they possess, the Government will adhere to its consistent and established policy in relation to them, and it will not acquiesce in domestic interference by other powers.

Commissioner Blount was conveyed by the United States revenue cutter to Honolulu, where he arrived on March 29. He declined receptions tendered both by the Hawaiian Patriotic League and the Annexation Club. The latter, numbering 1,200 members, was formed as soon as it became known that the treaty had been shelved. Members of the American colony tendered the American commissioner the use of a mansion, with furniture, carriages, etc., which Minister Stevens strongly urged him to accept, but he preferred to remain at a hotel. This rejection of an intended courtesy threw the commissioner into the company almost solely of the Royalists, who made headquarters at that hotel. On the day after his arrival he was introduced by Mr. Stevens to President Doie, and presented Presi-

dent Cleveland's letter accrediting him in the following language:

I have made choice of James H. Blount, one of our distinguished citizens, as my special commissioner to visit the Hawaiian Islands, to make a report to me concerning the present status of affairs in that country. He is well informed of our sincere desire to cultivate and maintain to the fullest extent the friendship which has so long existed between the two countries, and in all matters affecting relations with the Government of the Hawaiian Islands his authority is paramount.

On the 31st he gave notice to President Dole of his intention to terminate the American protectorate, and on April 1 the naval authorities hauled down the American flag and withdrew the garrison of marines to the ships. In the evening Mr. Stevens called on the commissioner to urge the necessity of keeping the troops on shore to prevent Japanese interference, as it was suspected that the Queen had arranged with the Japanese commissioner to have troops landed from the Japanese man-of-war "Naniwa" to reinstate her. The Japanese commissioner, when he learned that the presence of the "Naniwa" had given rise to such a suggestion, requested his Government to order the vessel away, and expressed regret to Mr. Blount that any one should charge that the Empire of Japan, which had so many reasons for valuing the friendship of the Government of the United States, should consent to offend that Government by entering into the conflicts of the Hawaiian Islands. On May 4 Mr. Blount wrote that the indications were unmistakable that a majority of the people of the islands are opposed to annexation. In his last letter, dated July 31, he said:

The condition of parties in the islands is one of quiescence. The action of the United States is awaited by all as a matter of necessity. This condition, it can be assumed, will remain until the proposition to annex is accepted or rejected.

In the latter contingency no sudden movement is likely to occur. The present Government can only rest on the use of military force possessed of most of the arms in the islands, with a small white population to draw from to strengthen it. Ultimately it will fall, without fail. It may preserve its existence for a year or two, but not longer.

Mr. Stevens was recalled in May, and then Mr. Blount was appointed minister plenipotentiary.

The question was raised in the Senate as to the constitutionality of Mr. Blount's appointment without the consent of the Senate.

The manner in which Commissioner Blount collected testimony is in dispute. It is charged that he refused to listen to any but such as would further a predetermined purpose to condemn the Provisional Government.

In his report to Secretary Gresham, July 17, he describes the antecedents and character of the Missionary party in the following words:

From 1820 to 1866 missionaries of various nationalities, especially American, with unselfish toil, patience, and piety, had devoted themselves to the improvement of the natives. They gave them a language, a religion, and an immense movement on the lines of civilization. In process of time the descendants of these good men grew up in secular pursuits. Superior by nature, education, and other opportunities, they secured wealth. They sought to succeed to the political control exercised by their fathers. The revered missionary disappeared. In his stead there came the Anglo-Saxon

in the person of his son, ambitious to acquire wealth and to continue that political control conceded to his pious ancestor. Hence, in satire the native designated him a missionary, which has become a campaign phrase of wonderful potency.

This leads Mr. Blount to ask whether, with the native convinced that the foreigners had stolen his land, degraded free labor, and exposed his daughters to the evil influence of an overwhelming degraded male population, with the whites vaunting their wealth and intelligence, their missionary work, and condemning the weaknesses of the natives, there was not a powerful provocative to divergence and political strife?

The commissioner traces all recent troubles on the islands to the Constitution forced upon King Kalakaua by the Missionary party, and never submitted to the vote of the people. The success of the revolution of Jan. 17 he attributed to the encouragement of Minister Stevens and the menace of armed intervention.

On Saturday evening, Jan. 14, a small body of men—Germans, natives, and Americans—took up the subject of dethroning the Queen and proclaiming a new government with a view to annexation to the United States.

The first and most momentous question with them was to devise some plan to have the United States troops landed. Mr. Thurston, who appears to have been the leading spirit, on Sunday sought two members of the Queen's Cabinet and urged them to head a movement against the Queen and to ask Minister Stevens to land the troops, assuring them that in such an event Mr. Stevens would do so.

Failing to enlist any of the Queen's Cabinet in the cause, it was necessary to devise some other method to accomplish this. A Committee of Safety, consisting of 18 members, had been formed from a little body of men assembled in W. O. Smith's office. A deputation of these, informing Minister Stevens of their plans, arranged with him to land the troops if they would request it "for the purpose of protecting life and property."

It was further agreed between him and them that in the event they should occupy the Government building, and proclaim a new government, he would recognize them. The two leading members of the committee, Messrs. Thurston and Smith, growing uneasy as to the safety of their persons, also went to him to know if he would protect them in the event of their arrest by the authorities, to which he gave his assent.

A meeting of the committee was held that night at the house of Henry Waterhouse, next door to Minister Stevens's house, where they determined on the dethronement of the Queen, and selected officers. At this meeting it was assented to by all that Mr. Stevens had agreed with the Committee of Safety that in the event it occupied the Government building and proclaimed a provisional government he would recognize it as a *de facto* Government.

The leaders of the revolutionary movement would not have undertaken it but for Mr. Stevens's promise to protect them against any danger from the Government. But for this their mass meeting would not have been held; but for this no request to land the troops would have been made. Had the troops not been landed no measures for the organization of a new government would have been taken. The American minister and the revolutionary leaders had determined upon annexation to the United States, and had agreed upon the part each was to act to the very end.

He comments on the absence from the files of the legation of Mr. Stevens's reply to the call of the committee for the landing of marines, and says that it was the first time that American troops were ever landed on the islands at the in-

stance of a committee of safety without notice to the existing Government. Mr. Stevens has denied that he sent a reply to the committee, and denounces as false the statements that he had agreed to land troops or ever promised to protect the revolutionists. Mr. Blount found that the great body of the natives and a large proportion of whites were opposed to annexation. He found no annexationist who was willing to have the matter submitted to the popular vote.

The Provisional Government.—The officers of the Provisional Government were named in the proclamation of Jan. 17. Sanford B. Dole was made President. The Cabinet or Executive Council consisted of Mr. Porter, Minister of Finance; Mr. King, Minister of the Interior; and W. O. Smith, Attorney-General. President Dole assumed the duties of Minister of Foreign Affairs.

Early in February S. M. Damon was chosen as Vice-President of the Provisional Government.

Commissioners were appointed to proceed to Washington to negotiate a treaty of annexation to the United States. Their chairman was Lorrin A. Thurston, his associates being W. R. Castle, Joseph Marsden, C. L. Carter, and W. C. Wilder.

On Jan. 20 President Dole issued a proclamation announcing that all powers and duties belonging to the Sovereign of Hawaii were vested in the President of the Provisional Government, and that the Executive Council would perform the duties of the Cabinet. Another decree fixed the punishment—imprisonment for not less than six months nor more than six years—for any person who recruited soldiers or sailors to engage in hostility against the Provisional Government or acted in any other treasonable manner. All persons in the employ of the Government were required to take the oath of allegiance within twenty days. It was decided by the vote of the Executive and Advisory Councils to organize a national guard of 4 companies. John H. Soper was appointed commander of the forces, with the rank of colonel. W. G. Ashley was appointed marshal. Martial law was continued.

The Executive and Advisory Councils of the Provisional Government formed together the Legislature. One of its first acts was to repeal the lottery franchise act. Another prescribed an oath of allegiance to the Provisional Government, the takers of which were required not to renounce, but expressly to reserve, all allegiance that they might owe to any foreign country. Another act prohibited the importation of fire-arms, ammunition, dynamite, or any explosive except by the Government. On Jan. 30 Col. Soper issued an order requiring all citizens to declare what arms they had in their possession. The Government buildings were converted into barracks for the volunteer forces. Later, alien and sedition laws were enacted, permitting the expulsion or imprisonment of seditious non-citizens, and supplementary measures provided for the imprisonment without bail of persons suspected of plotting against the Government, and the suppression of newspapers expressing disloyal sentiments and the imprisonment of their editors. A law was made requiring that the names of the proprietors and editors of every newspaper should be conspicuously printed in its pages, in order that they might be held accountable for what was published. This meas-

ure was directed specially against a paper printed in Hawaiian and English, to which the Queen was suspected of giving pecuniary support. The principal native journals were suppressed by such measures. One of the early laws decreed that any one found talking against the Provisional Government or against the character of any of the Executive or Advisory Councils should be punishable by a fine of \$100 and imprisonment for thirty days.

By another act, any person having cause to believe that arms or ammunition were secreted for purposes of insurrection, or any seditious purpose, might swear out a search warrant and have the munitions confiscated, if any were found. Up to Feb. 1 the sessions of the new Government were held with closed doors, after which newspaper reporters were admitted. The opium law was repealed. The Board of Health was reorganized, and efforts were made to carry out thoroughly the law requiring all lepers to be taken to the settlement on Molokai Island. One officer was shot by a band of lepers who lived as outlaws in a mountain glen. After the American flag was hoisted over the Government building a guard of marines was stationed at its doors. By act of the Legislature a loan of \$750,000 was authorized. Iolani Palace was stripped of its furniture and treasures soon after it was vacated by the Queen. The ordinary household furnishings and ornaments were given up to Liliuokalani and the Dowager Queen Kapiolani. The gorgeous feather cloaks, the regal crown, and other insignia of royalty, relics of the Kamehamehas, portraits, and state furniture, were retained as the property of the Government. The Provisional Government took possession of the Crown lands, denying the title of Liliuokalani or other claimants, and some of them were disposed of in small holdings to natives and whites. The military force of the Provisional Government, which was increased by constant enlistments, stationed sentries in the streets. The troops of the "Boston" remained on shore and paraded three times a day through the city. On May 22 Charles Nordhoff was summoned before the Executive and Advisory Councils to answer a complaint of having committed a criminal malicious libel, in having published in his letters to the New York "Herald" a statement defamatory of the members in alleging that most of them had signed petitions for the lottery bill. The same day a guard was placed before his door because annexationists had threatened his life. He took the summons to Minister Blount, who told him not to appear or reply, because an American citizen could not be prosecuted criminally in Hawaii for what he published in American papers. On June 23 T. B. Walker, Archie Sinclair, and E. C. Crick were arrested by Marshal Hitchcock, Ashley's successor, for a conspiracy against the Government. Some days before dynamite bombs had been found in the garden of the Queen's house.

When Mr. Porter resigned the Ministry of Finance, in the latter part of May, S. M. Damon was appointed as his successor. F. M. Hatch became Vice-President of the Provisional Government.

Attempted Mediation of President Cleveland.—In Secretary Gresham's report to the

President, dated Oct. 18, he recommends that the treaty should not be resubmitted to the Senate.

At an early stage of the movement, if not at the beginning, Mr. Stevens promised the annexationists that as soon as they obtained possession of the Government building, and there read a proclamation of the character above referred to, he would at once recognize them as a *de facto* government, and support them by landing a force from our war ship then in the harbor, and he kept that promise.

This assurance was the inspiration of the movement, and without it the annexationists would not have exposed themselves to the consequences of failure. They relied upon no military force of their own, for they had none worthy of the name.

The Provisional Government was established by the action of the American minister and presence of the troops landed from the "Boston," and its continued existence is due to the belief of the Hawaiians that if they made an effort to overthrow it they would encounter the armed forces of the United States.

Under such circumstances, he asks, "should not the great wrong done to a feeble but independent State by the abuse of the authority of the United States be undone by restoring the legitimate government?" "Our Government," he says, "was the first to recognize the independence of the islands, and it should be the last to acquire sovereignty over them by force and fraud."

Albert S. Willis, of Kentucky, was appointed minister to Hawaii on Sept. 8, to succeed Mr. Blount, who returned to the United States early in August. Mr. Willis was confirmed, received his credentials on Sept. 27, departed for Hawaii on a naval vessel, and was received by President Dole on Nov. 7. There was an excited state of public feeling in Honolulu after his arrival, which became intense when the report of Secretary Gresham foreshadowing the President's policy of restoration reached the islands.

In a confidential letter of instructions, dated Oct. 18, Secretary Gresham informed Minister Willis of the conclusions drawn by the President from Mr. Blount's report, and his plan for reinstating the Queen by moral force under certain conditions.

The Provisional Government was not established by the Hawaiian people or with their consent or acquiescence; nor has it since existed with their consent. The Queen refused to surrender her powers to the Provisional Government until convinced that the minister of the United States had recognized it as the *de facto* authority, and would support and defend it with the military force of the United States, and that resistance would precipitate a bloody conflict with the force. She was advised and assured by her ministers, and by the leaders of the movement for the overthrow of her Government, that if she surrendered under protest her case would afterward be fairly considered by the President of the United States. The Queen finally wisely yielded to the armed forces of the United States then quartered in Honolulu, relying upon the good faith and honor of the President, when informed of what had occurred, to undo the action of the minister and reinstate her and the authority which she claimed as the constitutional sovereign of the Hawaiian Islands.

The President has, therefore, determined that he will not send back to the Senate for its action thereon the treaty which he withdrew from that body for further consideration on the 9th day of March last.

On your arrival at Honolulu you will take advantage of an early opportunity to inform the Queen of this determination, making known to her the Presi-

dent's sincere regret that the reprehensible conduct of the American minister, and the unauthorized presence on land of a military force of the United States, obliged her to surrender her sovereignty for the time being, and rely on the justice of this Government to undo the flagrant wrong.

You will, however, at the same time inform the Queen that, when reinstated, the President expects that she will pursue a magnanimous course by granting full amnesty to all who participated in the movement against her, including persons who are or have been, officially or otherwise, connected with the Provisional Government, depriving them of no right or privilege which they enjoyed before the so-called revolution. All obligations created by the Provisional Government in due course of administration should be assumed.

Having secured the Queen's agreement to pursue this wise and humane policy, which it is believed you will speedily obtain, you will then advise the Executive of the Provisional Government and his ministers of the President's determination of the question which their action and those of the Queen devolved upon him, and that they are expected to promptly relinquish to her her constitutional authority.

Should the Queen decline to pursue the liberal course suggested, or should the Provisional Government refuse to abide by the President's decision, you will report the facts and await further directions.

Rear-Admiral J. S. Skerrett was relieved by Rear-Admiral John Irwin, who took command on Nov. 6. The Provisional Government had imported an additional supply of machine guns, repeating rifles, and ammunition in anticipation of a struggle, and the military forces had been increased until there were 1,100 men under arms. The Government building was barricaded and converted into a fortress. The friends of the Provisional Government boasted that they were stronger than the naval forces of the United States in Hawaii, and declared that they would fight if the forces of the United States should be used to restore the Queen. As threats of assassination were uttered against Liliuokalani, the Provisional Government posted guards before her house. The Government decided to remove from office all employees whose loyalty they could not depend upon. Wundenberg, clerk of the Supreme Court, was dismissed on account of his affidavit contained in Blount's report. In anticipation of an announcement by Minister Willis that the United States would intervene to restore the Queen, the Executive Council framed a declaration to be presented to Minister Willis that the Government declined to enter into negotiations for the restoration of the Crown, and would resist with military force any attempt to overthrow its authority. An American League, composed of American citizens who were prepared to fight for the Government, numbered about 1,200, and there were 1,500 rifles in the hands of annexationists of this temper.

The Queen refused to accept the conditions laid down by President Cleveland, declaring that nothing but the execution of the members of the Provisional Government and banishment of their families would be consented to, and Mr. Willis therefore had nothing to communicate to the Provisional Government. The Secretary of State telegraphed to the minister, on Dec. 3, to require the Queen's unqualified agreement that the obligations assumed by the Provisional Government shall be assumed, and on a pledge that

there shall be no prosecution or punishment of those setting up or supporting the Provisional Government. Should she ask whether, if she acceded to these conditions, active steps would be taken to effect her restoration or to maintain her authority thereafter, the minister was to say that the President could not use force without the authority of Congress.

President Cleveland's Message to Congress.—Congress met the day after the last dispatch was sent to Minister Willis. On Dec. 18 President Cleveland sent a message to Congress, in which he reviewed the affair and gave his conclusions.

By an act of war, committed with the participation of a diplomatic representative of the United States and without authority of Congress, the Government of a feeble but friendly and confiding people has been overthrown. A substantial wrong has thus been done, which a due regard for our national character, as well as the rights of the injured people, requires we should endeavor to repair. The Provisional Government has not assumed a republican or other constitutional form, but has remained a mere executive council or oligarchy, set up without the assent of the people. It has not sought to find a permanent basis of popular support, and has given no evidence of an intention to do so. Indeed, the representatives of that Government assert that the people of Hawaii are unfit for popular government, and frankly avow that they can be best ruled by arbitrary or despotic power.

The United States, in aiming to maintain itself as one of the most enlightened of nations, would do its citizens gross injustice if it applied to its international relations any other than a high standard of honor and morality. On that ground the United States can not properly be put in the position of countenancing a wrong after its commission any more than in that of consenting to it in advance. On that ground it can not allow itself to refuse to redress an injury inflicted through an abuse of power by officers clothed with its authority and wearing its uniform; and on the same ground, if a feeble but friendly state is in danger of being robbed of its independence and its sovereignty by a misuse of the power of the United States, the United States can not fail to vindicate its honor and its sense of justice by an earnest effort to make all possible reparation.

These principles apply to the present case with irresistible force, when the special conditions of the Queen's surrender of her sovereignty are recalled. She surrendered not to the Provisional Government, but to the United States. She surrendered not absolutely and permanently, but temporarily and conditionally, until such time as the facts could be considered by the United States. Furthermore, the Provisional Government acquiesced in her surrender in that manner and on those terms, not only by tacit consent, but through the positive acts of some members of the Government, who urged her peaceable submission not merely to avoid bloodshed, but because she could place implicit reliance upon the justice of the United States, and that the whole subject would be finally considered at Washington.

The check that his plans had encountered in the Queen's refusal to accept the conditions imposed, which prevented the presentation of the plans to the Provisional Government, compelled President Cleveland to commend the subject to "the extended powers and wise discretion of Congress," with the assurance that he would "be much gratified to co-operate in any legislative plan which may be devised for the solution of the problem before us which is consistent with American honor, integrity, and morality."

HAYES, RUTHERFORD BIRCHARD, nineteenth President of the United States, born in Delaware, Ohio, Oct. 4, 1822; died in Fremont, Ohio, Jan. 17, 1893. His ancestors (Scottish originally) emigrated from England in 1682 and settled at Windsor, Conn. His father, a native of Brattleborough, Vt., married Sophia Birchard, of Wilmington, Vt., and died a short time before the son was born. Rutherford was educated in the common school, prepared for college at Norwalk, Ohio, and Middletown, Conn., and was graduated at Kenyon College, as valedictorian, in 1842. One of his college mates said of him that "he was remarkable for great common sense in his personal conduct; never uttered a profane word, and behaved always like a considerate, mature man." Another fellow-student, like the first a lawyer of high attainments, said: "Hayes left a memory which was a fascination—a glowing memory; he was popular, magnanimous, manly; was a noble, chivalrous fellow, of great promise."

He studied law at Columbus, Ohio, and in Harvard Law School, at the same time attending Longfellow's lectures on literature and studying French and German. He was admitted to the bar in 1845, and in 1846 formed a partnership with Ralph P. Buckland in Lower Sandusky (now Fremont). While in this partnership Mr. Hayes tried at Cincinnati a case referring to the building of a railway bridge over Sandusky Bay, and Thomas Ewing, who was of the opposing counsel, paid him the highest compliments for this his first case in a United States court.

In 1848 Mr. Hayes was compelled, on account of weakness of the lungs, to seek a warmer climate, and this was done so promptly that the cure was radical. Outdoor prairie life in Texas gave him new experiences and renewed vigor.

In 1850 he removed to Cincinnati, and opened an office with John W. Herron, and while waiting for business began a systematic course of study. He joined the Sons of Temperance and the Odd Fellows, and his addresses, delivered at their meetings, soon attracted attention. There was a remarkable coterie of men who formed at that time a literary club in Cincinnati. Among them were Salmon P. Chase, Thomas Corwin, Thomas Ewing (senior and junior), John Pope, Edward F. Noyes, Stanley Mathews, Moncure D. Conway, and Manning F. Force. Mr. Hayes was for eleven years a member of this organization, and in its debates he acquired much of his power of logical presentment of a subject.

In January, 1852, Judge Warden, of the criminal court, heard a little speech by Mr. Hayes, and gave to him the conduct of a famous criminal case, the defense of Nancy Farrer, a woman who was accused of poisoning all the members of two families. The whole community was in a state of indignation against her. Mr. Hayes became convinced that his client was insane and irresponsible, but the trouble was to prove it to the satisfaction of the jury. The plea attracted wide attention and received unstinted praise, but the verdict was murder in the first degree. Hayes immediately obtained a writ of error, and argued the case before the Supreme Court with such effect that Nancy Farrer was sent to a lunatic asylum.

By this time the young lawyer was so far settled in life as to be able to offer a home to the

woman to whom his heart had been given. In December, 1852, he married Miss Lucy W. Webb, daughter of Dr. James Webb, who had been a physician in successful practice at Chillicothe, Ohio, until 1833, when he went to Lexington, Ky., to complete arrangements for sending to Liberia slaves freed by him and his father. Here he contracted cholera and died.

In January, 1854, Mr. Hayes formed a partnership with R. M. Corwine and W. K. Rogers. In 1859 he was chosen by the city council to fill out a vacant term as city solicitor. The choice was made possible by the casting vote of a political opponent, and journals and men of both parties received the appointment with satisfaction. When the unfinished term had expired he was elected to it by a majority of 2,536 votes. In 1861, just before the arrival of the news of the fall of Fort Sumter, he suffered defeat for re-election in common with his party, but ran ahead of the other candidates, although he had been known for his antislavery convictions, and was an ardent supporter of Lincoln's candidacy for the presidency.

At the mass meeting held upon the arrival of the news from Charleston, Mr. Hayes was made chairman of the Committee on Resolutions. From that moment his voice was never silent, and his speeches were received with the greater enthusiasm when it became known that he was one of the earliest to enlist.

Gov. Dennison appointed William S. Rosecrans colonel, Stanley Mathews lieutenant-colonel, and Rutherford B. Hayes major of the Twenty-third Ohio Infantry, June 7, 1861. The literary club to which Mr. Hayes belonged had at the outset formed itself into a military company, of which he was captain; and from that company were more than 40 officers furnished to the National army, of whom several became generals. In September, 1861, Gen. Rosecrans appointed Major Hayes judge advocate of the Department of Ohio, which place he filled for two months. In October he was promoted to the rank of lieutenant-colonel. In the battle of South Mountain, Sept. 14, 1862, he distinguished himself by gallant conduct in leading a charge, and in holding his position at the head of his men after being severely wounded, until he was carried from the field. In October, 1862, he was promoted to colonel of the regiment, but he was given leave of absence until the wound was healed. On returning to the field, he was given a command in southwestern Virginia, and in the summer of 1863 he went with 2 regiments and a section of artillery to Ohio to arrest the raids of Gen. John Morgan, and aided in bringing about his surrender. In 1864 he commanded a brigade in Gen. Crook's expedition to cut the communications between Richmond and the Southwest, and here also he showed notable gallantry in leading his men in storming a fortification on Cloyd mountain. In July, 1864, while still commanding a brigade of Crook's division, he was ordered to charge what was found to be a greatly superior force, and Col. Mulligan, who was associated with him in the action, fell, when Hayes led a masterly retreat, and by his skill and daring prevented pursuit until the men reached a better position. At Berryville he showed high courage, and at Winchester, in September, 1864,

he led an assault upon a battery placed on an eminence. Between his forces and the height there was a morass over 50 yards in width. Leading his brigade, he plunged in first, became mired, dismounted, and waded across alone under the fire of the enemy. Once on firm ground, he waved his cap in signal that his men should join him, and when 40 had done so he made an assault and captured the battery after a hand-to-hand fight with the gunners. The place had been deemed so impregnable that the battery had no infantry supports. At Fisher's Hill, while pursuing Gen. Early, in September, 1864, he commanded a division, and executed a flank movement of great brilliancy over mountains and through woods, where, in spite of peculiar difficulties, he routed the enemy, capturing many pieces of artillery. In the following month, at the battle of Cedar Creek, so great was his display of courage and judgment, that Gen. Crook, taking him by the hand, said, "From this day you will be a brigadier-general." The commission came in a few days, and in March, 1865, he was brevetted major-general. In his memoirs, Gen. Grant speaks of his military career in terms of the highest praise.

In 1864, while he was in the field, his friends at home nominated him for Congress. When it was proposed that he get leave of absence to conduct his political campaign he said: "Your suggestion to take the stump, was certainly made without reflection. An officer fit for duty, who at this crisis would abandon his post to electioneer for Congress ought to be scalped." He was elected by 2,400 majority, and the Ohio soldiers in the field nominated him for Governor of the State.

He took his seat in Congress, in December, 1865. On questions of reconstruction he went with his party, and also on those that ended in the impeachment of President Johnson. He was the only new man, save one, to be given the chairmanship of a committee—that on the library. While he was at the head of this committee the library space was increased threefold by the addition of wings, and the "Force Historical Library" was added, mainly through his efforts. He procured the passage of a bill to transfer the Smithsonian Library to the Library of Congress, introduced a joint resolution to extend the privileges of the library to a larger class of public officials, and recommended the passage of a copyright bill for securing to the library copies of all books, pamphlets, maps, etc., published in the United States. One of his first votes was in favor of the resolution:

That the public debt created during the late rebellion was contracted upon the faith and honor of the nation; that it is sacred and inviolate, and must and ought to be paid, principal and interest; and that any attempt to repudiate or in any manner impair or scale the said debt should be universally discountenanced by the people, and promptly rejected by Congress if proposed.

He voted to lay on the table the resolution to bring in a bill to increase the pay of congressmen.

In 1865, Gen. Hayes submitted to the Republicans in Congress, and subsequently to the Republican caucus, these resolutions, which became the basis of the action of the party:

Resolved, That it is the sense of the caucus that the best if not the only mode of obtaining from the States lately in rebellion guarantees which will be irreversible is by amendments of the national Constitution.

Resolved, That such amendments to the national Constitution as may be deemed necessary ought to be submitted to the House for its action at as early a day as possible, in order to propose them to the several States during the present sessions of their legislatures.

Resolved, That an amendment, basing representation on voters instead of population, ought to be promptly acted upon, and the judiciary committee is requested to prepare resolutions for that purpose, and submit them to the house as soon as practicable.

In August, 1866, he was renominated by acclamation, and he returned to take part in the Fortieth Congress. While he was there the soldiers in his old division found in him a most sympathizing friend, and much of his time was taken up with gratuitous work in behalf of them and their families.

In 1867 Gen. Hayes was nominated for Governor of Ohio, his opponent, on the Democratic ticket, being Allen G. Thurman. In the course of a speech delivered during his campaign, Gen. Hayes said:

Our Government has been called the white man's Government. Not so. It is not the Government of any class, or sect, or nationality, or race. It is a government founded on the consent of the governed, and Mr. Broomall, of Pennsylvania, therefore properly calls it "the government of the governed." It is not the government of the native born or of the foreign born, of the rich man or of the poor man, of the white man or of the colored man; it is the Government of the freeman. And when colored men were made citizens, soldiers, and freemen, by our consent and votes, we were estopped from denying to them the right of suffrage. . . . We want in the reconstructed Union that there shall be the same freedom of the press and freedom of speech in the States of the South that there always has been in the States of the North. Again, we want the reconstructed Union upon such principles that the men of the South, who during the war were loyal and true to the Government, shall be protected in life, liberty, and property, and in the exercise of their political rights.

Gen. Hayes was elected Governor; but a proposed negro suffrage amendment to the State Constitution was defeated, and the Democrats obtained a majority in the Legislature, which elected Judge Thurman to the United States Senate.

In 1869 Gov. Hayes was renominated and re-elected, his opponent on the Democratic ticket being George H. Pendleton. The discussions of the campaign were principally on the subject of the currency and the national bonds. The notable events of his governorship have been thus summarized:

He recommended and had completed a comprehensive geological survey of Ohio.

He secured the establishment of a soldiers' orphans' home.

He had the powers of the Board of State Charities restored and enlarged.

He had provision made for the care by the State of the chronic insane.

Under his direction the graded system was adopted in the State Prison, and prison reforms were introduced.

Minority representation on election boards was secured.

The Agricultural and Mechanical College was founded and organized.

The suffrage amendment to the Constitution of the State was adopted.

The fifteenth amendment to the Constitution of the United States was ratified.

The right of soldiers in the National Asylum to vote was restored.

The students' privilege of voting while attending college was given back.

The "visible admixture" law was repealed.

The St. Clair papers were purchased, and letters and manuscripts relating to pioneer history collected.

A reform school for girls was established.

The State debt was reduced, and all increase of debt opposed.

In 1872, as candidate for Congress in the Cincinnati district, he was defeated. In 1873 he removed his residence to Fremont, intending

HOME OF EX-PRESIDENT HAYES, FREMONT, OHIO.

to retire permanently from public life; but in 1875 he reluctantly accepted a third nomination for the governorship, and was elected, his opponent on the Democratic ticket being Gov. William Allen, who had been elected in 1873. The currency question was the main issue; but there was also much discussion of a proposition to divide the school money between Catholics and Protestants. In one of his speeches in this canvass Gov. Hayes said:

If it shall turn out that the party in power are opposed to a sound, safe, stable currency, I have no doubt that in October the people will make a change. If it shall turn out that the party in power were guilty of gross corruption in the legislative department, and that when that corruption was exposed the majority shielded those who were implicated, I have no doubt the people will make a change. If it shall turn out that the party in power yielded to the dictation of an ecclesiastical sect, and through fear of a threatened loss of votes and power has suffered itself to be dominated over in its exercise of the law-making power, there ought to be, as I doubt not there will be, a great change. If it shall turn out that the party in power is dangerously allied to any body of men who are opposed to our free schools, and have proclaimed undying hostility to our educational system, then I doubt not the people will make a change in the Administration.

In the Republican National Convention of 1876, which was held in Cincinnati, the contest was prominently between Blaine, Morton, Brewster, and Conkling. Through the first four ballots these leaders ran quite evenly, Blaine leading; but the vote for Hayes had been steadily gaining, until on the fifth he took the third place. On the sixth he had passed to the second, the vote standing—Blaine, 308; Hayes, 113. On the seventh, enough States changed their votes to reverse the order, and the decisive

ballot was—Hayes, 384; Blaine, 351. William A. Wheeler, of New York, was nominated for Vice-President.

In his letter of acceptance Mr. Hayes reiterated, in regard to civil service, the sentiments that he had expressed several years before, not only favoring the reform in general, but making specific charges against the system that then hindered its working. He also declared in favor of a single term, although there was nothing in the platform to call for such expression, for sound money, and for such measures in the South as should tend to bring political peace and a commercial revival. The Democratic candidate was Samuel J. Tilden. Disaffection on the part of many Republicans made the vote close, and both parties claimed the election. The decision turned upon the action of the States of Louisiana, South Carolina, and Florida. The Republicans claimed that fraud throughout the South, where colored men and white Republicans were not allowed to vote, prevented them from having a majority of about forty electoral votes, instead of the exceedingly small one which they actually claimed. The Democrats contended that in the three States mentioned the actual vote was in their favor, and that Republican returning boards had counted otherwise. Both parties had sent watchers to those districts when the returns were being made, but no final decision could be reached. The Senate had a Republican and the House of Representatives a Democratic majority, so that it was impracticable to leave the decision to them. It was finally agreed, and an act was passed, to leave the matter to a commission composed of 5 Senators, 5 Representatives, and 5 members of the Supreme Court, the decision to be final unless set aside by a concurrent vote of both houses of Congress. While the matter was in dispute Mr. Hayes wrote a letter to John Sherman, then at New Orleans, which was afterward made public. He said:

I am greatly obliged for your letter of the 23d. You feel, I am sure, as I do about this whole business. A fair election would have given us about 40 electoral votes at the South—at least that many. But we are not to allow our friends to defeat one outrage and fraud by another. There must be nothing crooked on our part. Let Mr. Tilden have the place by violence, intimidation, and fraud rather than undertake to prevent it by means that will not bear the severest scrutiny.

The electoral commission, by a strict party vote of 8 to 7, decided that the vote must be received as reported by the returning boards, and this gave the presidency to Mr. Hayes by a majority of 1 vote in the electoral college. The 4th of March, 1877, being Sunday, he was inaugurated on Monday, the 5th. In his inaugural address he reiterated the principles and views set forth in his letter of acceptance, adding that, while the President owes his election to a party, he should be always mindful that "he serves his party best who serves his country best," and declaring that the general acceptance of the settlement by the two great parties of a dispute, "in regard to which good men differ as to the facts and the law, no less than as to the proper course to be pursued in solving the question in controversy," was an "occasion for general rejoicing."

His Cabinet consisted of William M. Evarts, Secretary of State; John Sherman, Secretary of the Treasury; George W. McCrary, Secretary of War; Richard W. Thompson, Secretary of the Navy; David M. Key, Postmaster-General; Charles Devens, Attorney-General; and Carl Schurz, Secretary of the Interior. Business was depressed at the North, and in the South there were violent dissensions. In South Carolina and Louisiana there were two sets of men claiming the right to the State offices. Mr. Hayes invited the heads of the contending factions in South Carolina to come to Washington for conference, and sent to Louisiana a commission composed of eminent men of both parties. In this body were Gen. Joseph R. Hawley, of Connecticut; John M. Harlan, of Kentucky; Charles B. Lawrence, of Illinois; Ex-Gov. John C. Brown, of Tennessee; and Wayne McVeagh, of Pennsylvania. The result was that the Legislatures of the State united to form one body, and in both States the Democratic governors were established and the United States troops withdrawn. The justice of the decision was a mooted point, although the difficulty of the situation was conceded. The Republicans who objected to it did so on the ground that the question was essentially involved in that of the presidential election. If President Hayes was the legal occupant of the presidency, then the Republican candidates were the legal occupants of the gubernatorial chairs. On the whole, his somewhat arbitrary decision was upheld, and it was accompanied by pledges from Southern leaders in Congress that they would exert their influence to maintain peace.

In the hands of the new President civil-service reform received a great impulse. The claim of Senators and Representatives to "patronage" was not recognized. To the Secretary of the Treasury he expressed a wish that "the collection of the revenues should be free from partisan control and organized on a strictly business basis, with the same guarantees for efficiency and fidelity in the selection of the chief and subordinate offices that would be required of a prudent merchant."

On June 22, 1877, he issued an order that "no officer should be required or permitted to take part in the management of political organizations, caucuses, conventions, or election campaigns. Their right to vote or to express their views on public questions, either orally or through the press, is not denied, provided it does not interfere with the discharge of their official duties. No assessment for political purposes on officers or subordinates should be allowed. This rule is applicable to every department of the civil service. It should be understood by every officer of the General Government that he is expected to conform his conduct to its requirements."

On May 5, 1877, the President issued a call for an extra session of Congress on Oct. 15, to provide for the pay of the army, for which nothing had been done previous to its adjournment. Meantime there were serious railroad and other strikes, and the army was called upon for trying service in maintaining order. In his first annual message he said, in reference to his course in the South: "No unprejudiced mind will deny that the terrible and often fatal collisions which for several years have been of frequent occurrence

and have agitated and alarmed the public mind have almost entirely ceased, and that a spirit of mutual forbearance and hearty national interest has succeeded." He recommended resumption of specie payments in these terms: "I must adhere to my most earnest conviction that any wavering in purpose or unsteadiness in methods, so far from avoiding the inconvenience inseparable from the transition from an irredeemable to a redeemable paper currency, would only tend to increase and prolong disturbance in values, and, unless retrieved, must end in serious disorder, dishonor, and disaster in the financial affairs of the Government and of the people." He also insisted strongly that "all the bonds issued since Feb. 12, 1873, when gold became the only unlimited legal-tender metallic currency of the country, are justly payable in gold coin, or in coin of equal value," and that "the bonds issued prior to 1873 were issued at a time when the gold dollar was the only coin in circulation, or contemplated by either the Government or the holders of the bonds as the coin in which they were to be paid. . . . It is far better to pay these bonds in that coin than to seem to take advantage of an unforeseen fall in silver bullion to pay in a new issue of silver coin thus made so much less valuable. The power of the United States to coin money and to regulate the value thereof ought never to be exercised for the purpose of enabling the Government to pay its obligations in a coin of less value than that contemplated by the parties when the bonds were issued." He also urged again his civil-service recommendations; but Congress did not respond. No appropriation was made for the civil-service commission, and acts contrary to its decision were upheld. The efforts to save the timber lands of the country were denominated outlandish, the specie-payment act, instead of being upheld, was voted down, and the payment of the national debt in silver was favored. The Democrats set on foot an investigation in Louisiana and Florida. If the object was, as charged by the other party, to oust the President, it failed, after the famous "cipher dispatches" had been divulged. In January, 1879, the resumption act (passed in 1875) went into operation with the smoothness which he had predicted. He suspended from office in the New York Customhouse Chester A. Arthur and Alonzo B. Cornell, two of the most prominent men in the party, his reason being that they did not conform to his order forbidding political activity. He said: "Their offices have been conducted as part of the political machinery under their control." For a like reason he suspended a prominent Western postmaster. The Democrats in the Senate gave help enough to have the new appointees confirmed, and when they entered upon office Mr. Hayes said: "Neither my recommendation nor that of the Secretary of the Treasury, nor the recommendation of any member of Congress or other influential person, should be regarded. Let appointments and removals be made on business principles and on fixed rules."

On Feb. 12, 1880, President Hayes issued a second proclamation against lawless attempts to settle the Indian Territory. In March of the same year, in submitting to Congress the correspondence in regard to an interoceanic canal

across the Isthmus of Panama, he said: "The policy of this country is a canal under American control."

The first bill vetoed by him (Feb. 28, 1878) was the measure entitled "An Act to authorize the coinage of the standard silver dollar, and to restore its legal-tender character," commonly known as the "Daddy-Dollar" bill. It was passed over the veto and became a law. The second veto (March 6, 1878) was on a bill providing for holding a special term of the United States District Court in Mississippi for the trial of persons charged with depredating upon public timber lands. The veto was sustained. The third (March 1, 1879) was the "Act to restrict the immigration of Chinese to the United States." The veto was sustained. The fourth (April 29, 1879) was on the Army Appropriation bill, because of the sixth section of that measure, which prohibited the use of United States troops at the polls. This veto was sustained, and Congress passed the army bill without the objectionable feature. The fifth (May 12, 1879) was on the so-called Military Interference bill, which a Democratic caucus had framed for the express purpose of meeting the objections of the President to the sixth section of the vetoed army bill. This veto, also, was sustained. The sixth (June 23, 1879) was on the Judicial Expenses bill, because of the restrictions imposed by that measure upon the appointment and payment of deputy and special marshals at the elections. This veto was sustained. The seventh (June 30, 1879) was on the Special Marshals Appropriation bill, which covered the same grounds that had caused the veto of the Judicial Expenses bill one week previous. This veto was also sustained. The eighth (May 4, 1880) was on the Special Deficiency Appropriation bill, because of a "rider" providing that the special deputy marshals for service at the polls should belong to opposite political parties, and that they should be appointed by the Circuit Court of the United States for the district in which such marshals were to perform their duties; but should there be no session of the circuit court, then the district judges were authorized to convene their courts for that purpose. The President waived the merits of the "rider," and vetoed the bill simply on the objection to placing "riders" on appropriation bills. No attempt was made to pass the bill over the veto. The ninth (June 15, 1880) was on a bill regulating the appointment of special deputy marshals at elections. This veto was sent to the Senate, and when Congress adjourned *sine die*, on June 16, it had not been read, but remained on the table, thereby defeating the bill. The tenth (March 8, 1881) was on a bill "to facilitate the refunding of the national debt." The next day he was succeeded in the presidency by James A. Garfield.

Among other recommendations made by President Hayes was one for a new Indian policy; education; allotment of land in severalty, inalienable for a certain period; fair payment for other Indian lands; and investment of Indians with the rights and privileges of citizenship as fast as such policy should render it safe.

After his retirement from the presidency he devoted his time in a quiet way to various public matters. Temperance found in him a warm and

ready advocate, and he was for several years President of the National Indian Association, which has done so much to bring about the reforms suggested in his last message.

He died suddenly, of neuralgia of the heart. In the proclamation announcing the event, President Harrison paid this tribute to his memory:

His public service extended over many years and over a wide range of official duty. He was a patriotic citizen, a lover of the flag and of our free institutions, an industrious and conscientious civil officer, a soldier of dauntless courage, a loyal comrade and friend, a sympathetic and helpful neighbor, and the honored head of a happy Christian home. He has steadily grown in the public esteem, and the impartial historian will not fail to recognize the conscientiousness, the manliness, and the courage that so strongly characterized his whole public career.

Biographies of Rutherford B. Hayes have been written by James Q. Howard, Russell H. Conwell, and William D. Howells. For a portrait on steel, see the "Annual Cyclopaedia" for 1876.

HAYTI, a republic occupying the greater part of the island of Hayti, in the West Indies. The legislative powers are vested in a National Assembly, consisting of a Senate and a House of Deputies. Under the Constitution of Oct. 9, 1889, there are 50 Deputies, elected for three years by the direct vote of all Haytians twenty-one years of age, and 30 Senators, in part elected for six years by the Chamber and in part nominated by the President. The President is elected for seven years by the whole National Assembly sitting together. Gen. L. M. F. Hippolyte is President for the term ending May 15, 1897.

Finances.—The revenue is derived entirely from customs. The receipts for 1890-'91 were \$7,322,076, of which \$4,219,620 were collected on imports and \$3,102,456 on exports. The budget for 1891-'92 makes the total receipts \$8,166,000 in Haytian currency, and the expenditures \$7,958,314, of which \$1,147,242 are for war, \$1,954,317 for the public debt, \$1,171,185 for the interior and police, \$981,816 for public instruction, \$694,551 for finance and commerce, \$574,125 for public works, \$486,818 for justice, \$361,574 for agriculture, \$187,148 for marine, \$135,530 for foreign relations, \$174,850 for the National Bank, and \$89,158 for public worship.

The debt on Jan. 1, 1892, amounted to \$15,757,011, made up of a foreign loan of \$4,536,506 raised in 1875, an internal debt of \$4,390,547, short interest-bearing loans amounting to \$1,663,894, a floating debt of \$1,125,559, and paper money amounting to \$4,040,505.

Commerce and Production.—The imports for 1891 amounted to \$10,060,979, of which \$6,454,601 were imports from the United States, \$1,930,713 from Germany, \$917,994 from France, \$602,191 from Great Britain, and \$95,480 from other countries. The total value of the exports was \$14,165,779, of which \$8,487,500 were exports to France, \$2,209,292 to the United States, and \$3,518,987 to other countries. The export of coffee in 1891 was 78,000,000 pounds; of logwood, 160,000,000 pounds; of cacao, 3,000,000 pounds; of mahogany, 35,000 feet. The mineral wealth of the country is not developed, although rich deposits of iron, copper, and salt are known to exist. There were entered during 1891 at the chief ports of Hayti 820 vessels, of 705,262 tons.

Army and Navy.—The army is recruited partly by conscription for seven years and partly by voluntary enlistment for four years. The law of 1878 fixed its strength at 6,828 officers and men. The fleet consisted in 1891 of 4 gunboats carrying 27 cannon and 1 steel gunboat, built in 1886, armed with 3 4-inch guns and 2 of smaller caliber. In 1892 several new gunboats were added to the navy. One of these, the "Admiral Pétion," built in Havre, an armored vessel carrying 15 guns, mysteriously foundered on Sept. 6, 1893, and 92 persons were drowned.

Political Situation.—Before the opening of the year 1893 insurrectionary disturbances had broken out in the north and on the southern coast, but they were easily quelled by detachments of Government troops. President Hippolyte maintained a despotic military régime for the purpose of guarding against revolutionary plots, and in watching against secret communications with exiles and the landing of arms or forces his officers hampered foreign commerce. The people of the country, with the exception of disappointed candidates for office, were not generally discontented. There was no popular leader in the country who could organize a formidable uprising or obtain the money and arms for a campaign against the Government. Nor were the exiles in Jamaica united. Neither ex-President Légitime, Gen. Manigat, nor Gen. Prophète was willing to give up his chances for the presidency or assist in overthrowing Hippolyte for the sake of elevating another to power. The new gunboats enabled the President to guard the coast more thoroughly and prevent the landing of filibustering expeditions. In August, 1892, Gen. Momplaisir and Gen. Arneaux, Haytian exiles in Jamaica, chartered the schooner "Willie Irving," and attempted to smuggle in a cargo of rifles and cartridges in order to raise an insurrection on the south coast. They were unable to land, and, returning to Kingston harbor, they threw the arms overboard, but were detected, and in May, 1893, were tried by the British court for violating the foreign enlistment act, and fined \$1,000 each, while Miller, master of the vessel, was fined \$500. Hippolyte sent an army of 2,500 men to the border, and President Heuraux, of Santo Domingo, suspecting Hippolyte of a design to aid the revolutionists of his country in an attempt to upset his Government, dispatched an equal force to the frontier district. The result of an exchange of views was that each ruler expelled from his dominions the exiled citizens of the neighboring republic, and each reaffirmed his adhesion to the agreement that no foreign power should be allowed to obtain territorial rights on the island.

HOLLAND. See NETHERLANDS.

HONDURAS, a republic in Central America. The Congress consists of a single Chamber, the members of which are elected in the proportion of 1 to 10,000 inhabitants, for four years, one half retiring every two years. The President serves also four years. Gen. Ponciano Leiva was elected President on Nov. 10, 1891.

Finances.—The revenue is derived from customs and Government monopolies. The receipts in 1889 were \$2,094,660, and the expenditures \$2,077,552. The internal debt amounted to \$2,031,379. The foreign debt was contracted in

London and Paris for the purpose of building an interoceanic railroad, which has never been completed. The capital amounts to about \$27,000,000, and the arrears of interest to nearly \$40,000,000.

Commerce and Production.—The chief products are cattle, mahogany and other woods, India rubber, bananas, coconuts, indigo, sarsaparilla, gold, and silver. The exports in 1891 were valued at \$2,667,008. The exports of vegetable products were \$1,491,316; of minerals, \$593,087; of cattle, \$451,116; of manufactured products, \$41,489. The bulk of the exports goes to the United States. The principal imports are cotton and silk fabrics, and hardware. Gold and silver are mined in larger quantities than formerly, owing to the introduction of modern methods.

Communications.—The projected interoceanic railroad, starting at Puerto Cortez, was built as far as San Pedro Sula, 69 miles, but a part was afterward abandoned, when a bridge over the Chamelicon river was carried away, and at present only 37 miles are open to traffic. There are 1,717 miles of telegraph lines, over which 93,000 messages are sent annually on the average.

Civil War.—In the presidential election at the close of 1891, when Ponciano Leiva, the Minister of War and appointed successor of President Luis Bográn, was elected by an overwhelming majority over Policarpo Bonilla, the young leader of the Liberal party, official and military coercion was employed to bring about this result more flagrantly than usual because Liberals were more numerous than Conservatives, at any rate in the urban and progressive districts, and they had nerved themselves for a vigorous effort to overthrow Bográn's party, whose candidate was deemed to be only a figure-head and a stepping stone for Bográn's return to power. When the election was over Bonilla announced that he would wait till the next one to demonstrate the strength of his party, while Bográn said that he would keep aloof from politics, and Leiva's election was ratified by the votes of Liberal as well as Conservative members of Congress. As a pledge of peace and reconciliation, Gen. Domingo Vasquez, a Liberal leader, was called from exile and made Minister of War and commander of the army. Political prisoners were treated with leniency, and the Government even went so far as to prosecute a police official of Yuscaran for shooting and killing a voter who protested against the exclusion of Liberals from the polls. The wealthy and influential exiles in Nicaragua, however, were not appeased, and in the mountain district bordering on Salvador Gen. Terencio Sierra, an influential young revolutionary, still kept up the guerilla warfare that he had waged since Bográn decreed his exile and burned his *hacienda*. Bográn and Leiva, becoming frightened, changed all at once their policy of conciliation. When the Court of Appeals confirmed the sentence of eight years' imprisonment passed upon the official homicide of Yuscaran, a squad of soldiers marched into the court-room and liberated the prisoner, who was afterward promoted in rank by the President. While the Liberals were still angry over this act, and over the renewal of ar-

rests and of the flogging of political prisoners, a decree of banishment was issued against Policarpo Bonilla, who did not immediately join the exiles in Nicaragua, but went to Guatemala. A rising on the north coast, headed by his cousin, Manuel Bonilla, and one Nuilla, was easily put down by the Government troops, who shot Nuilla, but released Manuel Bonilla on parole. A more formidable movement in the south was checked by Gen. Vasquez, who recaptured the village of Danli after it was taken by exiles from Nicaragua, and the village of Corpus that had been seized by Sierra, and, driving the invaders back across the frontier, burned a village 12 miles beyond. Then Policarpo Bonilla went to Nicaragua, and, raising his standard, gathered before the end of 1892 a force of from 1,000 to 1,500 men, exiles and citizens who joined them from Honduras, armed nearly all with Remington army rifles and the rest with shotguns and *macheles*. When Bonilla proclaimed himself Provisional President, the valetudinarian Leiva resigned the presidency into the hands of Rosinda Aguerre, who, in behalf of the frightened Conservatives, offered to make peace with Bonilla and take him into his Cabinet. But Bonilla marched to the mining town of Tatumbula, 24 miles from Tegucigalpa, and fortified the place. While waiting there for the Government forces to attack, he was joined before the end of January, 1893, by Manuel Bonilla with 200 insurgents from Olaucho, who had surprised the garrison at Juticalpa and armed themselves in the arsenal there. Gen. Vasquez marched out with a force not much superior to Bonilla's, composed mainly of Indians, who never fight in close order, and were not to be depended upon to carry the works by storm. Vasquez sat down before the rebel camp, and, while a little band of foreign mercenaries, nearly all Americans, who were able to hit at 1,000 or 1,500 yards, annoyed the enemy by picking off the officers and men who showed themselves, and occasional shots from two Krupp howitzers spread alarm among the Indians who had joined Bonilla's army, a large detachment stole around to the rear of the position and cut off Bonilla's communications with his base of supplies in Nicaragua. Vasquez led the attack on the rear of the rebels, and carried one after another the three lines of stone ramparts that they had erected on the mountain tops. The operations lasted from Feb. 2 till March 27. Vasquez planned to attack the enemy, whom he had so successfully hemmed in on both sides, but when morning came he found the camp deserted. Sending the main body of the army toward Nicaragua, to which he supposed the rebels had fled, he destroyed the town of Tatumbula, and set out on a leisurely march to the capital. Sierra, commander of Bonilla's troops, by a brilliant march over the mountain trails had reached Tegucigalpa, and on March 29, he sent 200 of his bravest troops to attack the town. The 400 Government troops fled before them, but rallied and checked them in the principal plaza. Sierra's men, fearing that they would be surrounded, withdrew to a bench on the mountain side, and when attacked there were recalled by Sierra, who saw the army of Vasquez approaching in the distance. Vasquez, when he arrived, sent troops around to attack the rebels in the

rear, and on April 2 they fled; and when he came up to them and repeated the manoeuvre they evaded him again. The Government troops, according to the usual custom, massacred all the wounded and prisoners. Bonilla's forces were not well enough supplied with ammunition to continue the war long. On the news of his first successes, and the report that he was in possession of the seat of Government, the Liberals of the ports of Truxillo and Ceiba took possession of those places, and in various towns of the interior they fought the officials and the Government faction, and were successful. When Bonilla and Sierra were known to be in retreat, the supporters of Vasquez regained control, except in the southern country still occupied by the revolutionary troops, and the eastern provinces, where the Liberals long held out. Manuel Bonilla's force was defeated with heavy losses, and he was wounded. Ponciano Leiva resumed the presidency for the purpose of abdicating in favor of the victorious Vasquez, who was pro-

claimed Provisional President, with the powers of a dictator. Before June all the towns and departments were in the hands of the new Government. The revolutionary army had disbanded, and the leaders were fugitives.

In the beginning of November the American steamship "Costa Rica" put in at the Honduran port of Amapala. Bonilla was a passenger, having embarked at a Nicaraguan port for Guatemala. Vallila, commander of the port of Amapala, demanded that he be surrendered to stand trial on criminal charges. The captain refused, and, getting up steam, stood out to sea. Before she got out of cannon range a dozen shells were fired at the vessel and burst near her. United States Minister Young telegraphed on Nov. 10 to the Minister of Foreign Affairs at Tegucigalpa to inquire if the Government of Honduras accepted the responsibility for the act. Lopez, the Honduran minister, replied, disavowing the conduct of the officers, and offering an apology, which was accepted.

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, William J. McConnell, Republican; Lieutenant-Governor, Frank B. Willis; Secretary of State, James F. Curtis; Treasurer, William C. Hill; Auditor, Frank C. Ramsey; Attorney-General, G. M. Parsons; Superintendent of Public Instruction, B. B. Lower; Chief Justice of the Supreme Court, Isaac N. Sullivan; Associate Justices, Francis E. English, Thomas M. Stewart.

Legislative Session.—The second session of the Legislature, which meets every other year, began Jan. 2, and continued until the evening of March 6. The delays brought about by the Democrats and Populists in the Senate defeated many important measures. By them a rule of obstruction was inaugurated, and bills were held back until the last days of the session, when it had become too late to consider them in the House.

Among the bills held back was one reducing the State tax levy from 85 cents to 65 cents on the \$100. The levy of 85 cents has already produced a surplus, and its continuance, with the increasing assessment of the State, must necessarily produce a surplus in the treasury which will reach 25 per cent. of the total collection of taxes; but by reason of the failure to pass a law providing for the loaning of such funds, the public will derive no benefit from the accumulation.

Another bill that did not pass was one providing for a reapportionment of the representation of the State.

Much time was spent in the effort to pass a general law providing for the division of counties and the removal of county seats.

The Governor withheld his signature from a bill that reduced the liquor license from \$500 a year in the larger towns to \$300, making the cost of license uniform in large and small towns.

This bill was passed over the Governor's veto in the Senate, but the House refused to act with it. The Cœur d'Alène City School of Mines bill—an act providing for the establishment, location, maintenance, and support of a scientific school for the State of Idaho—was not approved because several of its provisions conflicted with the State Constitution, and others were of doubtful meaning. The act authorizing county commissioners to issue bonds for the purpose of refunding the indebtedness of their county was held to give too much latitude to the commissioners, and it therefore was not signed, nor was the bill defining the property relations of husband and wife.

Just before the close of the session an appropriation bill to cover the State expenses for the years 1893 and 1894 was rushed through the Senate, and the House was forced to concur and pass it without amendment. The law providing for the organization, government, and powers of cities and villages was the subject of prolonged debate before its passage. The act was intended to apply to Boise City as well as all other cities; but it is by some asserted that Boise City has a special charter which the repealing clause can not affect. The age of consent was fixed at fourteen years. Until this year Mormons in Idaho have been deprived of the right to vote. Much litigation and much legislation has arisen from this condition of things, but during this session a bill was passed enfranchising them without conditions.

Among other bills passed are these:

Providing for internal improvement of the State by the construction of a system of wagon roads in the counties of Boise, Custer, Lemhi, Idaho, Shoshone, Kootenai, Latah, and Nez Percés, and providing funds for the construction of this system of roads by the issuance of a series of bonds to the amount of \$185,000. Appropriating \$30,000 for the Idaho exhibit at the World's Fair.

Organizing Lewiston State Normal College.

Requiring the sheriff to select only *bona fide* citizens, residents of his county, to serve as a *posse* in

the service of process when resistance is offered or anticipated.

Providing for the establishment of a soldiers' home.

A bill for the protection of game and fish.

A bill to protect telegraph and telephone companies and secure secrecy of dispatches.

Providing for contracting the labor of convicts in the Penitentiary, the labor to be performed within the grounds of the Penitentiary.

Authorizing the commissioners, upon petition of one fourth of the qualified electors of the county, to fix the bounty for the destruction of the coyote, wild cat, fox, lynx, bear, squirrel, rabbit, gopher, muskrat, panther, cougar, with a provision that the bounty for rabbits, gophers, and squirrels shall not exceed 5 cents each.

Providing a penalty for persons convicted of making, selling, or disposing of any key used to open any switch lock, car lock, etc., without consent of the company owning the same.

Making it a felony for any one to obstruct a railroad track so as to endanger the lives of passengers.

For the improvement of the Capitol building.

Requiring persons owning mining claims to make affidavit that the required amount of yearly assessment work had been done.

Providing for imprisonment not to exceed six months or a fine of not more than \$300 or both for any person who deals, plays, or conducts "French monte," "E. O. or roulette," "the thimble game," or "percentage stud poker," "craps," "strap game," "thimblery game," "patent safe game," "black and red game," commonly known as "the ten-dice game," "two-card box at faro," or any other percentage game, and further that the lay-out by which the game is played shall be seized by the officer making the arrest and sold at auction for the benefit of the school fund. If it can not be sold, it shall be destroyed.

Providing for the incorporation of institutions of learning.

Making it unlawful for employers to enter into agreements with their employees or persons about to enter their employment not to become or continue as members of labor organizations.

Providing for the prevention of the spread of fruit-tree pests, and for their extirpation.

Joint memorials to Congress were introduced praying

That those who served for thirty days as volunteers in suppressing the Nez Percé war of 1877 each be permitted to make a homestead entry of 160 acres on the 500,000 acres of Nez Percé reservation land, soon to be thrown open to settlement, and to prove up on the same without showing proof of residence.

Asking for an appropriation of \$10,000 for the support of a State soldiers' home; asking Congress to appropriate a sum sufficient to make a survey and secure an estimate as to the cost of dredging Spokane river, an outlet of Cœur d'Alène lake, so as to lower the water in that lake about five feet, preventing its backing up the St. Marie's and Cœur d'Alène rivers, inlets of the lake, and submerging adjacent lands.

Asking Congress to pass a law providing for the free and unlimited coinage of silver as it existed prior to the demonetization act of 1873, and that the relative standard value thereof be fixed as nearly as possible on the basis of 412½ grains to the dollar.

Education.—The amount of the school fund subject to distribution for 1893 was \$40,000. The school population was 31,219, an increase of 5,478 during the past two years. The attitude of the Mormon population toward the system of popular education has undergone a marked change, and Mormon children are now attending the public schools.

The University of the State of Idaho was

opened in October, 1892; by January, 1893, 117 students had been enrolled. Only the west wing of the proposed university building has been erected, at an outlay of \$34,749. It is estimated that the cost of the additional building will be \$75,000. It is in the city of Moscow. Three agricultural experiment stations—1 at Nampa, 1 at Grangeville, and 1 at Idaho Falls—are under the general direction of the board of regents of the university, where also agriculture is taught.

Finances.—The Committee on State Affairs and Federal Relations submitted to the Legislature the following statement of the condition of the State's finances:

LIABILITIES.

Outstanding registered 10-per-cent. warrants, Jan. 1, 1893.....	\$187,325 04
Warrants drawn in January, 1893, and payable from the 1892 appropriation.....	30,000 00
Unexpected balance World's Fair appropriation.....	8,072 00
Possible outstanding unregistered warrants.....	5,000 00
Expenses second session Legislature.....	39,000 00
Civil deficiency, 1891-'92.....	12,500 00
Militia deficiency, including expenses Cœur d'Alène trouble.....	34,000 00

Total debt, exclusive of bonds, Jan. 15, 1893. \$245,797 04

ASSETS.

Due from eighteen counties for 1892 taxes.....	\$250,000 00
Probable poll taxes.....	12,000 00
Total.....	\$271,000 00
Deduct 8 per cent. estimated delinquent.....	20,720 00
Balance.....	\$250,280 00
Total indebtedness.....	245,797 04
Surplus, 1892.....	\$4,482 96

It also estimated the ordinary expenses for 1893 and 1894 at \$328,750, and advised that this amount be all required to be raised by direct taxation during these two years. An increase of 10 per cent. in the assessed valuation of the State was expected, making the valuation for 1893 \$34,276,000.

In his message to the Legislature the outgoing Governor stated the bonded indebtedness of the State on Jan. 1, 1893, to be as follows: "The bonded indebtedness of the State actually outstanding on Nov. 15, 1890, was as follows: old bonds, act of 1877, \$46,715.06; Capitol-building bonds, act of 1885, \$80,000; insane-asylum bonds, act of 1885, \$20,000; wagon-road bonds, act of 1889, \$11,000; total, \$157,715.06. All these bonds draw interest at the rate of 6 per cent. During the two years just past the old bonds of 1877 and the \$5,000 of the issue of insane-asylum bonds became due and payable, and have been refunded, together with accrued interest with bonds, also drawing interest at 6 per cent., due in 1901, and payable in 1911, in pursuance of an act of the Legislature approved March 14, 1891. The same act also authorized the issuance of \$78,000 in bonds for the redemption of outstanding warrants, but there being cash in the general fund applicable to this purpose, a portion of the warrants was paid and canceled. The total amount of new bonds issued for refunding the old bonds and warrants and interest was \$102,000. The insane-asylum bonds and interest were refunded by the issuance of \$6,000 new bonds. Of the wagon-road bonds authorized by the act of 1889, there has been a further issuance of \$37,000, and the entire bond-

ed indebtedness of the State at this date is \$351,000."

Penitentiary.—The Penitentiary is about 2 miles east of Boise City, on a tract of 160 acres reserved for that purpose. The cost of keeping each prisoner has been about 73 cents a day, as the only labor performed by prisoners was in caring for the reservation and making their own clothing. In future this charge will be much reduced, as the prison is now authorized to contract the labor of convicts if such contracting does not conflict with the interests of manufacturers in the State. Improvement in the sanitary condition of the prison is very necessary. Statistics show that nearly all the convicts came into this Penitentiary without a trade.

Insane Asylum.—The Idaho Insane Asylum is at Blackfoot, Bingham County. The grounds cover several hundred acres. At the beginning of the year the number of patients was 98. So far as possible, employment is provided for the insane. In addition to caring for the farm and the vegetable garden, the men are employed during summer at brick making, and during the winter at cutting cordwood. Brick for first-class fire-proof buildings can be provided chiefly by the labor of patients. The work of the woman inmates of the asylum has been in the kitchen, laundry, and sewing room. The dresses, coats, trousers, and underwear needed by the patients are made in the asylum. The medical superintendent calls attention to the low rate of insanity in this State, less than one half the average rate in other States of the Union.

The Deaf, Dumb, and Blind.—Under the provisions of an act approved March 14, 1891, the State Board of Education was authorized to contract with the authorities of charitable institutions of other States and Territories for the education of the deaf, dumb, and blind. A contract was made with the Colorado Springs Deaf, Dumb, and Blind Asylum for the care of these unfortunates at an annual charge of \$250 for each pupil. In 1891 4 pupils—3 blind and 1 deaf—were sent to Colorado Springs; in 1892 6—4 blind and 2 deaf—were sent. It is estimated that the State contains about 50 who are entitled to its care.

Soldiers' Home.—Provision was made by the Legislature for the establishment of a soldiers' home within the State for honorably discharged Union soldiers, sailors, and marines who served during the civil war, for members of the State National Guard disabled while on duty, and for veterans of the Mexican War, all of whom are to be *bona fide* citizens of the State. The control of the home is vested in 5 trustees, to consist of the Secretary of State, commander for Department of Idaho, Grand Army of the Republic, and 3 others, 2 of whom are to be members of the Grand Army of the Republic; all to be appointed by the Governor. An appropriation of \$25,000 was made, to be secured from the sale of public lands given to the State by the Government for charitable purposes, instead of being taken directly out of the general revenue fund, the amount appropriated to be loaned to the institution by the State, which takes a lien on the land in question to secure the amount advanced.

Irrigation.—In the message of the outgoing as well as of the incoming Governor, special at-

tention was called to the importance of the establishment of a system of irrigation under fixed laws and regulations, and the appointment of a commissioner of irrigation was strongly advocated. A decision of the Attorney-General, to the effect that it would be unconstitutional to pass a law exempting canal property from taxation, was called forth by a petition from several canal companies to the irrigation committee, asking for a law exempting irrigation ditches from taxation. The committee decided that it would be unconstitutional to comply, and their decision being referred to the Attorney-General, was confirmed by him.

The topographical division of the geological survey is engaged in work that will be of great benefit in establishing a system of irrigation. In the chief valleys of the southwestern portion of the State streams will be gauged for a considerable period. From the results can be learned how much water passed the gauging point any day in a year. Maps of the valleys will be made. From weather reports can be estimated the amount of rain and snow that fell. A record of every water right along the stream will be secured, and a description of every ditch, canal, reservoir, reservoir site, etc.

The amount of agricultural lands in Idaho is 16,000,000 acres, and of this area three fifths is arid.

Wagon Roads.—Much benefit will undoubtedly accrue to the State from the construction of the system of wagon roads authorized by the last Legislature. The main road will pass from Banner, Boise County, *via* Warrens, Idaho County, through Nez Percés and Latah Counties, to the mouth of St. Marie's river, Kootenai County, and thence to Wallace, Shoshone County. Branches will extend from Mount Idaho to Elk City, and from Bear valley, Idaho County, through Custer and Lemhi Counties, to the head of the north fork of Salmon river, near the Montana line. This means about 300 miles of road. Nearly all the valley and open lands of any value in the State have been already taken up under the various acts of Congress, and the lands that are chiefly valuable for their timber are in the interior and mountainous portions of the State. To pay for their construction the issuing of a series of State-road bonds, to the amount of \$135,000, was authorized, and the charge of the surveying and construction is confided to a commission to consist of one commissioner from each county through which the road will pass, or a person selected by each board.

Game and Fish.—The game law enacted this year provides that no moose, caribou, or elk shall be killed prior to Sept. 1, 1897, and after that only between Sept. 1 and Dec. 31. The season for deer, mountain sheep, antelope, and goats is from Sept. 1 to Jan. 1. None of these animals shall be killed for their hides, nor shall any one buy or sell such hides or transport the same. The animals shall not be hunted with dogs. The Mongolian pheasant can not be killed until Aug. 1, 1897. The season for killing pheasants, grouse, sage hens, and fool hens is from Aug. 1 to Jan. 1; for quail and prairie chickens, from Oct. 15 to Dec. 15; and for ducks, geese, and swans, from Aug. 15 to April 15. No fish, except salmon, salmon trout, and sturgeon, shall be taken except

by hook and line; and none of any kind shall be taken in any way, except for home consumption or brooding purposes, between Nov. 1 and April 1 of the succeeding year.

Mormons.—It is estimated that the Mormons of voting age number in Bingham County 3,000; Bear Lake, 700; Cassia, 350; Oneida, 850. To most of these the right of franchise has been extended this year.

Almost since the organization of the Territory the Mormon Church within its borders had advocated bigamy and polygamy. To put a period to the advancement of its doctrines, the Territorial Legislature passed the "test-oath act," which prescribed an oath to be taken by all persons as a condition precedent to registration and the exercise of the elective franchise. This act excluded all members of the Mormon Church from the elective franchise. Some of the members of that organization at once set about devising schemes by which the law might be evaded or set at naught. In October, 1888, just prior to the election, a large number of the members made a pretended withdrawal from the organization and thereafter registered as voters, taking the required oath. Several persons were indicted in a district court, and, a test case having been made, the question of the validity of the "test-oath law" was passed upon by the Supreme Court of the United States in the case of *Davis vs. Beson*, and the validity of the statute was affirmed by that tribunal.

When Idaho became a State the substance of the test-oath statute enacted by the Territorial Legislature was embodied in its Constitution. The first Legislature that convened under the State organization determined to prescribe additional limitations and conditions for the right of suffrage. Accordingly, on Feb. 25, 1891, it passed an election bill that provided, among other things, that the registrar before he registers any applicant must require him to swear that he has not since Jan. 1, 1888, belonged to an organization which has at any time taught the doctrine or encouraged the practice of polygamy. This law has remained in force until February of this year. In October, 1892, the Supreme Court of the State unanimously decided that the law was constitutional and must be upheld.

In October, 1890, a manifesto was issued by authority of the so-called Mormon Church, and afterward confirmed by church conference, in which it was declared to be the policy of the Church to abandon further practice of polygamous relations. Since that time it has been constantly claimed by members of this Church that the manifesto was issued in good faith, while those high in authority outside the Church have represented that the members and adherents of this Church have generally abstained from plural marriages and polygamous relations. In consideration of evidence placed before him to this effect, the President of the United States issued a proclamation granting full amnesty and pardon to all persons liable to the penalties of the act of Congress by reason of unlawful cohabitation under cover of polygamous or plural marriages who have abstained from such unlawful cohabitation since November, 1890.

The disabilities under which Mormons are made to suffer under the Constitution of the

State of Idaho are these: Bigamists and polygamists are not permitted to exercise the franchise, neither is any person who belongs to any church organization or incorporation that teaches bigamy and polygamy. Relying on the claims of members of the Mormon Church that it has absolutely abandoned both the practice and the teaching of polygamy and no longer permits what is known as plural, patriarchal, or celestial marriages, the Legislature meeting this year passed a new election law eliminating what have been called the retroactive features of the test oath and permitting any man to register and vote who does not *now* practice or teach polygamy or who belongs to a church that does not *now* practice or teach polygamy, or who is not a bigamist. The constitutional disabilities alone remain in force.

Woman Suffrage.—The chairman of the House Judiciary Committee propounded to the Attorney-General the following question:

Will it require an amendment to the Constitution to enable females to exercise the right of suffrage in this State at any and all elections, and hold office in the State, or will an act of the Legislature be sufficient to accomplish the purpose?

and it was answered in substance as follows: The State possesses the power to prescribe the qualifications of electors, and to designate the particular classes of persons who may vote, subject to the restrictions of the Federal Constitution. It is settled that a State may in its constitution restrict the right of suffrage to males. One of the express conditions of section 2 of Article VI of the State Constitution confines the right of suffrage to male citizens of the United States, except at school elections. It also states that the Legislature shall never annul any of the provisions in this article contained. Women have the right to vote at school elections if they have the qualifications of electors, but while the Legislature may prescribe additional qualifications, limitations, and conditions, it can not extend the right of suffrage to females. This would require an amendment to the Constitution. A joint resolution was offered to amend the Constitution by extending the right of suffrage to women, but it was killed on its third reading.

World's Fair.—The Legislature of 1891 voted \$20,000 for World's Fair purposes, and to this amount \$30,000 was added by the Legislature of 1893. The result of the expenditure of these amounts was a most satisfactory agricultural exhibit, comprising wheat, corn, oats, clover, flax, hemp, cotton, tobacco, figs, almonds, walnuts, apples, quinces, peaches, pears, plums, cherries, apricots, nectarines, prunes, berries, and grapes. The wonderful mineral exhibit was made in the Mining Building, in a white-and-gold pavilion, fashioned in the style of a classic temple.

ILLINOIS. A Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, John P. Altgeld, Democrat; Lieutenant-Governor, Joseph B. Gill; Secretary of State, William H. Hinrich-

sen; Auditor, David Gore; Treasurer, Rufus N. Ramsey; Attorney-General, Maurice T. Moloney; Superintendent of Public Instruction, Henry Raab; Railroad and Warehouse Commissioners, Isaac M. Phillips, J. R. Wheeler, and Jonathan C. Willis; Superintendent of Insurance, Bradford K. Durfee, appointed in July; Chief Justice of the Supreme Court, Joseph M. Bailey; Associate Justices, John Scholfeld, who died on Feb. 13, Simeon P. Shope, David J. Baker, Alfred M. Craig, Benjamin D. Magruder, and Jacob W. Wilkin.

Finances.—For the biennial period ending Oct. 1, 1892, the treasury statement is as follows: Balance in all funds, Oct. 1, 1890, \$4,445,467.99. Receipts for the two years ensuing—general revenue fund, \$5,854,269.26; State school fund, \$2,091,058.17; local bond fund, \$2,641,415.85; total, \$10,586,743.28. Disbursements—general revenue fund, \$5,856,678.82; State school fund, \$2,126,967.90; delinquent land tax fund, \$331.06; unknown and minor heirs fund, \$2,348.40; local bond fund, \$2,696,333.71; total, \$10,682,659.89. Balance on Oct. 1, 1892—general revenue fund, \$3,524,803.88; State school fund, \$278,346.49; unknown and minor heirs fund, \$12,407.88; local bond fund, \$533,993.63; total \$4,349,551.88. The bonded indebtedness outstanding remains at \$19,500. These bonds were long since called in and have ceased to draw interest, but have not been presented for payment and are probably lost.

Legislative Session.—The regular biennial session of the General Assembly began on Jan. 4, and adjourned on June 16. Comparatively few measures were enacted into law, notwithstanding the length of the session. The State was restricted for members of Congress and for members of the State Senate. The compulsory education law of 1889, known as the Edwards law, against which so much clamor had been raised by the foreign-born element, was repealed and a new law was enacted requiring every person having control of any child between seven and fourteen years of age to cause such child to attend some public or private day school at least sixteen weeks annually, twelve of which shall be consecutive. This act does not apply to any case where the child has been or is being otherwise instructed for a like period of time in the elementary branches of education, or whose physical or mental condition renders attendance impracticable or inexpedient, or who is excused for sufficient reasons by any competent court of record. A very moderate penalty, not exceeding \$20, may be imposed on any person violating these simple requirements. The manufacture of clothing, purses, feathers, artificial flowers, and cigars was regulated by an act which also provides for the appointment of a State factory inspector and deputies. Children under fourteen years of age are forbidden to work in any manufacturing establishment, factory, or workshop, and children between fourteen and sixteen years may be allowed to work therein only under certain regulations. No female shall be employed therein more than eight hours in any one day, or forty-eight hours in any one week. It was also made unlawful for any individual or firm, or agent, officer, or employee of any company or corporation to prevent or at-

tempt to prevent employees from forming, joining, and belonging to any lawful labor organization. Any such person who coerces or attempts to coerce employees by discharging or threatening to discharge them from his employ or the employ of any firm or corporation because of their connection with such organization shall be subject to fine or imprisonment or both in the discretion of the court.

The insurance department of the State Auditor's office was made a separate State department under the control of a superintendent appointed by the Governor with the advice and consent of the Senate. A commission consisting of 2 members of the Senate and 3 members of the House was created for the purpose of revising and codifying the public statutes of the State, and was directed to report at the session of 1895. The sum of \$100,000 was appropriated for carrying into effect the act of 1887 establishing an Industrial Home for the Blind. A State Home for Juvenile Offenders was established, and provision was made for the necessary buildings and for its management.

For each of the years 1893 and 1894 a levy of \$1,500,000 for general State purposes, and of \$1,000,000 for school purposes, was authorized.

Provision was made for submitting to the people at the next general election a constitutional amendment giving the General Assembly power to regulate and control contracts, conditions, and relations existing or arising between corporations and their employees.

Other acts of the session were as follow:

To prevent and punish abandonment of wife or children by the husband.

Prohibiting employment of aliens as peace officers.

To regulate foreign building, loan, and homestead associations doing business in the State.

Authorizing the organization of district mutual wind-storm, cyclone or tornado insurance companies.

Revising the law regulating life and accident insurance companies on the assessment plan, and regulating fraternal beneficiary societies.

Revising the law regulating the commitment and detention of lunatics.

Establishing a naval militia.

To provide for the creation of pleasure driveways and park districts.

To provide for the enlargement of Lincoln Park, Chicago.

To prevent the formation of trusts and combines.

Providing for a commission to promote uniformity in State laws.

Providing for an investigation of the whisky trust.

Charities.—The charitable institutions of the State are 11 in number. They consist of the Northern Insane Hospital at Elgin, with an average attendance of 905; the Eastern Insane Hospital at Kankakee, average attendance 1,703; the Central Insane Hospital at Jacksonville, average attendance 1,079; the Southern Insane Hospital at Anna, average attendance 802; the Asylum of Insane Criminals at Chester, recently opened, average attendance 51; the Institution for the Deaf and Dumb at Jacksonville, average attendance 373; the Institution for the Blind at Jacksonville, average attendance 162; the Asylum for the Feeble-minded at Lincoln, average attendance 485; the Soldier's Orphan's Home at Normal, average attendance 398; the Charitable Eye and Ear Infirmary at Chicago, average

attendance 132; and the Soldiers' Home at Quincy, average attendance 846. The total average number of inmates in these institutions is 6,935, and the average net cost *per capita* for their maintenance is \$163 per annum.

Education.—The following statistics from the report of the State Superintendent of Public Instruction cover the school years ending June 30, 1891, and June 30, 1892;

ITEMS.	1891.	1892.
Children of school age	1,160,051	1,221,892
Children enrolled in public schools ..	799,059	809,452
Average daily attendance	560,059	574,788
School districts	11,509	11,578
Average school year in months	7-4	7-4
Male teachers	7,091	6,170
Female teachers	15,942	16,176
Monthly wages, male teachers	\$55 55	\$56 92
Monthly wages, female teachers	\$45 81	\$46 06
Value of school property	\$27,883,349	\$29,924,873
Private schools reported	975	955
Pupils in private schools	105,755	90,444
Teachers in private schools	2,925	2,867

Penitentiary.—On Dec. 1, 1892, there were confined in the Joliet Penitentiary 1,434 convicts, and in the Chester Penitentiary 613. The convict lease system was abolished by a constitutional amendment adopted in 1886, but this amendment could not change existing contracts, and as the State authorities had already made a number of long-term convict leases, it was necessary that the agreements therein contained should be carried out. These leases have expired from time to time until in January, 1893, only 269 convicts at Joliet and 125 at Chester were employed thereunder. As fast as they were released, the convicts have been set to work under the "piece-price" system, which was adopted as a temporary expedient until the General Assembly should provide some law regulating their labor. At the session of 1893 action was taken authorizing the Penitentiary authorities to employ the released convicts in such occupations as would best secure their health, discipline, and reformation, and money was appropriated for purchasing machinery, tools, power, and raw material for their use. The new reformatory at Pontiac has been thoroughly organized, and by proclamation of the Governor was opened to receive prisoners early in January of this year. On Dec. 1, 1892, there were 339 inmates at the State Reform School.

Railroads.—The report of the Railroad Commissioners for 1892 shows the railroad mileage of the State to be 14,677-88 miles, an increase of 360-57 miles over 1891. Illinois still leads all the States in the total railway mileage in operation and the number of miles of railway per square mile of territory. The gross earnings from operation of railroads were \$306,618,011-79; the operating expenses, \$206,049,930-77; income from operation, \$10,568,081-02; total income, \$114,426,308-23; expenses assignable as fixed charges, \$80,086,358-33; net income, 54 roads, \$36,616,701-29; net deficit, 27 roads, \$2-276,751-39. Fifteen operating and 11 leased or subsidiary lines paid dividends amounting to \$25,327,515-47, but the Centralia and Chester, the East St. Louis Connecting, and the Pawnee roads failed to earn enough to pay expenses. The total earnings and income of the railroads

in Illinois aggregated \$81,793,012-43. There was an increase of 6-96 per cent. in the receipts from passengers and of 12-99 per cent. in the receipts from freight. The total earnings from operation show an increase of 12-30 per cent. and the total earnings and income of 11-26 per cent.

The total number of railway employees in Illinois was 66,680, and their aggregate annual salary \$40,072,676-88, an increase of 5,712 employees and of \$3,184,025-81 in salary.

Illinois and Michigan Canal.—The earnings of this canal for the two years ending with 1892 amounted to \$158,333-65, and the disbursements to \$152,212-17. During this period the sum of \$28,516-98 was expended for repairs and ordinary improvements. New gates have been put in at the Henry and Copperas creek locks, for which the General Assembly of 1891 made a special appropriation of \$25,000.

State Banks.—A compilation of reports made by the various State banks on April 10 shows that their combined resources aggregated \$118,446,833-63. The principal items in this aggregate were: Loans and discounts, \$82,600,673-73; overdrafts, secured and unsecured, \$216,450-78; United States bonds, \$35,414-87; other bonds and stocks, \$10,009,626-83; cash on hand, \$8,647-543-61; due from other banks, \$18,932,066-78; checks and other cash items, \$1,859,780-27; collections, \$88,813-07. The larger items among the liabilities aggregate the following amounts: Capital stock, \$18,072,500; surplus fund, \$5-225,712-79; undivided profits, \$3,288,517-72; savings deposits subject to check, \$27,305,030-96; individual deposits subject to check, \$46-348,972-84; demand certificates of deposit, \$4-185,764-63; time certificates of deposit, \$7,575-137-82; certified checks, \$565,724-70; cashier's checks outstanding, \$349,313-47; due to other banks, \$5,080,449-15; bills payable and notes rediscounted, \$441,055-38.

Labor Riot.—On June 9 a bloody encounter occurred at Lemont between a mob of striking laborers and an armed force of sheriff's deputies. Three persons were killed outright, and more than a dozen were wounded. The difficulty grew out of an attempt on the part of the strikers to prevent any one from superseding them in the quarries and on the drainage canal. This encounter aroused such bitter feeling that the Governor, upon the request of the sheriff of Will County, ordered the militia to the scene on the day following the riot. Their presence restored order, and after a few days, no further disturbance occurring, the Governor, having visited the scene and counseled obedience to law, decided to order their withdrawal.

The Anarchists pardoned.—On June 27 the country was astonished by the news that Gov. Altgeld had granted pardons to the 3 anarchists, Oscar Neebe, Samuel Fielden, and Michael Schwab, who were convicted for participation in the memorable Haymarket massacre in Chicago on the night of May 4, 1886, when several policemen were killed and many seriously wounded by the explosion of a dynamite bomb that was thrown as they approached the crowd they were ordered to disperse. Fielden and Schwab, together with 5 other leaders, were sentenced to be hanged, but succeeded in securing a commutation of their sentence to life imprisonment, while

Neebe received a sentence of fifteen years. The Governor, in his statement accompanying the pardons, alleged that the jury that tried their cases was packed; that it was prejudiced, and therefore incompetent to try the case; that there was no evidence connecting the prisoners with the crime charged, and that the judge who presided at the trial was prejudiced.

Suits against Former State Officers.—Late in January, in accordance with instructions from Lieut.-Gov. Gill, then acting as Governor, Attorney-General Moloney brought suit against ex-State Auditor Pavey and his sureties, claiming that the ex-Auditor had violated his official bond by retaining possession of the private account books relating to the insurance department, and by drawing a salary as insurance commissioner in addition to that of Auditor. On Feb. 10 the acting Governor further instructed the Attorney-General to bring suits against all the auditors and State treasurers who had held office since 1870. In his letter of instructions he made the following charges:

1. That the auditors of public accounts have for many years drawn 3 salaries, namely, 1 as auditor of public accounts of \$3,500 per annum, 1 as Commissioner of Insurance of \$5,000 per annum, and 1 as *ex officio* member of the State Board of Equalization at \$5 per day—in violation of section 23, Article V of the Constitution, prohibiting State auditors from receiving in excess of their salary (\$3,500) "any fees, costs, perquisites, or compensation"; and, further, that the books and records necessary to show the receipts and expenditures of the insurance department have been illegally sequestered by outgoing auditors of public accounts.

2. That for years the public moneys in the State treasury have been loaned at interest by State treasurers, and the interest or profit accruing from the money so loaned has been converted to the use of former State treasurers, and for such interest they have not accounted to the public of the State of Illinois.

To this order the Attorney-General soon responded by bringing suit on the bond of E. S. Wilson, who retired from the office of State Treasurer at the beginning of the year, and in March he began legal proceedings against ex-Auditors Charles E. Lippincot and Charles P. Swigert. The questions that are involved in these suits had not been determined at the close of the year 1893.

Chicago.—On April 4 an election for members of the city government was held which aroused unusual interest from the fact that the officials to be chosen, especially the mayor, would have the duty of representing the people of Chicago in all public ceremonies attendant upon the World's Fair, and in entertaining visiting officials and celebrities. Carter H. Harrison, who had already served several terms as mayor, received the Democratic nomination; Samuel W. Allerton was the nominee of the Republicans and of a citizens' convention, and De Witt C. Cregier received the nomination of the Labor party. After a sharp canvass, in which nearly every newspaper of influence in the city united in opposing Harrison, he was elected, having a plurality exceeding 20,000 over Allerton.

Another important election occurred in the city in November for judges of the local courts. Judge Joseph Gary, who presided at the trial of the anarchists in 1886, and whose conduct there-

in had been severely criticised by Gov. Altgeld, was a candidate for re-election. Although a Democrat and rejected by the convention of his own party, he was nominated on the Republican ticket, and was earnestly supported by the better element of both parties. In spite of the opposition of Gov. Altgeld, he ran ahead of the ticket, and was re-elected by a handsome majority, carrying with him into office nearly all the other Republican candidates. On Oct. 28 Mayor Harrison was assassinated (see article HARRISON, CARTER HENRY, in this volume). On Dec. 19 a special election was held to choose a mayor, at which John P. Hopkins, Democrat, was successful, receiving 112,700 votes to 111,313 for George B. Swift, the Republican candidate, and 1,517 for the Socialist Labor nominee.

INDIA, an empire in southern Asia dependent on the British Crown, is governed, pursuant to certain general acts of Parliament, by a Governor-General, popularly styled the Viceroy, and his subordinates, under the general control of the Secretary of State for India, who is a member of the British Cabinet. The Secretary of State is assisted by a Council of at least 10 members, 9 of whom must have served or resided ten years in India. All expenditures of the revenues must be passed upon by the Council; but in matters involving foreign relations, the policy of the Government toward the native states, or other matters requiring secrecy, the Secretary of State may act without the Council. The Governor-General is assisted by a Council of 5 ordinary members, supplemented by a member representing the Department of Public Works and the commander in chief of the forces. Governors and lieutenant-governors also become extraordinary members when the Council meets within their provinces. The ordinary members have charge of the Departments of Home Affairs, Revenue and Agriculture, Military Affairs, Legislation, Finance and Commerce, and Public Works. There is a Legislative Council, consisting of the Council of the Governor-General and from 10 to 16 additional members appointed by him. The ordinary members of the Executive Council are appointed by the Crown, as are also the Governors of Bombay and Madras. The Lieutenant-Governors of Bengal and of the Northwest Provinces and Oudh, and the Chief Commissioners of Assam, the Central Provinces, and Burmah are appointed by the Viceroy, subject to the confirmation of the Secretary of State. The Governors of Madras and Bombay (including Sindh) have each an Executive and a Legislative Council, and a separate civil service and a separate army. The Lieutenant-Governors of Bengal and of the Northwest Provinces have only legislative councils. The chief commissioners have no councils or legislative powers. The provinces have divisions administered by commissioners, and these divisions are subdivided into districts under collector magistrates and deputy commissioners, which are the units of administration. Each district magistrate has under him usually a joint magistrate, an assistant magistrate, and deputy collectors or other officers. Many of the magistrate collectors exercise judicial as well as administrative functions. The term of the Marquis of Lansdowne as Viceroy expired in December, 1892. Sir Henry Nor-

man, Governor of Queensland, was appointed in September to take the place at the expiration of the term, and after at first accepting, ultimately declined the appointment for personal reasons. It was then offered to Lord Cromer, who also declined. The Earl of Elgin, born 1849, was appointed Viceroy early in October, and signified his acceptance of the office. His father was appointed Viceroy in 1862, and died in India.

The Indian Councils act, passed by the Imperial Parliament in 1892, provided for enlarged representation in the Supreme Council and in the several provincial councils; it also provided that the council members should be allowed the privilege of interpellating the Government, and that in the Supreme Council discussion of the budget should be allowed in all cases; whereas heretofore discussion had been permitted only when fresh taxation was considered. The act only laid down general principles, leaving the task of practically applying them to be worked out by the Government of India, subject to the approval of the Secretary of State. Early in the present year the Viceroy made known the rules which would govern interpellations in the Supreme Council, these being essentially the same as those which obtain in the Imperial Parliament. It is left discretionary with the president to disallow any question to which answer at the time might jeopardize the public interests. The rules for the provincial councils are similar, but forbid interpellation upon matters not under the control of the local government, as well as all questions, except as to matters of fact, relating to any subject in controversy between the local government and the Supreme Government or the Secretary of State. As to the budget, the rules provide that a full explanation of it shall be made in Council each year, after which members are privileged to speak upon it and the financial member may reply, the president closing the discussion. The Viceroy proclaimed these rules and the privileges to which they relate in force from Feb. 2, 1893. The Councils act provides that the maximum number of additional members of the Viceroy's Legislative Council shall be 16, of whom at least one half shall be nonofficial. It was proposed by the Indian Government and approved by the Secretary of State that there should be 10 nonofficial members, of whom 4 should be recommended by the legislatures of the provinces having councils, 1 should represent the interests of commerce, and 1, perhaps, be chosen from the Calcutta bar, while the selection of the other 4 should be left entirely to the discretion of the Viceroy. The new system, while it creates various elective bodies, does not give them the power of absolute election, but confines them to the privilege of recommending candidates to the Government. The right of appointment remains with the governors of provinces, and in the Supreme Council with the Governor-General in Council; but in commenting upon this point in the Legislative Council, the Viceroy remarked that such recommendation would be entitled to the greatest weight, and was not likely to be disregarded except in cases of the clearest necessity.

Finances.—The revised estimate of revenue for 1891-'92, and the budget estimate for 1892-'93, were, in tens of rupees, as follow :

REVENUE.	1891-'92.	1892-'93.
Land revenue	23,880,500	24,875,500
Opium revenue	8,028,100	7,694,600
Salt revenue	8,690,700	8,544,700
Stamps	4,226,900	4,229,600
Excise	5,096,900	5,102,400
Provincial rates	3,476,500	3,628,100
Customs	1,687,000	1,691,800
Assessed taxes	1,644,600	1,645,200
Forests	1,697,900	1,567,200
Registration	890,400	892,200
Tribute	778,900	762,100
Interest	582,500	911,100
Post-office, telegraphs, and mint ..	2,545,400	2,618,000
Civil departments	1,643,600	1,615,800
Miscellaneous	891,100	969,900
Railroads	19,654,900	18,832,700
Irrigation	2,249,600	2,216,700
Buildings and roads	615,700	606,400
Military departments	776,900	789,000
Total	58,565,900	58,867,900

The expenditure under the different heads in 1891-'92, according to the revised estimates, and that for 1892-'93, according to the budget estimates, was, in tens of rupees, as follow :

EXPENDITURE.	1891-'92.	1892-'93.
Interest	4,884,000	8,977,100
Refunds, compensations, etc.	1,785,400	1,755,400
Cost of collection	7,813,900	8,528,200
Post-office, telegraphs, and mint ..	2,440,500	2,547,900
Civil salaries	13,883,700	14,182,500
Miscellaneous civil charges	5,045,000	5,170,900
Famine relief and insurance	1,209,900	1,204,700
Railroad construction	182,600	801,500
Railroad revenue account	20,188,700	20,407,200
Irrigation	2,963,200	2,919,500
Buildings and roads	6,243,700	6,920,100
Army	22,506,900	21,593,500
Defense works	550,000	614,500
Total	59,127,400	59,839,000

Deducting balances due the Imperial Government on provincial accounts, the expenditure for 1891-'92 stands at Rx 58,865,900, and for 1892-'93 at Rx 58,221,300. In addition to these amounts a capital expenditure not charged against revenue on railroad and irrigation works is set down for 1891-'92 at Rx 3,500,000, and for 1892-'93 at Rx 4,035,000.

The closed account for 1891-'92 showed an additional surplus of Rx 113,435, making it Rx 467,000. The figures for 1892-'93 as revised showed an increase in the net revenue of Rx 1,891,600, while the net expenditure increased Rx 3,120,000, thus converting the anticipated surplus of Rx 164,600 into a deficit of Rx 1,081,900. The budget estimate of revenue for 1893-'94 is Rx 90,005,700, and of expenditure Rx 91,600,800, the result being a deficit of Rx 1,595,100. The principal increase in the estimated revenue of 1892-'93 was Rx 971,600 in opium, the crop of which had been for three years a partial failure. This led the Government to reduce the number of chests sold, and resulted in a material appreciation in the prices obtained, while the cost of production was considerably decreased. The other items which went to make up the increase were land, salt, stamps, excise, and others of the general revenue. Of the increased expenditure, Rx 1,635,300 was due to the fall in exchange during the year below 1s. 6d. per rupee, the price calculated in the budget, in addition to which there was a considerable increase of expenditure

in England and on the army in India. The deficit for 1893-'94 is due mainly to exchange, Rx 2,229,400, and a reduction of Rx 600,000 in the opium revenue, while there is some addition to the army expenditure. On the other hand, there is an estimated increase of Rx 647,700 in the ordinary revenue, some improvement in estimated railroad receipts, and some reduction in estimated expenditure, both in England and in India. The fall in exchange has in two years added Rx 4,142,400 to Indian expenditure. It was expected that the Secretary of State would draw bills during the current year to the amount of £18,700,000. The rupee is reckoned at 1s. 2½d.

The cultivation of the poppy in British territory is permitted only in parts of Bengal, the Northwest Provinces, and Oudh, though some opium is produced in the Punjab for local consumption. The Government advances funds to the opium grower in the monopoly districts to enable him to put in the crop, the whole of which he is bound to sell at a fixed price to Government agents, who transmit it to Patna or Ghazipur, where the Government factories are located. The product is then packed in chests and sold in Calcutta, at monthly auction sales, for export to China. Opium is also produced in a number of the native states, which have agreed to conform to the British system. Opium exported from their territories is subject to a heavy duty, and upon exportation from the country must pay to the Indian treasury a duty, recently reduced from 650 to 600 rupees per chest. In 1855-'58 the net revenue from opium averaged Rx 4,580,000; while from 1882 to 1891 the average was Rx 6,540,302.

The consolidated debt on March 31, 1891, was Rx 207,154,763, of which Rx 102,746,555 were payable in India, and Rx 104,408,208 in England. There was also an unfunded debt in India of Rx 11,271,306, making the total debt Rx 218,426,069. The revenues and expenditures in tens of rupees of each of the governments for the year ending March 31, 1891, are given in the following table:

GOVERNMENTS, ETC.	Revenue.	Expenditure.
India.....	14,587,295	19,085,102
Bengal.....	19,694,541	8,910,894
Assam.....	1,027,214	698,480
Punjab.....	7,291,573	4,711,538
Northwest Provinces and Oudh..	10,658,651	4,391,091
Central Provinces.....	2,029,024	1,897,472
Madras.....	11,617,255	8,254,856
Bombay.....	18,245,054	8,692,654
Burmah.....	8,087,045	8,895,507
In England.....	892,009	16,568,575
Exchange.....	198,080	5,087,144
Total.....	85,741,649	82,058,478

Abolishing Free Silver.—In March, 1892, the Indian Government began a correspondence with the Secretary of State for India, in the course of which it was proposed that, in case it became evident that the Brussels Conference would not arrive at a satisfactory conclusion, and no direct arrangement could be made between India and the United States regarding silver, the mints of India should at once be closed to the free coinage of silver, and arrangements be made for the introduction of a

gold standard. The Secretary of State referred the whole matter to a committee of seven members, of which Lord Herschell was chairman. The committee recommended the closing of the mints against the free coinage of silver, accompanied by an announcement that, though closed to the public, they will be used by the Government for the coinage of rupees in exchange for gold at a provisional ratio of 1s. 6d. for the rupee, and that at the Government treasuries gold will be received in satisfaction of public dues at the same ratio. The committee further recommended that the time for taking action should be left discretionary with the Government of India, subject to the approval of the Secretary of State. A bill in which for 1s. 6d. was substituted 1s. 4d. as the provisional value of the rupee, was introduced by the Government in the Legislative Council at Simla on June 26, 1893, and passed. The Viceroy said it was not proposed to substitute a gold for a silver currency, nor to attempt at present to fix a legal-tender price for gold. The feeling of satisfaction with the act abated somewhat when the Secretary of State found it necessary to sell his bills on the Indian Council below the provisional price of 1s. 4d. for the rupee. The exchange value of the rupee fell below 15d. early in October, but no bills were sold by the Secretary of State. Sales were made on Oct. 26 at 15½d., and that continued to be the price through November and December, though the sales made were comparatively small. The total sales of bills and telegraphic transfers from April 1 to Dec. 19 amounted to 104,625,375 rupees, and produced £6,491,985. On Dec. 21 the royal assent was given to an act of Parliament empowering the Secretary of State for India to borrow £10,000,000, or any part thereof, to meet the expenditure of the Indian Government in England. This removed the necessity of further sales of rupee paper to meet immediate requirements, unless a more favorable rate of exchange could be obtained. The imports of uncoined silver into India continued so heavy even after the closing of the mints that the imposition of an import tax upon it was advocated by members of the Indian Government. The Government of India announced in August that, in compensation for the great decline in the value of the rupee, Government servants, whether civil or military, would thereafter receive one half of their salaries, up to the limit of £1,000, at the rate of 18d. per rupee.

Defense.—Besides the British army in India, numbering 74,081 men of all ranks, there was, at the beginning of 1893, exclusive of artificers and followers, a native army numbering 144,755 men of all ranks, making the aggregate strength of the Indian army 218,786 men. The British army in India was made up as follows: Artillery, 419 officers and 12,821 noncommissioned officers and privates—total, 13,312; cavalry, 261 officers and 5,418 noncommissioned officers and privates—total, 5,679; engineers, 293 officers; infantry, 1,537 officers and 52,176 noncommissioned officers and privates—total, 53,713; invalid and veteran establishment, 11 officers and 24 noncommissioned officers and privates—total, 35; staff corps, 841 officers; general list, 117; unattached officers, 2; unemployed general

officers, 39. The native army comprised: Artillery, 33 European and 26 native officers, and 3,752 noncommissioned officers and privates—total, 3,811; cavalry, 362 European and 626 native officers, and 22,439 noncommissioned officers and privates—total, 23,427; sappers and miners, 56 European, and 63 native officers, and 8,706 noncommissioned officers and privates—total, 3,825; infantry, 1,119 European and 2,043 native officers, and 110,530 noncommissioned officers and privates—total, 144,755. Measures are progressing which will enable the Imperial Government to draw from the various feudatory states contingents of well trained and equipped troops to take place in line with the regiments of the regular Indian army. These special contingents, which are known as imperial service troops, numbered, at the beginning of the present year, 17,028, of which 9,510 were infantry, 7,218 cavalry, and 300 artillery. At the end of July, 1893, over 48,000 magazine rifles had been distributed to the British infantry, while 29,000 were held in reserve, and 44 batteries had received 12-pounder guns.

Commerce and Production.—The following table gives, in tens of rupees, the values of the leading imports and classes of imports during the year ending March 31, 1892:

IMPORTS.	Value.
Cotton manufactures	28,689,472
Metals, hardware, and cutlery	6,894,067
Silk, raw and manufactured	3,014,698
Sugar, raw and refined	2,561,996
Woolen goods	1,762,081
Liquors	1,442,095
Railway plant and rolling stock	1,434,178
Oils	2,685,965
Machinery and millwork	2,111,596
Coal	1,250,488
Provisions	1,771,738
Apparel	1,298,027
Salt	627,963
Spices	797,196
Glass	723,203
Drugs	650,425
Paper	470,899
Umbrellas	414,942
Grain and pulse	215,590

The total value of the merchandise imported during the year on private account was Rx 66,587,457, against Rx 69,034,900 in the preceding year.

The values of the principal exports of private merchandise of Indian production during the year ending March 31, 1892, are given in the following table:

DOMESTIC EXPORTS.	Value.
Rice	18,885,971
Wheat	14,380,469
Cotton, raw	10,754,312
Cotton, manufactured	7,035,086
Opium	9,562,461
Seeds	12,208,458
Hides and skins	5,186,092
Jute, raw	6,448,493
Jute, manufactured	2,518,100
Tea	5,968,129
Indigo	8,214,076
Other dyes and tans	764,710
Coffee	1,998,659
Wool, raw	1,013,564
Wool, manufactured	94,748
Spices	408,978
Lac	751,224
Sugar, raw and refined	505,417
Raw silk and cocoons	518,627
Silk, manufactured	163,957
Oils	583,311
Wood	609,468
Provisions	776,581
Saltpeter	365,618

The total value of the domestic exports for the year was Rx 103,550,831, against Rx 95,902,193 for the preceding year. The value of the foreign merchandise exported during the year ending March 31, 1892, was Rx 4,485,179.

The distribution of the foreign trade among the principal countries is shown by the following table, which gives the values, in tens of rupees, of the imports and exports of merchandise for the year ending March 31, 1892:

COUNTRIES.	Imports.	Exports.
Great Britain	48,341,400	38,446,985
China	2,677,188	13,711,883
France	1,041,678	10,945,575
Egypt	91,289	7,181,460
Belgium	1,334,927	5,480,273
Germany	1,524,969	5,073,527
Straits Settlements	2,358,698	4,997,769
United States	1,199,453	3,872,568
Italy	585,906	2,935,457
Ceylon	669,777	2,769,838
Austria	889,407	2,174,645
Japan	65,746	1,269,787
Mauritius	1,719,871	1,156,436
Australia	267,815	967,739
Holland	185,415	982,071
Arabia	358,297	644,499
Persia	709,993	594,839
East Africa	826,591	560,719
Spain	14,802	246,779

The following table shows, in tens of rupees, the imports and exports of specie and bullion, both on private and Government account, for five fiscal years:

YEAR.	GOLD.		SILVER.	
	Imports.	Exports.	Imports.	Exports.
1889	3,236,058	243,573	10,569,908	1,361,052
1890	3,119,088	805,154	10,723,873	1,479,193
1891	5,071,027	455,724	12,388,674	1,450,596
1892	6,500,593	864,680	13,438,654	1,258,518
1893	4,113,929	1,705,187	10,602,733	1,561,649

The imports of silver during the year ending March 31, 1893, amounted to about Rx 15,000,000, and continued unusually heavy throughout the calendar year.

The total imports of merchandise and treasure, including those of the Government, during the year ending March 31, 1892, reached the value of Rx 84,155,045, and the total exports amounted to Rx 111,460,278. Imports of merchandise to the value of Rx 54,706,516, and exports to the value of Rx 67,237,583, passed through the Suez Canal.

The foregoing figures are for the sea-borne traffic, and do not include the transfrontier land trade, the value of which, for merchandise only, for three years ending March 31, is given in tens of rupees, in the following table:

YEAR.	Imports.	Exports.	Total.
1890	8,261,700	8,368,400	6,525,100
1891	8,515,200	8,099,700	6,544,900
1892	8,970,900	8,918,200	7,889,100

Navigation.—The total number of entries of vessels at British Indian ports during the year ending March 31, 1892, was 5,686, aggregating 4,308,375 tons. Of these, 2,325 were British, aggregating 3,563,678 tons; 953 were British Indian, aggregating 146,659 tons; 721 were foreign, aggregating 507,944 tons; and 1,687 were

native, aggregating 90,094 tons. The whole number of clearances were 5,472, aggregating 4,282,476 tons, of which 2,385 vessels, of 3,583,354 tons, were British; 977, of 148,968 tons, were British Indian; 645, of 468,904 tons, were foreign; and 1,515, of 81,055 tons, were native. Of the entries, 1,043, aggregating 2,019,288 tons, and of the clearances, 1,268, aggregating 2,412,341 tons, were of steam vessels passing through the Suez Canal.

Railroads.—The number of miles of railroads in operation in March, 1892, was 17,564, and the number of passengers carried during the year was 122,855,337, against 114,082,246 in the preceding year; while the freight moved aggregated 26,158,953 tons, against 22,612,718 tons, during the previous year. The working expenses amounted to Rx 11,303,847, which was 47.02 per cent. of the gross earnings; and the net earnings realized were Rx 12,736,432, giving an average return on the capital expenditure on working lines of 5.76 per cent., against Rx 10,310,913 net earnings, and 4.85 per cent. return for the preceding year. The total expenditure of the state on railroads, including lines under construction or survey, amounted to Rx 227,669,765.

Posts and Telegraphs.—During the year ending March 31, 1891, the post-offices handled 288,066,477 letters, postal cards, and money orders, 24,935,368 newspapers, 1,901,547 parcels, and 10,375,319 packets. The revenue was Rx 1,402,748, and the expenditure Rx 1,396,535. The length of the telegraph lines was 37,070 miles, with 113,512 miles of wire, and the number of paid messages was 3,507,100. The receipts were Rx 781,034, and the expenses Rx 763,980.

The National Congress.—The Indian National Congresses were organized while the Marquis of Ripon was Viceroy, as a means of making known to the Government in an orderly but forcible manner the wishes and views of the native population in political affairs, and for the purpose of securing a larger native representation in the administration of the Government. The first Congress convened in 1884. These Congresses have been held annually since that time. The eighth met at Allahabad on Dec. 30, 1892, with 700 delegates, under the presidency of W. C. Bonerjee, of Calcutta. The Congress adopted four resolutions: (1) That, while accepting Lord Cross's Councils act as intended to give the people of India a real representation in the legislative councils, it regretted that the act does not in terms concede to the people the right of electing their own representatives. (2) That simultaneous examinations for the civil service should be held in England and India. (3) That serious mischief has been done to the country by the combination of judicial and executive functions in the same officials. (4) That, in view of the diversity of opinion on the currency question, the Congress hoped that, unless forced to do so, the Government would take no steps to change the currency standard.

Burmese Frontier Troubles.—The Kachin tribes, a hardy and warlike people who occupy the mountainous northeastern districts on the borders of Upper Burmah, early in January, 1893, made repeated attacks upon a British exploring party which was making its way in a northeast-

erly direction from Bhamo to establish a fortified post at Sima, in the Kachin hills, and on the Nampoung river. In one of these attacks Lieut. Dent was dangerously wounded. After the post was established at Sima it was invested by the Kachins, 1,000 strong, and in a sortie Capt. Mor-ton, who was in command of the post, was killed. The post was strengthened, and an attempt was made to open the road between Sima and Nhrang, but after some severe fighting the road was abandoned to the Kachins. The fighting continued at and around Sima through January and most of February, the forces consisting at first entirely of the native military police, but eventually it was determined to send re-enforcements of both native and British troops, and near the end of February the officer in command reported that the rising was crushed, and that the submission of all the villages around Sima was complete.

Meantime trouble with the Kachins had broken out in the Northern Shan States, where the Kachins besieged Theinni, and killed Lieut. Williams and a native officer who proceeded against them at the head of a column of military police. In this case, however, a force of British and native infantry was promptly sent out, and the rising was quelled. There was also some fighting with the tribes in the Chin hills, but they were brought to submission and disarmed. In April the Kachins round Sima raided several villages, driving out the police, who had been re-enforced from the fort, and compelling them to retreat to Sima. Strong re-enforcements were sent to the fort at Sima, and the rebel tribes were driven from its vicinity, but no further operations against the Kachins east of the Irra-waddy were undertaken. This termination of the campaign was considered very unsatisfactory in Burmah, as a number of rebellious villages had not been visited, and no adequate punishment had been inflicted. It was generally believed that the Kachins had been encouraged, if not actually assisted, by the Chinese authorities, as a Chinese officer in a handsome laced uniform was found among the killed near Sima.

Religious Riots.—The magistrates of Rangoon, the chief city of Burmah, in deference to the Hindu population, by whom the cow is regarded as a sacred animal, prohibited cow-killing near the Hindu temple during the Bakri Id festival in June, and in resentment of this the Mohammedans began, on the 22d, to make riotous demonstrations, which culminated three days later in an attack on the police. The principal officials were on the spot, and made strenuous efforts to quiet the mob; but the rioters charged the police with stones and fired upon them with fatal results, and the recorder of Rangoon ordered the police to fire upon and charge the mob. The rioters suffered a loss of 20 killed, while many were seriously wounded. This did not suffice to subdue them, and a regiment of soldiers was called out, which cleared and occupied the main streets. Afterward, through the efforts of leading Hindu and Mohammedan merchants, quiet was restored. Similar riots occurred during the festival in Azimgar. A mob stoned the police, seriously injuring the district superintendent, whereupon the police opened fire, killing and wounding many of the rioters. Great alarm

prevailed; the English women and children were sent away, and troops were sent from Fyzabad to the scene of the trouble. Rioting from the same causes occurred in July at Ballia, to which 100 men of the Bengal infantry were sent to quell the disturbance. But the most serious of these religious outbreaks began in Bombay on Aug. 10. It was the day of the Divasra holiday of the Hindus, and also a Mohammedan prayer day. The Hindus made a great noise with their tom-toms near the principal mosque, and after the morning prayer some 2,000 Mohammedans rushed out of the mosque, shouting their war cry and running toward the neighboring Hindu temple. Apprehensive of an outbreak, the police were massed near the temple, where they met and drove back the Mohammedans. Rioting then became general throughout the city, especially in the native town and in the suburbs, and was continued throughout the two days following. There are upward of 500,000 Hindus in Bombay, while the Mohammedans number about 160,000, and it was estimated that at least 50,000 men took part in the riots. The police were unable alone to cope with such widespread disorder, and the military were promptly called out. In addition to the troops of the garrison, the volunteers were summoned, and marines were brought from the war ships in the port and troops from Poona. Comparative quiet was restored on the night of the 12th, but the outbreaks continued for several days. The rioters on both sides fought fiercely with sticks and stones, and several mosques and Hindu temples were desecrated or destroyed. The number of killed, so far as known, was 36 rioters and 3 policemen. The immediate cause of these religious riots was believed to be the activity of the missionaries of the Cow Protection Society in stirring up the feelings of the Hindus against the cow-killing Mohammedans, and while the educated and better classes on either side took no part in the riots, it was evident that they did little to prevent them.

Khan of Khelat deposed.—In April the Indian Government was advised that the Khan of Khelat had murdered his Prime Minister, caused other high officials to be mutilated, and held a number as prisoners. A column of troops was ordered forward from Quetta, and the Khan was called upon for an explanation, and required to release the prisoners. The Khan admitted to the Viceroy's agent that he had killed 3,000 men and women since his accession, thirty-six years ago. Upon the recommendation of the agent the Khan was deposed in August, and his eldest son, Mir Mahmud, recognized as his successor. The position of the state remained otherwise unaffected.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles; population by the census of 1890, 2,192,404. Capital, Indianapolis.

Government.—The State officers during the year were: Governor, Claude Matthews, Democrat; Lieutenant-Governor, Mortimer J. Nye; Secretary of State, William R. Myers; Attorney-General, Alonzo G. Smith; Auditor, J. O. Henderson; Treasurer, Albert Gall; Superintendent of Public Instruction, H. D. Vories; Statistician, William A. Peele; all Democrats; Judges of the

Supreme Court, Silas D. Coffey, Walter Olds, Jephtha D. New, James McCabe, Timothy O. Howard.

Finances.—The Auditor's compilation from the returns of the taxable values of the several counties for this year gave: Total true valuation of taxables, \$1,266,855,377; total State tax on this sum, \$1,704,806.44; total value of railroad property, \$160,387,420; total number of polls, 385,619. The grand total of taxes for all purposes estimated for the year was \$18,037,759.51. The amount of delinquent tax, including the past year and the preceding years not yet outlawed, was \$3,001,906.69.

Following is the assessment of express, telegraph, telephone, and sleeping-car companies as fixed by the State Board of Tax Commissioners. These figures are exclusive of the real estate, structures, machinery, fixtures and appliances subject to local taxation within the State: Express companies, \$1,225,890.75; telegraph and telephone, \$2,976,925.25; sleeping-car, \$558,400; total, \$4,761,216. This is the first assessment made of these companies since the supplementary tax law passed in 1893 went into effect.

The State debt at the beginning of the year, with interest, amounted to \$8,830,615.12. The matured bonds, to the amount of \$340,000, with interest, \$51,287.50, were paid on April 1.

A census bulletin published in April shows facts about mortgages as follows: The aggregate of farm mortgages in the State is \$74,554,426. In 1890 the value of farms and improvements, exclusive of personal property, was \$529,537,587. These figures are below the real value of the property, but upon that basis the debt on farms is less than 14 cents on a dollar, while that on lots and improvements is almost 13½ cents. The mortgage debt upon the true value of the real estate in Indiana is 9.79 per cent., lower than any Northern State now reported.

Banks.—The report compiled from official data showing the number of bank failures and resummptions from January to September, shows that 36 Indiana banks failed and 7 resumed.

An investigation of the failure of the Indianapolis National Bank resulted in 7 indictments. That against the president contains 167 counts. Two indictments were found in connection with the failure of the Vincennes National Bank.

An abstract of the reports made to the comptroller of the currency in October shows the total resources of the national banks in the State to be \$53,994,670, and the total liabilities the same, including individual profits, \$1,867,075, and unpaid dividends, \$32,446. The average reserve was 37.41 per cent., or about 12½ above the legal requirement. The individual deposits are \$26,495,725, and the cash on hand, aside from cash items and clearing-house exchange, amounts to over \$8,000,000.

The first report on the building and loan associations of the State gives the number as 477. The assets, including \$640,501.65 cash on hand, were, in June, 1893, \$27,538,061.94, with liabilities the same, including \$1,760,587.82 of undivided profits. The total receipts were \$17,340,856.46; the disbursements the same, including the amount of cash on hand as above. The total number of shares in force June 30, 1893,

was 680,216. The depositing members were 85,520; the borrowing members, 41,382. The authorized capital stock is \$219,144,500; the capital stock subscribed and in force, \$84,069,257.

Industries.—The fourth biennial report of the Bureau of Statistics gives figures based on investigations for 1891, as follow: Eight industries—namely, iron, railway-car building, wood, woolen, quarry, encaustic tiles, wagons and carriages, and glass—have an investment in buildings, grounds, and machinery of \$13,810,950; the annual cost of materials used aggregates \$24,239,919; the value of their product amounts to \$44,473,312. The whole number of establishments was 427, including mining companies. They employ 28,830 men, 1,852 boys and 1,778 women and girls. The average daily wages of the skilled and unskilled men was \$1.85 on statements from the employers, and \$1.95 on statements of the employees.

Tables regarding the iron trade, based upon reports of 93 establishments in 17 cities, show the value of buildings in use to be \$5,548,573; annual cost of material used, \$9,568,211; annual value of manufactured products, \$19,265,997; months in operation during the year, 11.1; average per cent. of increase in wages, 4.3; average hours in day's work, 9.9. Only one city, Hammond, showed a decrease in wages, and that decrease was 8 per cent. The highest average price paid skilled labor was \$3.99 a day, and the average lowest \$1.59 a day. The average lowest paid unskilled labor was \$1.18.

In the statistics concerning the wood industry an average increase of wages of 7.45 per cent. is shown.

The bureau reports the number of pounds of wool produced in the State in 1891 as 3,443,796. The total annual value of the manufactured product was \$1,903,659, giving employment to 1,962 persons.

Coal.—The latest figures of the product of coal at hand are for 1891. The total product was 2,973,474 short tons; spot value, \$3,070,918. Compared with the output of 1890, the product of the Indiana coal mines in 1891 shows a decrease of 332,463 short tons and a loss in value of \$188,315. The decreased output was largely due to the three months' strike in the Brazil region; but whether this would account for so great a falling off is to be doubted. The general average price was \$1.08 per ton, an increase of 4 cents over the price in 1890. The average number employed was 5,879.

Education.—The apportionment of school money prepared in May gives the whole number of children between six and twenty-one as 795,113; the total amount collected and ready for apportionment, \$1,415,003.97, equal to \$1.75 *per capita*, with \$15,000 for the State Normal School, and a balance of \$8,556.22.

The superintendent is preparing a revised edition of the school laws, with special reference to protecting teachers from illegal exactions. It is said that the trustees have, in many instances, shown a willingness to bind teachers in their articles of contract down to stipulations in direct contravention of the statutes. For instance, in contracting with a teacher to teach a term of school it is generally stipulated in the articles that he shall not receive pay for certain

legal holidays, when the statute expressly affirms that he shall.

Plans were made for a new building for the Normal School, to cost \$60,000, but the Legislature appropriated only \$40,000. Under the law this money must be used for the object for which it was appropriated before Nov. 1, else it is covered into the State treasury. Therefore contracts had to be let for as much work as the \$40,000 would pay for.

Charities.—A memorial from the superintendents of the 4 insane hospitals was submitted to the Senate, setting forth the inadequacy of their accommodations.

In 1890 the total population of the State was 2,192,404. The ratio of insane to the total population, according to the census of the whole State, was 1 to 660. The capacity of hospitals of this State was: Central Hospital, 1,523; Southern, 390; Eastern, 435; Northern, 410. This gives a general ratio of hospital capacity to population of 1 to 869.

Notwithstanding this appeal, the Central Hospital was cut from \$260,000 for maintenance to \$220,000 a year, with the specific appropriation of \$100,000 not granted. The 3 other insane hospitals get the same for maintenance and repairs they did two years ago, with no specific appropriations. The number of insane, by the report of the State Board of Charities, is 2,767.

The Institution for Feeble-Minded Children asked \$200,000 for a new building and a farm, but received only the usual amount for maintenance, with \$2,000 for incidentals cut off.

The Blind Asylum's maintenance was cut from \$30,000 to \$25,000, while that of the Deaf and Dumb Institution was increased from \$55,000 to \$62,000. The Knightstown Home was cut on maintenance from \$95,000 to \$90,000, and did not get the extra appropriation of \$28,000 asked.

Prisons.—The Woman's Reformatory received an appropriation of \$40,000. The earnings and receipts of the institution amounted to \$12,795.47 during the year, leaving the net cost of maintenance \$27,204.53. An indebtedness of \$6,851.31, incurred for repairs made necessary by fire, has been canceled. The cost of maintenance for each inmate was \$169 for the year. The salaries and wages amounted to \$12,688.60, subsistence to \$7,000.65, and clothing to \$2,541.84. An inmate of the girls' department, seventeen years of age, confessed to having set the fire that burned the prison in March, 1892.

The Grand Army.—The national encampment of the Grand Army was held in Indianapolis, Sept. 4 to 7. The report of the Adjutant-General shows that the membership in good standing is 397,233, a net loss in the past year of 2,657. During the year there were 7,002 deaths in the order, more than in any previous year. Under the column "Expended for Charity" was reported \$178,745. Since these records have been kept there has been reported under this head \$2,500,000. The Woman's Relief Corps disbursed \$58,628. Resolutions were adopted censuring the pension legislation and administration of the Government.

The number of men in line in the procession was estimated at 22,000.

A controversy was caused in July, 1892, by the action of the commission in charge of the sol-

diers' monument in progress of building at Indianapolis, in placing the dates of the Mexican War on an astragal near the top, beside those of the war of the rebellion. Protesting resolutions were passed by encampments and army posts, a public meeting was held, the commission was petitioned, and an appeal was made to the Legislature. In April, at the State encampment, a protesting resolution was passed, with a declaration of the purpose of those represented not to support any candidate for the Legislature who would not pledge his influence to have them removed. The commission at length voted for their removal, and it was done in September.

Legislative Session.—The Legislature convened on Jan. 5, and adjourned on March 6. The message of the retiring Governor recommended grouping the State institutions under fewer boards of control and the appointment of at least one woman on each board; favored the movement for better roads; and made a strong appeal for State aid to the National Encampment of the Grand Army of the Republic, to be held at Indianapolis, and for appropriations for the completion of the soldiers' monument, and the State exhibit at the World's Fair. He recommended free text-books and appropriations to the higher institutions of learning under the care of the State, and the establishment of a soldiers' home.

The bill for the soldiers' home was defeated, and also the Grand Army appropriation bill, a bill to abolish the prison contract system, an antitrust bill, a bill to enable mortgages to count as a set-off in taxation, a bill to give a minority party watchers on election boards, a street-car paving bill designed to compel the railroad company of Indianapolis to bear the expense of paving between tracks, and a libel bill to relieve publishers from liability for damages if prompt retraction be made of libelous matter.

An apportionment law was passed, slightly different from that of 1891, which was declared unconstitutional by the Supreme Court. It is claimed that it will give the now dominant party a majority of 20 in the Senate and 26 in the House. A suit against the act was filed in the circuit court in November. The complaint alleges gross inequalities in the apportionment of districts; it declares that by this act

Forty-three counties are formed into 22 districts, to each of which 1 Senator is apportioned. Eleven of said districts, composed of 21 counties, contained 148,204 male inhabitants above the age of twenty-one years, while the other 11 of said districts, composed of 22 counties, contained 97,207 male inhabitants over twenty-one years of age. Said first-named 11 districts contained 50,977 more male inhabitants according to said enumeration of 1889 than were contained in said latter districts, and by such apportionment the senatorial representation of 26,984 male inhabitants twenty-one years of age of said districts, being the unit for 2 Senators with a fraction of 4,944 in excess, is wrongfully denied to the counties contained in said districts, and is given to the counties contained in said other 11 districts, whereby their representation, which of right should be but 9 Senators, is increased to 11, and the representation of said other 11 districts is reduced to 11 senators, when it should of right have been 18 Senators.

It is alleged that the act is unconstitutional in that it violates the provision in regard to the basis of Representatives prescribed for counties.

The enumeration of 1889 makes the Representative unit 5,510, so that any county having this number was entitled to one Representative, while by the act of 1893 some counties having that number were denied a separate and individual Representative, and other counties having less were accorded a Representative, and in some cases also a joint Representative with other counties. The court was therefore besought to enjoin the clerks of counties from issuing notices of an election under that act in November, 1894.

An act drawn by the Building Association League of the State was passed at its request. It is designed to shut out the national associations, and requires full reports of the local associations to be made to the State Auditor.

There was a long struggle over a bill to restore to the Governor the appointments for the State institutions. On this the Democratic majority was divided, and the Republicans voted in its favor, so that it was passed.

The general appropriation bill gave, in round numbers, \$5,025,000 for the next biennial period. Separate appropriation bills that were passed dispose of about \$200,000. Many salaries and expense and maintenance funds were increased.

A revenue tax bill cuts the school fund $2\frac{1}{2}$ cents, and leaves the total State levy, 82 cents, divided thus: School fund, $13\frac{1}{2}$ cents; general and institution funds, 15 cents; sinking fund, 8 cents; State University, $\frac{1}{2}$ cent.

An act was passed repealing the clause on elections, requiring the publication of nominations. The publication of sample ballots is done away with, so that so far as appears there is no provision whatever for giving any election notices by the county clerk in general elections, or by the city or town clerks in city or town elections. As the law now stands, there is no provision for official publication of any proposed constitutional amendment.

Another act affecting elections was one abolishing the spring elections in cities not under special charters, and uniting them with the November elections, at the same time extending the terms of holding office from two to four years. It provides that officers now holding in towns coming under the law whose terms would expire in May and September, 1893, or at any other time, shall hold their respective offices till September, 1894.

Other acts passed were these:

Forfeiting subsidies to railroads where contracts are not complied with.

Preventing the discharge of employees for unionism. To raise to fourteen years the age under which children can not be employed in mines and metal factories.

To raise the age of consent to fourteen years.

Providing for six-year and life licenses for teachers.

Making first railroad liable for freight all the way through.

Permitting railroads to issue preferred stock.

Forcing biweekly payments of salary to minors.

To compel employers to provide seats for women and children in factories, etc.

To protect union labels.

The Democrats re-elected David Turpie United States Senator by a vote of 35 to 11 in the Senate, and 63 to 36 in the House, over Charles W. Fairbanks, the Republican candidate.

The Fee and Salary Law.—The Legislature of 1891 passed a law establishing salaries for county officers, and doing away with the fee system, in obedience to a general demand for a reform in that respect, but the operation of the law was put off for two years, thus not affecting the candidates then standing for office. Some efforts were made in the Legislature of 1893 to remedy obvious defects in the law, but nothing was done about amending it. After the adjournment of the Legislature suit was brought by the sheriff of Vigo County to compel the Auditor to pay him mileage for the transfer of prisoners to the Penitentiary, and claiming that the law of 1891, according to the provisions of which the Auditor had refused the demand, was in conflict with the provisions of the State Constitution, and therefore void. It does not appear that the Attorney-General prepared briefs in defense of the law. The decision in the circuit court was against the law.

Court Decisions.—The long-standing case in regard to the legality of the election of R. S. Robertson as Lieutenant-Governor in 1886 was closed in October. The defendant, A. G. Smith, the present Attorney-General, who claimed the office in virtue of his election as President of the Senate in 1885, and exercised it, drawing some part of the salary, confessed judgment for \$500, and the suit was dismissed at his costs. Details of the contest are given in the "Annual Cyclopædia" for 1887.

A suit against a saloon keeper in Indianapolis, to enjoin him from building and maintaining a saloon next to the plaintiff's residence, was first tried in the circuit court, which sustained the demurrer filed by the defendant's attorneys, maintaining that the complaint was defective. The complaint attacked the constitutionality of the liquor license laws of the State, and alleged further that the saloon was a nuisance, and should be abated. Both parties elected to try the case in the lower court on the constitutional question alone, and it was decided against the plaintiff. On appeal, the Supreme Court affirmed the decision. A petition for a rehearing was granted, and the opinion handed down reversed the former decision. This sends the case back to the circuit court. It is regarded as an important victory for the opponents of saloons, since it decides that the license does not protect the saloon keeper from suits for damages to adjacent property.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population was 192,214 in 1850; 1,911,896 in 1890. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Horace Boies, Democrat; Lieutenant-Governor, Samuel L. Bestow, Democrat; Secretary of State, W. M. McFarland, Republican; Auditor, C. G. McCarthy, Republican; Attorney-General, John Y. Stone, Republican; Treasurer, Byron A. Beeson, Republican; Adjutant-General, George Green, Democrat; Superintendent of Public Instruction, J. B. Knoepfler; Commissioner of Labor Statistics, J. R. Sovereign; Railroad Commissioners, John W. Luke, Republican, Peter A. Dey, Democrat, George W. Perkins, Republican; Chief Justice of the Supreme Court, Gifford S. Robinson, Re-

publican; Associate Justices, Charles T. Granger, Josiah Given, and James H. Rothrock, Republicans, and L. G. Kinne, Democrat.

Finances.—The biennial report of the Auditor, submitted in October, gives the whole amount paid into the treasury during the two years ending June 30, 1893, on account of general revenue, as \$3,706,151.77, which, being added to the \$488,058.95, the cash in hand July 1, 1891, gave a total of \$4,194,210.72 available for current expenses. The disbursements for the same period amounted to \$3,781,229.27, leaving a balance June 30, 1893, of \$412,981.45. The monthly reports of the county treasurers, for the month of July, 1893, show that there was \$33,004.19 cash in their hands on the first day of July, 1893, belonging to the State.

Valuations.—The State Board of Equalization reported an increase of 7-6 per cent. on the value of land per acre over the valuation of 1891. The report rendered omitted one county, Woodbury, from which no report had been received, reserving the right to raise its value to the average, if it should fall below, or 7-6 per cent. Exclusive of that county, the number of acres was 33,845,145; the assessed value, \$285,082,014; the value per acre, \$8.42; the gain over 1891, 87 cents; the gain per cent., 5; the equalized value, \$297,616,208; equalized value per acre, \$8.66.

Tables given in the official register show the average incumbrance on farms to be \$1,819; the average rate, 7-36; the number of families owning incumbered farms, 77,111; the value, \$805,658,669; the incumbrance, \$101,745,924; and percentage of incumbrance to value, 33-29.

Banks.—The Auditor's report places the increase in the number of State and savings banks during the year ending June 30, 1893, at 81, the largest increase in any one year in the history of the State. The whole number of banks reported up to that date was 325, of which 148 were savings banks. The total assets of the State and savings banks were \$59,011,405.14, an increase in assets during the year of \$1,843,437.47. Of this amount, \$1,749,920 is increase in capital by reason of the organization of new banks. The total deposits June 30, 1892, were \$42,476,395.89. Those of June 30, 1893, were \$42,151,434.35, or a decrease of \$324,961.58.

The deposits in the savings banks amounted to \$25,426,031.70, and their total assets to \$34,733,976.49. By the statistics of failures of State and private banks from January to September, it appears that 28 Iowa banks suspended, and 3 resumed.

Insurance.—The Auditor's latest available report on insurance shows the business transacted during the year 1892. During that year 34 life-insurance companies, of which 4 were Iowa companies, and 121 fire-insurance companies, 20 of which were Iowa companies, were authorized to do business in the State.

Of the fire companies, the amount of risks written was \$253,233,462; the premiums received, \$4,268,999.55; the losses paid, \$1,734,312.39; the losses incurred, \$1,698,474.94; the percentage of losses to premiums, 40-6.

The amount of life policies written during the year was \$27,938,987; of those terminated during the year, \$21,066,987; of those in force at the end of the year, \$85,440,107. The premiums

received amounted to \$2,476,556.17; the losses incurred, to \$716,307.75; the losses paid, to \$686,444.75. The percentage of losses incurred to premiums received was 28.9.

Mining.—Reports of the State mine inspectors for the two years ending June 30, 1893, give the following figures: Total tons produced the first year, 4,047,479, and the second year, 4,614,875; number of miners the first year, 6,996; the second year, 7,766; value of product the first year, \$5,848,651; the second year, \$7,042,654. At the end of 1892 the number of mines was 298, in 1893 it was 337.

A State convention of coal miners held at Oskaloosa in October adopted resolutions asking that "the Secretary of the State Mine Inspectors Board be a practical miner," and that a bill be enacted to provide for the pay of "the coal miners and laborers of Iowa every two weeks, and that not more than one week's pay be kept back at any one time."

Butter.—Some idea of the butter product of Iowa may be gathered from the fact that it nearly equals the gross earnings of the railroads in the State each year. For the year ending June 30, 1892, the 10,000 miles of Iowa railroad earned \$37,405,171, while the butter produced during the same months was worth \$32,922,986. If the value of the milk and cheese sold be added, it will surpass the earnings of the railroads.

Education.—The report of the State superintendent for the biennial period ending Sept. 30, 1893, gives the total enumeration of persons of school age as 687,150, of whom 513,614 are enrolled in the public schools, with an average attendance of 824,217. There are 13,433 schoolhouses, valued at \$15,110,494, with apparatus valued at \$461,094, and libraries aggregating 122,728 volumes. Male teachers to the number of 4,837 were employed at an average salary of \$38.73 per month, and 23,464 female teachers at an average of \$30.81. The total of teachers' salaries was \$4,789,323. There were 4,328 graded and 12,387 ungraded schools, taught on an average seven months and sixteen days in the year. The average cost of tuition per month was \$1.89. The cost of schoolhouses, grounds, libraries, and apparatus during the period was \$1,303,970; fuel and other contingent expenses came to \$1,722,248; and the total expenditures, including salaries, amounted to \$7,815,541. The annual interest of the permanent fund amounted to \$229,508; the total equalized assessment of the entire State to \$565,857,799.

The State Normal School has 17 instructors and professors, and 811 students; has graduated 587 since its establishment, of whom 108 were in the classes of 1892-'93; and has an income for the year of \$27,955, exclusive of charges for board and lodging.

The report gives statistics of 13 colleges and universities in the State, with a total of 350 instructors and professors and 6,083 students. Three hundred and three baccalaureate degrees were conferred in course 1892-'93. The total income for the year, excepting 3 institutions not reported, was \$316,538, exclusive of charges for board and lodging. The benefactions reported amounted to \$120,438. This does not include Drake University, which had about \$100,000 added to its endowment fund.

The permanent school fund was \$4,663,770.42 at the beginning of the year, having been increased \$85,502.71 in 1892 from the sale of school lands, nearly all of which are now disposed of. When the direct-war-tax refund was made in 1892 the State paid \$234,948.01 of its indebtedness to the school fund, and now it owes only \$10,937.18.

Charities.—The expense of taking care of the insane of the State at the State hospitals for the quarter ending June 30 was \$95,956. It was divided among the 8 hospitals as follows: Independence, \$35,448; Clarinda, \$26,320; and Mount Pleasant, \$34,188. A large part of this is paid back to the State by the several counties who have patients in the hospitals. Very few of the incurables are kept at the State hospitals.

The commissioners of the Soldiers' Home at Marshalltown decided not to recommend an appropriation for more cottages. "The expense of keeping these families is considerable. Although in the matter of clothing them there has been the utmost economy in the buying, yet it costs a good deal, as the soldiers' wives were almost destitute of comfortable wearing apparel." During the past two years 566 men have been cared for, and 46 have died, at an average age of fifty-eight. The average cost per man for two years is \$150.

Prisons.—The January report of the reform schools showed that there were 393 boys at Eldora, and 137 girls at Mitchellville. The Auditor issued warrants for their support amounting to \$4,651—\$3,144 to Eldora and \$1,507 to Mitchellville.

The report from the State Penitentiary at Anamosa for March showed an average of 304 inmates. Warrants were drawn for \$3,045.65 for support, \$639.67 for improvements, and \$2,525 for salaries of officers and guards.

The Fort Madison Penitentiary showed in March an average of 420 convicts. The Auditor issued a warrant to this institution for \$2,556.67 for salaries of officers and guards. Investigation was made of the affairs of both prisons, which resulted in the suspending of the warden at Fort Madison, the committee finding that the surplus fund arising from loss of time by guards was not satisfactorily accounted for.

Destructive Cyclone.—Dreadful havoc was caused by a cyclone that swept over northwestern Iowa July 6. The greatest destruction was at Pomeroy, a town of 900 inhabitants, where only 9 houses were left standing unmarred. A relief committee was immediately appointed, and help for the suffering was sent from all parts of the State. The report of the committee, rendered in October, showed a total of 71 deaths from the cyclone. In all \$69,761 in cash was contributed, besides lumber, brick, etc. The committee restored 100 homes, and furnished complete relief to 150 homeless families. The total property loss is finally placed at \$250,000.

Outrage in Muscatine.—A monstrous crime was committed in Muscatine in May. A large can of powder was exploded in the cellar of each of the houses of Hon. John Mahin, editor of the Muscatine "Journal"; E. M. Kessinger, retired capitalist; and N. Rosenberger, attorney. The interiors of all the dwellings were completely wrecked and the escape of their 15 sleeping occu-

pants from death seems miraculous. The owners of these residences were prosecuting the saloon keepers, against whom injunctions had been granted. The county supervisors offered a reward of \$2,000 for the apprehension of the perpetrators, and the citizens raised by subscription nearly \$5,000 more. Subscriptions were also taken to assist in rebuilding the wrecked houses, and the mayor and council were called upon to close immediately all saloons. They were all closed within four days. Citizens of other parts of the State assisted in raising the fund for rebuilding and refurnishing the homes.

Judicial Decisions.—A case to test the constitutionality of the medical-practice act and the pharmacy law was brought before the Supreme Court by the Eclectic Medical College of Des Moines to compel the State Board of Medical Examiners to grant certificates to its graduates allowing them to practice. The judgment of the lower court dismissing the petition was affirmed, the decision thus sustaining the State law.

A decision in regard to taxation of church property not used for church purposes was rendered in the case of a lot bought by a congregation with the expectation of building a church upon it. Afterward the congregation decided not to use it, and built in another place. To assist in the erection of the church the property in question was mortgaged for \$5,000. The petition says that the church intends to sell the property and use the proceeds to liquidate the debt of the church. The property was assessed by the assessor for taxation, and the board of supervisors refused to remit the taxes. The church refused to pay; as a consequence it was sold for taxes, and the church wanted the county treasurer restrained from issuing a tax deed. The defendant demurred to the petition, and the demurrer was sustained, the court deciding that the intention to use the proceeds arising from the sale for church purposes in no manner bears upon the present uses of the property, which is held for the purpose of sale, and hence can not claim exemption under the statute. The church will appeal to the Supreme Court.

An action was brought by the taxpayers of Lyon County to enjoin the payment of \$120,000 of county bonds, issued at a time when the constitutional limit of taxation was \$71,876.35. The action was begun in 1887. The defendants in this case were bondholders who joined in the issues in the district court. The court holds that the bonds are all void because issued at a time when the indebtedness of the county was far in excess of the constitutional limit. The remedy of the bondholders to recover what they are entitled to, the court says, is to bring action against the county.

The question of the right of the Governor to remit costs came up before the Supreme Court on appeal. Bonds were given for the appearance of a man indicted for keeping a liquor nuisance. He went away and the bond was declared forfeited. Gov. Boies remitted the judgment. The county attorney then made a showing of the costs in the case and the amounts due him as commissions and attorney's fees in the case, and demanded that the bondsman should be held for the amount due Harrison County and the county attorney as costs. This

was sustained by the district court. The question raised in the appeal is as to the authority of the Governor to remit costs and attorney's fees. The Supreme Court holds "that others, and not the public, own the costs; that the Governor, in his acts of remission, represents the public and can only remit that which, under the law, goes to the public."

Political.—Four tickets were put into nomination for the election of State officers Nov. 7.

The Republican convention met at Des Moines Aug. 16. The platform asserted that

The campaign claims of the Democratic party in the election of 1892 have proved false, and the claims made by the Republican party proved true. Not an allegation made by the Democratic party as to the McKinley law or reciprocity, not a claim of the vaunted good results of the Democratic success, has come true; but in the withholding of the pensions of Union soldiers, in business paralysis, in mills and manufactories closed, in suspended banks, in bankrupted firms, in the distress of farmers, in the growing multitude of tramps, in falling wages of thousands of working people discharged from employment, in the monetary stringency, in the prevailing hard times and public distress, are the fulfillment of what Republicans predicted with historic warrant, as to the known capacity of the Democratic party to distress and afflict the American people.

When President Cleveland said, in his recent message to Congress, that our unfortunate financial plight, with the evil conditions he depicted, are principally chargeable to congressional legislation touching the purchase and coinage of silver by the General Government, he omitted the largest producing cause. This is the sinister effect of the threatened Democratic attempt to overthrow protection and a protective tariff, as embodied in that wise measure known as the McKinley law, and so close American manufactures and overwhelm the industries that give profitable employment to American capital and American labor.

It declared in favor of maintaining both gold and silver as tender for the paying of debts, and that Congress should provide for equal values in gold, silver, and paper dollars; it declared opposition to State-bank money, and denounced a "cheap and depreciated money of low purchasing power as an especial hardship upon the poor and all who receive wages." It commended the administration of President Harrison, and condemned the pension policy of the present Administration. On the issue of prohibition the platform declared that

Prohibition is no test of Republicanism. The General Assembly has given to the State a prohibitory law as strong as any that has ever been enacted by any country. Like any other criminal statute, its retention, modification, or repeal must be determined by the General Assembly, elected by and in sympathy with the people, and to them is relegated the subject to take such action as they may deem just and best in the matter of maintaining the present law in those portions of the State where it is now or can be made efficient, and give to the localities such methods of controlling and regulating the liquor traffic as will serve the cause of temperance and morality.

The ticket nominated was: For Governor, Frank D. Jackson; for Lieutenant-Governor, Warren S. Dungan; for Railroad Commissioner, John W. Luke; for Superintendent of Public Instruction, Henry Sabin; for Judge of the Supreme Court, Gifford S. Robinson.

The Democratic convention was held at Des Moines Aug. 23. The platform declared in favor of tariff reform, and urged Congress to give "the

country early relief, having in view a permanent, stable, honest, and equitable revenue system." It denounced the McKinley tariff and the Sherman act, demanding the immediate repeal of the silver-purchasing clause, declared in favor of both gold and silver as the standard money of the country, and

The coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in payment of debts, and we demand that all paper currency shall be kept at par with and redeemable in such coin.

It commended the administration of President Cleveland, and expressed faith in his intentions and his policy.

On pensions and prohibition the platform declared as follows:

We favor just and liberal pensions to deserving veterans, and in their interest we urge that the names of all fraudulent and illegal pensioners be eliminated from the rolls, but the pension of no worthy soldier should be disturbed.

We demand, in the interest of true temperance, the passage of a carefully guarded license-tax law, which shall provide for the issuance of license in towns, townships, and municipal corporations of the State by a vote of the people of such corporations and which shall provide that for each license an annual tax of \$500 be paid into the county treasury, and such further tax as the town, township, or municipal corporation shall provide.

The nominations were: For Governor, Horace Boies; for Lieutenant-Governor, Samuel L. Bestow; for Railroad Commissioner, Thomas Bowman; for Superintendent of Public Instruction, J. B. Knoepfler; for Judge of the Supreme Court, John Claggett.

The People's party held its convention Sept. 5. The platform declared that there are two parties only—the People's party, and the Gold party. It approved the South Carolina method of liquor control, and declared in favor of woman suffrage; favored the election of President and Vice-President by direct vote of the people, and demanded taxation of mortgages. The principal emphasis was placed on the silver question:

The one overshadowing, all-absorbing issue before the American people to-day is the question whether the debtors of the United States shall be allowed to pay their debts in the money of the Constitution, or whether their homes and property shall be confiscated for the benefit of pirates. The only party that votes as a unit against the tricks of the millionaires is the People's party.

The nominees of the convention were: For Governor, J. M. Joseph; for Lieutenant-Governor, E. A. Ott; for Railroad Commissioner, John Idle; for Superintendent of Public Instruction, Mrs. E. J. Woodrow; for Judge of the Supreme Court, A. W. C. Weeks.

The Prohibition party held a convention May 31, and adopted resolutions declaring

That the paramount issue in State and national politics at this time is the annihilation of the traffic in intoxicating drinks.

That the prohibitory law of Iowa should be maintained and strengthened by provisions for enforcement by State power in localities where it is persistently nullified or criminally neglected.

It further censured the pharmacy law as amended, and called for a law making 2 cents a mile the maximum for passenger rates on railroads, favored woman suffrage, tariff for revenue only, suppression of trusts, unrestricted immigration, the abrogation of the extradition treaty with Russia, an antioption law, and free coinage, the silver dollar being made to contain a dollar's worth of metal. The nominations were: For Governor, B. O. Aylesworth; for Lieutenant-Governor, J. C. Reed; for Railway Commissioner, D. H. Gillet; for Superintendent of Public Instruction, Belle H. Mix; for Judge of the Supreme Court, J. A. Harvey.

Dr. Aylesworth is President of Drake University, and withdrew from the canvass, on the ground that the university needed all his time. Bennett Mitchell was then made the nominee for Governor.

The Citizens' State Temperance Convention, opposed to the Republicans on the prohibition issue, put L. S. Coffin in nomination for Governor, but made no other nominations. Mr. Coffin withdrew, and the name of Bennett Mitchell was substituted. The Secretary of State refused to print this nomination and the Republican nominations for other offices on a ticket to be called the "Citizens' Republican Prohibition Ticket," on the decision of the election board that it was against the law.

The election resulted in a victory for the entire Republican ticket. Jackson, for Governor, received a total of 207,159 votes; Boies, 174,793; Joseph, 23,511; and Mitchell, 10,107.

A large number of votes were thrown out on account of being defective, under the Australian-ballot system, 271 voters in Polk County alone losing their votes in this way.

ITALY, a constitutional monarchy in southern Europe. The Chamber of Deputies consists of 508 members, elected, in the proportion of 1 to 57,000 inhabitants, by male citizens twenty-one years of age who can read and write and pay 19.80 lire or francs in direct taxes, or have served in the army two years, or possess certain special educational or other qualifications. Soldiers in active service do not vote. Government officials, except certain high functionaries and officers of the army and navy, not to exceed 40 altogether, are not eligible, nor are ordained priests. The second Chamber, called the *Senatus*, is composed of men who have attained distinction in some pursuit, or occupy high offices, or pay 8,000 lire of taxes. Senators are nominated for life by the King. They must be at least forty, and Deputies thirty years of age. The King exercises the executive powers through his responsible ministers. The reigning King is Umberto I. born March 14, 1844, who succeeded his father, Vittorio Emanuele, Jan. 9, 1878. The heir apparent is Vittorio Emanuele, Prince of Naples, born Nov. 11, 1869. The Cabinet in the beginning of 1893 consisted of the following ministers: President of the Council and Minister of the Interior, Giovanni Giolitti; Minister of Foreign Affairs, Benedetto Brin; Minister of the Treasury and Minister of Finance *ad interim*, Bernardino Gri-

maldi; Minister of Justice and Ecclesiastical Affairs, Teodorico Bonacci; Minister of War, Gen. Luigi Pelloux; Minister of Marine, Admiral Raccchia; Minister of Commerce, Agriculture, and Industry, Pietro Lacava; Minister of Public Instruction, Ferdinando Martini; Minister of Public Works, Francesco Genala; Minister of Posts and Telegraphs, Camillo Finocchiaro Aprile.

Finances.—The budget estimate of revenue for the year ending June 30, 1893, was 1,666,122,471 lire; the estimate of expenditure, 1,694,275,629 lire. The total ordinary receipts were estimated at 1,528,913,851 lire, of which 233,306,875 lire were derived from the income tax, 231,000,000 lire from customs, 193,000,000 lire from the tobacco monopoly, 106,342,000 lire from the land tax, 84,000,000 lire from the house tax, 76,180,000 lire from the state lottery, 73,300,000 lire from stamps, 73,299,800 lire from Government railroads, 69,023,244 lire from octrois, 63,500,000 lire from the salt monopoly, 62,700,000 lire from registration dues, 49,000,000 lire from the post-office, 36,300,000 lire from succession duties, 36,179,337 lire from repayments, 33,000,000 lire from excise duties, 29,140,550 lire from various taxes on transactions, 18,450,000 lire from the tax on railroads, 15,100,000 lire from telegraphs, 11,180,208 lire from state property, and about 36,000,000 lire from other sources. The total ordinary expenditure was estimated at 1,546,626,357 lire, of which 450,155,182 lire were for interest on the consolidated debt, 91,292,413 lire from the floating debt, 78,959,282 lire for interest on the redeemable debt, 27,711,540 lire for railroad annuities, 15,050,000 lire for the civil list and appanages, 73,462,820 lire for fixed annuities, 148,010,943 lire for expenses of collection, 243,058,765 lire for war, 100,765,465 lire for the navy, 53,750,786 lire for the Interior Department, 52,640,903 lire for posts and telegraphs, 39,451,578 lire for public instruction, 33,161,186 lire for the Department of Justice, 29,303,831 lire for public works, 9,605,534 lire for the Department of Commerce and Agriculture, and 8,469,207 lire for foreign affairs. The extraordinary expenditures of the Ministry of Public Works were set down as 76,979,780 lire; of the Ministry of Marine, 6,875,000 lire; of the Ministry of War, 4,450,000 lire. The capital of the consolidated and redeemable debt amounted in the beginning of the financial year to 11,979,718,057 lire. The total interest charge was 584,658,951 lire.

The Army.—The permanent army in 1892 had a total strength of 247,809 officers and men under arms, comprising 14,448 effective officers and 191 on half pay, 107,249 regular infantry, 22,739 cabineers, 13,114 bersaglieri, 8,828 Alpine troops, 10,257 infantry attached to the military districts, 24,131 cavalry, 30,970 artillery, 7,604 engineers, 1,437 men attached to military schools, 2,320 sanitary troops, 1,868 commissariat troops, 229 men in invalid and veteran corps, and 2,424 in penal establishments and disciplinary companies. There were 5,279 officers and 594,181 men of all arms enrolled in the permanent army who were on unlimited leave of absence. The mobile militia numbered 6,348 officers and 525,179 men, and the territorial militia 10,756 officers and 1,940,322 men. There is a special corps of African troops which consisted on June 30,

1892, of 215 European and 32 native officers and 6,122 men, of whom 3,795 were natives.

The Navy.—The "Italia" and "Lepanto" were, until the "Royal Sovereign" and her sister ships were added to the British navy, the heaviest war ships in the world, having a displacement of 13,896 and 13,550 tons respectively. They have no belt of armor, as all the vital parts are below water, protected from a plunging fire by steel deck armor, which is 6 feet below the water line. The citadel is protected with inclined armor 19 inches thick. The four 100-ton guns with which each is armed are mounted *en barbette*. The "Lepanto" has a speed of 18.4 knots; the "Italia," 17.8 knots. Of the same class and type is the "Re Umberto," which carries 68-ton guns; also the "Sardegna" and "Sicilia," not yet completed. Each of these vessels cost about \$5,000,000 to build and equip. The "Duilio" and "Dandolo," of 11,138 and 11,202 tons displacement, are central-citadel ships armed with 4 100-ton guns each, and having 22 inches of armor on the citadel. The barbette ships "Lauria," "Francesco Morosini," and "Andrea Doria" have a displacement of 11,000 tons and 18 inches of armor at the water line. Four old broadside ships under 8,000 tons, with 4½-inch side armor and 4- and 8-ton guns, and a turret ram, complete the list of battle ships of the first class, besides one building of 13,090 tons displacement. The 11 turret ships have a total armament of 168 guns over 10 centimetres, and 366 smaller guns. There are 12 deck-protected cruisers, launched between 1883 and 1893, carrying 114 heavy and 219 small cannons; 4 corvettes, armed with 24 heavy and 63 light cannons; 12 torpedo cruisers, launched between 1886 and 1893; 8 dispatch vessels and 7 torpedo avisos; 9 first-class and 4 second-class gunboats, 75 seagoing torpedo boats, 38 first-class and 21 second-class torpedo boats, 14 torpedo launches, 15 transports, 6 school ships, 8 coast guards, 8 auxiliary cruisers, 6 paddle-wheel gunboats for the lagoons, and 13 vessels for harbor service. There are 4 deck-protected cruisers, 1 torpedo cruiser, and 12 seagoing torpedo boats under construction. The navy is manned by 1,458 officers and 17,871 men, besides 4,090 for coast defense. It was decided in 1893 to add 2,000 men.

Navigation.—The merchant navy, on Jan. 1, 1892, numbered 6,624 vessels, of 811,264 tons, of which 6,308, of 609,821 tons, were sailing vessels, and 316, of 201,443 tons, were steamers. During 1892 there were 121,099 vessels, of 23,043,181 tons, entered at Italian ports, and 119,895, of 23,297,089 tons, cleared. Of the vessels entered, 15,813, of 6,953,106 tons, were engaged in foreign trade, of which 9,348, of 1,851,483 tons, were Italian, and 6,465, of 5,101,623 tons, were foreign. Of these there were entered with cargoes 13,392, of 6,408,371 tons, and the number of steamers was 6,195, of which 1,434, of 1,266,499 tons, were Italian.

Commerce.—The total value of the special imports for 1891 was 1,126,584,582 lire, and of the special exports 876,800,155 lire. The imports of precious metals were 54,286,700 lire, and the exports 62,709,400 lire. For 1892 the special imports amounted to 1,173,400,000 and the special exports to 958,200,000 lire. The imports of precious metals were 44,000,000 and the exports

53,900,000 lire. The values, in lire, of the principal imports in 1892, compared with the values in 1891, are given in the following table:

IMPORTS.	1891.	1892.
Cereals	127,500,000	167,300,000
Raw silk	60,400,000	101,500,000
Coal	101,800,000	90,000,000
Cottons	97,400,000	92,700,000
Hides and skins	43,900,000	42,600,000
Woolen goods	49,400,000	42,400,000
Iron	44,800,000	40,800,000
Cotton goods	39,000,000	34,900,000
Coffee	31,900,000	32,500,000
Sugar	28,300,000	30,400,000
Fish	28,500,000	29,100,000
Timber	20,900,000	29,100,000
Machinery	27,400,000	24,600,000
Wool	25,400,000	25,000,000
Colors and dye stuffs	24,300,000	24,700,000
Silk manufactures	20,700,000	22,600,000
Chemical products	22,500,000	30,700,000
Animals	21,800,000	20,700,000
Gums and resins	19,100,000	12,500,000
Tobacco	17,200,000	16,600,000
Seeds	17,600,000	15,800,000
Petroleum	14,200,000	14,900,000
Cheese	14,000,000	13,700,000
Linen yarn	14,700,000	13,200,000

The values of the principal exports for 1891 and 1892 were as follow:

EXPORTS.	1891.	1892.
Silk	285,700,000	335,500,000
Olive oil	62,500,000	60,800,000
Wine	40,500,000	55,300,000
Onions, etc.	24,200,000	30,600,000
Sulphur	20,000,000	29,100,000
Hemp and flax	23,100,000	28,000,000
Eggs	22,400,000	23,200,000
Wood manufactures	18,100,000	21,100,000
Butter and cheese	17,400,000	19,700,000
Coral manufactures	17,700,000	18,800,000
Silk fabrics	16,000,000	17,900,000
Cotton	19,200,000	17,500,000
Slates	20,100,000	16,500,000
Marble and alabaster	16,000,000	15,900,000
Tartar	17,300,000	15,000,000
Almonds	20,500,000	15,000,000
Zinc ore	13,600,000	14,900,000
Fruits	10,500,000	12,700,000
Animals	21,400,000	11,200,000
Rice	11,000,000	9,700,000

The following table shows the amount of trade with the principal foreign countries in 1892, compared with the trade in 1891, the values being given in lire:

COUNTRIES.	1891.		1892.	
	Imports.	Exports.	Imports.	Exports.
England	202,800,000	117,400,000	244,600,000	118,900,000
France	180,100,000	186,900,000	168,500,000	147,100,000
Germany	183,900,000	183,700,000	149,800,000	143,500,000
Austria-Hungary	123,000,000	87,200,000	122,800,000	105,800,000
Switzerland	47,600,000	104,600,000	42,500,000	172,900,000
United States	73,700,000	73,600,000	79,800,000	100,900,000
Russia	69,700,000	18,800,000	194,200,000	10,300,000
British India	91,700,000	18,600,000	66,300,000	14,600,000
Belgium	35,600,000	38,200,000	27,300,000	34,400,000
Argentine Republic	11,900,000	34,600,000	30,500,000	25,900,000
Turkey in Europe	24,100,000	15,200,000	26,000,000	15,200,000
Egypt	21,000,000	15,000,000	18,300,000	10,700,000
Spain	9,700,000	11,700,000	9,200,000	18,900,000
Central America	3,700,000	900,000	14,200,000	500,000
Roumania	3,100,000	800,000	12,500,000	800,000
Turkey in Asia	2,800,000	1,500,000	5,600,000	3,100,000
Malta	900,000	11,900,000	1,000,000	9,700,000
Australia	200,000	1,600,000	100,000	1,100,000
Other American countries	16,500,000	5,400,000	9,400,000	15,900,000
Other African countries	7,200,000	6,100,000	5,800,000	10,600,000
Other Asiatic countries	2,400,000	900,000	7,500,000	700,000
Other European countries	20,200,000	31,900,000	17,500,000	13,300,000
Total	1,150,900,000	989,500,000	1,173,400,000	956,300,000

Session of Parliament.—The ministerial programme for 1893 included the renewal of subventions for the foreign and coasting steam navigation lines, which expired on March 15; a law for promotions in the army, which fixed the age of retirement; a law for consolidating the banks of issue; a divorce law, and one requiring civil marriage previous to a religious ceremony; and a law for the payment of civil and military pensions. The first of these bills passed the Chamber on March 2. The second was rejected by the Senate, and was withdrawn. The Pension bill was intended to relieve the budget of the charges for workmen's pensions by transferring the business to the Loan and Deposit Bank. The bill for requiring civil marriage had a useful object, because cases were frequent of men deserting wives after marrying them in church, but not completing the contract by a civil marriage. The Minister of Justice, Teodorico Bonacci, offended the Clericals by presenting this and the Divorce bill, and the Liberals because he did not press them. On May 19 the Chamber rejected the estimates of the Ministry of Justice as a rebuke to the Cabinet for its financial policy, and to this minister in particular on other grounds. The Cabinet resigned as a body, but the King declined to accept the resignation of any except the Minister of Justice, and requested the Premier to fill his place and the Ministry of Finance, which was held provisionally by Grimaldi, the Minister of the Treasury. Two Senators were selected, on May 24, for the vacant portfolios—Judge Eula as Minister of Justice, and Gagliardo as Minister of Finance. The Pension bill passed the Senate on June 2. On the resignation of Eula the portfolio of Justice was given to Santamaria. An important reform contemplated by the ministry was the suppression of several small universities, and their consolidation with those that are well equipped and prosperous. There are 17 state universities and 4 free universities, supported by provinces and communes, besides the Milan Academy for Philological and Literary Studies, and the Florentine Institute, which lacks only the law department. All these institutes have authority to grant diplomas, and some of them create advocates and physicians on very easy

conditions. The number of students varies from 49 in the Free University of Ferrara to 4,074 in the University of Naples, the number of professors from 4 at Macerata to 60 at Naples. The whole continental portion of the former Kingdom of the Two Sicilies has only this one university, while the island of Sicily has one at Palermo with 1,125 students, another at Catania with 454, and a third at Messina with 203. The University of Rome, with 82 professors and tutors and 1,297 students, serves for the rest of southern Italy. Tuscany has the Universities of Pisa, with 596, and Siena, with 169, and the Institute of Florence, with 434 students; Umbria has the Free University of Perugia, with 119 students; in the Marches, Macerata has 91 students, and the free universities of Camerino and Urbino 93 and 79 respectively; in Emilia, besides Bologna, with 1,245 students, there are the Universities of Parma, with 238, Modena, with 819, and the insignificant free university at Ferrara. In the north of Italy, Piedmont, Liguria, Lombardy, and Venetia have each a well-visited Government university, Turin having over 1,400, Genoa 940, Pavia some 1,100, and Padua 1,200 students. On the island of Sardinia, where education is so backward that 66 per cent. of the recruits are unable to read, there are 2 universities—one at Sassari, with 186, and one at Cagliari, with 119 students. Minister Martini's plan of organic reform, which included the granting of corporate rights to the universities, the improvement of the official status of the professors, and the extension of the live universities by amalgamating some of the weak ones with them, roused such opposition—particularly in Messina, Sassari, Siena, and Modena—that the reform was once more put off for fear of offending local pride.

Bank Scandals.—There are 6 banks in Italy authorized by statute to issue bank notes. Their notes constitute the main currency of the country, the only other money being small bills issued by the Government, amounting in 1891 to 841,949,000 lire, the silver and bronze subsidiary currency, and whatever gold is retained with the paper at a heavy discount. The amount of bank notes in circulation at the beginning of 1892 was returned as 1,121,601,000 lire. The assets of the 6 issue banks at that date were officially stated to be 3,863,297,000 lire, and the liabilities 3,355,357,000 lire. Before calling for a decision on the question of renewing the privileges of these banks for six years more, the Government ordered an official inquiry into their condition and management.

The fact that the Banca Romana had exceeded its legal issue of bank notes by 62,000,000 lire was known after the arrest of its president, who was charged furthermore with publishing false balance sheets, and with counterfeiting in having manufactured in London 40,000,000 lire more of bank notes, with which he intended to cover up the cash deficit of the bank, and putting some of the bills in circulation. On Jan. 27, Antonio Monzilli, director of the credit office in the Ministry of Agriculture and Commerce, was arrested on the charge of embezzlement and falsification. The judicial inquiry showed that a conspicuous member of the Right, the Deputy Rocco de Zerbi, had at various times received money from the Roman Bank, amounting to 400,000 lire. On

application being made for the Chamber to permit his arrest, he declared that he courted a criminal trial; but before he could be arrested he died, it was supposed, by his own hand. Baron Michele Lazzaroni, a man of reputed wealth, popular among Romans, and a favorite at court, was arrested as an accomplice of his uncle, Cesare Lazzaroni, and was accused also of having opened false current accounts and fraudulently obtaining large sums in the name of an artist named Peralta, who was arrested afterward. Pietro Tanlongo, until he too was arrested, carried on a clandestine correspondence with his imprisoned father, and instructed him in the pretended revelations that he made in his answers to the judge. The letters were concealed in loaves of bread sent to the prisoner, and as soon as he began to receive them Bernardo became loquacious and told of giving Depretis 3,000,000 lire for electoral purposes in 1887, and 152,000 lire to Giolitti, Lacava, and Grimaldi in the last elections. When, besides Giolitti and the Marquis di Rudini, he implicated Crispi, the latter joined in the demand for a parliamentary inquiry. A budget of incriminating documents, which was called Tanlongo's *libro d'oro* ("golden book"), was found by the police. Crispi's name was involved not only in the *Panamino* ("little Panama"), as the Italian scandal was humorously named, but at the same time in the French Panama, as his name was found in one of Reinach's lists as the recipient of a check for 50,000 francs in March, 1891. This was explained satisfactorily by the fact that he was the attorney of Reinach's firm and trustee of property in Italy belonging to the Reinachs. It came out that among the unpaid acceptances of the Banca Nazionale was a note of his for 175,000 lire, which he had borrowed as proprietor of the "Riforma" newspaper. This note was eventually taken up with money given by King Umberto, who was believed to have sacrificed 4,000,000 lire of his private fortune for the purpose of releasing public men from similar debts to the banks. Nicotera, who is honored as one of the heroes of the war of independence, found himself in a more embarrassing situation than Crispi. Tanlongo had letters from him asking for money, which he would fetch himself, and in the banker's handwriting was a remark about 150,000 lire obtained from the bank, and alleged to have been paid out by Nicotera for the Government. The examiner explained that he had borrowed 44,000 lire from the Banca Romana, and 135,000 from the Banca Nazionale, to aid an institution in which his sister was interested, and had redeemed his notes on entering the Rudini Cabinet out of a loan obtained from his friend, the Marquis de Medici, whom he owed also 50,000 lire.

Orsini, who conducted the official examination of the banks, reported that the Banca Romana had issued 64,500,000 lire of bank notes beyond the legal limit of 73,000,000 lire. Four fifths of the commercial paper held by the bank was overdue and unsecured. There was a cash deficit of 28,600,000 lire unaccounted for except by fictitious accounts current recently opened in the names of unknown individuals, Tanlongo's account being represented as overdrawn by over 4,000,000 lire. Lazzaroni's by an equal sum, and that of Prince Torlonia to a large amount.

The criminal court on June 18 found Cuciniello guilty of embezzling 2,450,000 lire from the Bank of Naples with the connivance of D'Alessandro, the cashier, and sentenced the one to ten, the other to six years of imprisonment. On July 15 the examining judge discharged all except eleven of the persons arrested for fraud and corruption in connection with the Banca Romana, and of these, 4 were discharged for lack of evidence by the Court of Appeal on Sept. 21. This latter decision, by which Pietro Tanlongo and Michele Lazzaroni escaped trial, was regarded as disgraceful by the public, and such was the indignation at the supposed bargain to purchase the silence of the older prisoners that the district attorney took an appeal, which was denied by the Supreme Court. Bernardo Tanlongo, Cesare Lazzaroni, Antonio Monzilli, the Government supervisor of banks, Lorenzo Zammarano, Gaetano Belluci-Sessa, a lawyer who had acted as agent in Tanlongo's bribes, and two employees of the bank named Agazzi and Toccafundì were held for trial.

An investigating committee of 7 Deputies of unimpeachable honesty and patriotism selected from all parties concluded its work during the vacation. When the new session opened, on Nov. 30, the reading of the report was demanded as soon as the house was called to order. Among the men censured were Minister Grimaldi, Under-Secretary Count Michele Amadei, Augusto Elia, Baron Nicotera, Alessandro Narducci, Luigi Niceli, Duke Gennaro di San Donato, Pietro Delvecchio, Filippo Cavallini, Francesco Montagna, Luigi Simonetti, and Bruno Chimirri. The committee recorded its disapproval of Premier Giolitti, who knew of the bank's irregularities as early as 1889; of ex-Premier Crispi, of Miele, and of Prof. Luigi Luzzatti, formerly Minister of Finance, who were all cognizant of the condition of the bank. Urbano Ratazzi, Minister of the Royal Household, was found to have borrowed largely from the bank, and consequently he had already been dismissed. Pietro Lacava, the Minister of Commerce, was reproved severely for not having made a thorough inspection and for keeping from the Legislature the facts that he knew.

Change of Ministry.—The reading of the report produced a tumult that compelled the President, Giuseppe Zanardelli, to suspend the sitting amid the volley of furious invectives and insults that were hurled at the ministers. Giolitti and his colleagues, who had commanded a large majority when the Chamber was adjourned, were forced into an unprecedented act by the novel situation. They at once presented their resignation to the King, and when the Chamber met on the following morning declared that they would meet their assailants as members of Parliament, not as ministers discredited before the country by suspicions of malfeasance and dishonesty. The Radicals charged them with seeking to evade impeachment, and amid general disorder the session was again suspended. There was no leader of a majority on whom the King could call because the ministry had retired without being regularly assailed, and so the King asked Giuseppe Zanardelli, President of the Chamber, to form a ministry. Zanardelli tried to effect a combination on a

broad nonpartisan basis that would include Sonnino, the leader of the Center, and Fortis, the Radical leader, and when this failed he almost succeeded in getting together a Cabinet drawn entirely from the Left, but was finally compelled to confess his failure to the King, who on Dec. 5 sent for Crispi. On Dec. 14 the Cabinet was constituted as follows: Francesco Crispi, Premier and Minister of the Interior; Baron Blanc, Minister of Foreign Affairs; Baron Giorgio Sonnino, Minister of Finance and Minister of the Treasury *ad interim*; Giuseppe Sarrocco, Minister of Public Works; Andrea Calenda di Tavani, Minister of Justice; Gen. Stanislao Mocenni, Minister of War; Admiral Constantino Morin, Minister of Marine; Augusto Bacelli, Minister of Education; Paolo Boselli, Minister of Agriculture; Count Luigi Ferraris, Minister of Posts and Telegraphs.

Monetary Difficulty.—The year 1893 was marked by financial and monetary disturbances resulting from a complication of causes to which the bank exposures were only contributory. The financial position of the Government was really better than ever, inasmuch as the deficit was nearly, if not quite extinguished, the budget for 1893 showing on its face an actual surplus of 7,000,000 lire. The Government was thus relieved of the necessity of placing bonds abroad; but to strengthen its position it had been obliged to reduce the expenditure on new railroads from 266,000,000 to 29,000,000 lire and expenditure in other departments also, which contributed to the general dullness of trade. An excess of imports over exports depleted the gold reserves, leaving the Government no stock to draw on for payment of the interest on the debt held abroad. At the same time the French were unloading their large holdings of Italian *rentes* in order to invest in Russian Government bonds at a faster rate than they could be absorbed in Italy in the existing state of the money market. The fall in *rentes* resulting from this injured public and private credit had made it more difficult for individuals to buy back the securities, and for the Government to obtain 120,000,000 to 150,000,000 lire in foreign money to meet its obligations abroad. About 600,000,000 lire of the Italian stock held in France were repurchased by Italians. These operations were rendered more difficult and costly when, as a natural result of the monetary situation, gold rose to a premium of 5, then 10 or 12, and finally 20 per cent. The premium was only partly due to the illegal excessive issue of bank notes, because these notes were all guaranteed by the Government. In the spring silver also rose to a premium and speculators made a profit by exporting the fractional currency which was legal tender in any country of the Latin Union. In a short time silver vanished from circulation, and then even bronze coins were bought up and held for a premium. Ordinary business was paralyzed for want of small change. Some firms struck token coins; others accepted halves and quarters of the 5- and 10-lira notes of the Government, which also commanded a premium; and others issued their printed notes of the value of a lira, against which they deposited sums in banking institutions. The efforts of the Government to stop the exportation of silver by making it a misdemeanor

had little or no effect. The Government ordered the coinage of 10,000,000 lire of bronze pieces and the issue of 30,000,000 lira notes, and meanwhile entered into negotiation with the members of the Latin Union for the nationalization of small silver money. The French Government ordered an estimate of the amount of Italian fractional currency in France, and requested bankers and others to separate them and pay them in at the treasury, by which means a large quantity was obtained and remitted to the Italian Government. The French Government also convened a conference of representatives of the Latin Union at Paris for the purpose of deciding the question of nationalizing small silver coins, Belgium, Greece, and Switzerland having expressed a willingness to consider the matter. The conference decided to release the Italian fractional currency from the conditions of the convention, and to return the small coins to Italy on condition that no more fractional paper should be issued than the amount of the coin received, and that the silver coinage should not exceed 6 lire *per capita* as provided in the treaty.

Sicilian Disturbances.—The popular discontent and lawlessness in the island of Sicily was a reason even more imperative than the financial dilemma for calling back the Sicilian statesmen to the head of the Government. The south of Italy, especially Sicily, suffered keenly from the general economical distress that followed upon the tariff war with France. Socialistic leaders sprang up who taught the people there that they had specific grounds for desiring a social revolution and formulated demands that were caught up by the whole laboring and farming population. The land of the island belongs to absentee landlords who deal with the people mostly through agents, and the exactions have been felt as an oppression for ages. The taxes too are not willingly paid, and neither the authority nor the cost of the Central Government is as easily borne in this part of Italy as in other provinces. The vexatious *octroi* duties bear with exceptional severity on the Sicilians, though much of the money collected is diverted from its legitimate destination. The working people of the island who imbibed labor, anti-ent, and antitax ideas formed themselves into a socialistic society composed of little groups called *Fasci dei Lavoratori*, which first clamored for higher wages and improved conditions for labor. Brigandage and lawlessness reappeared as a consequence of privation and discontent. The symptoms of disorder began to manifest themselves when Giolitti became Premier. Before the beginning of 1893 some of the peasantry who had squatted on uncultivated land refused to be evicted and defied the officers of the law. A collision with the military was the consequence and several countrymen were shot. The agita-

tion against taxation and in favor of local autonomy and a reform in the land laws had assumed portentous dimensions when Crispi took charge of the interior. On Dec. 18 antitax rioters seized the municipal buildings of Monreale, a town near Palermo, overcoming the police. The troops charged the mob on the steps of the tax office, and eventually fired a volley, wounding 30. The mayor of this town, having expressed sympathy with the Socialistic demands, was suspended before the outbreak and threatened with prosecution for inciting to revolt. In Bioppo and other towns similar disturbances took place. The Government took vigorous measures to check insurrection. The *Fasci dei Lavoratori* were found to have prepared for a general uprising. They had secretly collected thousands of rifles and a large quantity of ammunition, and were well supplied with money, some of which was supposed to have been contributed by French Socialists. Troops were called out and quartered in the disturbed section, until by the end of the year there were nearly 40,000 garrisoned in Sicily. Gen. Morra di Lavriano was placed in command, and under martial law was clothed with arbitrary military and civil powers. In Pietraperzia the peasants tried to disarm the soldiers, who fired and killed 8 persons. In the village of Gibellina rioters burned houses, and the military, after two futile charges, fired on the mob, killing 5 and wounding 10. In Terrasini, near Palermo, the villagers set fire to the *octroi* offices. In Trapani the doors and windows of the town hall were smashed and bombs were exploded. In the large town of Marineo the mob of several thousand attacked the municipal buildings, and when the troops appeared there was a sharp fight in which 30 citizens were killed and 50 wounded and a number of soldiers were injured. At Calata Fiumi several hundred peasants attempted to wreck the *octroi* offices and were dispersed by the troops. Similar conflicts occurred at Caltinesetta, Ragusa, Leonforte, Naro, and other places. While the central committee of the Socialist party, led by Napoleone Colajanni, issued a manifesto appealing to the people to renounce violence, which would be fatal alike to Sicily and to the party, the committee of the *Fasci dei Lavoratori*, the leading spirit of which was Giuseppe de Felice Giuffrida, Deputy for Catania, published one declaring the disturbances to be a painful necessity and a consequence of unbearable conditions which could only be remedied by force. A state of siege was proclaimed over the whole of Sicily. Premier Crispi would not have been able to arrest the insurrectionary movement so quickly, even with the overwhelming forces that were thrown into Sicily, if the people were not confident that he sympathized with them and would insist on legislation reforming the tax and land laws.

J

JAPAN, a constitutional monarchy occupying islands east of Asia. The Emperor, Mutsuhito, born Nov. 3, 1852, is the one hundred and twenty-third of the line of mikados. The heir

apparent, Yoshihito, was born Aug. 31, 1877. By the Constitution of 1889, inheritance to the imperial title is restricted to the male line. The imperial houses from which heirs to the throne

may be taken are ten, to each of which allowances from the civil list are made annually. Eleven members of the Upper House of the Diet are styled princes. The fifth session of the Imperial Diet was formally opened by the Emperor on Nov. 28, 1893.

Finances.—The budget submitted to the Imperial Diet, Nov. 28, 1893, for the next fiscal year, in six books containing 1,438 pages, may be thus summarized, the figures standing for silver yen: Totals—revenue, 90,675,196; and expenditure, 85,472,159. The increase of income over that of last year, 2,649,481, is derived from the tax on *saké* and tobacco, customs dues, licenses, commissions and receipts from posts and telegraphs; the decrease of 926,573 is in mining-tax receipts and receipts from railroads, making a balance of 1,712,808. In expenditure there is a total increase of 3,624,054. Owing to the great development of administrative and civilizing agencies, the items of ordinary expenditure amount to 1,994,704; but as there has been saved by reduction of office expenses and salaries 1,695,315, the total actual increase is but 299,382. In extraordinary expenditure the items amount to 3,894,733, which sum is decreased 632,212 by a reduction of subsidy to the Japan Railway Company and less outlay on men-of-war, giving a balance of 3,262,521. The excess of revenue over expenses is 5,233,036. In the report of the budget committee, distributed Dec. 19, a retrenchment of 3,382,000 is proposed, by which the estimated surplus is 8,400,000. In March, 1892, the foreign debt was but \$3,840,000. The national debt (including the foreign) in 1892 was yen 251,743,709, which, with 22,000,000 of circulating notes payable in silver on demand and 25,702,384 of paper money, makes a total of 299,446,093. Of metal coinage, there have been made and circulated since the foundation of the mint, in 1879, until 1892 yen 193,592,540, of which yen 188,891,364 (63,426,861 gold, 109,665,118 silver, 4,267,349 nickel, and 11,532,036 copper) are in circulation. The paper money issued by the Government and national banks for ordinary business amounted, April 1, 1892, to yen 136,161,150.

Trade.—The total foreign trade for 1892 was nearly double that of 1884. Owing to the progress of native industries, the imports of raw material are increasing over the imports of manufactured goods. Since 1887 the value of imports has increased over 19 per cent. The value of cotton yarn and piece goods has decreased 17 per cent., while woolen goods remain stationary. In 1892 eleven times the quantity of raw cotton imported in 1887 entered Japan, and during these four years the export of fabrics made in Japan was over 400 per cent. The Japanese now compete with the British in the far East in certain lines of cotton goods. Exclusive of yarn made from native cotton, the increase of yarn consumed in 1887 was 25,000 tons; in 1892, 72,000 tons. Imports of sugar are increasing. Since 1890, owing to fluctuations in silver, Japan has been steadily selling in a dearer market and buying in a cheaper one. In 1892 the export of gold was nearly \$5,000,000, and the import nearly \$15,000,000 of silver. British trade has declined, and American trade has advanced. The foreign trade of Japan for the year 1892 amounted in exports to nearly \$65,-

717,350, and in imports to nearly \$53,308,810, or an increase in the whole foreign trade over that of 1891 of nearly \$2,592,170, and an excess of exports over imports of nearly \$14,408,540, more than a majority of the whole being done at Yokohama. During the past ten years raw silk has formed over 40 per cent. of the exports, while tea has fallen from 17 to 8 per cent., while the export of manufactured silk goods has greatly increased. In imports, cotton yarn from 22 per cent. in 1883 has fallen to 10 per cent. of the total value in 1892, while raw cotton has risen from 1 to 17 per cent., being now the most important article in the import trade. While Japan is yearly becoming more and more her own manufacturer, 82 per cent. of the foreign trade (78.5 per cent. of imports and 85.5 per cent. of exports) is in the hands of foreigners. Since 1887 the gold value of the import trade has increased 19 per cent., and the value of the export trade 60 per cent. The steady increase of trade with the United States is especially shown in "General View of Commerce and Industry in the Empire of Japan," published by the Government, and distributed at the World's Fair in Chicago. The total values of exports and imports for 1873 to 1891 show a steady increase of the former from yen 4,236,162 to 29,795,755, and of the latter from yen 1,017,761 to 6,840,048, showing that as a buyer from Japan the United States leads all nations, while as sellers only Great Britain and China exceed. Especially has mutual increase of trade been noticed since the Centennial Exhibition of 1876. The first Japanese chamber of commerce was established in 1878, since which date 50 more have come into existence. These, with the other organizations which have sprung into existence in recent years and are noted below, exert a powerful influence in developing the commercial energies and resources of the whole empire.

Army and Navy.—On Dec. 31, 1891, the total enrollment of persons in the employ of the military service was 209,620, of whom 251,254 were soldiers, 1,879 students, 10,581 petty officers, 3,587 officers, and 595 general and superior officers. Under the conscription law there were available in 1890 350,369 recruits, of whom 307,856 had just attained the conscript age of twenty. Of the recruits, 20,365 were placed in active service and 127,565 assigned to the reserve. The empire is divided into 6 military departments, in which are 19 hospitals, the proportion of deaths among 100 sick soldiers being 1.24, and of deaths among 1,000 being 7.11. In the navy department, Dec. 31, 1891, were 14,190 persons, of whom 13,092 were officers and sailors in active service; 35 steam vessels, of 61,763 tons displacement and 76,665 horse power, mounting 324 cannon, all of the finest modern European model and equipment, and manned by 5,726 officers and subordinates, formed the Japanese fleet. In the 3 naval hospitals the death rate of the sick was 1.33, and of every 1,000 men was 5.87.

Industry.—In almost all the items under this head the progress shown is extraordinary. The stimulus of foreign demands and of the cultivated tastes of the people, besides the application of Western arts and sciences, are the underlying causes of the increase. Of land owned by proprietors, 61 per cent., and by farmers, 39 per

cent. is cultivated. Eleven thousand five hundred and twenty-three acres of rice and other arable lands are now under cultivation, the total product of 8 crops—rice, rye, wheat—in 1891 being 90,391,865 bushels, averaging 21 bushels to the acre. Mulberry plantations for the food of silkworms cover 617 acres. Most of the fertile land is in valleys, but there are vast spaces of forest, mountainous, or poorly productive land, though famines are now preventable on account of railways and improved transportation by land and sea. On account of the silicious bamboo which covers densely much of the land otherwise utilizable as pasture, sheep can not be profitably reared. The area belonging to the state and covered by forests, groves, and wild bamboo amounts to 26,018 acres, but a steady decrease of the area of infertile and increase of reclaimed or fertile land is noticed as compared with previous years. The total number of horses is 1,546,868, and of cattle is 1,044,976, which, considering the great development of railways and new articles of food, is a relative as well as actual increase over former years. Of tea, 55,723,352 pounds were grown in 1890. In the *saké* manufacture 14,752 distilleries and breweries produced of the various alcoholic beverages made from rice 63,456,500 gallons, while 948,565 persons brewed *saké* for domestic use. Of soy, the increased production of 23,160,040 gallons, as compared with little over half that amount in 1885, we note that there is a European demand, the condiment being now well known either in a pure state or as the basis of widely advertised sauces with local European names. The output of pottery and porcelain for 1890 was valued at yen 2,882,508, and of pipes yen 1,504,560. During the year 1891, 367 patents were issued, 117 models deposited, and 554 trademarks registered.

To meet the modern conditions of business there are now in Japan more than 50 chambers of commerce, 2,013 trades unions organized by those who pursue the same trade in the whole empire, 13 rice exchanges, 8 stock and 3 general exchanges, and 1,916 markets at which daily, monthly, or several times a year, buyers and sellers gather from various places for the purchase and sale, according to the old methods, of products, fabrics, and new or second-hand articles of all sorts. The 134 national banks of the country have a paid-up capital of yen 48,701,100. The Bank of Japan, with its paid-up capital of yen 10,000,000, gives stability and equilibrium to the system, and is the organ of the Government's financial administrations. Private banks number 252, with a paid-up capital of yen 19,796,000. Semibanking corporations numbering 678 have a capital of yen 13,827,000. Of joint-stock companies for commercial purposes there are 2,631 with capital aggregating yen 182,137,828; of these, 315 are agricultural, 1,296 commercial, and 1,020 industrial. Instead of the old system of isolated and individual workshops the tendency is to associated labor and the concentration of capital in large manufactories, with the accessories of steam and other engines. Companies and individuals now own 2,489 factories, of which 739 have steam engines (1,519 engines with 28,500 horse power) and 464 with hydraulic engines (1,283 engines of 4,772 horse power), the capital invested being yen 70,734,764. The pro-

duction and manufacture of silk occupies the first importance, after which follow, in relative importance, weaving, mining, refining of metals, and the preparation of rice, tobacco, *faience*, watches, bricks, and cotton. Besides 5 Government technical schools of navigation, industry, fine arts, posts and telegraph, there are numerous schools in the commercial cities which further the progress of commerce and industry. Of the 767 serial publications, 167 are devoted to agriculture, commerce, and industry, and 170 to science. Besides the great educational and special museums in the cities of Kioto, Tokio, and Nara, there are in the various prefectures 36 industrial museums. Of the 1,864 miles of railway in 1893 the Government owns 551 and private corporations own 1,313 miles, in all of which, to Sept 30, 1892, yen 78,308,127 had been invested, and on which in one year 25,790,802 persons traveled. Other traffic and travel on wheels was done by 31,965 horse vehicles, 178,041 *jinnrikishas*, 11,027 ox carts, and 763,056 handcarts.

Salt-Making, Fisheries, and Navigation.—A maritime population, numbering 865,189 active fishermen, living in 365,329 houses, with 277,698 boats or junks, produced in 1890 dried and salt fish, seaweed, and other marine products to the value of yen 10,257,134: sardines, dried or in oil, 323,548,790 pounds; besides 7,950,570 pounds fish oil. Salt meadows, or sea-shore tracks of sand which are sprinkled with sea water—the bed being leached after evaporation, and the brine boiled down—produced 24,331,700 bushels of salt. The salt beds covered 19,088 acres, and there were 17,595 furnaces for reducing the brine. Transportation by sea is now carried on by 607 steamers, of 95,588 tons burden and 21,167 horse power, the sailing ships built in European style numbering 835, of 50-137 tons burden, commanded by 1,366 Japanese and 188 foreign captains, and manned by 7,502 natives. To these are to be added 18,701 junks, with a tonnage amounting to 3,167,096, and 617,618 small boats. Sixty-eight national light-houses and lightships guard the coast, while 77 similar aids to navigation are maintained by local authority or enterprise. In 1891 46 vessels of foreign and 800 of native model were lost or damaged on the coasts or at sea, causing over 622 deaths.

Organized Charity.—Japan has sent hundreds of special missions to Europe and America to study administrative affairs, jurisprudence, and the various arts and sciences calculated to develop material civilization; but study of foreign methods of public benevolence has thus far and rarely been prosecuted by private individuals. Rich nobles and merchants have also generously contributed to literary, educational, and scientific objects, but it is rarely that private munificence founds hospitals, homes, asylums for the sick, aged, or needy. Little work of this sort is done by either Shinto or Buddhist temples. What has been done in benevolent enterprise by the Christian missionaries has been, on account of slender resources, rather by way of stimulating example. The initiation of public charity has been encouraged by their Majesties the Emperor and Empress, who have given handsomely from their private purse. Three imperial ordinances have called attention to the

subject with good effect, especially on behalf of foundlings, victims of calamity, and of contagious diseases. Already a few public hospitals, insane asylums, homes for foundlings, etc., exist in Tokio, Osaka, Akita, and Nagoya, which supplement the work of the private hospital, which are means of income to physicians educated in Western medicine and surgery. The Akita Benevolent Association is the development of an asylum for orphans, the aged, and the unfortunate, which was founded in 1839. The rules and regulations of this association, published April 4, 1892, are now circulated over the empire to encourage imitation. Already charity bazars, concerts, and theatricals are now the fashion, and in Tokio are under the patronage of eminent men and women. The world-famous actor Danjiro in 1892 gave 3 representations in aid of the poor—said to be the first Japanese instance of the kind. There are also the Red Cross Society, and special organizations for relief in epidemics, such as cholera. In case of earthquakes, inundations, fires, and famines, public subscriptions are made, and the Government furnishes relief. In 1891, 784,423 persons were afforded relief in food, shelter, tools, seeds, or by remittance of taxes to the extent of yen 984,095, as compared with 1,165,118 persons at an expense of yen 1,009,286 for the previous year when the great earthquake took place. In 1890, 17,487 sick, infirm, or aged were aided gratuitously by public funds, and 128,872 persons assisted temporarily repaid their loans; 5,431 foundlings were succored at a public cost of yen 28,761.

JEWS. Abroad, one turns first to Russia, where the process of nationalizing, felt by all creeds and classes not of the dominant faith, is peculiarly severe in its relations to the Jews. The silent rebuke of the civilized powers was not without its effect, so far as any open outbreaks are concerned, but the laws of expulsion to the pale are strictly enforced, with their attendant hardships. Within the pale immigration is now assisted by the Government to a certain degree. A rabbinical conference was called by the Czar, and the first sessions were held in November, but its practical result is not yet known. In Germany and Austria-Hungary Semitism is growing less intense. The Ahlwardt disclosures were a boomerang for the party, which is now being understood as hostile not to the Jew alone, but to capitalists in general. The rise of an organization opposed to the anti-Semites, with a journal of its own, supported by many non-Israelites of distinction, is a happy augury. In France the anti-Semites suffered severe defeat. In Switzerland the agitation against the Jewish method of slaughtering animals succeeded, and the subject was discussed in Germany and elsewhere. In Roumania proscriptive measures are still enforced, but in Bulgaria civil and religious liberty is maintained, while Turkey's attitude continues peaceful and progressive. In England the Russian migration, with its effects on the labor world, has been the subject of newspaper and parliamentary debate. It has been shown that the accessions of pauper aliens have been few. Still the problem of Russian immigration remains. A new director has been appointed for the Argentine colonies, and the condition of the

colonists may be summarized thus: In the province of Santa Fé—Moiseville, 486; Monigotes, 69. Province of Buenos Ayres—Mauricio, 789. Province of Entre Rios—Clara, 999; San Antonio, 291. On land purchased by the colonists themselves: Province of Cordoba—Ballesteros, 69; St. Julio, 30. In all, 2,683 colonists, who possess 5,276 oxen, 1,128 milch cows, 331 mules, and 2,076 horses. About 40,000 acres are sowed, mostly with wheat and maize. In addition, over 100,000 vines and fruit trees have been planted in Clara colony alone. Among the colonies are distributed 8 thrashing machines, 8 steam engines, 97 reaping machines, and 6 other machines (steam and horse power) for maize; 24 sowing and 4 mowing machines, besides 1,345 plows, 843 harrows, and 264 agricultural carts. The buildings actually erected are: Moiseville, 91 houses, 1 school, and 1 synagogue, also 150 wells sunk; Mauricio, 314 houses, 2 schools, and 320 wells sunk; Clara, 270 houses; San Antonio, 111 houses, 1 synagogue, 1 school, and 29 wells sunk—a total of 793 houses, 3 schools, 2 synagogues, and 499 wells.

According to the blue book on the census of India, issued this year (although its statistics bear on the year 1891), there were 17,200 Jews in India, of whom 10,500 are in Bombay, 2,800 in Aden, 1,800 in Cochin, and 1,450 in Calcutta. There are two sections of the community—white, and black. In the ranks of the native army are many Jews, who, while maintaining the principles of their faith, have adopted the language and much of the social customs of the Maratta population by whom they are surrounded.

Despite obstacles—social, political, and religious—the Jews abroad continue to display commendable activity in every sphere. In pure science, medicine, and philology their progress is more marked than in literature proper, although there is a gratifying addition to the ranks of young writers in England, Germany, and France in particular. There has been no interruption in the work of erecting new synagogues and public institutions. More attention is being paid to industrial training, and an agricultural school has been organized near Hanover. Special incidents of interest were the gifts of a million francs for a maternity hospital in Paris, without distinction of creed; of a consumptive hospital by Baron Nathaniel de Rothschild, of Vienna, and the late Baron Bleichroeder, of Berlin; the election of Maurice Loewy as Vice-President of the Paris Academy of Sciences; the silver jubilee of Dr. M. Elstatter, Finance Minister of Baden; the appointment of M. A. Isaacs as Solicitor-General for Victoria, and election of Nathaniel Levi and Emanuel Steinfeld to the legislative council; and the lecture by Chief Rabbi Adler, of London, before the Church of England Sanitary Association on "Sanitation as taught by the Mosaic Law." Claude G. Montefiore's Hibbert Lectures were published in London, together with Joseph Jacob's "The Jews of Anger in England," and I. Zangwill's "Ghetto Tragedies." An Anglo-Jewish historical society was founded. S. Alexander was appointed to chair of Logic and Philosophy in Owen's College, Manchester. Dr. Kayserling, of Buda-Pesth, continued his researches as to the Jews and the discovery of America. Among works published about the Jews and Judaism

were Nahida Remy's "Culturstudien über das Judenthum" (Berlin), Leroy Beaulieu's "Israel chez les Nations" (Paris), and Dr. Steinschneider's "Hebrew Translations of the Middle Ages" (Berlin).

At home, the year that has closed was marked by no more suggestive event than the Congress of Religions at the World's Fair. Both in this and in the Jewish Denominational Congress, as well as in the Jewish Women's Conference, the Jews were represented by speakers and essayists of force and ability. In the Congress of Religions papers were presented by Rev. Dr. Gottheil on "Moses"; Miss Josephine Lazarus, "The Outlook for Judaism"; Rev. Dr. Felsenthal, "The Sabbath in Judaism"; Rev. Dr. E. G. Hirsch and Rev. Dr. H. P. Mendes, "Orthodox Judaism"; Rev. Dr. I. M. Wise, "The God Idea in Judaism." In the Jewish Women's Congress the chief papers were by Mrs. Helen K. Weil, Miss Julia Richman, Mrs. Eva L. Stern, Mrs. Pauline Rosenberg, Miss Ray Frank, Mrs. L. Manheimer, Miss Mary Cohen, Mrs. M. D. Louis, Miss Lesem, Miss Henrietta Szold, on subjects connected with Jewish history and literature, and on philanthropic and economic topics. At the Jewish Denominational Congress the programme included the following among its features: "The Synagogue and the Church, and their Mutual Relations with Reference to their Ethical Teachings," K. Kohler, New York; "Contributions of the Jews to the Preservation of Sciences in the Middle Ages," S. Sale, St. Louis; "Popular Errors about the Jews," Joseph Silverman, New York; "Ethics of the Talmud," M. Mielziner, Cincinnati; "A Concise Digest of the History of the Jews as far as their Share in the Culture of the Various Nations and Ages is concerned," G. Deutsch, Cincinnati; "A Jewish Department of the Chautauqua," H. Berkowitz, Philadelphia; "Religious Education of the Jews in Modern Times," Max Heller, New Orleans; "Position of Woman among the Jews," M. Landsberg, Rochester; "Atheism," Ad. Moses, Louisville; "Ethical Judaism: What the World benefited by its Teachings," A. Kohut, New York; "A History of the Education of the Jews, both Public and Private," H. Zirndorf, Cincinnati; "Popular Lectures," Adolph Raden, New York; "Reverence and Rationalism," M. H. Harris, New York; "Attitude of Judaism to the Science of Comparative Religions," L. Grossmann, Detroit; "A Review of the Messianic Idea of the Jews from the Earliest Times to the Rise of Christianity," J. Schwab, St. Joseph, Mo.; "The Historians of Judaism of the Nineteenth Century," E. Schreiber, Toledo, Ohio.

At the sixth convention of the Central Conference of Rabbis, held in Chicago, Aug. 23, Rev. Dr. I. M. Wise presided, and the revised prayer-book, a hymnal, and a union catechism were subjects of debate.

At the second annual session of the American Jewish Historical Society, held in New York, Dec. 27, the papers submitted were as follow: Dr. Cyrus Adler, "Settlement of the Jews in the Ohio Valley"; Rev. Henry Cohen, Galveston, "Settlement of the Jews in Texas"; Rev. Dr. B. Felsenthal, Chicago, Ill., "History of the Jews of Chicago," "What is the Exact Date

of the Trial of Jacob Lumbrozo for Blasphemy?" "A Sermon by Moses Mendelssohn, translated into English and printed One Hundred and Thirty Years Ago," "Concerning the Jewish Congregation in Surinam"; Mr. Herbert Friedenwald, Philadelphia, "Jacob Isaacs and his Petition to the House of Representatives concerning the Conversion of Salt Water into Fresh Water," "Letter of Jonas Phillips, of Philadelphia, to the Federal Convention," "Memorials to the Continental Congress"; Prof. R. J. H. Gottheil, "On a Manuscript Hebrew Translation of a Spanish Book on the Conquest of Mexico and Peru"; Dr. Charles Gross, "Unpublished Documents from the Public Record Office, London"; Mr. J. H. Hollander, Baltimore, Md., "The Civil Status of Jews in Maryland, 1684-1776," "Sketch of Haym Salomon, from an Unpublished Manuscript of Jared Sparks"; Max J. Kohler, Esq., New York, "Phases of Jewish Life in New York before 1800," "The Lopez and Rivera Families of Newport"; George A. Kohut, New York, "Correspondence between the Jews of Malabar and the Jews of New York," "A Petition from the Jews of Germany to Congress," "Some Jewish Wills"; N. Taylor Phillips, Esq., New York, "Family History of the Rev. David Machado," "Unpublished Letters of the Rev. Gershom Mendes Seixas"; Mrs. Isabella H. Rosenbach, Philadelphia, "Aaron Levy."

Among the new works of the year were Rev. M. Fluegel's "Spirit of Hebrew Legislation," Rev. L. Adler's "Sabbath Hours," Max J. Kohler's edition of Judge Daly's "The Jews of North America," Prof. Abram S. Isaacs's "Stories from the Rabbis," "Melodies of the Synagogue," issued by the Jewish Women's Congress, and a further installment of Dr. Jastrow's "Talmudic Dictionary." The Jewish press has been increased by additions in Richmond, Syracuse, Boston, and Portland, Ore.

The fiftieth anniversary of the Benai Berith Order was appropriately celebrated in New York, Philadelphia, and in other cities. Attempts were made to organize young Israel by a Jewish Endeavor Society, and Dr. Berkowitz began his Jewish branch of the Chautauqua. Efforts were made to establish a technical institute in Philadelphia, and, despite the financial panic, nearly a million dollars was raised for the new Mount Sinai Hospital, New York. The condition of the Russian immigrants in New York caused much solicitude, but no concerted attempt is made to divert the stream from the metropolis. Some idea of the extent of the work of the United Hebrew Charities of New York may be gathered from these statistics presented at the annual meeting. There were 5,620 applications requiring action, classed as local poor, and 3,770 Russian and Roumanian cases. In addition there were 4,279 cases in the local department and 525 in the Russian previously investigated and again brought up. Transient relief was also given to 697 persons who were not visited by any committee, but were investigated at the office, and supplies were afforded to 2,714 similar cases; 4,177 persons were supplied with transportation, and 4,432 found employment through the agency of the society, making a total of 55,300 persons who were assisted in various

ways. Among the applicants aided in the local department were 542 widows and 402 persons over the age of sixty years. The total receipts were \$178,910.95; the disbursements, \$177,518.89. Among latter items are: Cash relief, \$64,490.77; transportation, \$88,001.53; supplies and lodging, \$23,552.51; free burial, \$4,610.50; maternity, \$2,551.61; medical aid, \$4,839.10; salaries, \$13,352.48. Work was found for 694 office boys, 230 porters, 104 tailors, 322 laborers,

486 factory hands, 108 clerks, 91 dishwashers, 85 drivers, 12 elevator men, 14 farmers, 9 furriers, 6 bell boys, 6 harness makers, 11 printers, 28 jewelers, 26 locksmiths, 32 machinists, 8 musicians, 13 nurses, 17 packers, 39 painters, 17 plumbers, 12 pocketbook makers, 54 pressers, 72 sales people, 32 domestics, 93 shoemakers, 9 stablemen, 8 tanners, 9 teachers, 72 tinsmiths, 5 typewriters, 12 upholsterers, 9 varnishers, 33 waiters, 24 watchmakers, 20 weavers, etc.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,205 in 1860; 364,399 in 1870; 996,096 in 1880; and 1,427,096 in 1890. Capital, Topeka.

Government.—The following were the State officers during the year: Governor, Lorenzo D. Lewelling, Populist; Lieutenant-Governor, Percy Daniels; Secretary of State, Richard S. Osborne; Auditor, Van Buren Prather; Treasurer, William H. Biddle; Attorney-General, John T. Little; Superintendent of Public Instruction, Henry M. Gaines; Superintendent of Insurance, S. H. Snider; State Bank Commissioner, John W. Breidenthal; Railroad Commissioners, John Hall, P. B. Maxson, W. D. Vincent; Chief Justice of Supreme Court, Albert H. Horton; Associate Justices, W. A. Johnston, S. H. Allen.

Finances.—On July 1, 1890, there was a balance of \$715,188.13 in the State treasury: the receipts for the two years ensuing were \$5,392,531.10, and the disbursements \$5,880,506.72, leaving a balance of \$721,162.52 on July 1, 1892. The balance on Nov. 30, 1893, was \$678,731.50. The State debt, which is not large, is being gradually reduced.

Legislative Session.—The regular biennial session of the Legislature began at Topeka on Jan. 10. At the preceding November election the People's or Populist party had elected its entire general ticket for State officers and a majority of the members of the State Senate, but had failed to secure control of the Lower House. The State Canvassing Board, which met late in November, found, on the face of the official returns, that 15 Republicans and 25 Populists had been elected to the Senate, and 63 Republicans, 58 Populists, and 2 Democrats to the House, while in one representative district (Coffey County) there was a tie vote. As required by law in such a case, the board proceeded to decide by lot which of the 2 candidates should be entitled to the seat, with the result that the Republican candidate was chosen. After the result of the canvass had been declared, an error was found in the official returns from Haskell County, by reason of which the board had certified the election of A. W. Stubbs, Republican, when in fact his Democratic opponent, Joseph Rosenthal, had received a majority of the votes cast. The returns were sent back to the county clerk for correction; but, as the board had performed its duties as required by law and had dissolved, it was claimed that the members could not legally be called together again for the purpose of receiving and

acting upon the corrected returns. In order to test this question, Rosenthal, late in December, began mandamus proceedings in the State Supreme Court against Stubbs, and obtained a decision early in January to the effect that the Canvassing Board could not be reconvened, and that he must await the action of the Legislature. Simultaneously with the beginning of this proceeding by Rosenthal, the Populist candidates for Coffey, Republic, and Jackson Counties brought similar proceedings against their Republican opponents; but their cases were not argued or decided prior to the meeting of the Legislature. The Populists also served notice upon several of the Republican Senators and Representatives that their seats would be contested before the Legislature when it should convene, whereupon the Republicans retaliated by serving like notice of contest upon several Populist members. The charge had been freely made by the Populist leaders since the election that they had been deprived through fraud of their majority in the Lower House, and, as the time for the legislators to assemble drew near, it was asserted that the Republicans, in spite of their apparent majority, would not be allowed to organize that body. The Senate was organized by the Populists without difficulty, but in the House both sides came prepared for a stubborn contest. After a stormy session, 2 Houses were organized—one by the Republicans, in which 63 members participated, the other by the Populists, in which 58 members took part. The 2 Democratic members took no action on either side. George L. Douglass was chosen Speaker of the Republican House, and J. M. Dunsmore of the Populist. The rival Speakers occupied the platform side by side, and each House attempted to conduct its business regardless of the other. The Republicans at once proceeded to admit Rosenthal to the seat for which the Republican candidate, Stubbs, held the certificate, the latter having refused to participate in the organization of the Republican House or in any way to take advantage of the error by which the certificate was given him. The Populists, after electing officers, proceeded to unseat 18 Republican members without investigation of the merits of each case, and installed in their places 11 Populists, securing in this way an apparent majority. Both Speakers remained in the chair all night, the Republicans fearing to adjourn lest they should be locked out of the Capitol, which was then controlled by Populist officials. An understanding was finally reached, by which both sides were allowed access to the Representatives' hall pending a settlement of the

controversy. No change in the situation occurred on the second day: but on Jan. 12 Rosenthal and his 2 Democratic colleagues, who had heretofore been neutral, announced that they regarded the Republican majority as forming the only legally organized House, and that they would hereafter act with it. In spite of the fact that the Douglass House now contained 66 members, all holding legally issued certificates, the Populist Governor, Lewelling, later in the same day, sent a communication to the Dunsmore House recognizing it as the legally constituted House of Representatives. On the following day the Populist Senate gave its recognition to the Dunsmore organization, which now had every equipment for the transaction of business except a majority of the persons holding certificates of election to the House. For several days the contest remained unchanged, each House holding regular sessions. On Jan. 18 Gov. Lewelling issued a manifesto, defending his course, from which the following is an extract:

Being personally satisfied that the Populist House had a majority of the *legally elected* Representatives, notwithstanding the possession of the majority of certificates by the opposite party, I deemed it my duty to recognize it as the House of Representatives. The Senate is presumed to have been governed by like considerations.

In reply, Speaker Douglass issued a counter-manifesto, from which the following paragraph is taken:

It has been the universal custom in this State, and is the accepted rule in parliamentary bodies, that members whose election has been ascertained in the usual way, and who have received from the constituted authorities the proper certificates of election, are *prima facie* entitled to seats in the body at its organization. If any other rule were adopted, no legislative body could ever be fairly organized, for a minority could always give notice of a sufficient number of contests to destroy the right of the majority to organize, and by placing the minority in control, it could maintain such control without limit. Every recognized authority upon this question is conclusive.

If, after a majority of the members of a House have regularly organized and proceeded to business, a minority of 58 members, by first mutilating an official roll and calling in 10 contestants for seats, can organize a House of Representatives, then one member can do so with the aid of 62 contestants, and there is an end to even the semblance of constitutional government. If the recognition of the Governor and the Senate can make such a body a part of the Legislature, there is little necessity of electing a House of Representatives by the people, for its political complexion will always be at the mercy of a partisan Governor and a partisan Senate.

On Jan. 23 a caucus of the Republican legislators was held, at which Joseph W. Ady was nominated on the third ballot as the party candidate for United States Senator, his principal competitor being United States Senator B. W. Perkins. The law required that on the following day a ballot for Senator should be taken in each House. In the Senate the Republicans voted solidly for their candidate, while the Populists, who had not yet agreed upon a candidate, scattered their votes. In the Dunsmore House the votes were also divided among several candidates, while the Douglass House voted for Ady. Later in the same day the Populist caucus succeeded in nominating Judge John Martin, a

Democrat, as its candidate, the vote on the fifteenth and final ballot being: Martin, 49; Judge Frank Doster, 35. On the next day, Jan. 25, the Houses met in joint session, over which the Populist Lieutenant-Governor presided. As he proceeded to recognize the Populist House, the Republicans refused to answer the roll call. Ninety-one members responded to their names, of whom 11 were Populists holding seats in the Dunsmore House by virtue of the attempted unseating of Republicans. Without these there was no quorum. When the vote for Senator was taken, two Democrats, Senator O'Brien and Representative Rosenthal, who had not before recognized the Dunsmore House, voted with the Populists, and Wilson, the independent Republican from Meade County, who up to this time had been acting with the Republicans, recognized the Populist presiding officer and gave his vote to the Populist caucus candidate. The result of the ballot was the election of Martin, who received 86 votes to 4 for M. W. Coburn and 1 each for W. S. Hanna, F. J. Close, and S. H. Snider. Before the result had been announced, Senator Baker demanded that the Republicans be given the right to vote. This was refused, the election of Martin was declared, and the session dissolved. Thereupon the Republicans organized a second joint session, elected Speaker Douglass president, and passed a resolution declaring that as ten of the members who had voted in the former joint session were not entitled to their seats, there had been no election. A ballot was then taken in which 77 votes were cast for Ady, and the session adjourned. This attempt to elect a Republican claimant to the senatorial office was soon abandoned, as the Republicans could not hope to secure a majority of the Legislature in a joint session. Both parties now sought to affect a settlement between the rival Houses, but without success. The Republicans were anxious to bring the questions at issue before the State Supreme Court, but such a proposition was scouted by the Populists. Finally the Republicans decided upon the plan of arresting Ben. C. Rich, chief clerk of the Dunsmore House, and bringing him before the Douglass House to answer for contempt of the latter in interrupting and hindering its proceedings. They believed that Rich would resist imprisonment through *habeas corpus* proceedings, which would bring the whole question into the court. The arrest was made on the afternoon of Feb. 14 by the sergeant at arms of the Douglass House, but the fact soon became known to the Populists, who rallied and finally released him and escorted him to the Governor's office. During the conflict 2 Republicans were knocked down, and several men on each side were badly bruised. The encounter occurred in the center of the city and created great excitement.

After this episode the Populists decided to lock the Republicans out of the hall of Representatives. Sheriff Wilkerson, of Topeka, Republican, was called upon by the Governor to assist him in preventing their entrance, but refused to obey. When, therefore, on the morning of Feb. 15, the Republican members reached the Capitol they found it guarded by Populists. Rushing past the guards, in spite of threats,

they succeeded in reaching the hall only to find the doors locked. Sledge hammers were brought into use, and, the doors being forced, they entered and took possession of the hall. As soon as the Populists learned what had been done, Gov. Lewelling was notified, and he promptly called out the militia and instructed them to proceed to the hall and eject the Republicans from the floor.

Meanwhile the latter, fearing trouble, proceeded to bolt the doors and barricade the entrances to the hall. Several companies of the militia soon appeared and were drawn up around the Capitol, awaiting orders, and cannon were brought out from the arsenal. The Republicans found themselves besieged. The heat was turned off from the hall, and no food was allowed to pass through the militia lines. At this juncture Gov. Lewelling appeared before them and urged them to abandon the hall and prevent a conflict, but was met with a prompt refusal. The commander in chief of the State militia, Col. Hughes, was a Republican and a member of the House. Late in the evening of this day he appeared before his colleagues and informed them that he would sooner resign his command than carry out an order to eject the Republican House, and that a majority of his command would withdraw from the militia with him. He further intimated that orders to the guards, so far as they related to the taking of provisions into the hall, had been relaxed. Hardly had this been said when a string was dropped out of every window, and in shorter time than it can be told baskets filled with substantial lunches were hoisted up, and the Republicans broke their long fast.

Telegrams were sent by the Governor to various parts of the State, ordering out the militia, while at the same time, in response to other telegrams, hundreds of Republicans hastened toward Topeka, bound to see that the Republican legislators were protected. It soon became evident that the Governor could not rely upon the militia, which was officered largely by Republicans and could not be trusted to obey his orders in ousting a body of men with whom these officers were in sympathy. The feeling on both sides was intense, and the slightest friction would have precipitated a conflict. Cooler heads sought to effect a peaceful solution of the difficulty, and on Feb. 16 various propositions were submitted on both sides and discussed. Finally, on Feb. 17, an agreement was reached by which the Republican House was given undisputed possession of the hall, and the Populist House agreed to hold its meetings elsewhere; no arrests were to be made by either House of the members or officers of the other; the militia was to be disbanded, and the *posse* of Sheriff Wilkerson to be dismissed. This truce left the real difficulty still unsettled, but the Republicans had already made up a case for the court. On Feb. 15 the sergeant at arms of the Douglass House had arrested L. C. Gunn, of Topeka, on the ground that he had refused to appear before a committee of that House when summoned. He applied to the Supreme Court for a writ of *habeas corpus*, and the case was heard on the following week, Gov. Lewelling and the Populists being represented by counsel. A decision

was rendered on Feb. 25, two of the three judges (both Republicans) deciding in favor of the Douglass House, the third judge (a Populist) dissenting. In the face of this decision it was impossible for the Dunsmore House to maintain its organization with any pretense of right, and on Feb. 26 it disbanded and those of its members who held certificates of election joined the Douglass House, recognizing its legality. Seven weeks of the session had already been consumed in this wrangle, and only a few days remained for legislation. But this time was well utilized. One of the most important enactments was an Australian-ballot law, applicable to all elections for national, State, district, county, city, and township officers. It contains the usual provisions for nominating candidates by conventions or nomination papers. Except in case of municipal elections, the county clerk shall have charge of preparing and printing the official ballots. The names of all candidates shall be printed on each ballot, the nominees of each party being arranged in a column under the party name. Plain white paper, through which the printing can not be read, shall be used. Voters shall indicate their choice by marking a cross opposite the name of each candidate of their choice, or by writing in a name and placing a cross opposite thereto. Each polling place shall contain voting booths, and the door or curtain shall be closed when the voter is preparing his ballot. Employees are allowed two hours without loss of pay in which to vote on election days. The polls shall be open from eight o'clock in the morning till six o'clock at night.

An act to prevent corruption at elections requires every candidate and every political club and committee to file sworn itemized statements of election expenses with the county clerk within thirty days after every election. It was made unlawful for a candidate to hire any one to work in his interest on election day, and various forms of bribery were defined and punished.

Several acts were passed designed to drive money lenders from the State. One of these provides that all debts not payable in legal-tender notes shall be payable in standard silver or gold coins authorized by Congress, all stipulations in the contract to the contrary notwithstanding. Another provides that in all execution sales, and in all foreclosure proceedings (notwithstanding any provisions of the mortgage), the owner shall have eighteen months in which to redeem, and meanwhile shall be entitled to possession of the property.

All private corporations, except steam railroads and corporations engaged in producing farm and dairy products, are required to pay their employees weekly. Coal miners are authorized to employ a check weighman to care for their interests in the weighing of coal mined, and it is provided that all coal shall be weighed before being screened.

A valued-policy law, making the amount of insurance the measure of damages in case of total loss, was enacted.

For each of the fiscal years 1893-'94 and 1894-'95 a State tax of 3½ mills was authorized for current expenses, and an additional rate of two tenths of a mill for interest on the State debt. Suitable provision was at last made to se-

cure an exhibit of the resources of the State at the Chicago World's Exposition, the sum of \$65,000 being appropriated for that purpose. Among other appropriations were the following: \$50,000 for an additional wing to the State Normal School; \$70,000 for a detached ward cottage at Ossawatimie Insane Asylum; and \$50,000 for a physics and engineering building at the State University.

A constitutional amendment granting women equal rights of suffrage with men was adopted, and its submission to the people at the next election provided for.

Other acts of the session were as follow:

To prevent the introduction of cholera and other infectious diseases.

To provide for the construction and maintenance of levees.

Requiring railroad companies to stop at least one passenger train a day going in each direction at every county seat through which their line runs.

Requiring every telegraph company to maintain an office at every county-seat through which its line runs.

Education.—In 1892 the number of persons of school age in the State was 498,801, of whom 382,225 were enrolled in the public schools. This is a loss of 7,345 from the enrollment of 1891. The average daily attendance was 239,299, a decrease of 6,803 from 1891. There were 9,123 school districts in the State, and 9,088 school buildings. During the year 179 new schoolhouses were erected at a cost of \$151,620. To 3,722 male teachers an average monthly salary of \$52.10 was paid, and to 6,716 female teachers an average monthly salary of \$35.42.

The total amount of money received during the year 1891 for school purposes was \$5,044,299.68, of which the sum of \$3,538,450.91 was received of county treasurers from district school taxes. In 1892 the whole amount received was \$5,010,981.97, of which \$3,539,986.11 was received from the treasurers of the several counties of the State from district school taxes.

Prisons.—At the State Penitentiary there were 837 prisoners on Dec. 1, 1893.

The Legislature of 1885 made an enactment providing for a State reformatory for male criminals between the ages of sixteen and eighteen. Propositions came from several cities of the State for the location of this institution, and the commission appointed to locate it selected Hutchinson, and a structure there exists in an unfinished condition, although \$260,000 has been expended in its erection.

Prohibition.—The following is an abstract from the Governor's message upon this subject:

Prohibition is a part of the law of Kansas; not only statutory law, but a part of the Constitution of the State. A very large class of our people earnestly believe in the efficiency of the law, while a respectable element are not personally in favor of prohibition. Many of those who live in the larger towns and cities believe that the expense resulting from an honest, faithful effort to enforce the law exceeds the good results obtained, and is greater than the people should be made to bear. In the rural districts the law seems to be generally enforced; but it is not so well supported by public sentiment in the centers of population. Extraordinary powers have been placed in the hands of the executive for the enforcement of the law in cities of the first class through the metropolitan police system. It is un-

fortunate but true that these powers have in great measure been nullified by various law-evading devices, while serious evils have followed almost, if not quite, as objectionable as the one sought to be destroyed. In many places public sentiment seems to have encouraged and connived at the open violation of the law, and thus contempt is brought upon the authority of the State.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 40,400 square miles; population in 1890, 1,858,635. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, John Y. Brown; Lieutenant-Governor, Mitchell C. Alfred; Secretary of State, John W. Headley; Treasurer, Henry S. Hale; Auditor, L. C. Norman; Attorney-General, William J. Hendrick; Superintendent of Public Instruction, Edward P. Thompson; Commissioner of Agriculture, Charles Y. Wilson, all Democrats; Insurance Commissioner, Henry T. Duncan; Register of the Land Office, G. B. Swango; Railroad Commissioners, C. C. McChord, C. B. Poyntz, and Urey Woodson; Chief Justice of the Supreme Court, William H. Holt, Republican; Associate Justices, William S. Pryor, Joseph H. Lewis, and Caswell Bennett; Clerk of the Court of Appeals, Abram Addams, Democrats.

Finances.—The following general statement is given in the Auditor's biennial report:

At the close of the fiscal year ending June 30, 1891, there was in the treasury a balance of	\$11 04
The receipts for the year ending June 30, 1892, were.....	4,594,149 54
Making a total of.....	\$4,594,160 58
Expenditures for the same period.....	4,307,703 68
Leaving a balance, June 30, 1892.....	\$216,451 90
The receipts during the year ending June 30, 1893, were.....	4,128,788 24
Making a total of.....	\$4,340,285 14
Expenditures for the same year.....	4,160,758 84
Leaving a balance, June 30, 1893, of.....	\$179,491 80

The total taxable property for 1892, as returned by the county assessors, under the assessment made under the old law in the autumn of 1891, and equalized by the State Board of Equalization, was \$552,764,538; and for the year 1893, under the assessment made in the autumn of 1892 under the schedule of the new law, \$596,799,076.

Valuations.—The proportion of assessed to cash value of property has been 70 per cent., but this year, by reason of the new revenue law requiring a fair cash valuation, the Board of Equalization raised the per cent. to 80, holding that rate as the proper proportion to arrive at a fair adjustment of the assessed valuations as between counties, based on the previous year's cash transfers of property. The land and personalty subject to equalization, which excludes bonds, stocks, cash, etc., was assessed for 1893 in round numbers at \$321,132,000. The tax rate for 1893 was 42½ cents on each \$100 valuation, while the tax rate for 1892 was 47½ cents.

Banks.—The tables compiled from official data showed that from January to September only 7 bank failures occurred in Kentucky. The report of Kentucky banks outside of Louisville, for October, showed the reserve held to be 26.50 per cent., the required per cent. being 15.

Railroads.—The Railroad Commission completed its work of fixing assessments in December. The total assessment of railroad property in the State is \$55,005,765—last year's assessment \$52,316,038—making an increase of nearly \$3,000,000 on the last year, or \$21,000,000 more than the railroads themselves fixed the value on their property.

There have been built during the past year 59.47 miles of road, though these are mostly extensions, no road in the State building road to a greater extent than 16 miles. Several old pieces of road have been abandoned, which leaves the actual total mileage increase at 36.

A contract was given in December for building 60 miles of railway in eastern Kentucky, connecting the coal fields of Pike County with the Big Sandy river at Whitehall.

The Court of Appeals rendered a decision in October in what is known as the Railroad case. The act of 1884 exempted newly constructed roads for five years from the beginning of the construction. The act of 1886, the Hewitt revenue bill, is held by the court as repealing the act of 1884 and withdrawing the exemption, not, however, to affect the roads that were actually begun before Sept. 14, 1886. The lower court held that the exemption continued, and was not repealed by the Hewitt bill. The result will give the State probably \$100,000.

Another decision by the Court of Appeals affecting railroads was that a regulation of a railroad company requiring a passenger entering a train without a ticket to pay 25 cents extra fare, this sum to be refunded upon the presentation to any ticket agent on the road of a "rebate check" furnished by the conductor, was not unreasonable, and that where a passenger, with knowledge of the rule, and with knowledge of the fact that there was no ticket office at the station for which he was destined, failed before starting on his journey to buy a round-trip ticket, which he knew he could procure, he could not complain that upon his return he was ejected from the train on his refusal to pay the 25 cents extra.

State Institutions.—The number of patients in the lunatic asylums at the end of the year was 2,337—625 in the Western, 942 in the Central, and 770 in the Eastern. The institutions are full.

At the end of the year 1,103 convicts were confined in the Frankfort Penitentiary, and 504 at Eddyville.

A long controversy has been going on in reference to the accounts between the State and the Mason & Foard Company, which for some time had the lease of the labor of convicts at the Frankfort prison. A report made by the sinking fund commissioners in February made claim to \$38,193.85 as due the State from the company; but a minority report of the Governor and the Secretary of State claimed an indebtedness of \$94,000. On the other hand, the company claimed that the State was indebted to it. The minority report of the commissioners implied mismanagement on the part of a former administration.

The contract expired April 1, though the company had the option of renewing it. This they gave up, and bids were advertised for leasing the labor of the prison as a whole, but none were received. Then the Legislature authorized the

lease of the convict labor by the day at so much per head, and bids were again asked. None were entered except from the same company, which made 2 bids—1 for 500 men at an average of 37½ cents a day, the State to furnish the fuel, and the other for the same number at 35 cents, the company furnishing the fuel. Difficulties arose in the attempt to settle the terms of the contract, and it was not made. The commissioners, in August, decided to conduct a chair factory in the prison on the State's account. Nov. 1 convicts to the number of 150 were set at work, and the Governor's message stated that at the beginning of 1894 about 600 were employed, a contract having been made to dispose of the output to the extent of \$18,000 a month.

The case of accounts between the State and the Mason-Foard Company was taken into the courts. The commissioner to whom the case was referred for proof and auditing of the accounts, reported that the State owed the lessees \$12,234. The matter still remains to be settled.

Education.—An important opinion in reference to the use of the school fund was given by the Attorney-General this year, in answer to the Auditor, who wished to know whether a bill for stationery furnished the Department of Public Instruction could legally be paid out of the fund set apart for the maintenance of public schools. The Attorney-General gave as his opinion that the common-school fund could not be so used, it evidently having been the intention of the framers of the law to place that fund beyond the reach of any attempt to turn it aside from the purpose for which it was originally designed.

It appears that there is also ambiguity in the new Constitution on the subject of the manner of voting for school trustees, and of those entitled to vote.

Local Option.—Great excitement was caused in Breathitt County, June 4, by the blowing up with dynamite of the "Hustler" office by unknown persons. The "Hustler" is a weekly paper, edited by the Rev. J. J. Dickey, and its influence resulted in the recent passage of a local-option law.

A local-option election was held at Bowling Green, July 1, and resulted in a victory for the temperance people by a majority of 28. An all-day prayer meeting, women at the polls, and the ringing of church bells added to the excitement.

At Paducah the opponents of local option filed a petition, July 1, with the county judge, signed by about 800 voters, praying that he order an election to decide whether spirituous, malt, and vinous liquors shall be sold in that city. This action of the liquor men was to forestall the local-option people, as, if the city election was held, no other election could be held involving the same question for three years.

Whisky.—As great interest centers in the stocks of whisky in Kentucky, the following table has been prepared to show what the stocks were in the State at the end of each month from June 30, 1892, to June 30, 1893, in gallons:

June 30, 1892.....	82,851,182	Jan. 31, 1893.....	82,391,775
July 31.....	81,700,561	Feb. 28.....	86,221,723
Aug. 31.....	79,349,296	March 31.....	90,171,965
Sept. 30.....	77,556,471	April 30.....	92,164,349
Oct. 31.....	76,315,697	May 31.....	94,711,082
Nov. 30.....	76,314,158	June 30.....	93,839,382
Dec. 31.....	73,915,553		

The production for the year (that of June, 1893, being estimated) was placed at 22,549,281 tax gallons, or 563,762 barrels. The tax on this amounts to \$19,294,352.90. Forged whisky warehouse receipts to the amount of \$250,000 were found in March to have been floated, a large part being held by Louisville banks.

Road Convention.—The State Road Convention met at Bowling Green in April. The Committee on Road Law recommended the adoption of the Sims law by the Legislature. This law puts the control and repairing of all roads of dirt, stone, gravel, or other material in the hands of the fiscal or county courts. It provides that a yearly tax of 25 cents on the \$100, and a capitation tax not to exceed \$1.50, shall be levied for the construction and maintenance of roads.

Natural Gas.—Great excitement was caused in the early part of the year by the discovery of oil and natural gas at Petroleum, in the southern part of the State. A Pittsburg company leased a large tract in the section, and bored wells, one of which emitted a stream of natural gas, and the others oil. The discovery raised the price of land from \$2 to \$100 an acre.

The Lottery.—A decision was rendered Dec. 16, by the Court of Appeals, against the lottery in the State. The decision holds that the State had no constitutional right to contract its police powers away, and the purchase of the lottery franchise by authority of the Legislature will not stand. The general offices and branches of the Frankfort lottery were closed Dec. 18.

Chickamauga.—The State commissioners appointed to locate the positions of Kentucky troops on the battlefield of Chickamauga—now a national park—were on the ground in October. Kentucky had 18 regiments engaged on the National side in the battle, and 5 on the Confederate side. The positions of the Orphan Brigade and the spot where Gen. Hardin Helm fell, and the point at which Gen. Croxton's brigade opened the battle were fixed, as well as other points of interest to the Kentucky soldiers.

The Muhlenberg Taxes.—An armed force of deputies was taken by the United States marshal to Central City, in May, to enforce collection of the county-bond taxes. The marshal had instructions to see that the special collector of taxes for that county, appointed by the United States circuit court, was protected from violence while engaged in his duty, and to protect all property that may be seized for taxes. This is the culmination of a long litigation, in which the people of Muhlenberg County have sought to resist their bonded indebtedness, which was originally \$400,000, voted in 1868, in aid of the construction of the Elizabethtown and Paducah Railroad, 26 miles of which runs through Muhlenberg County. For five years after making the subscription the county levied and paid a sufficient tax to keep the interest on its bonds paid up. Then a spirit of repudiation took possession of the dominant element in the county, which resulted in the resignation of the justices of the peace, who, they supposed, had exclusive power to levy taxes, and the refusal of the sheriff to collect taxes. Early in 1885 a funding board proposed to compromise the debt by issuing new bonds for 80 cents to the dollar of the old debt, having twenty years to run at 6 per

cent. Up to July, 1885, about one third of the debt had been refunded, when 600 or 700 citizens filed a bill in the Muhlenberg circuit court enjoining the funding board from further refunding, the county judge from further levying taxes, and the sheriff from collecting taxes, or to pay either the original or the compromise bonds. This case was transferred to the United States circuit court, where the injunction was discharged. It was then appealed to the Supreme Court, which court remanded it to the State court. The State court discharged the injunction, and the Court of Appeals, in February last, affirmed that decision. In April the special collector made affidavit that he was threatened with violence, and the bondholders obtained an order directing the marshal to go into Muhlenberg County and enforce the collection of taxes and protect the collector. The debt, with interest from 1873, amounted to nearly \$1,000,000.

The residents of the county deny that the collector has ever been in any danger. A meeting of citizens was held at Greenville, May 29, and it was agreed that the county court should levy a tax of \$1 on each \$100 worth of property, to be based on the assessment of 1892, the tax to be collected by the sheriff.

Legislative Session.—The Legislature met in January, and adjourned July 8. Judge William Lindsay, Democrat, was elected United States Senator, to fill the vacancy caused by the resignation of John G. Carlisle, by a joint vote of 79 against 19 for Augustus E. Willson, the Republican candidate. The term will expire March 4, 1895.

The question of removal of the capital came up, Louisville, Lexington, Danville, and Bowling Green, being the competing sites. The name of Louisville was selected to fill the blank in the bill, and then the bill was voted down. Frankfort was illuminated on the evening of the day the vote was taken.

A new charter, granted to Louisville by the Legislature, was vetoed, on the ground that it permitted banks, trust companies, and the like, to be taxed by license or by a certain percentage of their gross incomes, while the Constitution provides that taxes "shall be uniform upon all property subject to taxation," and "all property, whether owned by natural persons or corporations, shall be taxed in proportion to its value, unless exempted by this Constitution; and all corporate property shall pay the same rate of taxation paid by individual property."

A bill on charitable institutions was vetoed. It was similar to the old bill, except that it abolished the Institution for Feeble-Minded Children and provided for the maintenance of an asylum for insane women instead. It was vetoed on the ground that it was unconstitutional, violating the provision that no law shall relate to more than one subject, and that shall be expressed in its title. Many other bills and resolutions were vetoed on constitutional grounds.

The act prohibiting the sale of intoxicating liquors was repealed for certain counties and certain precincts, according to the operation of the local-option law.

Other acts passed and approved were as follows:

Accepting the provisions of an act passed by Congress to apply a portion of the proceeds of the public lands to the more complete endowment and support of the colleges for the benefit of agriculture and mechanic arts.

Authorizing persons whose lands have been sold for taxes prior to Jan. 1, 1893, and purchased by the State or county, to redeem them.

Providing for and regulating the ventilation of coal mines.

To confirm the validity of funding and refunding bonds issued by cities of the second class under and by virtue of an act approved July 4, 1892.

Definitely fixing the compensation of the Governor at \$6,500 a year.

Dividing the State into 38 senatorial districts.

Regulating the sale of dynamite.

Repealing all laws and parts of laws that authorize a municipality to become a stockholder in a company, association, or corporation, or to obtain or appropriate money, or to loan its credit to any corporation or individual, and declaring an emergency.

Requiring officers and directors of incorporated burying grounds to make annual reports of their financial condition to stockholders therein.

Prohibiting barbering on Sunday.

To protect citizens from empiricism. This is described under the head of medical registration.

To regulate the liability of insurance companies that take life or accident risks on live stock.

To establish a State board of pharmacy.

To provide more fully for protection of the lives and health of persons employed in coal mines.

Defining the property rights of husband and wife—the proportion of estate falling to the survivor in case of the death of either.

Resolutions were adopted as follow:

Providing for the appointment of a committee to investigate the operations of the geological survey. Providing for a committee to inquire as to the probable cost of constructing and maintaining a house of reform. Directing the Attorney-General to prosecute lottery companies. Instructing the State's delegation in Congress to vote for granting franking privilege to State Commissioners of Agriculture. Providing that the inspector of mines serve as curator for the cabinet and property of the geological survey.

Political.—The Republican League of the United States met in convention at Louisville, May 10 and 11. The ratio of representation

was 6 delegates at large from each State and Territory, and 4 from each congressional district, and 1 from each college Republican club in the United States. The National Convention of the American Republican college League was held at the same place, May 11. Delegations from 33 States responded at the opening roll call. Resolutions were adopted expressing

Satisfaction in the passage of a general law for the safety of life and limb of railway employees, upon recommendation of President Harrison, by a Republican Congress and in conformity with the expressed pledge of the National Republican Convention. Declaring faith in a genuine secret-ballot law, fortified by efficient acts for the suppression of corrupt practices in elections. Recommending the establishment of a system of arbitration for the adjustment of differences arising between labor and capital. Demanding the abolition of private armed forces represented by the Pinkerton and like agencies, and the suppression of all public gambling, whether in food products or by means of lottery tickets. Urging an amendment to the Constitution making the President ineligible to a second term. Expressing a desire to see the Monroe doctrine enforced, and declaring that, since "the Democratic party, for the first time in thirty-two years, has succeeded to power in both the executive and legislative departments of the Government, we now direct attention to the fact that it should either give the people a fair trial of the policies advocated in its initial platform, or admit that it gained supremacy by gross misrepresentation and hypocrisy.

A resolution recommending to the favorable consideration of the Republican clubs the question of woman suffrage was referred to the Committee on Resolutions, which reported adversely. When put to vote in the convention, it was adopted by a vote of 875 to 185. The convention adjourned to meet in Denver in May, 1894.

Elections were held in November for members of the General Assembly. A light vote was cast. There was a Democratic gain, attributed partly to the redistricting of the State by the last Legislature. The Populists lost heavily, their leading man, Pettit, candidate for State Senator, being defeated by a large majority. The Democrats elected their candidate for Mayor of Louisville by 6,672 majority.

L

LABOR CHURCH. The Labor Church is the name of a religious movement which has made considerable advance among the working men and trades unions of England. Dissatisfied with the preaching and various features of the services and usages of the regular churches, whether established or dissenting, they have withdrawn from them, and have set up organizations of their own, chiefly in the business and industrial centers of the country, choosing preachers from among their own number. The following statement of principles of the organization was distributed through the congregation at the institution of the Labor Church in Birmingham, Oct. 8:

1. The labor movement is a religious movement.
2. The religion of the labor movement is not a class religion, but unites members of all classes in working for the abolition of commercial slavery.

3. The religion of the labor movement is not sectarian or dogmatic, but free religion, leaving each free to develop his own relations with the power that brought him into being.

4. The emancipation of labor can only be realized so far as men learn both the economic and moral laws of God, and heartily endeavor to obey them.

5. The development of personal character and the improvement of social conditions are both essential to man's emancipation from moral and social bondage.

LIBRARY ECONOMY, PROGRESS OF. In the "Annual Cyclopædia" for 1886 appears an article giving a brief *résumé* of the publications of the Bureau of Education on "Public Libraries in the United States"; a short historical account of the inception, growth, and work of the American Library Association; a general statement of the principles and practice of library economy as then understood; and a summary of the latest report of the Commis-

sioner of Education (1884-'85) on library statistics.

This paper therefore takes up the subject in its various branches at that point, bringing statistics, etc., up to date as far as possible. Fortunately for our purpose, appears just at this time the second special "Report on the Public Libraries of the United States," as well as the "Statistics of Public Libraries in the United States and Canada," for 1891, by Weston Flint, statistician of the Bureau of Education (Washington, 1893). The present has been called the golden age of libraries in America; that it is so is due, more than to any other cause, to the appreciation of the work of libraries by the Federal and State governments, and to the generous aid they have given to the undertakings of the Library Association. Commissioner Harris, in his letter of transmittal, says:

Next after the school and the daily newspaper comes the library in instructive power. These three institutions are the great secular means which our people have to prepare themselves for their singular destiny. The school, for the most part, finds its function in teaching *how* to read; the newspaper and the library furnish *what* to read. It is clear that one of the most important interests in education is to be found in connecting closely the common school with the public library. It is common to call a person educated who knows the rudimentary branches. . . . By these he is enabled to help himself to the information and wisdom stored up in the library. He is prepared to begin the work of educating himself. To be educated in any true sense of the word, he must use the library, and master the experience of mankind. The school gives the preliminary preparation for education, and the library gives the means by which the individual completes and accomplishes his education.

Mr. Harris discusses at some length the advantages and disadvantages of both oral and text-book methods of teaching, and says: "The American school has some sort of justification for its much-blamed adherence to the text-book method. . . . What is good in our American system points toward this preparation of the pupil for independent study of the book by himself. It points toward acquiring the ability of self-education by means of the library." He then mentions a "practical device" by which the common school and the library can work together to the great advantage of the student, namely, supplementary reading at home, and, calling the library "the most important link in the great movement that has recently spread hither from England—university and school extension," adds:

Another great point is that the books are taken home by the pupils into families who have no accumulation of books, or, at best, only of such books as lack popular interest. These books taken home are picked up by the parents, and older brothers and sisters, and read by them. This makes the supplementary reading system an educator of the people as people—an extension of the school that is of vital importance. . . . The school, the newspaper, and the library, working together in mutual helpfulness, will form the very potent means of education which is necessary for the universal elevation of the people that characterizes the history of the world at the present day.

Dr. Nörrenberg, custodian University Library, Kiel, Germany, in charge of the German library exhibit at the World's Fair, who has made a

careful study of American libraries and their administration, said, in an address at Chicago: "You Americans are kind enough to say Germany is ahead in higher education and universities, but I will say America is ahead of the whole world in the education of the people by public libraries." James D. Brown, Librarian Clerkenwell Public Library, London, says, in his report to his commissioners of his visit to American libraries and to the World's Congress of the Columbian Exposition: "In one very important respect the American libraries are superior to those of Britain, and that is the closer connection which has been established between schools and other parts of the educational machinery of the country. This has resulted in a more generous recognition of public libraries than has been obtained in Britain, and furnishes an example which might well be copied by our government, when an extended scheme of education comes to be considered."

It is undoubtedly along this line of new departure that the libraries of the United States have made their greatest and most admirable progress in the past ten years. The function of the public library as a public educator having been recognized by Federal, State, and municipal governments, the libraries' department is everywhere being rapidly organized as a legitimate and necessary part of the educational system. The other forms of school and school-district libraries having been found faulty and cumbersome in mechanical detail (entailing upon the school management duties and labor, additional to the work of teaching, impossible to carry on efficiently and successfully), these libraries are being, in many parts of the country, merged in the public libraries. Several of the largest and finest libraries of the United States are of this class—notably the Public Library of St. Louis—a model of its kind. The schools are relieved of the care of their necessarily small collections of books, and are given all possible privileges in the use of the large libraries, which themselves, being usually under the control of the boards of education, are being specially adapted to educational work. This is the central idea of the unique and new library law of the State of New York, which places all such institutions under the control of the Regents of the University. As an adjunct of university extension work, *traveling libraries*, with their annotated lists and appliances for carrying on the work of the library, are sent out free of charge from the Public Libraries Department of the State Library at Albany to any town or village of the State which may make application for such privileges to the Regents of the University.

Another growing educational feature of the public libraries is their union, usually under one roof, with art, industrial, and trade institutes, as the Buffalo Library and the Pratt Institute of Brooklyn. This kind of library has notable examples of long standing in England, as the Birmingham Public Library and Art Institute, and the Liverpool Free Library.

Statistics.—The following is a summary of the second volume of "Statistics of Public Libraries in the United States," issued in 1892:

The list in the first volume endeavored to record all libraries of 300 or more volumes, while the second

volume contains only those of 1,000 volumes and over. To make a comparison, therefore, between the two it is necessary to deduct from the list of 1885 all libraries so small as to be excluded from the list of 1893. Omitting these, the report for 1885 contained 2,987 libraries. The present report gives 3,804, or an increase of over 27 per cent. The proportion of growth averages nearly 2,000 volumes to each library, or an increase in books of 66 per cent. In other words, in less than a decade the number of books accessible to readers has increased 12,000,000, or rather more than 1 book to every 6 inhabitants.

In the main list, which fills all but 33 pages of the report, the information is entered under the following heads: State and post-office; name of library; founded; own or rent building; how supported—taxation, rent, corporation, fees; circulating, reference, or both; free or subscription; class—general, theological, school, college, society, medical, law, etc.; number of bound volumes; number of unbound pamphlets; number of bound volumes added during 1891; number of unbound pamphlets added during 1891; number of volumes issued for home use; number of volumes issued for use within the library; amount received from taxation, 1891; amount received from other sources; amount of permanent endowment; amount expended for books in 1891; value of building; librarian or reporting officer.

Mr. Flint, in his introduction, has tabulated a most interesting series of statistics, covering the following subjects: Statement of statistics of libraries in the United States in former reports, 1870-190; libraries in the United States in 1891 of 1,000 volumes and over, summary of statistics of, classification according to size; summary of statistics as to support of libraries in the United States; summary of statistics of libraries in the United States as to ownership of buildings, circulating or reference, free or subscription, etc.; summary of statistics of libraries as to class; general summary of statistics of libraries in the United States as to number of volumes, population to library, and books to every 100 of the population in 1891; distribution of libraries in the United States, and the number of volumes, by geographical divisions; increase in number and size of libraries from 1885 to 1891; general summary of statistics of number of libraries, volumes, population to library, and books to every 100 of the population, in 1885; increase in number of libraries from 1885 to 1891; increase in number of volumes in libraries from 1885 to 1891; increase in average size of libraries from 1885 to 1891; decrease of population to a library from 1885 to 1891; increase in number of books to every 100 of the population from 1885 to 1891, with percentages; summary of statistics of libraries of the Dominion of Canada for 1891, by provinces; classification of libraries in Canada, by provinces; statistics, by provinces, showing how libraries in Canada are supported; summary, by provinces, showing whether or not fees are charged in the

libraries of Canada; summary, by provinces, showing the number of libraries in Canada that are reference, or circulating, or both; detailed statistics of libraries of over 1,000 volumes in the United States in 1891, arranged by States and Territories.

There are now 25 libraries in the country exceeding 100,000 volumes, and 65 exceeding 50,000. In the total libraries of over 1,000 volumes, half are in the division called in the report "the North Atlantic," which includes the New England States, New York, New Jersey, and Pennsylvania; and an even greater proportion is shown in the relative number of books in these various divisions, the North Atlantic having over 16,500,000 of the total of 31,000,000. Other figures under these groupings show even more strongly this condition. Thus, omitting fractions, every 9,000 people in the North Atlantic section have a library, while it takes 26,000 in the South Atlantic, 42,000 in the South Central, 20,000 in the North Central, and 15,000 in the Western division. So also in the average number of books. In the North Atlantic section, to every 100 of population there are 95 books; in the South Atlantic, 48; South Central, 12; North Central, 33; and Western division, 53.

The tables appended are drawn from Mr. Flint's lists, and are presented in this form to show more clearly the provision made by each State for reading for the people, and the responding use made of such provision by the people through a few of the larger libraries.

The average number of volumes in libraries to every 100 of population is shown in the following table:

District of Columbia.....	924	Iowa.....	25
Massachusetts.....	257	Missouri.....	25
Rhode Island.....	164	Virginia.....	22
Connecticut.....	151	Kansas.....	21
New Hampshire.....	118	Utah.....	21
California.....	95	Kentucky.....	20
Nevada.....	92	Louisiana.....	20
Maryland.....	60	South Carolina.....	18
Vermont.....	87	Montana.....	17
Maine.....	82	Georgia.....	15
New York.....	74	Tennessee.....	15
New Jersey.....	59	Nebraska.....	15

The libraries in the United States of 60,000 volumes and over, in 1891, were as follows:

State and Post-Office.	NAME OF LIBRARY.	Bound volumes.
1. Washington, D. C.	Library of Congress.....	650,343
2. Boston, Mass.	Public Library.....	556,368
3. Cambridge, Mass.	Harvard University Library.....	400,322
4. Chicago, Ill.	University of Chicago Library.....	380,000
5. New York city, N. Y.	Mercantile Library Association.....	283,738
6. New York city, N. Y.	Astor Library.....	238,946
7. New Haven, Conn.	Yale College Library.....	234,500
8. San Francisco, Cal.	Sutro Library.....	200,000
9. Chicago, Ill.	Public Library.....	175,574
10. Boston, Mass.	Boston Athenaeum Library.....	173,581
11. Cincinnati, Ohio.	Public Library.....	160,325
12. Philadelphia, Pa.	Mercantile Library Company.....	164,000
13. Philadelphia, Pa.	Library Company of Philadelphia.....	163,457
14. Albany, N. Y.	New York State Library.....	157,114
15. New York city, N. Y.	Columbia College Library.....	135,000
16. Washington, D. C.	House of Representatives.....	125,000
17. Brooklyn, N. Y.	Brooklyn Library.....	113,251
18. Ithaca, N. Y.	Cornell University Library.....	111,007
19. Baltimore, Md.	Peabody Institute Library.....	110,000
20. Detroit, Mich.	Public Library.....	108,730
21. Baltimore, Md.	Enoch Pratt Free Library.....	106,683

State and Post-Office.	NAME OF LIBRARY.	Bound volumes.
22. Princeton, N. J.	College of New Jersey Library	105,521
23. Washington, D. C.	Surgeon-General's Office	104,800
24. Annapolis, Md.	Maryland State Library	100,000
24a. Philadelphia, Pa.	University of Pennsylvania	100,000
25. Worcester, Mass.	American Antiquarian Society	95,000
26. New York city, N. Y.	Apprentices' Library	98,874
27. New York city, N. Y.	Society Library	90,000
28. Worcester, Mass.	Free Public Library	85,674
29. Sacramento, Cal.	California State Library	85,000
30. Frankfort, Ky.	Kentucky State Library	80,000
30a. St. Louis, Mo.	Public Library	80,000

32. Chicago, Ill.	Newberry Library	79,000
33. Ann Arbor, Mich.	University of Michigan Library	78,705
34. St. Louis, Mo.	Mercantile Library Association	75,800
35. Woodstock, Md.	Woodstock College Library	75,000
35a. Hanover, N. H.	Dartmouth College Library	75,000
35b. New York city, N. Y.	New York Historical Society	75,000
36. Boston, Mass.	State Library of Massachusetts	73,824
37. Washington, D. C.	United States Senate Library	72,502
38. Madison, Wis.	State Historical Society Library of Wisconsin	72,000
39. Providence, R. I.	Brown University Library	71,000
40. San Francisco, Cal.	Public Library	69,914
41. New York city, N. Y.	Union Theological Seminary Library	67,089
42. Cleveland, Ohio	Public Library	66,920
43. Buffalo, N. Y.	Buffalo Library	66,756
44. South Bethlehem, Pa.	Lehigh University Library	66,793
45. New York city, N. Y.	Lenox Library	65,000
46. Binghamton, N. Y.	Central High School Library	64,241
47. Columbus, Ohio	Ohio State Library	61,500
48. San Francisco, Cal.	Mercantile Library Association	62,000
49. Milwaukee, Wis.	Public Library	61,111
50. Georgetown, D. C.	Riggs Memorial Library	61,104
51. New Bedford, Mass.	Free Public Library	60,000
51a. Salem, Mass.	Essex Institute Library	60,000
51b. Jackson, Miss.	Mississippi State Library	60,000
51c. Cincinnati, Ohio	Young Men's Mercantile Library Association	60,000
51d. Harrisburg, Pa.	State Library of Pennsylvania	60,000

NOTE.—The above grading may not be absolutely correct, as, in the statistics of some libraries, departments are given as separate collections, while in others all are united.

The libraries of the United States issuing over 100,000 volumes for home use, in 1891, were:

State and Post-Office.	NAME OF LIBRARY.	Volumes in library.	Issued for home use.
1. Boston, Mass.	Boston Public Library	556,288	1,812,489
2. Chicago, Ill.	Chicago Public Library	175,874	995,651
3. Baltimore, Md.	Enoch Pratt Free Library	106,668	434,449
4. New York city, N. Y.	New York Free Circulating Library	88,000	891,570
5. Newark, N. J.	Newark Free Public Library	81,188	804,066
6. Cleveland, Ohio	Cleveland Public Library	66,920	290,815
7. Minneapolis, Minn.	Minneapolis Public Library	49,000	279,178
8. Detroit, Mich.	Detroit Public Library	108,720	274,000
9. New York city, N. Y.	Apprentices' Library	90,874	233,549
10. Cincinnati, Ohio	Cincinnati Public Library	156,673	221,478
11. Omaha, Neb.	Omaha Public Library	36,285	176,102
12. Brooklyn, N. Y.	Pratt Institute Library	40,000	173,564
13. New York city, N. Y.	Agullar Free Library	17,675	159,988
14. Milwaukee, Wis.	Milwaukee Public Library	61,111	156,644
15. Indianapolis, Ind.	Indianapolis Public Library	50,015	140,992
16. San Francisco, Cal.	Mechanics' Institute	57,954	139,090
17. Springfield, Mass.	City Library Association	79,218	136,997
18. New York city, N. Y.	Mercantile Library Association	289,798	136,646
19. San Francisco, Cal.	Free Public Library	69,914	134,622
20. Worcester, Mass.	Free Public Library	65,674	129,760
21. Brooklyn, N. Y.	Union for Christian Work	20,749	128,707
22. Grand Rapids, Mich.	Public School Library	26,202	126,815
23. St. Louis, Mo.	Public Library	60,000	121,970
24. Salem, Mass.	Public Library	20,000	120,248
25. St. Paul, Minn.	Public Library	80,274	116,615
26. Los Angeles, Cal.	Public Library	25,287	116,268
27. Lynn, Mass.	Lynn Free Library	44,821	115,548
28. Cambridge, Mass.	Public Library	34,000	110,446
29. Jersey City, N. J.	Free Public Library	19,859	107,588
30. St. Louis, Mo.	Mercantile Library Association	75,800	106,979
31. Newton, Mass.	Free Library	84,780	105,938
32. Buffalo, N. Y.	Buffalo Library	66,756	104,244
33. Rochester, N. Y.	Central Library	19,564	103,018
34. Dayton, Ohio	Public Library	29,662	101,610

Associations and Clubs.—The American Library Association (national), organized with 100 members at Philadelphia in 1876, and incorporated 1879, has more than 1,200 members on its list. It includes a large number who ap-

preciate the fact that the greatest educational problem before the country is the development of public libraries as a supplement to the public schools, and who recognize in this association the organized forces now shaping the modern

library movement in the United States. Sixteen meetings have been held, constantly developing new features of interest and laying out new lines of work.

The "American Library Association Handbook" is kept in print and revised up to date, and may be had by any one interested in library matters on application to the President of the Association, J. N. Larned, Superintendent Buffalo (N. Y.) Library, or to the Secretary, F. P. Hill, Newark (N. J.) Public Library.

Within the association are several suborganizations of those engaged in the same specific work, or seeking to accomplish some common purpose too technical or novel, or involving too great outlay, to belong properly to the association at large.

The Publishing Section, organized in 1886, has as its object to secure the preparation and publication of such catalogues, indexes, and other bibliographical helps as may be best produced by co-operation. It publishes each year a "Co-operative Index to Periodical Literature," and thus supplements "Poole's Index." These annual supplements, once in five years, are combined in a single alphabet and again printed.

The section published in 1890 "Reading for the Young," by John F. Sargent—a classified, annotated, and indexed list of best books for young people. It has just issued the A. L. A. (American Library Association) "Index to General Literature," indexing in a single alphabet of subjects several hundred volumes of miscellaneous essays, collected biography, and travel, historical monographs, reports of societies, etc. The section is now greatly interested in the proposal to publish signed and dated reviews of new books by the best available authority in each field, and, besides the full review, a condensed catalogue note stating whether the work is elementary or advanced, and its relative value, and noting important errors and where full criticism may be found. Several annotated lists of books on special subjects have been published, and others are to follow.

The important work immediately before this section is the preparation and publication of the "A. L. A. Catalogue," intended to be a classified and annotated bibliography of 25,000 to 50,000 best books on the plan of Sonnenschein's (English) "20,000 Best Books." This will be the co-operative work of specialists, edited by the association.

Central card cataloguing—i. e., the issue of printed catalogue cards to libraries from a central office—discussed since 1877, has in this year become an established fact. The Rudolph Indexer Company, of New York city, and the Library Bureau of Boston, are now prepared to supply printed titles of new books of the United States and Great Britain simultaneously with the date of publication, and will continue the work, to include 100,000 volumes of standard books.

There is also a *College Library Section*, a *Trustees' Section*, a *State Libraries*, and a *Law Section*, each having its own organization and special work, and holding annual meetings in connection with the conferences of the association.

Allied agencies are the "Library Journal," official organ of the American Library Association, published monthly at 28 Elm Street, New

York city, and the Library Bureau, for the manufacture and sale of library fittings and supplies, with a publication and printing office for preparation of catalogues, etc., and an employment department. The offices are at 146 Franklin Street, Boston, Mass., and Stewart Building, New York city.

Clubs. On June 18, 1885, the New York Library Club was organized to promote, by meetings, discussion, and co-operation, the library interests of New York and vicinity. Its success has shown the need of similar clubs in all great cities, wherever, within a convenient distance, there are a number of library workers inspired by the modern spirit of progress. The Chicago club was organized Dec. 17, 1891; Philadelphia, Jan. 29, 1892.

State Associations. The New York State Association, organized July 11, 1890, was the first association devoted wholly to promoting the library interests of a single State. The handbook of this organization may be had by applying to the President, W. T. Peoples, Mercantile Library, New York city. Similar associations have been organized in Iowa, New Hampshire, Massachusetts, New Jersey, Connecticut, Wisconsin, Maine, Michigan, Kansas, southern California, Minnesota, Indiana, Colorado, and Pennsylvania.

Schools and Training Classes.—The American Library Association recognizes officially these institutions for the training of librarians, and has among its standing committees one specially appointed to supervise the work. The *Library School* was opened at Columbia College in January, 1887. The first year a course of three months in library economy was offered, and 20 students were entered. At the middle of the term the course was extended to four months, and at its end a majority of the class decided to take the two years' course then offered. The second year the annual session was extended to seven months, and in the third to eight. In the fourth year the school was transferred to the State Library at Albany, under the control of the Regents of the University of the State of New York. Certificates and diplomas were awarded to 19 students. In the fifth year a course of study was laid out, and the conferring of a degree (B. L. S., bachelor of library science) was authorized. It is conducted by a faculty of 12 professors and instructors, and lectures are given by nonresident librarians and others.

There are *Training Classes* at the Pratt Institute, Brooklyn, N. Y.; the Drexel Institute in Philadelphia; the Armour Institute in Chicago (each directed by a graduate of the Library School); the Free Public Library at Los Angeles, Cal., and the Summer School conducted by Mr. Fletcher at Amherst, Mass. Admissions to these classes are not limited to graduates of colleges or academies, the examinations are not so severe, and the courses of study include English composition and general literature.

Conference of Librarians.—At the conference held in Chicago, in July, 1893, the programme was so planned as to make the proceedings a handbook of library economy, setting forth on each subject treated the points of agreement to which the profession has attained, and also the points of difference. Topics were assigned to several librarians by vote of their

confères, and the authors aimed to present on each subject a judicial digest of previous articles, papers, discussions, and experience. As finally printed by the Bureau of Education, the volume will represent the position of the profession on the most important topics of library economy, etc., at the close of the 1893 meeting, supplementing the special report which was published in 1876.

Libraries at the World's Fair.—The American Library Association Model Library was proposed as a means of helping small libraries throughout the country in the selection, purchase, and cataloguing of books. It is composed of 5,000 volumes, which the association recommend for an average public library. The selection was made by a committee, who passed upon the suggestions of about 75 librarians and specialists. When the lists were completed publishers were asked to give the books. The invitation was most generously responded to, and the books were placed in the United States Government building, with the most perfect apparatus, and in connection with an architectural exhibit of plans, photographs, etc., of the largest and finest library buildings in this and in foreign countries, and with a large collection of model appliances showing the best methods of work and the latest inventions and devices. The whole exhibit has been permanently deposited with the Bureau of Education at Washington. A catalogue has been prepared, is published by the Bureau of Education, and will be sent free to libraries and schools.

The Comparative Library exhibit contained samples, models, and photographs of blanks, forms, appliances, furniture, and fittings used in libraries. A special feature was the collection of answers to questions on all important departments of library administration. Questions were printed on uniform blanks, and the returns are bound together by subject. These volumes show in compact form the library methods in use in 1893, and what changes are advocated. The collection now forms part of the great Bibliothecal Museum of the New York State Library at Albany.

The Woman's Library. In the Woman's Building, in a superb room furnished by the women of New York State, were collected about 7,000 volumes written by women of this and other countries. This library will be preserved in a memorial building as the nucleus of an international and historical exhibition of woman's work in literature. Foreign women sent contributions of special value—France, 800 volumes; Bohemia, 300; Sweden, 130; Italy, 150; Germany, 300; Great Britain, 500; Japan, 50.

Of the many foreign libraries, the largest and finest were the German, French, and Swedish, though all were most worthy of praise. Nearly all were carefully catalogued; and since these catalogues were distributed with generosity, their value to the libraries of this country can hardly be estimated, giving such an opportunity of becoming acquainted with the best libraries of all countries and their methods as could otherwise be gained only at the expense of much travel and study abroad. Nearly every State of the Union had libraries in its State building, or in connection with its educational exhibit.

LITERATURE, AMERICAN, IN 1893.

The financial stringency of the year does not appear to have materially affected the book trade, for more books were published in 1893 than have ever been recorded by the "Publishers' Weekly"—5,134 in all—an excess of 272 over the record of 1892 (4,862), previously the largest known. It is perhaps worthy of remark that of the multitudinous announcements made by publishers in the spring and fall, hardly one book went over into 1894. And as there was no falling off in numbers, neither was there in the quality of the volumes sent out. More of our novels came to us from English and other foreign sources, the standing being 834 of such to 263 American; but with this exception, and that of one other department, viz., biography, the books supplied to the American reading public were from native authors. Of the total 5,134 books, 4,281 were new; 2,803 were by American authors, including new editions, 1,180 were of foreign origin, manufactured in the United States, and but 1,151 were imported in sheets from England. The greatest increase was shown in works of theology, law, education, physical and mathematical science, general literature, sports and amusements, and the useful arts. The largest decrease was in fine-art and illustrated books (though this is taken as an indication of improvement in public taste), and there was also a marked falling off in history, political and social science, and biography.

Biography.—Works falling under this department always possess a charm, and many of those published in 1893 had especial value. The collection of "The Writings of George Washington," collated and edited by Worthington C. Ford, was rendered complete by the issue of the thirteenth and fourteenth volumes, and "The Story of Washington," by Mrs. Elizabeth Eggleston Seelye, which followed her "Story of Columbus" in the "Delights of History" series, had an introduction by her father, Edward Eggleston. Vols. III and IV completed "The Writings and Correspondence of John Jay, First Chief Justice of the United States," edited by Henry P. Johnston, and Paul Leicester Ford gave us Vol. II of "Writings" of Thomas Jefferson. James Schouler presented "Thomas Jefferson" in a somewhat new aspect as regards his later political career in the "Makers of America" series. Another volume of the same series was "Peter Stuyvesant," by Bayard Tuckerman, who wrote also on "William Jay and the Constitutional Movement for the Abolition of Slavery." "The Life and Writings of Jared Sparks," in two volumes, by Herbert B. Adams, was a valuable contribution, and to the same period belong the "Writings" of Thomas Paine, edited by Moncure D. Conway, with introductions and notes to the four volumes, one of which appeared during the year. "Paul Jones," by Molly Elliot Seawell, belonged to the "Young Heroes of Our Navy" series, while "Major-General Wayne and the Pennsylvania Line in the Continental Army" was the theme of C. J. Stillé. One of the most romantic figures in the history of our country was dealt with by Alfred M. Williams in "Sam Houston and the War of Independence in Texas." "Christopher Gist's Journals" were published together for the first time, and cover explorations of the Ohio river and its branches in 1750-'53. "Select Speeches of Daniel Webster, 1817-1845" had an introduction and notes by A. J. George, while "The Life and Times of C. G. Meminger," by Henry D. Capers, and "The Life and Times of William Lowndes Yancey," by John Witherspoon Du Bose, throw much light on the financial policy as well as the origin of the Confederate States. Two more volumes were written upon "Abraham Lincoln" by John T. Morse, Jr., in the series of "American States-

men," and Joel Benton edited "Greeley on Lincoln," with which were included letters of the great journalist to Charles A. Dana and a lady friend. Vols. III and IV of the "Memoir and Letters of Charles Sumner," by Edward L. Pierce, completed a work the first half of which was given to the public in 1877. In the "Great Commanders" series, "General Greene" was by Capt. Francis Vinton Greene, "General Jackson," by James Parton, "General Johnston" (Joseph E.), by Robert M. Hughes, and "General Thomas," by Henry Coppée. A critical biography of "General George H. Thomas," by Donn Piatt, was also published, the concluding chapters of which were by Gen. H. V. Boynton. "Leonidas Polk, Bishop and General," by William M. Polk, M. D., in two volumes, and "Memoirs of William Nelson Pendleton, D. D.," the Confederate general of artillery, by his daughter, Susan P. Lee, may be classed together. "Personal Reminiscences, 1840-1890," by L. E. Chittenden, included some not hitherto published of Lincoln and the war, and he also published the true and romantic story of "An Unknown Heroine." A new issue of Mrs. Elizabeth B. Custer's "Tenting on the Plains" was made and given for the first time to the general trade. A "Life of Hon. James G. Blaine," by T. C. Crawford, was published, and in the "Men of Achievement" series we had "Statesmen," by Noah Brooks, "Men of Business," by W. O. Stoddard, and "Inventors," by Philip G. Hubert, Jr., while "Explorers and Travelers" found a sympathetic chronicler in Gen. A. W. Greely. Mrs. Sarah K. Bolton's latest volume was upon "Famous Voyagers and Explorers." In the series of "American Reformers," "John B. Gough, the Apostle of Cold Water," was by Carlos Martyn, and "Henry Ward Beecher, the Shakespeare of the Pulpit," by John H. Barrows, D. D. Redelia Brisbane supplied a mental biography and character study of "Albert Brisbane." The first volume of "Orations and Addresses by George William Curtis," on the principles and character of American institutions and the duties of American citizens, was edited by Charles Eliot Norton. "The Builders of American Literature," whose biographical sketches we owe to Francis H. Underwood, were all born previous to 1826; to the same hand belongs "The Poet and the Man," recollections and appreciations of James Russell Lowell, while two volumes of the "Letters of James Russell Lowell," edited by Charles Eliot Norton, are essentially an autobiography as complete as it is charming. Two volumes also contain the valuable "Letters of Asa Gray," edited by his widow, Jane Loring Gray, and from Charles F. Holder we have "Louis Agassiz" in the "Leaders of Science" series. "Descartes" in the "Modern Philosophers" series, was by Dr. Joseph Torrey. "A. Bronson Alcott, His Life and Philosophy," were treated by F. B. Sanborn and Hon. W. T. Harris, largely from hitherto unpublished materials, and George S. Merriam edited a memorial volume by friends of "Noah Porter." Notes of the life and friendship of "Whittier" we owe to Mrs. James T. Fields, "Personal Recollections of John G. Whittier" (prefaced by an unpublished poem of Edna Dean Proctor) to Mary B. Claflin, and "Whittier with the Children" to Mrs. H. M. Lothrop (Margaret Sidney). "Personal Recollections of Nathaniel Hawthorne," by his college classmate, Commodore Horatio Bridge, were published posthumously. The "Memoirs" of Charles Godfrey Leland (Hans Breitmann) abound in interest, and William Dean Howells gives us a glimpse at his early experiences in "My Year in a Log Cabin." Edward Everett Hale described "A New England Boyhood" with all the charm we should expect, and Mrs. Laura E. Richards introduced others than her young readers to the home life of Dr. and Mrs. Julia Ward Howe in her series of papers "When I was your Age." "The One I knew the Best of All," by Mrs. Frances Hodgson Burnett, tells the story of her childhood. By no hand could the "Life and Art of Edwin Booth" have been more sympathetically touched than that of his near and dear friend William Winter, and Laurence Hutton

also offered a tribute based on observation and an intimate knowledge, entitled "Edwin Booth" in Harper's "White and Black" series. "Leaves from the Autobiography of Tommaso Salvini" were welcomed by his admirers. Henry T. Finck devoted two volumes to "Wagner and his Works," and Daniel W. Wilder wrote "The Life of Shakespeare," copying from the best sources without comment. A Growoll made a short biographical and bibliographical sketch of the pessimist poet, "James Thomson." A life of "Phillips Brooks, the Man, the Preacher and the Author," by Newell Dunbar, had an introduction by Joseph Cook and an estimate by F. W. Farrar, D. D., and "Phillips Brooks in Boston," compiled by M. C. Ayres, consisted of five years' editorial estimates. "A Modern Paul in Japan," by Jinzo Naruse gave an account of the life and work of the Rev. Paul Sawayama, with an introduction by Alexander McKenzie, D. D.; Ellis Schreiber wrote a "Life of Augustus Henry Law, Priest of the Society of Jesus"; and Rev. J. K. Slatery, "The Life of St. Peter Claver, S. J., the Apostle of the Negroes." Other volumes of clerical biography were "Israel Edson Dwinell, D. D.," by Rev. Henry E. Jewett, "Memorials of Richard H. Richardson, D. D.," and a "Memoir of James Petigru Boyce, D. D.," late President of the Southern Baptist Theological Seminary at Louisville, Ky., by John A. Broadus, D. D. "My Life and Times," of Cyrus Hamlin, tells much of missionary work in Turkey, far enough removed from which are "The Wizard of Wall St. and his Wealth; or, The Life and Deeds of Jay Gould," chronicled by Trumbull White. Charles H. Bell sketched "The Bench and Bar of New Hampshire," "Speeches and Addresses of William McKinley" were collected into a volume, and Thomas Wentworth Higginson supplied an introduction to the "Speeches and Addresses" of William E. Russell, edited by Charles T. Russell, Jr. "College Tom," by Caroline Hazard, tells the story of one of her ancestors (Thomas R. Hazard), whose "lifelong protest against slavery was his most noteworthy achievement," and another volume of unpretentious biography is that by Adela E. Orpen, who in "The Chronicles of the Sid" tells of the life and extensive travels of Adelia Gates. "An All-Around Boy" contained the life and letters of Ralph Robinson Green, published by his father, Rufus S. Green, D. D. "Brave Lads and Bonnie Lassies," by F. Myron Colby, told the stories of young folks who have helped to make history, beginning with Egypt. A sailor's life fifty years ago is depicted in "Twenty Years at Sea," by Frederick Stanhope Hill, and "Sketches of Border Adventures of Major Moses Van Campen" were written by his grandson, J. Niles Hubbard. "Seventy Years on the Frontier" was the title of Alexander Major's memoirs, and "Buffalo Bill" from Prairie to Palace gave an authentic and authorized history of the wild West and its hero. An edition of 725 copies only was issued of the "Life and Works of Alexander Anderson, M. D., the First American Wood Engraver," by Frederick M. Burr. J. A. Coles, M. D., was the author of a biographical sketch of "Abraham Coles," and J. Howe Adams, M. D., of the "History of the Life of D. Hayes Agnew, M. D." "Donn Piatt: His Work and his Ways," was by Charles Grant Miller. "What America owes to Women," a series of pen portraits of American women past and present, edited by Lydia Hoyt Farmer, Columbian poems and prose sketches of "Kentucky Pioneer Women," by Mary Florence Taney, "A Woman of the Century," biographical sketches accompanied by portraits of leading American women, edited by Frances E. Willard and Mary A. Livermore, and "Women of Cleveland," by Mrs. W. A. Ingham, bear testimony to the prominent position assumed by the sex during the Columbian year; and, retracing our steps, we have "Presidential Inaugurations from George Washington, 1789, to Grover Cleveland, 1893," by Thomas Hudson McKee. F. B. Heitman also drew up the "Historical Register of Officers of the Continental Army during the War of the Revolution, April, 1775, to December, 1783." "Oliver Cromwell: With

Illustrations from Old Paintings and Prints" was by George H. Clark, and Charles Knowles Bolton described "Saskia, the Wife of Rembrandt." The "Genealogy of the Plumb Family," by Henry Blackman Plumb, "Genealogical Sketches of Robert and John Hazleton and some of their Descendants," by W. B. Lapham, M. D., "The Estes Genealogies," by Charles Estes, the "Genealogy of the Cutts Family in America," by C. H. C. Howard, and the "Creole Genealogy" (of St. Louis), by Paul Beckwith, are of family interest. William Elroy Curtis published Part II of a descriptive catalogue of "Christopher Columbus: His Portraits and his Monuments," Charles Paul MacKie described "The Last Voyages of the Admiral of the Ocean Sea," and a facsimile of the pictorial edition of "The Letter of Columbus on the Discovery of America" was printed by order of the trustees of the Lenox Library, which possesses the only perfect copy, with a new and literal translation and a complete reprint of the oldest 4 editions in Latin. A quadricentennial edition (limited to 402 sets) of Washington Irving's "Life and Voyages of Christopher Columbus" was also issued in three volumes. Vols. II and III appeared of the "National Cyclopædia of American Biography," and T. A. Buebey edited and compiled a "Biographical Directory of the Railway Officials of America" for 1893.

Two important translations were "John and Sebastian Cabot," from the Italian of Francesco Tarducci, by Henry F. Brownson, and "The Story of My Life," from the German of George Ebers, by Mary J. Safford.

Criticism and General Literature.—To this department belong "Essays in London and Elsewhere," by Henry James; "Other Essays from the Easy Chair" of George W. Curtis; "Essays in Idleness," by Agnes Repplier; "As we go," by Charles Dudley Warner, who also made a study of "The Work of Washington Irving"; and "Stelligeri," a volume of essays concerning America, by Barrett Wendell. F. Marion Crawford, who is certainly entitled to be heard, questioned "The Novel, What is it?" and George Haven Putnam considered "Authors and their Public in Ancient Times." George C. Lorimer told "What I know about Books and how to use them," and Joseph H. Thayer, D. D., delivered a lecture upon "Books and their Uses" before the Harvard Divinity School, to which was appended a list of books for students of the New Testament. Marion D. Shutter, D. D., made a literary study of the "Wit and Humor of the Bible." Arthur MacArthur wrote a "Biography of the English Language," and also made "An Examination into the Present Position of English among the Languages of the World" in the same volume. Maurice Thompson delivered the 'arew lectures of 1893 before Hartford Theological Seminary upon "The Ethics of Literary Art." John F. Genung gave us "Outlines of Rhetoric embodied in Rules," "Persian Literature, Ancient and Modern," was rendered accessible to us by Mrs. Elizabeth A. Reed, who did so much for "Hindu Literature" a year or two ago, and "The Growth and Influence of Classical Greek Poetry" was traced by Prof. R. C. Jebb in lectures delivered in 1892 on the Percy Turnbull Memorial Foundation in the Johns Hopkins University. "The Private Life of the Romans" was compiled for the use of students by Harriet Waters Preston and Louisa Dodge, and "The Development of the Athenian Constitution" was traced by George Willis Botsford in the Cornell Studies in Classical Philology. Miss E. S. Kirkland wrote "A Short History of English Literature for Young People," a companion volume to her "Short Histories" of France and England. "The Classic Myths in English Literature," edited by Prof. Charles Mills Gayley, while based chiefly on Bulfinch's "Age of Fable" (1855), differs from that work in many important respects and contains much new material, and "Tales from Shakespeare," by Harrison S. Morris, in four volumes, included those of Charles and Mary Lamb. Prof. Felix E. Schelling published "The Life and Writings of George Gascoigne," with three poems of that au-

thor heretofore not reprinted; Katharine Lee Bates made a study of "The English Religious Drama," and William Lyon Phelps traced "The Beginnings of the English Romantic Movement. Prof. L. A. Sherman's "Analytics of Literature" purports to be a manual for the objective study of English prose and poetry, and Edward T. McLaughlin edited "Literary Criticism for Students" with an introduction and notes. Vol. IV of "Harvard Studies in Classical Philology" was issued, as was Vol. III of "A Journal of American Ethnology and Archaeology," edited by J. Walter Fewkes. James C. Pilling, of the United States Bureau of Ethnology, continued his valuable series with "The Bibliography of the Salishan Languages," and Rev. W. Muss-Arnolt published a volume "On Semitic Words in Greek and Latin," as well as two pamphlets on "The Assyro-Babylonian Months and their Regents" and the names of the same. Vol. III appeared of "Hermetic Philosophy," two papers by Morris Jastrow, Jr., and Talcott Williams on "Magic and Prodigy in the East" were reprinted from "Poet Lore," and Morris Jastrow compiled Part II of "A Dictionary of the Targumim." Denton J. Snider was heard from in a commentary on "Dante's Inferno." "The Work of John Ruskin" in its influence upon modern thought and life was reviewed by Charles Waldstein in the Harper's "American Essayists" series, and an edition limited to 150 copies was issued of "Robert Browning as an Exponent of a Philosophy of Life," by Brainerd Marc Burridge. The "Literary, Scientific, and Political Views of Orestes A. Brownson" were selected from that author's works by Henry F. Brownson, and "Sir Francis Bacon's Cipher Story" was again discovered and deciphered by Orville W. Owen, M. D. Julia Duhring, who appeared last year as "Amor in Society," devoted herself in 1893 to "Mental Life and Culture." William Morton Fullerton made some studies in historic psychology entitled "Patriotism and Science," and Daniel G. Brinton, M. D., turned from his accustomed fields to "The Pursuit of Happiness" in what he calls "a book of studies and strowings." Charles Dudley Warner wrote an introduction to "Seen from the Saddle," by Isa Carrington Cabell, and W. Armstrong Collins was equally expert "At Long and Short Range" of a variety of subjects. "Coffee and Repartee," by John Kendrick Bangs, "Bachelor Buttons," by Frank Chaffee, "Way-side and Fire-side Rambles," by Almon Gunnison, "Humanics," by John Staples White, "What One Woman thinks," by Mrs. Haryot Holt Cahoon, "More than King," by James Vila Blake, "Ruminations," by Paul Siegvolk (Albert Matthews), and "Only a Flock of Women," by Mrs. A. M. Diaz, discuss every question, perhaps, that is capable of interesting the human mind, while Mrs. Helen H. Gardener exploited what she terms "Facts and Fictions of Life." "The Opinions of a Philosopher," by Robert Grant, is a sequel to "The Reflections of a Married Man," "The Latter-Day Eden," by Henry Tuckley, treated of wedlock and the home; from Isaac Errett we had "Linsey-woolsey, and Other Addresses," Donn Piatt's "Sunday Meditations and Selected Prose Sketches" were posthumously published, and Ella Wheeler Wilcox was at home in dealing with "Men, Women, and Emotions." Rev. J. W. Daniel took "A Ramble among Surnames," and Marshall Brown edited a collection of "Bulls and Blunders." Our ancestors came in for a full share of attention in "Our Colonial Homes," by Samuel Adams Drake, and "Customs and Fashions in Old New England," by Mrs. Alice Morse Earle, while Anne Hollingsworth Wharton peeped profitably "Through Colonial Doorways," "The Old Colony Town, and Other Sketches" of William Root Bliss worthily succeeds his "Colonial Times on Buzzard's Bay," and "An Old Town by the Sea," described by Thomas Bailey Aldrich, proved to be Portsmouth, N. H. "Authors and Writers associated with Morristown," by Mrs. Julia Keese Colles, possesses local interest also. Prof. Eben Horsford Norton reconstructed "Leif's House in

Vineland," and Elizabeth G. Shepard prepared "A Guide to Norumbega and Vineland." "Some Old Puritan Love Letters," which passed between John and Margaret Wintthrop, 1618-1638, were edited by Joseph Hopkins Twichell. Two of the six volumes of the "Distaff Series," issued by the Board of Lady Managers for the State of New York at the World's Columbian Exposition to show the representative work of women of the State, were respectively "Woman and the Higher Education," edited by Miss Anna C. Brackett, and "Early Prose and Verse," in the arrangement of which Mrs. Alice Morse Earle and Emily E. Ford collaborated. "Emerson's Year-book," prepared by "A. R. C.," and "Helpful Words from the Writings of Edward Everett Hale," contained much of the best work of both authors, and F. Saunders edited over 100 "Historical and Patriotic Addresses." "The Lover's Lexicon," which we owe to Frederick Greenwood, begins, as sometimes happens, with "abhorrence" and ends with "wife"; and from an unknown hand we have a selection of "Masterpieces of Prose," English and American. "Liber Scriptorum," the first book of the Authors' Club, in an edition limited to 250 copies, represented 109 contributors who signed their several articles, in prose and verse, written especially for the work, with pen and ink; it was the most unique as well as the most sumptuous volume of the year. The first of the two volumes of "The Standard Dictionary," edited by Isaac K. Funk, D. D., Francis A. March, and Daniel S. Gregory, D. D., was issued at the close of the year; Mrs. Ella Sterling Cummins reviewed California writers and literature in "The Story of the Files"; the United States Bureau of Education published "Statistics of Public Libraries in the United States and Canada," prepared by Weston Flint; "Bibliotheca Americana, 1893," appeared, as did "The A. L. A. Index," compiled by William I. Fletcher, and the second supplement to "Poole's Index to Periodical Literature," bringing the work down to Jan. 1, 1892. "The Writings of Henry David Thoreau" were issued in the Riverside edition in ten handsome volumes, with biographical introductions and full indexes, and "The Natural History of Intellect, and Other Papers," by Ralph Waldo Emerson (some of which have never before been printed), came to us in three editions, with a general index to Emerson's collected works.

Education.—From no source could we have "The Theory of Education" better set forth than by Hon. William T. Harris in a short paper forming No. 15 of "Schoolroom Classics." "Education and Educators" were exploited by David Kay in "School Bulletin Publications," and Malcolm MacVickar defined "Principles of Education." "The Public-School System of the United States," by J. M. Rice, M. D., deals with the subject after careful and detailed observation, and William S. Munroe made a study in the history of American pedagogy under the title of "The Educational Labors of Henry Barnard." S. S. Laurie wrote of "John Amos Comenius, Bishop of the Moravians, His Life and Educational Works"; Isaac Sharpless made a short study of "The Relation of the State to Education in England and America," and Charles W. Bennett wrote a "History of the Philosophy of Pedagogics." The "History of Educational Journalism in the State of New York" was the theme of a paper read July 28, 1893, before the Department of Educational Publications of the International Congresses of Education of the World's Columbian Exposition, by C. W. Bardeen; "School Management" was a practical treatise by Emerson Elbridge White; Montague R. Leverton, M. D., published "Thoughts on Institutions of the Higher Education"; Charles Franklin Thwing told of what goes on "Within College Walls"; and Lida Rose McCabe treated of "The American Girl at College." "Benjamin Franklin and the University of Pennsylvania" consists of 27 papers by as many eminent Philadelphians, edited by Francis Newton Thorpe, and published by the United States Bureau of Education. "Princeton Sketches," by

George R. Wallace, and "Harvard Stories," by W. K. Post, may be classed together. J. W. Stearns edited a "Columbian History of Education in Wisconsin," by various authors, and Edward Smith wrote "A History of the Schools of Syracuse." The record of "Twenty-two Years' Work of the Hampton Normal and Agricultural Institute" is an encouraging one. Kate Douglas Wiggin edited "The Kindergarten" in the "Distaff Series," and Emilie Poulsson wrote talks and stories for use "In the Child's World." George Ricks supplied "Object Lessons and how to give them" in two series for primary, intermediate, and grammar schools, and "Methods of teaching Modern Languages" were discussed by A. Marshall Elliott, Calvin Thomas, and others. Prof. Charles F. Kroeh published "The Living Method for learning how to think in German," with revised editions of his works treating other foreign languages by a similar method, and Oscar Weineck prepared "A Common-Sense Guide to English for Foreigners." The essentials for true education are discussed by Abbot Kinney in "Tasks by Twilight." "A Pathfinder in American History" was devised for teachers by W. F. Cordy and W. I. Twitchell, while Eva Wilkins and Amos M. Kellogg handled the same theme in "Descriptive Geography taught by Means of Map Drawing" and "Geography by Map Drawing." Paul H. Hannus contributed an essay on "Geometry in the Grammar School," and Paul Carus lectured on "The Philosophy of the Tool," as did James MacAlister on "Art Education in the Public Schools." "Figure Drawing for Children" formed the theme of a volume by Caroline Hunt Kimmer, while "Progressive Lessons in the Art and Practice of Needlework for Use in Schools" and "School Needlework" emanated from Catherine F. Johnson and Olive C. Hapgood. Burke A. Hinsdale published "How to Study and Teach History, with particular reference to the history of the United States."

Fiction.—"The Prince of India: or, Why Constantinople fell," in two volumes, by Gen. Lew Wallace, was the leading novel of the year so far as popularity is concerned, although several standard writers made their accustomed contributions. F. Marion Crawford, in "The Children of the King," told a tale of Southern Italy, while his "Pietro Ghisleri" makes us again acquainted with many of the characters in his "Sarcinesca." "Marion Darche" is a story of New York life of to-day. "The World of Chance," by William Dean Howells, deals with the experiences of a young author among publishers, and he also conducted a heroine to "The Coast of Bohemia." "David Balfour," by Robert Louis Stevenson, was a sequel to "Kidnaped," published in 1886, and from his fascinating pen we have also "Island Nights' Entertainments." Henry James sent out three volumes of short stories. "Social Strugglers" were described by Hjalmar Hjorth Boyesen, from Arlo Bates we had "In the Bundle of Time," and from Thomas Bailey Aldrich "Two Bites of a Cherry, with Other Tales." "Duffels" was the quaint title given by Edward Eggleston to eleven short stories; Mrs. Margaret Deland introduced us to "Mr. Tommy Dove," with which are included four other stories, and the latest heroine of Amélie Rives (Mrs. John Armstrong Chanler) was "Tanis, the Sang-Digger." Bret Harte makes "Suey," whom we met in a former tale, the leading character of a tale of the plains, while the scene of "Sally Dows" (with which are three other stories) is laid in Georgia during reconstruction times. Maurice Thompson went to Louisiana in the days of 1812 for his outlaw, "The King of Honey Island," and Molly Elliot Seawell gave us "Children of Destiny" in addition to "Through Thick and Thin" and "The Midshipman's Mess: A Soldier's Story and a Sailor's Story," for boys. Elizabeth Stuart Phelps (Mrs. Herbert D. Ward) told of the awakening of "Donald Marcy," and her husband published "A Republic without a President, and Other Stories." Julien Gordon (Mrs. Van Rensselaer Cruger) tells the story of her lovers by means of "His Letters," and

"Stanton Page" (Henry B. Fuller) in his powerful novel of "The Cliff Dwellers" proved himself as capable to deal with the stirring life of modern Chicago as with the gentler scenes of "The Chevalier of Il Pensieri Vani" and "The Châteline of La Trinité." Mrs. Amelia E. Barr described "A Singer from the Sea" on the Cornish coast, and "Girls of a Feather"; Sidney Luska (Henry Harland) laid the scene of "Mademoiselle Miss" and the four succeeding stories abroad; Frank R. Stockton published "The Watchmaker's Wife, and Other Stories"; Octave Thanet (Alice French), "Stories of a Western Town" and "An Adventure in Photography"; John Seymour Wood, "A Coign of Vantage" and "An Old Beau and Other Stories"; Mrs. Constance Cary Harrison, "Sweet Bells out of Tune" (in addition to editing the volume of "Short Stories" in the "Dittaf Series"); and Paul Du Chailu the romantic history of "Ivar the Viking"; while "Out of the Sunset Sea," by Albion W. Tourgee, pictured life in the time of Columbus and introduced the Cabots. Maria Louise Pool wrote two novels, "Katharine North" and "The Two Salomeas." Charles King's sole contribution was "Foes in Ambush"; "Toppleton's Client," by John Kendrick Bangs, was full of humor, as was "The £1,000,000 Bank Note, and Other New Stories" of Mark Twain (Samuel L. Clemens). Lillian Bell divulged "The Love Affairs of an Old Maid," and "A Spinster's Leaflets" were given to the public by Alyn Yates Keith. "Prairie Folks" were described by Hamlin Garland; Julian Hawthorne made himself at home at "Six Cent Sam's," and edited "The Confessions of a Convict"; from Sarah Orne Jewett we had "A Native of Winby" and eight other tales, largely of New England life; from Mrs. Mary Hartwell Catherwood "The White Islander" and "Old Kaskaskia"; from Patience Stapleton, "My Jean"; and from Anna Katharine Green (Mrs. Kohlfe) "A Matter of Millions" and "Marked Personal." Edgar Fawcett wrote "American Push" and "Loaded Dice"; Edgar Saltus, "Madam Sapphira: A Fifth Avenue Story"; and Robert Appleton, "Mr. Philip St. Clare," a novel of fashionable life. "Friends in Exile" was a tale of diplomacy, coronets, and hearts, by Lloyd Bryce. Mrs. Elizabeth Winter ("Isabella Rastelar"), the wife of William Winter, framed a tale of adventure in the attempt to find "The Spanish Treasure"; and Marie Corelli displayed original imagination in her "Barabbas." "The Reversend Melanchthon Poundst" was a novel by the late Donn Piatt. Gilbert Parker dawned on us as a new writer of Canadian romance in "Pierre and his People" reminding us a little of Kipling. He also published "The Translation of a Savage" and "Mrs. Falchion," and collaborated with Luke Sharp, Lanoe Falconer, and others to produce "Tavistock Tales." "The Hermit of the Nonquon," by Charles Nelson Johnson, had its scene laid in the Canadian backwoods of to-day. Bright books were "White Birches," by Annie Elliot; "The Petrie Estate," by Helen Dawes Brown; "A Wedding Tangle," by Frances Campbell Sparhawk; "Melody," by Mrs. Laura E. Richards; and humorous stories "Told by the Colonel," according to William L. Alden. Grace Greenwood (Mrs. Sara J. Lippincott) gave us a new volume of "Stories and Sketches," as interesting as any she ever published, and stories of local color were "Dr. Latimer: A Story of Casco Bay," by Mrs. Clara Louise Burnham; "At Mount Desert," by Mildred Fairfax; "Elinor Fenton," an Adirondack story, by D. S. Foster; "An Adirondack Idyl," by Mrs. Lida O. Vanamee; "Tom Croly's Word," by G. W. Hamilton; "The Old House at Four Corners," by Margaret K. Parker; "A Tiff with the Tiffins," by Frances Isabel Currie; "From Side Streets and Boulevards," a collection of Chicago stories, by Preserved Wheeler; "The Loyalty of Langstreth," by J. R. V. Gilliat; "Where the Tides meet," by Edward Payson Berry; "The Road of the Rough: A Simple Story of Life in New York," by Maurice M. Minton; "The Little Heroine of Poverty Flat," by Elizabeth M. Comfort;

"The Norsk Gopher," a story of the Northwest, by Charles N. Sinnet; "A Literary Courtship: Under the Auspices of Pike's Peak," by Anna Fuller, "Under the Live Oaks" (of California), by Mrs. T. M. Browne; "Silhouettes from Life: On the Prairie, in the Backwoods," by Anson U. Hancock; "The Story of a Western Claim," by S. C. Gilman, telling how two boys solved the Indian question; "A Florida Enchantment," by Archibald Claverling Gunter and Fergus Redmond; "Broadoaks," the scene of which is laid in Virginia, by M. G. McClelland; "A Southern Heritage," by William H. Brown; "A Border Leander," by Howard Seeley; "Redbank," a quiet story of life on a Georgia plantation, by M. L. Cowles; "Gainet Wind and Tide," by Nellie T. Kinkead; "Born in the Whirlwind," by William Adams, D. D.; "A Tennessee Judge" and "Miss Madam, and Other Sketches," by Opie P. Read (Arkansas Traveler); "Nance: A Story of Kentucky Feuds," by Nanci Lewis Greene; "John Gray," a tale of the same State in the olden time, by James Lane Allen, and "A Golden Wedding, and Other Tales," by Ruth McEnery Stuart. "A Mute Confessor" was the romance of a Southern town, told by William N. Harben. Henrietta Matson depicted "The Mississippi Schoolmaster" (colored); W. S. Harrison wrote "Sam Williams: A Tale of the Old South," and George G. Smith "Mr. Hall and his Family, especially Susie." Charles Sumner Seeley gave a realistic account of strange adventures in "The Lost Canyon of the Toltecs," and Emily Howland Hoppin in "From Out of the Past" gave many descriptions of Touraine. "Val Maria," by Mrs. Lawrence Turnbull, was a romance of the time of Napoleon I, and "Self-accused" by Frank Morton, had its scene laid in the Hawaiian Islands. John R. Musick continued his "Columbian Historical Novels" with "A Century too soon," a story of Bacon's Rebellion, "Braddock," "The Pilgrims," "The Witch of Salem," "Independence," and "Sustained Honor," the last relating to the War of 1812; and other tales of bygone days were "Dorothy the Puritan," by Augusta Campbell Watson; "Beatrice Hallam," by John Esten Cooke; "The Brides of the Tiger," by W. H. Babcock; "Ansel's Cave: A Story of Early Life in the Western Reserve," by A. G. Riddle; "Old Kaskia Days," by Elizabeth Holbrook; "The Stormy Petrel," a tale of the closing days of slavery and John Brown's raid, by J. Bowles; "John Holden, Unionist," by T. C. De Leon and Erwin Ledyard; "The Copperhead," by Harold Frederic; "A True Son of Liberty," by F. P. Williams; and "In Blue Uniform," by George I. Putnam. "The Son of a Prophet," by George Anson Jackson, attempts to create the character of the author of the Book of Job. "The Complaining Millions of Men" was a strong story by Edward Fuller, opposed to Socialism; Robert Grimshaw prophesied of what may be in 1943 in "Fifty Years Hence"; "Ai: A Social Vision," seen by Charles Daniel, had reference to the social reform of the city of Philadelphia; and "Looking Within," by J. W. Roberts, made manifest the misleading tendencies of "Looking Backward." "Joseph Zalmonah," by Edward King, shows the evils of the sweating system, and "The Cosmopolis Club," by Rev. Washington Gladden, discussed many political evils. "None Such? There will yet be Thousands," by Emory J. Haynes, D. D., points out to millionaires methods to dispose of their wealth, while "Unveiling a Parallel," by "two women of the West," was a satire upon modern civilization. "After Many Days" purported to be an American novel by two Americans, Theodora B. Wilson and James Clarence Harvey. Amanda M. Douglas published "Lyndell Sherburne," a sequel to "Sherburne House," "Bertha Wray's New Name," and "Larry," which last won the \$2,000 prize offered by the "Youth's Companion." Julia McNair Wright wrote three stories also, "The House on the Beach," "Mr. Grovener's Daughter," and "On a Snow-bound Train," and Fannie E. Newberry "The Odd One." Nathan Haskell Dole wrote a novel on his own account entitled "Not Angels quite," Mary Harriot Norris pub-

lished "John Applegate, Surgeon," and "Christian Reid" (Frances C. Fisher) "A Comedy of Eloquence." "Elizabeth, Christian Scientist," was by Matt Crim; "A Modern Agrippa" (with Patience Barker: A Tale of Old Nantucket), by Caroline Earle White; "A Washington Symphony," by Mrs. W. Lamont Wheeler; "Fencing with Shadows," by Mrs. Hattie Tyng Griswold; "Third Hand high," by W. N. Murdoch; "The Rose of Love," by Angelina Teal; "Ashes of Roses," by Louise Knight Wheatley; "Rachel Stanwood," by Lucy Gibbons Morse; "A Question of Honor," by Lynde Palmer; "Margaret Davis, Tutor," by Anna Chapin Ray; "That Mary Ann," by Kate Upson Clark; "A Marriage of Reason," by Maurice F. Egan; "A Daughter of This World," by Fletcher Battershall; "Life's Battle Won," by Julia A. W. DeWitt; "Brothers and Strangers," by Agnes Blake Poor; "Bertha's Summer Boarders," by Linnie S. Harris; "None Other Name; or, The Blacksmith of Minnaberg," a story of the Reformation, by Sarah J. Jones; "The Twentieth Door," by Rev. Charles M. Sheldon; "Only Judith," by Lydia L. Rouse; "Tom Sylvester," by T. R. Sullivan; "A Lover's Reward," by Jacques Edouard; "Mrs. Clift-Crosby's Niece," by Ella Childs Hurlbut; and "The Dugdale Millions," by W. C. Hudson ("Barclay North"). Kate Douglas Wiggin described "A Cathedral Courtship" (with which is included "Penelope's English Experiences") abroad; Alice E. Lord found romance abundant in "The Days of Lamb and Coleridge," and Augustus Filon painted for us "Garrick's Pupil." "In the Dwellings of Silence" was a romance of Russia, by Walker Kennedy; "The Siberian Exiles" we owe to Thomas W. Knox, who published also "The Talking Handkerchief, and Other Stories"; while C. E. D. Phelps and Leigh North collaborated upon "The Bailiff of Tewkesbury." "An Odd Situation," by Stanley Waterloo, makes a plea for free trade with Canada and annexation, while "Washington Brown, Farmer," by Le Roy Armstrong, deals with the financial difficulties of Kansas. Mary E. Stone directed "A Riddle of Luck" against too prolific authorship, and Mary A. Denison narrated "The Romance of a Schoolboy." "John Paget," by Sarah Barnwell Elliott, tells the story of twin brothers, and arraigns fashionable churches and devotion to creeds, while "Hiram Golf's Religion" was tenderly set forth by an anonymous hand. Stories more or less religious in tone were: "In the Pine Woods," by Rev. T. L. Baily; "The New Minister," by Paul Kenneth; "A Hillside Parish," by S. Bayard Dod; "How I became a Preacher," a sequel to "How I became a Sailor," by Omer T. Gillett, M. D.; "Tending Upward," by Mary B. Willey; "Endeavor Doin's Down to the Corners," by Rev. J. F. Cowan; "The Endeavorers of Maple Grove," by Hattie S. Gardner; "Annie Coopes's Friends" (who belonged to the Epworth League), by Mrs. C. B. Howard; and "Silver Bowls," a story for the King's Daughters, by Minnie E. Kenney. "Joy, the Deaconess," by Elizabeth E. Holding; "Camerton Slope," by Rev. R. F. Bishop; "Patty's Granduncle," by Mrs. Helen Pearson Barnard; "Sweet Millie," by Ernest Gilmore; "Consecrated Anew," by Belle V. Chisholm; and "Light on a Dark Path," by Alida W. Graves. "Josiah Allen's Wife" (Marietta Holley) gave us "Samantha at the World's Fair." "The Doomsdwoman," by Gertrude Franklin Atherton; "Gold," by Laura Daintrey; "Dr. Perdue," by Stinson Jarvis; "One of Earth's Daughters," by Ellen Roberts, "Was it Suicide?" by Ella Wheeler Wilcox; and "A Conflict of Evidence," by Rodrigues Ottolengui, are specimens of a numerous class, to which belong "Two Soldiers and a Politician," by Clinton Ross; "The Masked Venus," by Richard H. Savage; "Broken Chords crossed by the Echo of a False Note," by Mrs. G. McClellan; "Both were mistaken," by Arline Dare; "The Shadow of Desire," by Irene Osgood; and "The Third Man," by J. G. Bethune. "The Fallen Race," by Austyn Granville, recalls the author of "She"; while "Zenith, the Vestal," by Mrs. Margaret B.

Pecke, "Life," by William W. Wheeler, "The Dream Child," by Florence Huntley, and "Arsareth: A Tale of the Luray Caverns," by B. C. Warren, deal with theosophy, hypnotism, and spiritualism.

Volumes of short stories not included above are: "The Story of a Story, and Other Stories," by J. Brander Matthews; "Nowadays, and Other Stories," by George A. Hibbard; "In the Three Zones," by F. J. Stimson ("J. S. of Dale"); a second series of "Day and Night Stories," by T. R. Sullivan; "The Woman who failed, and Others," by Bessie Chandler; "The First Supper, and Other Episodes," by Jonathan Sturges; "Balcony Stories," by Grace King; "Monsieur Nasson and Others," by Grace Howard Pierce; "A Catastrophe in Bohemia," by Henry S. Brooks; "A Daring Experiment, and Other Stories," by Mrs. Lillie Devereux Blake; "My Three-Legged Story Teller," by Adelaide Skeel; "Made in France: French Tales retold with a United States Twist," by H. C. Bunner; "Three Greek Tales," by Walter Phelps Dodge; four volumes of "Historical Tales," American, English, French, and German, by Charles Morris; "Stories from the Rabbis," by Abram S. Isaacs; the "Chinese Nights' Entertainment," by Adele M. Fields; "Voodoo Tales," compiled by Mary Alicia Owen; "My Dark Companions and their Strange Stories," by Henry M. Stanley; "Blackfoot Lodge Tales," containing the story of a prairie people, by George Bird Grinnell; and the "Stories from Scribner's" series, six volumes, entitled respectively "Stories of Italy," "Stories of the South," "Stories of New York," "Stories of the Railway," "Stories of the Sea," and "Stories of the Army."

Juvenile.—Of prime interest to the readers for whom they are destined will be the "Comic Tragedies" written by Jo and Meg and acted by the "Little Women" of Louisa M. Alcott, now published by her sister Anne, the joint author. Kate Douglas Wiggin contributed "Polly Oliver's Problem," and a new writer for young folks made his appearance in Dr. S. Weir Mitchell, who gave "Mr. Kris Kringle: A Christmas Tale." Mrs. H. M. Lothrop (Margaret Sidney) published "Little Paul and the Frisbie School"; J. T. Trowbridge, "Woodie Thorpe's Pilgrimage, and Other Stories"; Kirk Munroe, "The Coral Ship," "Raftmates," and "The White Conquerors," the last a tale of Toltec and Aztec; W. T. Adams (Oliver Optic), "A Victorious Union," "The Young Navigators," and "American Boys afloat"; W. O. Stoddard, "The White Cave," "Tom and the Money King," and "On the Old Frontier"; A. G. Plympton, the author of "Dear Daughter Dorothy," "Robin's Recruit"; Harry Castlemon (C. A. Fiedick), "The Camp in the Foothills," "Rodney, the Overseer," and "Two Ways of becoming a Hunter"; E. S. Ellis, "The Campers Out" and "Across Texas"; while John Kendrick Bange spent "Half Hours with Jammieboy." Charles E. Brimblecom narrated the adventures of "An Archer with Columbus," and "The Boys of Greenway Court," by Hezekiah Butterworth, was a tale of the early days of Washington. Horatio Alger, Jr., wrote two books, "Facing the World" and "In a New World; or, Among the Gold Fields of Australia," while Mrs. I. M. Alden (Pansy) had no less than three, "Worth Having," "Stephen Mitchell's Journey," and "Twenty Minutes late," in addition to "The Pansy" for 1893, which she edited with George R. Alden. Mrs. Elizabeth W. Champney told of "Six Boys" and "Witch Winnie in Paris," "Archie of Athabasca," by J. Macdonald Oxley, and "Lost in the Wilds of Canada," by Eleanor Stredder, belong across the border, while "Through Apache Land," by R. H. Jayne, appeared fitly in the "Warhoop Series." "The Mill at Sandy Creek" was by the Rev. E. A. Rand; "The Barbary Bush" and eight other stories by Sarah C. Woolsey (Susan Coolidge), "John Boyd's Adventures," by Thomas W. Knox, and "Josiah in New York; or, A Coupon from the Fresh-Air Fund" and "Jenny Wren's Boarding House," by James Otis Kaler. "Ingleside," by Barbara Yechton, was illus-

trated by Jessie McDermott, and from the same author we had "Little Saint Hilary, and Other Stories," "Nibby's Christmas" was the title of three pathetic little tales by Jacob Riis. It is impossible to more than enumerate "The Moncasket Mystery and how Tom Hardy solved it," by Sidney Marlow; "Oscar Peterson, Ranchman and Ranger," by H. W. French; "Marking the Boundary," by E. Everett Billings; "The Mate of the Mary Ann," by Sophie Swett; "The Musical Journey of Dorothy and Delia," by Bradley Gilman; "Deerhurst; or, The Rift in the Cloud," by Julia Douglas; "Paula Crayton," by Jane Ellis Joy; "Frankie Bradford's Bear," by Joanna H. Mathews; "Elsie at Ion," by Martha F. Finley (Martha Farquharson), the nineteenth of the "Elsie Books"; "Jack, Jr.," by Sally Campbell; "Robert of the Sunny Heart," by Imogen Clark; "Big Brother," by Annie Fellows Johnston; "Jack's Hymn," by Elizabeth Olm; and "The Gentle Heritage," by Frances E. Crompton. Elbridge S. Brooks contributed "Heroic Happenings told in Verse and Story"; two series of "Parables from Nature," by Mrs. Margaret Gatty, were illustrated by Paul de Longpré; Helen M. Burnside told of "A Day with the Sea Urchins," and Edric Vredenburg edited "Told by the Sunbeams and Me" and "All but One" in the Raphael Tuck & Sons' prize series for children.

The Arts.—From Prof. John C. Van Dyke we have "Art for Art's Sake," seven interesting university lectures on the technical beauties of painting, while "Picture and Text" comes to us as a number of sketchy essays, chiefly on artists and art subjects, from Henry James. "The Genesis of Art Form," an essay in comparative aesthetics, by George Lansing Raymond, traced the identity of the sources, methods, and effects of composition in the various arts, while Edwin A. Barber made the first attempt at a systematic treatment of American ceramics in his historic sketch of "The Pottery and Porcelain of the United States" with 200 entirely new illustrations. "Art and Handicraft in the Woman's Building of the World's Columbian Exposition, Chicago, 1893," edited by Mrs. Maud Howe Elliott, had special articles by Mrs. Potter Palmer, Mrs. Julia Ward Howe, and others, while "Some Artists at the Fair" proved to be Frank D. Millet, Will H. Low, W. Hamilton Gibson, and F. Hopkinson Smith, the papers of each being profusely illustrated. "The Columbus Gallery," by Néstor Ponce de Leon, contains pictures of all the existing portraits, monuments, statues, medals, and paintings of the great discoverer, with historical descriptions, and from C. M. Kurtz we had "The Art Gallery, Illustrated, of the World's Columbian Exposition." Henry Van Brunt published "Greek Lines, and Other Architectural Essays," written at intervals during an active professional career of more than thirty years. "A Catechism of Architecture" was a simple and practical little work by John Gash. "Italian Gardens" were studied by Charles A. Platt, the result being a sumptuous volume, and Mrs. Schuyler Van Rensselaer entitled hints which she vouchsafed on good taste in gardening "Art Out of Doors." A reissue was also made in handy shape of her "English Cathedrals," illustrated by Joseph Pennell. A second series of "Shadows of the Stage" was welcomed from William Winter, while "The Realm of Music" was explored by L. C. Elson, and "Musical Education and Musical Art," by Edith V. Eastman. John Knowles Faine edited 6 out of 80 contemplated parts of "Famous Composers and their Works." Clara K. Rogers discussed "The Philosophy of Singing," and D. A. Blackman explained "The Psycho Vowel Method of Voice Culture." "Everybody's Guide to Music" was written by Josiah Booth. "Odd Business: High Art in Fun, Frolic, and Fancy with the Pencil and Quill," by L. J. Bridgman, contained many quaint conceits. Candace Wheeler edited "Household Art" in the "Distant Series," and Mrs. Addie E. Heron prepared a manual of home decoration under the name of "Dainty Work for Pleasure and Profit." "A Guide to Old

and New Lace in Italy exhibited at Chicago in 1893" we owe to the Countess Cora Slocomb di Brazza, and suggestions for "Color Instruction" in the public schools to Louis Prang, Mary Dana Hicks, and J. S. Clark. The Grolier Club published 400 copies only of a "Catalogue of Original and Early Editions of Some of the Poetical and Prose Works of English Writers, from Langland to Wither," with 87 facsimiles of title-pages and frontispieces. "The Christ-Child in Art," by Henry Van Dyke, was a study in interpretation which, with its many illustrations, came in opportunely at the Christmas season. Other holiday volumes were "French Illustrators," with 15 plates in color on Japan paper, and more than 100 sketches, portraits, and drawings, the text of which was by Louis Morin, a distinguished French illustrator; "The Masters and Masterpieces of Engraving," by Willis O. Chapin, with 60 engravings and heliogravures; "Riders of Many Lands," by Theodore Ayraut Dodge, illustrated by Frederick Remington, and "The Century Gallery," a collection of 64 of the best engravings that have appeared in the "Century" and "St. Nicholas." "Henriette Ronner: The Painter of Cat Life and Cat Character," a portfolio of photogravures, had an introduction by Thomas A. Janvier. "A Referendum on the Illustrations in the Garfield Edition of Gen. Lew Wallace's Novel 'Ben Hur'" was prepared by Paul Van Dyke, and among illustrated editions of standard works, we have William Cullen Bryant's "Poems of Nature," illustrated by Paul de Longpré, Charles Reade's "The Cloister and the Hearth," with 560 drawings by William Martin Johnson, "The Autocrat of the Breakfast Table," taken in hand by Howard Pyle, and "Knickerbocker's History of New York," in a Van Twiller edition, the original designs for which were supplied by Edward W. Kemble. "The Old Garden, and Other Verses" of Mrs. Margaret Deland burst into radiant bloom under the hand of Walter Crane. Two hundred copies only were printed of "A Selection of Cartoons from 'Puck'" by Joseph Keppler, with text and introduction by H. C. Bunner. C. S. Reinhart illustrated "Meh Lady" by Thomas Nelson Page. Three publishers issued Blackmore's "Lorna Doone" in holiday dress, and two Owen Meredith's (Lord Lytton's) "Lucile." The tenth series of "The Good Things of Life" was issued.

General Sciences.—As usual, but few works of value in this department were published. Among these were "Camp Fires of a Naturalist," the story of fourteen expeditions after North American mammals, from the field notes of Prof. Lewis Lindsay Dyche, by Clarence E. Edwards. Vol. I was concluded of H. Nehrling's "North American Birds" by the issue of Parts VI, VII, and VIII, and Jacob H. Studer edited "The Birds of North America," with 119 colored plates. Austin C. Appar prepared a "Pocket Key of the Birds of the Northern United States East of the Rocky Mountains." Samuel H. Scudder, in "The Life of a Butterfly," described one of the most common species in America, and he also published a "Brief Guide to the Commoner Butterflies of the Northern United States and Canada." Parts XIII and XIV of the third series of "The Butterflies of North America," by William H. Edwards, appeared; also the fifth volume of Charles Sprague Sargent's description of "The Silva of North America." Charles S. Newhall gave attention to "The Shrubs of Northeastern America," and Mrs. William Starr Dana told us "How to know the Wild Flowers." "Recreations in Botany" were from the pen of Caroline A. Creevey. A new and enlarged edition was issued of Rev. Francis Wolfe's "Demands of the United States and List of American Pediastrums," first published in 1884, and William K. Brooks filled two volumes with a monograph upon "The Genus Salpa." F. Leslie Ransome contributed "The Eruptive Rocks of Point Benita," and Andrew C. Lawson "The Geology of Carmelo Bay" and "The Post-Pliocene Diastrophism of the Coast of Southern California" to the "University of California Bulletin of the Department of Geology,"

and "A Curious Aino Toy" was the subject of a bulletin of the Essex Institute by E. S. Morse. Part I of the "Eleventh Annual Report of the United States Geological Survey" (1889-'90) was given to geology and Part II to irrigation; L. S. Foster compiled No. 4 of "Bibliographies of American Naturalists" (devoted to the published writings of George Newbold Lawrence, 1844-'91), issued as a bulletin of the United States National Museum, and the Smithsonian Institution published "A Select Bibliography of Chemistry, 1492-1892," by Henry Carrington Bolton; "The Mechanics of the Earth's Atmosphere," a collection of translations compiled by Prof. Cleveland Abbe; and Albert A. Michelson's work "On the Application of Interference Methods to Spectroscopic Measurements." Volumes of applied science were "Continuous-Current Dynamos and Motors," by Frank P. Cox, an elementary treatise for students; "How to manage the Dynamo," by S. R. Bottono; "Electric Lighting for Marine Engineers," by Sydney F. Walker; Vol. I of "Theoretical Elements of Electro-Dynamic Machinery," by A. E. Kennelly; an "Arithmetic of Magnetism and Electricity," by John T. Morrow and Thorburn Reid; "Comparisons between the different Systems of Distributing Electricity," by Henry Robinson; and "High School Laboratory Manual of Physics," by Dudley G. Hays, Charles D. Lowry, and Austin C. Kishel. Two papers by James Swinburne and C. H. Wordingham upon "The Measurement of Electric Currents" and "Electrical Measuring Instruments and Meters for Electrical Energy" appeared in one volume. Daniel Carhart prepared "A Field Book for Civil Engineers"; Sidney H. Wells, a practical manual of "Engineering, Drawing, and Design," in two volumes; "Arthur Latham Baker set forth "The Elements of Solid Geometry"; Silas W. Holman proffered a "Discussion of the Precision of Measurements"; and Augustus Knudsen wrote on "Triangular Surveys from Single Stations." An "Index to 'The Popular Science Monthly' from 1872-'92" was compiled by F. A. Fernald, the value of which can readily be appreciated.

For juvenile readers we have "Talks by Queer Folks: More Land and Water Friends," by Mary E. Bamford, and Vols. II and III of "Leaves from Nature's Story-Book," by Mrs. M. A. B. Kelly.

To intellectual science belong "Genetic Philosophy," by David Jayne Hill; "The Interpretation of Nature," by Prof. N. S. Shaler; "An Historical Interpretation of Philosophy," by John Bascom; "Elements of Psychology," by James Mark Baldwin, a simplification of the author's larger "Handbook of Psychology"; "The Ethics of Hegel," translated in the "Ethical Series," with an introduction by J. Macbride Sterrett; "First Steps in Philosophy," by William Mackintire Salter; a "Primer of Philosophy," by Paul Carus; "The Philosophy of Individuality," by Antoinette Brown Blackwell; and "Elements of Deductive Logic," by Noah K. Davis. Thomson Jay Hudson endeavored to find "The Law of Psychic Phenomena," and James B. Alexander to explain "The Dynamic Theory of Life and Mind." Henry Wood, the author of "Natural Law in the Business World," offered in "Ideal Suggestion through Mental Photography" a restorative system for home and private use.

History.—No important contributions to history were made during the year. "The French War and the Revolution," by Prof. William Milligan Sloane, appeared in the "American History Series," and the "Causes of the American Revolution" were set forth by James A. Woodburn in the "John Hopkins University Studies." A special edition was reprinted of James Madison's "Journal of the Federal Convention," published under the direction of the United States Government in 1840, and a new popular edition was issued of "A Half Century of Conflict," by Francis Parkman, in two volumes. "Massachusetts: Its Historians and its History" was the theme of Charles Francis Adams, as was "The Making of Virginia and the Middle Colonies, 1578-1701," that of

Samuel Adams Drake, while a cheaper edition was also issued of the latter's "The Making of the Great West." Theodore C. Gambrell, D. D., published "Studies in the Civil, Social, and Ecclesiastical History of Early Maryland"; Bernard C. Steiner, a "History of Slavery in Connecticut"; and Laura Bride Powers, "The Story of the Old Missions of California." "Division and Reunion, 1829-'89," by Woodrow Wilson, belonged to "Epochs of American History," and "Nullification, Secession," by Caleb W. Loring, was an argument for our Government as an indissoluble nation. "From Chattanooga to Petersburg under Generals Grant and Butler" was at once a contribution to the history of the war and a personal vindication by Gen. William Farrar Smith; Rev. David Bittle Floyd wrote a "History of the Seventy-fifth Regiment of Indiana Infantry Volunteers"; William Forse Scott, "The Story of a Cavalry Regiment," that of the Fourth Iowa Veteran Volunteers; and N. D. Preston, a "History of the Tenth Regiment New York Volunteer Cavalry." J. C. Bancroft Davis supplied a chapter in diplomatic history in "Mr. Fish and the Alabama Claims." "The Gilded Man (El Dorado), and other Pictures of the Spanish Occupancy of America" were drawn by A. F. Bandelier, and from Joseph Wallace we have a "History of Illinois and Louisiana under the French Rule." "Illinois, Historical and Statistical," by John Moses, filled two volumes. A new and revised edition of "The Discovery of the Yosemite and the Indian War of 1851," by L. H. Bunnell, was issued, and "The Settlement of the Jews in North America," by Charles P. Daly, which had been twenty years out of print, was edited with notes and appendices by Max J. Kohler. "English History for American Readers" was the joint work of Thomas Wentworth Higginson and Edward Channing, and Mary Abigail Dodge (Gail Hamilton) supplied "English Kings in a Nutshell," as an aid to memory in a different form from that in which it first appeared in 1885. John Codman Kopes selected "The Campaign of Waterloo" for a military history, which he supplemented with an atlas of the same. "The Dawn of Italian Independence," in two volumes, by William Roscoe Thayer, traced the story of Italy from the Congress of Vienna, 1814, to the fall of Venice, 1849, and "Florentine Life during the Renaissance" was the theme of Walter B. Scaife in "Johns Hopkins University Studies." Two volumes also contained "The Influence of Sea Power upon the French Revolution and Empire, 1793-1812," by Capt. A. T. Mahan, U. S. N., which creditably succeeded his former work, and Mrs. Laura E. Richards gave us "Glimpses of the French Court." A limited edition of "Old Court Life in France," by Frances Elliott, first published in this country twenty years ago, was issued, and John Bonner wrote "A Child's History of France." "The Evolution of an Empire," by Mrs. Mary Parmele, was a brief historical sketch of Germany; Sidney Whitman described "The Realm of the Habsburgs"; while "Russia and Turkey in the Nineteenth Century" were the theme of Elizabeth Wormeley Latimer. Horatio F. Brown gave an historical sketch of the republic of "Venice," and "The Story of Poland," in "The Story of the Nations" series, was by Prof. W. R. Morfill. J. B. Bury wrote the "History of the Roman Empire from the Foundation to the Death of Marcus Aurelius" for "Harper's Students' Series." Vols. III and IV completed "The Memorial History of the City of New York," edited by James Grant Wilson, and William Loring Andrews compiled a limited edition of "The Bradford Map" of the city, published in 1731. A "Centennial History of the City of Washington, D. C.," was written, and Erastus Thatcher compiled a book upon "The Founding of Washington City." G. H. McMaisters published a "History of the Settlement of Steuben County," and Don Gleason Hill, the town clerk, edited "The Early Records of the Town of Dedham, Mass., 1636-1659." "Ontario's Parliament Buildings," by Frank Yeigh, chronicled a century of legislation from 1792.

Housekeeping.—In "Some Passages in the Practice of Dr. Martha Scarborough," Mrs. Helen Campbell made a plea for better food, better cooking, and better living among the New England folks, veiling her motive in the form of a slight story, while she proved herself at home "In Foreign Kitchens," and also issued a new revised edition of "The Easiest Way in Housekeeping and Cooking." "Daily Dinners," by Nancy Lake, consisted of a collection of 366 distinct *menus* in English and French, intended for the mistress rather than the cook, and "Real Cookery" was defined by Grid. "The Manufacture of Liquors and Preserves," by J. de Brevans, an eminent French chemist, is a particularly valuable work, containing over 300 formulas; Alessandro Filippini gives recipes for "One Hundred Desserts"; while Mrs. Louisa E. Smith devoted her attention to "Bonnes Bouches, and Relishable Dishes for Breakfast and Luncheon." "Sandwiches: A Baker's Dozen" we owe to Marion L. Campbell, and "A Handbook of Invalid Cooking" to Mary A. Boland. The sum and substance of all are contained in "Miss Parloa's Young Housekeeper."

Jurisdiction.—"Comparative Administrative Law," in two volumes, by Frank J. Goodnow, was an analysis of the administrative systems, national and local, of the United States, England, France, and Germany; Frederick J. Stimson published Vol. II of his work on "American Statute Law," and Vol. III of the "Code of Civil Procedure" of the State of New York, including amendments enacted in 1893, was annotated by E. M. Stever. Herbert B. Huntley compiled "The Code of Procedure and Penal Code" of the State of Washington, and Roswell Shinn wrote "A Treatise on the Pleadings and Practice in the Courts of Record of Michigan," in two volumes. John M. Vanfleet set forth "The Law of Collateral Attack on Judicial Proceedings," and Irving Browne was the author of "A Treatise on the Admissibility of Parol Evidence in Respect to Written Instruments." "A Treatise on the Law of Certiorari at Common Law and under the Statutes," by George E. Harris, "A Summary of Equity Pleading," by C. C. Langdell, "Illustrated Cases in Equity," compiled by William S. Pettee, and "A Treatise on Extraordinary Relief in Equity and at Law," in two volumes, by Thomas Carl Spelling, relate to law in the abstract. "Outlines of Criminal Law and Procedure" were drawn for the use of students by Emlyn McClain, who prepared also "A Selection of Cases on the Law of Carriers"; "The General Principles of the Law of Evidence in their Application to the Trial of Criminal Cases at Common Law and under the Criminal Codes of the Several States," were published by Frank S. Rice; Part I of "A Selection of Cases and Other Authorities upon Criminal Law," by Joseph H. Beale; Vol. II of "A Selection of Cases on the Law of Torts," by Jeremiah Smith; the "Law of Contract," by William T. Brantley; "A Treatise on the Law of Quasi-Contracts," by William Albert Keener; "Cases on the Law of Agency," by Floyd R. Mecham; and "A Text-Book on Commercial Law," by Salter S. Clark. "Code Practice in Personal Actions" was an elementary treatise for students by James L. Bishop; J. G. Sutherland revised and enlarged, with the assistance of John R. Berryman, both his works "On Damages" and "A Treatise on the Law of Damages"; and J. E. Cobby wrote "A Practical Treatise on the Law of Chattel Mortgages," in two volumes; two were also filled by "A Treatise on the Law of Mortgages of Real Property" by Darius H. Pingrey. Sidney Perley set down "Principles of the Law of Interest"; Charles G. Black, those of the "Law of Taxation," with special reference to its application in the State of New Jersey; and Henry Campbell's "Treatise on the Law of Tax Titles" passed through a second revised and enlarged edition. Horace E. Smith wrote "A Treatise on the Law of Personal Property"; Rufus Waples, "A Treatise on Homestead and Exemption"; and Martin L. Newell, "A Treatise on the Action of Ejectment and Concurrent Remedies for the Re-

covery of Real Property." "The Law of Banks and Banking" was from the pen of Charles T. Boone; "The Law relating to Bank Collections" was determined by Albert S. Bolles; "The Law of Bank Checks in the United States," by Henry C. Van Schaack; "Elements of the Law of Bills, Notes, and Checks, and the English Bills of Exchange Act for Students," by Melville M. Bigelow; and Charles P. Norton drew up a "Handbook of the Law of Bills and Notes." Stewart Rapalje selected for a theme "The Law relating to Real-Estate Brokers." In insurance we have two volumes of "A Treatise on the Law of Insurance," by Arthur Biddle; George A. Clement's "Digest of Fire-Insurance Decisions"; Vols. III and IV of J. S. Bloomington's "Annual Digest of Insurance Decisions"; John A. Finch's "Digest of Insurance Cases" for the year ending Oct. 31, 1892; and "The Insurance Statutes" of the State of New York, edited and annotated by Morris Cooper. The issue of the second and third volumes of "Economic Legislation of All the States," by Allen Ripley Foote and Charles E. Everett, completed that work; Charles Fisk Beach, Jr., gave two volumes to "Company Law"; and "The Law and Practice under the Statutes concerning Business Corporations in the State of New York" was handled by Dwight A. Jones. Vol. I of the "American Corporation Legal Manual" was edited by C. L. Borgmeyer, and John Lewis edited and annotated Vols. VI and VII of "American Railroad and Corporation Reports." Vols. XXXVIII to XLI, inclusive, of "American and English Corporation Cases," and Vols. LI to LIV of "American and English Railroad Cases" appeared; and William L. Murfree, Jr., discussed the "Law of Foreign Corporations." "The Law and Practice of International Extradition" emanated from John G. Hawley. Francis Rawle compiled "Acts relating to Car Trusts"; James Barr Ames printed Vol. I of "A Selection of Cases on the Law of Trusts"; Henry F. Buswell defined "The Civil Liability for Personal Injuries arising out of Negligence"; and Francis B. Tiffany treated of "Death by Wrongful Act." "The Law of Electric Wires in Streets and Highways," by Edward Quinton Keasbey, and "A Treatise on the Law of Street Railways," by Henry J. Booth, may be classed together; and "Public-School Law of the United States" we owe to Irwin Taylor. "A Treatise on the Law relating to Gifts and Advancements" was by W. W. Thornton; "Probate Law" (as practiced in California and other Western States and Territories, by D. E. and Joseph I. Alexander; and "The Law of Wills," by John B. Cassoday. "The Infringement of Patents for Inventions" was studied by Thomas B. Hall, as was "Patentable Invention" by Edward S. Kenwick. George H. Knight prepared the "Patent-Office Manual," and Woodbury Lowery issued Vol. XX of "Decisions on the Law of Patents." "Everybody's Lawbook," by J. A. Koonce, and "Legal Advice" for citizens of the State of New York, by Eldorus Dayton, are explained by their titles. C. C. Walsh gave us "The Student's Quiz-Book" in three volumes, and William Lansing "The Lawyer's and Clerk's Assistant." Vols. XXI and XXII appeared of the "American and English Cyclopædia of Law" compiled under the editorial supervision of Charles F. Williams, as well as Boyer's, Story's, Sharp and Allen's and the Snow-Church Company's legal directories. Vol. XXVIII to XXXIII of "American State Reports" by A. C. Freeman, were issued; also Vols. XII and XIII of "The Supreme Court Reporter" and Vol. LV of the "Federal Reporter." Four volumes by Frank F. Brightly contain "A Digest of the Decisions of All the Courts of the State of New York from the Earliest Period to the Year 1892," and Austin Abbott contributed Vol. XXIX of "New Cases" which appeared before the same courts. Special volumes of local law were "Precedents and Rules of Pleading in Civil Actions in the County and District Courts of Texas," by John Sayles; "Practice in Courts of Review that substantially

follow the Colorado Procedure," by John C. Fitnan; "The Law of Assignment for the Benefit of Creditors in the State of Illinois," by Sydney R. Taber; "The Powers, Duties, and Liabilities of Towns and Town Officers in Massachusetts," by William M. Seavey; "The Law of Boroughs in Pennsylvania," by Frank R. Savidge; "The Tennessee Officer," by W. C. Kain; "The Louisiana Justice," by A. F. Knobloch; and "The Statutes of 1893" for Oklahoma. "A Treatise on the Law of Water Rights" as formulated and applied in the Pacific States, was a revised and enlarged edition of "Pomeroy on Riparian Rights," and a third edition also appeared of "Remedies and Remedial Rights by Civil Action," by the same author (John Norton Pomeroy).

Medicine and Surgery.—Under the first head we have "Principles and Practice of Medicine," by Henry M. Lyman, M. D.; a "Handbook of Local Therapeutics," edited by Harrison Allen, M. D., who collaborated also with Richard H. Harte, Arthur Van Harlingen, M. D., and G. C. Harlan in its composition. The first of two volumes on the "Theory and Practice according to American Teachers," edited by William Pepper, M. D., appeared, as did a "Manual of the Practice of Medicine," designed especially for students, by A. A. Stevens, M. D.; "Essentials of Homoeopathic Materia Medica," compiled by W. A. Dewey, M. D., was a quiz compend arranged for students, and to the same school belongs "Verdi's Special Diagnosis and Homoeopathic Treatment of Disease, for Popular Use." R. S. Aitchison issued "A Medical Handbook for the Use of Practitioners and Students"; George D. Black edited "The Doctor at Home and Nurse's Guide-Book"; Orestes M. Brands and Henry C. Van Gieson prepared "An Academic Physiology and Hygiene"; Emmet Denamore, M. D., explained "How Nature cures"; and Frederick A. A. Smith, M. D., advised "Keep your Mouth shut," to which popular treatise on mouth-breathing was added an appendix on ophthalmia in newborn children by Dr. Smith and Dr. Swan M. Burnett. "A Compendium of Materia Medica, Therapeutics, and Repertory of the Digestive System" was by Arkell Roger McMichael, M. D.; W. W. Van Valzah gave his attention to "The Chronic Disorders of the Digestive Tube"; as W. F. McNutt, M. D., did to "Diseases of the Kidneys and Bladder"; and G. Frank Lydston, M. D., to "Stricture of the Urethra" and "Varicocele and its Treatment." A second edition was made of "A Clinical Study of Diseases of the Kidneys," by Clifford Mitchell, M. D.; Charles H. Burnett, M. D., edited "Diagnosis and Treatment of Diseases of the Ear, Nose, and Throat," by eminent American, British, Canadian, and Spanish authors, in two volumes; "Diseases of the Eye, Ear, Throat, and Nose" was a manual for students and practitioners prepared by Frank E. Miller, M. D., James P. McEvoy, M. D., and John E. Weeks, M. D. Horace F. Ivins, M. D., published a "Text-Book on Diseases of the Nose and Throat," and Howard F. Hansell, M. D., and James H. Bell, M. D., "A Manual of Clinical Ophthalmology." Ward A. Holden illustrated "An Outline of the Embryology of the Eye" from original pen drawings. George T. Jackson, M. D., issued a "Handbook of Diseases of the Skin"; W. A. Hardaway, a "Manual of Skin Diseases"; and H. K. Crocker, M. D., "Diseases of the Skin," with special reference to the skin eruptions of children. The results of the latest investigation were summed up in "Modern Gynecology," by Charles H. Bushong, M. D.; Thomas More Madden made a speciality of "Clinical Gynecology," and J. Bland Sutton of "Surgical Diseases of the Ovaries and Fallopian Tubes." "Electricity: Diseases of Women, and Obstetrics," by Franklin H. Martin, M. D., deals with the practical application of electricity in cases of the kind; and G. W. Bratenahl, M. D., and Sinclair Toussay, M. D., collaborated on "Gynecology" for the Students' Quiz Series." P. A. Morrow, M. D., edited "A System of Genito-Urinary Diseases"; "Fermentation, Infection, and Immunity" was a new theory advanced by J. W. McLaughlin, M. D.; Walter Vought,

M. D., offered "A Chapter on Cholera for Lay Readers"; and two volumes in the "Students' Quiz Series," were "Histology, Pathology, and Bacteriology," by Bennett S. Beach, M. D., and a manual of the "Practice of Medicine, including Nervous Diseases," by Edwin T. Doubleday, M. D., and J. D. Nagle, M. D. Henry Putnam Stearns, M. D., published "Lectures on Mental Diseases," and Landon C. Gray a "Practical Treatise on Nervous and Mental Diseases." Theodore M. Kirchoff, M. D., prepared a "Handbook of Insanity." "The Disease of Inebriety" was arranged and compiled by the American association for the study and cure of the same. Dr. S. A. K. Strahan's "Suicide and Insanity" was a physiological and sociological study. The principles and practice of "Nursing" were set forth by Isabel Adams Hampton; and Martin W. Curran gave "Information for Nurses in Home and Hospital." "Medical Microscopy" was the theme of Frank J. Wethered, M. D., and "Anæsthetics and their Administration" of Frederick Hewitt, M. D. J. S. Cassidy, M. D., was an authority as regarded "Elements of Chemistry and Dental Materia Medica." N. Senn, M. D., published a "Syllabus of Lectures on the Practice of Surgery arranged in Conformity with the American Text-Book of Surgery"; F. J. Brookway, M. D., and A. O'Malley, M. D., produced a manual of "Anatomy"; and Irving S. Haynes, M. D., a "Practical Guide for Beginners to the Dissection of the Human Body." "Brain Surgery" was by M. Allen Starr, M. D.; the "Student's Handbook of Surgical Operations" and a "Manual of Operative Surgery," in two volumes, by Frederick Treves; and A. Liataud sent out a "Manual of Operative Veterinary Surgery." "Human Monstrosities," in four parts, received the attention of Barton C. Hirst, M. D., and George A. Piersol, M. D. Vol. XIV of the "Index-Catalogue of the Library of the Surgeon-General's Office" was issued by the War Department at Washington, D. C.; Alexander Duane, M. D., published "The Student's Dictionary of Medicine and the Allied Sciences"; and the third of four volumes of an "Illustrated Encyclopædic Medical Dictionary," by Frank P. Foster, M. D., appeared. "An Account of Bellevue Hospital" was edited by Robert J. Carls, M. D., with a catalogue of the medical and surgical staff from 1736 to 1894; C. Gilman Currier drew "Outlines of Practical Hygiene adapted to American Conditions"; T. M. Stevenson, M. D., and Shirley F. Murphy issued Vol. I of a "Treatise on Hygiene and Public Health"; and A. R. Horne, D. D., made "Common-Sense Health Notes." F. L. Dibble dealt with "Vagaries of Sanitary Science."

Poetry.—No volume of striking merit appeared during the year, but many collections of pleasing verse. Richard Watson Gilder published "The Great Remembrance" and 40 other poems. Verses of Edward Everett Hale, written on occasion, "For Fifty Years," were collected, as were "Phillips Brooks's Poems," and poems of Thomas Wentworth Higginson and Mary Thacher Higginson, entitled "Such as they are." Eugene Field gave us a "Second Book of Verse," and from James Whitcomb Riley we had 100 short poems on "Green Fields and Running Brooks." "On the Road Home" was the name given by Mrs. Margaret E. Sangster to a number of her poems; three by Mrs. A. D. T. Whitney were entitled "White Memories"; Mrs. Julia C. R. Dorris "Periwinkle" was illustrated in charcoal by her daughter, Zulma De Lacy Steele, and Louise Imogen Guiney touched tuncfully "A Roadside Harp." "Where Brooks go softly" was the chosen haunt of Charles Eugene Banks, and Madison J. Cawein wrote "Poems of Nature and Love" and "Red Leaves and Roses." Richard Hovey composed an elegy, "Seaward," on the death of Thomas William Parsons, whose "Poems" were collected into a volume during the year, and whose translation of "The Divine Comedy of Dante Alighieri" had a preface by Charles Eliot Norton, and a memorial sketch by Louise Imogen Guiney. Charles H. Crandall published "Way-side Music: Lyrics, Songs, and Sonnets"; Kate Ra-

worth Holmes, "Pictures from Nature and Life"; Bliss Carman, "Low Tide on Grand Pré," a book of lyrics; Mrs. Julia Ditto Young, "Thistle Down"; W. H. Venable, "The Last Flight"; Annie Wall, "Some Scattered Leaves"; Gertrude Hall, "Allegretto"; Frank L. Monteverde, "Looking Beyond"; and M. A. B. Evans, "In Various Moods." "The Story of Aunt Patience," by Mary D. Brine, was illustrated by F. C. Gordon; Harmon Seeley Babcock wrote "The Friendship of Learning," and other poems, while "East and West, The Discovery of America, and Other Poems" of Ernest Francisco Fenollosa belong peculiarly to the Columbian year. "Poems of Two Worlds" were by William Cotter Wilson, "Lyric Touches" by John Patterson, "Back Country Poems" by Samuel W. Foss, and "Cosmos and Other Poems" by Anna Hubbard Mercur. "Under King Constantine," three post-Arthurian idylls, was by Mrs. Katrina Trask. It is impossible to do more than enumerate "In Dreamland, and Other Poems," by Thomas O'Hagan; "The Wine of May, and Other Lyrics," by Frederick L. Pattee; "Fair Shadow Land," by Edith M. Thomas; "Oberon and Puck: Verses Grave and Gay," by Helen Gray Cone; "Fleeting Thoughts," by Caroline Edwards Prentiss; "A Song of the Christ," by Mrs. Harriet Adams Sawyer; "Målmörda: A Metrical Romance," by Joseph C. Clarke; "The Legend of the White Canoe," by William Trumbull; and another "Legend of a Lake," by John Alleyn Macnab. Sixteen short poems by Capt. Jack Crawford were entitled "Camp-Fire Sparks." "Cap and Gown" was a compilation of college verse by Joseph La Roy Harrison, and Horace Parker Chandler issued two additional volumes of "The Lover's Year Book of Poetry," referring chiefly to married life and child life. A new edition was issued of William Winter's "Wanderers." Goldwin Smith published translations from the Latin poets under the name of "Bay Leaves," and John Osborne Sargent's "Horatian Echoes: Translations of the Odes of Horace" had an introduction by Oliver Wendell Holmes. William Hyde Appleton also gave us "Greek Poets in English Verse." "Songs for the Shut-In" were gathered and arranged by Mary Craige Yarrow, and "Columbia's Emblem, Indian Corn," was a garland of tributes in prose and verse by various authors. "Christmastide in Song," a volume of selections, was illustrated with photogravures of well-known paintings of the Nativity. Virginia F. Townsend caught for us "What Christmas says to New Year." Kinahan Cornwallis proffered another historical poem upon "The Conquest of Mexico and Peru," prefaced by "The Discovery of the Pacific." The few contributions to dramatic writing were "Aethelwold," by Amélie Rives (Mrs. John Armstrong Chanler); "Giles Corey, Yeoman," by Miss Mary E. Wilkins; "Hannibal and Katharna," by John Fife Cookson; "The History of Geronimo's Summer Campaign in 1885," by George D. Cummings; "The Plutocrat," by Otto F. Schupphaus; "Count Julian," by Julian Sturgis; "The Decision of the Court: A Comedy," by Brander Matthews; and two farces, "Evening Dress" and "The Unexpected Guests," by William Dean Howells. "Poems and Plays" of Donn Piatt were issued, and Justin Adams published "At the Picket Line" and "Trips; or, Beyond the Rockies." The poem read at the opening of the World's Fair, May 1, 1893, was by William A. Croffut, and was entitled "The Prophecy."

Political, Social, and Moral Science.—As much as usual was written on these topics. Albert Bushnell proffered "Practical Essays on American Government"; Prof. Woodrow, "An Old Master" (Adam Smith), with other political essays; Goldwin Smith followed, "The United States: An Outline of Political History, 1492-1871," with "Essays on Questions of the Day: Political and Social"; and Ellis Paxton Oberholzer discussed "The Referendum in America" in "Publications of the University of Pennsylvania." "Politics in a Democracy" was by Daniel Greenleaf Thompson. In the "Columbia College Studies" Cortlandt F.

Bishop wrote a "History of Elections in the American Colonies," while "The World's Representative Assemblies of To-day" were studied comparatively by Edmund K. Alden in the "Johns Hopkins University Studies." Other volumes of these studies were "Local Government in the South and Southwest" (in which was included "Popular Elections of United States Senators"), by E. W. Bemis and others; "Church and State in North Carolina," by Stephen B. Weeks; "The Negro in the District of Columbia," by Edward Ingle; and "The Condition of the Western Farmer, as illustrated by the Economic History of a Nebraska Township," by Arthur F. Bentley. Allen Ripley Foote, in "Prosperity and Politics," advocated what he believed the only measures to relieve the economic and political situation; Winfield J. Davis wrote the "History of Political Conventions in California"; and Walter C. Clephane, "A History of the Government of the District of Columbia." "The City Government of Philadelphia" was a study in municipal administration by students of the University of Pennsylvania, and Clinton D. Higby furnished "A General Outline of Civil Government in the United States, the States, Counties, Townships, Cities, and Towns." A "Congressional Manual of Parliamentary Practice" was deduced from the rules and rulings of Congress by J. Howard Gore. "American Marine," by William W. Bates, presented the shipping question in history and politics, and the relation of "Inland Water Ways" to transportation was discussed by Emory R. Johnson. Marshall Cushing told "The Story of Our Post-Office," ex-Gov. William Larrabee took in hand "The Railroad Question," George H. Lewis considered "National Consolidation of the Railways of the United States," and Mrs. Marion Todd "Railways in Europe and America" from the standpoint of government ownership. The financial crisis occurring during the year induced many attempts to comprehend and remedy the situation. Beginning at the beginning, we have "The History and Theory of Money," a special course of twelve lectures by Sidney Sherwood; "The People's Money," by W. L. Trenholm; and "The History, Organization, and Influence of the Independent Treasury of the United States," by David Kinley, initiating a new series, the "Library of Economics and Politics," edited by Richard T. Ely, of which the second volume was "The Repudiation of State Debts," a study in the financial history of several States, by William A. Scott. "The Banking Question in the United States" was discussed by Horace White, Michael D. Harter, A. B. Hepburn, and others, Jan. 12, 1893, at a meeting held under the auspices of the American Academy of Political and Social Science. S. Whitney Dunscomb, Jr., made a study of comparative legislation on "Bankruptcy," William Zebina Ripley wrote "The Financial History of Virginia, 1609-1776," Victor Roosevelt gave his attention to "Special Assessments," and Max West considered "The Inheritance Tax," all in the "Columbia College Studies"; Richard P. Rothwell advocated "Universal Bimetallism and an International Monetary Clearing House," and "The Future of Silver," translated from the German of Edward Suess by Robert Stein, was published by direction of the United States Senate Committee of Finance. J. B. Duryea published a second edition of his "Practical Treatise on the Business of Banking and Commercial Credit." Enoch A. Bryan, in "The Mark in Europe and America," reviewed the discussion of early land tenure, as Frederick E. Haynes did "The Reciprocity Treaty with Canada of 1854." "Pensions" were the theme of D. Cady Eaton. Coming now to social science, we have "The Psychic Factors of Civilization" passed in review by Lester F. Ward; "Factors in American Civilization," studies in applied sociology in the form of popular lectures and discussions before the Brooklyn Ethical Association; "Outlines of Economics," by Richard T. Ely, in which theory holds a more prominent part than in his earlier "Introduction to Political Economy"; "Socialism and the American

Spirit," by Nicholas Paine Gilman; "Principles of Economics the Satisfaction of Human Wants in so far as their Satisfaction depends on Material Resources," by Grover Pease Osborne; "A Treatise on Trusts and Monopolies," by Thomas C. Spelling; "Industrial Arbitration and Conciliation," some chapters from the industrial history of the past thirty years, compiled by Josephine Shaw Lowell in "Questions of the Day" series; "The Social Condition of Labor," by E. R. L. Gould (in the "Johns Hopkins University Studies"); "Women Wage-Earners: Their Past, their Present, and their Future," by Mrs. Helen Campbell, with an introduction by R. T. Ely; "Woman, Church, and State," by Matilda Joselyn Gage; "Masses and Classes," a study of industrial conditions in England, by Henry Tuckley; "The Economics of the Russian Village," by Isaac A. Hourwich, another of the "Columbia College Studies"; "Public Assistance of the Poor in France," by Emily Greene Balch, in "Publications of the American Economic Association," "The Housing of the Poor in American Cities," its prize essay for 1892, by Marcus T. Reynolds, and the "Report" of the proceedings of the same association at the fifth annual meeting, Chautauqua, N. Y. "Abnormal Man" was the theme of a "Circular of Information" issued by the United States Bureau of Education, being a collection of essays on education and crime, by Arthur MacDonald, with an extensive bibliography. From the same author we have also a volume on "Criminology," with an introduction by Cesare Lombroso. Henry M. Boies spoke from extensive acquaintance of "Prisoners and Paupers," while B. O. Flower described "Civilization's Inferno." A newly revised and enlarged edition was issued of George W. Hale's "Police and Prison Cyclopaedia"; seven essays were delivered on "Philanthropy and Social Progress" by Miss Jane Woods Addams, Robert A. Huntington, and others, before the School of Applied Ethics at Plymouth, Mass.; and Mrs. Frances A. Goodale edited "The Literature of Philosophy" in the "Distaff Series." "Slavery and the Slave Trade in Africa" was by no less an authority than Henry M. Stanley. J. N. Stearns edited "Temperance in all Nations," in two volumes, being the history of the cause in all countries of the globe, together with the papers, essays, addresses, and discussions of the World's Temperance Congress held in Chicago, June, 1893. "Conversations between the Rabbi of the Boarding House and a Company of Intelligent Ladies and Gentlemen," by H. H. Young, covered the labor and every other problem. Benjamin R. Tucker gave us "Instead of a Book, by a Man too busy to write one," a fragmentary exposition of philosophical anarchism, and William H. Van Ornum asked "Why Government at All?" Publications of the American Academy of Political and Social Science embraced the following papers: "Our Failures in Municipal Government," by Gamaliel Bradford; James Harvey Robinson's review of "Sidgwick's Elements of Politics"; "Home Rule for our American Cities" by E. P. Oberholtzer; "The Nature of the Federal State," by E. V. Robinson; "Local Government of Country Communities in Prussia," by Conrad Bornhak; "Parliamentary Procedure," by Jesse Macy; "Social Work at the Krupp Foundries," by S. M. Lindsay; "Psychologic Basis of Social Economics," by Lester F. Ward; "Cost and Expense" and "Cost and Utility," by Simon N. Patten; "The Surplus Gains of Labor," by J. B. Clark; "The Effects of Consumption of Wealth on Distribution," by William Smart; "The Theory of Final Utility in its Relation to Money and the Standard of Deferred Payments," by Lucius S. Merriam; "Taxation of Large Estates," by R. T. Colburn; "Seligman's 'Shifting and Incidence of Taxation'" and "The Standard of Deferred Payments," by E. Alsworth Ross; "The Relation of Economic Conditions to the Causes of Crime," by Carroll D. Wright; and "Preventive Legislation in Relation to Crime," by C. H. Reeve. "Sub-Cælum" was the picture of a sky-built human world by A. P. Russell. Sidney Webster published a small work on "Misuse of Legal Tender."

Sports and Pastimes.—In this department we have a few books by standard authorities. Howland Gaspar, in "The Complete Sportsman," supplied a manual of scientific and practical knowledge for the instruction and information of all votaries of the gun, while the big game of the United States and its chase with horse, hound, and rifle are the theme of "The Wilderness Hunter," by Theodore Roosevelt, who also edited, with George Bird Grinnell, "American Big-Game Hunting," the book of the Boone and Crockett Club. "The Thoroughbred Horse" was treated by S. D. Bruce, and Ashmont (Dr. J. Frank Perry) disclosed "Kennel Secrets." "University Football," edited by James R. Church, has the play of each position treated by experts on the elevens of Harvard, Yale, and Princeton, and "American Football for Schools and Colleges" was again discussed by A. A. Stagg and H. L. Williams. The "American Yacht List for 1893" was issued, and William B. Aiken set forth in small compass "An Outline of the Principles and Leads of American Whist." "Whist Nuggets," in the "Knickerbocker Nuggets," was a charming compilation by W. G. McGuckin.

Theology.—As usual, there were a great many books published in this department. George Park Fisher, D. D., was the author of a "Manual of Natural Theology"; Dr. L. F. Stearns wrote three or four years before his death the popular discussion of "Present-Day Theology," published during the year; and Henry R. Percival drew up "A Digest of Theology." M. W. Gifford laid down "Laws of the Soul"; William G. T. Shedd, D. D., considered "Orthodoxy and Heterodoxy," as well as "Calvinism: Pure and Mixed," the latter a defense of the Westminster standards; David Nelson Beach outlined "The Newer Religious Thinking"; and Josiah Strong, D. D. (the author of "Our Country," discussed "The New Era." "The Coming Kingdom" was by Thomas Van Ness. "Through Christ to God" was a study in scientific theology by Joseph Agar Beet, D. D. A second edition was issued of "The Credentials of Science the Warrant of Faith," by Josiah Parsons Cooke, and Rev. J. A. Zahm wrote of "Catholic Science and Catholic Scientists." Thomas Cooper considered "Evolution, the Stone Book, and the Mosaic Record of Creation" in three lectures, from an orthodox standpoint. "Son of Man; or, The Sequel to Evolution," by Celestia Root Lang, and "The Lyric of Life," by Laura A. S. Nourse, made special pleas for immortality. "Christ and Criticism," by Prof. Charles Marsh Mead, D. D.; "The Bible: Its Origin and Growth and its Place among the Sacred Books of the World," by Jabez T. Sunderland; "The Higher Criticism," by Rev. C. W. Rishell; "The Higher Criticism of the Hexateuch," by Charles A. Briggs, D. D.; "The Bible in the World's Education" (the first annual course of lectures on the Wycliffe foundation of the University of Denver), by Bishop Henry White Warren, who published also "Exegesis: A Leading out of Perplexities into Perception of the 'Pentateuch' (Fivefold Book) of Moses"; and "Holy Writ and Modern Thought," by Bishop Arthur Cleveland Coxe, were akin in theme; and Joseph Henry Crooker assigned the place of "The New Bible and its New Uses." "What is Inspiration?" by John De Witt, D. D., purported to be a fresh study of the question with new and discriminative replies, and Henry Preserved Smith, in "Inspiration and Inerrancy," set forth fully his position. Charles A. Briggs, D. D., published Part II of "The Case Against Professor Briggs" and "The Defense of Professor Briggs" before the Presbytery of New York, Dec. 13, 14, 15, and 19, 1892. The authors of "Progressive Christianity" reprinted articles upon "The Divinity of Jesus Christ" which appeared in the "Andover Review," and R. A. Redford, in "Vox Dei," traced the doctrine of the Spirit as set forth in the Old and New Testaments. From the same author we have "Four Centuries of Silence; or, From Malachi to Christ." "The Meaning and the Method of Life" was a search for religion in biology by George M. Gould, M. D.,

and Rev. George A. Gordon traced "The Witness to Immortality in Literature, Philosophy, and Life." "Biblical Eschatology," by Henry Theodore Cheever, D. D., was a review of the writings of the Presbyterian divine, Rev. L. C. Baker, and Charles H. Strong made a study from Scripture on death and after death entitled "In Paradise." "Eccles Orator! Christ the Orator" came to us from Rev. T. Alexander Hyde, and Rev. Minot J. Savage preached 13 sermons on "Jesus and Modern Life"; he also traced "The Evolution of Christianity," and published "Psychics: Facts and Theories," and four addresses entitled "Is This a Good World?" "Christ and Modern Unbelief" was the theme of seven sermons by Rev. Randolph Harrison McKim, and studies of devotion and worship by several authors were collected under the name of "The Spiritual Life." Emily Oliver Gibbs studied "The Origin of Sin, and Dotted Words in the Hebrew Bible." "Straight Sermons to Young Men and Other Human Beings" were preached before the Universities of Yale, Harvard, and Princeton by Henry Van Dyke, D. D. "The Ideal Humanity, and Other Parish Sermons" of William T. Wilson were furnished by some commemorative words by Bishop Henry C. Potter; and among other collections of the kind we may mention "From Things to God," by David H. Greer, D. D.; "Things New and Old," by Rev. Robert Collyer; "Sermons Preached in St. John's Church, Washington, D. C.," by Rev. George W. Douglas; "The Boy Jesus, and Other Sermons," by William M. Taylor, D. D.; "Members of One Body," by S. McChord Crothers; six Lenten sermons on "The Comments at the Cross," by Rev. Cameron Mann; "Pulpit and Platform," sermons and addresses by O. H. Tiffany, D. D.; "Sermons for the Church," by Dr. Caleb Davis Bradlee; "The Larger Life," by Henry Austin Adams; "Common Folks' Religion," by L. A. Banks, D. D.; and "Vision and Duty," by Rev. Charles A. Berry. "Addresses" of Bishop Phillips Brooks had an introduction by Rev. Julius H. Ward, "Brilliant from the Writings of the Right Reverend Phillips Brooks" were selected, and a "Phillips Brooks Year-Book" made, while two memorial sermons of Rev. H. R. Harris and Rev. Arthur Brooks were printed, with the bishop's name for title. "The Good Wine at the Feast's End" was the subject of a sermon by himself issued in pamphlet form. The "Theological Propædæutic" of Philip Schaff, D. D., contained also a classified bibliography of "A Ministerial Library" by Rev. Samuel Macauley Jackson. The Fletcher prize essay of Dartmouth College for 1892 was by Rev. George Guirey upon "The Hallowed Day"; Rev. Washington Gladden treated of property and industry under the Christian law in "Tools and the Man"; Henry Clay Trumbull pronounced "A Lie never Justifiable," and issued a second edition of his conception of "The Blood Covenant." Theodore L. Cuyler, D. D., addressed himself to "The Young Preacher," while "The Deaconess and her Vocation" were the theme of Bishop J. M. Thoburn. Lucy Rider Meyer also wrote on "Deaconesses, Biblical, Early Church, European, American." "Our Best Moods," by David Gregg, D. D., and "Discourses" of Edward H. Hall, thirteen in number, may be placed together, and John B. De Motte explained "The Secret of Character Building." "The Hand on the Plow," by Arthur T. Pierson, D. D., told some secrets of service. "Jackknife and Brambles," by Atticus G. Haygood, Sr., is chiefly devoted to the minor difficulties in religious matters. "The Beasts of Ephesus" was written for the Christian Endeavor Societies by James Brand, D. D., and "The New Generation," for the Epworth League, by Edwin A. Schell; the origin, growth, and working plans of this last were sketched by Joseph F. Berry, D. D., in "Four Wonderful Years." Rev. Madison C. Peters sent out what he termed "Sanctified Spice," and Rev. C. J. Adams asked "Where is my Dog? or, Is Man alone Immortal?" Charles B. Morrell, M. D., edited "Bible Lamps for Little Feet," and Charles S. Robinson, D. D., made "Annotations upon Popular Hymns." "Bible Stud-

ies" were edited from stenographic notes of 23 lectures delivered by Rev. Henry Ward Beecher in 1878-79. James Strong wrote "The Student's Commentary: A Complete Hermeneutical Manual on the Book of Ecclesiastes"; Milton S. Terry, "The Prophecies of Daniel expounded"; Orello Cone, D. D., "The Gospel and its Earliest Interpretations"; Marvin R. Vincent, D. D., a "Student's New Testament Handbook"; John A. Broadus, D. D., "A Harmony of the Gospels in the Revised Version"; J. W. McGarvey, a "New Commentary on the Acts of the Apostles," in two volumes; Bishop John H. Vincent, "The Story of a Letter" (Epistle to the Ephesians); Alfred Rowland, 40 sermonettes on "Paul's Ideal Church and People." G. G. Findlay sketched the origin and contents of "The Epistles of Paul the Apostle," while Charles Carroll Everett presented what he believes to be a wholly new view of the doctrine of the atonement from "The Gospel of Paul." From Bishop Vincent we have also "The Holy Waiting" and an Easter study entitled "In Search of his Grave." Prof. George D. Herron made a plea in "The New Redemption" for the Church to reconstruct society according to the Gospel of Christ. "The Sacramental System considered as the Extension of the Incarnation" was the theme of the Bishop Paddock lectures of 1892, by Rev. Morgan Dix, and the place of "The Transfiguration" in the Christian year was determined by Bishop George F. Seymour and John H. Egar, D. D. "The Reasonable Christ" was the title of a series of studies by George E. Merrill. "Christian Worship: Its Principles and Forms" were treated by J. W. Richard, D. D., and F. V. N. Painter, and William Reed Huntington, D. D., wrote a "Short History of the Book of Common Prayer." A "Short History of the Christian Church" was by John Fletcher Hurst, D. D.; "A Sketch of the History of the Apostolic Church," by Oliver J. Thatcher. "Catholic Papers," by various writers, had a preface by the Bishop of Milwaukee; six lectures on "Catholic Dogma" and five on "The Church's Ministry of Grace" were delivered by as many ministers of the Episcopal Church, under the auspices of the Church Club of New York, while Rev. Lyman Abbott treated "The Roman Catholic Question" in a broad spirit in a sermon printed in pamphlet form. Vol. I of an "American Church History Series" was issued, being an enumeration, classification, and description of "The Religious Forces of the United States," on the basis of the last Federal Census, by H. K. Carroll. The "History of the Origin and Development of the Governing Conference in Methodism" was written by Thomas B. Neely, D. D., as was a "Manual of Methodist Episcopal Church History," by George L. Curtiss. "The Distinctive Doctrine and Usages of the General Bodies of the Evangelical Lutheran Church in the United States" were set forth; Prof. Williston Walker explained "The Creeds and Platforms of Congregationalism"; and Amory H. Bradford, D. D., in "The Pilgrim in Old England," reviewed the history, present condition, and outlook of the Independent (Congregational) churches in that country. A "Manual for Church Officers" was drawn up by G. H. Dryer, D. D., and the American Unitarian Association issued a "Book of Prayer and Praise for Congregational Worship." "In Spirit and in Truth" was the title of a volume of essays by younger ministers of the same Church. Special churches were commemorated in the "History of the First Unitarian Church of Portland, Oregon, 1867-'92," by Earl Morse Wilbur, and the "History of the Second Church of Christ in Hartford," by Rev. E. P. Parker, while the "History of the McCormick Theological Seminary of the Presbyterian Church" was written by J. L. Halsey, D. D. "The Gospel Among the Slaves" was a short account of missionary operations among the African slaves of the Southern States, compiled and edited by W. P. Harrison, D. D., and James S. Dennis, D. D., delivered six lectures upon "Foreign Missions after a Century" before Princeton Theological Seminary. "The Lone Star," by David Downie, D. D., told the

story of the successful Telugu mission in Southern India, and Samuel W. Pond chronicled the adventures of "Two Volunteer Missionaries among the Dacotas." John L. Atkinson described "Siddartha, the Japanese Buddha." "Talks on the Veranda in a Far-Away Land," by Charles Tracy, were upon missionary work in Turkey. George F. Pentecost, D. D., covered the International Sunday-School Lessons for the coming year in "Bible Studies for 1894," and "Thoughts on God and Man" were selected from the writings of Frederick William Robertson, of Brighton, by Joseph B. Burroughs, M. D.

Unclassified.—Hubert Howe Bancroft undertook "The Book of the Fair," in twenty-five parts, one of which was published during the year; the official catalogue was issued of "The World's Columbian Exposition," as well as the official directory, and Tudor Jenks wrote "The Century World's Fair Book for Boys and Girls." "Rand, McNally & Co.'s Handbook of the World's Columbian Exposition" contained special descriptive articles by Mrs. Potter Palmer, the Countess of Aberdeen, Mrs. Schuyler Van Rensselaer, and others. Néstor Ponce de Leon compiled from original documents a true description and drawing of "The Caravels of Columbia." "Humors of the Fair," by Julian Hawthorne, was illustrated by Will E. Chapin. "Four Centuries after; or, How I discovered Europe," by Ben Holt, was a burlesque on the tributes paid to the discoverer of our continent. "The Making of a Newspaper" was described from the experiences of certain representative American journalists, related by themselves and edited by Melville Phillips. Technical volumes were "Buildings and Structures of American Railroads," by Walter G. Berg, Robert Grimshaw's "Locomotive Catechism," and "Street Railway Motors," by Herman Haupt; while S. F. Van Oss considered "American Railroads as Investments." A new edition was issued of "The Story of the Atlantic Telegraph," by Henry M. Field, D. D., first published in 1866; W. J. Keenan and James Riley told the story of the telephone in "The Transmitted Word"; and William J. Hopkins wrote on "Telephone Lines and their Properties." "Homes in City and Country" were discussed by Russell Sturgis, John W. Root, Bruce Price, and others; Frank T. Lent volunteered "Sound Sense in Suburban Architecture"; John S. Billings, M. D., wrote on "Ventilation and Heating"; and James R. Willett on "Heating and Ventilation of Residences." John Smeaton gave attention to "Plumbing and Drainage," and Frederick Colyer wrote a "Treatise on the Modern Sanitary Appliances for Healthy Residences and Public Buildings." "Sewage Purification in America," by M. N. Baker, gave a description of the municipal sewage purification plants in the United States and Canada; J. H. T. Turner and A. W. Brightmore set forth "The Principles of Water Works Engineering"; Walter G. Kent wrote on "The Water Meter," William M. Barr on "Pumping Machinery," and Herbert M. Wilson prepared a "Manual of Irrigation Engineering." Robert Scott Burn edited "The Student's Introduction to Mechanics" and "The Carpenter and Joiner," by various authorities. The "Theory of Structures and Strength of Materials," by H. T. Bovey; "Constructive Materials of Engineering," by Albert W. Smith; "Hick's Builder's Guide"; "Compound Riveted Girders," by William H. Birkmire; "A Manual on Lime and Cement," by A. H. Heath; "Notes on the Testing and Use of Hydraulic Cement," by F. P. Spalding; "Knots, Splices, Hitches, Bends, and Lashings," by F. R. Brainerd; "Notes on Cylinder Bridge Piers and the Well System of Foundations," by John Newman; "Slide-Valve Diagrams," as obtained by a French method, by Lloyd Bankson; "Roll-Turning for Sections in Steel and Iron," by Adam Spencer, an appendix to his larger work; "The Cabinetmaker," by various writers; "Pigments, Paint, and Painting," by George Terry; and "Oils, Fats, Waxes, and Allied Materials," by C. R. Adler Wright, were valuable manuals of their kind; and Theron L. Hiles told how

to harvest, store, ship, and use "The Ice Crop." "Market Gardening and Farm Notes," by Burnet Landreth, and "Bulbs and Tuberous-Rooted Plants," by C. L. Allen, were also of practical interest; and H. N. Jarchow discoursed of "Forest Planting." F. W. Back told "How to judge a Horse," and J. Roafe Cox of "Horses in Accident and Disease." A large volume contained the "Manufacturers of the United States," and "Textile Industries of the United States" were investigated by William R. Bagnall, Vol. I (to be followed by two more) covering the period of 1689-1810. "The Ore Deposits of the United States," by James F. Kemp, "Mines and Mining Men of Colorado," anonymous, and the "California Gold Book," by W. W. Allen and R. B. Avery, belong together, as do "Photography Indoors and Out," by Alexander Black, and "Amateur Photography," by W. I. L. Adams. Genevieve Stebbins advocated "Dynamic Breathing and Harmonic Gymnastics," and Helen G. Ecob made a study of "The Well-Dressed Woman." Six speeches on temperance, by John G. Wooley, entitled "Seed," had an introduction by Miss Frances E. Willard and Lady Henry Somerset. Mrs. Henrietta D. Kimball gave us "Witchcraft illustrated," and Barrett Wendell asked "Were the Salem Witches guiltless?" "Great Disasters and Horrors in the World's History" were chronicled by A. H. Godbey, one of which was surely "The Fall River Tragedy," treated in a volume by Edwin H. Porter. "The Ne Plus Ultra Soda Fountain Requisites of Modern Times," by George H. Dubella, was a practical receipt book for beverages of the kind. "Americans in Europe" were goosiped about by One of Them; Mrs. Frank Leslie asked, "Are Men Gay Deceivers?" accompanying the question with other sketches; and Arthur H. Young brought "Hell up to Date"; "Remarks," by Bill Nye (Edgar Wilson Nye), covered every conceivable subject. Clifton Johnson published "The Country School in New England," with his own illustrations. The "Manual of Guard Duty," of the United States army, approved Jan. 7, 1893, was issued; Albert Gallup compiled a "Handbook of Military Signaling"; Henry G. Sharpe wrote on "The Art of subverting Armies in War"; and F. N. Maude contributed "Letters on Tactics and Organization." These were again reviewed in "The Service of Security and Information," by Arthur L. Wagner. "Three Roads to a Commission in the United States Army" were shown by Lieut. W. P. Burnham. John F. Maurice made a study of "The Balance of Military Power in Europe." "Ainsley's Engineer's Manual of the Local Marine Board Examinations" filled two volumes, and Vol. V of the "Interstate Commerce Commission Report" covered the period from July 1, 1891, to Sept. 1, 1893. The "Organization and Management of Private Corporations" was treated by A. S. Craig, and Nathaniel C. Fowler, Jr., in "Building Business," furnished an illustrated manual for aggressive businessmen. Nugent Robinson compiled "The Busy Man's Handbook," and Isaac Pitman's "Complete Phonographic Instructor" was intended for class or self instruction. Joseph Allen Minturn told in "The Inventor's Friend" how to obtain success with patents, and Wallace A. Bartlett published a "Digest of Trade-Marks." The "Annual Club Catalogue and Directory" for 1893 was compiled from official reports; L. Balch wrote "A Manual for Boards of Health and Health Officers"; "Poor's Manual of the Railroads of the United States for 1893" reached its twenty-sixth year, and was accompanied by a supplement, "Poor's Handbook of Investment Securities for 1892-'93." "The Annual Literary Index, 1892," was edited by William I. Fletcher and R. R. Bowker; the "Publishers' Trade List Annual, 1893," and the "Annual American Catalogue, 1892," were issued; also Parts V and VI of "Handy Lists of Technical Literature," compiled by H. E. Haberkorn. A. Grovoll gave practical hints on "The Profession of Book-selling." Albert S. Bolles edited "The Banker's Almanac and Register and Legal Directory for 1893."

making the forty-third year of its publication; and "Appletons' Annual Cyclopædia and Register of Important Events of the Year 1892" was published, making Vol. XVII of the new series and Vol. XXXII of the whole.

Voyages and Travels.—"My Arctic Journal," by Mrs. Josephine Diebitsch Peary, describes a year among ice fields and Eskimos, and is accompanied by an account of "The Great White Journey across Greenland," by her husband, Lieut. Robt. E. Peary. Angelo Heilprin also supplied "The Arctic Problem, and Narrative of the Peary Relief Expedition of the Academy of Natural Science of Philadelphia." "Appletons' Guide-Book to Alaska and the Northwest Coast" was written by Miss Eliza R. Scidmore, and William H. and Sarah K. Wiley visited "Yosemite, Alaska, and the Yellowstone." Julian Ralph made a study of the present conditions and future possibilities of "Our Great West," while Kate Sanborn showed herself "A Truthful Woman in Southern California." "At the North of Bearcamp Water," by Frank Bolles, chronicled the strollings of that author in New England from July to December, and "Picturesque Berkshire," in 2 parts, contained descriptive and imaginative text from celebrated writers, with nearly 1,200 reproductions of photographs taken in this county of the Bay State. "The Land of Poco Tiempo," by Charles F. Loomis, we find to be New Mexico and its contiguous regions. The "History of the Expedition under the Command of Lewis and Clark," performed by order of the Government in 1804-'06, was edited anew by Prof. Elliott Coues from the only authorized edition of 1814, and, with a critical commentary, fills four volumes, while "The Mississippi River from St. Louis to the Sea" consists of 42 maps, compiled by J. A. Ockerson and C. W. Stewart from the most recent surveys made by the United States Government and State engineers. "Two Hundred Miles on the Delaware River" described a canoe cruise from its headwaters to the falls at Trenton, made by F. Wallace Haff, and Alfred O. Legge visited "Sunny Manitoba." F. A. Ober followed "In the Wake of Columbus," narrating his adventures as special commissioner sent by the World's Columbian Exposition to the West Indies, and Frederick Douglass delivered a "Lecture on Haiti" at the dedication ceremonies of the Haytian pavilion at the World's Fair, Jan. 2, 1893. "Gossip of the Caribbees," by William R. H. Trowbridge, sketched Anglo-West-Indian life. Bertram G. Goodhue illustrated his "Mexican Memories" himself, and Isaac N. Ford spent nine months in "Tropical America," which he describes with graphic pen. "In the Track of the Sun" is a handsome and profusely illustrated volume of readings from the diary of a globe trotter, Frederick Diodati Thompson, while Mrs. Marguerite Dickens, wife of Commander Dickens, U. S. N., carries us pleasantly "Along Shore with a Man-of-War." "Letters of Travel" were selected from the correspondence of Bishop Phillips Brooks, and P. J. Hamilton told of "Rambles in Historic Lands." "The Rulers of the Mediterranean," as sketched by Richard Harding Davis, proved to be Gibraltar, Cairo, the Suez Canal, etc.; Thomas A. Janvier detailed the events of "An Embassy to Provence," and Henry M. Field sauntered by "The Barbary Coast." William T. Adams (Oliver Optic) saw "Strange Sights Abroad," and Thomas W. Knox brought us up again with "The Boy Travelers in Southern Europe." Walter Phelps Dodge went "As the Crow flies from Corsica to Charing Cross." William H. Bishop gave excellent advice for a "House-Hunter in Europe." "Our Cycling Tour in England" was full of faithful description from the pen of Reuben Gold Thwaites, and Thomas Linn, M. D., supplied an opportune medical guide to "The Health Resorts of Europe," in connection with which may be mentioned "Carlsbad," similarly treated by Emil Kleen, M. D. "On Sunny Shores," by Clinton Scolard, was a companion volume to "Under Summer Skies." Maturin M. Ballou's latest volume, "The Story of Malta," found many readers, while Mrs. Clara

Erskine Clement (now Mrs. Waters) selected for her theme "The Queen of the Adriatic." Mrs. Elizabeth Robins Pennell's trip "To Gipsyland" was illustrated by her husband, Joseph Pennell. Robert S. Gardiner was the author of "Japan as we saw it"; Alice M. Bacon, of "A Japanese Interior," written from an extensive experience; while from Naomi Tamura we have a picture of "The Japanese Bride." H. M. Wharton, D. D., evidently enjoyed "A Picnic in Palestine," and we gladly accompany M. M. Shoemaker "Eastward to the Land of the Morning."

Among books which combine utility with literary merit may be mentioned "Boston illustrated," an entirely new volume, edited by Edwin M. Bacon under the old title; "Picturesque Chicago," with a guide to the World's Fair; and "Appletons' General Guide to the United States," in a new edition, revised to date, with an appendix devoted to the Columbian Exposition. "Appletons' Library Atlas of Modern Geography" contains a full gazetteer and indexes, with an illustrated descriptive text based on the results of the latest censuses, and 103 large new maps. A souvenir of Niagara Falls, entitled "The Niagara Book," we owe to William Dean Howells, Samuel L. Clemens, Prof. N. S. Shaler, and others; it is illustrated by Harry Fenn.

The following are the figures of book production during the year, as compared with those of 1892, from the columns of the "Publishers' Weekly":

CLASSIFICATIONS.	1892.		1893.	
	New books.	New editions.	New books.	New editions.
Fiction.....	735	867	773	860

LITERATURE, BRITISH, IN 1893. The literature of the year is pronounced "eminently satisfactory" by the "London Publishers' Circular," notwithstanding the fact that the birth of no very remarkable work was witnessed. One hundred and twenty-eight more books were written by British authors than in 1892, making a total of 6,382. Fiction increased, particularly in the department of juvenile books, giving more than 5 novels for every working day in the year. Four hundred new works of literary miscellany were chronicled, in addition to 100 new editions, and there was even an increase in poetry; but in theology there was a marked falling off, and history, educational works, law, and political economy also showed a slight decrease.

Biography.—No work could have been more attractive to American as well as English readers than the

"Familiar Letters" of Sir Walter Scott, in two volumes, edited by David Douglas, and yet another of surpassing interest was "The Life and Work of John Ruskin," by W. G. Collingwood, which also filled two volumes, handsomely illustrated. "Three Letters and an Essay" of Ruskin were issued, the former written in 1836-'41, and the last at the age of sixteen. J. Cumming Walters gave us studies of "Tennyson, Poet, Philosopher, Idealist"; and William Wright narrated facts stranger than fiction of "The Brontës in Ireland." In the "Great Writers" series W. J. Linton published "The Life of John Greenleaf Whittier"; "Recollections of Dr. John Brown," by Alexander Peddie, were accompanied with selections from his correspondence, and John Churton Collins contributed a biographical and critical study of "Jonathan Swift." "Horace Walpole" was the subject of a memoir by Austin Dobson, and W. Ernest supplied "Memoirs of the Life of Philip Dormer, Fourth Earl of Chesterfield." "Footprints of Statesmen during the Eighteenth Century in England" were followed by Reginald Baliol Brett, and W. McCullagh Torrens told of his "Twenty Years in Parliament." The "Life and Letters of the Right Hon. Robert Lowe, Viscount Sherbrooke," by A. Patchett Martin, filled two volumes, as did the "Life and Times of the Right Hon. William Henry Smith," by Sir Herbert Maxwell. "Letters, Remains, and Memoirs of Edward Adolphus Seymour, Twelfth Duke of Somerset," were edited and arranged by W. H. Mallock and Lady Guendolen Ramsden; "Some Further Recollections of a Happy Life" were edited from the journals of Marianne North by her sister, Mrs. John Addington Symonds, and other volumes full of interest were: "The Diary of Col. Peter Hawker, 1802-1853"; "A Sketch of the Life of Georgiana, Lady De Ros," by her daughter, Mrs. J. R. Swinton; "Hic et Ubique," by Sir W. Fraser; and "The Letters of Lady Burgherch," from Germany and France during the campaign of 1813-'14. "Some Notes of the Past," by Sir Henry Drummond Wolff, related events of the Franco-German War. A. J. C. Hare told "The Story of Two Noble Lives," those of Charlotte, Countess Canning, and Louisa, Marchioness of Waterford, in three volumes, while two were filled with "The Life of Capt. Sir Richard F. Burton," by his wife, Isabel Burton, who also edited the memorial edition of his works. To Clarence Ford we are indebted for the "Life and Letters of Madame de Krüdener." Francis Espinasse published "Literary Recollections and Sketches"; Henry Vizetelly, "Glances Back through Seventy Years"; John Cordy Jeaffreson, "A Book of Recollections"; James Bertram, "Some Memories of Books, Authors, and Events," belonging to Edinburgh; while "Lights and Shadows in the Life of an Artisan" was a rather unique volume by Joseph Gutteridge. The second volume of "Annals of my Life," by Bishop Wordsworth, covered the period 1847-'56; two volumes were issued of a "Life of Edward Bouverie Pusey," written by Canon Liddon, and to the same period belongs "William George Ward and the Catholic Revival," by Wilfrid Ward, as signal a success as his previous volume on the Oxford movement, and "Memorials of Mr. Serjeant Bellasis," by Edward Bellasis. Rev. Walter Lock contributed "John Keble" (in this the centennial year of his birth) to the series of "English Religious Leaders," another volume of which was "Thomas Chalmers," by Mrs. M. O. W. Oliphant; Roland E. Prothero gave us "The Life and Correspondence of Arthur Penrhyn Stanley, D. D."; and Rev. John Owen treated of "The Skeptics of the Italian Renaissance," and also of those of the French Renaissance in a companion volume. Archdeacon Denison published a "Supplement to Notes of my Life," and Sir Monastuart Grant Duff a tribute to "Ernest Renan." John Milum added "Thomas Birch Freeman, Missionary Pioneer to Ashanti, Dahomey, and Egbá," to the "Missionary Biography Series"; a cousin of A. M. Mackay of Uganda was commemorated in "A. Mackay Ruthquist; or, Singing the Gospel among Hindus

and Góns," by J. W. H.; and "Baroness Burdett-Coutts," was the title of a sketch of the public life and works of that philanthropist prepared for the lady managers of the World's Columbian Exposition by command of Her Royal Highness the Duchess of Teck. Mrs. Annie Besant's "Autobiography" was welcomed by her admirers. In the "Great Educators" series, "Froebel, and Education by Self-Activity" was by Henry Courthope Bowen, and "Abélard and the Origin and Early History of Universities," by Gabriel Compayré. "Napoleon, Warrior and Ruler," by W. O'Connor Morris, belonged to the "Heroes of the Nations" series, as did "Henry of Navarre and the Huguenots of France," by P. F. Willert; while in the "Rulers of India" series "Lord Hastings" and "Aurangzib" were by Sir W. Wilson Hunter; "The Marquess of Hastings," by Major Ross-of-Bladenburg, C. B., "Haidar Ali and Tipu Sultan," by Lewin B. Bowring; "The Marquis of Wellesley," by Rev. W. H. Hutton; "James Thomason," by Sir Richard Temple; "The Earl of Auckland," by L. J. Trotter; and "Lord Clive," by G. B. Malleon. "The Earl of Aberdeen" was the subject of a monograph by Hon. Sir Arthur Gordon in the "Prime Ministers of Queen Victoria" series. "Edward the First" was ranked among the "Twelve English Statesmen," by T. F. Tout. "Charles Darwin: His Life told in an Autobiographical Chapter" was in reality an abbreviation of the "Life and Letters" of the great naturalist, by his son Francis Darwin. Whitley Stokes edited the "Life and Speeches of Sir Henry Maine," and Rev. T. T. Carter, "Nicholas Ferrar, his Household and his Friends," Catherine J. Hamilton gave us a second series of "Women Writers," and F. Forster Buffen another of "Musical Celebrities," and Vols. III and IV of biographies of "Eminent Persons" were reprinted from the London "Times." Raymond Blathwayt collected "Interviews" with various distinguished persons. Arthur Hill Hassall volunteered the "Narrative of a Busy Life"; Mrs. Newton Crosland (Camilla Toulmin), "Landmarks of a Literary Career, 1820-'92"; and W. B. Le Fanu, "Seventy Years of Irish Life." Four volumes contained the "Diary and Letters of Madame F. B. d'Arblay," edited by her niece, Charlotte Barrett, and Henry B. Wheatley edited "The Diary of Samuel Pepys," with additions. G. Barnett Smith was the author of a "Life of Ferdinand de Lesseps," and H. R. Hawsie selected "Sir Morell Mackenzie" for the theme of a controverted memoir. Thomas and Paul Sandby gave us "Biographies of British Artists," illustrated; Alfred T. Story, "William Blake: His Life, Character, and Genius"; the "Life and Works of Jean Léon Gérôme," by Fanny Field Hering, was published in an expensive *édition de luxe*; while to a remoter period belong "Madame: A Life of Henrietta, Daughter of Charles I, and Duchess of Orleans," by Julia Cartwright; a biography of "Joan of Arc," by Lord Ronald Gower; and "Mary Stuart," by John Skelton. The thirty-seventh volume of the "Dictionary of National Biography," edited by Sidney Lee, was reached, and "Cassell's New Biographical Dictionary" was issued. "Historic Personality," by Francis Seymour Stevenson, M. P., contained many clever, quotable things about biographies and biographers.

Essays.—Under this head, which includes more than is properly implied by the title, belong Walter Pater's lectures on "Plato and Platonism," and Coventry Patmore's twenty-three short essays entitled "Religio Poete," both of which won the highest commendation from all critics, the former having been pronounced the most beautiful prose book of the year. Edmund Gosse discussed "Questions at Issue" in the literary life of to-day; William Watson abandoned poetry for a time to make "Excursions in Criticism"; Andrew Lang gave himself with delightful enthusiasm to a defense of "Homer and the Epic"; John Addington Symonds, whose death during the year is to be regretted, published "In the Key of Blue, and Other Prose Essays," and an exhaustive

study of our own "Walt Whitman," who was again the theme of Oscar L. Twigg in "Browning and Whitman: A Study in Democracy," "Essays and Addresses" of the Rt. Hon. A. J. Balfour, M. P., were welcomed in a collected form, and C. H. Pearson, in "National Life and Character: A Forecast," reached conclusions which are not encouraging, if ably set forth. "The Australians: A Social Sketch" was from the pen of Francis Adams. Cardinal Manning's "Pastime Papers," Mr. Goschen's book on "The Cultivation and Use of the Imagination," "Seers and Singers," by Arthur D. Innes, and "Studies in Life and Literature," by C. H. Lusted, found many readers, while to Rev. Alfred J. Church we owe "Pictures from Greek Life and Story." Stopford A. Brooke devoted two volumes to "The History of Early English Literature: Being the History of English Poetry" from its Beginnings to the Accession of King Ælfred, and "The Victorian Age of English Literature," by Mrs. M. O. W. Oliphant and F. R. Oliphant, filled two more. Vol. X of Henry Morley's "English Writers" was given to "Shakespeare and his Time: Under Elizabeth"; "Essays on Lord Tennyson's Idylls of the King" were written for British Indian students by Prof. Harold Littledale, but proved a valuable contribution to Tennysonian literature at home and in America; "Folia Litteraria," by John W. Hales, consisted of essays and notes on English literature; William Kenton furnished "Outlines of English Literature" for the "University Extension Manuals"; and Frederic Harrison was heard from on "The Choice of Books," "The Sonnet in England, and Other Essays" were welcomed from J. Ashcroft Noble, Vol. VI of "The Bookworm" was issued, Leopold Wagner treated of "The Significance of Names," A. C. Champeys wrote a "History of English," tracing the origin and development of the language, and K. F. Brewer added to his "Orthometry" what he termed a new and complete rhyming dictionary. B. H. Wheatley's "Literary Blunders" in the "Book-Lovers' Library," was a delicious chapter in the history of human error, and "Books about Books" contained "Book-Plates," by W. J. Hardy, and "The Great Book Collectors," by C. I. and Mary A. Elton, while E. Gordon Duff told of "Early Printed Books" and Falconer Madan of "Books in Manuscript." W. Roberts contributed a chapter on the history of typography entitled "Printer's Marks," "The Highway of Letters and its Echoes of Famous Footsteps," by Thomas Archer, is full of delicious reminiscences of Fleet Street, Rev. W. Tuckwell told of "The Ancient Ways" of Winchester and its college, "Aspects of Modern Oxford" were presented by A. Mere Don, and from Mr. Frederic Harrison we had "Annals of an Old Manor House" (Sutton Place, Guilford). "The Legendary Lore of the Holy Wells of England" was explored by R. C. Hope; G. F. Northall gave us "English Folk-Rhymes"; Augustus Jessopp was charming as ever in "Random Roaming"; Jane Barlow's "Irish Idylls" are full of sympathetic insight into the life and character of the nation; Phil Robinson recorded "Some Country Sights and Sounds," and in "The Poets and Nature" tells of reptiles, fishes, and insects, having already told of "Poets' Birds" and "Poets' Beasts"; Alexander H. Japp wrote of "Hours in my Garden," with other nature sketches, and much of the same delicate perception of her beauties is found in "An Old Woman's Outlook in a Hampshire Village," by Charlotte M. Yonge, and "Letters to Marco," by George D. Leslie. "Life in a North Country Village" was described by M. E. Francis. David Masson followed "In the Footsteps of the Poets." Jerome K. Jerome vouchsafed "Novel Notes," and other works of humor were "From Windom Court," by Henry Seton Merriman and Stephen Tallentyre, "Mr. Punch's Prize Novels," and F. Anstey Guthrie's "Mr. Punch's Pocket Ibsen," "The Sunny Days of Youth," by Edward J. Hardy, "Towards the Sunset," by A. K. H. Boyd (the Country Parson) and "Windfalls of Observation," by E. S. Martin, may be classed together. Prof. A. H. Sayce

threw "Fresh Light on Biblical Races" in six volumes, and in "By-Paths of Bible Knowledge" described social life among the Assyrians and Babylonians, while W. A. Clouston selected "Five Hundred and Eighty-nine Wise Sayings," largely from Eastern sources. E. Maunde Thompson prepared a "Handbook of Greek and Latin Palæography." "Representative English Literature from Chaucer to Tennyson" was arranged by Henry S. Pancoast, and Henry Craik supplied critical introductions to his "English Prose Selections," of which Vol. I appeared. John Veitch was an authority on "The History and Poetry of the Scottish Border," and "Three Centuries of Scottish Literature" were reviewed by Hugh Walker. "The Best Letters of William Cowper" were issued in the "Laurel-Crowned Letters Series," Augustus Jessopp prefaced a selection of the "Wise Words and Quaint Counsels of Thomas Fuller" with a life of their author, and "Selections from the Writings of William Blake," the painter and poet, were made. A handsome tercentenary edition was also issued of Isaac Walton's "Complete Angler," in two volumes, illustrated.

Fiction.—A stronger tendency toward "realism" and an increase in the number of "short stories" are lamented by critics across the water in their comments on the fiction of the year. "The Heavenly Twins," by "Sarah Grand," attained a larger sale than any English novel since "Robert Elanere," and "Dodo," a *fin de siècle* heroine of an unattractive type, was portrayed by E. F. Benson. Walter Besant, in "The Rebel Queen," depicted Hebrew life, and dealt with the problem of woman's position and rights, and William Black wrote "The Handsome Humes" and "Wolfenberg," the latter "wholesome, picturesque, and breezy" as ever. J. M. Barrie published three books, "Two of Them," "An Auld Licht Manse," and a "Tillyloss Scandal," while "The Stickit Minister, and Some Common Men," by S. R. Crockett, was a warning to him to look to his laurels as the delineator of Scottish life and character. Rudyard Kipling returned to the field in which he showed himself a master in his 15 short stories entitled "Many Inventions"; Olive Schreiner (Ralph Iron) contributed a little African story, "Dream Life and Real Life," and from A. Conan Doyle we had three books, "The Refugees," a tale of two continents and the Huguenot persecution in France, "The Sign of the Four," and "The Firm of Girdlestone," a romance of the unromantic. I. Zangwill wrote "Merely Mary Ann"; Mary Angela Dickens, "A Mere Cipher"; "The Last Sentence" sustained the reputation won by Maxwell Gray; Mrs. M. G. Tuttielt in "The Silence of Dean Maitland," and somewhat akin in theme to this last was "The Transgression of Terence Clancy," by Harold Vallings. "The Highland Nurse," by the Duke of Argyll, recalls the author of Waverley; Mrs. M. O. W. Oliphant wrote "The Sorceress" and "The Marriage of Elinor," and contributed, with Thomas Hardy, W. E. Norris, J. M. Barrie, and others, to "Stories in Black and White"; S. Baring-Gould wrote "Mrs. Curgenven of Curgenven" and "Cheap Jack Zita"; W. Clark Russell, "List, Ye Landsmen" and "The Tragedy of Ida Noble"; W. E. Norris, "A Deplorable Affair"; Grant Allen, "Blood Royal," "The Scallywag," "Michael's Crag," and "Ivan Greet's Masterpiece"; Beatrice Whitby, "In the Suntime of her Youth"; F. W. Robinson, "The Wrong that was done"; Jessie Fothergill, in "Oriole's Daughter," dealt with art life in Rome with all the charm that made "The First Violin" so marked a success; George Gissing, in "The Odd Women," made a pessimistic study of the "woman question"; Hubert Crackanthorpe painted powerful pictures in "Wreckage," a collection of short stories on the seamy side of life, with which may be mentioned "Keynotes," by George Egerton (Mrs. Clairmonte), and "A Book of Strange Sins," by Coulson Kernahan. "Pastorals of France" and "Renunciations," by Frederick Wedmore, in one volume, deal with gentler scenes, as did

"The Delectable Duchy," by Q (Arthur Quiller-Couch). Mrs. F. A. Steele sent six short stories "From the Five Rivers" of India, and Frank Mathews saw the west coast of Ireland and its people "At the Rising of the Moon." Charles Haddon Chambers drew "Thumb-Nail Sketches of Australian Life," and J. H. Pearce recounted "Drolls from Shadowland." Frank Frankfort Moore, in "I forbid the Banns," dealt yet again with the sex question, describing a comedy which was played seriously; the influence of heredity was traced "From One Generation to Another" by Henry Seton Merriman; John Oliver Hobbes (Mrs. Craigie) made "A Study in Temptations"; and David Christie Murray described "A Wasted Crime," and also "Time's Revenge." Other well-known authors were represented: Ada Cambridge, by "A Little Minx"; Rosa Nouchette Cary, by "But Men must work"; Florence Warden, by "My Child and I," "Grave Lady Jane," "A Shook to Society," and "A Terrible Family"; Mrs. Alexander (Mrs. Annie F. Hector), by "Found wanting"; George MacDonald, by "Heather and Snow"; Matilda Betham-Edwards, by "The Curb of Honor"; Justin McCarthy, by "The Dictator" (of a South American state); B. L. Farjeon, by "Something occurred"; George Manville Fenn, by "A Secret Quest," "Witness to the Deed," and "Nurse Elisia"; Adeline Sergeant, by "Christine"; Anthony Hope, by "Half a Hero," the scene of which was laid in the South Pacific; Stanley J. Weyman, by "A Gentleman of France"; Mrs. Forester, by "Dearest"; Florence Marryat, by "Parson Jones"; Frank Barrett, by "Kitty's Father," "Out of the Jaws of Death," and "The Woman of the Iron Bracelets"; Joseph Hatton, by "Under the Great Seal," a story of St. John's, Newfoundland, a hundred years ago; Annie Thomas, by "Utterly Mistaken"; Fergus Hume, by "The Harlequin Opal"; and Mrs. W. K. Clifford, by "A Wild Proxy." H. Rider-Haggard went to Mexico for "Montezuma's Daughter"; "Mark Rutherford's Autobiography," which aroused much comment some years since, was supplemented in 1893 by "Mark Rutherford's Deliverance"; Miss Lily Dougall, the author of "Beggars All," showed deep spiritual insight in "What Necessity knows." Christabel R. Coleridge wrote, alone, "Waynflete," as Miss Charlotte M. Yonge did "Grisly Grisell," while both collaborated upon "Strolling Players." M. E. Braddon (Mrs. John Maxwell) laid the scene of "All along the River," first upon the Cornish coast, shifting it afterward to France and Italy; The Duchess added "The Hoyden" to her long list of similar heroines, and also described "Lady Verner's Flight," while John Strange Winter (Mrs. H. E. V. Stannard) analyzed "The Soul of the Bishop." It only remains to mention briefly "A Comedy of Masks," by Ernest Dowson and Arthur Moore; "Can this be Love?" by Mrs. Louisa Parr; "Tiny Luttrell," an Australian story, by Ernest W. Hornung; "Catherine," by Frances M. Peard; "The Red Sultan" and "The Burden of Isabel," by J. Maclaren Cobban; "A Trying Patient, and Other Stories," by James Payn; "A Woman of Forty" and "Out of Reach," by Esme Stuart; "A Moral Dilemma," by Annie Thompson; and "To right the Wrong," by Edna Lyall (Ada Ellen Bayly). Andrew Lang gave to young readers and their sympathizers "Prince Ricardo of Pantoufia," being the adventures of Prince Prigio's son; and he also contributed introductory essays and notes to an American illustrated edition of the Waverley novels, in 48 volumes, initiated during the year, and limited to 1,000 copies.

Fine Arts.—Only 86 books were issued in this department in 1893, whereas 1892 showed 147, and among these, it is to be remembered, are included illustrated books. The most important were George Moore's "Modern Painting," fiercely polemical, but coming sometimes close to the soul of things; Philip Gilbert Hamerton's brief exposition of the technical principles and practice of "Drawing and Engraving," and "The Evolution of Decorative Art," by Henry

Balfour. F. E. Hulme treated also of "The Birth and Development of Ornament." William Morris edited "Arts and Crafts Essays," by members of the Arts and Crafts Exhibition Society, with an introduction, and Marcus B. Huish supplied "The Year's Art for 1893." Vols. III-V appeared of "The Castellated and Domestic Architecture of Scotland from the Twelfth to the Eighteenth Century," by David McGibbon and Thomas Ross, and "Inigo Jones and Wren," by William J. Loftie, traced the rise and decline of modern architecture in England. Taveron Perry supplied a "Chronology of Architecture, 306-1628." J. S. Gardner wrote on "Ironwork: From the Earliest Times to the End of the Medieval Period." Percy Fitzgerald's "London City Suburbs as they are To-day" was splendidly illustrated by W. Luker, Jr., and P. Norman wrote on "London Signs and Inscriptions." "Latin Historical Inscriptions, illustrating the History of the Early Empire" was a work of unusual interest and value by J. McN. Rushforth, and W. Carew Hazlitt made a study of "The Coinage of the European Continent." Four lectures of Henry Irving upon "The Drama" were collected into a volume, and contain the last word upon the subject from unimpeachable authority. F. T. Pigott wrote upon "The Music and Musical Instruments of Japan," and Georgiana Hill filled two volumes with "A History of English Dress" from the Saxon period to the present. "Lord Tennyson and his Friends" was the title of a series of 25 portraits with reminiscences by Anne Thackeray Ritchie, and the Hon. Mary Monica Scott described "Abbotsford and the Personal Relics and Antiquarian Treasures of Sir Walter Scott," which were illustrated by William Gibb. Miss S. T. Prideaux supplied "An Historical Sketch of Book-binding."

History.—No historical work of sterling value is to be recorded from English authors. C. S. Fearenside's "Intermediate Text-Book of English History" was continued to cover the period 1485-1603; Rev. Sir G. W. Cox published "A Concise History of England and the English People"; Montagu Burrows, "Commentaries of the History of England from the Earliest Times to 1865"; and Edgar Sanderson, a "History of England and the British Empire"; while H. Morse Stephens gave his attention to "Europe, 1789-1815." The "History of Modern Europe," by the late C. A. Fyfe, filled three volumes. Sir Alfred Lyall traced "The Rise of the British Dominion in India." Sir George Campbell gave to the public his "Memoirs of my Indian Career." G. W. Forrest edited Vol. I of "Selections from State Papers" upon "The Indian Mutiny," William Forbes Mitchell contributed "Reminiscences of the Great Mutiny, 1857-59," and J. Tulloch Nash "Volunteering in India during the Indian Mutiny and Sepoy War." H. G. Keene wrote a "History of India from the Earliest Times to the Present Day," for the use of students and colleges. In the "Epochs of Indian History" series, "Ancient India 2000 B.C.-800 A.D." was by Romesh Chunder Dutt. D. C. Boulger wrote "A Short History of China," and, crossing to the Dark Continent, we have "The Rise of our East African Empire: Early Efforts in Nyassaland and Uganda," by Capt. F. D. Lugard, in two volumes; "A History of the Gold Coast of West Africa," by Col. A. B. Ellis; and Vol. VI of George McCall Theal's "History of South Africa," covering the period 1834-'54. In the "Story of the Nations" series "The Story of Parthia" was written by George Rawlinson, "The Story of Poland," by W. B. Morfill, and "The Tuscan Republics," by Bella Duffy. In the "University Series" Arthur J. Grant portrayed "Greece in the Age of Pericles"; W. Warde Foster made a study of "The City-State of the Greeks and Romans"; "Outlines of Roman History" was a useful book of reference by Henry F. Pelham; and in the "University Extension Manuals" "The French Revolution" formed the theme of C. E. Mallet. W. A. Salisbury sent out a history of "Portugal and its People." Special studies were "The Grey Friars in Oxford," by Andrew G. Little; "The Jews of Ange-

vin England," a collection of documents and records collected and translated for the first time, edited by Joseph Jacobs; Walter Besant's "History of London"; and Canon Raine's "York." William Stephen wrote a "History of the Scottish Church," G. Buchanan Ryle and John M. McCandlish on "Scotland's Free Church," and Dr. Bayne on "The Free Church of Scotland," while P. W. Joyce supplied a "Short History of Ireland from the Earliest Times to 1603," Sir Charles Gavan Duffy edited with an introduction Thomas Davis's account of "The Patriot Parliament of 1889," and Spencer Walpole's "The Land of Home Rule" contained an interesting account of the Isle of Man. T. P. O'Connor made "Sketches in the House" during the last parliamentary session, and the year witnessed the completion of the illustrated editions of Green's "Short History of the English People."

Physical, Moral, and Intellectual Science.—Two of the projected nine volumes of Prof. Huxley's "Collected Essays" were issued during the year, the first being upon "Methods and Results," and the second entitled "Darwiniana," while the Romanes lecture for 1893 upon "Evolution and Ethics" was also delivered by him. Herbert Spencer criticised Weismann's theories in an essay reprinted from the "Contemporary Review" upon "The Inadequacy of Natural Selection"; George J. Romanes made "An Examination of Weismannism," and a translation of Weismann's "The Germ-Plasm," it may be added, made one of the volumes of the "Contemporary Science Series"; Henry B. Orr offered "A Theory of Development and Heredity"; and Francis Galton wrote on "Deciphering of Blurred Finger-Prints." John Gray McKendrick and William Snodgrass collaborated upon "The Physiology of the Senses," in the "University Extension Manuals," other volumes of which were "Chapters in Modern Botany," by Patrick Geddes, and an introduction to modern geology entitled "The Earth's History," by R. D. Roberts. Henry Walter Bates's "The Naturalist on the River Amazons" was reissued, with a memoir of the author by Edward Clodd. In the "Contemporary Science Series" we had an outline of the growth and present condition of some phases of "Modern Meteorology," by Frank Waldo, and "Public Health Problems," by John F. J. Sykes. George Massee published "British Fungus Flora: A Classified Text-Book of Mycology"; L. N. Badenoch, "The Romance of the Insect World"; A. Newton and H. Gadow issued Part I of their "Dictionary of Birds"; Rev. Murray A. Mathew gave his attention to "The Birds of Devon"; Sir Robert Stawell Ball told of the wonders "In the High Heavens," and also "The Story of the Sun"; while "Some Salient Points in the Science of the Earth," by Sir J. William Dawson, was pronounced by far the most interesting as well as the most forcible of his works. Sir Henry Howorth, M. P., appealed for the second time to common sense against the extravagance of some recent geology in "A Glacial Nightmare and Flood," and W. Saville-Kent described "The Great Barrier Reef of Australia." St. George Mivart published a work on "American Types of Animal Life," contrasting them with Old World forms, which he offered as an introduction to the study of the higher animals, especially the mammalia. Rising to man, we have "Three Introductory Lectures on the Science of Thought," by F. Max Müller, with an appendix which contains a correspondence on "Thought without Words"; Prof. Henry Calderwood treated of "Evolution and Man's Place in Nature"; Herbert Spencer published Vol. II of "The Principles of Ethics," containing "Justice," "Negative Beneficence," and "Positive Beneficence"; and David G. Ritchie, "Darwin and Hegel, with Other Philosophical Studies." William Morris and E. Belford Bax wrote on "Socialism: Its Growth and Outcome," while Bernard Bosanquet gave us "The Civilization of Christendom, and Other Studies" in "The Ethical Library." Ramsden Balfourth (Leon Ramsey) contributed "The New Reformation and its Relation to Moral and Social Problems"

to the "Social Science Series." "The Ethic of Usury and Interest," by W. Blissard, purported to be a study in inorganic socialism; Charles Booth published Vols. III and IV of his examination into the "Life and Labor of the People in London," covering respectively "Blocks of Buildings, Schools and Immigration," and "The Trades of East London"; W. J. Ashley issued two volumes of "An Introduction to English Economic History and Theory"; W. H. Mallock was heard from on "Labor and the Popular Welfare"; and L. T. Hobhouse on "The Labor Movement." The Duke of Argyll, in "The Unseen Foundations of Society," made what he termed an examination of the fallacies and failures of economic science due to neglected elements; Dr. James Bonar broke entirely fresh ground in his survey of "Philosophy and Political Economy in some of their Historical Relations"; Shaw Lefèvre's "Agrarian Tenures" surveyed the land laws of the United Kingdom, while Harold Cox wrote on "Land Nationalization." Charles L. Tupper's work on "Our Indian Protectorate" was an introduction to the study of the relations between the Government of the mother country and its Indian feudatories; Prof. Dicey condemned the Home-Rule bill as "A Leap in the Dark"; and W. Charteris Macpherson suggested the reform of the House of Lords in "The Baronage and the Senate." "The Golden Book of India," compiled by Sir Roper Lethbridge, was a genealogical and biographical dictionary of the ruling princes, nobles, and other important personages of the Indian Empire. Herbert Joyce wrote "The History of the Post Office," and John Edgar a "History of Early Scottish Education." Baroness Angelina Georgina Burdett-Coutts edited a series of papers on "Woman's Mission" (of philanthropic work) by eminent writers, and Henry Frith chronicled "The Romance of Navigation." "The Evolution of Religion" was the theme of the Gifford Lectures of 1890-'91 and 1891-'92, by Edward Caird, and filled two volumes; other lectures on the same foundation were James Hutchison Stirling, on "Philosophy and Theology," and Sir George G. Stokes, on "Natural Theology." The Hibbert Lectures for 1892 were by C. G. Montefiore, upon "The Origin and Growth of Religion, as illustrated by the Religion of the Ancient Hebrews," and the Rev. George Matheson set forth "The Distinctive Messages of the Old Religions." Charles Thomas Cruttwell wrote "A Literary History of Early Christianity," in two volumes; Robert F. Horton delivered the Yale Lectures on preaching for 1893 upon the Lyman Beecher Foundation entitled "Verbum Dei," and Bishop William Alexander (of Derry and Raphoe) visited our country and lectured before the president, faculties, and students of Columbia College upon "Primary Convictions" of the soul. William Knight examined "Aspects of Theism," as J. D. King did "The Supernatural"; the Bamptom Lectures for 1892, by Canon Alfred Barry, were entitled "Some Lights of Science on the Faith"; Canon Bright treated of "Morality in Doctrine"; William Dearing Harden made "An Inquiry into the Truth of Dogmatic Christianity"; Charles A. Whituck wrote on "The Church of England and Recent Theological Thought"; two books on the early days of Christianity were "The Church in the Roman Empire before A. D. 170," by W. M. Ramsay, and "Christianity and the Roman Empire," by W. E. Addis; while Arthur Lillie traced "The Influence of Buddhism on Primitive Christianity," in addition to attacking "The Great Enigma" of life. From Leslie Stephen emanated "An Agnostic's Apology," and other essays, A. J. Dadson treated of "Evolution and Religion," as F. W. H. Myers did of "Science and the Future Life." Wilfrid Ward offered "Witnesses to the Unseen, and Other Essays"; A. M. Fairbairn, D. D., defined "The Place of Christ in Modern Theology" in a work of admirable scope and power, and published also a volume of sermons, "Christ in the Centuries"; from Dr. Brooke Foss Westcott, now

Bishop of Durham, we had "The Gospel of Life," and also a charge to the clergy of his diocese upon "The Incarnation" as a revelation of human duties; Dr. Cheyne named "Founders of Old Testament Criticism"; and the Rev. J. A. McClymont dwelt upon "The New Testament and its Writers." Dr. Clifford spoke on "Christian Certainties"; Dean Church preached "Cathedral and University Sermons"; the last work upon which Charles H. Spurgeon was engaged, "The Gospel of the Kingdom: A Popular Exposition of the Gospel according to Matthew," was given to the world during the year with introductions by Mrs. Spurgeon and the Rev. Arthur T. Pierson; Henry Drummond published an address upon "The City without a Church"; Arthur Willink argued for "The World of the Unseen"; Hugh Macmillan and Canon Faber issued volumes of "Sermons"; the Hulsean Lectures of 1871, by Dr. Fenton J. A. Hort, upon "The Way, the Truth, the Life," were published, and Dr. Alexander MacLaren, in addition to "Paul's Prayers, and Other Sermons," contributed a volume to the new sixth series of the "Expositor's Bible," selecting "The Psalms, I-XXXVIII," for his theme. Other volumes were "Ezra, Nehemiah, and Esther," by Walter F. Adee; "The Book of Joshua," by Dr. William G. Blaikie; "The First Book of Kings," by Canon Farrar; and the "Epistle to the Philippians," by Dr. Robert Rainy. "Joshua and the Land of Promise," by Rev. F. B. Myer, appeared in the "Old Testament Heroes" series. The second of twenty contemplated volumes of the "Preacher's Complete Homiletic Commentary" was issued, devoted to "The Book of Exodus"; "The People's Bible" of Dr. Joseph Parker reached its twenty-second volume; and "II Corinthians-Philippians" and "Colossians-James" were the additions to "The Sermon Bible." R. M. Benson gave three volumes to the "Final Pass-over," and a fourth is to be expected. Of exceptional interest was J. Rendel Harris's story of "The Newly Recovered Gospel of St. Peter," with a full account of the same, and J. Armitage Robinson and Montague Rhodes James lectured on it as "The Apocryphal Gospel of St. Peter," in a volume of the "Cambridge Texts and Studies." "Faith and Criticism" was the latest expression of Congregationalism. In conclusion, it remains to mention the Rev. F. D. Maurice's "Patriarchs and Lawgivers" and "Prophets and Kings," both of the Old Testament. The last hours of Prof. Minto were spent upon his "Logic: Inductive and Deductive," in the "University Extension Manuals," and Alfred Sidgwick followed with "The Process of Argument." "Theosophy; or, Psychological Religion," was the theme of F. Max Müller's Gifford Lectures for 1892; Mrs. Besant asked "Death—and After?" and "Hypnotism, Mesmerism, and the New Witchcraft" were explained by Ernest Hart. Volumes of a miscellaneous character, which may be as well included under this head as any other, were "Electrical Papers," by O. Heaviside, in two volumes; "Short Stalks; or, Hunting Camps North, South, East, and West," by Edward North Buxton, illustrated by Whymper, Lodge, Wolf, and others; "Fishing Experiences of Half a Century," by F. Howell Hopkins; "The Art of Golf," by Sir W. G. Simpson, and the two contributions to the "Badminton Library" of "Coursing and Falconry" and "Swimming." "Agricultural Analysis" was a manual of quantitative analysis for students of agriculture, by Frank T. Addyman. "The Statesmen's Yearbook" for 1893, edited by J. Scott Keltie, reached its thirtieth year of issue.

Poetry.—More poetry was written in 1893 than in the preceding year, and, indeed, the present may be termed the golden age of poets, inasmuch as their verses are actually sold and "new discoveries" are being constantly made of genius. But the younger generation alone was mostly represented. Miss Christina Rossetti published a volume of "Verses," pronounced the best of the year, and "King Poppy," for years the cherished literary offspring of Lord

Lytton's brain," which was first conceived in 1872, put into verse in 1874, and rewritten and retouched between 1887 and 1890, at last given to the world in 1893, proved to be "that rare thing in poetry—a novelty." William Watson published "The Elopement Angels: A Caprice"; Michael Field, "Underneath the Bough: A Book of Verses," and a play in prose, "A Question of Memory"; and Robert Buchanan "The Wandering Jew," which gave rise to considerable controversy. We have volumes of "Poems" from Francis Thompson, Mrs. Meynell, and Arthur Christopher Benson; Norman R. Gale wrote "A Country Muse" (new series) and "Orchard Songs"; W. B. Yeats, "The Countess Kathleen"; John Davidson, "Fleet Street Eclogues"; Maude Egerton King, "A Book of Songs and Sonnets"; Aubrey De Vere, "The Forming of Queen Meare, and Other Legends of Ireland's Heroic Age"; W. H. Mallock, "Verses"; F. W. Bourdillon, "Sunsum Corda"; Theodore Watrisslaw, "Caprices," fervently *fin-de-siècle* in tone; Miss Evelyn Douglas, "Songs of a Bayadere"; William Allan, M. P., "A Book of Poems," "Rose and Thistle," "After Toil Songs," and "Northern Lights"; Mrs. Augusta Webster, "Selections" and "Portraits"; Miss Mary F. Robinson (Mme. Darmesteter), "Retrospect"; Bryan C. Waller, "Perseus in the Hesperides"; C. Weekes, "Reflections and Refractions"; Hon. Roden Noel's "Poems" had an introduction by Robert Buchanan; "Under the Hawthorn, and Other Verses" of Mrs. de Gruchy were published posthumously; Lord Houghton's "Stray Verses, 1869-'90" deserve mention; "Echo and Narcissus" came from J. W. Aizlewood, "Spreta Carmina Muse" from Pakenham Beatty, and "Ballads of a Bohemian" from S. J. Adair Fitz-Gerald. "Poems Dramatic and Lyrical" of Lord de Tabley were reissued from former volumes of his verse. A handsome American edition of "The City of Dreadful Night," by James Thomson, had an introduction by Elizabeth Cavazza, and Austin Dobson's "Proverbs in Porcelain," to which was added "Au Revoir," a dramatic vignette, formed one of the holiday volumes. Sir John Croker Barrow was the author of "The Seven Cities of the Dead, and Other Poems," and Count Stenbock of "The Shadow of Death." The sole work of Sir Edwin Arnold was "Adzuma; or, The Japanese Wife," a play in four acts, and two comedies were written by Robert Bridges and Henry Arthur Jones, entitled "The Humors of the Court" (with which were included other poems) and "The Crusaders." The final volume of "The Poets and the Poetry of the Century," edited by Alfred H. Miles, includes selections from Mr. Bridges and from Kipling's "Barrack-Room Ballads"; and among other collections of value may be mentioned "The Love Songs of Connacht," by Douglas Hyde, "The Ballad Minstrelsy of Scotland" and "Scottish Ballad Poetry," edited by G. Eyre Todd. Richard Le Gallienne contributed an introduction to the "Poems of Arthur Henry Hallam," which he edited, and in the "Book-Lovers' Library," Gleeson White edited "Book Song," an anthology of poems of books and bookmen from modern authors. An especially valuable edition of "The Poetical Works of Milton" was that edited by Prof. Masson with a memoir, introduction, notes, and an essay on Milton's English and versification. "Selected Poems of Matthew Arnold" appeared in the "Golden Treasury Series," and "Poems by the Brontës" were collected into a volume.

Voyages and Travels.—"Studies of Travel," by the late historian Edward A. Freeman, in two volumes, one devoted to Greece and the other to Italy, we owe to his daughter; and "Artistic Travel," by Henry Blackburn, covered a thousand miles toward the sun through Normandy, Brittany, the Pyrenees, Spain, and Algeria. F. W. W. Howell contributed "Ice-landic Pictures" to the "Pen and Pencil Series"; William Bement Lent went "Gypsying beyond the Sea" from English fields to Salerno shores; Edward Harrison Barker's "Wanderings by Southern Waters"

carried him to eastern Aquitaine; the author of "A Day in my Life at Eton" gave an account of his trip "Across France in a Caravan"; E. R. Somerville and Martin Ross wandered "In the Vine Country" of southern France; J. Warren Berry made "Studies in Corsica"; Abel Chapman and Walter J. Buck recorded their sport with rifle, rod, and gun in "Wild Spain"; Wilmot Harrison described "Memorable Paris Houses"; and A. R. Hope Moncrieff edited "Where to go abroad" as a guide to the health resorts. Mrs. Frances Monto Elliot published "The Diary of an Idle Woman in Constantinople"; "Out of Doors in Trarland," by Frederick J. Whishaw, told of the seeings and doings of a wanderer in Russia; while Kate Marsden narrated the adventures of her journey "On Sledge and Horseback to the Out-cast Siberian Lepers." Fully as miserable as these last were the "Trans-Siberian Savages" B. Douglas Howard visited in Saghalien, and who are again described in "Alone with the Hairy Ainu: or, 3,800 Miles on a Pack Saddle in Yezo, and a Cruise to the Kurile Islands," by A. H. Savage Landor. Miss M. Bickersteth's "Japan as we saw it" had a preface by her father, the Bishop of Exeter, and Edward G. Browne registered his impressions gained in "A Year amongst the Persians." Two volumes contain the results of the Earl of Dunmore's visit to "The Pamirs"; while "Where Three Empires meet," by E. F. Knight, is a narrative of recent travel in Cashmere, western Tibet, Gilgit, and the adjoining countries. "The Simple Adventures of a Memsahib," from the pen of Sara Jeannette Duncan (now Mrs. E. C. Coates), have all the freshness and charm of "A Social Departure" and "An American Girl in London." E. D. Cumming saw Burmese life "In the Shadow of the Pagoda." Jeannette A. Grant went "Through Evangeline's Country," and in "Miss Gray's Girls" described summer days in the Scotch Highlands. C. H. Hudson spent anything but "Idle Days in Patagonia," and Nehemiah Bartley, in "Opals and Agates; or, Scenes Under the Southern Cross and the Magelhans," vouchsafed memories of fifty years of Australia and Polynesia. Eyre Crowe told of what he saw "With Thackeray in America" when he acted as secretary to the great novelist. "Travel and Adventure in Southeast Africa," by F. Courtney Selous, was the narrative of eleven years spent on the Zambezi and its tributaries, with an account of the colonization of Mashonaland and the progress of the gold industry in that country; "Adventures in Mashonaland" were related by two hospital nurses, Rose Blennerhassett and Lucy Sleeman; James Johnston, M. D., gave us "Reality versus Romance in South Central Africa"; D. J. Rankin described "The Zambesi Basin and Nyassaland"; and Dr. J. A. Moloney went as medical officer of the expedition "With Captain Sairs to Katanga." H. Anderson Bryden was at home with "Gun and Camera in Southern Africa"; "Letters from South Africa," by a special correspondent of the "London Times," had a vivid freshness and realism; "On English Lagoons" contained the voyage of two wherry-men on the Norfolk Broads; J. Ll. W. Page traced "The Rivers of Devon from Source to Sea"; and Rev. S. F. Hotchkin wrote of "The York Road, Old and New, Fox Chase, and Bustleton." "Travels in America One Hundred Years Ago," by Thomas Twining, and "Captain Cook's Journal during his First Voyage Round the World," were interesting reprints. To exploration belong "The City and the Land," seven lectures by Major Conder, Col. Wilson, Walter Besant, Mr. Flinders Petrie, and others, published by the Palestine Exploration Fund, and "How the Codex was found," a narrative of two visits to Sinai, from Mrs. Lewis's journals, 1892-'93, by Margaret Dunlop Gibson.

The following are the figures of book-production in England during 1893, compared with those of 1892, from the London "Publishers' Circular":

DIVISIONS.	1892.		1893.	
	New books.	New editions.	New books.	New editions.
Theology, sermons, biblical, etc.	528	145	459	74
Educational, classical, and philological	579	115	518	104
Juvenile works and tales	292	58	659	86
Novels, tales, and other fiction	1,147	890	985	893
Law, jurisprudence, etc.	86	29	27	23
Political and social economy, trade, and commerce	151	24	71	14
Arts, sciences, and illustrated works	147	62	86	87
Voyages, travels, geographical research	250	86	247	73
History, biography, etc.	298	75	269	65
Poetry and the drama	185	42	197	57
Yearbooks and serials in vols.	860	18	870	1
Medicine, surgery, etc.	127	50	98	58
Belles-lettres, essays, monographs, etc.	107	82	96	11
Miscellaneous, including pamphlets, not sermons	718	228	1,102	828
	4,915	1,389	5,129	1,258
		4,915		5,129
		6,254		6,899

LITERATURE, CONTINENTAL. The usual summary of the most important additions to the literature of Continental Europe is given herewith. Complete lists of publications in Germany, France, Italy, etc., are issued in those countries, in the form of special annual bibliographies similar to those published in England and in the United States.

Austria. See *Bohemia, Germany, and Hungary.*

Belgium.—In the domain of history this country's press is, as ever, prolific, national history receiving an especially generous share of attention. The Abbé A. Cauchie has published a monograph on "La grande Procession de Tournai"; Prosper Claeys describes the office of "Le Bourreau de Gand"; the Chevalier Camille de Borman writes of "Les Echevins de souveraine Justice à Liège"; Charles Rahlenbeck has made a study of the "Trois Régentes des Pays-Bas"; and Ernest Discailles has issued works on "Charles Rogier," a prominent leader in the Belgian revolution of 1830, and another remarkable Liberal, "Adelson Castiau." Discailles, and even more so Godefroid Kurth (author of "L'Histoire Poétique des Mérovingiens"), appear to form notable exceptions in animation and warmth of style among Belgian historians, who are accused of a lack of literary qualities. Ecclesiastical history has received noteworthy additions in "Le Diocèse de Liège sous l'Épiscopat de Mgr. de Montpelier (1852-79), by le Chanoine Daris, and "Le Clergé dans le Diocèse de Tournai," by le Chanoine Vos. Henri Pirenne has issued a valuable "Bibliographie de l'Histoire de Belgique," and a number of inedited documents have been issued, as well as continuations. Mgr. Namèche's great and scholarly "Cours d'Histoire Nationale," which was begun forty years ago, was finished by the publication of the twenty-ninth volume, some months after the death of the author. Other contributions in the field of history and biography include "Souvenirs du Mexique" (1864-67), by Gen. Van der Smissen, of the Belgian Legion under Maximilian, and "Portraits et Silhouettes," by Baron Prosper de Hauteville. Among the books of travel, Jules Leclercq's "Le Voyage au Mont Ararat" is worthy of note. The year's contributions to political and social science include valuable works like Ed. Vander Smissen's "La Population," Maurice Heins's "Les quatre grandes Villes de la Belgique" (financial and administrative statistics of Brussels, Antwerp, Ghent, and Liège in 1890), and Louis Franck's timely "La Femme dans

les Emplois publics." "Les Bases de la Morale et du Droit," by the Abbé Maurice de Baets, J. J. van Biersvliet's "La Mémoire," and the Abbé A. Auger's "Études sur les Mystiques des Pays-Bas au Moyen-Âge" are among the year's publications in religion and philosophy. The literature of the fine arts has been enriched by Prosper Claeys's "Expositions d'Art à Gand" (1792-1892), Albert Dutry's sketches of "Les Peintres du Peuple," Max Rooses's excellent "L'Œuvre de P. P. Rubens" (5 vols.), and a study of "Alexandre Borodine," a Russian musician, by Alfred Habet. Literary history has likewise received some meritorious contributions, such as "La Poésie néerlandaise contemporaine en Belgique," by Omer Wattez, and Georges Eekhoud's work on English literature, "Au Siècle de Shakespeare." "La Jeune Belgique," that group of young authors, is making propaganda for its ideas in various literary reviews in French, and in the numerous publications by the members of this literary coterie, such as the poetry of Valère Gillo, the Abbé Hoornaert, Iwan Gilkin, and André Fontainas, and the novels of Henry Maubel, Arnold Goffin, Frantz Mahutte, Georges Rodenbach, and Camille Lemonnier, both of the latter living in Paris. We are told, however, that the Belgians are quite indifferent to these manifestations of a desire for innovations in the national literature. "Ma Juliette" is a posthumously published story by Jean Rousseau. Charles de Coster was not appreciated during his lifetime, while now come eager but tardy attempts to do him justice by the republication of his masterpiece ("Légende d'Oylenspiegel") and the erection of a monument at Ixelles. Ed. Descamps's antislavery drama, "Africa," was crowned by an antislavery committee at Paris, no doubt influenced by ethical rather than aesthetic principles.

The works of importance in the Flemish language also include some interesting contributions to history, such as the monograph on the Battle of the Spurs ("Slag van Kortrijk"), by J. Fredericks, and the continuation of F. de Potter's work on Ghent, the communal accounts of which city in the days of Philip van Artevelde have been published by J. Vuylsteke. A. Prayon van Zuylen's highly important "De Belgische Taalwetten Toegelicht" gives an account of the laws on the official use of the two national languages, and of the struggle of the Flemings in defense of their language. Prudens van Duyse, a prominent Flemish poet during the literary revival of the Thirties, forms the theme of a volume by J. Micheels, while the centenary of the birth of Jan Frans Willems, father of the Flemish movement, was celebrated in a volume containing three studies, by Max Rooses, Julius Vuylsteke, and G. Bergmann respectively, and issued by the society founded some forty years ago in Willems's honor. The extent of this Flemish literary movement has already called for a "Vlaamsche Bibliographie," edited by F. de Potter, under the auspices of the Royal Flemish Academy (Vol. I). The history of the Flemish theater in the eighteenth century has been written by O. van Hauwaert; Ibsen forms the theme of an essay by E. de Bom; D. Slegckx, writing with as much vigor as ever at the age of seventy-five, is the biographer of Guillen de Castro; while Pol de Mont has performed a like service for Peter Benoit, the head of the Flemish school of music. N. de Pauw has published some queer mediæval verse, and F. Van Veerdeghem a religious drama of the seventeenth century, "De Menschenwordingh." "De Boer der Sehrance," by L. Smit, and Miss V. Loveling's "Eene Idylle," which, like some of her former works, has met with great success in Holland, are especially noteworthy new novels, while among the poetical works of the year the "Verzamelde Gedichten" of the late L. Kettman (Floris van Westervoort) and "Dichtoefeningen" of Abbé Guido Gezelle, "chief of the particularist school in West Flanders," deserve commendation. The young element finds expression for its revolutionary tendencies in its journal, "Van Nu en Straks."

Bohemia.—Literature in this country has again been given an impetus by a national quasi-literary festivity—the three hundredth anniversary of the birth of J. A. Comenius—which called forth a swarm of papers and essays. The historical works to be recorded are generally national in character: J. L. Pic's important "Archæological Investigations in Central Bohemia," T. Bilek's "History of the Consecrations" (after the battle on the White Mountain), Z. Winter's "Pictures of Bohemian Towns," Zibrt's "History of the Costumes of Bohemia," Lubor Niederle's "Man in Prehistoric Times," etc. Several books bearing upon the fine arts have appeared, notably Mádl's "Manual of the History of Art," Branis's "History of Mediæval Art," and costly publications such as Koula's "Selection of Bohemian National Embroidery from Náprstek's Bohemian Industrial Museum," "Collection of Designs from the Retrospective Jubilee Exhibition, 1891," arranged by Chytil, and Zeyer's "Barok a Rokoko," reproductions of prominent buildings in Prague. Jaroslav Vítěk has brought out his "History of Bohemian Literature," the first thorough work of its kind issued since the publication of Jos. Dobrowsky's book in German. It has given rise to much controversy, winning praise in some quarters, while in others the author was reproached with want of national feeling, in which matter his countrymen are probably rather quick to take umbrage. Jaroslav Vrchlický and Svatopluk Čech, the two most prominent writers in the country, have celebrated their jubilee. While Čech has been active only as a journalist, the prolific Vrchlický has again added several volumes to the amazingly large number of poems, dramas, novels, stories, literary studies, and translations which form the fruit of his literary labors thus far. His newest works include "Moje Sonata" (poems), "Thistles from Parnassus" (sequel to "Breviary of Modern Man"), in which meditation and satire are mingled, "Life and Death," "Three Kisses" (a comedy long unpublished), and "Studies and Portraits," critical essays treating mainly of authors and artists in western Europe. Among the novels of the year are works by Václav Vítěk ("Captain Halaburd," "The Black Lake"), Renatus, F. Schulz ("Modern Novels"), Konrad, Albiéri, and S. Heller ("Romance of the Sea" and "Red Court"), all adherents of the older school in prose fiction. The new school shows the usual revolt of the younger element against conventional views, the striving for novelty and more truth to life, which finds expression more particularly in the short story, often successful, but not always mature and finished enough. This movement toward realism seems to be very widespread, and the growth of interest in the life of the people is no doubt due largely to the intensely patriotic national feeling of the Bohemians. Further fermenting influences are found also in the agitation among the university students and in the polemic between the literary world and the well-organized Roman Catholic press. The productions of the younger writers of fiction are concerned mostly with the life of their countrymen. Thus Klostermann, in his "From the Paradise of the Bohemian Forest," Capek, in "Tales," and Rais, in "Bittersweet," "Mountain Herbs," and "Family Chronicle," describe Bohemian country folk successfully, while Hladik and Aurednické are rather conventional in their novels dealing with fashionable life in Prague. The humbler classes in the capital are, however, well hit off in "Merry Prague People," by Hermann, and "From the Memoirs of Korinek, Student of Philology," a pseudonymous work, while "Three Ways," "Small Stories," and "Without Bread," novelettes by Herites, are concerned with life in the smaller towns. Herben, in his "To the Third and Fourth Generation," and Mrstik, in "Good Souls" (short sketches), have chosen the Moravian village as their scene of action, while Polish matters form the theme of "Butterfly from a Norwegian Fairy Tale" and "Sketches of the Last Polish Insurrection," both by Jelínek. Much interest has been aroused also by the "Twilight Talks of the Literary Society Maj." There is no dearth of

poetry, nor any abundance of good verse. A note of melancholy predominates in Muzik's delicate "Hymns and Sighs" and "Black Pearls," as also in "Third Book of Lyrics" by Machar, who, despite an occasional want of finish in style, is the most original and individual among the younger poets, for whose storm-and-stress yearnings he finds most apt expression. Other poetical productions of note are Sládek's strongly patriotic "Bohemian Songs," Borecký's "Rosa Mystica" (symbolical poems), the fourth part of Julius Zeyer's "Annals of Love," and a volume of pieces on country life by Sová. Kaminský, Cerviuka, Klásterký, and Procházka have also published new poetry. F. X. Svoboda's "Rozklad," dealing with the enervating and ruining influence of city life on a farmer's family, is named as the only piece produced which rises somewhat above the conventionality which seems to dominate the drama at present.

Danmark.—If literary activity in this country during the past year or two has not produced any epoch-making masterpieces, nor introduced any new writer of striking talent, yet the general result is good, and up to the average.

The important works of Galschiøt, Barfod, Bricks, P. Hansen ("Den Danske Skueplads"), mentioned last year, have been continued, as have also Carl Brunn's "History of Copenhagen," I. L. Heiberg's "Et Liv genoplevet i Erindringer," and "Den Dansk-Tydske Krig, 1864; udgivet af Generalstabens." C. Bruun and C. P. Fenger have issued "Thorvaldsen's Museum Historie"; Miss Anna Hude, "Danehoffet og dets Plads i Danmarks Stasforfatning"; V. Bergsøe, "Danske Medailler"; J. Larsen, "Bidrag til den danske Folkeskoles Historie, 1784-1818"; and F. Buhl, "Det israelitiske Folks Historie." C. V. Bruun has prepared "Bibliotheca Danica . . . 1482-1880," and a fine illustrated encyclopædia is in course of preparation. "Hankabók . . ." (1892) is the first complete edition of this great codex.

Among books of travel is one by Dr. Kaarsberg, on the Kalmucka, which shows that the flesh is heir to the same diseases among these tribes as under the "degenerating influence" of civilization. Georg Brandes has issued a selection from his essays, under the title "Menschen und Werke," in German. C. Kalisch's "Studier over Tennyson," Otto Jespersen's study on Chaucer, and a compilation on Browning by Dr. Stefanesson (of Iceland) remind us of the influence of England in Danish literature. Prof. Gjellerup, Valdemar Vedel, Niels Møller, Prof. Høffding, Johannes Jørgensen, and others, show a thorough knowledge of the modes of thought and the style of English writers. Shelley's centenary was celebrated by papers in various periodicals, and Adolf Hansen issued a translation of "Prometheus Unbound." Translations of Carlyle's "Past and Present" and of less important English books, serve to emphasize the recurrence of the English influence felt here so strongly toward the end of the eighteenth century. However, the French spirit is still much in evidence. Gallic symbolism has its admirers in the younger element, and Baudelaire and Maeterlinck both find favorable reception, as does also Ibsen—as yet. There is here, as nearly everywhere else, a healthy desire for novelty, and for a reaction from ultra-realism, with its not always pleasing nor clean incursions into the domains of pathology and psychology. Among the newest additions to *belles-lettres* are J. Paludan-Müller's "Idyller fra det daglige Liv" (1892); S. Michaëlis's "Vanemenneskere" (1892); "Paa naert Hold" (1892), by J. Hilditch; "Troid: ny Samling" (1892), by J. Lie; K. Becker's "Søskende"; K. Larsen's "Cirkler"; K. Gjellerup's "Wuthorn" and "Ti Kroner og andre Fortællinger"; J. Schjørring's "Skiftende Tider"; H. Winther's "Herregaard og Præstegaard"; "Svend Dyrings Hus," by H. Hertz; J. Nielsen's "Kulsviere: en Kærlighedshistorie"; C. Winther's "Til Een"; C. Møller's "Vore Husdyr: humoristiske Smaahistorier."

France.—There is no end to the publications dealing with national history, and more especially the Revolu-

tion. A newly formed society is devoted to the study of the latter period, to which the Faculty of Letters at Paris has devoted a special chair. Of the mass of new books on that eventful period the most remarkable are: "Le Culte de la Raison et le Culte de l'Être Suprême (1793-94)," by Aulard; Albert Sorel's "L'Europe et la Révolution"; Vol. VIII of A. Chuquet's "Les Guerres de la Révolution"; Charles Gomel's "Les Causes financières de la Révolution française: les derniers Contrôleurs généraux." Pierre de Nolhac, who unites learning with a graceful and easy style, has written a somewhat vindicating monograph on Marie Antoinette; H. Housaye pictures France in "1814" and "1815"; and Paul Thureau-Dangin has finished his large "Histoire de la Monarchie de Juillet" (7 vols.), which has given rise to much controversy on account of its partiality to Orleanist principles. The same epoch is covered by the "Souvenirs de Alexis de Tocqueville, publiés par le Comte de Tocqueville," written in 1850, and giving a truthful picture of the men and events of the time of Louis Philippe. More recent times are dealt with in A. Verly's "Général Boulanger et la Conspiration monarchique," and three volumes on the Panama Canal affair—J. L. Forain's "Les Temps difficiles," Léon Durocher's "Perceement de l'Isthme de Corinthe" (a mild satire), and A. Lucas's "Précis historique de l'Affaire du Panama." Ernest Lavisse, always bent on illustrating the origin and cause of the power of Germany, has brought out "Jeunesse de Frédéric II" and "Le grand Frédéric avant l'Avènement," and a "Histoire Générale du IV^e Siècle à nos Jours" has been begun under the direction of E. Lavisse and A. Rambaud. In the field of political biography and memoirs some interesting new books are also to be recorded. "Mes Souvenirs sur Napoléon," par le Cte. Chaptal. Arthur Lévys "Napoléon intime," F. Masson's "Napoléon et les Femmes," (Vol. I), and the "Mémoires" of Gen. Thiébault, Chancellor Pasquier, and Gen. Bigarré, relate to the Napoleonic era, now so popular a topic. Henri Welschinger's "Le Maréchal Ney, 1815"; Vol. I of "Histoire du Cardinal Richelieu," by Gabriel Hanotaux; "Études sociales et politiques: les dernières Années de La Fayette, 1792-1884," by A. Bardoux; Spuller's work on Lamennais; H. Buchard's "L'Amiral Cloué: sa vie"; Marie Dronsart's "W. E. Gladstone"; "Mémoires du Baron Haussmann" (8 vols.); and Vol. I of "Discours et Opinions" of Jules Ferry, have also appeared. Colonies and colonization form the topic of Burdeau's "L'Algérie en 1891," Chailey-Bert's "La Colonisation de l'Indo-Chine," M. A. Legrand's "Au Pays des Canaques: la nouvelle Calédonie . . . en 1890," and H. Coudreau's "Ches nos Indiens: quatre Années dans la Guyane française (1887-91)." Other works in that broad division, voyages and travels, are Barbier's "Voyage au Pays de Dollars" (the United States, of course) and G. Sauvin's "Autour de Chicago." Finally, there are Charles Lenthéric's "Le Rhône" (2 vols.), important for its description of the part played by the river in the formation of France; Robida's "La vieille France: Provence"; P. Strauss's "Paris ignoré" (1892); and Louis Paulian's "Paris qui mentie." Interesting works on political and social science have seen the light. The relations between Church and state form the theme of two books—Charles Benoist's "L'Église et l'État" and Anatole Leroy-Beaulieu's "La Papauté, l'Église, et la Démocratie." L. Grégoire's "Le Pape, les Catholiques et la Question sociale," and "L'Église Catholique et la Liberté aux États-Unis," by DeMeaux, follow out kindred lines. The third volume of Levasseur's important "La Population française" has appeared, and Ferdinand Dreyfus has written a timely study of "L'Arbitrage international." Purely philosophic books, not illustrating some question of political or social economy, appear to be rare. Dervaulle has carefully summed up the "Philosophie de Condillac," and Daniel Bourchenin the history of "Pessimisme dans la Société et dans les Lettres françaises contemporaines." A. E. Chaignet has completed his

"Histoire de la Psychologie des Grecs" (5 vols.); and Raoul Allier's "Les Défaillances de la Volonté au Temps présent," and Thamin's "Education et Positivisme" (proposing that education be governed by idealism and religion instead of materialism) are also worthy of note. The appearance of two new reviews in this field is to be noted: "Revue de Sociologie" and "Revue de Métaphysique et de Morale." In the department of religion and ecclesiastical history one naturally thinks first of the late Renan's "Histoire du Peuple d'Israël," Vols. IV and V. Molinari's "Religion" maintains that religious feeling is natural to humanity, developing best under a free government; Ch. Letourneau's "L'Évolution religieuse dans les diverses Races humaines" traces the various religions to the same underlying principle; Louis Figuier's "Bonheurs d'Outre-Tombe" and Bourdeau's "Problème de la Mort" are contributions to eschatology, the first favorable to the doctrine of immortality, the other combating it. P. Allard traces the "Histoire des Persecutions du I^{er} au IV^e Siècle" in five volumes. Mommsen and Marquardt's "Handbuch der römischen Alterthümer" is being translated, various French specialists being intrusted with the separate parts of the work. In the domain of fine arts we have A. Gazier's "Philippe et Jean Baptiste de Champaigne" and S. Rocheblave's "Les Cochin" (both in the intermittent series "Artistes Célèbres"); E. Fazy's "Louis II et Richard Wagner"; A. Pellissier's "Les Chefs-d'œuvre de l'Art moderne . . ."; H. Lemonnier's "Études d'Art et d'Histoire: l'Art français au Temps de Richelieu et de Mazarin"; A. Ernst's "L'Art de Richard Wagner: l'Œuvre poétique"; G. I. L. E. Larroumet's "Meissonier." Edmond de Goncourt tells the story of a famous dancer in "La Guimard" ("Les Actrices du XVIII^e Siècle"). The literature of bookbinding has received a very important addition in Ernest Thoinan's "Les Relieurs français, 1600-1800," and Octave Uzanne, in his "Bouquineurs et Bouquinistes," tells of book-hunting on the quays of Paris. Several interesting works dealing with literary history and criticism have appeared, one of the most remarkable being the volume of essays upon the drama in France, by Ferdinand Brunetière, editor of the "Revue des deux Mondes," and probably the most prominent exponent of purely objective criticism. The Vicomte de Vogüé, in his "Regards historiques et littéraires" (1892) and "Heures d'Histoire," as in earlier works, strives to get at the hidden significance of thought and action of the present day, and to infer the tendencies of the next generation; Barbey d'Aurevilly's "Les Œuvres et les Hommes" treats of noted "Mémoires"; René Doumic's "De Scribe à Ibsen" illustrates the evolution of the drama; the late Édouard Goumy's unfinished "Les Latins" accentuates the value of the Latin classics in education; and Louis Leger's "La Littérature russe" (1892) is especially valuable as regards the literature of past centuries. A. David-Sauvageot's "Le Réalisme et le Naturalisme dans la Littérature et dans l'Art" (1892); P. Giniesty's "L'Année littéraire 1892"; E. Tissoit's "Drame norvégien: Henri Ibsen, Bjørnstjerne Bjørnson"; "Un Homme de Lettres sous l'Empire et la Restauration" (diary of Edmond Gérard); E. Montégut's "Esquisses littéraires"; P. Morillot's "Le Roman en France depuis 1610"; Joseph Bédier's "Les Fabliaux"; H. Dietz's "Les Littératures étrangères" (Vols. I and II: Italy, Spain); and "Anthologie des Poètes français du XIX^e Siècle," are also of interest. Furthermore, Jules Lemaitre's "Impressions du Théâtre," Albert Soubiers's "Le Théâtre en France, 1871-92," J. J. Weiss's "A propos de Théâtre," Gustave Larroumet's "Études de Littérature et d'Art," Paul Stapfer's "Des Réputations littéraires," Georges Pellissier's "Essais de Littérature contemporaine," deal mostly with the literature of to-day. Monographs on Alfred de Musset, by Mme. Vincens (Arvède Barine), throwing new light on his relations with George Sand; Lesage, by Eugène Lintilhac; J. J. Rousseau (whose biography Henri Beaudouin issued in 1892), by Arthur Chuquet (an able piece of work); Descartes, by

A. Fouillée; Rabelais, by René Millet; Chateaubriand, by De Lescure; Hugo, by Léopold Mabilleau—all seven in the series "Grands Écrivains Français"—of Thomas Cornille (striving to show him as unfairly overshadowed by Pierre), by G. Reynier; Hugo, by Ch. Renouvier; Lamartine, by Émile Deschanel, have appeared. Another new periodical is to be recorded, "Le Livre et l'Image," "a monthly documentary illustrated review," edited by John Grand-Carteret, who in 1892 issued the profusely illustrated volume, "XIX^e Siècle."

In the domain of *belles-lettres*, the question of the character of the French literature of to-day becomes a somewhat vexed one. It is in a state of transition. The positivism of Hippolyte Adolphe Taine (Vol. VI of whose "Origines de la France Contemporaine" has appeared), the neo-mysticism of Melchior de Vogüé and Paul Desjardins, the materialism or realism of Zola, the psychology of Paul Bourget, Paul Margueritte, and Marcel Prévost, the classic beauty of the poetry of Leconte de Lisle and José Maria de Hérédia, a native of Cuba, and the most recent efforts of the "symbolists" (rather contemptuous of grammatical rules), all find their devotees in the ranks of "young France." As one critic says, there are two main currents in contemporary French literature, the scientific and the imaginative; which will preponderate is as yet an unsettled question. It seems, however, that subjectivism is beginning to gain on objectivism; that the *littérateurs* of France are governed more generally by a desire to probe the serious questions of the hour, to preach what one writer has called "*le devoir présent et l'action morale*,"—in a word, that literature is regaining a more ethical character. The following works may be said to specially illustrate various of these conflicting movements in French literature: Jules Lemaitre's "Les Rois," one of those visions of the future now so much in vogue, and dealing with the fate of monarchy in the face of the rapid progress of democracy; Paul Bourget's "Cosmopolis," which may be accepted as a reaction against the naturalism of Zola and others; and "L'Autonnie d'une Femme," by Marcel Prévost, a refined realist, whose latest work deals with the rivalry between a young woman and one of maturer age, both enamored of the same man, and the moral aim of which, we are told, is to show "that love is wrong when it has no other end than itself," are all three especially noteworthy books. Paul Margueritte, originally a disciple of Zola, whom he deserted some years ago, has issued "La Mouche" (short stories), and J. H. Rosny, "one of the most brilliant writers of the new French school of fiction," has in his latest work shown a tendency to desert "Zolaism" for idealism. In fact, there seems to be no new work of note which shows any affinity with the spirit and method of Zola, whose "Le Docteur Pascal" ends the long history of the Rougon-Macquart family, to which he devoted nearly twenty-five years of his life. Anatole France, graceful, skeptical, witty, has published "L'Étui de Nacre" (a collection of tales, 1892), "Les Désirs de Jean Servien," and "La Rôtisserie de la Reine Pédauque," in which he is as fantastical, thoughtful, and ironical as ever, and François Coppée has brought out a collection of short stories under the title "Longues et Brèves," and a volume of papers, "Mon Franc Parler."

From the mass of fiction published during the year we may select also Jean Carol's "Le Portrait" (short stories), J. Barbey d'Aurevilly's "Le Chevalier des Touches," A. Houssaye's "Le Roman de la Duchesse," Jane Dieulafoy's "Rose d'Attra," A. Silvestre's "Floral," L. Roger-Milès's "Nos Femmes et nos Enfants . . .," C. Mendès's "Nouveaux Contes de Jadis," J. Richepin's "L'Aimé," E. Daudet's "Made-moiselle de Cîrec," Pierre Loti's "Matelot" and "L'Exilée," Édouard Rod's "Vie privée de Michel Teissier," and "Tante Joujou," by "Gyp" (Comtesse de Janville). Hector Malot's "Complices," and two works by promising newcomers—Jean Madeline's "Contes sur Porcelaine" and Masson-Forestier's

"Pour une Signature" (six short stories)—are stragglers from 1892. A notable book in the field of poetry is "Les Trophées," by José Maria de Hérédia, long known as a writer of impeccable and beautiful verse. The entire edition of this, his first volume, we are told, was sold on the day of publication. Other works, marked more or less by similar characteristics—purity of style and beauty of language, absence of the ethical or the philosophical element, suppression of the *ego*—are Ferdinand Hérold's "Chevaleries Sentimentales," Maurice du Plessy's "Livre Pastoral," Henri de Reunier's "Tel qu'on Songe," and "Adolphe Betté's "Thulé des Brumes." The poetry of Jean Rameau ("Nature"), Maurice Rollinat ("La Nature"), André Lemoyne ("Fleurs du Soir"), has also won approbation. New plays produced or published include Georges Lecomte's "Mirages"; Paul Hervieu's comedy "Les Paroles Restent" (1892), a brilliant success; Ernest Daudet's "Un Drame Parisien" (1892), not too tenderly treated by the critics; Guy de Maupassant's "La Paix du Ménage"; François de Curel's "Envers d'une Sainte," "Les Fossiles," "L'Invitée," and "Amour Brode" (which met with instantaneous public approval despite simplicity of method and severity of thought and style); Henri Amic's "Une Vengeance"; Maurice Vaucraire's "Valet de Cœur"; Georges Courteline's first play, "Boubouroche," a decided "hit"; the "Dramas Sacrés" of Armand Silvestre and Eugène Morand (depicting incidents from the New Testament represented in the surroundings of the fourteenth and fifteenth centuries); and E. de Goncourt's satirical farce, "À bas le Progrès," with a preface directed against the influence of Ibsen and of Russian literature. Sardou and Moreau manufactured "Madame Sans-Gêne," and Lemaitre's "Les Rois" was described as a weak production.

Germany (including Austria and, in part, Switzerland).—An increase of popular histories in this land of thoroughness is to be noted. German matters form the theme of Fr. G. Schultheiss's "Geschichte des deutschen Nationalgefühls" (Vol. I), W. Bippen's "Geschichte der Stadt Bremen" (Vol. I), and L. Geiger's "Berlin, 1688-1840" (Vol. I, 1892). Hans Blum's "Das Deutsche Reich zur Zeit Bismarck's" and "Aus Bismarck's politischem Briefwechsel" (1892) are among the works relating to the ex-Chancellor, whose "Politische Briefe" (4. Sammlung, 1892), correspondence with Gen. Leopold von Gerlach (1851-'62), and "Politische Reden" have likewise been published, as have also the "Reden" (1883-'93) of his successor, Caprivi. Some interesting biographies and "memoirs" have seen the light, among which are Alfred Arneht's "Aus meinem Leben," Ha. Barth's "Crispi," Erich Marcks's "Gaspard von Coligny," the "Tagebücher" of the late Theodor von Bernhardy, interesting in their bearing on the Russo-Turkish war, the veteran Austrian diplomatist Count Alexander Huebner's account of the "most momentous year of his life" (i. e., 1848), and Wilhelm Oechelhäuser's "Erinnerungen aus den Jahren 1848-'50," in which we are told the story of France's refusal, during the Industrial Exhibition of 1849 at Paris, to recognize this envoy of the "German Empire." Vita Hassan has written "Die Wahrheit über Emin Pascha," and the question and history of colonization is producing many books here, as in France. The United States are viewed in various phases in Cl. Jannet and W. Kämpfe's "Die Vereinigten Staaten Nordamerika's in der Gegenwart," Ernst von Hesse-Wartegg's "Chicago" and "Curiosa aus der neuen Welt," W. Siever's "Amerika," and G. Dieck's "Kulturbilder aus den Vereinigten Staaten." General history is covered in Raymond's "Weltgeschichte" (two volumes); and Max Ohnefalk-Richter's "Kypros: die Bibel und Homer," J. G. Droysen's "Kleine Schriften zur alten Geschichte" (Vol. I), and "Die attischen Grabreliefs," issued by the Vienna Academy, are contributions to archaeology and ancient history. In theology and philosophy we have Eduard Reuss's "Das alte Testament übersetzt, eingeleitet und erläutert" (posthumous, 1892);

Paul de Lagarde's "Septuaginta-Studien"; F. Spitta's "Zur Geschichte und Literatur des Urchristentums" (Vol. I); W. Preger's "Geschichte der deutschen Mystik im Mittelalter" (Part III, 1892); and H. K. Hg. Delf's "Philosophie des Gemüths." The neglect of method first introduced by Schopenhauer (whose letters have been published by Ludwig Scheumann) reached its climax, we are told, in Nietzsche (Vol. IV of whose "Also sprach Zarathustra" has appeared), who "preaches the return to a condition of nature," maintaining that true morality consists in being above the difference between good and evil, attaining his ideal of humanity, the "Übermensch." It is worthy of note that the French "Symbolistes" are said to be enthusiastic admirers of Nietzsche. Boguslawski defends warfare in his "Der Krieg in seiner wahren Bedeutung für Staat und Volk," while the directly opposite tendency has occasioned the founding of a new review by Baroness Bertha von Suttner, bearing the same title as her novel, "Die Waffen nieder." G. W. F. Hegel's "Kritik der Verfassung Deutschlands" has been edited from the author's manuscript by G. Mollat; L. Bucher's "Kleine Schriften politischen Inhalts," and J. Kohler's "Kulturrechte des alten Amerika. I: Das Recht der Azteken" (1892) have appeared; and E. von Bertouch's "Vorschläge zur Lösung der Arbeiterfrage"; K. Bücher's "Entstehung der Volkswirtschaft"; Eug. Jäger's "Die Agrarfrage der Gegenwart"; F. C. Huber's "Geschichtliche Entwicklung des modernen Verkehrs"; O. Henne am Rhyn's "Gebrechen und Stunden der Sittenpolizei aller Zeiten . . ."; Rdf. von Gneist's "Die Militärvorlage von 1892 und der preussische Verfassungskonflikt von 1862-'66"; Adf. Bastian's "Wie das Volk denkt"; L. Felix's "Kritik des Sozialismus"; Jul. Wolf's "Verstaatlichung der Silberproduktion und andere Vorschläge zur Währungsfrage"; and H. Wiermann's "Deutsche Politik seit Bismarck's Entlassung, 1890-'92," are further publications in the field of political and social science, and a new monthly, "Die Frau" (Berlin), is devoted to womanhood. The letters of Ferdinand Lassalle, written 1862-'64 to Hans von Bülow, have also been published. "Die deutschen Universitäten: für die Weltausstellung in Chicago, 1893; . . . hrsg. von W. Lexis" (two volumes), has appeared. A work of importance to students of archaeology is "Ausgrabungen in Sendschirli" (*Königliche Museen zu Berlin: Mittheilungen aus den Orientalischen Sammlungen*). The subject of fine arts in general has been contributed to by Rich. Muther in his timely and valuable "Geschichte der Malerei im 19. Jahrhundert"; Brunn ("Griechische Kunstgeschichte"); Alois Riegl ("Grundlegungen zu einer Geschichte der Ornamentik"); P. Leffeldt ("Bau- und Kunstdenkmäler Thüringens"); R. Bormmann ("Bau- und Kunstdenkmäler von Berlin"); Paul Clemen ("Kunstdenkmäler der Rheinprovinz"); Philipp Spitta ("Zur Musik," essays); while Rich. Graul's "Fritz v. Uhde," La Mara's edition of Liszt's letters (two volumes), Bierbaum's "Fritz von Uhde," and Otto Brahm's "Karl Stauffer-Bern" (a talented Swiss etcher) illustrate individual efforts in the broad domain of the fine arts. The history of literature is still receiving fresh contributions relating to Goethe and Grillparzer. In the "Jahrbuch der Goethe-Gesellschaft" a number of Goethe's letters to Christiane are published, throwing much light on the relations between the two; while H. Düntzer, in "Friederike von Iesenheim im Lichte der Wahrheit," has vindicated another one of Goethe's loves, Friederike Brion, from charges made against her. In the yearbook of the Grillparzer Society, on the other hand, portions of Grillparzer's "Tagebuchblätter" afford an insight into the strange self-doubt, the misanthropy that agitated that unhappy poet's soul. This yearbook has also now begun to enter upon its more extended programme—the study of Grillparzer's time, of a century of German-Austrian literary life, a subject which Adam Müller-Guttenbrunn has treated in his interesting "Im Jahrhundert Grillparzer's." The triennial prize founded by Grill-

parzer under severely critical conditions could not be awarded this time, the jury failing to agree upon the choice of any dramatic work coming up to his high standard. Robert Hamerling (to whose memory a monument has been erected at Waidhofen) has been held up as a pattern of education by A. Brückner, as were Rembrandt and Moltke in the preceding year. Adolf Wilbrandt has undertaken to issue a selection from the works of the once so well-known Georg Christoph Lichtenberg, and Gottfried Böhm has written "Ludwig Weckhlin (1739-92): ein Publizistenleben des 18. Jahrhunderts." Fritz Jonas's edition of Schiller's letters; K. Lorenz's "Der Anteil Mecklenburgs an der deutschen Nationalliteratur bis zum Ende des XVII. Jahrhunderts"; several volumes on Gottfried Keller; P. K. Rosengger's "Gute Kamaramen: Persönliche Erinnerungen an berühmte und beliebte Zeitgenossen"; and "Das junge Deutschland," by Johannes Pröls (1892; valuable, but style not commended), are further contributions to the history of literature in Germany, while other countries are dealt with in Richard Loening's "Die Hamlet-Tragödie Shakespeares," an interesting and excellent monograph; "Shakespeare: fünf Vorlesungen aus dem Nachlass von Bernhard Ten Brink"; Ph. Aug. Becker's "Jean Lemaire, der erste humanistische Dichter Frankreichs"; and Max Kaluza's "Chaucer und der Rosenroman."

The novel in Germany has ever been a favorite medium for propagation of reform ideas, and thus Paul Heyse, in "Merlin," battles sturdily against the naturalistic tendencies of the day. But the new movement will no doubt run its course. The organ of the "Moderns," by the way, is the "Gesellschaft" (Munich). Frau Marie von Ebner-Eschenbach ("Gesammelte Schriften," 6 vols.) is occupied with a religious problem in "Glaubenslos." Karl Frenzel has published "Frauenrecht," and "Und Bebel sprach" is a spirited antisocialistic production. Egypt forms once more the theme for Ebers in "Per Aspera" and "Kleopatra"; Paul Heyse (who has published also "Das Marienkind"), in his "Aus den Vorbergen," tells some charming stories of peasant life in the Bavarian Alps; while the scene of L. Ganghofer's "Der Klosterjäger" is laid in the Austrian highlands. To such idyls of rural life should be added also August Silberstein's "Dorfmusik" and Josef Wichter's "Im Schneckenhaus," both dealing with Austria. Urban life, on the other hand, is pictured forth in A. Niemann's "Voll Dampf voraus," Theophil Zolling's "Coulissengeister," minutely true to nature, and Luise von Bunsen's "Gegen den Strom," all three portraying phases of life in Berlin, and C. Karlewies's "Ein Sohn seiner Zeit," touching on the varieties of existence in the Austrian capital. Finally, of novels we have Hans Hoffmann's patriotic "Landsturm," dealing with the *Freiheitskriege* against Napoleon I, Heinz Tovote's "Das Ende vom Liede," and Felix Dahn's three-volume "Julian der Abtrünnige." Josef Joachim, the author of peasant stories like "Der Sonnenhaldenbauer," seems destined to take high rank among Swiss authors, while J. J. David has further proved his talent in a volume of stories, "Probleme." In the domain of the short story might be mentioned also the following collections: H. Tovote's "Heimliche Liebe," H. Heiberg's "Am Karmin," and E. von Wolzogen's "Das gute Krokodil." In the realm of poetry we find the division between idealists and naturalists sharply defined by the existence of a special organ for each—the "Musen-Almanach" of the older generation, and the "Moderne Musen-Almanach" of the younger men. Julius Rodenberg, Felix Dahn, Rudolf Gottschall, and Otto Roquette are among the recent contributors to the former, while the latter numbers among its writers Johannes Schlaf, Detlef von Liliencron, Arnold Holz, Otto Julius Bierbaum, and Carl Busse. It appears, however, that the "naturalism" of these "moderns" is often artificial, strained, and mannered, only a few, like Evers, striking a true note. The collected works of Eduard Paulus and the newest poems of Wilhelm

Jordan have both been praised for the freshness and youthful enthusiasm of these two literary veterans. "Jucunda Juventus" is a volume of humorous poetry by Ernst Eckstein. Hans Hoffmann, the novelist, has published "Seitab vom Wege," poetical impressions of Athens's ruins, while Ferdinand von Saar glorifies a modern city in his "Wiener Elegien," classic in their finish. Marie Eugénie delle Grazie shows enthusiasm for beauty and a well-rounded style in her "Römische Vignetten" and "Aus Neapel." The play of the year which has probably made the greatest stir is Gerard Hauptmann's revolutionary drama "Die Weber," performed in Berlin and in Paris with an unequivocal and tremendous success. Lacking unity of action, a plot, or a hero, it depicts the revolt of the Silesian linen weavers during the reign of Frederick William IV of Prussia, a tragedy of hunger and despair. In his comedy "Der Biberpelz" he draws an unlovely picture of a suburb of Berlin, while his "Hannele," presenting the dream of a delirious half-drowned pauper girl, has been described as a weird combination of ultranaturalism and fantastic symbolism. Sudermann has also had a most decided success with his "Die Heimath," which deals with the conflict between an honest retired colonel and his erring daughter, an actress, who places herself above the moral restrictions of social life. Richard Nordmann shows the influence of Sudermann's "Ehre" in his "Gefallene Engel." J. V. Widmann, in "Jenseits von Gut und Böse," combats the refusal to be bound by moral laws, the ultimate outcome of doctrines such as those preached by Nietzsche in his book of the same title, and his "Markenfest" also made a hit. Paul Lindau's "Der Andere" deals with a sort of "Jekyll and Hyde" problem, the dual-soul theory, while his "Der Komödiant" is a dramatization of the story of Molière's unfortunate married life. The newest drama from the pen of Richard Voss, "Daniel Danieles," has been praised for its powerful depiction of the conflict stirring the soul of a baptized Jew whose heart still clings to the old faith; his "Jürg Jenatsch" lacks balance and psychological justification. Paul Heyse does not appear to have made the most of a good subject in his "Jungfer Justine." Another one of the older writers, Adolf Wilbrandt, has written "Die glückliche Frau," "Der Meister von Palmyra," and "Bernhard Lenz," the latter two not very successful, it seems; and Gustav Moeré a new four-act comedy, "Blaues Blut." And yet a few of the younger generation: Ludwig Fulda, whose "Der Talisman" is founded on a well-known fairy tale—the story of the king going naked among his people, the hypocritical courtiers admiring his beautiful garment the while, until a little child speaks the truth; Robert Misch ("Baronin Ruth"), Richard Skowronnek ("Palast-Revolution," a comedy, reminiscent of Bend Sin, but good in characterization); Erich Hartleben ("Hanna Jagert," comedy); Max Halbe, author of the social drama "Eisgang," whose "Jugend" is described as an idyl of love, ending sadly; and Franz Nissel, whose dramatic works have been issued in one volume. Reference may be made also to Julius Stinde's "Das Torfmoor," a clever satire against the Ibsen cult.

Greece.—Some of the most noteworthy among the historical works of the year are continuations, such as "History of Greece," by Spyr. Lambros (Vol. III); Vol. II of "History of the Athenians," by Kamburoglos; and "History of the Nineteenth Century," by P. Karolidis (Vol. III). To these should be added the "Works" of the late Anastasius Byzantios, dealing with recent political movements in Greece. D. Bikelas has published in Paris "La Grèce byzantine et moderne" (which essays originally appeared in the Greek newspapers, in which latter much that is good in the literature of this country seems to-day to find an outlet), and Tryphon Evangelides, "History of King Otto." Two noteworthy biographical works are Mark Renieris's monograph on "Metropolitan Kritopulos" (once Patriarch of Jerusalem), and that on Mark Eugenius, Bishop of Ephesus, by Niceph-

orus Kalogeras. Alcibiades, son of John Sakellion, has finished the "Catalogue of the Manuscripts in the National Library at Athens," begun by his father, and Athanasius Papadopoulos Keramou has published at St. Petersburg a volume of "Inedita," in Greek and Russian, "containing a biography of the holy sixty martyrs, unpublished speeches and letters of the Patriarch Photius," etc. Dionysius Thereianos is the author of a learned "Sketch of the Stoic Philosophy"; and Neocles Kasasis has brought out an "Encyclopædia and Methodology of Law" and a three-volume "Philosophy of Law and the State." The vexed question of language in the Greek literature of to-day, referred to last year, has been further discussed by G. Hatzidakis (in "The Question of Language") and E. Rhoidis, who proves himself a good philologist as well as a witty writer in his "Idola." The relative merits of the question have also been illustrated by the literary productions of the adherents of both sides. Thus, George Stratigis's "New Poema," a volume of elaborate and well-polished rhymes, is written in the "learned language"; while "The Eyes of my Soul," by Constantine Palamas, a thoughtful writer, with leanings toward mysticism, and "The Singer of the Village and the Fold," by Constantine Krystallis (who has a keen eye for phases of popular life), are both by writers who have worked ardently for the development of the popular idiom. Lastly, Karkavitsas has issued a half dozen of his excellent Neo-Hellenic tales in one volume, under the title "Diegemata."

Holland.—Last year there were a number of important additions to historical literature to record; now there comes a complaint of a dearth of such material. Among the productions of note are some devoted to Dutch history, more especially the history of individual towns. Thus, documents relating to Rotterdam have been collected by Unger, and a voluminous work on Dudewater has been edited by Van Aelst. The Church of St. Jacob, in the Hague, forms the theme of Van den Brandeler, while Dr. van Meer has issued a work of importance on the Synod of Emden in 1571. Parliamentary history (1849-'88), with especial reference to taxation, is recited by Bok, and the history of Dutch jurisprudence has been told by Fockema Andraea. Works concerned with other lands include W. H. de Beaufort's "Geschiedkundige Opstellen" (1892, 2 vols.), and Pierson's "Hellas," (2 vols.), the latter dealing with Greece's development in religion, art, and morals. S. H. and D. A. Junius have swelled the literature of a much-used topic in their "Zonnig Afrika" (1892). R. A. van Sandick's "Leed en Liefuit Bantam," besides dealing with the history of this Dutch possession, gives an interesting characterization of the noted author E. Douwes Dekker (Multatuli). "Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch-Indië," is in course of publication.

Political history and science have received additions in H. G. Hartman's "Het gemeentewezen in Nederland en België" (1892); F. J. L. Krämer's "De Nederlandsch-Spaansche Diplomatie voor den Vrede van Nijmegen" (1892); and J. Sickenga's "De Gemeente in Nederland"; and social science in H. van Kuhl's (Rienzi) "Socialisme en Vrijheid"; J. Rochussen's "Na twintig Jaren: sociale vraagstuk en muntvraagstuk." In theology, we have a work on the chronology of the Bible, by Dr. Wildeboer; G. T. P. J. Bolland's "De Pentateuch naar zijn Wording onderzocht"; E. H. van Leeuwen's "Bijbelische Godgeleerdheid." To these we add J. Reitsma's "Geschiedenis van de Hervorming en de hervormde Kerk der Nederlanden" and Prof. Van der Wyck's monograph on the late Dr. Opzoomer. The complaint respecting a decline in the study of literary history is borne out by a pamphlet in which Kalf points out the defects in the teaching of Dutch, the formation of taste through standard works being but little attended to. The brochure attracted much attention. C. Honigh has completed the late Dr. George Penon's selections from Dutch authors; Schaapman has begun to reprint his

able essays under the title "Menschen en Boeken"; and F. M. Jaeger has collected his literary studies in "Kunst en Leven," and has issued also a translation of Max Nordau's "Entartung," with his own criticisms on Dutch literary peculiarities, incurring the displeasure of the younger element, among whom he formerly enjoyed a decided popularity. Other new productions in literary history and criticism are E. de Bom's "Henrik Ibsen en zijn werk"; and W. J. A. Jonckbloet's "Geschiedenis der Nederlandsche Letterkunde."

Jan Ten Brink, that ardent opponent of the new literary movement, introduces eminent authors and other luminaries of a brilliant period in Dutch literary history in his "De Brederos." Social problems form the theme of Miss Cornelia Huygens's "Hoogenoord" (2 vols.), and Miss A. C. Van Meyendal's "Toch verzoend." "Aleida Ploegers," by Louise B. B., and "Een Hellevaart," by Vincent Loosjes, have both won praise, as have also "Intimiteiten," an attractive work by Ebba, and Meerkerk's "Karakter," a promising though not faultless production. It has been said that the novelists of Holland find much of their material among the middle class of their countrymen and in the society of the Dutch East Indies. The latter portion of the globe is the scene of action of Pelerlaer's "Noordwest en Zuidoost" (describing the origin of the war with the Achinese); J. R. Jacobs's sketches of military life; "Ups and Downs," by P. A. Daum (a Batavian newspaper editor); "In de Koffie," stories about the coffee trade, by J. Dermout; and scenes from domestic life, by Therese Hoven. Clever writers of short stories are: N. G. L. van Loghem (Fiore della Neve), Marcellus Emanta, W. C. Capel Florentijn ("Nordseekinderen," 1892), Wemerus Buning, Jan Peereboom, Van Vlymen, and Mme. S. La Chapelle-Roobol ("De Schoonmama en een paar andere Novellen"). The new school—the Dutch phase of that latest movement in literature felt throughout the continent—has scored a brilliant success in Louis Couperus's "Eline Vere" (noted last year), which, it appears, found an imitation in Franz Netscher's "Egoïsme." Frederic van Eeden, on the other hand, is said to show the influence of the German Hoffmann in his "Kleine Johannes." Couperus has issued "Eene Illusie," and Van Eeden "Johannes Viator," which latter has been regarded as a very noteworthy achievement. Its obscurity appears to be characteristic of not a few of the younger writers, such as Jac. van Looy (noted for force of diction, and whose "Gekken" has been widely read) and J. Hora Adema, whose strong novel, "Thea," shows mystical tendencies. Fokko Bos does not seem to sustain his reputation for originality in his most recent work.

The complaint regarding occasional obscenity in the work of the younger men has been reiterated, the individual cases cited including three pseudonymous writers, two using the name of *Bram*, the third *Conrad Van der Liede*; the latter, since the publication of "Zijn vader," has changed, however, and really shows much promise. In poetry, Miss Helene Swarth (a resident of Belgium), noted for the beauty and tender sentiments in her sonnets, has, in her "Felicie" and "Poëzie," produced almost the only volumes of note issued during the twelvemonth. This field is but little cultivated at present. The concise statement of a certain Dutch author, "Literature does not pay in Holland," is amplified by a German critic. The Dutch, we are told, while regarding modern efforts in their own literature with cool reserve, always show a vivid sympathy for foreign productions, even those marked by the most daring innovations. Thus we find, in partial corroboration of this statement, that the theater in Holland depends much on adaptations from the German, French, etc.—Taco de Beer, for instance, editing a translation of Lessing's "Nathan the Wise." G. C. Hoogewerf's interesting "Petrus Dathenus," in blank verse, would hardly do for production on the stage; "Asschepees," a curtain-raiser, by a lady who veils her identity under the pen-name Jo

van Sloten, achieved a well-deserved success. "Het Kind" is a somewhat old-fashioned play by H. Th. Boelen; and H. Heyermans, Jr., is promising in his "Dora Kremer," which was coolly received. A German paper adds that Heyermans hereupon submitted a one-act play, "Ahasverus," as the work of one Ivan Jelekovich, and enjoyed a brilliant success under this assumed name.

Hungary.—There are a few noteworthy new historical works to be reported: Vol. XV of the "Monumenta Comitatus regni Transylvaniae," published by the Academy of Sciences, Vol. III. of Miklós Szendrei's "History and Topography of the Town of Miskolcz," Theodor Ortway's "Geschichte der Stadt Pressburg" (1892), translated from the Hungarian by the author, and Vol. I of Geyza Kuun's "Relationum Hungarorum. . . ." Report comes of much activity in the study of national history, and of the publication of a series of ethnographic monographs of great interest, begun by the Hungarian Society of Geography. Of the Academy's "Magyar Students Abroad," Vol. II, "Students at the Vienna University," has been issued, as have also the first two volumes of Tivadar Ortway's monumental "Ecclesiastical Topography of Hungary in the Beginning of the Fourteenth Century." In the rubric "Geography and travels" we have Prof. Havas's "Bibliotheca Geographica Hungarica" (a bibliography of geographical literature concerning Hungary), and Árpád Abonyi's "Pictures from Bosnia." Karoly Széchy's "Life and Writings of Peter Vajda" and Gjörgy Gracsa's "Life and Work of Kossuth" are contributions to biographical literature. Prof. Földes's "Social Economy," written with special reference to Hungary, is described as the best work of its kind that has appeared in that country in recent years. Other publications in this field are Polza's "Communal Friendly Societies" and Mór Gelléri's "History of the Hungarian Industrial Association." Nor must that very important undertaking be forgotten, the "Great Pallas Lexicon," the Hungarian encyclopedia (more or less national, like Brockhaus in Germany, the Britannica in England, or Appletons in the United States), to be complete in 16 volumes. We are told also that the Academy has awarded its grand prize to the Historical Dictionary of the Hungarian language (3 vols.), finished by Szarvas and Simonyi.

It is but natural that Hungary should have its school of realists and naturalists; we are told also that imitators of the "symbolists," the "décadents," are not wanting. In prose fiction we have, first of all, "Brother George," a historical romance in five volumes, by Maurus Jókai, that prolific literary veteran, the half century of whose activity has been celebrated during the year; a feature of this jubilee was the determination of the committee to issue an *édition de luxe* of his works, limited to 1,000 copies, at 200 gulden apiece, 100,000 gulden of the proceeds being destined for the famous author. Sigismund Justh, the popular novelist, has published "The Legend of Money," Robert Tábori takes us to the gaming table in his "High Stakes," and Ferencz Herczeg, an ex-cavalry officer, draws vigorous and characteristic pictures of life in Hungarian society in his "The Gyurkovics Girls," one of the best novels of the twelvemonth. Another very successful book is "True Stories," by Adolf Agai (Porzóc), a thoroughly original writer and a talented humorist, author also of "On Water and Land." The late János Arany—to whom a bronze memorial was set up in Buda-Pesth—has in a measure, perhaps, found a successor in Andor Kozma, a writer of fine and melodious verse, and a popular contributor to the "Borszem Janko" (Hungary's comic paper). His "The Duel" is described as a mordant satire against that barbarous practice. In speaking of the drama, mention should be made of Irene Hecht Csérhalmi's "Influence of French Romanticism on Hungarian Dramatic Literature." Árpád Herczik is named as an excellent writer of "society comedies." Ferencz Herczeg's "The Dolova Nabob's Daughter," a comedy adapted from one of his

novellettes has met with success, as has also the drama "Resignation," by Vilmos Karczag, a writer well versed in the technique of dramaturgy.

From Vienna comes the report that a *bona-fide* peasant theater has been installed on the *piazza* of Sigismund v. Justh, and the efforts of the rural Theopians have met with much praise.

Italy.—In spite of what would appear to be discouraging political conditions, there is still an ardent devotion to letters in this country; the younger writers seem to have been especially active, and the interest in serious studies appears to be increasing. In the domain of history, the sixteenth century receives special attention, as does Dante in literary history. Francesco Nitti has issued an able and careful study of Leo X ("Leone Decimo e la sua Politica"), an old "Cronaca del Soggiorno di Carlo V in Italia" has been published by Prof. Romano, and Luigi Celli, in "Tasse e Rivoluzione," throws light upon the revolt of 1572-73 in Urbino. Pasquale Villari has written "I primi due Secoli della Storia di Firenze." The names of two distinguished historians of the eighteenth century appear in this year's list: Augusto Pierantoni has edited a posthumous paper by Pietro Giannone, "Il Tribunale della Monarchi di Sicilia," an erudite and important production, and Matteo Campori has published "Correspondenza fra L. A. Muratori e G. G. Leibniz" (important letters illustrating various periods of Italian history). The publication of "Carteggi Italiani inediti e rari" has been begun by Filippo Orlando, and "Il Santo Ufficio della Inquisizione in Napoli" (2 vols.), by Luigi Anabile, and studies on "The Martyrs of Free Thought and the Victims of the Holy Inquisition in the Sixteenth to the Eighteenth Centuries," etc., by Antonino Bertolotti, are both posthumous works by historians of note. Prince Lanza di Scalea, in "Donne e Gioielli in Sicilia nel Medio Evo," describes the life of womankind in the time of Italy's greatest luxury. A number of important monographs dealing with noted historical personages have seen the light. First and foremost, there is Pier Desiderio Pasolini's fascinating and scholarly "Caterina Sforza" (3 vols.); Attilio Centelli, in his "Caterina Cornaro e il suo Regno," tells the story of that queen of Cyprus; and a biography of "Adelaide di Savoia, Elettrice di Baviera" is by Carlo Merkel, a young historical student of repute. V. Bellio, M. A. Lazaroni, and Ces. de Lolla have published books on Columbus. Tulliolli's "Le Reminiscenze di un Bersagliero" is a record of personal experience, 1848-'90. In the rubric "description and travel" Caterina Pigorini Berli's "In Calabria"; A. Tanfani's "Il Paese delle Sterline" (depicting life in London); L. Salazar's "Montecarlo elegante"; G. Modrich's "La Russia" (which, by its partisan character, has aroused hostile feeling); A. Centelli's "L'Oriente d'oggi"; and "Da Napoli ad Amburgo," by Adolfo Rossi, are publications of interest. Arturo Graf's "Leggende e Superstizioni" is concerned with the mediæval belief in the supernatural world. Literary history, too, has been enriched by some works of interest. Recent Italian literature forms the theme of Giuseppe Robitetti's "Il Romanzo in Italia," and E. A. Butti's "Né Odi né Amori," while the national literature of past ages is dealt with in "Cultura e Metrica Latina in Italia," by U. Ronca; G. A. Cesareo's reprint of the satires of Salvator Rosa, with some hitherto unpublished letters; "Lo Cunto de li Canti di G. B. Basile," edited by Benedetto Croce; Curzio Mazzi's work on Leone Allacci and the Vatican library; and Gioseü Carducci's "La Storia del Giorno di Giuseppe Parini." The industry of Dante students has again resulted in the publication of a number of volumes, and a new Dante journal ("Giornale Dantesco") has made its appearance in Venice, edited by G. L. Passerini. Phases of English literature are discussed in "Nel Presente e nel Passato" and "Segni dei Tempi" (both by Senator Negri), and by Prof. Rodriguez, whose essays on Tennyson, Cowper, and our own Longfellow have been well appreciated; Domenico Ciampoli's "Saggi Letterari" have to do with Russia; and Sigism.

Friedmann's "Il Drama Tedesco del nostro Secolo" (2 vols.), B. Zumbini's "Studi di Letterature Straniere," and Giulio Monti's "La Poesia del Dolore" (on the inspiration afforded by suffering) are also worthy of note.

An unusually large number of novels have seen the light, and they appear to show in general a marked improvement and less conventionality. Especially is this true of the work of the younger men, such as Giuseppe di Rossi ("Mal d'Amore"), Marco Praga, a successful young playwright ("La Biondina"), and Carlo Placci ("Un Furto"). Salvatore Farina's "Amore Bugiardo" is said to fall behind the previous efforts of this "Italian Dickens"; Paolo Lioty's bizarre "Spiriti del Pensiero" is described as a "ghastly story of life and death"; L. Giulio Mambrini's "A Bordo" is marked by delicate sentiment; while "I Lussuriosi," a naturalistic novel, the first work of Luciano Zuccoli, shows talent, but is characterized as "unclean and paradoxical." Geronimo Rovetta has published "Il Primo Amante"; Anton Giulio Barrili, a series of stories dealing with Columbus and his times; Matilde Serrao, a fantastic romance ("Castigo"); Anna Rading (Neera), "Senio" and "Nel Sogno"; Bruno Sperani (pseudonym of a lady), "Emma Walder"; and Alberto Cantoni, a skeptical humorist, "L'Alitena delle Antipatie." Ugo Valcareggi's "Distruzione," an important product of naturalistic art, has attracted much attention, and various phases of military life form the theme of I. Trebla's "Volontario di un Anno," A. Oliveri Sangiacomo's "Fanti e Cuori," and G. Saragat's "In Caserma." The classical tendency in poetry, though it has evidently outlived the ultranaturalistic movement, seems to be itself on the wane, despite Carducci's championship of it and the graceful verses of Enrico Panzocchi. We are told that a note of sympathy with the oppressed runs through some of the newest lyric poetry. Giosuè Carducci, who arouses so much criticism, both favorable and adverse, has published "Il Cadere," noted as a lofty patriotic production; Napoleone Razetti's "Carni e Odi Barbare" are said, on the whole, to show beauty of form and vigorous conception; Gabriele D'Annunzio's "Odi Navali" show signs of degeneracy into weakness and mannerism; while Sylvia Albertoni's "Versi" are said to be pervaded by a "melody, delicately fascinating." The silver wedding of the king and the queen as a source of poetic inspiration has resulted in a long string of uninteresting and indifferent verse. A third edition of Pope Leo XIII's Latin poems ("Carmina et Inscriptiones") has been announced. Critics are now taking a more hopeful view of dramatic art in this country; a salutary realism is said to mark recent work in this field. Camillo Antona-Traversi, whose "Le Rozeno" met with such success, has been at work upon a new play, "Danza Macabre"; his brother, Giannino Antona-Traversi, is the author of "La Mattina dopo" and "Dura Lex" (a plea in favor of divorce); the adultery of a physician's wife with a friend, one of his patients, forms the subject of two plays, G. M. Scalinger's "Il Dottor Müller" and Illica's "World of Thought," while F. Bernardini's "Il Cieco" deals with the unfaithfulness of a blind man's wife. The Golden festival of February, in Venice, developed into an imposing popular demonstration.

Norway.—Among the new works in the various fields of learning are the continuation of "Diplomatium Norvegicum . . . udgivne af C. R. Unger og H. J. Huitfeldt-Kaas"; O. Skavlan, "Henrik Wergeland—Afsandlinger og Brudstykker—udgivet efter Forfatterens efterladte Papirer" (1892); J. B. Halvorsen's "Norsk Forfatter-Lexikon, 1814-80" (continuation); "Den angelsaksiske Kirkes indflydelse paa den norske," by A. Taranger; A. C. Bang's "Dokumenter og Studier vedrørende den lutherske Katekismus' Historie i Nordens Kirker" (Vol. I), L. H. Aberg's "Filosofisk Sedelära" (2 vols.), and various volumes by F. Hagerup and others on legal topics. Henrik Jaeger has begun "Illustreret norsk literatur Historie." In *belles-lettres*, B. Lie's "I Eventyrland" (1892); T.

P. Krag's "Ensomme Mennesker. Lo og andre Fortællinger" (1892); H. E. Kinck's "Huldren" (1892); P. Egge's "En Skibsgut" (1892), are to be recorded. Toward the end of 1892 the "Nyt Tidsskrift-nyraekke" appeared, a revivification of the little magazine "Nyt Tidsskrift," which had run from 1889-'87; Sigurd, Ibsen, Björnson, J. E. Sara, and others are among its contributors. More interest and criticism than ever have been aroused by "Bygmester Solness," the new play by Henrik Ibsen, who appears to be the object of a veritable cult in London, where an Ibsen Society has been formed. In his latest production, it is said, his powers are at their height; if it is his most profoundly thoughtful play, it is also his most obscure one.

Poland.—Beginning with history, W. Boguslawski's "Annals of the Western Slavs," and "Monumenta Polonice Historica," Vol. VI, are to be noted, as well as monographs by A. Pawinski ("Youth of Sigismund the Old"); A. Kraushar ("Life of Christopher Arciszewski," admiral of the Dutch in Brazil, 1592-1656, 2 vols.); and A. Lewicki ("Insurrection of Swidrygello," a Lithuanian chief). I. K. Ożegalski has published "Reminiscences of bloody times in 1863," and K. Skirmunt and A. Czolowski have issued *brochures* on Lithuania and Eastern Galicia respectively. W. Spasowicz's collected writings, in six volumes, have appeared. St. I. Czarnowski has written on "Periodical Literature and its Development," and W. Rubożyński on the "Golden Age of Italian Art"; M. Strajanu is the author of "Principie de Estetică și Poetică"; F. Wisniewski's subject is "Mind and Matter"; and I. Dabrowski makes a study of "Death"; most of these are short treatises.

In prose fiction there are a number of new publications to record, among them not a few of merit. "Lux in Tenebris Lucet" and "Do we follow Him?" (the crucifixion on Golgotha forming the principal incident) are by H. Sienkiewicz, translations of whose writings have been well received in the United States. B. Prus has issued "The Little Angelica" (in which tragedy and humor are happily combined); Mme. Orzeszko, "The Vestal"; T. T. Jez, "In the Dark" (a peasant story); Z. Kaczowski, "The Zaklika" (a doleful picture of Polish nobility); Mme. Z. Kowerska, "The Little Rosalie"; Sewer, "In Shadow and Sunshine" (a story of rural life, marked by truth and feeling); Jeske-Choiński, "In Chains"; Ad. Kreczowiecki, "Veto" (4 vols.); W. Luskin, the artist, "The Great Year" (depicting the coming war); M. Gawalewicz, "The Fog"; Rawita, "Charyzmy" (a historical novel dealing with the Cossack rebellion in Poland in the last century); Abgar-Sottan, "The Realm of the Czars" (a picture of Russian bureaucracy); Mme. Zapolska, "A Fragment of Life" (an excellent novelette); and another lady, under the pseudonym Zmogas, two stories, one dealing with Nihilism, the other with the Lithuanian rising of 1863. Two beginners have been quite successful—J. Dombrowski with "Death," a "psychopathological study," and Miss J. Szebek with "A Sisyphus Life." Among the short stories, sketches, and novelettes brought out during the year are publications by Ostojka, J. Lentowski, Mme. Konopnicka, the distinguished poet ("Na dredze"), A. Dygasinski, S. Graybner, Z. Niedzwiecki (a writer of decided talent, whose erotic tendencies have been objected to), Kosiakiewicz, who describes life in the smaller towns, and Miss Szczesna (Cybulska), whose prose sketches in "Passing Clouds" are quite poetical in feeling. Of poetry, K. Lewandowski's "Szella" and C. Jankowski's "A few Rhymes" have been well received, while Felician (Falenski), noted for his perfection of form, has broken his long silence by a volume of epigrams and satires entitled "Meandry," and a collection of "Translations from Foreign Poets."

There has been much activity among dramatists, which may be due in part to two competitions, held at Warsaw and Cracow. "The Woman Teacher," a prize play by Count W. Koziembrodski, deceased since then, though reminiscent of Dumas, is original in con-

ception. Zgliniski's "Jakob Warka," Gawalewicz's "Old Debt" and "The Pearl," Jeske-Choiński's "Last Act," K. Zalewski's "The Rights of the Heart," Baluck's "Flirt" and "Kilinski" (historical drama), two noteworthy first attempts in comedy by S. Graybner ("Fredzio" and "Count George"), and "The Wood," the last effort of J. Blizinski, whose recent death deprives Poland of one of her best writers of comedies, are among the successful plays of the year.

Romania.—The publications of the year include: A. D. Xenopol's "Istoria Romanilor din Dacia-Traiana," Vol. VI: Istoria contemporană cu portretul autorului"; S. F. Mariani, "Inmormântarea la Români: Studii etnografice" and "Nascerea la Români: Studii etnografice"; I. Lăzăreanu, "Istoria Literaturii Române"; G. D. Teodorescu, "Cronica din Nürnberg, 1493: Conferință publică ținută în adunarea Societății Geografice Române"; S. Popescu, "Catechistica. Adică metodică specială Studiului Religiei"; G. Mărușeanu, "Lumea de azi: Roman de aventuri"; A. Bacalbaga, "Moș Jeacă. Din cazarmă"; G. Cosbuc, "Balade și Idile"; and D. C. Olanescu, "Teatru." "Romanische Revue" (editor, St. N. Cirou) and "Romanische Jahrbücher," both printed in German, have been in existence about ten years. The editor of the last-named one, W. Rudow, has published a "Geschichte des rumänischen Schrifttums" (Wernigerode, 1892), which has been adversely criticised, but is said to show most knowledge in the treatment of contemporary literature.

Russia.—There appear to have been comparatively few contributions to general or to non-Russian history. They include Karéev's popular "History of Modern Europe" (3 vols.), Pokrovski's "Study on the Athenian Constitution of Aristotle," and Prince Trubetskoy's work on the "Wellanschauung of St. Augustine." National history, however, has received much attention. Earlier periods of Russian history are dealt with in Sobestvanski's "National Peculiarities, Characteristics, and Legal Customs of the Ancient Slavs"; V. G. Vasilevski's lives of St. George, Archbishop of Amastria, and St. Stephen, Archbishop of Somoh; I. Shtcherbatchef's "Danish Archives: Materials for the History of Old Russia in Copenhagen, 1326-1490"; the "Works" of Catherine II, edited by A. I. Vvedenski; "Protocols and Reports of the Senate" (1715), edited by the Academy of Sciences; and "Archives of Prince Kurakin," Vols. II and III. More modern phases of national history form the theme of Nadler's "Alexander I and the Holy Alliance" (Vol. V); A. Tratchevski's publication of documents on "Diplomatic Relations of Russia with France . . ." (1805-'6), continued in Vol. LXXXII of the "Journal of the Imperial Historical Society"; Mme. Likhatchev's "Materials for . . . the History of Education of Women in Russia" (1796-1828, Vol. II); Stehéglov's work on the founding of the Russian "Council of State" under Alexander I; and Mme. A. O. Smirnova's reminiscences, a noteworthy contribution to the literature on Czar Nicholas and his time, published in the "Northern Messenger." V. Serguéevitch has continued his "Russian Legal Antiquities," Suvorov shows the influence of western Europe on ancient Russian law, especially ecclesiastical, while Pavlov as emphatically denies it; Nikitski's "History of the Economic Conditions of Great Novgorod" was published posthumously in the "Proceedings of the Moscow Society for the Study of Russian History and Antiquities." Siberia is dealt with in V. Meiov's "Bibliography of Siberia" and S. Elpatjevski's "Outlines of Siberia." E. Lamanski has issued "India: Economic Study"; V. Krivenko, "Sketches in the Caucasus"; and F. Elenef's "Finnish State," Khorsenski's "History of Armenia," A. Liprandi's "Downfall of Poland," R. V. Zotov's researches concerning the principality of Tchernigov, G. Preis's "Russian Jews in America," and a "Systematic List of Works on the Jews in Russian, . . . 1708-1889," are other efforts in historical specialism. Noteworthy contributions to social and political science are Tchuprov's popular "Political Economy" and "History of Polit-

ical Economy"; a series of statistical compilations under the general title, "Results of Economic Investigations in Russia, based on the Data of Zemstvo Statistics," two volumes of which have appeared; "Peasant Leases and Rents," by Prof. Karushhev; and "Village Communes," by Vasil Vorontzov (the author of "History of Capitalism in Russia," and who has also described the Russian "small farmer" in his "Progressive Tendencies in Peasant Agriculture"); and Fortunatov's book on the "Rye Crops of European Russia," which admirably supplements Grasse's data on the same subject. It was reported in August that Count Tolstoi had completed an important work, socialistic in character, entitled "God in Man," and that he intended further, in a novelette, to express his opinions concerning the social conditions of the present. In the domain of philosophy we have A. Vvedenski's "On the Limits and Symptoms of Animation" (representing the views of the neo-Kantians), J. Panaf's "Light of Life," and the collected works of V. D. Kudavtzev, professor at the Moscow Theological Academy. Here, as in France, the theories of the German philosopher Friedrich Nietzsche have awakened more or less interest.

Other new publications are, in education, A. Shtchekin's "Public Schools . . . in Russia" (1892); P. Snamenski's "History of the Theological Academy of Kasan . . . 1842-70" (3 vols.); in philology, N. Goryaev's "Essays toward a Comparative Etymological Dictionary of the Russische Written Language." Under the editorship of Arseniev and Petrushevski, who succeeded Andréevski, on his death, in 1891, the magnificent encyclopædia in course of publication has been extended and improved, growing into a noteworthy national undertaking, seventeen volumes having appeared.

Among biographies are those of A. J. Koshelev by Kolupanov, and of the historian Pogodin by Barukov (seven volumes published)—both, like the interesting correspondence between Youri Samarin and Baroness von Kahlen and Vol. III (1851-'60) of J. S. Aksakov's "Letters," throwing much light on the Slavophil movement; two volumes of Schönrock's work on Gogol have appeared, and three volumes of Vengerov's voluminous and excellent "Critico-Biographical Dictionary of Russian Authors." The diary (3 vols.) of Nikitenko, the censor, has been published, and Skabitchevski has written an interesting "History of Russian Censorship," while E. Garschin has brought out a "Russian Literature of the Nineteenth Century." The French symbolists and *décadents* have been much discussed by N. K. Mikhailovski (adversely) and others, and Merezhkovski has written quite from their standpoint in his book on "The Causes of the Decline of, and of the New Currents in, Contemporary Russian Literature." P. D. Boboruikin, Prince S. Volkonski, and Avrelin have contributed to the magazines on purely æsthetic matters, and Appelroth has made researches in the literature on Praxiteles.

In the department of prose fiction there are to be recorded two new novels by Tchekhov, "Room No. Six" (one of his best) and "The Story of an Unknown Person"; E. Salias's "Fifth Wheel" and "Sir King" (historical novel); Dedlov's "Sashenka"; Borboruikin's "Our People" (dealing with servant life); W. Nemirovitch-Dantchenko's "The Millions of Slavenow"; Garin's excellent "School-Boy" (a continuation of his "Childhood of Tema," and supposed, like the latter, to be autobiographical); and "Ruffina Kaziova," by Mme. Blaraberg (Ardov), describing the colonies among the people proposed in the Seventies for the spread of socialism. The latter author has also issued a collection of stories, and Garin a volume of "Sketches and Tales," under which title two volumes by Korolenko, exquisite in their delicacy and feeling, have also seen the light. Korolenko has also written his impressions of the famine (1892) in Nizhni Novgorod, and the literary activity of Erel, the novelist, has been practically limited to writing accounts of his philanthropic labors among the peas-

entry of the famine-stricken province of Voronezh. The latter *semafo*, by the way, is said to have issued the most notable statistical returns among those which formed part of the large mass of publications called forth by that fearful period of suffering.

Spain.—As is but natural, the contributions to Columbian literature called forth by the Columbian quadracentenary (enthusiastically celebrated throughout Spain) again form a noteworthy percentage of the historical publications. Among the more important of these are works by the Marquis de Hoyos, Juan Lemarque de Novoa ("Cristobal Colón," a poem), Louisa Vidart ("Colón y Bovadilla y la Ingratitud de España"), Joaquín Torres Asensio (Vol. I of "Fuentes históricas sobre Colón y América," translations of old works), F. R. Vhagon ("La Patria de Colón"), José María Asensio ("Martín Alonso Pinzón"), Cesáreo Fernández Duro, Balaguer ("Castilla y Aragón en el Descubrimiento de América"), Ángel de los Ríos ("Colón y los Montañeses"), F. Serrato, F. de P. Vallador ("Colón en Santafé y Granada"), and M. Sales Ferrer ("El Descubrimiento de América"). The Royal Academy has issued a "Bibliografía Colombiana" (list of all publications relating to the navigator and his sons, Diego and Fernandez) and—in Vol. VII of "Documentos inéditos de las antiguas Posesiones de Ultramar"—"Los Pleitos de Colón," and the Duchess of Alva has published "Autógrafos de Cristobal Colón y Papeles de América." The relations between the Spanish and the Moors, both in the past and present, are illustrated in numerous historical works such as Eduardo Saavedra's "Estudios sobre la Invasión de los Arabes en España," the collection of Hispano-Arabic historians (Vol. VIII), Francisco Xavier Simonet's "Pericia geográfica de los Escritores Arabes," and the papers by Rodrigo Amador de los Ríos on monuments of Arabian art shown at the quadracentenary celebration, etc. The number of professorships of Oriental languages (especially Arabic) at the universities has greatly increased. National and local history have, as ever, received much attention. Of the "Colección de Documentos inéditos para la Historia de España," the one hundred and fifth volume, containing the chronicle of Rodrigo Jimenez de Rado, Archbishop of Toledo, has been issued, and two volumes of a new series, "Nueva Colección de Documentos . . ." have made their appearance. C. Miguel Vigil has issued "Heraldica asturiana y Catalógica armorial de España"; M. Danvila y Collado, "Reinado de Carlos III" (Vol. I); and G. J. Gómez de Arteche, "Reinado de Carlos IV." J. de Moret's "Anales del Reino de Navarra" is completed with the twelfth volume; Benavides has issued "Glorias de Antequera"; Pablo Hurtado, "Indicios Cacerreños"; Anselmo Salvá, "Cosas de la vieja Burgos"; José Puiggar, "La Tornado del Bruch y Vindicación de Igualada"; Viscount of Palazuelos, "Santa María de Forqueras"; Gutierrez del Caño, "Historia de la Villa de Zaratán" and "Las Batucacas y los Jurdes"; Aguilar y Cano, "Hien Belay: Estudio histórico acerca del Castillo de Poley"; Juan A. Balbas, "El Libro de la Provincia de Castellón"; Emilio Grahit y Papell, "El Sitio de Gerona en 1633"; Pablo Alzole, "El Arte Industrial en España"; and Manuel Jorretto, "Los sitios reales: notice . . . des séjours et dependances de la maison Royale d'Espagne" (a fine and curious bilingual work); and Vol. II of A. P. Gascon de Gotor's "Zaragoza artística, monumental é historica" (1891-'92) has appeared.

The congress of Americanists assembled at Huelva and La Rabida in October, 1892, contributed much to the literature concerning Spanish America, including Matías Alonso Criado's "Páginas históricas de la República Oriental del Uruguay," and Pedro Pablo Figueroa's "Diccionario biográfico nacional, ó Historia de la Literatura Chilena," etc. To these should be added Juan Fernandez Ferraz's "Nahuatlismos de Costa Rica," Francisco Fernandez y Gonzalez's "Los Lenguajes hablados por los Indígenas del Norte y Centro de América," and F. Montero Barrantes's "Geografía de Costa Rica" (1892), and "Elementos

de Historia de Costa Rica" (1892). The following are named as worthy of note in archaeology and numismatics: "Catalogo abreviado de las Monedas del Dr. Gago"; "Apuntes para la Clasificación de Monedas antiguas españolas y extranjeras," by Gomez Imaz; "Santa Maria la Real de Najera," by Constantino Garraz; and "De Llanos a Cobadonga," by Foronda. And Vicente Maumus's "La Iglesia y la Democracia" has been commended.

New works of fiction are: Lp. Alas, "El Señor, y lo demás"; L. de Terán, "Clara Obscuro"; L. Taboada, "Páginas alegres"; F. Tusqueta, "La Hembra"; V. F. Lopez, "El Filibustero"; G. Tarde, "El Duelo"; B. Pérez Galdos, "La Loca de la Casa"; A. Palacio Valdés, "El Maestrante"; J. Gutiérrez, "Los Amores de Valentina"; J. Echegaray, "El Poder de la Impotencia"; J. J. Franco, "Masón y Masona" (1892, 2 vols.). Jacinto Benavente's "Colección de Cartas de Mujeres" is said to reveal a delicate observation of the female heart. Poetry and the drama have not received much attention. In the former there is practically nothing to record except a few poems by Campomar (of which, too, Columbus is the subject). Juan Perez de Guzman has published "Cancionero de la Rosa" and "Cancionero de Señores" (selections from the poetry of sixteenth and seventeenth century authors), Menendez y Pelayo, a digressive "Antología de Poetas Líricos Castellanos" (Vols. I-IV), and an anthology of Spanish-American poetry has been announced. In dramatic literature there is little of note, except, perhaps, "Mariana" ("a realistic study of modern society") and "Dolores," two comedies by José Echegaray, and a drama by his brother Miguel. As usual, there are many translations in the list of the year's literary product.

Sweden.—The rich literary productiveness of the preceding year appears to have been succeeded in 1893 by a period of comparative rest. History has been contributed to in O. Alin's "Carl XIV. Johan och rikets ständer 1840-'41"; T. Andersson's "Svenska Underhandlingar med Rysland, 1587"; continuations of "Handlingar rörande Sveriges Historia" and of "Riksdags-Protokoll, Sveriges Ridderskaps och Adels," and O. Fredrick's "Några bidrag till Sveriges Krigshistoria åren 1711-'13." O. Salomon has published "Föreläsningar öfver J. J. Rousseau"; L. Norborg, "I den kirkliga Bekännelse-frågan"; O. Ahnfeldt, "Utvecklingen af Svenska Kyrkans Ördning under Gustaf den förstes Regering"; A. Malmström, "Den apostoliska Kyrkan och Principatet"; Otto Norberg, "Svenska Kyrkans Mission vid Delaware i Nord-Amerika"; and R. F. Hermanson, "Finlands Statsrättsliga Ställning" (published in Finland). One of the most noteworthy books of the year is the veteran statesman Louis de Geer's "Memoirs" ("Minnen"), revealing a noble and upright personality, and imparting much knowledge in regard to Sweden's recent history. A biographical sketch of the late Sonja Kovalevski, the talented professor at the Stockholm University, written by her friend, Anna Charlotte Leffer-Cajanello (through whose death Swedish literature has suffered a decided loss), has been published posthumously, as have also the "Efterlemnade Bref och Anteckningar" of C. W. Scheele (by A. E. Nordenskiöld), in which that noted chemist's claims to the discovery of oxygen are proved.

Not only, as stated in our last review, have Swedish authors to contend with difficulties in the shape of a market restricted as to time and a limited circle of readers, but their field is narrowed even more by the publication of numerous translations—frequently both cheap and poor. The newly formed Authors' Union proposes to ostracize both bad translations and translations of bad books," which will also tend to regulate the scale of prices for literary work. As indicated last year, a certain quality of restraint seems to keep Swedish *belles-lettres* in the golden mean between ultra-realism and extravagant idealism. New works to be recorded are: G. Schröder, "En Timmermärkarens minnen"; F. Hodberg, "Från Skärgården och Fastlandet" and "Arbetslif" (1892); T.

Hedberg, "En Vinter i södern"; and G. af Geijerstam, "Stockholmsnoveller."

Switzerland.—The German Swiss have always in these reports been classified with Germany, and that not simply as a matter of convenience, for in a literary sense they are closely related to their brethren in the empire. Notices of the work of some of their important writers in the broad domain of *belles-lettres*, such as J. Joachim and J. V. Widmann, will be found under **Germany**. In the present division, however, may be placed some of the notable publications in the various fields of learning, more especially those of directly national or local interest. History has been contributed to in Paul Schweizer's important "Geschichte der schweizerischen Neutralität," and Wilhelm Oechsl's "Quellenbuch zur Schweizergeschichte" (Neue Folge), and this subject has its periodical in "Anzeiger für schweizerische Geschichte," while as a literary review the country has a "Schweizerische Revue" (third year). In ecclesiastical history we have Emil Egli's "Kirchengeschichte der Schweiz bis auf Karl den Grossen," and in biography E. de Budé's "Vie de Jacob Vernet, théologien genevois (1698-1789)" and C. H. Vogler's life of the almost forgotten sculptor Alexander Trippel, of Schaffhausen; while various phases of Swiss law are elucidated in Eug. Huber's "System und Geschichte des schweizerischen Privatrechts" (Vol. IV), C. Stösser's "Grundzüge des schweizerischen Strafrechts" (Vol. II), and W. Riesen's "Das Schweizerbürgerrecht" (1892), and a "Schweizerisches Idiotikon" is in course of preparation. It is reported that an attempt to introduce the production of national dramas in French Switzerland was made by performing, at Avenches, a drama by Adolph Ribaux, of Neuenburg, entitled "Julia Alpinula."

Spanish America.—It may no doubt be urged that our Spanish-American brothers are kept in such a state of turmoil by revolutions following each other in rapid succession, that literature can hardly thrive in such an atmosphere. Yet some portion of what has been done seems worthy of note, both as a measure of present achievement and a promise of future expansion.

Under **Spain** will be found a list of important works by Americanists and a reference to a new Spanish-American anthology. Lexicographical material is found in Carl Lentzner's "Tesoro de Voces y Provincialismos Hispano-Americanos" (Vol. I, Halle, 1892), and another Spanish book by a German author is "Geografía y Geología del Ecuador, publicada por orden del Supremo Gobierno de la República" (Leipzig, 1892), by Theodor Wolf, twenty years a resident in that country. In Barcelona (1892) was published Vol. I of the "Obras" of Fray Vicente Solano (1791-1865), a *savant* Franciscan monk who lived in Ecuador, while Oscar d'Araujo issued in Paris "L'Idée républicaine au Brésil." It appears that in the latter country journalism, "the main factor of popular instruction," finds in French literature an "inexhaustible source whence it seeks the material necessary to the fulfillment of its civilizing and patriotic mission." At any rate, that was the reason cited for the failure of the Brazilian Congress to ratify the copyright treaty negotiated between France and Brazil in January, 1891. In the Argentine Republic, two noteworthy volumes published at Buenos Ayres are Alexandro Rosa's description of his numismatic collection of 1,571 pieces, and a five-volume work on Dictator Rosas, by Adolfo Saldías, while from Uruguay came the news of the death, in Montevideo, of Alexandro Magarinos Cervantes, famous as author, editor, liberal statesman, and university professor. In Cuba the cultivation of plants peculiar to the climate of that island was described in "Tesoro del Agricultor Cubano" (2 vols., "Biblioteca de la Propaganda Literaria"), by Francisco Javier Balmaseda, the sixteenth edition (1893) of whose "Fábulas morales" has also appeared.

After "Mexico, 5 través de los Siglos" (1887-'89, 5 vols.), perhaps the most important work of na-

tional interest in Mexico published in recent years is "Monumentos del Arte Mexicano antiguo," by Dr. Antonio Peñafiel, issued at Berlin, Germany, in five folio volumes, in 1890, a sumptuous book with text in Spanish, French, and English.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. Population in 1890, 1,118,587. Capital, Baton Rouge.

Government.—The following were the State officers during the year: Governor, Murphy J. Foster; Lieutenant-Governor, Charles Parlange; Secretary of State, Thomas S. Adams; Treasurer, John Pickett; Auditor, W. W. Heard; Superintendent of Public Instruction, A. D. Lafargue; Attorney-General, M. Cunningham—all Democrats. Commissioner of Agriculture, Henry C. Newsom; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Samuel D. McEnery, Charles E. Fenner, Lynn B. Watkins, and Joseph A. Breaux—all Democrats. Judge Fenner resigned Aug. 15, to take effect Oct. 1. His term of office would have expired in 1896. Hon. Charles Parlange, Lieutenant-Governor, was appointed to fill the vacancy.

The death of Judge E. C. Billings, Dec. 1, left vacant the Federal judgeship for the eastern district of Louisiana; and on Dec. 13 the President sent to the Senate the name of Judge Parlange for the vacant office.

Valuations.—Great dissatisfaction is felt at the inequalities of assessment in the various parishes, and glaring injustice in the valuations put upon property for purposes of taxation has been exposed by some recent developments.

Suggestions are rife as to amendments in the law by the constitutional commission; but it appears that the Legislature has full power to take measures for equalizing valuations. As a step toward that end, the assessor of St. Landry issued a call for a convention of tax assessors to meet in New Orleans, Jan. 16, 1894, the day after the convention of sheriffs, who, as collectors, would be of assistance to the assessors.

Finances.—The Auditor reports the receipts from all sources for 1893 to have been \$3,956,854.95. The expenditures were \$3,546,275.89. An additional sum of \$171,343.02 was paid out during the year from the direct tax fund of \$314,000, which was received in 1892 and is not in the receipts and expenditures proper.

The State Board of Liquidation held a meeting in the summer, and decided to take measures to use a surplus that has accumulated from the fund set aside for the payment of interest on State consolidated bonds for the purchase of State bonds, and thereby accomplish a reduction of the State debt.

The Treasurer, who was not present at the meeting, announced his disagreement with this determination of the board. He took the position that the act of 1874, under which the bonds were to be purchased, had been abrogated by the Constitution of 1879, and that, consequently, he would not pay out the money unless ordered to do so by the courts or upon the warrant of an act of the Legislature. The Attorney-General declared that the law governing the Board of Liquidation leaves nothing to the discretion of the board, and he therefore applied in behalf of the State to the Civil District Court

of New Orleans for a mandamus to compel the Treasurer to obey the law.

The case was tried, and it was decided that the Board of Liquidation has the power to order the purchase of State bonds, and the Treasurer must, when so required, pay for the bonds out of the funds dedicated to that use. The Treasurer dissented from this judgment, and carried an appeal to the Supreme Court of Louisiana, the entire case turning on a question of constitutionality. That court affirmed the judgment of the lower court.

Charities.—The Confederate Soldiers' Home had 50 inmates, and cost about \$8,000. At a meeting of the Army of Tennessee a resolution was adopted calling on all the camps of Confederate veterans in the State to appoint a committee of three to go before the Legislature and request a liberal appropriation for the Soldiers' Home in the city of New Orleans. The State has no pensioners of the war. A bill was introduced at the last session for the purpose of levying an appropriation, to be applied in the payment of moderate pensions to disabled veterans; but it was found that the Constitution not only made no provision for such an appropriation, but absolutely prohibited it.

The Institute for Deaf Mutes at Baton Rouge had an enrolment of 70 during the year, and the session closed with 66. An industrial department opened last year has cabinet, carpenter, and shoe shops for the boys, and instruction in dressmaking and embroidery for the girls. Diplomas were given for the first time this year to those who had finished the course.

Education.—Disagreements between the president and the faculty of the State University at Baton Rouge led to a request, in July, on the part of three members of the faculty, that the board should make a change in the presidency. They said they believed the school was suffering from the weakness and inefficiency of the president's administration. After consideration, the board replied that the management appeared to be satisfactory, and the president must be sustained. These three professors and one other thereupon resigned, and two more professors resigned in September. The July reports of the president of the faculty and the treasurer showed the attendance of cadets larger than last year, the health and discipline excellent, and the finances of the institution in fair condition. Four hundred dollars was appropriated for the care and improvement of the grounds.

The amount of school money apportioned among the school population in June was \$49,152.87, giving 13 cents *per capita*, the total number being 378,099. The State board of education met to select text-books for the schools. Most of the school superintendents were opposed to any change unless books of equal merit could be purchased at a materially lower figure than that asked for the books now used. Bids were taken from representatives of the principal school-book publishing houses.

At the eighth annual commencement of the State Normal School at Natchitoches, in June, 14 pupils were graduated. The Peabody Normal Institute opened for a five-days' session at Thibodaux, in June, with about 100 teachers present, and the enrollment reached 200 before the close.

Another institute opened at Crowley, June 7, with a large attendance.

The session of the Louisiana Chautauqua, held at Ruston, in July, was attended by more than 2,000 persons, and the meetings were characterized by great enthusiasm and success.

Crops.—The total movement of cotton in November was in excess of any movement for that month except in 1891, taking the records back as far as 1880. The total for the month was 1,656,884 bales, against 1,482,928 in November, 1892, and 1,919,272 in November, 1891—an increase over last year of 173,956, and a decrease under the year before last of 262,388.

The effect of the sugar bounty has been greatly to stimulate production. The average yield of cane per acre has increased two tons, and by improved processes more sugar is obtained from the cane. The introduction of the central factory system has proved of great advantage, enabling men of small means to engage in the sugar business, whereas heretofore, as it takes from \$250,000 to \$500,000 to equip a plantation for making sugar, only large capitalists could engage in it. The influence of the bounty on the price to consumers is explained as follows: During the several months in which the Louisiana sugar crop is being marketed the price of sugar is greatly cheapened to consumers. That this is a fact is well known to all interested in the sugar trade. The cause of this cheapening is the fact that during that period the domestic producers, to the number of many hundred, put upon the market good grades of sugar, which can enter directly into consumption without the intervention of the refiners. Such sugar thus competes actively with refined sugars, hence the prices of the latter are reduced in order to compete with the Louisiana product.

The rice-growers have unanimously reached the conclusion that in order to cheapen the cost of handling rice the present system of shipping in sacks must be abandoned and shipments in bulk substituted. For some years past the percentage of the crop grown along the river has grown smaller, until now fully two thirds of the crop is grown in what is known as the Calcasieu section. All this Calcasieu rice, as well as a good portion of the river rice, comes to market by rail. It is therefore proposed to bring the rice in bulk, and for that purpose it will be necessary not only to erect elevators in New Orleans, but along the lines of railroad traversing the rice belt.

The stock-taking of April 1 showed that there were held in New Orleans 369,527 sacks of rough rice. There was a shortage of the crop this year, which led to a material advance in price.

Lumber.—A report issued by the Southern Lumber Manufacturers' Association, covering stocks on hand Aug. 20, and sales for the first six months of the year, gives the number of mills in Louisiana as 12; the daily capacity, 615,000 feet; the stocks, 20,150,000 feet; and the shipments, 45,294,339 feet. The report is not complete, as only 94 answers were received to the 400 requests sent out through seven States. But those replying were judged to cover a large majority of the best plants in the yellow pine districts.

Bananas.—Statistics of receipts at the leading ports show that New Orleans has become the great banana market in the country. In 1892 the re-

ceipts amounted to 4,483,351 bunches, against 3,715,625 at New York, 1,840,519 at Boston, and 1,818,328 at Philadelphia. During the first six months of 1893 the total receipts at New Orleans were 2,210,271 bunches.

The Jackson Monument.—A movement has been made by the "Daughters of 1776-1812" to obtain custody of the Jackson monument on the plains of Chalmette, rescue it from the decay into which it is falling, and, if possible, finish it according to the original plan. The design was adopted by the Jackson Monument Association, May 30, 1855. The shaft was to be 142 feet in height. As it now stands it shows 56 feet faced with Tuckahoe marble from New York. It was designed to place the marble steps at the base after the completion of the shaft.

The Lottery.—The Louisiana State lottery received in January a charter from the republic of Honduras. The concession is a monopoly of the lottery business for fifty years. The Hondurian Government grants to the company the island of Cuanaja, in the bay of Honduras.

Storm and Flood.—In March, sections of Catahoula and Concordia Parishes were overflowed, bringing misery and want to many families. In May, bad breaks occurred at Bayou Lafourche, Grand Lake, Ark., Lake Providence, and Wyl's Levee in East Carroll Parish, four miles south of Lake Providence, resulting in immense damage to growing crops. The Governor, with others, made a tour of inspection of the levees, and summarized the results of his observations as follows:

There are about 90 miles of levees in Arkansas in which the people of Louisiana, and especially those of the parishes composing the Tensas basin levee district, are directly interested. Of this stretch about 17 miles have been built this year by the General Government, and are in a fine and safe condition. Contracts covering about 25 miles additional have been given out by the General Government for the present year, and when these are completed they will form a stretch of 42 miles of good and safe levees. The Government has also repaired and raised other levees during last season. All aid possible should be rendered that State in this direction. Most of the old levees in Arkansas are in a wretched condition, poorly constructed, and inadequate to resist any flood of the magnitude of that which now threatens us.

The levees in Louisiana I find in fine condition. Immense dikes have been built which will resist almost any flood in the river, and at points where any weakness has manifested itself the danger has been promptly met.

The break in East Carroll occurred after this report was made, and was regarded as the crowning catastrophe of the season. The crevasse was 300 feet wide, May 23. It was in the heart of the finest portion of East Carroll Parish, about halfway between the upper and lower ends of its levee system. The plantations adjacent are numerous and of the highest fertility. The break was at the lower end of Providence reach, in the bight of a bend, and in a position to catch the full force of the river. By May 30 the crevasse had widened to 3,000 feet. Those made homeless by the floods were sheltered in two large camps, supplies were distributed, and many of the men were employed on the repairs. Two hundred tents were sent for to shelter those coming later from the rear of the parish and

from Madison. At least 5,000 colored people were driven from their homes.

May 29 a crevasse occurred at Amos bayou, in Arkansas, bringing more destruction to homes and crops in north and east Louisiana.

A part of Baton Rouge was inundated from a crevasse in June. Two breaks occurred, June 17, on the east bank of the river, one above and one below New Orleans. The one above, in the parish of St. John the Baptist, was very serious; 1,000 men were set at work upon it, but in spite of their exertions the ends were continually giving way, and the United States engineer was called upon for assistance. The line of cribbing was doubled in width, and 100,000 sacks were brought to be placed in position. They were in piles 80 or 40 feet high on each side of the crevasse. A line of men carried these sacks from the piles to the cribbing. On each side of the crevasse a line of men reaching for half a mile could be seen, each one with a sack of earth on his shoulder. This continuous procession was kept in operation until far into the night. The towboat "Jackson" steamed up to the crib work, and, with numerous electric lights hanging out from the cabin, turned the night into day. This enabled the men to work all night. The crevasse, which had widened to 170 feet, was gradually closed.

June 27, the New River country, which has been frequently flooded, suffered from an overflow from the Rescue crevasses, exceeding in depth, extent, and suddenness any previous inundation. There was but one house along the 25 miles of the New River settlement with its floor above the surface of the water. Ten lives were reported lost.

A cyclone devastated the little town of Lockport, on Bayou Lafourche, Sept. 7. Eight persons were killed, and many more injured.

The most dreadful disaster of the year was the storm of Oct. 1. It came without warning, because it came in directly from the sea, having been encountered 25 to 50 miles out, south of New Orleans, blowing from the southwestward. It moved so rapidly that it struck the city only a few hours after it was first encountered at sea. The section devastated was that lying about the mouth of the river, and as far west as East Island and Bayou Grand Caillou. The greatest fury of the storm was spent on the oyster settlements at Bayou Cook and the Cheniere Islands. The storm struck the district at 7 o'clock in the evening. Not a house was left standing, and more than half the population was lost. The survivors were in the most destitute condition. Grand Isle, a summer resort lying directly in the path of the storm, had a miraculous escape, due to the fact that the land upon it is higher than that of the Cheniere. Many houses were blown down, but only 25 lives were lost. At Cheniere about 800 lives were lost. The whole loss of life was estimated at 2,500. Prompt assistance was sent to the survivors from New Orleans, from other parts of the State, and from other States.

Court Decisions.—Decision was rendered in the United States court, in the case of the widow of an Italian who had been lynched at the parish prison. She was an American, and with her husband continued to reside in Louisiana

till his death. She sued for damages. The judge decided that marriage with an alien did not affect her citizenship, and hence that the United States courts had no jurisdiction.

In a case against the Amalgamated Council and various labor organizations which ordered a strike of all the labor organizations in November, 1892, an injunction was asked against these bodies under the act of Congress prohibiting combinations in restraint of trade. In an elaborate opinion the court declares that the acts complained of were unlawful, and that the merchants are entitled to relief.

Conventions.—An Immigration Convention was held in New Orleans in March, called by the Governor, for the purpose of discussing the best methods of bringing capital and immigrants into the State. Resolutions were adopted inviting immigrants from other States and from Europe, requesting the chairman to appoint a committee whose duty it should be to publish a pamphlet describing the advantages the State offers to immigrants, indicating the merits of its climate, soils, timber lands, fisheries, etc.; to promote the formation of local and parish immigration organizations which will prepare lists of available lands and other data; and to co-operate with the Immigration Bureau to promote the work of that department, and to formulate plans for paying all proper expenses of the work.

A Cotton Acreage Convention was held during the same day, assembling after adjournment of the sessions of the other. It was called by the Commissioner of Agriculture, to take such action as should seem best, looking to the decrease in acreage devoted to cotton the present year, and to consider the propriety of sending delegates to a general interstate convention to be held at an early date for a similar purpose.

The resolutions were in accordance with the purpose of the convention, urging upon the attention of planters of the whole cotton section "the folly of pursuing the old methods of planting mostly cotton, to the exclusion of cereal and other crops, and upon such planters, as individuals and citizens, to set the personal example of raising first such crops as will give support to home and family, and then to plant sufficient cotton to furnish the luxuries of life."

Constitutional Commission.—At the last session of the Legislature provision was made for the appointment of a commission charged with the duty of considering important measures which would involve an amendment to the State Constitution, and of reporting suggestions to the next session of the Legislature. This commission is to be composed of two members of the State Senate, appointed by the Lieutenant Governor; three members of the House of Representatives, chosen by the Speaker of that body; and two members for the State at large, named by the Governor from among the mass of citizens. There is a very general demand for a remodeling of the suffrage and election system in operation in the State. The commission met in July, but the organization was deferred, on account of absences, till Jan. 3, 1894.

LUTHERANS. The Evangelical Lutheran Church in the United States numbers 60 synods, 5,302 ministers, 9,069 congregations, 1,293,163 communicant members, and a population of

7,000,000. The number of Lutherans in the world is 52,850,660. Its 2,786 parochial schools in the United States employ 3,370 teachers, and contain 146,287 pupils; and its 5,865 Sunday schools have 48,233 officers and teachers and contain 453,109 pupils. The offerings of the congregations for missions, educational institutions, orphanages, hospitals, deaconess institutions, and other works of benevolence (9 synods not reporting), amount to \$884,859.26. The General Council is credited with 9 synods, 1,055 ministers, 1,777 congregations, and 307,523 communicant members, and benevolent contributions amounting to \$287,811.93; the Synodical Conference, with 3 synods, 1,519 ministers, 2,165 congregations, 441,129 communicants, and \$171,254.86 for benevolence; the United Synod of the South, with 8 synods, 205 ministers, 405 congregations, 86,518 communicants, and \$18,575.42 for benevolence; the General Synod, with 26 synods, 1,046 ministers, 1,441 congregations, 165,346 communicants, and \$230,694.28 for benevolence; and 12 independent synods, with 1,477 ministers, 3,281 congregations, 342,647 communicants, and \$176,521.82 for benevolence. The 26 theological seminaries have property valued at \$1,097,800, endowment amounting to \$527,700, 90 professors, and 1,083 students; the 35 colleges have property valued at \$3,024,500, endowment amounting to \$709,223, 297 professors, and 5,162 students; the 37 academies have property valued at \$488,250, endowment amounting to \$50,100, 176 instructors, and 4,380 students; and the 13 ladies' seminaries have 125 professors and 1,047 pupils. The aggregate of these items shows 111 educational institutions, having property valued at \$4,889,323, endowment amounting to \$1,290,573, and 237,245 volumes in their libraries, employing 688 instructors, and having 11,622 students, of whom more than 2,520 are in preparation for the ministry. The amount given as endowment expresses only a small fraction of the resources of the educational work of the Lutheran Church, for 85 of the 111 institutions are very largely supported by annual gifts. The Lutheran Church in the United States maintains 35 orphanages, 8 asylums for the aged, 14 hospitals, 6 deaconess institutions, and 12 immigrant and seamen's missions, whose property is valued at \$2,342,700, and whose inmates number 35,000. These institutions are maintained principally by private gifts. The periodical publications of the Church number 133, of which 49 are German, 44 English, 15 Norwegian, 12 Swedish, 4 Danish, 3 Icelandic, 3 Finnish, 2 Slavonian, and 1 French. Following is a report of the 4 general bodies and the 12 independent synods:

General Synod.—The thirty-sixth biennial convention of this general body was held at Canton, Ohio, May 21 to June 1, 1893. The Rev. Jacob A. Clutz, D. D., President of the General Synod and President of Midland College, at Atchison, Kan., delivered the opening sermon. Delegates from 26 district synods were in attendance, representing 842 parishes and 1,441 congregations. The following officers were elected: President, the Rev. Charles S. Albert, D. D., Philadelphia; Secretary, the Rev. William S. Freas, D. D., York, Pa.; Treasurer, Louis Manss, Cincinnati, Ohio. The business of the convention consisted chiefly in hearing reports of the various boards and taking action on their recommendations.

An important declaration of the General Synod, at this convention, was as follows:

That the preamble and resolution adopted at York, Pa., in 1864, expressing the judgment of this synod that certain erroneous views often ascribed to certain articles of the Augsburg Confession are not contained in the same, be regularly published in the minutes of this body and in the Book of Worship, in immediate connection with the constitution of the General Synod.

An overture from the synod of Northern Indiana, asking for an edition of the English Book of Worship with the Common Service omitted, opened the whole subject with reference to that service and called forth a protracted discussion on what has for some time been a burning question in the General Synod. The report of the Woman's Home and Foreign Missionary Society shows that there are 677 societies in existence, with a membership of 18,897, whose contributions for two years amounted to \$37,457.29. The total sum contributed during the last decade amounts to \$157,132.47. The work has made rapid and substantial progress from the beginning. At the seventh session a series of resolutions in favor of prohibition was adopted. The Committee on "A Development of Luther's Small Catechism" reported that they had "taken note of all criticisms made on their work, and with these in view had carefully revised the whole work again," and had published a limited number of copies for examination, recommending that their book be published "at once for use in the churches, that the value of the work may be tested by practical experience." The educational and benevolent institutions of the body were reported as being in a flourishing condition. The work of deaconesses received careful attention, and the board appointed in 1889 to act for the synod, reported with reference to its needs, plans, and work, and the entire matter was again commended to the synods and congregations. Among other things the report contains:

We are now able to report that 2 candidates have entered upon a course of training, and several applications are pending. The board proposes to send the candidates to Kaiserswerth to be trained. For more than half a century the work has been carried on there, with constantly increasing success. Such a course will not prevent the adoption of original methods in adapting the system to our own land.

The Committee on Sunday Schools reported 1,134 schools, with 20,641 officers and teachers and 165,268 pupils; local expenses, \$92,858.55; and benevolent contributions of \$35,850.50. The board of publication of the General Synod publishes lesson helps for the schools on the basis of the International series of lessons. The committee recommended a normal series of tracts and books as an aid to teachers on the subjects of history, doctrine, and practice. The Committee on Common Service reported that the translation of the Augsburg Confession from the Latin is completed; but only a little progress has been made in the translation of the German text. With reference to the preparation of a standard English edition of Luther's Small Catechism, the following was reported:

At the first meeting of the committee at Gettysburg—present, representatives of the General Synod, the General Council, and the United Synod—the text was determined by a collation of Luther's last revision (1545) with the other editions. Subsequent sessions of the committee were held in Philadelphia in November, 1890, and January, 1891, where the translation was completed, subject to revision at a later meeting. In Philadelphia, representatives of the Joint Synod of Ohio aided in the work. At the final meeting of the committee at Wernersville, in September, 1892, the entire work was revised and completed. All branches of the English-speaking churches of the Lutheran faith were represented in the work.

Then follows a copy of the standard English version of Luther's Small Catechism as prepared by the joint committee. An overture for practical co-operation to all Lutheran bodies in America was adopted, and ordered to be communicated to the various synods.

Resolutions were also passed at this convention setting forth that "the marriage service by the ministry of the Church can be properly given only under the conditions, relations, and limitations set forth in that divine law which the Church and the ministry represent," and expressing the desire for a national law of marriage by which the evil of easy divorce for unscriptural reasons may be lessened and finally corrected. The synod also protested against the use of the contributions of the congregations within its bounds to the American Bible Society, for gifts of Bibles to those denominations which are carrying on missionary operations among Lutherans in Germany and Sweden.

According to the report of the Board of Foreign Missions, the total receipts, together with a balance of \$12,024.37, were \$126,012.14. Of this amount the Woman's Missionary Society contributed \$33,080.45, and from legacies \$9,787.65 were received. The expenditures of the board for the same period were \$117,007.45. Three new missionaries were sent out to the India mission. The following is the corps of workers in India: 6 ordained American missionaries, 1 ordained native pastor, 4 subpastors, 20 catechists, 107 subcatechists, 5 Bible and tract colporteurs, and 48 helpers. The mission embraces 425 villages containing Christians, 825 congregations, 135 prayer houses, 6 mission bungalows, a printing press and book bindery, a reading room and book depot, and a hospital and dispensary; and 13,566 baptized members; 180 Sunday schools and 7,018 pupils; 174 elementary schools, with 175 teachers and 3,277 pupils; a boarding school with 82 pupils; and the Arthur G. Watts Memorial College, at Guntur, formally opened March 17, 1893, having 34 instructors and 525 students. The zenana department contains 6 woman missionaries, 5 assistants, 61 Bible teachers, 68 secular teachers, 84 minor servants, 46 home pupils, 21 schools and 1,286 pupils, 13 Sunday schools with 32 teachers and 663 pupils. The mission work in Africa known as the Muhlenberg Mission, in Liberia, embraces 2 ordained American missionaries, 2 native ordained missionaries, and 180 communicant members, 810 Sunday-school pupils, 2 teachers in other schools and 274 pupils. The industrial department is exceptionally successful. The value of the Muhlenberg Mission plant is \$60,445.

The report of the Board of Home Missions showed the total receipts for two years, including a balance on hand, to be \$84,279.55. The Woman's Missionary Society contributed \$10,126.49. The average annual cost of each mission to the

Church is estimated at \$250. During the two years embraced in the report, 155 separate missions were cared for by the board in twenty States and Territories, 180 missionaries were employed, serving 214 congregations, 45 new missions were received on the funds, 39 new congregations were organized, 45 new churches built or bought, and 18 missions became self-sustaining. The membership of the 155 missions is 13,216, with 200 Sunday schools and 19,386 pupils. The contributions for salary and local expenses of these missions were \$272,174.42, and contributions for benevolence to \$15,958.46. The report of the Board of Church Extension shows total receipts amounting to \$107,115.53, an increase of \$27,260.15 in the past two years. This increase came largely from the synods directly on the apportionment, and \$8,255.09 from the woman's missionary societies. Loans, donations, and special appropriations were made to 104 congregations amounting to \$86,450.11. But this does not by any means tell of all the work done by the board. The assets of the board are \$223,381.20. The Western secretary, the Rev. John N. Lenker, presented the work of the board to 25 conventions of district synods, reaching from New York and Pennsylvania to California, often in the day and evening sessions; to congregations, woman's conventions, conferences, mission festivals, and educational institutions. The Board of Publication, with headquarters in Philadelphia, presented an interesting report of work done in supplying literature for pastors and people. Its assets are \$75,727.73, and its sales for the year ending March 31, 1893, amounted to \$78,696.14. The board publishes 7 periodicals, the combined monthly circulation of which is 255,500 copies. During the two years included in the report the board published 11 new books.

The thirty-seventh convention of this general body will be held at Hagerstown, Md., beginning June 5, 1895.

General Council.—This body—composed of English, German, and Swedish Lutherans—held its twenty-fourth convention in the Evangelical Lutheran Church of the Holy Trinity, Fort Wayne, Ind., Oct. 5-11, 1893. The Rev. Adolph Spaeth, D. D., professor in the Theological Seminary at Mount Airy, Philadelphia, delivered the opening sermon. Delegates from 7 of the 8 district synods belonging to this body, and a delegate from the English Synod of the Northwest, applying for admission, were present, representing 1,065 ministers, 1,777 congregations, and a communicant membership of 307,523. Representatives were also in attendance from the German Augsburg Synod, instructed to inquire into the doctrinal position of the Council, with a view of applying for admission. The following officers were elected: President, the Rev. Carl A. Swenson, Ph. D., President of Bethany College, Lindsborg, Kansas; English recording secretary, the Rev. George W. Mechling, Lancaster, Ohio; German recording secretary, the Rev. John Nicum, D. D., Rochester, N. Y.; Swedish recording secretary, the Rev. Carl J. Petri, Minneapolis, Minn.; and treasurer, William H. Staake, Esq., Philadelphia. The Committee on Church Book reported on the publication of the new edition of this book, which is

said to be the most complete liturgical work ever published in the United States. A pulpit edition has also been issued, to which general prayers were added, with special reference to Church festivals. The committee was instructed to publish a revised edition of the Sunday-School Book for the Sunday schools of the General Council. The committee also reported that final action had not yet been taken on the completed revision of the English translation of Luther's Small Catechism, made by a joint committee of all the general bodies and synods in which the English language is largely used. The translation proposed by the joint committee was presented for examination. The German Editorial Committee was instructed to issue a new edition of the German Sunday-School Book. The Board of Publication was authorized to publish a special edition of the Church Book for the use of missions. The report of the Board of Publication presented a large increase in its business since the publication of the new Church Book. The total receipts were \$22,578.13, and the expenditures \$22,317.19.

After a protracted discussion concerning its relation to other synods in the Council, the English Synod of the Northwest was admitted without a dissenting vote. The Rev. William A. Passavant, D. D., presented the report of the directors of the Theological Seminary at Chicago. This institution, formally opened in the autumn of 1891, has 3 professors, 31 regular students, and 39 post-graduate students. Since the last convention of the Council a professor's residence, and a hall for the seminary for the accommodation of students, have been erected. The seminary is permanently located on the north side, near Lake Michigan, and is open to all students of the Evangelical Lutheran Church who, having the proper gifts, give evidence of Christian character and experience. The curriculum of the institution is very comprehensive, embracing 18 different courses, and makes provision for a post-graduate course. The report of the Immigrant Mission in New York city showed that important work has been done among the thousands of Lutherans who annually come to this country. The receipts of the Emigrant House for the year ending April 1, 1893, were \$17,292.38, and the expenditures were \$15,548.88. With reference to the overture from the General Synod looking toward a union of Lutherans (see above), a committee was appointed to confer with a similar committee of the General Synod as to the real object in view, with the understanding that practical co-operation can only be possible on the basis of unity in faith and practice, and the committee was instructed to act always on the basis of the principles of faith of the General Council, and to take no action binding on it.

The home missionary operations of the General Council are much more extensive than appears from the minutes of this body. Each synod carries on mission work within its own territory, while the large field not thus provided for is intrusted to 3 general boards—English, German, and Swedish. The entire number of home missions of this general body, as carried on by the 3 boards and the individual district synods, is 321, and the money expended for this work during the past two years amounted to

\$106,700. The missions are scattered from ocean to ocean, and from Nova Scotia to Florida and Texas. The Rev. William A. Passavant, Jr., Pittsburg, Pa., Superintendent of the Board of English Missions, presented its report. The 22 missions supported by this board are all in important centers, like Boston, Chicago, Minneapolis, St. Paul, Fargo, Seattle, Tacoma, and Portland. Into these missions have been gathered 1,360 communicant members, who represent 9 different nationalities. During the past two years 6 of these missions were organized, 7 have built houses of worship, and some have advanced far toward self-support. The receipts were \$23,027.45, of which the Sunday schools contributed \$6,888.86. The expenditures were \$32,230.24.

The Rev. John Nicum, D. D., Secretary of the Board of German Home Missions, presented the biennial report of the board, together with detailed explanations of the work in the extensive territory under the care of the missionaries employed. This board maintains 45 mission congregations and preaching stations, employing from 8 to 10 missionaries. In the South, missionary operations are carried on in Kentucky and Alabama, and missions are maintained, 1 in Chicago and 4 in Utah. But the most extensive operations are carried on in the northwestern provinces of Canada—in Manitoba, Assiniboia, Alberta, and Saskatchewan, where 6 missionaries are stationed, serving 35 congregations and preaching stations. The membership of these missions is 3,500 persons, of whom 1,850 are communicants. This is the result of the past five years during which the present board has had charge of the work. The receipts for two years amounted to \$11,450.98, and the expenditures to \$10,494.44. The board was authorized to take out articles of incorporation, and to appoint a superintendent of German missions. The Rev. Carl J. Petri, of Minneapolis, Minn., presented the report of the Board of Swedish Home Missions. It shows that more than 60,000 Swedes

have come to this country since the report of two years ago, and 50 pastors have been added to the working force of synod. The work of the Board of Missions extends over the entire country, and embraces more than 100 missionaries. The receipts for two years were \$38,335.57.

The Rev. John Telleen, of Rock Island, Ill., was elected superintendent of missions. He began his work, March 1, 1892, and his labors have been eminently successful. The receipts for two years were \$32,856.52, and the expenditures \$30,844.30. The report furnishes the following statistics: 108 mission workers, 6 principal stations, 145 villages where the gospel is preached, 95 villages where schools have been established, 8,757 Christians, and 1,608 children in the schools.

Quarter-Centennial.—A quarter-centennial celebration of the General Council was held during this convention, and interesting addresses were delivered on the history, faith, work, and influence of the general body since its organization. The Committee on Statistics gave the present status of the body as follows: 10 synods (including the German Iowa Synod), 2,221 congregations, 255,662 members, 26,358 baptisms, and 18,519 confirmations during the past year, 1,146 Sunday schools, 19,429 officers and teachers and 165,921 pupils, 616 parochial schools and 29,625 pupils; value of church property, \$12,307,452; congregational expenses, \$1,946,426; German home missions, \$4,677; English home missions, \$12,443; foreign missions, \$20,359; educational institutions, \$58,543; orphanages, \$21,414; general benevolence, \$88,491; total benevolence, \$281,937; contributions for all objects, \$2,228,363; 4 theological seminaries, 13 colleges, with 180 professors, 2,029 students, endowment, \$351,484, and property, \$794,543.

The United Synod of the South and the Synodical Conference, being the other two general bodies of Lutherans in this country, held no conventions in 1893.

M

MACMAHON, MARIE EDME PATRICE MAURICE, Comte DE, Duc DE MAGENTA, ex-President of the French Republic and Marshal of France, born in Sully, June 13, 1808; died in Paris, Oct. 17, 1893. The family was a race of soldiers descended from an Irish adherent of the Stuarts who traced his lineage back to King Murtogh O'Brien. The Marquis de MacMahon was a lieutenant-general and a peer of France who was a close friend of the Comte d'Artois, afterward Charles X. His father's patron was king when young MacMahon, a vigorous youth of seventeen, entered the military college of St. Cyr, then an exclusive, aristocratic school. He gained no honors in his studies, but won friends by his frank and manly bearing, was expert with the sword, fought his share of duels, and when he left the college and immediately was initiated into active service in the expedition to Algeria, his soldierly qualities were soon brought out, and his keen powers of observation, rapid judgment, resolute action, and impetuous and dauntless courage were noted by

his commanders. He distinguished himself at the siege of Antwerp, in 1831, as aid-de-camp to Gen. Achard. With such a record and the aid of powerful connections, he obtained a captaincy at the age of twenty-five. Returning to Algeria, he showed himself a master and an exemplar of the tactics required in campaigning against the Kabyles. The fame of his deeds of daring and his cool intrepidity under fire was celebrated by the whole army. There was a scramble among the commanders to obtain the services of this brilliant officer who inspired the ranks with heroism and stimulated the wavering line to press on to victory. He signalized himself especially at Mouskaia, and in 1837, at the siege of Constantine, where he was wounded, and afterward in 1840-'45, during the operations in the south at Biskra, Bab-el-Zaza, Djebel Ahra, Ain Kebira, etc. He was a colonel in command of an infantry regiment in 1845, and was a general of brigade in 1848, and commanded the Constantine division at the time of the *coup d'état*. As an old Legitimist he was not favorably disposed

toward Napoleon III, though he accepted his act as a necessity for the restoration of order; nor was the Emperor ever friendly to the blunt soldier, who would not dissimulate his opinions and likings; and therefore he was banished to Algeria, unless the service of the most popular general in the army was required in the field. He was promoted general of division in 1852.

MacMahon went to the Crimea toward the close of the war, and led the assault on the Mal-

Governor-General in 1864, on the death of Marshal Pelissier. He was instructed by the Emperor to introduce the system of Arab bureaux, which did not put an end to native uprisings, and was abandoned after six years of trial.

When the Franco-Prussian War broke out, Marshal MacMahon was placed in command of the First Army and sent into Alsace, lacking definite information of the enemy's line of march, and mystified and balked by a succession of incomprehensible and contradictory orders from the quarters-general. The Germans broke into Alsace before he had his army together, and his advance guard was driven back at Weissenburg on Aug. 4, 1870. Compelled to act on the defensive, he took up a strong position at Wörth. There the army of the Crown Prince of Prussia fell upon him in overwhelming numbers on Aug. 6, and put his force to rout, capturing thousands of men and most of the artillery. His men retreated in disorder through the passes of the Vosges mountains, and when he had succeeded with difficulty in rallying them he retired to Chalons. Napoleon, whose dispatch telling that Marshal MacMahon had lost a battle cast such gloom as the reassuring words "Tout peut se rétablir" scarcely dispelled from the usually buoyant and confident French mind, retired from Metz to the camp at Chalons, where MacMahon had 120,000 men. The marshal planned to retire under the walls of Paris, but the Empress Regent, bent rather on saving the dynasty than on resisting the invasion, ordered him to march round by the Belgian frontier with his raw, disorganized troops, in order to strike the Prussians on the flank and join hands with Bazaine, who with admirable defensive strategy was holding the encircling German host at bay, but by his caution and delay compromising the fate of the country in the hope of saving his master's throne. MacMahon's ill-fed regiments were rolled back upon Sedan after the defeat of Gen. Faily's corps at Beaumont, on Aug. 30. At the battle of Sedan MacMahon was disabled by a fragment of a shell, which tore his thigh, at 7 o'clock in the morning, and he handed over the command to Gen. Wimpffen, thus escaping the humiliation of signing the capitulation. He remained on parole in a Belgian village while his wound was being treated, and then was taken to Wiesbaden, where he remained a prisoner of war till after the preliminary treaty of peace was signed. MacMahon's proverbial good fortune followed him even through this disastrous campaign. His honor and truth were never questioned by the public, and the military commission that investigated the causes of the defeat absolved him from blame, although he assumed personal responsibility for the march upon Sedan and the catastrophe that followed.

In April, 1871, Thiers called upon MacMahon to take command of the army of Versailles and suppress the Commune of Paris. This he accomplished in a ruthless military fashion, and even this created little resentment against MacMahon, who was regarded by the Parisians as a simple-minded soldier, faithful to duty and discipline, who had blindly obeyed orders without understanding the political rights or principles involved. He could not at first be tempted by

MARIE EDMÉ PATRICE MAURICE MACMAHON.

akoff. When Gen. Niel sent an order cautioning him not to expose his division so recklessly, and advising retreat, he had carried the outer works, and, standing on the parapet, he sent back the famous word, "J'y suis, j'y reste"—he was there to stay. For his conspicuous part in the victory he was nominated a Senator. In 1858 he was appointed commander in chief of the troops in Algeria, after leading in the previous year the force that suppressed a revolt of the Kabyles. As at the siege of Sebastopol MacMahon performed the crucial feat on which final success depended, so in the Italian campaign of 1859 it was his fortune to crown French arms with victory by saving the day at Magenta. While the army was converging on Magenta in three columns, the flank columns were engaged by the enemy, and Magenta, the center, was undefended because MacMahon's column was far in the rear. On hearing the cannonade he sent an aid to take observations, and when he learned the situation he hurried forward, overcoming every obstacle, and reached Magenta in time to turn the tide of battle. He was created a marshal and Duc de Magenta by the Emperor on the battlefield. He took a prominent part also in the battle of Solferino. After the war he was commander at Lille and in 1861 he represented the Emperor at the coronation of King Wilhelm of Prussia at Königsberg. Later he was charged with the organization of Algeria, of which he was made

the Royalists to take a part in politics, when the future form of government was undetermined and they were anxious to put their best men forward. He devoted himself exclusively to his professional duties, and was one of the most active of those who worked for the reorganization and rehabilitation of the French army. On May 24, 1873, when the Monarchists had forced Thiers to resign, MacMahon could not refuse to accept the presidency, pledging himself to continue the work of liberating the territory, restoring order, and maintaining the principles on which society rests, and to fulfill the will of the National Assembly. The Monarchists had the majority, and might have succeeded, for a time at least, in restoring the Bourbon dynasty if the Comte de Chambord had not insisted in returning altogether to the old *régime*. "If the Comte de Chambord comes with the white flag," MacMahon said, "the *chassepots* will go off of themselves." He was inclined to Bonapartism, while his wife, born Duchess de Castries, was an ardent Legitimist. Neither was averse to an Orleanist *régime* in preference to the republic, but MacMahon was too loyal a son of France to enter into a coalition or conspiracy to establish monarchy by fraud or coercion, though resolved to fight openly against radicalism, which he dreaded and detested. The reactionary Cabinet of the Duc de Broglie was followed after the adoption of the definitive republic founded on the moderate principles of Thiers, with the septennate, by one of the Right and Left Centers under Dufaure, and this by one of outspoken republican principles under Jules Simon. The religious conflict courted on both sides endangered the new Constitution. When Gambetta uttered his challenge to the President, "Il faut se soumettre ou se démettre," he repeated his resolute phrase, "J'y suis, j'y reste." He dismissed the Simon ministry, appointed the Monarchist-Clerical one of the Duc de Broglie and Fourton, and prorogued and finally, with the support of the Senate, dissolved the Chamber. The Royalists used force and pressure without avail against the Republican coalition headed by Gambetta, which won the elections of October, 1877. MacMahon declared in his message that he accepted the decision of the people, and would adhere to the republic. On Jan. 30, 1879, rather than sign a bill forcing into retirement some of his old comrades, he resigned the presidency, saying that new times demand new men. After that he lived a quiet, retired life, occupying himself with writing his memoirs and enjoying the universal reverence of the people in even a greater degree than his colleague Canrobert, the last surviving marshal of France. The state funeral that was given to him was one of the most imposing civic and military pageants that France has seen in recent years.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles; population in 1890, 661,086. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Henry B. Cleaves; Secretary of State, Nicholas Fessenden; Treasurer, George L. Beal; Attorney-General, Frederick A. Powers, all Republicans; Superintendent of Common Schools, Nelson A.

Luce; Railroad Commissioners, David N. Mortland, Asa W. Wildes, and Benjamin F. Chadbourne; Adjutant-General, Seldon Connor; Commissioner of Industrial and Labor Statistics, Samuel W. Matthews; Insurance Commissioner, Joseph O. Smith (Stephen W. Carr was appointed in December to succeed him); Fish and Game Commissioner, E. M. Stilwell, who died, and was succeeded in April by Thomas H. Wentworth; State Librarian, Leonard D. Carver; Bank Examiner, Charles R. Whitten; Chief Justice of the Supreme Court, John A. Peters; Associate Justices, Charles W. Walton, William W. Virgin, Artemas Libbey, Lucilius A. Emery, Enoch Foster, Thomas H. Haskell, William P. Whitehouse, all Republicans except Judge Libbey. Judge Virgin died Jan. 23, and Andrew P. Wiswell was appointed, April 10.

Finances.—The total bonded indebtedness of the State on Jan. 1, 1893, was \$2,506,300, being composed entirely (with the exception of \$4,000) of registered bonds issued in 1889, very nearly all the old bonds, most of which were of the loans of 1864 and 1869, having been redeemed. The receipts for 1892 were \$1,577,678.12, and the expenditures, \$1,472,712.04; the cash on hand, Jan. 1, 1893, was \$304,569.68.

The value of property returned by the city, town, and plantation assessors in 1892 was \$265,025.481. The estimate of expenditures for 1893 was \$1,504,535.54, and the estimated receipts, \$1,464,882.

Valuations.—Tables published by the State assessors give the following figures: Number of polls, 167,378; of real estate, \$164,555,671; of nonresident real estate, \$30,302,562; resident personal estate, \$66,595,471; nonresident personal estate, \$3,561,787; total amount of live stock, \$15,747,468; total amount of mills and machinery, \$20,208,236; total amount of bank and trust stock, money at interest, and stock in trade, \$35,691,969; total number of horses and colts, 144,702; of oxen and steers, 138,601; of cows, 138,994; of sheep, 370,602; of swine, 33,445; total value of live stock, \$18,553,686; value of wild lands, \$17,795,680; value of carriages, \$1,798,016; value of musical instruments, \$1,721,491; value of shipping, \$6,346,228; franchise tax on railroads, \$115,043.05; railroad commissioners' tax, \$10,000; tax on express companies, \$1.134; tax on telephone companies, \$8.125.

Mortgage Indebtedness.—In Maine the decrease in the number of farms for the decade ending with 1890 was only 3.5 per cent., little more than half the decrease in the State of New York, which was 6.1 per cent. In every 100 farms cultivated by owners, there are in Maine 78 free of debt and 22 with mortgages. The mortgage indebtedness per head of the population is \$49.

Banks and Loan Associations.—The savings-bank tax under the law passed by the previous Legislature for the year ending Oct. 29, 1893, amounted to \$406,021.89, an increase over that of 1892, when the assessment was made under the old law, of \$39,253.10. There are 53 savings banks in the State. Only one has suspended business—the Richmond Bank.

The total deposits in the savings banks, October, 1892, was \$53,397,949.15, a net gain of \$3,119,496.71 over the preceding year. The total

number of depositors at the same date was 155,333, making a net gain of 8,665 for the year. The average rate of dividend was 4.04 per cent.

The 29 building and loan associations had resources to the amount of \$1,460,193.40. The number of shareholders was 7,897; of borrowers, 1,658; of outstanding shares, 39,690; of shares pledged for loans, 7,860; of loans, 1,949.

Railroads.—The returns of railroad corporations for the year ending June 30, 1893, show that the mileage of steam railroads in Maine was, at that date, 1,399.14 miles. The extension of the Portland and Rumford Falls Railway, 14.73 miles, furnishes the only additional mileage to that of 1892. The gross earnings show a marked increase over the previous year. The number of passengers carried in 1893 was 6,332,535, against 6,178,076 in 1892. The number of tons of freight carried in 1893 was 4,188,948, against 3,694,934 in 1892.

The street-railroad mileage, June 30, 1893, was 76.14, an increase of 17.88 over that of 1892. The number of passengers carried was 7,600,062, an increase of 1,728,528.

Education.—The Superintendent's report shows a falling off in the number of pupils in 1892 from the figures of the preceding year. There is an increase of the number of weeks in which schools were held, due to the increase of \$80,264 in the resources, consequent upon the increase in State valuations. The free text-book law has been generally complied with, and there is practically uniformity of books. The expense of the plan was very much less than was anticipated, the average cost per pupil for the two years having been less than one dollar a year. The average for the past year was 58 cents.

The whole number of pupils in the State is 210,472, a decrease of 525; attending school during the year, 136,634, decrease, 4,799; average registered attendance, 113,692, decrease, 9,074; average daily attendance per term, 90,191, decrease 12,871.

Average wages of male teachers per month, excluding board, \$35.75, increase, 85 cents; average wages of female teachers per month, excluding board, \$17.32, decrease, 24 cents.

The whole amount expended was \$164,342, increase, \$16,767; paid by towns and districts, \$124,111, increase, \$16,057; paid from State treasury, \$40,231, increase, \$710.

The amount apportioned to the schools for 1893 was \$505,600.81, exceeding that of 1892 by \$17,706.33.

The three normal schools had a total attendance of 374, and 98 graduates. The Madawaska Training School had 64, and graduated 6.

The State College, at Orono, reported receipts for the year ending June 30, 1892, of \$111,862.54, and expenditures, \$111,187.53. It receives from the United States Government \$17,000 a year, under the Morrill act, for the department of agriculture. The senior class numbered 16.

Charities.—The inmates of the insane hospital, Dec. 1, 1892, numbered 685, of whom 328 were women. Two hundred and sixty-nine were admitted and 257 discharged during 1893.

The balance on hand, Dec. 1, 1891, was \$2,125.15; the receipts for the year, \$163,185.65; the disbursements, \$161,226.62. The hospital was filled to its utmost capacity, but the finish-

ing of two new pavilions has relieved this condition. Twelve insane criminals were removed during the year to the insane department of the State Prison, at Thomaston.

The Military and Naval Orphan Asylum has 49 children under its care.

According to the directors' report, issued in November, the General Hospital had a total number of patients during the year amounting to 1,069. Of these, 221 were free patients and 92 paid in part.

Reform Schools.—The visiting committee made the following report of the Boys' Reform School in December: Whole number of boys received into the institution since it was opened, 2,056; present number, 122; number committed during the past year, 36. A cottage, finished during the year, accommodates 80 boys of the higher grade. The work required of the boys in the chair shop is easily performed. What they do beyond that amount they receive compensation for.

The annual report of the Girls' Industrial School at Hallowell showed that all departments were in a prosperous condition. Three hundred and seventy-five girls have been committed to the school since its organization, in January, 1875. Sixteen have been admitted during the past year, and the average number at the school was 60.

Labor Interests.—The report of the Commissioner of Industrial Statistics gives the total cost of factories completed, enlarged, or in process of erection in 1892 as \$2,128,000, and the number of persons employed as 4,812. The list of employments in which women are engaged numbers 155. The deputy commissioner made 330 visits during the year, and took from the mills 104 children. He thinks the age limit should be fourteen.

Strikes took place in 1892 in the cotton mills at Biddeford and in the shoe factories at Auburn, where about 3,000 men are employed.

Machias.—Exercises commemorative of the first naval battle of the Revolution were held, Aug. 11-13, at Machias, including a reception to the officers of the ship "Machias." In recognition of the name given to the ship, and in commemoration of the early settlers of the town who took part in the battle, a gift was made to the ship by the people of Machias of a massive silver bowl, with date of the battle inscribed on one side, and a picture of the "Margaretta" and sloop "Unity" hauling alongside the war ship, and men leaping on board, all ready to haul down the British flag.

Blaine Memorial.—At a public meeting in Augusta, March 14, a Blaine Memorial Association was organized, for the purpose of collecting funds by voluntary subscription for a suitable memorial to James G. Blaine. Provision was made for the appointment of a subscription committee, and a committee of five to be appointed by the officers and the subscription committee, when, in their judgment, sufficient funds shall have been subscribed, this committee of five to be fully empowered to invite designs and proposals for a portrait statue in bronze of Mr. Blaine, and to make final decision, and be authorized to contract for the execution and erection of the work. The statue is to be at Augusta.

Indians.—In accordance with the appeal from the Passamaquoddy Indians, mentioned in the "Annual Cyclopædia" for 1892, page 430, the Legislature of Massachusetts passed a resolution requesting the Governor to communicate on the subject of the treaty obligations with the Governor of Maine. In reply to Gov. Russell's letter, Gov. Cleaves said, in part:

For a series of years the Passamaquoddy Indians, so called, have claimed certain rights in the State of Maine not conceded to them by treaty or legislative authority. Our Supreme Court, in the case of *State vs. Peter Newell*, 84 Mo., 463, has held that the Indians resident within this State are not "Indian tribes" within the treaty-making powers of the Federal Government, nor are they in political life or territory the successors of any of the various "Eastern tribes of Indians" with whom treaties were made by the Crown or the colonies, in colonial times, hence they can not effectually claim any privileges or exemption under such treaties.

The report of the Penobscot Indians gives the total number as 386. The schools have met with fairly good success. On Indian Island there have been two terms with an average attendance of about 45. Twenty-five families have been enrolled this year, and have been quite successful in farming.

The Aroostook Region.—This great region is being opened to communication by the Bangor and Aroostook Railroad, which reached Houlton in December. The county of Aroostook has an area only a few hundred miles smaller than that of Massachusetts. It has about 50,000 inhabitants, a population considerably larger than it had a decade ago. In spite of the fact that until the beginning of the Bangor and Aroostook road the county had but 29 miles of railroad within its limits, and had to send most of its products into the United States *via* New Brunswick, it yet shipped almost two million bushels of potatoes every season, besides immense quantities of lumber, bark, etc. The Bangor and Aroostook is the longest railroad ever projected under one management in New England.

Revision of Laws.—The following were appointed commissioners to revise the laws relating to private and special legislation: Leroy T. Carleton, Franklin A. Wilson, Sewall C. Strout. It is believed that, by the enactment of judicious general laws, future legislatures may be relieved of a very large portion of the private legislation that has heretofore occupied the time of legislative bodies. The commission is required to report at the opening of the next Legislature, with draughts of laws covering the subject-matter.

Legislative Session.—The sixty-sixth legislative session began Jan. 4, and ended March 29. When the Governor signed the last bill he had given his signature to 485 acts and 106 resolves.

Hon. Eugene Hale was re-elected United States Senator.

Legislation was enacted affecting many important interests, including payment of taxes, insurance and railroad companies, savings banks, courts, education, manner of voting, and corporations.

The drift of legislation pertaining to taxation seems to have been in the direction of securing for the State an increased revenue from its corporations. A tax of one fourth of 1 per cent. a year is imposed upon the monthly dues paid in

by shareholders in the loan and building associations. A new feature in the tax system is the act for taxation of collateral inheritances. The amount is 2½ per cent. of the value, above \$500. The section regarding taxation of railroads is so amended, by reducing the amount of average gross receipts per mile that serve as the basis for the graduated tax rate under the old law, that a considerable increase of revenue will be secured. A tax of 2½ per cent. is assessed upon the value of telephone lines. Express companies are required to pay to the State a tax of 1½ per cent. on gross receipts.

An unusual number of insurance measures came before this Legislature. By a new law, all contracts of fire insurance shall cover actual loss or damage not exceeding the amount insured. Coinsurance contracts shall state the value of property insured. No company, under penalty of losing its license, not organized in Maine, but doing business here, shall remove any suit or action from Maine courts to United States circuit or district courts, or enter into any compact to govern or control insurance rates.

The savings-bank bill provoked a vigorous contest. It is designed to promote investment in home securities by placing a discriminating tax upon investments in other States. The savings banks fought the measure vigorously, but popular sentiment was too strong for them and carried the day. A new law very carefully prescribes the character of investments that may be legally made by savings banks of the State.

Amendments were made to the Australian system of voting, such as have been shown in the trial of the law to be necessary.

Some changes are made in the laws governing courts.

The most important of the enactments relative to educational matters is that which abolishes school districts and provides for a more efficient system of supervision. The purpose of this law is to secure the more equitable distribution of school advantages. The age of pupils allowed to attend the public schools of the State is fixed between five and twenty-one years. Provision has also been made for free education of deaf, dumb, and blind children at the American Asylum at Hartford, Conn., the Portland School for the Deaf at Portland, Me., and the Perkins Institute, at South Boston, Mass.

In reference to insurance, it was enacted that no foreign surety company, unless it has a paid-up, well-invested capital of \$250,000, shall employ an agent within the State.

A great number of measures important to farmers came before the Legislature. The laws of 1889 relating to the extirpation of contagious diseases among cattle are amended so as to apply to horses and sheep as well, and not generally "to other live stock," as the law read before. One hundred dollars for an animal with pedigree recorded, and \$50 for an animal without recordable pedigree, is now the limit of appraisal by the cattle commissioners of condemned animals. The laws against cruelty to animals are made more stringent than before. A fine of not more than \$100 is imposed for docking horses. An act was passed compelling the licensing of all dogs over four months old in all cities, towns, and plantations of the State. Dogs without license or col-

lar shall be killed, and fines are imposed for keeping such dogs.

A law was passed authorizing and requiring the inspector of factories, workshops, and mines to enforce the laws relating to fortnightly payments and sanitary conditions. A law was passed to protect persons, associations, and unions in their labels, trade-marks, devices, and forms of advertising. No person shall bring into the State, or transport, intoxicating liquors, in violation of the law, under a penalty of a fine of not less than \$50 nor more than \$100, and sixty days' imprisonment.

MANITOBA. The provincial Legislature met on Feb. 2, and the following were the members of the Cabinet: Hon. Thomas Greenway, President of the Executive Council and Minister of Agriculture and Immigration; Hon. D. H. McMillan, Provincial Treasurer; Hon. Clifford Sifton, Attorney-General; Hon. J. A. Smart, Minister of Public Works; and Hon. J. D. Cameron, Provincial Secretary. John Jacob Jackson was elected Speaker. Lient.-Gov. Schultz opened the session with the customary address.

On March 1, Hon. Clifford Sifton, Attorney-General, introduced a motion that the Dominion Government be petitioned to enact a law prohibiting importation, manufacture, and sale of intoxicating liquor as a beverage into or in the province of Manitoba, and it was carried.

The new school act abrogated the previously existing laws legalizing separate schools, and under its provisions Government assistance and grants of public money are only given to what may be called national schools. All teachers must now pass the same examination, and all schools be inspected. Those in favor of the continuance of separate schools supported by public grants appealed against the law to the Manitoba courts, which rendered a decision maintaining its constitutionality. They next appealed to the Supreme Court, which decided the case against the new law, and the Provincial Government then carried the case to the Privy Council, which decided in favor of Manitoba.

The following were the most important measures adopted during the session:

To amend the liquor license act.

To incorporate the Winnipeg Industrial Colonization Company.

To incorporate the Melita Northern Railway Company.

To encourage the destroying of wolves.

To incorporate the Winnipeg Canal and Water Power Company.

To incorporate the Life Assurance Company of Manitoba.

The following are the principal grants of money voted by the Legislature during the session: Administration of Justice, Attorney-General's department, \$17,150; for the Canadian Pacific Railway extension, Pipestone and Glenboro branches, \$87,500; Red River Railway, \$50,000; World's Columbian Exposition, \$66,000; educational grants, \$123,685.38; interest on provincial debentures, half-breed mortgages, and railway bonuses, \$94,398.80; indemnity and mileage of members of Legislature, \$24,800; railway aid and interest (specially authorized), \$98,550; new courthouse, Winnipeg, \$85,000; normal school in connection with Public Works

Department, \$60,000; and to defray the expense of legislation, public institutions, salaries of Government employees, etc., for the months of January and February, 1894, \$80,000.

The session closed on March 11.

Finances.—The total revenue of the province for the last fiscal year was \$871,660.04, and the total expenditure, \$1,247,915.76, which, less \$247,571 carried to the debit of various ledger accounts, would leave an expenditure of \$1,000,344.75. Assuming the last figures as being the real expenditure for the year, the excess of expenditure over revenue would amount to \$128,684.71.

Prisons and Hospitals.—The total number of prisoners and insane persons received into the jails of the province during last year was 814, being 70 more than for the year before.

Agriculture.—Of wheat, the total amount produced in the province was 14,500,000 bushels, or a yield of 16½ bushels an acre; of oats, 11,500,000 bushels, being a yield of 35 bushels an acre; of barley 8,000,000 bushels; potatoes, 2,000,000 bushels; and of turnips, 7,000,000 bushels.

The number of immigrants arriving in Manitoba in the year was 20,016, being an increase of 6,893 over the year before. Among those settling in the province during the time specified, were several parties of Icelanders, who were allotted land on the shores of Lake Winnipeg.

Education.—The school population of the province is 29,564; pupils registered under five years of age, 180; from five to twenty-one years, 23,022; over twenty-one years, 94: total number registered, 23,244; average attendance for the year, 12,976. The number of teachers employed was 902, the highest salary paid was \$1,600, the average salary \$490.15. The receipts of the department of education for the year amounted to \$500,227, and the expenditure to \$636,592.

Fisheries.—The value of the product of the fisheries of the province for 1892 was \$314,705, being \$50,000 in excess of that for the previous year. The increase was ascribed mainly to the large catch of whitefish—nearly 800,000 pounds.

Railroads.—The work in connection with recent railway extension comprised the completion of the road from Deloraine to Napinka, Pipestone branch to Reston, and the Brandon and Souris branch, the latter providing facilities to an excellent farming district and to the Souris coal fields.

The Mennonite Colony.—Last year the Mennonite colony of southern Manitoba paid the last of their indebtedness to the Government of Canada. A sum amounting to \$96,400 was advanced to the colonists, most of whom were poor, by the Dominion Government, the repayment of the money being guaranteed by 150 well-to-do farmers of German descent of Waterloo County, Ontario. They met at first with many discouragements, but finally prospered far beyond their most sanguine expectations. What was a few years ago a treeless prairie, without a solitary settler, is now a well-cultivated district, dotted with villages, and the most thickly populated farming section in the Northwest.

Keewatin.—The Lieutenant-Governor of Manitoba is also Lieutenant-Governor of the province of Keewatin, an expanse of 400,000 square miles, extending from Manitoba to Hud-

son's Bay. Little of this domain is suitable for agriculture, but it is rich in minerals, timber, fish, and furs. The population of the province is composed almost exclusively of Indians, who live by fishing and the sale of furs. The small white population consists almost entirely of Hudson's Bay Company traders and agents, men engaged in timbering operations, missionaries, and justices of the peace, the latter being specially appointed to administer law in the districts assigned to them. In his last annual report Lieut.-Gov. Schultz mentioned the entire absence of crime in the province during 1892. He reported further that the clauses of the Keewatin act relating to intoxicating liquors had been enforced, and that permits were issued only on paper certificates for sacramental or medicinal purposes. The Lieutenant-Governor also stated that the destruction of their food supplies at many points on the seacoast had driven the Indians inland, where game and fish abound. The practicability of successfully growing barley, oats, northern wheat, and the common vegetables in various sections of the country was also reported.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and 1,042,390 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Frank Brown, Democrat; Secretary of State, E. W. Le Compte; Attorney-General, John P. Poe; Comptroller, Marion D. Smith; Treasurer, Spencer C. Jones; Insurance Commissioner, J. F. C. Talbot; State Tax Commissioner, Frank T. Shaw; Adjutant-General, H. Kyd Douglas; Superintendent of Public Instruction, E. B. Prettyman; Chief Justice, Richard H. Alvey; Clerk of the Court of Appeals, J. F. Ford.

Finances.—The report of the Comptroller for the year ending Sept. 30, 1893, shows the balance on hand at beginning of year, \$482,048.46; receipts during the year, \$2,533,611.48; total amount available for 1893, \$3,015,659.94. The amount of disbursements during the year was \$2,446,609.36; leaving a balance, Sept. 30, 1893, of \$569,050.58. The disbursements for the fiscal year 1892 were \$3,065,833.02; deducting the expenses of the biennial legislative session, amounting to \$142,738.77, the ordinary disbursements for 1892 were \$2,923,094.25; the ordinary disbursement for 1893 were \$2,446,609.36. The indebtedness of the State is as follows: Original loans issued of 1886, \$1,898,829.10; original loans issued of 1889, \$3,079,400; original loans issued of 1891, \$706,757.14; defense redemption loans issued of 1892, \$3,000,000. From this deduct the amount of said loans bought and held as sinking funds to meet loans at maturity, \$2,185,706.71; Baltimore city stock and Frederick City bonds owned and held by the State to meet loans (face value), \$715,381.32; and the account will stand: Liabilities, \$8,684,986.24; amount of liabilities held by State, \$2,901,088.03; liabilities not thus provided for, \$5,783,898.21.

Insurance.—For the year ending May 31, 1893, the Insurance Commissioner reports insurance business done in Maryland: Fire insurance—premiums received, \$1,881,275.11; losses paid, \$1,143,907.21. Marine insurance—premiums received, \$269,992; losses paid, \$129,960. Steam-boiler insurance—premiums received, \$13,556.83; losses paid, \$779.41. Plate-glass insurance—premiums received, \$5,629.25; losses paid, \$1,058.98. Accident insurance—premiums received, \$94,082.46; losses paid, \$29,810.53. Guarantee insurance—premiums received, \$65,667.74; losses paid, \$2,764.34. Assessment life insurance—premiums received, \$663,781.41; losses paid, \$380,776.08. Premiums received, \$5,897,787.50; losses paid, \$3,249,168.13.

Taxation.—The State taxes are levied as follows: For public schools, 10½ cents on \$100; to pay the interest and create a sinking fund for defense redemption loan, 5¼ cents; to pay the interest and create a sinking fund for the exchange loan of 1886, one fourth of 1 cent; and to pay the interest and create a sinking fund for the treasury relief loan, 1¼ cent; total, 17½ cents on \$100. Although the Treasury Relief loan has been redeemed, the act creating it is still in force, and the tax collected is invested in the several sinking funds.

Education.—By the Legislature of 1892 the Maryland School Tax Commission was created, its duty, broadly stated, being to investigate the present method of distribution of the State school tax, to consider what legislation on the subject is needed, and to report to the General Assembly of 1894.

A majority report was prepared, and also a minority report. The minority report stated that, except the adoption of the statistical statements, the only portion of the majority report in which all the commission was able to concur was the statements that they were "unable to agree upon any recommendation for a change in the present method of distribution of the school tax, and that each member of the commission shall have authority to make such recommendation to the Legislature as he may see fit." From the statistical statements of the commission the following figures are taken: Total number of children from five to twenty years of age, 370,892; number of white children in 1892, 226,806; number enrolled in the public schools, 154,635; average attendance, 88,342; number of teachers in white schools, 3,330; amount of salaries paid them, \$1,284,609.66. The number of colored children in 1892 was 68,409; number enrolled, 34,274; average attendance, 17,056; number of teachers in colored schools, 663; amount of salaries paid them, \$190,485.71. The amount of school tax apportioned for white schools for 1892, at about \$1.43 *per capita* was \$418,480.72; the amount apportioned for colored schools at the same rate was \$123,000.

The disbursements for public schools, including the academic fund, for 1893, were \$644,798.16. The total receipts, upon the taxable basis of the State, at 10½ cents on \$100, for 1893, for public schools, was \$591,075.89; balance from 1892, \$256,606.10.

The State Normal School reports that there are 350 students on the roll, and that applications for admission largely exceed the capacity

of the institution. In the Maryland Agricultural College 144 pupils were instructed during 1893, and 69 were refused admission because of lack of accommodations. The entire number enrolled in 1891 was 82. A two-story brick building, 60 by 40 feet, has been erected for a gymnasium and library, and, for the latter, 800 volumes have been secured. The School for the Deaf receives annually from the State \$25,000. The cost of the building was \$225,000. An industrial building was erected in 1892. The present capacity of the school is 150 pupils. The School for the Blind has under instruction about 100 pupils; of these, 74 are free scholars of the State. The entire revenue of the institution for the past year was \$45,455.16, of which amount the State appropriated \$21,000. The entire disbursements were \$38,850. In the Asylum and Training School for the Feeble-Minded the boys are taught the ordinary industries of the farm, and it is intended to erect workshops in which they can be taught certain manual arts. The girls are taught to sew and to knit. The capacity of the building is 64, and there are 51 pupils.

The Hospital for the Insane during the past year treated 549 patients. Its income was \$98,635.52, and its present indebtedness is \$11,584.46.

The Penitentiary is self-supporting, and in addition has contributed to the revenue of the State. Its capacity is about 700, and it now confines 630 prisoners.

The House of Correction has 232 cells, with a capacity for about 300 prisoners. It is intended for the reception of "short-term" prisoners.

The amount distributed to the charitable institutions of the State and to the State prisons during 1892 and 1893 is \$542,757.32.

The Live Stock Sanitary Board expended \$5,997.67 during the year.

Constitutional Amendment.—The amendment to the Constitution proposed in 1892, by which power is given to the General Assembly to create an additional judge of the Supreme Bench of Baltimore city, was submitted to the people at the election held Nov. 7, 1893, when 16,507 votes were cast in favor of its adoption, and 8,574 against it. The Governor issued a proclamation, Nov. 24, 1893, that the amendment was adopted.

Land Office.—During the two years ending Sept. 30, 1893, 53 patents for land were issued, granting about 9,281 acres, of which quantity about 7,400 acres were vacant; 157 warrants of survey were issued, and of these warrants 67 have been executed.

Coal.—During the year, 3,327,749 tons of coal were taken from the mines in Allegany and Garrett Counties. The sixteen companies in this region employ 4,071 men.

Judicial Decision.—By a decision of the Court of Appeals, in which all the members concurred, the employment of the "single-tax" system, which has been in operation for more than a year in the town of Hyattsville, has been declared unconstitutional. Hyattsville is almost a part of suburban Washington, and its 1,500 of population is largely made up of people who do business in that city.

In 1886 the Legislature created a municipal corporation under the name of "The Commis-

sioners of Hyattsville." To it was given power to levy taxes, but the rate was restricted to 15 cents on the \$100 of assessed valuation. In 1892 the "single-tax" men secured the passage of an act providing "that the Treasurer and assessors should, in 1892 and biennially thereafter, assess each and every piece of land within said town separately with the improvements thereon, at a fair cash value," and that "the board of commissioners shall levy a tax upon all the property not exceeding 25 cents per annum per \$100 of the valuation." Under this statute the land within the taxable limits of the town was assessed at \$369,709, and the improvements at \$180,000. Personal property was not assessed at all. The commissioners struck from the assessment roll the entire valuation on improvements, and levied a tax of 25 cents on each \$100 of the assessed value of the land. Thereupon sundry taxpayers filed a petition that a mandamus might issue to prohibit the collection of the taxes actually levied, and to compel the commissioners to restore the valuation of improvements to the assessable basis, and to assess and include in it all personal property. The circuit court for Prince George's County dismissed the petition, and from that order an appeal was taken to the Court of Appeals, with the result above stated.

MASSACHUSETTS. A New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,815 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,788,085 in 1880; and 2,238,943 in 1890. Capital, Boston.

Government.—The following were the State officers during the year: Governor, William E. Russell, Democrat; Lieutenant-Governor, Roger Wolcott, Republican; Secretary of State, William M. Olin, Republican; Treasurer, George A. Marden, Republican; Auditor, John W. Kimball, Republican; Attorney-General, Albert E. Pillsbury, Republican; Railroad Commissioners, Everett A. Stevens, William J. Dale, Jr., and John E. Sanford; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, John Lathrop, James M. Barker, Charles Allen, Oliver Wendell Holmes, Jr., Marcus P. Knowlton, and James M. Morton.

Finances.—The receipts and payments on account of revenue for 1893 were as follows: Cash in the treasury on Jan. 1, 1893, \$6,437,247.05; cash received during the year, \$33,188,466.72; payments during the year, \$30,374,333.67; balance on Jan. 1, 1894, \$9,251,380.10. On Jan. 1, 1893, there were securities in the treasury amounting to \$27,894,717.86. During the year securities valued at \$5,788,197.39 were purchased, while other securities amounting to \$10,238,733.78 were withdrawn, sold, or paid, leaving on hand Jan. 1, 1894, a balance of \$25,939,749.47. The total funded debt on Dec. 31, 1893, exclusive of the armory, Fitchburg Railroad, grade-crossing, and sewerage loans, was \$23,331,415.55, to meet which the State had in its sinking funds \$20,121,616.30, leaving the net indebtedness only \$3,209,799.25. The armory and sewerage loans, and that part of the grade-crossing loan already issued, together amount to \$6,480,000. The Com-

monwealth will not be required to pay the principal or interest of the first two named, and only a percentage of the last, but the bonds representing them are State bonds and form a nominal part of the public debt. The same may be said of the Fitchburg Railroad loan. Of the proceeds of the sewerage loan, amounting to \$5,000,000, there had been expended, up to the close of 1893, the sum of \$4,044,525.82. The receipts from the collateral inheritance tax during the year amounted to \$59,429.31.

Valuation.—The total assessed valuation of property in the State for 1893 was \$2,428,339,029; personal estate being assessed at \$588,675,216, and real estate at \$1,839,663,813. Included in the assessment were 4,508,945 acres of land, 383,713 dwellings, 191,178 horses, 234,334 neat cattle, 46,153 sheep, and 27,871 swine. Personal estate in Suffolk County, which includes Boston, was valued at \$219,269,121, and real estate at \$737,498,505. For 1893 a total State tax of \$1,750,000 was levied.

Legislative Session.—The regular session of the Legislature began on Jan. 4, and ended on June 10. On Jan. 17, Henry Cabot Lodge, Republican, was chosen United States Senator, to succeed Hon. Henry L. Dawes, the vote being as follows: Senate—Lodge, 29; Patrick A. Collins, Democrat, 11; House—Lodge, 161; Collins, 71. At the Republican caucus held on Jan. 4, Lodge received 147 votes, and William W. Crapo 30. The question of rapid transit in Boston was discussed, and two important measures were enacted with reference thereto. One of these provided for a commission with authority to take land for a subway or an elevated railroad, as the commission should determine. The act was made operative only upon its approval by a majority of the persons voting at a general or special election held in the city for that purpose. At this election, held in December, a majority of the votes opposed the measure. The other act provides that, upon its adoption by the City Council of Boston, the mayor shall appoint a commission, known as the Board of Subway Commissioners, which shall have authority to construct a subway for street railway purposes, extending through Tremont Street from the junction of Tremont and Pleasant Streets to Scollay Square, or near thereto. The city is authorized to borrow not exceeding \$2,000,000 to pay for the construction of such way and to carry out the other provisions of the act. Street railway companies shall be compelled to use such subway upon paying such compensation to the city as the Board of Railroad Commissioners shall deem just. This act was adopted by the City Council, and commissioners were appointed by the Governor late in December.

The franchises heretofore granted to the Cape Cod Ship Canal Company, which were about to lapse on account of the failure of the company to perform the conditions of its charter, were bestowed on a new company called the Old Colony and Interior Canal Company.

After a long investigation into the business and financial operations of the Bay State Gas Company, the legislators decided that it had violated the law in issuing a certain obligation for \$4,500,000, and an act was passed declaring its charter annulled unless such obligation should

be canceled and surrendered within a limited time. Later the company saved its charter by complying with this provision.

By another law, all new issues of railroad corporation stock are to be first offered to the stockholders at the market value thereof, such value to be determined by the State Board of Railroad Commissioners, and all stock not so taken shall be sold at auction to the highest bidder. These requirements are intended to put an end to railroad stock dividends.

Provision was made for winding up the affairs of all those endowment orders doing business under the act of 1888, authorizing the payment of benefits at fixed periods, and the business of such orders was thereafter forbidden.

A day's labor for all persons employed in manual labor for or in behalf of the Commonwealth was fixed at nine hours.

A Metropolitan Park Commission was created, with authority to acquire and maintain for the public benefit open areas of land within a district known as the Metropolitan Park District, embracing the following cities and towns: Boston, Cambridge, Chelsea, Everett, Lynn, Malden, Medford, Newton, Quincy, Somerville, Waltham, Woburn, Arlington, Belmont, Braintree, Brookline, Canton, Dedham, Dover, Hingham, Hull, Hyde Park, Melrose, Milton, Nahant, Needham, Revere, Saugus, Stoneham, Swampscott, Wakefield, Watertown, Wellesley, Weston, Weymouth, Winchester, and Winthrop. Within this district the commission was authorized to acquire land by purchase, gift, devise, or by eminent domain. The sum of \$1,000,000, to be raised by the issue of 4-per-cent. State bonds, was placed at its disposal for the purpose of carrying out the objects of the act. Provision was also made by which each town and city shall pay to the Commonwealth yearly a proportionate part of the interest annually due on such bonds, and a fixed sum for a sinking fund to meet the principal at maturity.

A constitutional amendment relative to the mileage of members of the Legislature, which was proposed at the session of 1892, was approved at this session, and provision was made for its submission to the people in November. Another amendment was proposed for the first time, abolishing the requirement that commissioners of insolvency be elected by the people.

A State tax of \$2,500,000 for the year was apportioned among the towns. A further appropriation of \$25,000 was made in aid of the State exhibit at the World's Fair, and the sum of \$100,000 was appropriated for the extermination of the gypsy moth.

Other acts of the session were as follow:

Authorizing cities and towns to provide free evening lectures.

Incorporating the trustees of the John Greenleaf Whittier homestead.

To regulate the manufacture and sale of clothing made in unhealthful places.

Requiring the treasurers and assistant treasurers of savings institutions to give bonds for the faithful discharge of their duties.

To quiet title to real estate.

To abate the smoke nuisance in cities.

To punish persons falsely pretending to hold degrees from educational institutions.

Revising and consolidating the law governing the volunteer militia.

Constituting ten hours' work in twelve consecutive hours a day's work for conductors, drivers, and motormen on street railways.

To prevent posting of advertisements on trees in the highways.

Codifying and consolidating the laws relating to elections.

Extending the law prohibiting discrimination against persons on account of race or color so as to include barber shops and any other public place kept for hire, gain, or reward.

To protect persons, associations, or unions of persons in their labels, trade marks, and forms of advertising.

To authorize towns to use the McTammamy automatic ballot machines at elections of town officers.

To provide for licensing plumbers, and for supervising their business.

To provide for the appointment of a commission to examine and report upon the Norwegian system of licensing the sale of intoxicating liquors.

To provide for a highway commission to improve the public roads.

Requiring the preparation of plans and estimates for a new State prison.

Education.—The following public-school statistics cover the school year 1892-'93: Number of children between five and fifteen years, 390,039; number of all ages in the schools during the year, 391,745; average attendance, 290,801; teachers employed—men, 989; women, 10,244; average monthly wages of male teachers, \$140.73; female teachers, \$48.13; number of public schools, 7,510; average length of school year in months, 8.13. During the year 247 high schools were maintained, with 28,582 pupils in attendance, an increase of 2 schools and 1,100 pupils. Evening schools to the number of 244 were supported in 58 cities and towns. The number of teachers employed therein was 1,088; the total number of pupils enrolled, 27,784; and the average attendance, 14,881. The whole amount of money raised by taxation for the support of public schools, including only wages of teachers, fuel, and care of fires and schoolrooms, was \$6,282,141.20, an increase of \$703,190.91 for the year. The amount expended for new school-houses was \$1,556,039.40. The expenditures for schools, exclusive of the sum paid for repairing and erecting schoolhouses, was \$7,888,605.29. The total expenditures, including repairs and new schoolhouses, aggregated \$9,448,436.52.

The Industrial School for Girls, at Lancaster, on Sept. 30, contained 112 pupils; the Lyman School for Boys, 238; and the Primary School at Monson (at which neglected and dependent children and those convicted of light offenses are cared for), 209, of whom 148 were boys, 50 girls, and 11 women.

Charities.—The following is a summarized statement of the condition of the State charitable institutions: Danvers Lunatic Hospital, patients on Oct. 1, 1892, 863; admitted during the year ensuing, 394; discharged, 388; remaining, Sept. 30, 1893, 869; total expenses, \$171,443.24. Northampton Lunatic Hospital, patients on Oct. 1, 1892, 489; admitted, 169; discharged, 178; remaining Sept. 30, 1893, 480; total expenses, \$34,332.25. Westborough Insane Hospital, patients on Oct. 1, 1892, 545; admitted, 340; discharged, 871; remaining Sept. 30, 1893, 514; total expenses, \$111,914.36. Taunton Lunatic

Hospital, patients on Oct. 1, 1892, 698; admitted, 388; discharged, 335; remaining Sept. 30, 1893, 751; total expenses, \$127,954.63. Worcester Lunatic Hospital, patients on Oct. 1, 1892, 891; admitted, 534; discharged, 539; remaining Sept. 30, 1893, 886; total expenses, \$176,251.54. Worcester Insane Asylum, patients on Oct. 1, 1892, 449; admitted, 70; discharged, 65; remaining Sept. 30, 1893, 454; total expenses, \$74,803.28. State Almshouse at Tewksbury, insane department, patients on Oct. 1, 1892, 380; admitted, 157; discharged, 74; remaining Sept. 30, 1893, 463; almshouse department proper, inmates on Oct. 1, 1892, 825; admitted, 3,160; discharged, 2,980; remaining Sept. 30, 1893, 1,005. State Farm at Bridgewater, inmates on Oct. 1, 1892, 788; admitted, 962; discharged, 993; remaining Sept. 30, 1893, 757. Massachusetts School for the Feeble-minded at Waltham, pupils on Sept. 30, 1892, 398; admitted during the year, 101; discharged, 79; remaining Sept. 30, 1893, 420; expenses, \$107,850.01.

Prisons.—The number of convicts at the State Prison on Oct. 1, 1892, was 656; during the year following 145 convicts were admitted and 155 discharged, leaving 646 remaining on Sept. 30, 1893. The net cost of supporting the prison during the year was \$154,224.12, a decrease of \$7,790.07 over the previous year. The result of employing prisoners on industries upon the State account was a loss of \$17,202.02 for the year, against a loss of \$8,724.82 for 1892. The total cost of the institution to the State was therefore \$171,426.14. At the State Reformatory in Concord there were 887 prisoners on Oct. 1, 1892; 860 were received during the year ensuing, and 760 were discharged, leaving 987 remaining on Sept. 30, 1893. The current expenses of the institution were \$180,853.09, from which should be deducted \$25,053.55, the profit made upon the labor of prisoners, leaving \$155,799.54 as the net cost of the year. The Reformatory Prison for Women contained 292 inmates on Oct. 1, 1892; 308 were received during the year following, and 288 discharged, leaving 312 remaining on Sept. 30, 1893. The expenditures for the year were \$54,378.05, and the receipts from labor of prisoners and other sources \$20,392.65, making the net cost of the reformatory \$33,985.40.

In all the penal institutions in the State there were 6,408 prisoners on Oct. 1, 1892; 27,649 prisoners were committed during the year following, and 27,022 discharged, leaving 7,035 remaining on Sept. 30, 1893.

Savings Banks.—During the year ending Oct. 31 1,101,410 deposits, amounting to \$75,727,471.03, were made in the 185 savings banks of the Commonwealth, and \$15,655,565.81 in dividends were placed to the credit of depositors. During the same period there were 953,053 withdrawals, amounting to \$84,403,075.29, leaving the aggregate amount to the credit of depositors on that day \$390,995,569.81, represented by 1,214,493 accounts, an average of \$329.35 to each account. The total assets of the banks amount to \$424,579,334.38. Compared with the previous year, these figures show a decrease of 73,885 in number of deposits made, a decrease of \$6,808,063.12 in amount of deposits, an increase of 132,915 in number of withdrawals, an increase of \$10,744,837.36 in amount of withdrawals, an increase of

\$1,033,771.24 in dividends, an increase of \$6,-975,707.73 in the aggregate of deposits, an increase of \$8,681,174.94 in total assets, and a decrease of 94 cents in the average to each account.

Political.—The Prohibitionists met in State convention at Worcester on Sept. 6, and nominated the following ticket for State officers: For Governor, Rev. Louis A. Banks; for Lieutenant-Governor, Henry C. Smith; for Secretary of State, Samuel B. Shapleigh; for Treasurer, Wilbert O. Farnham; for Auditor, Alfred H. Evans; for Attorney-General, Robert F. Raymond. The usual platform was adopted. A convention of the People's party was held at Lynn on the same day, at which George H. Cary was nominated for Governor, Joseph K. Harris for Lieutenant-Governor, Isaac W. Skinner for Secretary of State, Thomas A. Watson for Treasurer, Maurice W. Landers for Auditor, Conrad Reno for Attorney-General. The platform demands a postal-bank system for deposit and exchange, Government ownership of railroads, telegraph and telephone lines, and a Federal system of coal-mining and distribution; recommends State and National supervision and control of the liquor traffic; protests against municipal contract labor system, and demands that civil-service rules be applied to all public employees; favors a universal workday of eight hours, and full municipal suffrage for women; demands such laws as shall compel the wealthy holders of personal property to pay their share of the taxes, and favors the municipalization of all local utilities, such as furnishing of gas, electricity, water, street railway transportation, etc.

The Democratic Convention, held at Boston on Sept. 27, placed in nomination the following candidates: For Governor, John E. Russell; for Lieutenant-Governor, James B. Carroll; for Secretary of State, James W. McDonald; for Auditor, John T. Wheelwright (who declined the nomination, and was succeeded on the ticket by Borden Hall); for Treasurer, Eben S. Stevens; and for Attorney-General, Charles S. Lilley. The platform favors the election of United States Senators by direct vote of the people, and contains the following declaration:

The Executive Council should be abolished, and the power of confirmation should be vested in the Senate. The Governor should appoint all purely executive officers, and have full power of removal, so that such officers and the members of commissions may be under his control, in order that coherent administration of State affairs and responsibility to the people may take the place of our present chaotic and irresponsible system.

We call attention to the subservency of the Republican Senate of the last Legislature to corporate influences, and particularly to its refusal to prohibit corporations enjoying special franchises from issuing, directly or indirectly, watered stock or other representatives of value for which an insufficient equivalent has been paid in. We demand a more rigid enforcement of existing laws relating to the capitalization of corporations, the enactment of further laws against stock watering, and the passage of measures tending to secure to the community a full return, by taxation or otherwise, for all special privileges or franchises.

We favor the adoption in this Commonwealth of some plan of referendum by which important acts of the Legislature can be submitted to popular vote.

We favor the adoption in this State of substantial taxes upon legacies and successions, both direct and collateral.

The Republican State Convention met in Boston on Oct. 7. There had been an interesting contest in the primaries between the friends of Attorney-General Pillsbury and ex-Congressman Frederic T. Greenhalge, in which the latter appeared to be the more successful in securing delegates. Before the convention was held Mr. Pillsbury withdrew, and Mr. Greenhalge was nominated for Governor by acclamation. Lieutenant-Governor Wolcott, Secretary of State Olin, and Auditor Kimball were renominated. For Treasurer, Henry M. Phillips was nominated, and for Attorney-General, Hosea M. Knowlton. Upon State issues the platform contains the following declarations:

The free school is the great bulwark of freedom. We will stand by it, no matter who shall assail it. Free public libraries, relief to the honest poor, succor to the unfortunate and helpless, the rescue of the wayward, the amelioration of the conditions of living among the toiling masses, all these shall have our constant support. We favor every practical measure that shall diminish intemperance, disorder, and crime. The Republican party will have no common interest with the saloon or the groggery. It will not recognize their right to dictate nominations or policies. We call for vigorous laws that shall bring severe penalties upon every offender against purity and honesty in elections.

The expediency of levying a tax upon legacies and successions was first commended to the attention of the General Court by a Republican Governor. We favor amendment to the existing law that will reach all bequests and inheritances, direct or collateral.

We believe that corporations which receive public privileges and valuable franchises from the people should be compelled to render good service to the public at reasonable rates based upon an honest capitalization, and that stock watering and all other kindred schemes of fraud in such corporations should be strictly prohibited by law.

We believe in frequent appeals to the people, and that, on important matters of legislation and under reasonable restrictions, some proper system of initiative and referendum may be wisely adopted, especially in such matters as refer to local self-government.

After a short but earnest canvass, in which national issues bore the leading part, the Republican ticket was elected in November by unusually large majorities. For Governor, Greenhalge received 192,618 votes; Russell, 156,916; Cary, 4,885; Banks, 8,556. There was also a Socialist Labor ticket in the field, headed by George E. O'Neill for Governor, who received 2,033 votes. Members of the State Legislature were chosen at the same time as follows: Senate—Republicans 33, Democrats 7; House—Republicans 183, Democrats 56. The constitutional amendment relative to the mileage of members of the Legislature was adopted by a vote of 125,375 in favor and 80,855 against it.

Special Election.—The selection by the Legislature of Congressman Henry Cabot Lodge as successor to United States Senator Henry L. Dawes, caused a vacancy in the Seventh Congressional District, to fill which Gov. Russell called a special election for April 25. The Republicans nominated William E. Barrett; the Democrats, William Everett; the People's party, George H. Cary; and the Prohibitionists, Louis A. Banks. Although this was a strongly Republican district, the Democratic candidate was elected by 34 votes. The official vote stood: Everett, 9,733 votes; Barrett, 9,099; Cary, 1,001; Banks, 602.

METALLURGY. Iron and Steel.—Experiments of H. S. Dyer on the production of pure iron in the basic furnace were made with the object of obtaining such an iron in order to determine the value of alloys. By working on the lines that he followed, the author hopes that pure iron and steel may be produced at reasonable cost. In the first experiments the furnace was charged in the ordinary manner with pig and scrap of fairly good quality, and the charge was worked slowly, care being taken, by liberal additions of limestone, to keep the slag well saturated with lime. The phosphorus was reduced during the process, but the result left much to be desired in other respects. Charges composed of from one half to four fifths of good scrap, and one half to one fifth of good Swedish pig, were then worked very quickly, and a remarkably pure iron was obtained. The next stage of Col. Dyer's experiments had for their object the utilization of ordinary scrap steel and the production, in the basic furnace, of steel high in carbon and low in phosphorus, and at the same time to decrease the wear and tear of the furnace. The principle of the process consists in melting scrap with carbonaceous material. The results of the experiments showed that when a pure carbonaceous material and ferro-manganese free from phosphorus can be obtained, there will be no difficulty in producing a pure carbide of iron containing only sufficient manganese for forging.

As the result of a wide series of experiments, the Valentine Iron Company, Bellefonte, Pa., has determined as the range within which the pig iron should run, varying somewhat for light or heavy work: Silicon, 2.50 to 3.75; graphite carbon, 2.75 to 3.25; combined carbon, 0.25 to 0.75; manganese, 0.30 to 0.70; phosphorus, 0.40 to 0.80; sulphur, not more than 0.06 per cent. Some of the finest machine borings the company has ever seen, obtained from a sewing-machine company, showed the analysis of the casting to be: Silicon, 2.82; graphite carbon, 3.36; combined carbon, 0.16; manganese, 0.67; phosphorus, 0.60; sulphur, 0.05 per cent.

Metallurgical experts, searching for methods for the removal of sulphur from iron, have tried many processes, but abandoned most of them. All are based on the use, in one way or another, of alkaline or basic materials. In the method described by Mr. Stead and Mr. Sainter before the Iron and Steel Institute, calcium chloride is the purifying material in admixture with iron, and the process is adapted either for purifying fluid iron or pig iron direct from the blast furnace. The fluid metal is run into a ladle having a layer of the purifying materials at the bottom, and afterward running the metal into pigs or plate metal for subsequent use in the puddling process; or the crude sulphury pig may be treated in the basic Siemens furnace or Bessemer converter with the desulphurizing mixture. About 70 per cent. of sulphur can be removed from the charge of metal in an open-hearth furnace by this process, which is in practical working at Wigan.

To the numerous ferro-compounds, in which the qualities of iron are modified by mixture of such substances as silicon, chromium, aluminium, etc., H. N. Warren has contributed a research on

boroneisen, or boron iron. Prepared by mixing solutions of borax and ferrous chloride and reducing with carbon, a boron iron having from 4 to 5 per cent. of boron breaks with the fracture of metallic manganese, is hard enough to scratch glass readily, is soluble with difficulty in acids, and has a melting point approaching that of cast iron. A more economical method of preparation is by reducing ferric carbonate or oxide in admixture with boron oxide and charcoal. The most peculiar property of the compound thus obtained is its great predominance when in admixture with large quantities of iron. One ounce of the boride thus melted with about two pounds of iron causes the whole to break with almost an analogous fracture to that of the boron compound itself, while it contains only the fraction of a percentage of boron. The boron iron thus produced casts more soundly, expands slightly, and is free from blowholes.

Trials have been made during the past two or three years, with the most satisfactory results, of armor plates and projectiles hardened or supercarburized by the Harvey process. This invention of H. A. Harvey, of Orange, N. J., is essentially a cementation process, in which the steel is treated under special conditions. The armor plate is made either from a steel comparatively low in carbon, or a high-carbon nickel steel, and is laid flat upon a bed of finely powdered dry clay, deposited upon the bottom of a fire-brick compartment erected within the heating chamber of a furnace. The treating compartment is then partially filled up with granular carbonaceous material, which, having been rammed down upon the plate, is covered with a stratum of sand, upon which is laid a covering of fire bricks. The furnace is then raised to an intense heat, which is kept up for such time as may be required for the absorption by the metal adjoining the upper surface of the plate of the quantity of carbon, in addition to that originally present, which may be necessary to enable the metal to acquire the capacity of hardening to the desired degree. After the carburizing treatment the plate is taken from the furnace, and without removal of the carbonaceous material from its surface is allowed to cool down to the proper temperature for chilling. During the cooling operation the carbonaceous material protects the hot supercarburized surface from the air, and thus prevents the formation of scale, which, if present, would interfere with the subsequent hardening of the metal. When the supercarburized surface is so far cooled down as to have a dull cherry-red color, the carbonaceous material is quickly removed, and the plate is then chilled by being sprayed with cold fluid, or by being submerged and kept in motion until cold in a large body of cooling fluid. Certain difficulties in the practical operation of this process, arising out of the disposition of powdered charcoal to fly off in dust, are obviated by a modification introduced by Mr. Harvey, in which the carbonaceous treating bed is formed partly of finely powdered wood charcoal and partly of animal charcoal.

In a process for mottling iron, recently introduced, the iron particles to be case hardened, having been cleansed, are brightly polished and then placed in an iron box and covered either

with bone dust or old leather that has been burned. The box is next placed in a brisk fire and allowed to remain about one hour, or until no doubt is left that all parts of the iron are heated to redness. The contents of the box are then dumped quickly into water. This operation requires great care, as the air must not strike the iron before it reaches the water. Special apparatus and practice are necessary to give the iron the desired blue-gray mottled color, for if the air touches the iron it assumes a black or blue-black streaked hue accordingly as the experiment is more or less imperfect. After the case-hardened iron is cooled it is varnished.

A new process for enameling iron, introduced by M. O. de Rochefort Luçay, depends upon a chemical action which can be produced upon iron with the aid of another metal. The operator causes a thin adherent pellicle of another metal to be formed on the iron or casting, and exposes it to a heat of 1000° C. in a current of a gas having oxidizing properties. The oxygen penetrates the pellicle and forms a magnetic oxide. This oxide increases as the exposure to the oxidizing current and the heat is continued, forming deeper within the metal as long as the process is kept up. The pellicle of metal first deposited disappears, forming oxides which combine with the magnetic oxide, or being volatilized according to what metal is employed. Bronze has been found by M. Bertrand to be the best metal for this purpose, and the electric process or the dip bath with sulpho-phenic acid the best method of effecting the deposit.

An ironmaster of Wolverhampton, England, has patented a process for removing the coatings from waste tinned and galvanized iron and considerably increasing the value of the iron, which is usually of good quality and capable of standing a high tensile strain.

An abstract of five series of tests made at the Massachusetts Arsenal to determine the effect of temperature on iron indicate that the strength of steel is greater at about 500° F. than it is at 79° F. The tests were made with five different qualities of steel, containing, respectively, 0.09, 0.20, 0.31, 0.37, and 0.51 per cent. of carbon, and the percentage of strength was obtained by dividing the tensile strength of a sample at the given temperature by the strength of the same quality of steel at 70°. The specimens were stronger in the neighborhood of zero, Fahrenheit, than at ordinary temperatures—all of them showing a minimum of strength at 210° F., or thereabouts, and a maximum of strength at about 550° F.

The new electric process for welding iron, of Mr. Julien, of Brussels, is based upon the fact that if one pole of a source of electricity is plunged into acidulated water, or water having in it a salt solution, and a sufficiently strong electric current is passed through, oxygen is given off at the (lead) anode, and hydrogen at the (iron) cathode. By increasing the current the evolution of gas can be augmented to such a degree that the iron bar, surrounded by hydrogen, is no longer in contact with the solution. As, however, the hydrogen "envelope" offers great resistance to the passage of the current, considerable heating takes place, whereby the "envelope" and the iron bar are brought to a white heat or

glowing condition. In this way temperatures up to 4000° F. can, it is said, be attained.

C. B. Adams, of the Wabash Railroad, has observed that after removing some main-line rails and relaying them on another part of the road, many of them gave out immediately, while others manifested no signs of wear. An investigation of the matter showed that the road from which the rails had been removed was built in a northwest to southeast direction, and that, in relaying, a large number of rails had been turned end for end. Those that had not been so placed exhibited no additional loss by attrition, while the turned rails succumbed in from thirty to ninety days. The conclusion was that the metal had been polarized from long use when first laid, and that the fiber was broken up by the traffic in the opposite direction from that in which it had been formed. It was also found that cast-iron wheels generally yielded twice the mileage when the cars were turned at each end of the journey than when they were run backward and forward.

L. J. D. Halter has produced a new kind of steel which is characterized by its specific composition, and is more especially adapted for the manufacture of springs of all kinds. It is claimed that springs made of this steel are capable of supporting, without permanent set, much heavier loads than springs now in use. The following are the component parts of the steel:

Silicon	1.8 to 3.2 per cent.
Carbon	0.25 to 0.45 "
Manganese	0.45 to 0.55 "

The process of manufacture remains practically the same as for ordinary steel, the proportion of the ingredients alone being varied. The metal is tempered at a higher temperature than usual—i. e. at from 900° to 1000° C.

To increase the yield of steel in the Bessemer and Siemens processes, J. Colley and T. Twynam utilize some of the excess of heat and the heat giving metalloids in the pig iron to be converted for the direct reduction of iron oxides, which oxides are thereby converted into steel simultaneously with the pig iron.

M. Sergius Kern concludes that the best reducing addition for steel castings is silico-spiegel with 10 per cent. of silicon and 12 per cent. of manganese. After casting, the products should contain from 0.25 to 0.30 per cent. of silicon. Mr. J. W. Spencer, of the Newburn Steel Works, made experiments to the same end, almost simultaneously with M. Kern, and arrived at nearly identical results. Aluminium was found to be an excellent reducing agent, decomposing the oxides and giving a metal without blowholes. But in castings of 165 to 250 kilogrammes it yields a crystalline structure which is defective. The presence of this metal increases the resistance to breakage.

In a new method, employed at Birmingham, England, for making weldless cold-drawn steel tubes suitable for bicycle-making, and other machine work where strength, lightness, and accuracy are required, the steel used is of special quality, and is received from the steel works in the form of sheets. Circular flat disks are next cut out of the sheets; these disks are pressed into the form of shallow cups, which are then passed successively through dies of decreasing diameter,

so as to reduce the diameter and increase the length of the cups until the flat disks of steel have assumed the form of tubes of the required lengths, with an end closed, to be cut off after the final drawing operation has been performed. The tubes are produced of sizes from $\frac{1}{4}$ inch to one sixteenth of an inch in diameter, are parallel inside and outside, and are concentric.

The following process for welding steel is recommended in Germany: Heat in an iron vessel 64 parts of borax, 20 parts of sal-ammoniac, 10 parts of ferrocyanide of potassium, and 5 parts of colophony, all pulverulent, together with some water and a spoonful of brandy. Stir well; let cool in the vessel, and then stamp to a powder. The steel pieces to be welded are brought to a bright-red heat at the weld points, and the process is then conducted in the usual way with the help of the powder.

The Coffin process for annealing steel, in use by the Cambria Iron Company, it is claimed, produces the important effect of materially raising the elastic limit of the metal without decreasing its ductility or ultimate strength.

In his method for tempering steel by electricity, Capt. Lagrange, of the Belgian army, uses the piece of metal as the negative electrode. The temperature of the surface rises very high; the passage of the current is interrupted. By this method, the inventor claims, particular parts of a specimen may be tempered.

A French manufactory, the *Acières de Saint-Denis*, is offering tools and mechanical pieces generally manufactured according to a method and with machinery permitting the supply in ingot steel (*acier fondu*) of articles which hitherto have been made of steeled iron or cemented cast iron. With ingot cast steel (*acier fondu coulé*) having for base a central substance, finished iron only, to the exclusion of crude iron or steel, the *Acières* obtain an ingot steel the fluidity of which permits the manufacture by casting in pieces or tools of a weight inferior to 15 grammes. This steel, owing to its homogeneity, has a maximum density. It can be tempered, like any other ingot steel.

Gold and Silver.—In assays of gold bullion, T. K. Rose observes, the amount of copper or silver contained in the assay piece very considerably influences the "surcharge" or difference in weight between the gold originally present in the assay piece and the result finally obtained. The presence of antimony, zinc, tellurium, iron, or nickel reduces the surcharge by quantities which the author has determined. It therefore follows that to insure accuracy check assays must be made on alloys of the same composition as those under examination. Variations in the surcharge are also caused by changes in temperature of the muffle furnace used in cupellation.

The peculiar feature of the cyanide-gold extraction process of Mr. W. Hannay is the stirring up the ore in an electrolytic cell with a carbon anode and necessary cathode.

In the method devised by William Beitel for treating the slimes formed under the action of the cyanide-gold process, a mass of the slimes is mixed with 50 per cent. of its weight of the double cyanide of manganese and potassium, mixed with ordinary cyanide solution. While in a state of suspension the mixture is charged into a filter

press under pressure, water is forced through, and the gold-cyanide solutions are thoroughly washed out. The forcing of water is continued until the escaping fluid does not show an alkaline reaction.

The gold ore concentrator of F. W. Grey and W. Marsh is provided with an outlet which is adjustable relatively to the inlet, and also with means whereby the capacity or area through which the ore passes can be varied. The concentrator may consist of a vessel preferably of an inverted conical or pyramidal form, within which is placed a box of corresponding form, so as to leave a space between the latter and the interior of the outer vessel. This space is made adjustable to suit various classes of ores being treated. The ore, mixed with the necessary amount of water, is introduced at one end of the space, say the bottom, and passes up toward the outlet.

Discussing the limits of accuracy of the analysis of gold bullion, T. K. Rose observes that if attention be paid to the certain causes of error which he points out, the gold in bullion of a high degree of purity can be determined within a range of ± 0.02 per 1,000, the limits of accuracy having been previously considered to be ± 0.10 per 1,000. This extreme degree of accuracy is possible only if the check gold be pure. The losses of gold in bullion assaying are due to absorption by the cupel, volatilization in the muffle, and dissolution in the parting acid. The losses found in a number of assays, the results of which are given, range from 0.44 to 0.64 parts per 1,000. Concerning the loss by volatilization, it was found that an increase takes place when the temperature is high, pure gold losing four times as much at 1245° as at 1090° ; that a large amount of gold is volatilized in an atmosphere mainly consisting of carbonic oxide, while a small amount is lost in coal gas; that a comparatively small amount of gold is carried away by the more volatile metals, copper appearing to exert an exceptional action; metals which are easily volatilized do not appear to be completely driven off by the highest temperatures attained in the experiments; and that a large proportion of gold is lost in the case of alloys that form flat buttons on the cupel, and conversely, a small proportion is lost from spherical buttons, although the surface actually exposed is greater in the latter case than in the former. A current of air or gas passing over the buttons does not seem to increase the loss, provided the surface of the molten metal remains at rest. These results point to the conclusion that the conditions which lower the surface tension of the gold button simultaneously raise the vapor pressure of the gold. Prof. Roberts-Austen observed, in the discussion of the paper in the Chemical Society of London, that he and his two colleagues in the assay office of the British mint had made in the past year 30,000 assays of gold, and they had every reason to believe that their average accuracy was $\frac{1}{1000}$ part.

Rich argentiferous ores containing blends are treated by J. David in such a manner as to increase the yield of silver and promote the recovery of the zinc while lessening the cost of treatment. The ore is reduced to a fine powder and mixed with a boiling solution of chloride of iron (a waste product from tin-plate works), to which are added hydrochloric acid and oxidizing agents. The sulphide of zinc is then decomposed, the zinc

being dissolved as a chloride and the sulphur set free, when the ore is ready for calcination.

For certain special economical reasons the higher grade sulphide ore is treated at Broken Hill, New South Wales, by the roast reduction process direct. The ore treated contains from 30 to 35 per cent. lead, 18 to 25 per cent. zinc, 10 per cent. iron, 10 per cent. gangue, and from 26 to 30 ounces of silver per ton. The roasting is carried on at a low temperature, with no attempt to sinter. The roasted ore is smelted with about one fourth its weight of carbonate ore, together with the proper proportion of fluxes and old slag to form a fusible slag and to render the charges permeable by the blast. Slags of various types were produced, some of which contained as much as 30 per cent. of oxide of zinc, and were fusible. Of the various types tried up to the present time that which has given the best results is a basic slag having the following composition: Silica, 24 per cent.; oxides of iron and manganese, 36 per cent.; zinc oxide, 16 per cent.; lime, 16 per cent. This runs well even if the sulphide of zinc should go a small proportion more than is shown above. It is fairly clean so far as its lead and silver contents are concerned, and it separates from zinciferous matter as well as other types of slag.

For estimating gold and silver associated with antimony, Ernest A. Smith mixed 500 grains of the metal crushed to a fine powder with litharge, 1,000 grains, potassium nitrate, 200 grains, and sodium carbonate, 200 grains, and heated in a wind furnace at a dull-red heat for about fifteen minutes. When quite tranquil the contents were poured into an ingot mold, and the button of lead, which weighed about 500 grains and was perfectly malleable, was cupelled direct. The resulting gold-and-silver button was parted with dilute nitric acid in the usual way.

To estimate the gold and silver in metallic bismuth, 500 grains were carefully cupelled, and the buttons of precious metals thus obtained were parted in the usual manner. The bismuth may be extracted from the cupels by rejecting the white portion, and crushing the stained portion to a fine powder and fusing at a red heat with fluxes.

Aluminum.—By the Hall process for preparing aluminum the price of that metal has been reduced from \$15 per pound to 50 cents per pound, making it, bulk for bulk, as inexpensive as copper and cheaper than nickel or tin. With it, working on a large scale, it is estimated that the cost of making pure aluminum can be brought down to 17 cents per pound. The process consists in reducing the oxide of aluminum by dissolving it in a fused bath consisting of a fluoride of aluminum together with a fluoride of some other metal more electro-positive than aluminum, and precipitating the metallic aluminum from this ore by electrolysis. The fused fluoride bath remains practically constant, and therefore costs but little. The ore is dumped into it, and, upon dissolving, the metal is immediately electrolyzed out by the current at the negative pole, and falls to the bottom of the pots. These are tapped or ladled out without disturbing the operation of the process, which is therefore continuous, and the purity of the metal thus obtained is higher than has ever been

attained by any other process. This process is identical with that of Hérault, which is carried on at Neuhausen, on the Rhine, in Switzerland.

In a paper on the industrial preparation of aluminum M. A. Ditte says that the alkaline aluminates are decomposed by water, and even in the presence of an excess of alkali the introduction of a few crystals of aluminum hydrate into the solution suffices to prevent the establishment of equilibrium and to effect the decomposition of the aluminate. The rapidity of the reaction may be increased by stirring. In the industrial process of obtaining aluminum from bauxite these crystals are provided by adding to the sodium aluminate a little of the deposit obtained by treating it with carbon dioxide in the cold, a deposit which consists of crystallized aluminum hydrate. The gelatinous hydrate has no such effect. The alumina precipitated is very pure. Substances such as silica and phosphoric acid, dissolved out of the bauxite by the caustic soda employed, remain in solution.

Files are now made containing a small portion of aluminum mixed with the file steel. It is claimed that this causes a great change in the character of the steel. It renders the steel softer when the file is cut, so that the teeth are much cleaner and more evenly cut than with the ordinary file; and when the file is hardened it gives the metal a toughness and hardness previously unknown, so that the result is a file that will do more work and with less clogging than the ordinary tool.

L. Grabau has devised a process for supplying aluminum fluoride in a sufficiently pure state at a cheap rate, so that it can be advantageously employed for the manufacture of aluminum. It consists in the employment of hydrofluoric or hydrofluosilicic acid with clay. Pulverized calcined clay, or kaolin, as poor in iron as possible, is introduced into dilute hydrofluoric or hydrofluosilicic acid with continual stirring during the process. At the end of the reaction the mass is neutralized, so that a drop of it forms a pure yellow color with tropeolum. A solution of aluminum fluoride is thus obtained free from silicic acid.

A method of coating aluminum with other metals, described by Prof. Neesen, of Berlin, consists in dipping the aluminum in a solution of caustic potash or soda, or of hydrochloric acid, until bubbles of gas make their appearance on its surface, whereupon it is dipped into corrosive sublimate to produce amalgamation. After a second dipping into caustic potash till bubbles of gas are evolved the metal is placed in a solution of a salt of the desired metal. A film of the latter is rapidly formed, and is so firmly adherent that in the case of silver, gold, or copper the plate can be rolled out or polished. When coating with gold or copper it is well first to apply a layer of silver. When thus treated the aluminum may be soldered with ordinary solder.

In the new method of Herr Bornträger for the separation of iron and alumina both hydroxides are precipitated together, ignited, and weighed as oxides. They are then redissolved in hydrochloric acid, rendered almost neutral with potash lye—not soda—and both oxides are then reprecipitated with neutral liquid potash soap. After filtering, the potassium chloride is

removed by washing with water, and the filter having been dried the iron oleate is run off with hot petroleum.

The peculiar adaptability of aluminum for the construction of roofs for train sheds and other similar purposes is pointed out by Alfred E. Hunt. Sheet aluminum can be furnished with a tensile strength fully equal to that of sheet copper; it can be bent and flanged readily, and can be fastened together in the same way copper sheets are. The metal is not acted on severely by salt water, and in an experiment made on a sailing vessel at sea a copper sheet corroded more than one of aluminum under equal exposure by immersion. Barnacles, however, seem to thrive on the aluminum plates. Mr. Hunt has also tested aluminum in contact with gases from locomotives, and finds that it lasts remarkably well, being in this respect better than copper, and far superior to iron. It is, however, not advisable to use soldered joints either with aluminum or copper plates, because of the expansion which the metal suffers, which would soon cause the joints to leak. The galvanic action of aluminum with other metals should also be considered when the question of using it arises.

The following solders for aluminum are recommended by J. Novel: No. 1, pure tin; melts at 250°. No. 2, pure tin 1,000 parts, fine lead 50 parts; melts at from 280° to 300°. No. 3, pure tin 1,000 parts, pure zinc 50 parts; melts at from 280° to 300°. These three solders may be used in the manufacture of aluminum trinkets. For the following two solders the soldering iron should be made of pure nickel; no. 4, pure tin 1,000 parts pure copper, 10 to 15 parts; melts at from 350° to 450°. No. 5, pure tin 1,000 parts, pure nickel 15 parts; melts at from 350° to 450°. No. 6, pure tin 900 parts, pure copper 100 parts, bismuth 2 to 3 parts; melts at from 350° to 450°, and is recommended for soldering aluminum bronze.

The essential features of a new system of electroplating with aluminum, according to the "London Electrical Review," are: A solution of ammonia alum in warm water is prepared, containing 20 per cent. of alum. To this is added a solution containing about the same quantity of pearl ash and a little ammonia carbonate. The mixture results in effervescence and in the deposition of a precipitate. The latter is filtered off and well washed with water. A second solution of ammonia alum, containing 16 per cent. of alum and 8 per cent. of pure potassium cyanide, is now prepared warm and poured over the precipitate previously obtained, the mixture being then boiled for thirty minutes in a closed iron vessel, jacketed to insure uniformity of heating. At this stage about 20 kilogrammes of water are added, and about 2 kilogrammes more of potassium cyanide, and the whole is kept boiling for about a quarter of an hour. The liquid is then filtered from the precipitate, and is ready for use in the electrolytic bath.

Copper and Tin.—In the process formerly used for depositing metal in making seamless copper ware, the product was of a crystalline porous nature, and wanting in the qualities of smoothness, tenacity, ductility, and density. It could therefore be used only as thin deposits, such as electrotyping or coating inferior or cor-

rosive articles. In a new process, adopted at Springfield, Mass., the copper is acted upon by a heavy pressure during deposition, so that every thin film is treated separately.

A curious change was observed to have taken place in the brass condenser tubes of a certain steam vessel after they had been in use rather more than twelve months. The metal was in many places converted into almost pure copper of a spongy texture, while the zinc of the alloy had disappeared. The probable cause of the failure was found to have been an electrolytic action between the tin lining of the tubes and the brass, in which the sea water circulating through the condenser formed the electrolyte. Had the tin coating remained perfect, doubtless no corrosion would have resulted; but the sand and grit conveyed in suspension through the condenser carried away the tin coating in spots, and it was at these points that the transformation of the metals occurred. If the pipes had not been tinned at all they would probably have remained intact.

On passing a current of gaseous chlorohydric acid through the refuse of copper-bearing pyrites, heated to a certain temperature, Messrs. Blattner and Koestner found that the acid combined only with the copper, thus making it soluble in water, while a notable proportion of it was decomposed by the action of the pyrites, setting free chlorine. This process, if it can be carried out on a commercial scale, will make it possible to extract all the copper remaining in the pyrites, and will serve also for the production of chlorine.

An experiment by the Arizona Copper Company for the extraction from the tailings from its concentration mill, by means of a sulphuric-acid leaching process, of the copper contained in them, is said to have given such satisfactory results as to warrant the practical adoption of the process.

To recover copper and nickel from mattes containing also iron, J. Strap treats the matte so that the copper is first separated. The residue is then cleared from iron and the nickel deposited from it.

In order to recover tin from tin-plate scrap, J. F. Duke and F. Redman take advantage of the fact that tin has a greater affinity for lead than for iron. The plate is compressed to a compact mass, and then heated to a temperature somewhat exceeding the melting point of lead, after which molten lead is poured into the vessel so as to cover the tin plate. The heat being maintained, the lead and tin become alloyed with one another. The alloy which does not adhere is then run into another vessel containing a charge of tin plate heated to the melting point of lead, and so successively through a series of, say, six vessels. More molten lead is then run into the first and through the six vessels, so as to reduce the proportion of the tin in the scrap, and a number of charges—six, for example—are run through the vessels. The alloy of lead and tin obtained from the last vessel can be used as solder or for other purposes, or the two metals can be separated.

By the process of M. Lambotte, of Brussels, for recovering tin from clippings of tinned iron, the clippings are introduced into a vertical cylindrical furnace which is surrounded by a spiral. Air charged with chlorine gas passes through the spiral, where it is heated by the chemical action going on within the furnace, and, entering

the furnace below, passes through the clippings. The tin is attacked and stannic chloride is formed, which volatilizes, and is subsequently collected upon condensing surfaces moistened with a solution of the same chloride. The iron is not attacked, and when entirely cleaned from tin is removed from below, and again used.

A method has been invented in Germany of covering tissues of cotton yarn with a flexible and brilliant deposit of tin. A clear paste of commercial zinc powder and white of eggs is first spread on the textures with a brush. The coating coagulates in drying. The tissue is then placed in a bath of perchloride of tin, and that metal is precipitated on the zinc. The article, after rinsing and drying, is calendered, whereby a luster is imparted to the tin.

Lead.—In a paper read before the Royal Society, J. B. Hannay said that the metallurgy of iron had obtained complete elucidation during the last twenty years, and that of copper was pretty well known, while the chemists of the mint, notably Roberts-Austen, had made the metallurgy of the precious metals their special study; but the fourth great domain of metallurgy, that of lead, was still in the empirical stage. Mr. Hannay proceeded to describe several new volatile compounds of lead, the discovery of which, he said, gave the key to the solution of many of the difficulties which had hitherto beset the investigator. One process consisted in passing a stream of air through the lead ore in a Bessemer converter, by which means all the ore was converted into pig lead, or litharge, or sulphate of lead, as might be required. The oxidation of the ore supplied all the heat required to conduct the process, so that no fuel was needed. The importance of this process, Mr. Hannay affirmed, might be judged from the fact that, besides obtaining all the lead as finished product without loss, against a 20-per-cent. loss by the old method, every ounce of silver was collected and separated without expense, no matter how little of that metal might be present.

As to whether pure or alloyed lead is best able to withstand the attacks of sulphuric acid, Dr. Lunge, after experimenting with various alloys, concludes that: 1. There is no difference in the cold between the actions of sulphuric acid on pure and antimonial lead, when the admixture of antimony does not exceed 0.2 per cent.; a lead of the following composition—Sb 1.81 per cent., Cu 0.05 per cent., Bi 0.01 per cent., Fe 0.01 per cent., Sn 0.04 per cent., As 0.10 per cent.—was more strongly attacked than pure lead, in contrast to the general supposition that antimonial lead is better able to withstand the attacks of sulphuric acid; when the acid is warm, the difference in favor of pure lead is more marked. 2. The action of nitrous vitriol is in all cases stronger when air has access than when not, and is always greater than that of pure vitriol. 3. The addition of a small percentage of copper to the lead does not increase its power to resist the attacks of sulphuric acid when the temperature is below 200° C.; when the temperature is above 200° C. the addition of 0.1 to 0.2 per cent. of copper is advisable, though its effect is not very marked.

The Roessler-Edelmann process of lead desilverization consists of two parts—desilverizing the lead by means of an alloy of zinc and

about 0.5 per cent. aluminium, from which results refined lead on the one hand, and a homogeneous zinc-silver alloy on the other, and working up the zinc-silver alloy to refined silver and refined zinc. Simplicity and saving of time, labor, and material are claimed for it.

Nickel.—In a series of experiments in casting and forging nickel at Altona, under the direction of a German industrial society, it came out that pure nickel without addition of magnesium was porous and irregular in fracture—which was yellowish gray—and would not forge well; that for the production of a useful nickel the addition of some magnesium is necessary; and that aluminium can not replace the magnesium.

In C. C. Bartlett's method for separating nickel, primarily in the form of a sulphate, from copper contained in certain nickeliferous copper ores, the ores or mattes are mixed with ordinary niter cake, the salt cake of commerce, or certain other materials, and are smelted, with the production of a very fluid matter of very low specific gravity. This matter includes the copper contained in the ore, while the nickel will remain in a mass by itself, and, being of greater specific gravity, will settle, after tapping the furnace, in the bottom of any vessel in which the mass is collected. The portion which sinks to the bottom will be found to consist ordinarily of sulphate of nickel, perhaps, with the salts of nickel, while the copper, iron, or other metal will be converted into sulphides, and rise to the top. When cool, the mass is broken up and the layers are separated by hand.

Manganese.—Test experiments have been made by Prof. Lorenz, of Göttingen, and his colleagues to determine whether manganese is really volatile or the volatility it manifests in furnace working is due to the intermediate action of carbon monoxide derived from the carbon usually present, forming a volatile and dissociable compound of a nature similar to nickel and iron carbonyl. It was definitely proved that carbon monoxide does not combine with manganese at a temperature below 350° C. In the high-temperature experiments with carbon monoxide a large quantity of manganese was found to have volatilized and condensed again. Hence manganese is certainly volatile with carbon monoxide. It was afterward found that equally good deposits of manganese dust were obtained when a current of either hydrogen or nitrogen, neither of which combines with manganese, was employed. It therefore appears that volatility is a property of the metal itself, and not merely attendant upon the formation of a compound with carbon monoxide, and is singularly manifested even at the temperature of the melting point.

For manufacturing, on a commercial scale, metallic manganese containing a minimum of detrimental impurities and absolutely free from carbon, W. H. Greene and W. H. Wahl expose the pulverized manganese ore purified from iron, or containing less than 1 per cent. iron, to reducing gases at a temperature approximating redness. All the manganese is thus converted into greenish-gray manganese monoxide, which must be allowed to cool out of contact with air, in order to prevent oxidation to red manganoso-manganic oxide. The monoxide is then mixed

with about 18 per cent. of its weight of granulated aluminum and a suitable flux, and the mixture is heated in magnesite crucibles to a temperature near the melting point of cast iron. As soon as the temperature of reaction is reached the mass promptly fuses, and must be poured from the crucible at its maximum temperature.

Adolphe Carnot's method for the assay of manganese oxides with hydrogen peroxide is based on the fact that while oxygenated water is decomposed with effervescence in contact with manganese peroxide, and that a small quantity of this oxide suffices to destroy an indefinite quantity of oxygenated water, the result is different when the peroxide and the oxygenated water are in presence of an acid which, though very dilute or weak, is capable of combining with manganous oxide. There occurs then a simultaneous decomposition of the two peroxides, and the quantity of oxygen liberated is exactly double that which exists in the manganese peroxide over and above MnO . The reaction occurs readily, even in the cold, whether with dilute nitric or sulphuric acid or with acetic acid, as long as the acids attack MnO_2 .

Alloys.—A new crystal ferro-nickel alloy was observed in breaking a pot of copper-nickel matte at the Canadian Copper Works, when a cavity was disclosed lined with brilliant tin-white crystals, which penetrated into the surrounding matte. Analysis of two samples gave percentages of iron and nickel nearly the same in both, with a small, varying percentage of copper. From this variation, and from the fact that crystals of pure copper were strewn on the surface of the crystals of ferro-nickel, that element was supposed to be an impurity, and the composition of the pure crystals corresponded very closely with the formula, Ni_2Fe .

In applying W. H. Greene's and W. H. Wahl's method of reducing metallic oxides to the production of ferro-alloys, a silicide is desirable containing as high a proportion of silicon and as low a proportion of carbon as possible. In the preparation of, for instance, a ferro-manganese, the object in view is substantially the manufacture directly from the oxide of a ferro-alloy sufficiently high in manganese and sufficiently low in carbon to be employed with economic advantage in the production of manganese steel and the deoxidation of the charge in the Bessemer converter or on the hearth. The chemistry of the operation is extremely simple.

Manganese metal, manganese copper, and manganese bronze are manufactured at the Isabellaehütte, Dillenburg, Austria. The alloys of manganese with copper and zinc are easily hammered and rolled, and serve for the production of household utensils and fancy articles.

A bronze alloy of great strength and ductility, manufactured by A. K. Huntington and R. T. Preston, consists mainly of copper and zinc, to which are added various proportions of ferro-manganese and nickel, along with small proportions of deoxidizing and fluxing agents, such as sodium, or potassium, or magnesium aluminum, or silicon; or silicon may be used in larger quantities to form a sensible portion of the alloy, while tin may also be employed in a proportion seldom exceeding 1 per cent.

Alloys of aluminum and antimony are obtained

by M. D. A. Roche in all proportions in several ways. The simplest process is a direct fusion of the two metals at a low temperature. The alloys containing a low percentage of antimony (less than 5 per cent.) are hard, and possess a greater tenacity and elasticity than pure aluminum, yet are quite malleable. Their color is a little less white than that of aluminum, but their brilliancy is greater and more silvery, enabling them to well resist the atmosphere. When the percentage of antimony is increased the alloy becomes harder, but its elasticity is diminished, and it is friable; the crystallization proper to aluminum gradually disappears, and when 90 per cent. of antimony is reached the alloy contains groups of separated crystals. It was also noted that the melting point became higher as the percentage of antimony increased, as did likewise the alterability of the compound in the air up to a point where the alloy had a composition: Al, 18.37 per cent.; Sb, 81.63 per cent. This appears to be a true antimonide of aluminum. It is infusible at the highest temperature of the Perrot furnace, its melting point being apparently above that of soft steel. It is inalterable in dry air at ordinary temperatures, but at very high temperatures the antimony volatilizes. Moist air decomposes it even at low temperatures, a blackish powder containing aluminum being precipitated, and antimony hydride being evolved. The same reaction takes place with cold water. Alloys rich in antimony have a lower melting point, but they are less alterable in moist air. According to the author, the aluminum-antimony alloys combine with other metals, forming more complex combinations, some of which can be used in the industrial arts. Among these he mentions the nickel and tungsten alloys, which are remarkable for their hardness, tenacity, and elasticity, and the silver alloy, which is susceptible of a very high polish.

The second report of the Alloys Research Committee of the Institute of Mechanical Engineers, by Prof. W. C. Roberts-Austen, after discussing the chemical philosophy of alloyage and solution, deals with the experiments made by the committee, first with the influence of impurities on copper. The question was raised whether normal copper can be made to assume an allotropic state, and whether the allotropic varieties may differ as much as those of nonmetallic elements. Prof. Roberts-Austen has little doubt that copper can be prepared by electrolytic deposition in an allotropic state having a different density from that of normal copper. Figures were given showing how different may be the qualities of a metal chemically pure; for instance, rods of pure electrolytic copper, all the same sample, but variously treated, broke under stresses varying between 8,219 tons and 18,750 tons to the square inch, the former being the tensile strength of cast rods, and the latter of cast rods worked and not annealed; while cast rods carefully worked and annealed gave a tensile strength of 18,250 per square inch. The experiments show a difficulty in determining a standard tenacity for copper. Pure copper has been considered the best that can be used for engineering purposes, and specifications are generally framed to this effect. The Research Committee, however, show that the metal may be, and frequently is, as a matter of

practical fact, too pure for the purpose. It has been found that a fair percentage of arsenic improves the copper used in fire boxes of locomotives. Antimony also, when present in proper proportions, strengthens the copper. Bismuth renders it weak, and its prejudicial effects do not seem to disappear even though only a trace is present.

The name of "iron-silver" has been given to an alloy of iron with other metals generally, and particularly with copper and zinc. Cast iron, in the form of turnings, filings, or powder, is immersed in a bath of hydrochloric acid, through which is passed a current of carbonic acid. Currents of air and steam are afterward passed through the bath, and the liquid is drained through the residue, which is then dried and alloyed with other metals. The best proportions are: Iron, 35 per cent.; zinc, 24 per cent.; copper, 40 per cent. The color of the new alloy is a silvery white.

In the course of the experiments that have been made to find an alloy which, while as hard as tungsten steel, should be more malleable and less brittle, attention has been turned to the employment of molybdenum. On account of the expense of the metal itself ferro-molybdenum was employed as a substitute. Under a new process adopted by Sternberg and Deutsche at Grunau, near Berlin, a metal from 96 to 98 per cent. pure has been brought into the market at a practicable price. Their process consists in reducing molybdate of lime with carbon. The lime is then separated from the metallic molybdenum formed by means of chlorhydric acid. It is found that only half as much molybdenum as tungsten is required to produce the same effect on steel. Steel with 2 per cent. molybdenum is silver-white in color, has a velvety fracture, and is extraordinarily hard.

An antifiction alloy, patented by T. D. Botome, is composed of lead, antimony, tin, and magnesium, which may be combined in various proportions. The inventor's patents cover two different sets of proportions.

METHODISTS. I. Methodist Episcopal Church.—This body includes 121 annual conferences, 8 mission conferences, and 7 missions; in all, 140 annual organizations regularly visited by one or another of the bishops. The "Methodist Yearbook" for 1894 gives as the summary of the statistics of all these bodies for 1893 (except the Congo Mission Conference and 2 Indian missions, for which no statistics were received, and 9 conferences of which the statistics for 1892 are inserted): Number of bishops, 18; of ministers in full connection and on trial, 16,444; of local preachers, 14,274; of lay members and probationers, 2,524,053; of Sunday schools, 28,392, with 326,050 officers and teachers and 2,411,525 pupils; of baptisms during the year, 113,628 of adults and 87,806 of children; of churches, 24,535, having a probable value of \$104,754,208; of parsonages, 9,300, valued at \$16,200,800. Of the members, 2,260,196, showing an increase during the year of 59,115, are registered as in full membership, and 263,857 (increase 22,311) as probationers. Amount of benevolent contributions: For the Missionary Society (including legacies, etc.), \$1,196,609, showing a decrease of \$60,764 from the previous year;

for church extension, \$151,224; for the Sunday-School Union, \$24,299; for the Tract Society, \$23,362; for the Freedmen's Aid and Southern Education Society, \$108,986; for education, \$165,729 (showing an increase of \$64,705); for the American Bible Society, \$35,444; for the Woman's Foreign Mission Society, \$277,290; for the Woman's Home Missionary Society, \$169,585; total contributions, \$2,152,528, showing a net decrease from the previous year of \$26,490. The contributions for ministerial support, indebtedness, etc., include, besides, \$10,298,915 raised for the support of ministers, bishops, and presiding elders; \$263,648 for conference claimants (worn-out preachers, their widows and orphans); \$5,384,686 for buildings and improvements; \$1,761,808 for old indebtedness on church property (leaving as present indebtedness, \$9,818,432); and \$3,641,917 for current expenses.

Committee of Church Extension.—The annual meeting of the General Committee of Church Extension was held in St. Paul, Minn., Nov. 2 to 4. The year's receipts had been: On the general fund, \$182,849; on the loan fund, \$149,730; in all, \$332,579. Six hundred and eighty-three churches had been aided, making the whole number from the beginning, 9,063. It was represented in the report that the increasing number of new conferences and missions on the frontier, and the increasing number of shelterless congregations and Sunday schools in the West and South, made imperative great enlargement of the means at the command of the board. The sum of \$310,825 was authorized to be applied to the work of the society during the ensuing year, and an equal amount was asked from the annual conferences.

Board of Education.—The receipts of the Board of Education for the year ending Nov. 29, 1893, were \$87,654. Fourteen hundred and sixteen students were aided during the school year ending in July, 1893. The total amount of \$461,032 had been loaned, and 5,186 students had been aided since 1873.

Freedmen's Aid and Southern Education Society.—The meeting of the General Committee of the Freedmen's Aid and Southern Education Society was held in St. Paul, Minn., Nov. 6 and 7. The receipts and expenditures for the year were balanced at \$363,763. The total indebtedness of the society was returned at \$174,915, having increased \$10,835 during the year—an increase not made by the regular expenditure, but caused by unforeseen emergencies. The work of the society is represented by 23 institutions (1 theological, 10 collegiate, and 12 academic) among colored people, with 229 teachers and 5,808 students, and 21 institutions (3 collegiate and 18 academic) among white people, with 110 teachers and 3,257 students. The aggregate property of these institutions is valued at \$1,808,800. Biblical departments are maintained in connection with all the collegiate and some of the academic institutions. Two hundred and seventy-seven young colored men were given instruction in theology during the year.

General Missionary Committee.—The General Missionary Committee met at Minneapolis, Minn., Nov. 9. The treasurer reported that the cash receipts for the year had been \$1,196,609, or \$60,764 less than the receipts of previous year,

and the expenditures had been \$1,350,245. Of this sum, \$676,107 had been applied to foreign missions, \$519,928 to domestic missions, \$8,900 to the salaries of missionary bishops, and \$28,245 in payment of special appropriations.

The following appropriations were made for the support of the missions during the ensuing year:

I. FOREIGN MISSIONS:

Africa	\$5,700
South America	51,671
China	118,711
Germany	27,700
Switzerland	7,900
Scandinavia	45,878
India	117,587
Malaysia	8,669
Bulgaria	18,350
Italy	42,500
Mexico	58,878
Japan	54,408
Corea	15,967
Lower California	900

Total for foreign missions..... \$568,584

II. DOMESTIC MISSIONS:

Welsh	\$1,601
Scandinavian	54,671
German	46,900
French	6,111
Spanish	14,056
Chinese	10,870
Japanese	7,400
Bohemian and Hungarian	8,585
Italian	5,271
Portuguese	713
Hebrew	1,200
Pennsylvania Dutch	800
American Indians	6,576
English-speaking	806,199

Total for domestic missions..... \$474,959

III. MISCELLANEOUS

For the debt	\$119,000
	109,000

Grand total..... \$1,271,586

The latest published report of the society (1892) showed that there were in the foreign missions, 543 American missionaries, 4,141 native laborers, 59,138 members, 81,652 probationers, 76,572 adherents; an average attendance on Sunday worship of 196,323, with 11,842 adults and 8,231 children baptized during the year; 13,090 pupils, 335 of whom were in theological schools, 2,395 in high schools, and 10,870 in other day schools; and 120,954 pupils in Sunday schools; in the domestic missions, 689 missionaries, 38,588 members, 7,005 probationers, 812 adults and 3,378 children baptized during the year, and 44,409 pupils in Sunday schools. The Scandinavian and German conferences, also results of mission work, included 732 preachers, 60,900 members, 5,765 probationers, 89 adults and 5,664 children baptized during the year, and 58,399 pupils in Sunday schools.

Woman's Foreign Missionary Society.—The General Executive Committee of the Woman's Foreign Missionary Society met at St. Paul, Minn., Oct. 25. The committee is composed of 3 delegates from each of the 11 branches of the society. The society is composed of 4,533 auxiliary societies, with 121,685 members; 723 young women's societies, with 14,264 members; and 713 children's bands, with 14,699 members. The amount of money contributed for the year by the various branches was \$277,290, being \$11,948 more than in the previous year. One hundred and forty-five missionaries were sup-

ported by the society, 117 of whom were in the field, and 28 were at home for the benefit of their health. Of these, 22 were in Japan, 8 in Mexico, 31 in China, 2 in Bulgaria, 36 in India, 6 in Corea, 2 in Malaysia, 2 in Italy, 5 in South America, and 3 in Burmah. The sum of \$310,873 was appropriated for the ensuing year.

Woman's Home Missionary Society.—The twelfth annual meeting of the Board of Managers of the Woman's Home Missionary Society was held in Toledo, Ohio, Oct. 26. The receipts for the year had been \$90,906. Thirty-five missionaries were employed in the South, and 14 industrial homes and schools were sustained there. Twenty missionary teachers were laboring among the Indians and in Mexico. Other institutions of the society were the Glenn Home at Cincinnati, Ohio; a Bohemian mission in Chicago, Ill.; immigrant homes in New York, Boston, and Philadelphia; city missions in Cleveland, Ohio, and Pittsburg, Pa.; and a training school at Washington, D. C.; all of which had been regularly and liberally sustained. Clothing and other supplies had been distributed to the value of \$70,000. A Chinese mission work was sustained by the Woman's Missionary Society of the Pacific coast.

Deaconesses.—Nineteen deaconesses' homes in the United States returned 220 deaconesses, 63 deaconesses were engaged in the work of the Woman's Home Missionary Society, and 20 were estimated to be working outside of homes, making a total of 303 deaconesses laboring in America. Property valued at \$284,908 was held in connection with this work. Besides these, 18 deaconesses were returned from 6 homes in India, and 12 working in that country outside of homes, 106 in Germany and Switzerland, and 2 in China. The whole number of deaconesses in the Church was 441. The Deaconess Conference holds annual national meetings. Although it is without authority, its recommendations have been generally adopted in the deaconesses' homes.

Epworth League.—The Epworth League includes 11,300 chapters, with 750,000 members; and the Junior League 2,000 chapters, with 80,000 members. Six college chapters were organized during the year, and more than 60 chapters in foreign lands. The first International Convention of the leagues met in Cleveland, Ohio, in June, 1893.

II. Methodist Episcopal Church, South.

The statistical tables of this Church, for 1892 give it 47 annual conferences, with 1,305,715 members—39,153 more than in 1891; 5,368 traveling preachers, 4,757 of whom are effective; and 13,426 Sunday schools, with 13,426 officers and teachers and 754,223 pupils; number of preachers admitted on trial during the year, 343; number of baptisms, 60,394 of adults and 33,749 of infants. One hundred and seventy-nine schools and colleges return 16,620 pupils, endowment funds amounting in the aggregate to \$1,538,000, and property valued at \$4,485,042.

Board of Church Extension.—The Board of Church Extension met at Louisville, Ky., April 27, Presley Meguiar presiding. The secretary reported that the receipts for the year had been \$65,925 on general account, and \$11,318 on Loan-fund account; making, in all, \$77,243.

The general and conference boards had helped 431 churches, paying them \$85,276. There were in hand for the help of needy churches during the coming year \$34,000 in donations and \$27,000 in loans, while the applications for aid aggregated \$173,295. Cash additions had been made to the Loan funds of \$14,761, bringing the total amount now available for use, and excluding valuable assets not yet turned into cash, up to \$96,459. The whole amount of aid furnished from these funds to date was \$168,240. Grants were made to 102 churches in 24 States and Territories, and to 1 in the District of Columbia and 1 in the Republic of Mexico, aggregating \$26,350 in loans and \$34,430 in donations. Assessments were laid on the conferences for the year to the amount of \$100,000.

Book Room.—The book agents reported to the Book Committee at its annual meeting, May 3, that the total business for the year from all departments had been \$343,708; from which a net gain in assets had been realized of \$50,131. The liabilities of the concern amounted to \$13,396. The Book Committee appropriated \$17,500 for the benefit of supernannuated ministers.

Board of Missions.—The annual meeting of the Board of Missions was held in Kansas City, Mo., beginning May 5. The treasurer's report showed that the receipts for the year ending March 31 had been \$374,565, and the disbursements \$277,510. The indebtedness for borrowed money had been reduced by the sum of \$61,050, leaving the liabilities from that source \$67,964. Appropriations were made to the missions in Brazil, China, Japan, Mexico, the Indian Mission Conference, and 12 other conferences, amounting, with certain special appropriations, to \$170,798. The service of the Rev. Dr. Young J. Allen in the translation and circulation of Christian literature in connection with the mission work in the Chinese Empire was commended, and the bishop was requested so to adjust his appointment that he might be in a position to continue it. Provision was contingently made for the eventual establishment of a Hebrew mission.

III. Methodist Protestant Church.—The annual meeting of the Board of Home Missions was held in Pittsburg, Pa., June 10. The treasurer reported that his receipts had been \$7,371. The reports received from the mission churches were generally of a favorable character. The appropriations to most of the points which had heretofore received aid were reduced, and a few new points were given assistance. The subject of organizing a woman's home missionary society, in accordance with the directions of the General Conference, was considered, but definite action was not taken.

The annual meeting of the Board of Foreign Missions was held at Steubenville, Ohio, May 2 and 3. The Rev. T. B. Graham presided. The treasurer reported that his total receipts had been \$13,922, in addition to which a balance in cash remained on hand at the beginning of the year of \$2,201. His disbursements had been \$13,238. A memorial was received from the Japanese Conference asking for a modification of certain parts of the action of the last General Conference concerning the government of the conference in Japan, which provided that "all missionaries sent out by the board or by the

Woman's Foreign Missionary Society shall be entitled to membership in the conference; but this shall not include the wives of missionaries." The Japanese conference was not ready to recognize women as members of the governing body. The board responded to this request that it had not the authority to change a law of the General Conference; that it could not pass an act out of harmony with the General Conference action, or construe that action in any other way than the plain words of the Discipline dictate and require. "If a mistake has been made, it will be wise to make the best of it, until such time as the matter can be remedied by proper authority."

IV. American Wesleyan Church.—The receipts of the general missionary secretary for the year ending May 31, 1893, were \$5,359. The mission in Africa was regarded as established, with land and a good building at Rokumso, although the missionary force had been weakened by the illness of some of its members. Fifteen towns had been visited. In the American work, 47 protracted meetings had been held on mission fields, 324 persons had joined the Wesleyan Church, and collections of \$290 had been taken.

V. African Methodist Episcopal Church.—The annual meeting of the newly organized Board of Church Extension was held in Philadelphia, Pa., May 4, Bishop Grant presiding. The receipts for the nine months of operation of the society were returned as having been about \$3,000. Assistance had been given to several churches throughout the connection.

VI. Free Methodist Church.—At the annual meetings of the General Conference Boards and Committees, held in Syracuse, N. Y., in October, the treasurer of the Mission Board reported that \$2,731 had been collected and disbursed during the year for the general or domestic work. Not being able to respond to all the numerous petitions asking for appropriations, the board had sought to give aid to the most needy fields. The sum of \$5,935 had been paid for foreign missions. Reports were read from the missions in India; at Inhambane, and the Bethany Zulu mission in Africa; and at Santiago, in the Dominican republic. Appropriations for aid in building churches, and in paying off church debts were made by the Board of Church Extension to the amount of \$1,230. About \$4,547 were reported to the Committee on Claims as having been raised during the year and paid to "Conference claimants" (worn-out ministers, ministers' widows, etc.).

VII. Methodist Church in Canada.—The latest statistics of this body give the following aggregates: Number of ministers and probationers for the ministry, 1,920; of members, including those on trial, 252,178; of Sunday schools, 3,229, with 30,576 officers and teachers and 244,774 pupils; of Epworth Leagues and Epworth Leagues of Christian Endeavor, 849, with 39,161 members; of churches, 3,092, besides 1,108 other preaching places; of parsonages, 967; of burial grounds, 1,117; total value of church property, \$11,597,491.

The last year's expenditures of the Board of Missions of this Church exceeded its income by about \$7,000; the total amounts being, income, \$224,778, and expenditure, \$231,983. A table of "percentage expenditure" shows that 40 per

cent. of the appropriations were to domestic missions, 25 per cent. to Indian missions, 4 per cent. to French missions, 2 per cent. to Chinese missions in British Columbia, 9 per cent. to the Japan mission, and 2½ per cent. to the China mission. Appropriations of \$242,062 were made for the ensuing year at the meeting of the Board in October.

VIII. Wesleyan Methodist Connection (British).—The "Wesleyan Methodist Calendar" for 1894 give statistics showing that in Great Britain there are associated with this Connection 2,101 ministers and 460,064 members, including those on trial; in Ireland, 226 ministers and 26,723 members; associated with foreign missions are 363 ministers and 44,258 members; and in connection with the French, South African, West Indian, and Australasian conferences, 947 ministers and 200,688 members—a total of 3,636 ministers and 726,283 members. The amounts raised during the year for Wesleyan connectional funds were: Foreign missions, £127,878; home missions, £35,092; Theological Institution, £15,665; General Chapel fund, £9,026; Education fund, £7,053; Auxiliary fund, £38,036; Schools fund, £22,016; Children's fund, £30,895; Extension fund, £1,759. The sum expended on the erection of Wesleyan new chapels and other trust property was £335,431.

The "Calendar" also gives the yearly statistics of the various sections of Methodism throughout the world. The Wesleyan Connection has in Great Britain 2,302 ministers and 478,692 communicants, and abroad, 1,175 ministers and 189,502 communicants; or a total of 3,477 ordained ministers and 668,194 communicants. The New Connection has, at home and abroad, 201 ministers and 38,055 members; the Bible Christians, 230 ministers and 31,991 members; the Primitive Methodists, 1,100 ministers and 198,467 members; the United Methodist Free Churches, 421 ministers and 36,805 members; the Wesleyan Reform Union, 22 ministers and 8,174 members; the Independent Methodists, 360 ministers and 6,855 members. If to these be added 36,195 ministers and 5,197,032 members in the United States, and 1,819 ministers and 241,376 members in Canada, a total is given of 44,775 ministers and 6,348,029 communicants.

The report of the Education Committee showed that the number of day-school departments was 828, with 176,593 pupils and an average attendance of 133,528. The sum of £32,822 had been expended during the year upon Sunday and day schools, and £6,265 upon alterations and enlargements. The total income of the schools had been £245,174, and the expenditure £253,056. The Sunday schools numbered 7,024, with 128,955 teachers and 939,938 pupils.

The report of the Chapel Committee, published in January, shows that the ordinary income of the fund was £8,933. The Relief Loan fund amounted to £46,000, and the Erections Loan fund to £50,000. A total of £14,505 had been advanced from these two funds. The committee had sanctioned 355 cases in all since the last report, and 53 modifications of cases previously sanctioned, making a total estimated expenditure of £278,736. The proposed new chapels, with the enlargements and other works, would give sitting accommodation for 21,290 persons. During the

year 319 other cases had been reported through the district synods, representing an expenditure of £309,204, and 21,199 additional sittings. The total amount expended on Wesleyan trust property and reduction of debt during the year had been £378,187. The net amount actually contributed in Great Britain was £292,583.

Report was made to the Conference of the "Joyful News" mission that it now included 180 lay evangelists, 12 women evangelists, an excellent working plan legally secured, and an annual income of £6,000.

In the London mission, 15 ministers, 20 lay agents, 60 "sisters," and several hundred unpaid workers had been engaged during the year in various parts of the metropolis in evangelistic work which had resulted in gathering congregations of between 10,000 and 15,000 persons, with a membership of about 5,000.

The report of the Worn-Out Ministers' and Ministers' Widows' fund showed an increase in almost every item of income. Of the £36,132 promised to the special fund, more than £20,300 had been paid.

Wesleyan Missionary Society.—The annual meeting of the Wesleyan Missionary Society was held May 2. Mr. R. W. Parks, M. P., presided. The income of the society, after reducing the legacies to the average for twenty years, had been £127,078, showing an increase of £1,950. The expenditures had been £127,169, while the debt brought over from 1891 caused a present deficiency of £21,521. Three hundred and forty principal mission stations were maintained in various parts of the world, with 1,767 chapels and other preaching places, and 338 missionaries, including supernumeraries. Of other laborers there were 2,295 paid agents and 4,783 unpaid agents. The stations returned 37,466 church members and 6,825 on trial, with 70,973 pupils in Sunday or day schools.

Conference.—The Wesleyan Conference met at Swansea in July. The Rev. Henry J. Pope was chosen president. In the pastoral session modifications were instituted in the method of trying accused chairmen of districts, and an adverse report by committee on a proposition to extend the franchise in the election of the president of the Conference by giving the right of voting to all ministers of ten years' standing, whether present in Conference or not, was approved. In the representative session (in which representatives of the laymen take part with the ministers) a number of changes were made in the system of the Connectional high schools, and measures were taken for the liquidation of the debt of the Schools fund; a committee report was adopted adverse to further extending the limit of time (now three years) of continuous ministerial service at a single station; a former expression of disapproval was reiterated and emphasized of raising money for Methodist purposes by any method in which the element of gambling is involved; the Sunday schools were given proportionate representation, corresponding with the average attendance upon them, in the circuit quarterly meetings; and in the discussion on the state of the churches, the propriety of the people's recognizing their own ministers in times of marriages and funerals, instead of going to the Established Church, was insisted upon;

definite doctrinal teaching and greater care in the conduct of meetings of the young, and the commendation of healthy literature to the young people were urged. On the receipt of the report of the Committee of Privileges, relating its activity during the year in behalf of a number of bills passed in the interest of nonconformists, a resolution respecting the Nonconformist Marriage bill, declaring it to be the one demand of the Conference, for such legislation "as will remove from the marriage service the presence of the registrar, on the ground that such presence makes an invidious distinction between the ministrations of the Established and nonestablished churches, and tends to discourage the performance of marriage services in Methodist places of worship," was offered and withdrawn.

IX. Primitive Methodist Church.—The Primitive Methodist Conference met in Nottingham in June. The Rev. John Stephenson was chosen president. The Conference is composed of the legal poll of 12 members, who really constitute the legal Conference, but have in effect waived their powers in favor of the larger and more representative body, which is composed of twice as many laymen as ministers. These lay members are elected annually by the district meetings from among the local preachers, class leaders, or station stewards, in addition to whom 4 lay members at large are appointed by the Conference of the previous year. The statistical reports showed an increase of about 1,200 church members, and more than £38,000 had been raised during the year for the Jubilee fund. The report of the Missionary Society represented that in 46 mission stations ("home") 63 regular and several occasional missionaries were employed, and a net increase of 70 members was returned. No part of the work was so satisfactory as that in the metropolitan area. The Australian missions had suffered from floods and bank-failures. Work in Fernando Po had been retarded by the civil and ecclesiastical authorities, but there had been an increase of members and development along the industrial line. In South Africa the work continued to grow and prosper among the natives. The mission party to the Zambesi district had received permission from the King to open a station near the Caffre river. The Conference decided to unify certain benevolent funds into a general connectional fund, and a committee was appointed to adjust the details. It was provided that if more than £50,000 is finally realized on the Jubilee fund, the sum of £5,000 may be devoted to the formation of a fund to aid aged or poor local preachers or other lay officers in the time of their need. The General Committee was instructed to consider the subject of making provision to aid local preachers to equip themselves more perfectly for their work. The privilege given to the quarterly meetings to send invitations to ministers preliminary to their appointment as preachers in charge was enlarged. The formation of juvenile and women's missionary societies was authorized. The College Committee was directed to consider in what way the connectional deed can be so changed as to place the full control of the appointment of the officers of the college in the Conference. The Conference camp meeting was attended by more than 10,000 persons.

X. Methodist New Connection.—The numerical summary of this body for 1893, presented to the Conference in June, gives totals of 543 chapels, 202 ministers, 1,202 local preachers, 31,709 members (an increase of 421), 5,215 probationers (an increase of 448), and in the Sunday schools 11,045 teachers and 85,600 pupils (an increase of 702). The report of missions showed that in Ireland there had been an increase of 10 members and 6 probationers; in China, 191 adult baptisms and a net increase of 72 full members and 100 probationers, with nearly 2,000 members on the church roll; and in the home-mission fields the net increase had been 39 members and 26 probationers. The Legacy fund created by the last Conference amounted to £2,398, and the property in China was valued at £9,000. The normal income of the Chapel fund had slightly declined in the department of receipts from the circuits. The sum of £8,844 had been raised in payment of trust debts, £3,123 on renovations, and about £3,000 on new chapels and schools. The Loan fund capital amounted to £3,000. The applications for grants and loans had been below the average.

The Conference met at Huddersfield, June 12. The Rev. Thomas Scowby was chosen president. A committee was appointed to consider the subject of the suitable commemoration of the centenary of the Connection, which will occur in 1896. Much attention was given to the affairs of the Book Room and periodicals. Two editors were provided for, to be chosen from the ministers in active service, or from the supernumeraries, whose work should be literary only, and a Book Room manager, who should give to the editors all the assistance in his power. A committee was appointed to represent the Connection on a committee instituted by the Free Church Congress of 1892 (see "Annual Cyclopædia" for 1892), with a view to preventing denominations from overlapping and interfering with one another's work. Another committee had been representing the Connection on a joint committee of Methodist denominations to watch over the civil and religious liberties of Methodism at large. A petition in favor of a measure for securing sites and for the leasehold enfranchisement of places of worship was approved. The Welsh Suspensory bill, Local Veto (of the liquor traffic), the Registration of Clubs, and Sunday Closing bills, and other measures affecting the interests of temperance and popular freedom were also approved. The subject of the formation of a Connectional Young People's Society of Christian Endeavor was left for the year to the consideration of a special committee.

XI. United Methodist Free Churches.—The Assembly of the United Methodist Free Churches met in Bristol, July 11. The Rev. S. Wright was chosen president. Reports were presented from the various funds of the Churches. The reports of the Chapel funds showed that debts on chapel property had been reduced during the year by £22,170, and that a further sum of £32,400 had been spent on new erections. The subscriptions toward the Relief fund amounted to £500. Through the agency of the Chapel Loan fund debts had been reduced by £3,871, making a total of £67,203 liquidated by means of this fund since its beginning. The income of the

Fire Insurance fund had amounted to £823, and the expenditure to £912. The contributions toward the Superannuation and Beneficent fund amounted to £476, and the capital of the fund stood at £40,000. The ministerial subscriptions reached £1,070. Nine thousand two hundred pounds had been promised, and £4,125 had been paid toward the Wesley Memorial fund. The sales from the Book Room had amounted to £7,431, or nearly £200 less than in 1892.

A resolution was adopted in favor of establishing branches of the Young People's Society of Christian Endeavor in all parts of the Connection.

XII. Bible Christians.—The Bible Christian Conference met at St. Austell in August. The Rev. J. Woodcock was chosen president. The statistical reports showed that the number of members in Connection had risen to 32,335, an increase of 1,101 having been returned during the last twelve months, while the number of pupils in Sunday schools was 55,264, showing an increase of 1,581. Other items were: Number of chapels belonging to the Conference, 858; of local preachers, 1,880; of ministers working under the Conference, 278. In the English circuits the amount received for Sunday-school purposes was £4,788, which left a net surplus of £806. The income of the Chapel fund for the last year had been £28,808, of which a balance was left over expenditures of £2,248. During thirty years £369,734 had been expended on new buildings and rebuilding and enlarging, while the debt was only £93,407 more than in 1863. The sum of £11,100 had been contributed for ministerial support. Notwithstanding a previous Conference had definitely fixed the time limit of the successive appointments of ministers to the same station at four years, all the three applications made for special exemptions from the operation of the rule were granted. The formation of Christian Endeavor societies in connection with all the congregations was recommended. A resolution was adopted in favor of an arrangement for the training of local preachers during their period of trial in parliamentary subjects and in preaching, and the matter was referred to the committee for the examination of candidates. A scheme was submitted for paying all the debts of the Connection by the time of the centenary of its formation, which will occur in 1915, and estimates were presented showing that if the average of contributions and payments that had prevailed during the past twelve years were continued till then, this would be done.

Methodist Union in Australia.—Negotiations have been in progress between the different Methodist churches of the several branches in Australia and New Zealand, with a view to agree upon a basis of union, and the general subject has been submitted to vote in the quarterly meetings. The results of the voting are regarded as showing the predominance of a feeling in favor of union in the abstract, accompanied by the opinion that the time has not yet come for it. The Victoria Conference (Wesleyan) approved of proposals contemplating, rather than close organic union, a kind of federation, including a general interchange of pulpits and the holding of united meetings for Christian fellowship; the appointment of a federal Methodist council, to arrange for periodical pulpit ex-

changes and for holding conventions to promote spiritual, social, and fraternal intercourse, as well as to prevent overlapping of interests and injurious denominational competition; the council to consider and report whether it would be possible to take common action in establishing a common book depot, a common Methodist journal, a common Sunday-school union, and a joint central examination committee, by which all candidates for the ministry of the several Methodist churches shall be examined and approved; the council also to have power to take common action on all questions affecting the civic or religious privileges of the churches represented. The Primitive Methodist quarterly meetings generally expressed approval of union, if on a "satisfactory basis," that term being intended to include recognition of the equal rights and privileges of laity and ministry.

MEXICO, a federal republic in North America, composed of 27 States, 3 Territories, and a Federal District. The Constitution was last amended on Dec. 27, 1890. The Senate consists of 56 members, 2 from each State and 2 from the Federal District, elected for four years by indirect suffrage, one half retiring every two years. The Chamber of Deputies has 227 members, elected every two years by direct suffrage. The President is elected for four years by direct universal suffrage and secret ballot. The President for the term ending Dec. 1, 1896, is Gen. Porfirio Diaz, now serving his third consecutive term, his fourth altogether. The Cabinet at the beginning of 1893 was composed of the following Secretaries of State: Foreign Affairs, J. Mariscal; Interior, M. R. Rubio; Justice and Education, J. Baranda; Finance and Commerce, L. M. Romero; War and Marine, Gen. P. Hinojosa; Treasury, F. Espinosa; Communications and Public Works, M. Gonzalez Cosio. Afterward J. J. Limantour succeeded Romero as Minister of Finance.

Commerce and Production.—The value of the imports for the financial year 1891 was \$50,018,658, and of the exports \$63,276,395. The exports comprised \$27,020,023 of merchandise, and \$36,256,372 of precious metals. In 1892 \$26,330,411 worth of merchandise were exported, and \$49,137,304 worth of specie and bullion. Of the total exports for 1892 the United States received \$49,932,000, Great Britain \$15,267,000, France \$4,644,000, Germany \$4,844,000, Spain \$661,000, and other countries \$620,000. The following were the principal exports of merchandise: Heniquen, \$6,358,000; coffee, \$5,814,000; lead, \$2,363,000; tobacco, \$1,756,000; woods, \$1,676,000; vanilla, \$969,000; copper, \$860,000. Of the heniquen fiber nine tenths goes to the United States. The commercial marine consists of 260 vessels, of which 47 are steamers. There are 98 cotton and 16 woolen factories in Mexico. The duties on cotton and woolen goods, though not protective in their original purpose, are about 100 per cent. Various other manufactures, favored by a high tariff, have been established. Wine-growing is a new industry which promises well. In 1891 there were 38 companies formed for various operations, with \$70,535,000 of American capital.

Communications.—There were 6,950 miles of railroad open to traffic in September, 1893.

The telegraph lines had a total length of 38,125 miles, of which 25,000 miles belonged to the Federal Government, and the rest to the State governments. The post-office in 1891-'92 forwarded 117,704,313 internal and 9,601,233 international letters and postal cards. The receipts were \$1,142,182, and expenses \$1,211,227.

Finances.—The budget for 1893-'94 makes the total receipts \$40,060,000. The expenditure was estimated at \$41,076,260. To balance the budget a reduction of 10 per cent. in salaries was decreed, reducing the total estimates to \$39,976,260. The public debt amounts to \$158,932,659. The foreign debt is £16,427,500, paying 6 per cent., including the consolidated loan of 1888 and one for £6,000,000 raised in 1890. The Tehuantepec Railroad bonds, £2,700,000 pay 5 per cent. The internal debt is \$62,932,659. In 1893, a new loan of \$15,000,000 was contracted in Berlin.

The Army and Navy.—The army in 1893 numbered 2,270 officers and 34,833 men. There are 30 battalions of infantry, besides cadres for 30 battalions of reserves, 3 auxiliary battalions, 1 battalion of pioneers, and the invalid corps, the total strength being 1,293 officers and 22,437 men; 4 battalions of artillery, numbering 148 officers and 1,688 men; 25 officers and 831 men in the stationary artillery; 11 officers and 101 men in the artillery train; 13 regiments of cavalry, comprising 481 officers and 6,359 men; a gendarmerie corps of 21 officers and 229 men; 6 troops of auxiliary cavalry, having 126 officers and 1,483 men; and 9 companies of rural guards, containing 165 officers and 2,200 men. The infantry is armed with Remington rifles, and the artillery with steel guns of the Bange system, having a caliber of 7.9 centimetres. The army is organized in 4 divisions of 2 brigades each, with 3 regiments in each brigade. The strength of the regiments varies. A battalion of infantry usually contains 4 companies of 240 men each. Including the reserves, the total peace effective of the army is estimated at 60 general officers, 3,600 other officers, 45,000 rank and file, 7,000 horses, and 3,000 mules. The war strength is about 3,700 officers, 132,000 infantry, 25,000 cavalry, and 8,000 artillery.

The naval force consists of 3 avisos, 2 gunboats, and a school-ship, carrying together 18 guns and manned by 84 officers and 416 men. There are building 2 transports, 4 coast-guard gunboats, and 5 first-class torpedo boats.

Insurrectionary Movements.—Before the beginning of 1893 seditious bands collected on the northern border in Chihuahua and on United States soil across the Rio Grande, several hundred miles above the scene of the late rebellion of Garcia. They captured Ascension and Corralitos, and drove out American settlers, who took refuge in New Mexico, and Gen. McCook sent detachments of United States troops to the locality. Pacheco and Perez, the leaders of the revolt, had supplied their followers with abundant arms and ammunition. The Indians of Yaqui river, in Sonora, revolted in sympathy with the uprising in Chihuahua. On Feb. 6, 1893, Gen. Urez, who refused to fight the Indians, was shot by order of a court-martial. In April a band of insurgents, led by one Amalla, sacked the mining town of Guerrero, and after-

ward defeated a body of Federal troops that pursued them. Troops that were sent out in June to suppress the Yaqui Indians were ambushed, and retired with severe losses. In the south of Mexico an insurrection, begun by Gen. Neri in Guerrero, was averted by a concession of the autonomous rights that were demanded. In the north the insurrectionary movement revived in the late autumn, and Gen. McCook again made arrangements to guard the frontier. Many citizens of the Ascension district who were drafted into the army were in sympathy with the insurrection. In an engagement in November, near the river Casas Grandes, the Federals were worsted. But the movement did not spread, as the revolutionary leaders hoped it would; though to the end of the year they remained in rebellion, demanding the concession of rights such as had been granted to the States of Cohahuila and Guerrero, and denouncing Diaz for having altered the Constitution, which restricted the President to one term of office, and for granting land and concessions to foreigners and obtaining for himself and his adherents corrupt profits therefrom, to the prejudice of the true interests of the people.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population in 1890 was 2,093,889. Capital, Lansing.

Government.—The following were the State officers during the year: Governor, John T. Rich, Republican; Lieutenant-Governor, J. Wight Giddings; Secretary of State, John W. Jochim; Treasurer, Joseph F. Hambitzer; Auditor, Stanley W. Turner; Attorney-General, Adolphus A. Ellis; Adjutant-General, Charles L. Eaton; Superintendent of Public Instruction, Henry R. Pattengill; Railroad Commissioner, Simeon R. Billings; Commissioner of Mineral Statistics, James B. Knight; Commissioner of Insurance, W. E. Magill till July 1, when he was succeeded by Theron F. Giddings; Commissioner of Banking, Theodore C. Sherwood; Commissioner of State Land Office, John G. Berry; Inspector of Oils, Neill McMillan; Commissioner of Labor, Charles H. Morse; State Librarian, Mary C. Spencer; Chief Justice of the Supreme Court, John W. McGrath; Associate Justices, Charles D. Long, Claudius B. Grant, Robert M. Montgomery, Frank A. Hooker.

Finances.—The balance on hand in the treasury, June 30, 1892, was \$1,241,971.82; the receipts during the year were \$2,775,991.57; the expenditures, \$3,470,451.65; the balance, June 30, 1893, \$547,511.74. The outstanding bonds are, past-due part-paid Five-Million-Loan bonds, \$19,000; adjustable at \$558.57 per \$1,000 (not bearing interest), \$10,992.83; trust fund debt, \$5,623,620.55.

The railroad companies paid taxes amounting to \$849,696.82; fire-insurance companies, \$131,971.25; life-insurance companies, \$70,004.70; telegraph companies, \$10,619.72; telephone companies, \$15,941.21. The receipts from specific taxes now exceed \$1,000,000 a year, and under the Constitution this money can be used only for payment of interest on the State debt, the balance being transferred to the primary-school interest fund, which is semiannually apportioned among the counties for support of

primary schools. In 1892 \$893,838.57 was paid by the State for the support of these schools.

Banks.—In the fifth annual report, submitted by the commissioner in December, he congratulates the people that in the recent financial crisis "Michigan, with her 162 State banks, was able to pass through the ordeal with the loss of but two banks—the Central Michigan savings bank of Lansing, and the Bank of Crystal Falls, L. S. Notwithstanding the unfavorable conditions there have been incorporated during the year 18 new state banks, with a capital of \$956,000."

Insurance.—The annual report of the business of fire, inland-navigation, and marine insurance companies for 1892 was published in June. At the beginning of the year there were 133 joint-stock companies authorized to issue policies on the stock plan, licensed to do business in this State; of this total 3 were organized in Michigan, 100 in other States, and 30 in foreign countries. The number of companies authorized to transact business in the State at the close of the year was 131. The capital represented at the beginning of the year was as follows: Michigan companies, \$1,000,000; companies of other States, \$50,264,444; foreign companies (deposit), \$6,000,000; total, \$57,264,444. The only mutual companies now authorized to insure against fire are those organized under Michigan laws.

Education.—A proposition was made this year to provide the State University with a fixed fund by giving it one fifth of a mill for every dollar of State tax levied. This was deemed rather extravagant, but the bill passed at one-sixth of a mill. At the present assessed valuation the university would realize from this tax \$188,333.33 for the year 1893-'94. Subsequently another bill was passed placing at the disposal of the university half of this sum, or nearly \$95,000, in the year 1893. The receipts for 1891-'92 from students and other sources outside of State funds and appropriations were \$253,530.44, or an annual average of \$126,765.22. The total current expenses for the two years were \$483,279.11, or an average of \$241,639.55 for each year. This gave an average annual deficit of \$114,874.33, which was partially offset by a land-grant fund of \$38,590 each year.

The university had 2,774 students in the spring term, of whom about half are residents of the State.

The State Normal School at Ypsilanti has over 1,100 students and 40 teachers.

The school population in 1892 was 674,279, and the whole number enrolled in public and private schools, 474,081; the ratio of enrollment to school population, 70.80. The number of schoolhouses was 7,666, and the seating capacity 563,576. The number attending higher institutions of learning was 7,529. The whole number of teachers was 16,100, of whom 3,359 were men, whose average monthly wages were \$47.72, while those of the 12,749 women employed as teachers were \$34.15.

Charities.—The School for the Blind received from the Legislature \$42,000 for the year 1893-'94. An additional sum of \$5,000 is to be appropriated for a mechanical building where the trades of willow-ware making, cane seating, hammock and net weaving, etc., can be taught.

Two hundred dollars yearly is to be paid to some oculist to examine the eyes of the pupils and ascertain whether their sight can be restored by treatment, at Ann Arbor. This was brought about by the recent case of Miss Keene, whose sight was restored after twenty-six years of total blindness. The study of music is one of the principal features of the institution. There are in the school 16 pianos. The average attendance for each year of the last biennial period was 78 and 74, the *per capita* cost being \$230.32. In 1893 the average number was 85.

The School for the Deaf had a total enrollment for the two years of 343, and an average number of 292.

The State Public School was established to provide a temporary home for dependent children. The total number of inmates each year of the biennial period was 474 and 497. The average number was 195 and 204. The *per capita* cost was \$167.89.

The most important work of the State Public School is that of indenturing children. The responsibility of placing them rests almost entirely with the county agent, whose duty it is to visit the home of the applicant and determine whether it is best to place a child there.

The Home for the Feeble-Minded, provided for by the last Legislature, will relieve this school to a great extent.

The establishment of an insane asylum in the upper peninsula, as provided for by the Legislature, was a much-needed measure. About one twelfth of the population of the State is resident in that section. The appropriation—\$75,000—is to be used one half in 1893 and the other in 1894. The buildings are to be on the cottage plan.

Prisons.—Reports of lax discipline in the prison at Jackson called for an investigation, which revealed the fact that a system of traffic had grown up among the convicts which was of such proportions that the time of two convict bookkeepers was wholly taken up in keeping track of the business, although it is one of the rules that convicts shall hold no conversation with one another. In view of this and many other evidences of lack of discipline, an investigation was ordered by the Legislature. The committee found a lack of harmony and official confidence, and general disobedience to the prison rules. There are about 1,108 penitentiary convicts in the State.

At Marquette State Prison there were 114 convicts. A new workshop has been built during the year to increase the capacity of the prison for turning out brooms and knit goods.

The report of the Reform School, which is hereafter to be known as the Industrial School for Boys, shows that from its establishment in 1856 to November, 1892, it has had 5,060 inmates. During the last year of that time there were 774 inmates. The current expenses for the year ending Nov. 30 were \$59,847.91, and the balance was \$11,430.17.

The Industrial Home for Girls had 304 inmates in 1892.

Investigation of a Lynching.—A confessed murderer was lynched, May 23, at Corunna, the county seat of Shiawassee County. The murder was extremely brutal, and the supposed mur-

derer avoided arrest for about six months, but was then caught and lodged in jail at Corunna. A mob of several hundred residents of the county organized, battered down the doors of the jail, detained the officers of the law, took out the prisoner, who was said to have already cut his own throat through fear, hanged him and mutilated his body, and delivered it to the sheriff. The complaint was drawn under the statute providing for the removal by the Governor of county officers in certain cases, and it prayed for the removal of William E. Jacobs as sheriff, who was charged with incompetency and neglect of duty in allowing the lynching.

The Attorney-General began an investigation in November, but postponed the continuation of it till Dec. 11. The testimony was very damaging to the sheriff. The Attorney-General was led to believe that the victim would not have been convicted if given a trial, because it appeared that an alibi could have been proved. He was also convinced that the man did not cut his own throat. The occurrence had a tendency to strengthen the sentiment in favor of a capital-punishment law.

Iron Ore.—By the annual report of the geological survey, it appears that Michigan retains the first place among States producing iron ore, with an increased output. The total iron ore mined in the State was 46.29 per cent. of the grand total for the United States, showing an increase of 28.12 per cent. over the previous year's production. Of the total for the State, 95.82 per cent. was red hematite, giving Michigan first rank as a producer of this class of ore, with 62.06 per cent. of the nation's red-hematite total. Michigan has also the credit of furnishing the largest annual output from one operation. The list of mines producing 50,000 tons or over shows that 32 of the largest mines are credited to this State.

The hard times have been especially severe on the iron miners of the upper peninsula. Over 4,000 were reported from Ishpeming in June, as discharged in that district. In August, the labor commissioner said, after a visit to that region, that the majority of the mines were closed, and scarcely any ore was being shipped from the ports. In November a terrible state of destitution was reported among the miners of the Gogebic range. This range is 10 miles long, and the ore taken from it is said to be the best Bessemer iron yet found in America. Over 3,000,000 tons of the ore were shipped from the range last year. Operators had been getting \$3.50 a ton for their product, and had been paying their miners about \$2 a day. They were forced to close this summer. It is estimated that 20,000 people are placed in destitute circumstances by the closing. The families were left helpless at the threshold of a Northern winter. Soup houses were opened, but the funds for these soon ran out, and the situation grew more desperate than ever. Gov. Rich issued proclamations asking help. Substantial aid was sent, and the railroad companies gave free transportation to many who wished to return to their former homes.

Powers of the Board of Health.—The Minneapolis, St. Paul and Sault Ste. Marie and Canadian Pacific Railways applied for an injunction to compel the State Board of Health to

cease the inspection of immigrants at the Sault. The case involved not only the powers of the board, but the validity of laws passed by the last Legislature. The court denied the writ, and sustained the board in enforcing its quarantine regulations.

State Lands.—The report of the Land Commissioner, issued in October, shows that there still remain unsold 437,891,943 acres of State lands. The report says further:

One thousand five hundred and fifty-one acres of swamp land have been taken by homesteaders during the year, and 856.89 acres have been patented. There are now 21,753.54 acres standing licensed as homesteads. A new class of homestead lands was created by Act 206 of the laws of 1893, the tax law. Sections 127 to 134, inclusive, of this act provide for the transfer of certain abandoned lands that have been sold to the State for delinquent taxes for more than three years to the control of this department, and subject to entry only as homesteads on payment of 10 cents an acre at the time of entry, and 10 cents an acre each year for five years, when deed will issue. Not more than 240 acres can be taken by one person. Many thousand acres of land will come under the provisions of this law.

During the year the amount of lands sold was 32,464 acres, for which \$166,718.40 was received. The total receipts of the State Land Office, on account of lands sold during the year, and for principal, interest, and penalty received on sales made in former years, and from other sources, was \$216,362.38. This year \$6,992.43 acres of swamp lands have been disposed of, and the proceeds of sales amounted to \$12,824.32.

Legislative Session.—The Legislature met on Jan. 4, and adjourned on May 29. There were 21 Republicans and 11 Democrats in the Senate, and 69 Republicans and 31 Democrats in the House. Francis B. Stockbridge, the Republican candidate, was elected to succeed himself as United States Senator.

Four amendments to the Constitution were acted upon favorably, and were submitted to vote at the spring election.

A bill on test of oils restores the point to 120° for a flash test, as it was before the enactment of 1891, when the law was changed so as to provide for an open test of 120°.

A new tax law was passed. It returns to the State system of collecting delinquent taxes, re-adopting it instead of the county system which was adopted by the Legislature of 1891. A clause in regard to land conveyances was the subject of controversy later, when the law went into operation. It required that a certificate should be attached to each conveyance of real estate offered for record, affirming that all taxes on the property involved in the transfer have been paid for a period of five years, the certificate to come from the Auditor-General or from the county treasurer of the county where the property is assessed. The Supreme Court decided in July that this section of the law was valid.

The Miner law for the election of presidential electors by districts, which was passed in 1891 and declared valid when brought before the Supreme Court, was repealed, and the old law providing for their election by the State at large is again in force.

An electric-lighting bill for Detroit allows the

city to do its own lighting. There is to be a board of six commissioners, and no sum greater than \$600,000 may be raised in any three years without the consent of the people by ballot.

A law was made providing for a tax on inheritances. It calls for 1 per cent. on all personal property in excess of \$5,000 after the payment of debts, but no tax on real estate which goes to direct heirs when the testator is a resident of the State. Where the testator is not a resident of the State, or where the property goes to collateral heirs, the tax is 5 per cent. on all real estate and personal property in excess of \$500.

The salaries of the judges of the Supreme Court were raised under a new law, and they are all required to live in Lansing. Salaries of the Attorney-General and the Auditor-General were increased.

A new prison law was enacted, one section of which provides for the gaining of time by convicts by good behavior. The new law in some respects is not quite as favorable to the prisoner as the old one. An insane asylum in the upper peninsula was provided for, and \$75,000 appropriated for buildings. An appropriation of \$2,000 was made for locating and marking the positions of Michigan regiments on the battlefields of Chickamauga, Chattanooga, and Mission Ridge. An additional \$25,000 was given for the World's Fair exhibit.

A bill granting to women the right to vote at all city, township, and village elections met with much opposition, but finally passed. It carried an educational restriction, providing that every woman claiming the right to vote shall be required to read, in the presence of the Board of Registration, at least one section of the State Constitution in the English language.

The constitutionality of this woman-suffrage law was called in question, the Attorney-General declaring against it. The question was brought before the Supreme Court in October, and the law was declared unconstitutional, on the ground that the "source of all authority to vote at popular elections is the Constitution; that the electorate is constituted by the fundamental law; and that the qualifications of electors must be uniform throughout the State."

A law, popularly called the "jag-cure law," was passed, providing that prisoners convicted of drunkenness should have given to them the choice between going to jail or the Penitentiary and going to an institution for the cure of drunkenness. The person convicted may have sentence suspended on condition that he agree to take the treatment and file a \$100 bond for the fulfillment of the promise. After his graduation the expense of treatment is to be paid by his county in case he brings sufficient proof of his poverty.

A bill was introduced to establish the death penalty for murder in the first degree. It was lost in the Senate, 17 members being unalterably opposed to it.

Political.—At the general election, April 3, a justice of the Supreme Court and two regents of the university were to be chosen, besides circuit judges. The four amendments passed upon by the Legislature were also to be submitted to the popular vote.

The Democratic Convention nominated George H. Durand for Justice of the Supreme Court, and Henry A. Harmon and Robert T. Bunker for Regents.

The Republican nominees were Frank A. Hooker for Justice, and Frank W. Fletcher and Herman Keifer for Regents.

The Populists nominated Edward S. Greece for Justice, and Myron O. Graves and Byron S. Ashley for Regents.

The candidates of the Prohibition party were Myron H. Walker for Justice, and Robert C. Safford and Joseph T. McCulloch for Regents.

The total vote for Justice was 842,780, of which Frank A. Hooker received 164,754, G. H. Durand 148,712, E. S. Greece 14,469, and Myron H. Walker 14,526. The number of blanks and rejected votes was 319. Frank W. Fletcher and Herman Keifer were elected Regents of the University.

Amendments to the Constitution.—All the four proposed amendments submitted to the people at the April election were voted favorably upon by the majority. They were:

1. Relative to works of internal improvement, authorizing the city of Grand Rapids to issue its bonds for the improvement of the navigation of Grand river.

2. Relative to the power of the Legislature to enact laws for the creation of county and township boards of highway commissioners, to maintain county roads at the expense of the county, and township roads at the expense of the townships.

3. Relative to the salaries of State officers, increasing and fixing the Governor's salary at \$4,000; the Lieutenant-Governor's salary at \$1,200; the judges of the circuit courts at \$2,500; the Superintendent of Public Instruction's salary at \$2,000; the Secretary of State's salary at \$2,000; and the Commissioner of the Land Office's salary at \$2,000.

4. Relative to the jurisdiction of circuit courts, giving them original jurisdiction in all matters civil and criminal not excepted by the Constitution nonprohibited by law, and appellate jurisdiction from all inferior courts and tribunals and a supervisory control of the same. They shall also have power to issue writs of *habeas corpus*, *mandamus*, *injunction*, *quo warranto*, *certiorari*, and other writs necessary to carry into effect their orders.

The first was carried by a vote of 70,597 to 55,091; the second by 68,486 to 60,015; the third by 64,422 to 62,601; and the fourth by 60,219 to 53,492.

The Legislature did not provide for the constitutional convention, which was voted favorably upon at the election of 1892.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population in 1890 was 1,301,826. Capital, St. Paul.

Government.—The following were the State officers during the year: Governor, Knute Nelson; Lieutenant-Governor, David M. Clough; Secretary of State, Fred. P. Brown; Treasurer, Joseph Bobleter; Auditor, Adolph Biermann; Attorney-General, H. W. Childs; Adjutant-General, H. Muehlberg—all Republicans, except the Auditor. Chief Justice of the Supreme Court, James Gilfillan, Republican; Associate Justices, William Mitchell, Daniel Buck, Thomas Cauty, Democrats, and Loren W. Collins, Republican.

Finances.—The total indebtedness of the State is \$1,971,306. The permanent school fund

is \$10,289,439; and the permanent university fund, \$1,026,584. The total revenues of the State for the fiscal year ending July 31, 1893, were \$5,083,608, and the total disbursements \$4,352,964, leaving a net surplus in the treasury of \$730,643.

Mortgage Indebtedness.—The results of the investigation of mortgage indebtedness in Minnesota by the census office show that 15.25 per cent. of the farm families hire, and 84.75 per cent. own, the farms cultivated by them; that 53.61 per cent. of the farm-owning families own free of incumbrance. On the farms of the State there are liens amounting to \$37,709,574, which is 31.61 per cent. of their value, and this debt bears interest at the average rate of 8.18 per cent. The corresponding facts for homes are that 46.99 per cent. of the home families own their homes; that of the home-owning families, 63.94 per cent. own free of incumbrance. The debt on owned homes aggregates \$27,953,418, or 34.36 per cent. of the value, and bears interest at the average rate 7.42 per cent.

On all the real estate of Minnesota there is a mortgage debt of \$197,745,989, of which \$75,355,562, or 38.11 per cent., is on acre tracts, and \$122,390,427, or 61.89 per cent., is on village and city lots.

Banks.—The number of banks suspended in the State between January and September was 31, of which 8 had resumed at the latter date. In the St. Paul banks the average reserve had increased from 37.17 per cent. on Oct. 3, the date of the last call, to 38.5.

Dairy Products.—According to the report of the State Dairy Commissioner, the number of creameries in operation in Minnesota in 1893 was 201; number of cows, 527,424; pounds of butter made in creameries, 18,916,300, valued at \$3,924,610.

Grain.—Estimates made in September placed the yield at an average of about ten bushels to the acre. While the yield is smaller than that of last year, the quality was reported better. The crop was moved very slowly, which was due in large part to the fact that fewer farmers than in any previous year thrashed out of the shock. The advance of the State in grain production since its admission is shown by the fact that in 1860 there were raised 2,186,995 bushels of wheat, 2,941,952 bushels of corn, and 2,176,002 bushels of oats; in 1892 there was raised 41,210,000 bushels of wheat, 24,192,000 bushels of corn, and 43,573,000 bushels of oats.

Lumber.—The value of the lumber product in 1890 was \$15,615,420; that of 1893 was estimated at \$17,898,780. At the semiannual meeting of the Mississippi Valley Lumbermen's Association, held at Minneapolis, in August, it was decided that all sawmills in the upper Mississippi valley district, with one or two exceptions, should shut down on Sept. 20, reducing the cut for each concern about 25 per cent.

Gold.—Special-Agent Gray, in his report on the gold fields of north Minnesota, says he found one vein with evidences of gold, which is about 7 feet wide and extends throughout the length of the island, and another 10 feet wide and 1,700 feet long. The section embraces only a narrow strip extending along the shore of Rainy lake for about 25 miles, and not more than 8 or 4

miles wide at any point, including a large number of islands.

Iron.—The report of the geological survey on the production of iron ores shows that Minnesota has passed Pennsylvania and New York, and occupies the third place among the iron-producing States, with a total output in 1892 of 1,225,465 long tons, or 7.7 per cent. of the total for the United States.

Prison Population.—On July 31 there were in the State Prison, exclusive of Federal convicts from other States, 338 inmates, and in the State Reformatory 153 inmates, thus making the aggregate prison population 491.

Railroads.—The opening of the transcontinental line of the Great Northern, in June, was celebrated with great rejoicing in St. Paul. This railway, which is now open to Puget Sound, is regarded as distinctly a St. Paul system, since that is its terminus, and its general offices and headquarters are there. It carries a large portion of the wheat crop, and a great amount of commerce to and from the growing towns of the Northwest passes over it. It is operated in connection with a fleet of steamers. The Great Northern, unlike the other transcontinental lines, has been built without Federal assistance. Except in so far as the old lines of the system within the State are concerned, it has been built wholly by private capital without a subsidy in money or in land. A daily passenger service was established in October on its new branch between Sioux Falls and Yankton.

The total mileage of railroad construction within the State for the year was 86.46. Nearly 4,000,000 acres of land in Minnesota are still owned by railroad companies.

Disastrous Fires.—In June the new towns of Virginia and Mountain Iron, on the Duluth, Mesaba and Northern road, were virtually put out of existence by fire. Afterward Mesaba and Biwabik, on the Duluth and Iron Range, were visited by serious fires, and Tower likewise had an experience with the flames, the destruction being due in all cases to the fierce forest fires raging on the iron ranges. Over 2,000 people were shelterless and without food, every house and provision depot having been burned. On Aug. 13 a fire consumed \$2,000,000 worth of property in Minneapolis, burning more than 200 houses and making 1,500 people homeless.

Reciprocity Convention.—An International Reciprocity Convention met at St. Paul, June 5. Its object was to take measures toward securing the adoption of a system of commercial reciprocity between Canada and the United States. A permanent organization was made. Resolutions were passed favoring reciprocity in trade, improvement of the Great Lakes to tide water, so as to admit the passage of ocean steamers and open competition between the railways of both countries; and providing for a committee of 10, 5 from the United States and 5 from Canada, to lay matters before their respective governments with a view to securing the enactment of necessary laws to secure the ends sought.

The World's Fair Exhibit.—The \$150,000 appropriated by the legislatures allowed the State to make a fine exhibit at the fair. The State days were June 1 and Oct. 13. Besides its own fine building, the State had exhibits in all

the general buildings. The forestry and mining displays were particularly fine. More than 200 awards were received for cereals, with only a little more than 300 samples shown, 40 for mining exhibits, and 66 for flour. Fifty premiums were received for draught horses, 48 for cattle, and 21 for poultry.

Decision.—In July the Supreme Court rendered a decision that has a wide bearing on labor and capital alike. The Northwestern Lumbermen's Association has a rule providing that no members shall sell goods at any place at prices lower than the retail dealers. The Bohn Manufacturing Company, one of its members, was accused of violating the rule, and was notified by the secretary that a circular warning them of the fact would be sent to all the members. The Bohn Company secured an injunction restraining the secretary on the ground that such a boycott would seriously injure their business. The lower court's order was reversed by the Supreme Court on the ground that the Bohn Company, being a member of the association, should have conformed to its rules. The Supreme Court holds that any one, unless under contract obligation, or unless his employment charges him with some public duty, has a right to refuse to work for or deal with any man or class of men he sees fit, and this right, which one man may exercise singly, any number of men may exercise jointly.

Legislative Session.—The Legislature met on Jan. 3, and adjourned on April 19. The Senate had 25 Republicans, 16 Democrats, and 18 Populists; the House, 71 Republicans, 36 Democrats, 2 Populists, and 5 Democrat-Populists.

Cushman K. Davis was elected to succeed himself in the United States Senate, having 87 of the 108 votes cast. Daniel W. Lawler, the Democratic candidate, had 49, and Sidney M. Owen, the People's party candidate, 23. Other votes were scattering.

A proposed amendment to the Constitution was voted favorably upon. It will authorize the levy and collection of a tax on inheritances, devises, bequests, legacies, and gifts.

An important act was that providing for building a new Capitol at St. Paul. The cost is not to exceed \$2,000,000, and the money is to be raised by a tax of two tenths of a mill a year for ten years. The tax will not be levied for two years to come.

The State University was placed on a more independent footing by an act providing for a slight increase in its annual maintenance fund by means of a tax of 0.15 of a mill. When the product of this tax shall exceed \$125,000 a year the excess is to be covered into the State treasury. It was provided that the question of free textbooks may be submitted to the voters of any school district.

In the interest of the farmers of the State laws were passed making new provisions in regard to inspection of wheat and to grain elevators. It has been charged that for years the farmers have been robbed and defrauded at the country elevators and exposed to the rapacity of middlemen. The new law extends the benefit of State inspection of wheat to all sellers. All elevators are to be treated as public elevators and to be under the supervision and subject to the inspection and regulations of the State Warehouse Commission.

Another act in the same interest was one giving to farmers the right to erect independent elevators on the railroad right of way. Still another act requires the railroad company to provide side-track facilities at these elevators.

For the aid of farmers whose crops were destroyed by hail or other storms in 1892, \$75,000 was appropriated for seed grain, as a loan to be repaid from the proceeds of future crops.

Provision was made for the purchase of a site and erection of a State elevator at Duluth, of a capacity of 2,500,000 bushels, to be managed and operated by the State Warehouse Commission.

In the interest of labor provision was made for safeguards to all dangerous machinery, placing all manufacturing and other establishments employing large numbers of people under the inspection of the Bureau of Labor.

A bill was passed to regulate the selling of railroad tickets and to check ticket-scalping.

Measures relating to cities and villages provided that no liquor license should be issued to any one not an actual resident of the State; that any county, town, incorporated city, or village may vote bonds in aid of improved canals or water ways, but not in excess of a total indebtedness equal to 5 per cent. of the taxable value of the property within the territory voting upon the proposition; that all villages incorporated by special acts previous to the general act of 1885 shall have the power to vote on the issue of license for the sale of intoxicating liquors.

A bill was passed for the purchase of land and erection of buildings for the soldiers' home.

Amendments to laws and statutes increased the number of vestrymen of Protestant Episcopal churches to 9; provided for graduating the amount of capital stock necessary to establish banks according to population; and increased the punishment for pools and trusts, providing that in addition to the punishment by fine there shall also be imprisonment in the Penitentiary of from one to ten years.

The State Elevator.—The act providing for a State elevator at Duluth, as described under the head "Legislative Session," was brought to test in the courts as to its constitutionality. Action was brought to enjoin the Board of Railway and Warehouse Commissioners from carrying out the provisions of the act, on the ground that it was in conflict with the Constitution. The lower court decided in favor of the act, but the Supreme Court reversed the decision.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; and 1,289,600 in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, John M. Stone, Democrat; Lieutenant-Governor, M. M. Evans; Secretary of State, George M. Govan; Treasurer, J. J. Evans; Auditor, W. W. Stone; Attorney-General, T. Marshall Miller, who resigned in January, and was succeeded by Frank Johnston, appointed by the Governor on Jan. 21; Superintendent of Public Instruction, J. R. Preston; Railroad Commissioners, J. F. Sessions,

Walter McLaurin, and J. H. Askew; Chief Justice of the Supreme Court, Thomas H. Woods; Associate Justices, J. A. P. Campbell and Timothy E. Cooper.

Finances.—For the fiscal year 1892 the disbursements exceeded the receipts by \$179,955.10, and for 1893 the excess of disbursements was \$248,545.92. Of the disbursements for 1893 \$674,195.32 were on account of the common schools. This sum added to the poll tax retained in the counties, amounting to \$245,823.58, makes a total contribution for the support of common schools of \$920,018.90.

The total assessment of real estate for 1893 was \$113,409,358, and of personal estate \$48,764,536. The State tax rate was 5 mills.

Education.—The following figures are taken from the latest report of the Superintendent of Public Education, covering the years 1892 and 1893: Number of educable children, 516,183; enrolled in public schools, 334,923; average daily attendance, 194,993; public schools taught, 5,986; teachers in public schools, 7,497; separate school districts, 58; total revenues for public schools, \$1,892,927. The statistics for 1892-'93 show that 73 whites in every 100 of school age were enrolled in the public schools, while fewer than 60 in every 100 negroes were enrolled. The enrollment of both races was 64.8 per cent. of all the educable children.

At the Agricultural and Mechanical College there was an attendance of 310 pupils for the session of 1891-'92, and of 263 for the session of 1892-'93. For the session beginning in 1893 there had been enrolled 243 pupils up to the close of the year. The attendance at the Industrial Institute and College for Girls for the session of 1892-'93 was 287, and for the present session up to the close of the year 273. The State University contained 158 students at the close of the year. These institutions are doing good work for higher education.

Charities.—At the end of the fiscal year 1893 there were 632 patients in the State Lunatic Asylum at Jackson, of whom 154 were white males, 196 white females, 136 colored males, and 146 colored females. The main asylum building, which was burned in February, 1892, has been rebuilt and furnished with modern improvements. In the East Mississippi Asylum, at Meridian, there were 240 white patients at the close of the year. All colored patients have been transferred from this institution to the asylum at Jackson. There were 80 pupils at the Institute for the Deaf and Dumb at the close of the year.

Railroads.—There are 2,466.5 miles of railroad in the State. The valuation of railroad property for the year was \$24,022,479, on which a State tax of \$120,110.50 was assessed.

Penitentiary.—On Dec. 23, 1893, there were 791 prisoners in the State Penitentiary, of whom 100 were white and 691 colored. This is an increase of 238 in two years. During 1892, 266 convicts were received, and during 1893, 401. There were 72 deaths and 72 escapes during these years. The net earnings of the institution for 1892 were \$24,010, and for 1893, \$29,961. All except 125 of the convicts have been leased to planters in the Mississippi delta, at \$8 per month for negroes and \$7 for white men; but under the new State Constitution all such leases

are prohibited after Dec. 31, 1894, when the State must undertake the direct control and employment of its prisoners.

Banks.—There are 63 State banks, with a total capital of \$3,260,925, doing business in the State. They have individual deposits subject to check amounting to \$4,399,590.96, and time deposits of \$551,401.88. These several banks hold in State, county, levee, and city bonds \$498,968.86, and are real-estate holders to the amount of \$494,556.64.

Confederate Pensions.—Under the provision of section 272 of the State Constitution the Legislature of 1892 passed an act authorizing \$50 to be paid annually out of the State treasury to all persons entitled to receive pensions under the laws of this State, but it was further provided that not more than \$64,200 per annum should be expended for that purpose. In consequence of a very large increase in the number, only \$32.25 was paid to each pensioner for 1892, and the amount for 1893 will be considerably less.

MISSOURI, a Western State, admitted to the Union, Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; and 2,679,184 in 1890. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, William J. Stone; Lieutenant-Governor, John B. O'Meara; Secretary of State, Alexander A. Lesueur; State Auditor, J. M. Seibert; State Treasurer, Lon V. Stephens; Adjutant-General, Joseph A. Wickham; Superintendent of Education, Lloyd E. Wolfe; Attorney-General, R. F. Walker; Railway Commissioner, James Cowgill; all Democrats; Chief Justice of the Supreme Court, Francis M. Black; Associate Justices, Thomas A. Sherwood, Theodore Brace, Shepard Barclay, James B. Gantt, Gavin D. Burgess, George B. Macfarlane; all Democrats.

Finances.—The State debt is less than \$7,000,000. The mortgage indebtedness on the farms and homes averages, according to a United States bulletin, \$80 to the head of population, and bears a ratio of 16.15 per cent. to the assessed valuation. The number of bank failures from January to September was 24; 3 resumed before Sept. 1. The aggregate liabilities reported were \$8,200,000.

Products.—Missouri grows 219,000,000 bushels of corn, 36,000,000 of oats, 20,000,000 of wheat, and 13,000,000 pounds of tobacco. The lead product has exceeded 100,000,000 pounds in a single year, and the zinc has equaled 12,500 tons a year. It is first of the States in the number of mules owned, third in hogs and corn, sixth in iron and horses, seventh in oats, ninth in sheep.

Coal.—By the report of the recently finished review of the coal fields of the country by the Geological Survey it appears that Missouri has 26,700 square miles of coal fields. No other Western State exceeds this supply save Illinois, which has 36,800 square miles. The Missouri product reached 2,733,949 tons in 1892, and the value of it was \$3,869,659. Three feet is near the average thickness of the coal beds of the

State, and beds 18 inches are profitably mined on a large scale. All Missouri coals are bituminous, with the exception of the cannel, which are found in local and small deposits.

Lumber.—From a statistical report of the Southern Lumber Manufacturers' Association, covering stocks on hand Aug. 20, 1898, and sales from Jan. 1 to July 1, it appears that of the 94 mills reported from 8 States only 6 are in Missouri. They have a total daily capacity of 430,000 feet; the stocks amounted to 30,150,000 feet, and the shipments to 64,590,575 feet.

A newspaper article published in April says that St. Louis is developing a large trade in the export of hard woods from the Southern forests. The trade is entirely new, and of most remarkable growth. Southern hard woods have been a feature of the lumber market for three or four years, but the export trade has been almost entirely confined to quartered and plain white oak, ash, walnut, and gum from New York and Boston.

The effect of the foreign trade has so far mainly been to cause a spreading out of territory in which lumber is bought. In addition to all this export and outside trade, there is a wonderful increase in home consumption. It was marked last year, but it is estimated to be fully 15 per cent. this year over last.

Government Lands.—The report of the General Land Commissioner shows that, of the vacant Government lands yet unappropriated, Missouri has 808,799 acres, all of which has been surveyed. More than one fourth of this is in the Ironton district, southeast of the center of the State. Taney, Camden, Stone, and Ozark counties, which have, in the order named, the largest number of acres of those reported by Counties, are lacking in railroad facilities. They are hilly and well supplied with timber, and have rich bottom lands along the streams.

A dispatch in November says a large number of home seekers have been victimized by the sale to them of lands in southwestern Missouri to which fraudulent titles were given. The source of title is from Don Joseph Valliere or Von de Carondelet, who are certified to have secured from the Spanish Government, in 1793, the grant of a large tract described as in the White river district, extending from the rivers Norte Grande and Cibulus to the sources of said rivers, 10 leagues in depth. In reality all the land not entered belongs to the United States Government. An investigation to trace the deeds to their source is in progress.

Storm and Flood.—A rise in the river in April and May flooded villages, carried away small buildings, and wrecked larger ones by undermining. A very large dock warehouse at East St. Louis gave way before the rush of the water, and about one fourth of it fell in a heap, the roof sinking and settling upon the wreck. Thousands of boxes and barrels of goods were thrown into the water, and 1 laborer was crushed to death under the debris.

In June a tornado passed over parts of Kansas and Missouri, doing great damage in both States, though Missouri suffered less than Kansas. Orchards were torn up by the roots, grain laid low, and buildings unroofed, overturned, or carried away. Many persons were injured, and 3 were killed in Gentry County.

Labor Interests.—A special jury in a St. Louis court decided that an employer damages the business character of his employee by summarily dismissing him without cause, as it creates a suspicion of incompetency that makes it more difficult for him to secure another job, in a case against the Glendale Quarry Company, which must therefore pay its former superintendent \$2,984.25 for damages and salary after his discharge. He had been employed a year by a verbal contract, but one day in August the company informed him that he was not needed any longer. No cause was assigned, but it transpired that it was to make room for a relative of one of the stockholders. The special jury was imppaneled at the request of the quarry company.

There was a strike in the autumn at the coal mines at Bevier, in consequence of the announcement that the usual increase of wages for the winter months would not be granted. The summer price had been 50 cents a ton, the winter price 60 cents. The miners also demanded a return to the plan of payment twice a month. They were joined in the strike by the miners of Huntsville and Ardmore.

Train Robbers.—A train on the Kansas City, St. Joseph, and Council Bluffs line was held up at Amazonia by 6 masked men Sept. 25. A hint of their intention, however, had been given in some way to the police, and a decoy train loaded with armed officers was sent in advance of the regular express train. The decoy train was just rounding a hill in a cut about a mile north of St. Joseph when the robbers flagged it. They boarded the baggage car, and the officers opened fire on them, killing 2 outright and capturing 3. Though the robbers used their revolvers freely, none of the officers were injured.

Powers of the Mayor.—The Supreme Court rendered a decision in December in a suit to restrain the Mayor of St. Louis from proceeding with the trial of the Commissioner of Public Buildings for alleged derelictions of official duty. The court affirmed the constitutionality of the provision of the city charter under which the trial was proceeding when interrupted by an application for a writ of prohibition.

Sale of Vagrants.—Under an old law, which is found in the revised statutes of 1889, several vagrant negroes have been sold recently in the State as chattels. In the case of a negro arrested for vagrancy at Mexico, in March, the constable was ordered by the justice to hire out or sell him for six months to the highest bidder, at public auction, at the door of the courthouse. The sale was stopped by *habeas corpus* proceedings brought to test the validity of the law. It was disputed by the negro's counsel on two grounds: That the statutory provisions found in the chapter named were repealed by implication and by the enactment of other legislation; and that, if not thus repealed, they were unconstitutional. In the decision rendered by the Supreme Court, Judge Sherwood said the Constitution of the State declares that there can not be in the State either slavery or involuntary servitude, except in punishment of crime, whereof the party shall have been duly convicted. The petitioner was guilty of no crime.

and these proceedings, if allowed to continue and reach their anticipated and ultimate developments, would result in his imprisonment and his being subjected to involuntary servitude and to punishment.

The Guarantee Investment Company.—This company, which has been doing business in the State for two years, was stopped in its operations in July by the closing of the money-order and registry offices of the post-office department against it, and in October nine of its officers were indicted by the Federal Grand Jury in Chicago. Beginning in Nevada, Mo., in 1891, with a capital of \$2,000, it soon had offices in St. Louis and Chicago, had placed 50,000 bonds of the denomination of \$1,000, and was in the receipt of \$60,000 a month from its subscribers. It had taken in over \$500,000 on initiation fees, and about as much more on account of payment of monthly installments, and had paid out \$206,000 for the redemption of bonds. It was gaining recruits at the rate of 3,500 a month, each applicant paying in \$10 as a "starter." The Government holds that the business is plainly of the nature of a lottery.

Legislative.—The Legislature was made up of 28 Democrats and 6 Republicans in the Senate, and 92 Democrats and 48 Republicans in the House. The session began on Jan. 4, and ended on March 23. Francis M. Cockrell was re-elected to the United States Senate by a vote of 109 to 49 for Chauncey I. Filley, the Republican candidate. Among the important acts passed were several amendments to the criminal laws.

The old law prohibiting the sale of liquor to Indians is extended to include "habitual drunkards."

Several measures in reference to elections were important; among these the Corrupt Practices act attracted general notice. It is the most radical law that has yet been enacted upon the subject, and some of its provisions are in advance of any views of reform that have been presented in this relation. It provides that every person who offers a bribe or otherwise illegally attempts to influence a voter's conduct shall be deemed guilty of a felony, and shall be punished by a fine of \$500 and imprisonment in the Penitentiary for not less than two or more than five years.

But this law is principally remarkable in the matter of expenditures for election purposes. Full publication of all campaign disbursements, both by candidates and by committees, is required, under oath, and no certificate of election can be issued to any successful candidate until he has made this return. It is provided that no candidate for Congress or for any public office in the State or in any county, district, or municipality shall expend more than \$100 where the number of voters is 5,000 or fewer, \$2 for each 100 voters over 5,000 and under 25,000, \$1 for each 100 voters over 25,000 and under 50,000, and 50 cents for each 100 voters over 50,000. The person receiving the next highest number of votes to that cast for his successful competitor can, at any time during his term of office, by affidavit to the Attorney-General, cause an action to be brought for violation of this section, and upon proper proof the guilty person will be deprived of office.

Other acts affecting elections make false personation of a voter at the polls a felony, with a penalty of five years.

An important law creates the Southeast Missouri Land Commission, one member each from Cape Girardeau, Ballinger, Scott, Mississippi, Stoddard, New Madrid, Pemiscot, Dunklin, Butler, and Wayne to be appointed by the Governor, who shall have made a topographical survey of the swamp lands, with proposed canals and other schemes for the reclamation of the lands.

Inspection of grain is provided for by a law declaring all private grain warehouses of 50,000 bushels or over to be public warehouses, and they are to come under the inspection of the State Railroad and Warehouse Commissioners.

An act to prevent abridgment of the legal rights of workmen by their employers provides for the fine and imprisonment of any employer or agent who forces an employee, under threat of discharge, to withdraw from any lawful organization or union of which he may be a member.

Elaborate laws go into effect for the protection of trade-marks, labels, etc., of manufacturers within the State.

An important law was one creating the office of excise commissioner, who will be appointed by the Governor. It takes the licensing power out of the hands of the collector of St. Louis.

A joint and concurrent resolution was adopted asking for an appropriation for the improvement of St. Francois river; and one submitting to the qualified voters of the State an amendment to the Constitution providing for increased tax levy for roads.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles; population, according to the census of 1890, 132,159. Capital, Helena.

Government.—The following were the State officers during the year: Governor, John E. Rickards, Republican; Lieutenant-Governor, Alexander C. Botkin; Secretary of State, Louis Rotwitt; Treasurer, Frederick W. Wright; Auditor, Andrew B. Cook; Attorney-General, Henri J. Haskell; Superintendent of Public Instruction, Eugene A. Steere; Chief Justice of the Supreme Court, William Y. Pemberton; Associate Justices, W. H. De Witt and E. N. Harwood.

Valuations.—The valuation of real property in the State for 1893 was \$71,805,939; of personal property, \$52,642,613; and of railroad property, \$9,953,355. The number of range horses in the State was 179,839, and their value \$4,446,407; number of cows (common), 22,833, value \$501,835; stock cattle, 753,268, value \$13,770,704; sheep, 2,252,527, value \$5,974,816; hogs, 9,914, value \$58,984.

The railroads were assessed per mile as follows: Northern Pacific, \$2,835; Great Northern, its Pacific extension and Neihart branch, \$4,000; Montana Central, Montana Union, and Oregon Short Line, \$5,000. Northern Pacific branch lines were assessed at \$4,000 per mile.

Legislative Session.—The regular business session of the Legislature began on Jan. 2, and adjourned on March 2. As neither Republicans nor Democrats controlled a majority of the Lower House, there was some difficulty and delay in effecting an organization of that body. The

situation was further complicated by reason of a dispute over the seat of the member from Choteau County, which arose out of the action of the county canvassing board in throwing out the returns from Box Elder precinct. By this action the board gave the election to the Democratic candidate, Hamilton; but, on application to the Supreme Court, an order was obtained directing the board to reconvene and count the rejected ballots, as a result of which the Republicans obtained a majority of the votes cast, and a certificate of election was issued to Leech, the Republican candidate. Both Leech and Hamilton presented their certificates to the House at the opening session demanding admission, whereupon the matter was referred to a committee, and both contestants were thereby prevented from taking part in the organization. With this seat vacant, there remained 26 Democrats, 25 Republicans, and 3 Populists entitled to act in the choice of a presiding officer. A temporary organization was effected on the first day by the Republicans voting with the Populists for Thomas Matthews, Populist, as temporary Speaker. Before permanent officers were chosen an agreement was reached between the Democrats and the Populists by which Matthews should remain permanent presiding officer, and some minor offices were to be given to the Democrats. This arrangement was carried out on Jan. 3, the second day of the session. On Jan. 10, by a vote of 27 to 26, the Republican contestant, Leech, was admitted to his seat as Representative from Choteau County, the Populists voting with the Republicans. The choice of a successor to United States Senator Wilbur F. Sanders devolved upon this Legislature. On the first joint ballot, taken on Jan. 11, before a Democratic caucus had been held, the vote stood: Sanders, Republican, 33; William A. Clark, Democrat, 15; Samuel T. Hauser, Democrat, 11; W. W. Dixon, Democrat, 8; Martin Maginnis, Democrat, 1; Samuel Mulville, Populist, 2. On Jan. 13 the Democratic caucus nominated William A. Clark on the first ballot, but there were 8 absentees, followers of Marcus Daly, who refused to recognize the caucus or be bound by its action. Their candidate was W. W. Dixon. On the second joint ballot, on Jan. 13, after the Democratic caucus had adjourned, the vote stood: Sanders, 32; Clark, 25; Dixon, 8; Mulville, 3. The Populists abandoned Mulville after a few ballots and gave their support to Dixon. One ballot was taken each day without substantial change in the standing of the candidates until Feb. 10. On that day the Republicans, following the decision of a caucus held on the preceding day, transferred their votes from Sanders to Lee Mantle, and the latter received their support till the end of the session. Strenuous efforts were made to heal the breach in the Democratic ranks, but the supporters of Dixon were obdurate, and, although the Democrats had a clear majority on joint ballot, they found themselves unable to elect a Senator. On the forty-third ballot, taken on March 1, the vote was: Mantle, 30; Clark, 24; Dixon, 11; scattering, 2. On the forty-fourth and final ballot, taken on March 2, the last day of the session, 6 Republicans and 2 anti-Clark Democrats came over to the support of Clark, giving him 32 votes to 25 for Mantle and 11 for Dixon. Soon after

the close of the session Gov. Rickards appointed the Republican candidate, Lee Mantle, to the vacancy. But in the United States Senate, on Aug. 28, a resolution was adopted, by a vote of 32 to 29, declaring Mantle not entitled to the seat, and indirectly deciding that the Governor had no authority under the Constitution to fill a vacancy when the Legislature has failed to do its duty. As Gov. Rickards refused to call an extra session, the State was represented by only one Senator during the year.

Among the laws enacted was one designed to carry into effect sections 41 to 44 of the State Constitution, by which penalties are provided for bribery and attempted bribery of members of the Legislature and other public officers, and for solicitation of bribery between fellow-members of the Legislature. An "antiscaip" law requires every person selling transportation tickets in the State to obtain from each company he represents a certificate of his authority to sell, and to present such certificate to the Secretary of State and obtain from him a license to act as ticket agent in the State. All persons who sell tickets contrary to these provisions are made liable to fine and imprisonment. The same act requires railroad companies to redeem unused tickets purchased by patrons. The introduction of hired peace officers from other States was prohibited, and a penalty was imposed on all persons who, without due authority, attempt to exercise the duties of peace officers.

A State board of charities and reform was created. There was also established a State bureau of agriculture, labor, and industry, to be conducted by a commissioner appointed by the Governor. A comprehensive fish and game law was enacted.

The following State institutions were established, and provision was made for their government: An agricultural college at Bozeman, a university at Missoula, a school of mines at Butte City, a normal school at Dillon, a deaf and dumb school at Boulder City, a reform school at Miles City, a home for orphans, foundlings, and destitute children at Twin Bridges, and a second prison at Billings. Some of these institutions received grants of such public lands as were held by the State from the Federal Government in trust for such institutions, but no appropriation of public money immediately available was made, except to the three institutions last mentioned. For the reform school \$25,000 were appropriated; for the home at Twin Bridges, \$15,500; and for the Billings State Prison, \$72,000.

The following new counties were created: Flathead County, out of a portion of Missoula, county seat Kalispel; Valley County, out of a portion of Dawson, county seat Glasgow; Teton County, out of a portion of Choteau, county seat Choteau; Ravalli County, out of a portion of Missoula, county seat Stevensville; Granite County, out of portions of Deer Lodge and Missoula, county seat Philipsburg.

The sum of \$20,000 was appropriated for bounties on stock-destroying animals. The tax rate for 1893 and 1894 was fixed at 2½ mills for State purposes. Resolutions were adopted favoring the election of United States Senators by direct vote of the people.

Other acts of the session were as follow :

Establishing a great seal for the State.

To provide for the sale of timber from lands belonging to the State.

Authorizing the State Board of Education to select lands from the school lands and other public lands for the uses and purposes of the educational institutions of the State.

Regulating the branding of stock driven into or through the State.

To punish persons driving horses, mules, or cattle from their usual and customary range.

Placing the Montana Historical Society under State control.

Providing for the incorporation of accident-insurance companies doing business on the assessment plan.

Authorizing counties and cities to make contracts for the abatement of injurious and unhealthful smoke and fumes, and to issue bonds for that purpose.

Permitting the purchase, consolidation, lease, sale, and aiding of one railroad by or with another.

Defining the conditions on which foreign corporations may do business in the State.

State Lands.—For the fiscal year 1893 there were 170,438.69 acres selected on account of State institutions from the public domain. The total selections of land for these institutions have amounted to 353,689.35 acres. Of this amount the State relinquished 1,382.94 acres, leaving the net selections 352,297.41 acres.

Silver Conference.—A convention of representatives from the mining districts of the State, called by the mine owners, met at Helena on July 6, at which a permanent organization was formed, to be known as the Montana Free Coinage Association. Delegates to attend the sessions of the Bimetallic League at Chicago, and to represent the silver interests of the State at the extra session of Congress, were also chosen. Resolutions were adopted, including these :

We declare it to be our deliberate conviction that, in view of the unrequited labors of prospectors, the work expended upon the development of unprofitable mines, the losses on unproductive plants, and all the factors that enter into the ultimate cost of the silver product of the West, every ounce of silver taken from the earth and prepared for the mint represents its full coinage value at a ratio to gold of sixteen to one.

That the commerce of the world calls for the use of silver and gold as money, not only for the purpose of affording the necessary volume of currency, but equally that each may correct the occasional aberration in the value of the other.

That as the history of the depreciation of silver is a history of adverse legislation, without which its parity to gold would have been maintained without doubt or difficulty, we demand that Congress shall be the first to retrace its steps and repeal the measures it has enacted to the detriment of that metal.

That we appeal to the laboring classes of the Union, without regard to section, to give their support to the policy of free coinage.

N

NATIONAL ACADEMY OF SCIENCES.

Officers: President, Othniel C. Marsh; Vice-President, Francis A. Walker; Foreign Secretary, Wolcott Gibbs; Home Secretary, Asaph Hall; Treasurer, John S. Billings. Two meetings were held during 1893. The first or stated meeting was held in Washington, D. C., on April 18-20, when the following papers were read :

"Helen Keller," by Alexander G. Bell; "Peptonization in Gastric Digestion," by Russell H. Chittenden; "On the Systematic Relations of the Ophidia," by Edward D. Cope; "The Classification of the Gastropodous Mollusks," by Theodore Gill; "Intermediate Orbits," by George W. Hill; "On the Nature of Certain Solutions, and on a New Means of investigating them," by Matthew C. Lea; "The Relations of Allied Branches of Biological Research to the Study of the Development of the Individual, and the Evolution of Groups," "The Endosiphonoidea (Endoceras, etc.), considered as a New Order of Cephalopods," "A New Type of Fossil Cephalopods," and "Results of Recent Researches upon Fossil Cephalopods of the Carboniferous," by Alpheus Hyatt; "On a Potentiality of Internal Work in the Wind" and "On a Bolograph of the Infra-red Solar Spectrum," by Samuel P. Langley; "The Relations between the Statistics of Immigration and the Census Returns of the Foreign-Born Population of the United States" and "Statistical Data for the Study of the Assimilation of Races and Nationalities in the United States," by Richmond Mayo-Smith; "Fundamental Standards of Length and Mass," "Telegraphic Gravity Determinations," and "Comparison of Latitude Determinations at Wai-kiki," by Thomas C. Mendenhall; and "Monograph of the Bombycine Moths of America, North of Mexico: Part I.—Notodontidae," by Alpheus S. Packard; also a "Biographical Memoir of General Montgomery C. Meigs," by Henry L. Abbott; and a "Memoir of Julius E. Hilgard," by Eugene W. Hilgard.

The following paper was read by a non-member :

"A One-Volt Standard Cell," by Henry S. Carhart, introduced by Thomas C. Mendenhall.

No new members were elected at this session, owing to the impossibility of agreeing upon candidates, but three foreign associates were chosen: François Felix Tissandier, of Paris, whose specialty is astronomy; Karl Ludwig, of Leipzig, whose specialty is physiology; and Karl Rammeisberg, of Berlin, whose specialty is chemistry. At this session also the third presentation of the Henry Draper medal was made to Henry C. Vogel, of Potsdam, Germany, for his researches in astronomical physics.

The scientific session was held in Albany, N. Y., on Nov. 7-9, when the following papers were read :

"Additional Researches on the Motion of the Earth's Pole," by Seth C. Chandler; "Certain Histological Relations between the Subalpine Plants of the White Hills and of the Labrador Coast," by George L. Goodale; "Double Stars," by Asaph Hall; "The Paleontology of the State of New York—the Present Condition of the Work," and "The Geological Map of the State of New York," by James Hall; "On a New Form of Telescopic Objective, as applied to the Twelve-Inch Equatorial of the Dudley Observatory," by Charles S. Hastings; "A New Process of Printing in Color," by Edward S. Morse; and "American Palaeozoic Cockroaches," by Samuel H. Scudder; also a "Biographical Memoir of Amos H. Worthen," by Charles A. White; and a "Biographical Memoir of William P. Trowbridge," by Cyrus B. Comstock.

The following papers were read by non-members :

"On Reaction—Times and the Velocity of the Nervous Impulse," by J. McKeen Cattell and Charles S. Dolley, introduced by George F. Barker; "Latitude Determinations at the Sayre Observatory," by Charles L. Doolittle, introduced by Lewis Boss; "Insect Voices," by Joseph A. Lintner, and "Edible and Poisonous Fungi," by Charles H. Peck, introduced by James Hall; and "On the Structure and Development of Trilobites," by Charles E. Beecher, introduced by A. Hyatt.

At this meeting the annual report of the President of the Academy was considered before presenting it to Congress, and for this purpose a special stated session was held on Nov. 8. The new Dudley Observatory was inspected by the members on Nov. 8, and its opening made simultaneous with the meeting of the Academy. Its director, Lewis Boss, is a member of the Academy. Its original opening, in 1856, was likewise celebrated by an unusual gathering of scientists in Albany, advantage of which was then taken to hold the meeting of the American Association for the Advancement of Science there.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,998 in 1870; 452,402 in 1880; and 1,058,910 in 1890. Capital, Lincoln.

Government.—The following were the State officers during the year: Governor, Lorenzo Crounse, Republican; Lieutenant-Governor, Thomas J. Majors; Secretary of State, John C. Allen; Auditor of Public Accounts, Eugene Moore; Treasurer, Joseph S. Bartley; Attorney-General, George H. Hastings; Superintendent of Public Instruction, Alexander K. Goudy; Commissioner of Public Lands and Buildings, A. R. Humphrey; Chief Justice of the Supreme Court, Samuel Maxwell; Associates, T. L. Norval, A. M. Post; Commissioners of Supreme Court, Robert Ryan, John M. Ragan, Frank Irvine.

Valuations.—For 1893 the assessed valuation of property in the State was \$194,733,124.73, against \$186,432,376.71 for 1892. Included in this assessment were 15,289,859 acres of improved land, valued at \$60,299,544; 13,041,457 acres of unimproved land, valued at \$27,051,620; 176,425 improved town and city lots, valued at \$30,888,037; 355,751 unimproved town and city lots, valued at \$9,833,807; 694,232 horses, valued at \$8,455,447; 1,447,664 cattle, valued at \$6,057,325; 45,520 mules, valued at \$658,275; 159,347 sheep, valued at \$128,842; 1,283,265 hogs, valued at \$1,707,183; railroad sleeping- and dining-cars, \$28,668,822; telegraphs, \$192,051.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 3 and continued through April 8. Politically, each House was divided as follows: Senate—Republicans 14, Independents 14, Democrats 5; House—Republicans 48, Independents 40, Democrats 12. An organization of the House was effected at the opening session by a combination between the Independents and Democrats; Representative Gaffin, Independent, was elected permanent presiding officer, and the minor officers were divided. The Senate on the second day secured a Republican as temporary clerk by the refusal of the Independents to vote; and on the fourth day Senator Correll, Republican, was elected president *pro tem* by Republican and Democratic

votes. After a delay of several days and numerous attempts to elect a permanent clerk, an agreement was reached between the Independents and Democrats, by which the former obtained the clerkship and the other Senate offices were divided between the two parties. The choice of a successor to United States Senator A. S. Paddock devolved upon this Legislature. As provided by law, the first ballot was taken in each House separately on Jan. 17. At this time none of the three parties had attempted to make a caucus nomination, and the votes were scattered among more than 30 of the 43 avowed candidates. In the House, Paddock, Republican, received 28 votes; Lieut.-Gov. Majors, Republican, 4; John M. Thurston, Republican, 3; John H. Power, Independent, 22; William A. McKeighan, Independent, 4; the remaining votes being divided among 27 other candidates. In the Senate Paddock had 5 votes, Majors 3, Thurston 1, Powers 8, scattering 15. On Jan. 18, on the first joint ballot, Paddock received 32 votes, Powers 27, Majors 7, McKeighan 6, scattering 59. A caucus of the Independents was held on Jan. 19, at which John H. Powers was made the party candidate, and on the following day he received 54 votes, the full party strength. But as he was not fortunate in winning Democratic support, he was superseded as a candidate on Feb. 1 by W. L. Greene, who proved no more successful in this regard. On Feb. 2 the full Republican strength was united for the first time in the support of John M. Thurston, who had been selected as the party candidate. The vote on this day stood as follows: Thurston 61, Greene 56, James E. Boyd 3, scattering 10. A few days later the name of Greene was dropped by the Independents, and Judge William V. Allen became their candidate. On the joint ballot on Feb. 6 he received 65 votes to 61 for Thurston, 3 for Boyd, and 2 for J. S. Morton. On the final ballot, taken on Feb. 7, he secured the entire Democratic and Independent support and was elected by a vote of 70 to 59 for Senator Paddock, to whose support the Republicans returned on this ballot.

The most important legislative result of the session was the passage of a voluminous act, known as the Newberry law, establishing the maximum freight rates chargeable by railroads. Several hundred commodities are mentioned in the act and classified for the purpose of fixing the rate. Extended tables of charges for different distances and for car-load or less than car-load lots are included in the act. It is further provided that, when any railroad shall in a proper action show by competent testimony that the schedule of rates prescribed by the act is unjust and unreasonable, the court may issue an order directing the State Board of Transportation to permit such railroad to raise its rates to any sum in the discretion of the board, provided that in no case shall the rate so raised be fixed at a higher sum than that charged by such railroad on Jan. 1, 1893. The State Board of Transportation is empowered to reduce the rates established by the act whenever the majority of the board shall deem it just and reasonable. The law was to take effect on Aug. 1, 1893.

In order to relieve the pressure of business before the State Supreme Court, the justices thereof were authorized to appoint 3 commissioners, no

2 being of the same political party, who shall hold office for three years, and should assist the court in the performance of its duties. It was made unlawful for any person, association, or corporation to bring into the State any person or persons or association of persons for the purpose of discharging the duties devolving upon police officers, sheriffs, or constables in the protection of private property, and such officers were prohibited from appointing nonresidents as deputies.

All companies, firms, or individuals issuing rebate vouchers or certificates or making promises, verbal or written, to allow a reduction of price charged upon the condition of sale, were required to deposit, in such institutions as the State Auditor should designate, sums of money equal to such rebate vouchers or certificates issued or promises made. All such vouchers, certificates, and written promises shall be transferable by endorsement and shall be a legal lien upon such deposits.

A further sum of \$35,000 was appropriated for the benefit of the State exhibit at the World's Columbian Exposition, and \$10,000 was set apart to be used by the Governor in securing attorneys to aid in prosecuting criminal proceedings against officials or employees who may have defrauded the State, and in conducting civil actions against such persons and their bondsmen.

Congress was memorialized to call a convention of the several States for the purpose of proposing a constitutional amendment, securing the election of United States Senators by direct vote of the people, and the legislatures of sister States were requested to co-operate in this movement.

Other acts of the session were as follow:

To provide for the appointment of police matrons in cities.

Declaring all persons entitled to full and equal enjoyment of the accommodations, facilities, and privileges of inns, restaurants, public conveyances, barber shops, theaters, and other places of amusement.

To provide for the parole of prisoners, to place the power therefor in the Governor.

To provide for ditching and draining wet or swamp land, and to protect them by levees.

To promote the development of water power for manufacturing and other industrial purposes.

To prohibit lumber dealers, coal dealers, and other persons or companies from entering into any contract to pool or fix the price at which lumber or coal shall be sold.

Providing for a recount, on or before May 1, 1893, of the votes cast for constitutional amendments in the November election. [The result was not changed by this recount, both amendments failing to secure a majority of the votes cast.]

Education.—For the year 1892-'93 the enrollment of students at the State University was as follows: Graduate students, 21; academic and industrial college, 532; college of law, 53; school of art and music, 141; special students, 82; preparatory course, 343; total in all departments, 1,086. This institution is one of the most successful of its class in the United States.

Penitentiary.—On Oct. 26 the State suffered a loss of nearly \$100,000 by the burning of one of the large workshops on the Penitentiary grounds. There was no insurance, and no funds of the State are now available for rebuilding.

Militia.—The National Guard of the State consists of 1,087 men, organized into two regiments of infantry, 1 troop of cavalry, and 1 battery.

Settlement of the Sand Hills.—The tide of immigration that between 1880 and 1890 poured into the vacant lands of Nebraska has materially diminished. Reports of land officers in the various districts where nearly 10,000,000 acres of Government lands lie vacant indicate that for several years past the bulk of the business of the land officers has been in the line of perfecting titles. By far the greater portion of the government lands suitable for cropping without irrigation is now gone. Most of the valleys and draws in what has been the "semiarid" region of the State are occupied by farmers and small stock raisers. The remainder, which is estimated approximately at 10,000,000 acres, lies chiefly in the northwestern part of the State, occupying an area 180 miles by 100.

From the time of Prof. Aughey's first report on the geology of Nebraska this section has been known as the "sand-hill country." The greater portion lies north of the Platte and west of the ninety-ninth parallel, continuing northward into South Dakota.

Impeachment of State Officers.—Investigations into the conduct of State institutions made this year by legislative committees developed the existence of various abuses and frauds in the furnishing of supplies to the State, and in March the Lower House selected a committee to examine the evidence taken at these investigations. A majority of this committee, toward the end of March, reported a recommendation that measures be taken to impeach the members of the State Board of Public Lands and Buildings. Articles of impeachment were accordingly drawn and submitted to the joint Assembly early in April. Charges were made in these articles against Secretary of State Allen, Ex-Treasurer J. E. Hill, Ex-Auditor Benton, Ex-Attorney-General Leese, Attorney-General Hastings, and Commissioner A. R. Humphrey. Several of the charges related to the construction of a new cell house at the State Penitentiary, wherein one W. H. Dorgan, agent of the board, was alleged to have defrauded the State through the failure of the board to perform its proper duties. Charges were also made that the board had fraudulently audited and paid the extravagant bills contracted by this agent. Another article charged the board with failure to exercise proper care in auditing the accounts and expenses of the insane asylum, whereby large sums were lost to the State. There were other allegations of minor importance. The Legislature adopted the report of the committee, and a few days later the State Supreme Court convened as a court of impeachment to try the charges. The trial of the case was postponed till May 1; the taking of testimony and arguments of counsel occupied several weeks, and a decision was not rendered till June 5. Although the defendants Hastings, Allen, and Humphrey were then acquitted of misdemeanors sufficiently grave to justify their removal from office, the court found that the action of the Board of Public Lands and Buildings in selecting Dorgan as its agent was highly censurable and wanting in an

intelligent regard for the interests of the public. The defendants Benton, Leese, and Hill were discharged on the ground that the Legislature had no legal authority to impeach ex-officials.

Maximum Freight Rates.—By the terms of the Newberry law, enacted this year, its provisions were to take effect on Aug. 1. On July 28, the Chicago, Burlington and Quincy road filed a bill in the Federal court at Omaha against the State Board of Transportation, asking that the latter be restrained from putting the rates into effect, on the ground that the law was unconstitutional. On the following day certain stockholders of the Chicago and Northwestern, the Chicago, Burlington and Quincy, the Union Pacific, and the Missouri Pacific companies began suits against the State board and the respective officials of these roads, asking for a similar injunction. Other railroads affected by the law brought similar suits. Answers were filed by the defendants in these suits on or before Sept. 4, and testimony was taken in October and November. No decision had been reached at the close of the year, and the temporary injunctions issued upon the filing of the respective bills, restraining the enforcement of the law, had not been modified up to that time.

The State Depository Law.—Late in January announcement was made of the failure of the Capital National Bank of Lincoln, one of the most important banking institutions of the State. This news was soon followed by other developments showing that very little, if anything, would be saved from the wreck, on account of the financial irregularities of some of the bank officials. The institution had been designated, in accordance with the act of 1891, as a depository for State funds, its bond to the State having been approved by the Governor, Attorney-General, and Secretary of State; and at the time of the failure it contained deposits of State funds amounting to about \$236,000. Only a few days before the failure the retiring State Treasurer, J. E. Hill, had turned over to his successor the funds in his hands, including certificates of deposit on this institution amounting to \$236,864.60. As it was during the term of Treasurer Hill that the depository law had been passed and the deposits made, a movement was begun to recover from him and his bondsmen the amount of the loss suffered by the State. A suit on his bond was brought by the State in the district court of Douglas County, where some of the defendants resided. The ex-Treasurer filed objections to the jurisdiction, and his objections were sustained. In another case, decided by the same court on the same day, a view of the law was taken which would seem to relieve the ex-Treasurer and his bondsmen from liability. This was the case of Hopkins vs. Scott, wherein it was decided that the State depository law of 1891 was constitutional and valid.

In May the president of the defunct bank, C. W. Mosher, was indicted in the Federal court at Omaha for official irregularities and was convicted and sentenced to imprisonment.

Political.—A justice of the Supreme Court and 3 regents of the State University were chosen by popular election this year. The first nominating State convention was held by the Prohibitionists, at Lincoln, on Aug. 23, and re-

sulted in the selection of Mrs. Ada M. Bittenbender for the judicial officer, and of A. E. Ricker, Mrs. C. H. Walker, and J. P. Heald for regents.

On Sept. 5 the Populist State Convention met at Lincoln, and nominated Silas A. Holcomb for justice and E. L. Heath, A. A. Monroe, and C. L. Brainard for regents.

The Democratic State Convention, held at Lincoln on Oct. 4, nominated Frank Irvine for justice, and M. M. Doolittle, J. M. Pyle, and Charles A. Kroman for regents.

On Oct. 5 the Republicans met in State convention at Lincoln, and nominated Thomas O. C. Harrison for justice, and H. D. Estabrook, C. D. Weston, and C. W. Kaley for regents. In the election the Republican ticket was successful. For justice of the Supreme Court, Harrison received 72,632 votes; Holcomb, 65,666; Irvine, 37,545; and Bittenbender, 6,357.

NETHERLANDS, a constitutional monarchy in western Europe. The legislative power is vested in the States General, consisting of 2 Houses. The First Chamber is composed of 50 members elected for nine years by the provincial states from among the highest taxpayers or high public functionaries in office or retired. The Second Chamber has 100 members, who are elected for four years by direct popular suffrage. The number of electors under the Constitution of Nov. 30, 1887, is about 250,000, or 1 in 15 of the population. The sovereign has power to dissolve either or both of the chambers, and in case of a dissolution is bound to order new elections within forty days and call a session within sixty days. All legislation must be initiated in the Second Chamber. The throne is hereditary in the male line in the house of Orange-Nassau in the order of primogeniture, but is transmissible to female heirs on the extinction of the male stem. This contingency occurred on the death, Nov. 23, 1890, of King Willem III, who was succeeded by his infant daughter, Wilhelmina, born Aug. 31, 1880, whose mother, Queen Emma, born Aug. 2, 1858, was appointed Regent. The ministry, constituted Aug. 20, 1891, is composed, as follows: President of the Council and Minister of Foreign Affairs, G. van Tienhoven; Minister of the Interior, J. P. Tak van Portvliet; Minister of Finance, N. G. Pierson; Minister of Justice, H. J. Smidt; Minister of the Colonies, Baron van Dedem; Minister of Marine, J. C. Jansen; Minister of War, A. L. G. Seyffardt; Minister of Public Works and Commerce, C. Lely.

Finances.—The budget for 1893 makes the total receipts of the treasury 127,343,890 guilders (1 guilder = 40 cents), of which 25,200,000 guilders are derived from the excise on spirituous liquors, 17,075,000 guilders from other excise duties, 11,614,000 guilders from direct personal taxes, 11,590,000 guilders from land taxes, 20,718,000 guilders from stamps and registration and succession duties, 5,730,000 guilders from the income tax, 4,528,000 guilders from patents, 5,736,250 guilders from customs, 2,330,000 guilders from domains, 7,400,000 guilders from posts, 1,359,000 guilders from telegraphs, 1,400,000 guilders from pilotage dues, 661,500 guilders from the lottery, 230,850 guilders from the guarantee of gold and silver articles, 136,000 guilders from hunting and fishing licenses, 3,945,000 guilders

from railroads, 6,980 guilders from mining royalties, and 7,688,360 guilders from other sources. The total expenditures are estimated at 137,860,022 guilders, of which 37,408,988 guilders are for the public debt; 22,265,552 guilders for war, 15,775,910 guilders for marine, 12,297,699 guilders for the interior, 5,488,669 guilders for justice, 660,506 guilders for the executive, 788,862 guilders for foreign affairs, 804,000 guilders for the Queen's household, 19,129,493 guilders for financial administration, payments to communes, and public worship, 21,825,658 guilders for public works, 1,369,690 guilders for the central administration of the colonies, and 50,000 guilders for unforeseen expenses.

The public debt in 1893 amounted to 1,083,966,950 guilders, not counting 15,000,000 guilders of paper money. Of the funded debt, 878,535,600 guilders pay $3\frac{1}{4}$ per cent. interest, having been converted in 1892 from 4-per-cent. obligations, 610,310,400 guilders pay $2\frac{1}{4}$ per cent., and 89,072,250 guilders pay 3 per cent.

The Army and Navy.—The active army is recruited under the law of 1861 both by voluntary enlistment and by conscription. The volunteers, who constitute one third of the army, are engaged for six or eight years. The conscripts are drawn by lot from among the able-bodied young men of the age of twenty. The annual contingent is 10,400. Substitution and the exchange of numbers after the drawing are permitted. Service with the colors lasts only twelve months, after which the men are called out to drill six weeks for six successive years. The peace effective for 1893 was as follows: General staff, 63 officers; administration, 193 officers; 46 battalions of infantry, 1,060 officers and 11,408 men; 16 squadrons of cavalry and 3 *dépôts*, 143 officers and 2,338 men, with 4,115 horses; 21 batteries of field artillery and 6 companies of train, 247 officers and 1,729 men, with 2,349 horses; 40 companies of fortress artillery, 217 officers and 1,695 men; 4 companies of artillery for armored forts, 15 officers and 202 men; 22 companies of engineers, 124 officers and 1,128 men; 3 companies of sanitary troops, 3 officers and 108 men; 12 sections of gendarmerie, 15 officers and 641 men, with 406 horses; 2 companies attached to the recruiting office for the colonies, 13 officers and 62 men; total, 2,033 officers and 19,311 men.

The navy in 1893 consisted of 6 armorclads, 18 monitors, 5 river gunboats, 31 other gunboats, 37 torpedo boats, 6 frigates, 3 corvettes, 6 schooners, 2 paddle-wheel steamers, 3 stationary vessels, 16 school-ships, and 1 transport; in all, 129 vessels, armed with 282 guns over 10 centimetres and 467 of smaller caliber. There were building 3 armorclads, of 3,400 tons each, and 1 deck-protected cruiser, of 4,600 tons.

Communications.—The length of railroads in 1890 was 1,839 miles, of which the state owned 936. There are 1,907,170 miles of canals and 3,000 miles of other navigable water. The state telegraph lines in 1891 had a total length of 3,311 miles, with 11,788 miles of wires. The receipts of the post-office were 7,050,784 guilders and the expenses 5,275,676 guilders.

Commerce.—The amount of the special commerce for 1892 and the shares of the different countries in the trade may be seen in the following table, which gives the values in guilders:

COUNTRIES.	Imports.	Exports.
Great Britain.....	266,500,000	325,800,000
Germany.....	274,700,000	504,200,000
Belgium.....	184,800,000	160,400,000
France.....	30,900,000	9,000,000
Sweden and Norway.....	16,900,000	10,000,000
Russia.....	38,500,000	3,100,000
Roumania.....	27,000,000
Turkey.....	8,100,000	7,000,000
Italy.....	4,700,000	4,700,000
Spain.....	22,000,000	1,700,000
Netherlands East India.....	177,200,000	62,500,000
British East India.....	41,900,000	600,000
Africa.....	6,800,000	7,400,000
United States.....	148,900,000	23,900,000
Brazil.....	2,900,000
Peru and Bolivia.....	18,600,000
Other countries.....	27,200,000	14,200,000
Total.....	1,382,100,000	1,188,900,000

In these totals are included the precious metals, of which 15,400,000 guilders were imported and 6,200,000 guilders exported. Of the total value of the imports, 362,300,000 guilders represent articles of alimentation, 303,700,000 guilders raw materials, 217,700,000 guilders manufactured articles, and 383,000,000 guilders miscellaneous merchandise. Of the total value of the exports, 343,100,000 guilders represent alimentary substances, 214,800,000 guilders raw materials, 217,200,000 guilders manufactured articles, and 353,100,000 guilders other merchandise. The total value of the special imports for 1891 was 1,356,000,000 guilders. The following were some of the principal articles: Cereals, 230,600,000 guilders; drugs, 222,600,000 guilders; iron and steel, and manufactures thereof, 124,000,000 guilders; textiles, raw and manufactured, 112,200,000 guilders; coal, 45,100,000 guilders; copper, 40,800,000 guilders; rice, 40,700,000 guilders; seeds, 35,600,000 guilders; coffee, 34,600,000 guilders; timber, 28,100,000 guilders. The total value of the domestic exports for 1891 was 1,140,400,000 guilders. Among the large exports the following are worthy of note: Drugs and chemicals, 157,200,000 guilders; grain and flour, 118,400,000 guilders; textiles and textile manufactures, 106,600,000 guilders; iron and steel and manufactures thereof, 83,000,000 guilders; copper manufactures, 24,700,000 guilders; paper, 23,900,000 guilders; skins, 21,800,000 guilders; flax, 18,900,000 guilders.

Navigation.—There were entered 8,802 vessels, of 15,824,000 metric tons, with cargoes and 563, of 361,000 metric tons, in ballast in 1891, and cleared, 5,799, of 8,781,000 metric tons, with cargoes and 3,463, of 7,370,000 metric tons, in ballast. The merchant navy consisted in the beginning of 1892 of 143 steamers, of 457,000 metric tons, and 478 sailing ships, of 370,000 metric tons.

The Dutch East Indies.—C. Pynacker Hordyck, Governor-General, was succeeded in 1893 by Jonkheer C. A. H. van der Wyck. Java and Madura, forming one colony, are divided into 22 residencies, administered by residents, who have under them assistant residents and *contrôleurs* to direct the various grades of native officials. The culture system, which involves the forced labor of the natives, has been abolished in regard to sugar and other products, but is still retained for the cultivation of coffee on Government lands

in Java and Madura and in Menado and the west coast of Sumatra. The area and population of the various possessions are estimated as follow:

POSSESSIONS.	Sq. kilometres.	Population.
Java and Madura.....	181,758	22,862,820
Sumatra and Riau.....	449,748	8,186,100
Banda.....	12,681	82,900
Billiton.....	4,807	40,100
Dutch Borneo.....	598,900	1,153,800
Celebes.....	120,917	989,000
Menado.....	67,463	566,500
Dutch New Guinea.....	897,204	233,000
Ambone.....	48,580	251,100
Ternate.....	55,792	106,000
Timor.....	44,406	760,000
Bali and Lombok.....	10,881	1,355,900
Total.....	1,873,061	31,614,000

Of the inhabitants of Java and Madura computed for 1891, 23,559,727 were natives, 42,504 Europeans, 243,006 Chinese, 14,047 Arabs, and 3,536 Hindus and others. The population of Batavia, the capital of Java and Netherlands India, was 104,590 in 1891; of Surabaya, 117,986; of Surakarta, 100,291.

The budget of Netherlands India for 1893 makes the total receipts 130,464,898 guilders, of which 29,892,524 guilders come from sales of Government coffee, 5,643,462 guilders from sales of tin, 178,200 guilders from sales of cinchona, 18,567,000 guilders from the opium monopoly, 12,836,000 guilders from customs, 16,157,000 guilders from the land tax, 8,297,000 guilders from the duty on salt, 1,738,000 guilders from posts and telegraphs, 8,388,000 guilders from railroads, and 28,777,712 guilders from other sources. The expenses are estimated at 136,588,058 guilders, 25,489,592 guilders in Holland and 111,098,466 guilders in India, leaving a deficit of 6,123,160 guilders.

The army of the Dutch East Indies, which is recruited by enlistment only, in 1893 numbered 537 officers and 2,544 men in the general staff and auxiliary services, 707 officers and 26,715 men in the infantry, 33 officers and 853 men in the cavalry, 90 officers and 2,707 men in the artillery, and 10 officers and 584 men in the engineers; total, 1,877 officers and 33,408 men. Of the rank and file, 13,593 were Europeans. The naval force consisted in 1893 of 1 protected corvette, 18 screw steamers, 5 paddle steamers, and 1 torpedo boat, carrying altogether 79 large and 77 small cannons. The *personnel* consisted of 627 officers, 557 surgeons, mechanics, etc., and 5,939 seamen, exclusive of 2,921 naval militiamen, 1,204 native sailors, and 55 officers and 2,106 men in the marine infantry.

The total value of the imports in 1891 was 146,925,000 guilders of merchandise and 13,249,000 guilders of specie, of which 5,602,000 guilders of merchandise and 4,000,000 guilders of specie were imported on Government account. The exports of merchandise were 17,148,000 guilders on Government account and 158,572,000 guilders by individuals; in all, 175,896,000 guilders. The specie export was 654,000 guilders. The exports of the principal articles of domestic produce were in 1890 as follow: Sugar, 51,500,000 guilders; coffee, 36,600,000 guilders; tobacco, 32,300,000 guilders; tin, 9,200,000 guilders; gutta-percha, 4,600,000 guilders; pepper,

4,200,000 guilders; indigo, 3,300,000 guilders; rice, 2,900,000 guilders; dammar, 2,600,000 guilders; gambier, 2,600,000 guilders; tea, 2,200,000 guilders; copra, 2,000,000 guilders; skins, 2,000,000 guilders.

The railroads in operation in 1893 had a total length of 1,361 kilometres, of which 1,258 were in Java and 103 in Sumatra. There were 173 kilometres in Java and 180 in Sumatra under construction. The telegraphs belonging to the state had a total length in 1893 of 7,852 kilometres, with 9,095 kilometres of wires, besides 910 kilometres of cables.

Legislation.—Two important projects of law that were brought before the States-General by the Government in 1893 were not readily adopted because strong divergent opinions were held on both subjects. One was a measure for a wide extension of the suffrage, and the other a thorough revision of the military law making liability to service equal and nearly universal. The Constitution of 1887 conferred the right of suffrage on all male citizens twenty-three years of age who pay a land tax of 10 guilders or more or a direct personal tax higher than the limit of partial exemption or are occupiers of the class defined in the law. It provided for a further extension of the franchise, and Tak van Poortvliet, in his electoral bill, aimed to make suffrage as nearly universal as the Constitution allowed. He proposed to make every man a voter who can make his application in writing and is able to support himself and his family if he has one. This would exclude only those who are unable to read and write and recipients of public or private charity. The division of opinion on the bill had no relation to the old party lines. The Radicals alone were solid in its support. The Liberals and the Conservatives were split into discordant factions, and the most uncompromising opponents of the reform were the members of the Liberal party, who feared the Social Democrats would not only become powerful in the Chamber, but would soon secure the same franchise for communal electors and make changes in public taxation and expenditure that would divert the resources of those who have for the benefit of those who have not. Even a section of the Socialists condemned the Government bill because it stopped short of universal suffrage. Among the Catholic Clericals and the Antirevolutionary or Protestant party many were hostile to the bill, and almost as many approved its principle. In the First Chamber during the discussion of the budget the ministry was implored not to make a Cabinet question of the electoral bill, for in case of a dissolution the parties would be thrown into confusion. Van Tienhoven, considered one of the moderate men in the Cabinet, declared that the ministers were agreed and collectively responsible.

The project for the reorganization of the service in the army and navy was intended to do away with the system of substitution, making personal military service obligatory in the standing army, the militia, and the Landsturm. The proposed period of service is nine years, of which three are spent in the active army, three in the sedentary service, and three in the reserve. The maximum annual contingent for the army and navy together is fixed at 11,500 men. Recruits

are not allowed, as heretofore, to find paid substitutes.

The War in Acheen.—The Kingdom of Acheen, or Atjeh, in the extreme north of Sumatra, having an area of 53,100 square kilometres and a population estimated at 444,600, rebelled against the Dutch rule in 1873, and the inhabitants, who are a fighting race, given to piracy and encouraged in smuggling by foreign traders, have been at open war with the Government ever since. The country was made a governorship in 1878. The authorities, though the expenses of the hostilities have been the cause of the chronic deficit in the budget, and though the losses of men, chiefly from beri-beri and other diseases, have been very great, have been reluctant to develop the military power necessary to crush the rebels, who would fight till they were exterminated, and have latterly contented themselves with occupying strategic points and blockading the coast. In 1893 the blockade was partially relaxed. The rebels, who are well armed with weapons smuggled in by merchants of Singapore, continue to attack the Dutch outposts and the tramways and industrial works established in the country, to cut telegraph lines, and raid cattle farms. In March, 1893, an engagement took place on the Tamiang river, in which the Dutch killed 63 men and captured 8 forts, 7 cannons, and a quantity of rifles, losing 6 killed and 45 wounded.

NEVADA, a Pacific coast State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census, was 42,491 in 1870; 62,266 in 1880; 45,761 in 1890. Capital, Carson City.

Government.—The following were the State officers during the year: Governor, Roswell K. Colcord, Republican; Lieutenant-Governor, Joseph Poujade; Secretary of State, Olin H. Grey; Comptroller, R. L. Horton; Treasurer, John F. Egan; Attorney-General, J. D. Torreyson; Superintendent of Public Instruction, Orvis Ring; Surveyor-General, John E. Jones; Justices of the Supreme Court, R. R. Bigelow, M. A. Murphy, C. H. Belknap; Clerk, J. Josephs; Regents of the University, E. T. George, J. W. Haines.

Legislative Session.—The sixteenth session of the State Legislature began on Jan. 16 and ended on March 6. On Jan. 24 Hon. William M. Stewart was re-elected United States Senator for the full term of six years, receiving a unanimous vote in each House. An act was passed at this session making all debts, bonds, or other money obligations payable in standard silver or gold coins, or other legal money authorized by Congress, anything in the contract or obligation to the contrary notwithstanding. Provision was made for obtaining the sense of the people on the question whether United States Senators should be elected by direct popular vote. Public officers were required to purchase all supplies for the State or counties of resident merchants and business men, provided such supplies can be obtained at an advance of not more than 10 per cent. over San Francisco prices, freight added. The counties were authorized to aid the Utah and Nevada Air-Line Railroad by issuing bonds to the railroad company to an amount equal to \$3,000 for every mile of road within their respective limits. An annual tax levy of

90 cents on each \$100 was authorized for the following purposes: Sixty-five cents for the general fund, 7 cents for the interest fund, 9.5 cents for the State interest and sinking fund, 3.5 cents for the Indigent Insane Asylum interest and sinking fund, and 5 cents for the general school fund. In order to prevent a deficiency in the general fund, authority was given for borrowing \$92,000 at 4 per cent. interest from the State school fund, and a similar loan of \$20,000 from the University fund. The sum of \$10,000 was appropriated for an exhibit at the Columbian Exposition. The Governor's salary was increased to \$10,000.

Other acts of the session were as follow:

Providing for the management and control of the State Agricultural Society by the State.

Making it lawful for any person to kill any wild unbranded stallion running at large on the Government range lands.

Repealing the act of 1891 consolidating certain State offices, and making the Secretary of State *ex officio* clerk of the Supreme Court and State Librarian, and the Governor's private secretary *ex officio* Adjutant-General.

Licensing the sale of cigarettes.

To prevent dissemination of contagious diseases among sheep.

Extending the sessions of the Legislature from forty to fifty days.

Providing a new law for the protection of game.

Providing a new law for the government of the State militia.

Requiring administrators, trustees, guardians, or managers of estates to render accounts every three months.

To prevent the spreading of contagious diseases, and to establish a State board of health.

Providing a new road law.

Repealing the irrigation law of 1889.

Constitutional Amendments.—At the session of 1891 28 proposed amendments to the State Constitution were introduced and passed through both Houses, were entered in their respective journals, and were published in full in the statutes and in the printed proceedings of the Legislature. No other publication of them was made. On Feb. 3, 1893, the next succeeding Legislature, being then in session, requested the Secretary of State to return to each House these proposed amendments for further action according to the Constitution; but the Secretary refused, on the ground that they were not in a condition to be returned, not having been published for three months next preceding the last general election. Thereupon the Attorney-General, at the request of the Legislature, applied to the State Supreme Court for a writ of mandamus to compel the Secretary to return them as requested. A speedy hearing was had, and on Feb. 8 the court announced its decision, granting the writ. The State Constitution provides that, after proposed amendments have been passed in both Houses, they "shall be referred to the Legislature next to be chosen, and shall be published for three months next preceding the time of making such choice," after which the next Legislature, if it approves them, shall make provision for their submission to the people. The question before the court was, whether a publication in the statutes and legislative journals, such as was made in this case, was a publication for three months next preceding the time of making such choice," within the meaning of the State Consti-

tution, and the court held that it was. In compliance with this finding of the court, the Secretary of State at once transmitted the amendments to the Legislature, whereupon 25 out of the 28 were agreed to by a majority in both Houses, and provision was made for their submission to the people at the general election in 1894. These amendments contemplate important changes in the organic law.

Mining.—Nevada has produced in gold and silver the total of \$587,381,515. The production of the Comstock lode alone for the three quarters ending Sept. 30, 1892, was \$1,676,763.34, and the total yield of the State for 1892 was \$3,492,416.76. On account of the depressed condition of mining industries many mines are closed. Only such as are thoroughly opened and fully equipped are running at a profit.

Annexation of Utah.—During the year this subject was seriously discussed by the people of the State. In a public letter, dated March 23, Senator Stewart says: "Nevada has sufficient agricultural resources, if they were developed, to maintain a State, but the fact that our population has declined in the last ten years discourages immigration and prevents the development of our resources. Utah and Nevada together would present a more tempting field for investment and for residence."

NEW BRUNSWICK, an eastern province of the Dominion of Canada; area, 27,322 square miles; population in 1891, 321,294. Capital, Fredericton.

Government.—On Sept. 22, 1893, Lieut.-Gov. Sir S. L. Tilley was succeeded by Hon. John Boyd. In less than three months Mr. Boyd died, Dec. 4, 1893; and on Dec. 22 the Hon. John James Fraser, Judge of the Supreme Court of New Brunswick, received the appointment. The Provincial Cabinet consists of Hon. A. G. Blair, Attorney-General and Premier; Hon. James Mitchell, Provincial Secretary and Receiver-General; Hon. H. R. Emmerson, Chief Commissioner of Public Works; Hon. Lemuel J. Tweedie, Surveyor-General; Hon. A. S. White, Solicitor-General; Hon. Charles H. La Billois, and Hon. H. A. Connell, without office.

Legislative Session.—The Legislature was convened on March 9, 1893, and the session closed on April 15. Two matters of more than ordinary public interest engrossed the attention of the Legislature a considerable portion of the session—the Bathurst schools and the leases of the lumber lands of the province. In respect of the first, there had been a growing difficulty between the Roman Catholic majority and the Protestant minority of the residents of the town and village of Bathurst, in the northern section of the province, over the administration of the school law by the board of school trustees. The Protestants declared that the nonsectarian features of the law were disregarded, and that their children were submitted to the influence of the teaching of Roman Catholic doctrines; and it was also charged that the provincial Board of Education, by certain regulations favoring the Roman Catholic body, and by not using its powers to prevent infractions of the law, was largely responsible. Numerously signed petitions from all sections of the province poured into the Legislature, praying that such orders

and regulations should be made as would carry out the purposes of the school law, and thus relieve the Protestants of Bathurst from the grievance complained of. After a long and spirited debate, the Government carried a resolution to the effect that one of the judges of the Supreme or county courts should be appointed to hold an investigation at Bathurst, and make a thorough inquiry into all the matters of complaint, taking evidence on oath, and report to the Board of Education, such report to be submitted to the Legislature at its next session. Judge Fraser (since appointed Governor) was commissioned to hold the investigation, which he did during the summer, but his report has not yet been made public.

The other matter referred to—the leasing of the Crown lumber lands—came before the session in anticipation of the lapsing in July of the ten-year leases under which the lands were held, and also, through the report of a lumber commission appointed in 1890 to inquire into all branches of the lumber industry, with a view to suggesting the best policy for preserving and utilizing the timber lands. It was determined to sell the leases at public auction to the highest bidder with an upset price of \$8 a square mile, subject to a yearly renewal at \$4 a square mile for a term of twenty-four years, and the payment of stumpage dues. Under these conditions 5,692 square miles were leased at an average price of \$15.60 a square mile.

The Legislature passed 84 laws, the most important being the following:

The Expropriation act, which enlarges the powers of the Chief Commissioner of Public Works in the maintenance and repairs of the public roads and bridges.

The Provincial Lunatic Asylum and its management throwing the cost of maintenance of pauper lunatics that are not dangerously insane upon the municipalities.

Relating to registry of bills of sale.

Protection of certain birds and animals.

Establishment of a boys' industrial home.

Admission of women to school boards.

Study of the effects of alcoholic drinks in public schools.

Proceedings in equity court.

Rights of the Crown, as represented by the Government of the province, in certain public lands and property.

Respecting the use of tobacco by minors.

Development of mines.

Incorporation of the Farmers' and Dairymen's Association of New Brunswick.

Finances.—The current revenue account for 1893 shows the receipts from all sources to be \$792,163.68; the payments, \$754,382.97. The balance against the province in 1892 of \$84,218.80 was reduced to \$46,438.09 at the close of 1893. The receipts obtained from Dominion subsidies were \$483,569.68; Crown lands, \$209,018.75; taxes of incorporated companies, \$21,827.82; succession duties, \$3,500; equity-court deposits, \$26,786.19; proceeds of bonds, \$34,500; other sources, \$12,961.24. The expenditure was distributed as follows: Administration of justice, \$17,456.99; encouragement of agriculture, \$21,799.34; expenses of Government and Legislature, \$85,172.63; education, \$182,072.32; interest on public debt, \$113,385.70; care of the insane, \$45,000; public health and hospitals, \$5,732.10;

maintenance and repairs of public roads and bridges, \$259,971.10; equity - court deposits, \$8,167.10; miscellaneous, \$15,625.69. The gross debt of the province was \$2,752,296.58; net debt, \$2,183,563.42. The gross debt is represented by bonds bearing 6 per cent., \$768,000; bearing 4½ per cent., \$280,000; bearing 4 per cent., \$1,579,000.

Education.—The Chief Superintendent of Education, in his annual report, shows the number of schools in operation in 1893 to be 1,624, an increase of 29 over 1892; and the number of pupils in attendance, 69,470, an increase of 561 over 1892. The number of teachers is shown to be 1,702, being about 30 in excess of 1892. The whole cost of education is \$421,383.60—borne by the Government, \$148,444.77; provided by direct taxation, \$272,938.83.

NEWFOUNDLAND, a British colony comprising an island of that name and the coast of Labrador; area of the island, 40,200 square miles. Capital, St. John's. The census of 1891 gave the population as 202,040, of whom 4,106 are resident on Labrador. The same census gave the number of sailing vessels engaged in the fisheries, from 20 to 60 tons, as being 1,410; of sailing vessels, from 60 tons upward, 271; boats, 4 to 30 quintals, 19,312; boats, 30 quintals and upward, 1,140; nets and seines, 32,995; cod traps, 2,541; population engaged in the fisheries, 53,502.

Sir Robert Pinsent, D. C. L., one of the judges of the Supreme Court, died in April, 1893, and has been succeeded by Sir James Winter.

A general election took place on Nov. 6, 1893. The Government, of which Sir William White-way is Premier, were sustained, his supporters numbering 24 and the Opposition 12.

Legislation.—The following were the more important acts passed in the session of 1893:

Making provision for the appointment of a council of higher education, for holding of examinations and the awarding of prizes and diplomas and scholarships. This council is to consist of 23 members; the superintendents of education and head masters of colleges are members *ex officio*.

Constituting a department of fisheries. It appoints a commissioner of fisheries having direction of the department and the administration of all laws relating to sea and inland fisheries. A fisheries board is appointed by the Governor in Council, of which the commissioner is president, and such board is to elect an executive committee, of which the commissioner is one, at its annual meeting. This board is to make inquiries into all matters relating to the fisheries, and to make rules and regulations for the fisheries of the colony.

To regulate the practice of medicine and surgery, providing for the appointment of a medical board, two from the St. John's Medical Society, two from the Conception Bay Medical Society, and three by the Governor in Council. The secretary shall keep a list of all licensed practitioners in Newfoundland, no man being permitted to practice medicine without a license from the board.

To regulate the practice of dentistry and dental surgery.

Providing for the granting of licenses to foreign fishing vessels for purchase of bait, ice, seines, lines, and supplies for fishery and for the shipping of crews. If any vessel is found to have purchased bait, ice, or outfit, or shipped a crew without license, such vessel shall be forfeited. Foreign vessels may enter any port in the colony to obtain license, application

for such license to be made to the customs office, the fee being \$1.50 a ton.

To provide for the establishment and maintenance of a fire department.

Three acts relating to the construction of the Northern and Western Railway provide for the transference by the Government of the contract for the Hall's Bay Railway from Messrs. Reid & Middleton to R. G. Reid, and for changing the form of debentures accordingly; the issue of debentures under this contract not to exceed £937,500.

The revenue and road acts, and others relating to matters of minor importance, such as that to prevent the killing of seals on Sunday, and the act authorizing the raising of a loan of \$100,000 at 4 per cent., for the construction of branch lines of railway.

Fisheries.—The number of vessels engaged in the Banks cod fishery was 100; their tonnage 6,270 tons: the number of men employed was 1,892; the codfish caught, 90,467 quintals; average catch per man, 65 quintals; average catch per schooner, 905 quintals. Cod fishing is also carried on around the shores of the island and on the Atlantic coast of Labrador. In 1892 (the latest date for which returns are available), the export of dried codfish, according to the customs list of exports, was 795,549 quintals, 183,000 pounds of boneless codfish, and 1,145 quintals of green codfish. Owing to the destruction of documents in the great fire of July 8, 1892, these returns are imperfect, and there are no returns of exports direct from Labrador. In fact, only the exports of half the year are represented in these returns. The export of cod oil was 2,707 tuns, and of cod-liver oil 1,536 gallons. The export of seal oil was 5,301 tuns, value \$397,575. The export of herrings in 1892 was 64,448 barrels. The export of lobsters was 32,506 cases, value \$260,048. Export of salmon was 1,951 tierces, value \$36,525. Total value of the Newfoundland fisheries in 1892, \$4,564,340.

In 1893, at the Dildo Hatchery, Trinity Bay, there were collected during the season 309,000,000 cod ova; and of these, 201,435,000 were hatched and the young fry planted in a good condition in the bay. Thus 65 per cent. of the ova collected were hatched, being an increase of 15 per cent. compared with the yield of 1891. In four years the total number of ova hatched and planted at Dildo Hatchery was as follows: 1890, 17,000,000; 1891, 39,650,000; 1892, 165,254,000; 1893, 201,435,000; total, 423,439,000.

The number of stations at which floating incubators for lobsters were operated in 1893 was 23. The number of lobsters from which ova were obtained was 26,036, which yielded a collection of 602,244,000, out of which 86 per cent. were hatched and planted. Adding to this 1,005,000 hatched at Dildo, the total is 518,258,000 hatched and planted in 1893. The total number of lobsters hatched during the last four years has been 1,909,656,000.

Twenty-two steam vessels were engaged in the seal fishery in 1893, having a tonnage of 6,934 tons; the crews numbered 4,962. The number of seals taken was 129,061; average catch per steamer, 5,870. In 1892 the number of seals taken was 348,624, being an average of 17,431 seals per steamer. The seal fishery of 1893 was one of the poorest on record.

Finances.—In 1892 the value of the imports was \$5,012,877; of exports, \$5,651,116; the rev-

enue for the same year amounted to \$1,883,790; the public expenditure was \$1,663,120; the public debt was \$6,393,867; the interest on the public debt, funded and floating, was \$257,908; the expenditure on the relief of the poor was \$205,666; on steam communication (subsidies), ocean and coastal, \$141,965; on education, \$137,076.

Close Time.—The close time for willow grouse or partridge is from Jan. 12 till Sept. 15; for caribou or deer, from Feb. 15 till Sept. 15; for otters and beavers, April 1 to Oct. 2; for salmon, from Sept. 10 to April 30. The license to kill deer, for nonresidents of the colony is \$100, not more than 5 stags and 3 doe to be killed in one season.

Mining.—The export of minerals in 1893 were as follow: Copper in ingots, 899 tons, value \$213,288; copper regulus, 5,744 tons, value \$342,720; green ore (copper), 20,000 tons, value \$134,000; iron pyrites, 35,176 tons, value \$316,584.

Railways.—The Northern and Western Newfoundland Railway, in course of construction, is to run from Placentia Junction to the Exploits valley, thence westward to Bay of Islands, then south via St. George's Bay to Port-au-Basques. It is now completed and operated to the Exploits river, a distance of 200 miles. It will be completed by the close of 1895, or early in 1896. The total distance is over 500 miles. It will open up the fertile lands, forests, and mining regions, as well as the coal fields of Grand lake and Bay St. George.

St. John's.—More than half the city of St. John's was destroyed by fire in July, 1892. At the close of 1893 more than 1,300 dwellings were erected. Most of the larger public buildings and stores will be rebuilt in another year or two. The Cathedral (Church of England) and the Presbyterian and Methodist churches, which perished in the flames, are in course of reconstruction. The new portion of the city will be a great improvement on the old. A new fire brigade, having an equipment embracing all the modern improvements, has been organized.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,976 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; and 376,530 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, John B. Smith; Secretary of State, Ezra S. Stearns; Treasurer, Solon A. Carter; Adjutant-General, Augustus D. Ayling; Attorney-General, Edwin J. Eastman—all Republicans; Commissioner of Insurance, John C. Linehan; Commissioners of Banking, Messrs. Lyford, Baker, and Heard; Mr. Heard resigned, having been appointed receiver of a bank, and was succeeded by Mr. Hatch; Commissioner of Labor, John W. Bourlet; Railroad Commissioners, Henry W. Pultney, Benjamin W. Prescott, Thomas Cogswell; Cattle Commissioners, Irving A. Watson, N. J. Bachelder. The Superintendent of Public Instruction, James W. Patterson, died during the year. Chief Justice of the Supreme Court,

Charles Doe; Associate Justices, William M. Chase, Isaac N. Blodgett, and Lewis W. Clark, Democrats, and Isaac W. Smith, Alonzo P. Carpenter, and R. M. Wallace, Republicans. Judge William H. H. Allen resigned March 16. Ira Colby was nominated to succeed him, and on his declination Robert M. Wallace, who was appointed. Judge Allen died before the close of the year.

Finances.—The Treasurer's report for the fiscal year ending May 31, 1893, gives the following statements: Cash on hand June 1, 1892, \$345,219.11; total receipts during the year, \$1,718,461.74; total disbursements, \$1,956,307.82; cash on hand June 1, 1893, \$107,373.08. The debt June 1, 1892, amounted to \$2,859,033.86, and the assets to \$707,120.97, so that the net indebtedness at that date was \$2,151,903.89; the liabilities June 1, 1893, amounted to \$2,600,861.77, and the assets to \$469,999.17, making the net indebtedness \$2,131,762.60, the debt having been reduced during the year by \$20,141.29.

Of the sources of revenue the State tax yielded \$500,000; the State's share of the railroad tax, \$128,809.85; the insurance tax, \$16,585.64; the telegraph tax, \$2,891.92; the telephone tax, \$2,088.28; escheated estates, \$5,486.30; charter fees, \$4,592.50; fees (insurance department), \$5,687.40; peddlers' license fees, \$2,025; interest on deposits, \$3,354.43; income of the Benjamin Thompson trust fund, \$18,010.85.

Of the expenditures, \$81,986.10 was for the Legislature; \$62,574.54 for salaries; \$31,958.67 for State printing; \$30,000 for the National Guard; \$18,567.90 for the Commissioners of Lunacy; and \$14,512.32 for the Australian ballot. The removal of the Agricultural College cost \$75,000; improvements of White mountain roads, \$6,180.79; the exhibit at Chicago, \$16,359.83; the State Library building, \$52,263.50; the commission for revising laws, \$2,000; legislative resolves, \$16,456.13; the Soldiers' Home (net expenses), \$8,866.18; and the publication of military records, \$2,061.87.

The amount paid on account of interest, or credited to the several trust funds, was \$155,892.63; the total interest receipts were \$21,865.28. State bonds amounting to \$277,400 and State notes (temporary loan) amounting to \$100,000 have been paid. The total of trust funds is \$593,311.34. The sum of \$78,426.88, derived from the nonresident savings-bank tax, was divided among the towns for school money, \$1.28 to each pupil.

Mortgage Indebtedness.—From a tabulated statement in a census bulletin it appears that the incumbrance of debt resting on real estate amounts in New Hampshire to an average of \$50 to the head of population. The amount of debt is 11.68 per cent. of the assessed value of real property. About one third of the families live on farms, and 78 out of every hundred of the farms are free from incumbrance.

Charities.—The State Insane Asylum had 368 patients at the end of 1893. During the year 166 were admitted and 154 discharged. The asylum has received by legacy \$15,000.

A terrible catastrophe occurred at Dover on the night of Feb. 9. The insane asylum of the Strafford County almshouse took fire shortly after ten o'clock, and only 4 of the inmates

were rescued, 41 being burned to death. As soon as the watchman discovered the fire the locks of the cells were broken; but so great was the confusion and bewilderment of the inmates that they only hindered one another in the attempt to escape.

A bill to establish a State asylum for the indigent insane, so as to remove them from county control, was introduced into the Legislature, but it failed.

The report of the Centennial Home for the Aged shows the presence of 19 inmates at the end of the year.

The Orphans' Home, in Franklin, has now a farm of 205 acres. A new nursery building was dedicated in October. It is of brick, 40 by 56 feet, and three stories high, with an annex 16 by 20 feet, two stories high.

Cattle.—The State Board of Cattle Commissioners reported that during the year the herds in 221 stables were inspected, and 115 cattle from them were condemned and killed. A post-mortem examination was made in every instance, and without a single exception it verified the diagnosis and revealed the existence of tuberculosis.

Education.—The Agricultural College received a bequest of \$400,000 from Benjamin Thompson, of Durham, on condition that the college should be moved from Hanover to his farm in Durham, Strafford County. The gift was accepted, and the State appropriated \$100,000 for new buildings, and at the session of 1893 an additional \$35,000. The work of building has been in progress for two years, and the new college was dedicated Aug. 30. There are 5 buildings. On the same day Rev. Dr. Charles S. Murkland was inaugurated president.

Much dissatisfaction has been felt with the work of the college heretofore, in that it seemed to fit its students for anything else rather than for farming. After nearly twenty-five years of existence it has graduated 143 students, only 30 of whom, according to the catalogue, are in any way connected with agriculture. The location of the college beside Dartmouth at Hanover was believed to be in part responsible, and its removal was proposed long before the bequest with that condition was made. Consequently the inaugural address of the new president was looked for with interest, as it was expected that the intended character of the policy to be pursued in future would be outlined. Hence the friends of agricultural education were greatly disappointed when they understood from the address that the course in agriculture was intended to be one of five courses of equal importance. The State Board of Agriculture sent a letter to the president and trustees protesting against such a course and such instruction as would tend to lead away from the farm rather than to it, and the State Grange, at its meeting in December, adopted resolutions condemnatory of the policy.

Dartmouth College inaugurated a new president at the commencement, in June, Rev. Dr. William J. Tucker, D. D., from Andover Theological Seminary. Sixty-eight students were graduated. At the opening of the collegiate year, in September, the entering class numbered about 125.

The graduating class of the normal school in Plymouth numbered 19.

Banks and Insurance Companies.—The savings banks and trust companies paid a tax this year amounting to \$770,242.80. This is all divided among the towns and cities, the tax on resident depositors going directly to the towns where they live, and the tax on the nonresident depositors and those whose residence is unknown constituting the literary fund. Five banks failed during the financial depression of this year, before Sept. 1.

The twenty-fourth annual report of the Insurance Commissioner gives the following information: The number of companies organized under the laws of New Hampshire and authorized to transact business in the State on Dec. 31, 1892, was 88. The number of domestic companies transacting business in 1892 was the same as that reported for 1891. The aggregate of business transacted by all authorized domestic and foreign companies, 88 in number, for the year ending Dec. 31, 1892, is as follows: Risks written, \$84,222,246.18; premiums received, \$1,026,593.27; losses paid, \$595,665.70.

Of the fraternal beneficiary associations, the aggregate membership of the 21 reporting was 621,000, a net gain over the membership of 1891 of 15,460. The death roll for the year was 7,743.

The Bank of the Commonwealth, Manchester, failed July 24, Dr. Joseph C. Moore, its president, being its largest debtor. Involved with its failure were those of the Derryfield Savings Bank and the People's Fire Insurance Company, to which Dr. Moore was also heavily in debt. Charles F. Morrill, cashier of the Commonwealth Bank and treasurer of the People's Insurance Company, disappeared when the failures were made public. The president's indebtedness to the Bank of the Commonwealth was stated to be \$100,000, and to the Derryfield Bank \$25,000. On the day of the failure he made transfers of his property. The receiver was directed to begin insolvency proceedings, and did so, but they were afterward discontinued by order of the Comptroller of the Currency. The court, however, decided that the proceedings should not be dismissed by this withdrawal, but that public notice of the motion to dismiss should be given in order that other creditors might come in and prosecute if they should choose. The last \$5,000 of the money appropriated for the World's Fair exhibit was placed in the bank July 12. It was not credited to the World's Fair Commission, but, as it appears, to the Halifax Hosiery Mills, of which company the president of the bank was also president, which owed the bank about \$31,000. July 12 was the date for the bank to return a sworn report to the Comptroller of the Currency. A certificate of the indebtedness was returned to the commission after the failure.

The President of the National Granite State Bank of Exeter, which went into the hands of a receiver Sept. 23, was arrested in November on a charge of embezzling \$30,000.

Railroads.—The report of the Railroad Commission for the year ending June 30, 1893, reviews the development during the decade of the five great systems that now include practically all the railways of the State. During that

period what were originally more than 50 separate and independent roads have passed by sale, lease, and consolidation into the control of five corporations, the Boston and Maine, Concord and Montreal, Fitchburg, Maine Central, and Grand Trunk, whose lines measure 8,165 miles, of which 1,165 miles are in New Hampshire. There are also two narrow-gauge roads, 17 miles long, and 5 logging roads, nearly 50 miles long. In the opinion of the board, nothing but good has so far resulted from the consolidation of the roads.

The most important railroad referee's decision ever recorded in the State was given in the Supreme Court in January. It was a finding in the case of the Manchester and Lawrence Railroad vs. the Concord Railroad Corporation, many times on trial since Feb. 18, 1888. The plaintiffs asked for a settlement by the defendants when they were in close business relations. The decision orders the defendants to pay the Manchester and Lawrence road \$399,078.07, with interest from July 1, 1888.

Legislative Session.—After a session of twelve weeks the Legislature adjourned April 1. There were on joint ballot 225 Republicans and 157 Democrats. On a bill to establish a police commission in the city of Manchester, which came up Feb. 22 for third reading in the House, the minority refused to vote. When the roll was called, the Speaker directed the clerk to record the members as present and declining to vote, thus "counting a quorum." The bill was declared to have passed, 160 voting in favor, 9 against, and 60 declining to vote.

An act was passed constituting a forestry commission, to consist of the Governor, *ex officio*, and four other members—2 Republicans and 2 Democrats—who shall be appointed by the Governor with advice of the council, and be classified in such manner that the office of one shall become vacant each year. The provisions of the act include the following:

It shall be the duty of the forestry commission to investigate the extent and character of the original and secondary forests of the State, together with the amounts and varieties of the wood and timber growing therein; to ascertain, as near as the means at their command will allow, the annual removals of wood and timber thereupon and the disposition made of the same, by home consumption and manufacture, as well as by exportation in the log; the different methods of lumbering pursued and the effects thereof upon the timber supply, water power, scenery, and climate of the State; the approximate amount of revenue annually received from the forests of the State; the damages done to them from time to time by forest fires; and any other important facts relating to forest interests which may come to their knowledge.

The Governor was directed to appoint a commissioner of labor, to serve three years, at an annual salary of \$1,500, who, with his clerks, shall constitute a bureau of labor.

A highway bill was passed of which the following are the principal provisions: "Each town shall annually raise and appropriate for repair of highways and bridges a sum not less than one fourth of 1 per cent. of the valuation of the polls and ratable estates on which other taxes are assessed by the town; each town shall elect highway agents, not to exceed 3, to have charge of the construction and repair of highways and bridges."

Another act in relation to highways gives power to the railroad commissioners to require the proprietors of a railroad to raise any railroad bridge or any overhead highway bridge, and in case of a highway bridge to change the approaches thereto so as to make them as nearly level as practicable.

Still another highway act relates to damages for injuries caused by defective roads, and provides for repairs and constructions on notice of necessity for them by 3 citizens or taxpayers in the State.

A bill was passed making it unlawful "for any building and loan association not organized under the laws of this State to transact any business in this State unless such association shall possess assets of at least \$500,000, and shall first obtain a license from the bank commissioners." A penalty of \$100 to \$500 fine, or ten days' to six months' imprisonment, or both, was prescribed as punishment of any person selling or attempting to sell stock of any association not thus authorized. The cities of Somersworth, Laconia, and Franklin were established.

Acts were passed exempting towns from opening and repairing highways to summer cottages; repealing the law for taxation of dogs; providing for the immediate completion of the revised record of New Hampshire soldiers and sailors in the War of the Rebellion; for the appointment of a commission to revise and amend the militia laws of the State; giving the State Board of Health authority to establish quarantine, and appropriating \$10,000 to be used if necessary for an epidemic fund; granting to owners of cattle killed by order of the cattle commissioners half the value of the animals upon a basis of health, providing they shall have been owned in the State at least three months before the disease was detected; changing the bounty on bears from \$10 to \$5; imposing a fine of \$50 for the first and \$100 or ninety days' imprisonment for the second offense, on any one found guilty of selling or causing to be sold adulterated butter, oleomargarine, or imitation cheese; providing for appointment of inspectors of buildings by cities and towns; forbidding guarantee savings banks from changing their rate of interest without having mailed to every depositor a notice of the proposed change three months in advance; providing for the appointment of 2 appraisers to visit the unincorporated lands of the State and appraise them.

In reference to Dartmouth College, \$7,500 was ordered paid to the trustees for the use of the college, and by a further section of the act the State "relinquishes to the trustees of Dartmouth College any rights which the State may have in Culver Hall, at Hanover, and waives the payment by said trustees of the \$15,000 appropriated by the State July 9, 1869, in aid of the erection and furnishing of said Culver Hall."

A resolution was passed extending thanks to Hon. William E. Chandler for his gift to the State of the statue of John Parker Hale for the Capitol grounds.

A joint resolution was passed making provision for submitting to voters at the election in November, 1894, the question of the expediency of calling a convention for revising the Constitution.

The sum of \$10,000 was appropriated for the purpose of procuring marble statues of Daniel Webster and Gen. John Stark, and placing them in the National Statuary Hall in Washington.

The sum of \$75,000 was appropriated for completing and furnishing the State Library building, and putting in order the grounds about it.

The Governor was authorized to appoint 8 commissioners—to serve without charge—to be called "commissioners for the promotion of uniformity of legislation in the United States." It shall be the duty of said board to examine the subjects of marriage and divorce, insolvency, descent, and disposition of property, and other subjects, with a view to securing uniformity in the laws of the different States upon such subjects; and to meet and act with other similar boards of commissioners appointed from other States for the above purpose.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles; population in 1890, 1,444,933. Capital, Trenton.

Government.—The following were the State officers during the year: Governor, George T. Werts, Democrat; Secretary of State, Henry C. Kelsey; Treasurer, George R. Gray; Attorney-General, John P. Stockton; Adjutant-General, William S. Stryker; Superintendent of Public Instruction, Addison B. Poland; Commissioner of Banking and Insurance, George S. Durvee; Comptroller, William C. Heppenheimer; Chief Justice of the Supreme Court, Mercer Beasley; Associate Justices, Bennett Van Syckel, Jonathan Dixon, David A. Depue, Alfred Reed, William J. Magie, Charles G. Garrison, Job H. Lippincott, Leon Abbett. Judge Edward W. Scudder died in February. Chancellor, Alexander T. McGill; Vice-Chancellors, Abraham V. Van Fleet, John T. Bird, Henry C. Pitney, and R. S. Green.

Legislative Session.—After sitting nine weeks, the Legislature adjourned March 11. The passage of three bills, known as the race-track bills, excited great indignation. The first provided "that the boards of freeholders of any county, board of aldermen, common council, township committee, or other body having general charge of the affairs of any city, township, or municipal division of the State, in which there is a race track, shall have power to license, for not more than five years, any such race track; provided, that no race course shall be licensed in cities having over 100,000 inhabitants." It also made it "necessary for the association having this racing to file with the Secretary of State a certified copy of a resolution passed by a three-fourth vote of the county board of freeholders of the county in which the race course is situated, that the maintenance of such race course is a public necessity." The second bill provided "that betting, and the practice of betting commonly known as bookmaking, upon horse races, within the inclosed grounds of any incorporated association or body in this State, or the keeping of a place or places within such grounds to which persons may resort for such betting, shall not constitute any misdemeanor or criminal offense when such association or incorporated body is not indictable for the carrying on of said races therein." The third provided that "habitual bookmaking shall not constitute a disorderly house, maintaining a

nuisance, or a conspiracy, or any criminal offense, but shall be deemed a misdemeanor, punishable by a fine of \$20."

These three bills were referred to the Committee on Municipal Corporations, from which they were promptly taken and passed by the House. The Senate passed them, and sent them to the Governor, who vetoed them, and on Feb. 25 they were again passed over his veto and became laws. Petitions asking for their repeal were immediately circulated, mass meetings were held, sermons were delivered throughout the State, citizens' leagues to effect their repeal were formed, and on Feb. 27 three bills repealing the race-track laws were introduced in the House. These, too, were referred to the Committee on Municipal Corporations, with whom, in spite of rigorous and repeated efforts to bring them up for passage, they remained until the end of the session.

The bill curtailing the power of the Republican Mayor of Jersey City took from the mayors of first-class cities the power to appoint the corporation counsel and attorney, and vested it in the Board of Finance, and also gave the board power to reject or confirm other appointments. This bill was passed over the Governor's veto on the last day of the session.

A very important bill was one designed to enable street or horse railway companies to use electric or chemical motors or grip cables as a propelling power, instead of horses; and also to erect poles and string wires without the consent of, or compensatory damages to, those in front of whose property the poles may be erected. It provides that consent need be obtained only from the township committee or municipal authority. This bill received the Governor's signature.

A bill aimed at the tracks on which winter racing had been practiced was rushed through both Houses, under suspension of the rules, on the last day of the session. This law forbids racing during the months of December, January, and February, under a penalty of \$1,000 to \$10,000 fine, or from six months to two years' imprisonment, or both.

Among other bills that became laws were the following:

Authorizing and regulating the construction of street railways upon turnpikes.

Authorizing the issuing of \$1,000,000 additional bonds for Hudson County Boulevard.

Making the printing, publishing, and sale of newspapers, the sale and delivery of milk, etc., on Sunday lawful.

Amending the election law by providing that Common Pleas Court shall sit before spring election to revise registry of election, as in the autumn.

Providing for the compulsory levying of a tax of three fifths of one mill on each dollar of taxable property for park maintenance.

Making it illegal to manufacture clothing in tenement houses.

Providing for the erection of a free public library in cities of the second class by issuing bonds to the extent of \$50,000.

Authorizing divorce where either party has been sentenced to State prison.

Fixing the rate of interest on arrearages of taxes at 7 per cent.

Exempting from taxation fraternal and beneficial organizations, and allowing all such orders to do business in this State upon compliance with the requirements to report regularly to the Commissioner of Banking and Insurance.

Finances.—From the Treasurer's report for the year ending Oct. 31, 1893, the following statements are gathered: State fund securities on hand, Nov. 1, 1892, \$1,660,882.96; riparian leases added to fund during the year, \$91,747.03; receipts during the year, \$1,962,319.80; disbursements during the year, \$1,857,982.83; balance, Oct. 31, 1893, \$724,038.12, this being the largest balance ever shown in the history of the State. Amount of fund Oct. 31, 1893, \$1,856,966.96. The amount of the school fund Nov. 1, 1893, was \$3,752,429.85; loss on sale of real estate, \$6,115; interest advanced on loans, \$67.60; investments during the year, \$130,000; income, \$169,661.40; disbursements, \$222,287.43; balance Oct. 31, 1893, \$255,210. The receipts from the State school tax of 1892 were \$2,151,700, all of which was expended, as was \$6,942, the amount received for the Agriculture College fund, and \$19,000, the amount of the United States appropriation to agricultural colleges. The amount of war debt has been diminished by \$96,300, and was on Jan. 1, 1894, \$837,400.

The report of the Comptroller for the fiscal year shows that the railroads and canals having their termini in the State were taxed, for the year ending Oct. 31, 1893, on a valuation of \$214,072,322, the tax levy being \$1,070,861.62. The tax received from miscellaneous corporations other than railroads amounted to \$535,612.26. The total amount therefore was \$536,612.26, being an increase over the previous year of \$70,734.69. Insurance companies incorporated in New Jersey are assessed 1 per cent. on their surplus, and 0.35 of 1 per cent. on the gross amount of the premiums received. There are 4 such life-insurance companies in the State, whose united tax is nearly \$100,000. The net receipts from the collateral inheritance tax were \$41,068.20; from official fees, \$42,751.37; from fees paid upon and subsequent to filing certificates of incorporation, \$121,161.56; from judicial fees, \$19,114.18; from riparian lands, \$16,352.39; from interest and dividends, \$18,870; and from other sources, \$998.33.

The report of the Board of Taxation shows the total assessed valuation of property in the State subject to taxation for 1893-'94 to be as follows: Valuation of real and personal property, \$765,824,674; valuation of railroads and canal property (subject to review), \$222,468,389; total, \$988,293,463.

The school tax is levied at the rate of \$5 for each child of lawful school age. The number of such children, as shown by the school census of 1892, was 405,222. There are also two minor sources from which money is received for school purposes. One is the \$100,000 annually set aside from the interest on investments made through the sale of riparian rights; the other is the special fund created by the distribution among the different States of a national surplus fund. The amount allotted to New Jersey was divided among the counties for school purposes, the interest only to be used. The amount received as interest from this fund during the year was \$31,829.35.

Trust Companies.—The resources of New Jersey trust companies at the close of business, June 30, 1893, as exhibited by reports to the

Department of Banking and Insurance, were \$13,903,190.71.

National Banks.—The statement of the National Banks for New Jersey shows that on July 12 their resources were \$84,513,224.56, the loans and discounts amounting to \$51,422,127.09. Individual deposits were \$49,250,358.25, and the amount due to other national banks was \$3,771,541.64.

Education.—There are 1,688 buildings in this State used for public schools, an increase of 19 over last year. During the year \$748,418.78 was spent on new buildings. There are 4,644 teachers, and the total enrollment in the schools is 243,254. The number of children attending no school was 89,692, and of these 80 per cent. are under eight and over fourteen years of age. The lawful school age is between five and eighteen. The number attending private schools is 47,157.

The Agricultural Experiment station received \$19,867.50, balance of special appropriation for the State Laboratory, and also \$9,246.51 of the annual appropriation of \$11,000, leaving a balance to the credit of this account of \$2,541.51. To the credit of the State Board of Agriculture \$7,867.62 was paid during the year.

The School for Deaf Mutes receives \$275 a year for each pupil, and every deaf person between the ages of five and twenty-one who is a resident of the State is eligible for admission. An annual sum of \$5,000 is appropriated for repairs which this year was increased by an addition of \$15,000 for the construction of a shop for industrial pursuits. There are 120 pupils enrolled. For the cost of maintenance of pupils during the year the State paid \$27,264.

The State maintains at Vineland a training school for feeble-minded children and a home for feeble-minded women. To these two institutions, and to the institutions of other States, \$81,783.83 was paid during the year for the care and support of the 329 wards of the State who are feeble minded or blind.

Home for Disabled Soldiers.—Of the 461 inmates of the home at the beginning of the year, 273 were drawing pensions from the National Government. The average age is sixty-two. An appropriation of \$3,000 for the purchase of a cemetery plot was made by the last Legislature. The United States Government paid to the home during the year \$28,313.15; the State paid \$20,330.44.

State Hospitals.—Under this name the insane asylums of the State will be known in future. The Board of Managers reports that the property under their care is worth \$3,513,690. This year the "dual system" was established at Trenton, which had before been in operation at Morris Plains.

The State this year paid to county lunatic asylums for support of patients \$120,700.58, and to the State hospitals for the insane \$125,173.75. The number of county patients in the State Hospital at Trenton, by the last quarterly report, was 810; at Morris Plains, 839; insane convicts at Trenton, 18; at Morris Plains, 44; patients in county asylums, 1,127.

State Prison.—For this institution the net amount disbursed was as follows: For maintenance of convicts, \$77,659.67; for salaries, \$82,511.68; for repairs, \$8,501.49; payment to dis-

charged convicts, \$1,153.50; total, \$169,826.84. This amount shows a decrease from 1892 of \$1,970.11. The amount received from the proceeds of convict labor was \$63,311.73, which was earned in the manufacture of mats and matting, of hosiery, shirts, shoes, trousers, brushes, and blocks. The woman convicts are chiefly employed in making clothing for the prisoners. The parole law is highly commended.

Reform School.—On account of the special appropriation for the erection and furnishing of a new family building, \$4,224.35 was this year paid to this institution in addition to the disbursement for the maintenance of pupils and expenses of trustees, which was \$54,996.79. The sum of \$40 per quarter is now allowed for each boy maintained, instead of \$37.50 as last year. The number of boys cared for during the year was 509, number remaining Oct. 31, 1893, 373, of whom 319 were white and 54 colored.

Industrial School for Girls.—The payments to this institution were \$15,977.55, an increase over the ordinary expenses of the preceding year of \$2,412.66. The number of girls under instruction during the year was 113; number remaining Oct. 31, 99.

Agriculture.—During the year most farm crops in the State were below the average yield. The late spring, protracted drought, and devastating storms contributed to this result. The average yield per acre for 1893 was: Corn, 26.4 bushels, the lowest by 10 bushels for years; wheat, 14.5 bushels; oats, 28.9 bushels; buckwheat, 13.4 bushels; white potatoes, 73 bushels; sweet potatoes, 97 bushels. There has been a reduction in the acreage of cereals during the last decade amounting to 172,018 acres, or 22.24 per cent. The products of the dairy are increasing rapidly. In Camden alone 1,530,000 gallons of milk were delivered during the past year. Farms devoted to the nursery business number 145, with a total acreage of 5,465 acres. The seed farms are 34, comprising 6,272 acres. Florists' establishments number 366, of which 8 are owned and managed by women. The total square feet of glass is 3,703,554; total value of establishments, \$3,666,518.46; total value of tools and implements, \$155,107.14.

World's Fair.—By several acts, \$180,000 was appropriated to further the work of the New Jersey Board of Commissioners to the World's Columbian Exposition, and to enable the State Board of Agriculture, the State Board of Education, and the Geological Survey to make a suitable exhibit in their respective departments, and to maintain a proper building for the use of the citizens of the State. The New Jersey Building, a reproduction of the Washington Headquarters at Morristown, was the first State building completed; it was formally dedicated May 1, 1893, the day of the opening of the exposition.

Marriage and Divorce.—The vital statistics of the State for 1893 give the number of marriages as 17,178. Of these, 4,570 were celebrated in Camden, and most of them were between persons who crossed the Delaware from Pennsylvania to escape the provisions of the laws of that State. Persons who do not wish to come in conflict with the marriage laws of the State of New York also come to New Jersey to be mar-

ried; 1,401 marriages were celebrated in Jersey City, 613 in Hoboken, and 1,956 in Newark. The number of divorces granted in the State has increased greatly. The number of cases docketed in the Court of Chancery is about 1,500.

Trenton Battle Monument.—A monument, rising 150 feet above the street level and marking the site of the battle of Trenton, was dedicated Oct. 19. On the base of the column are 4 tablets: One, crossing the Delaware, is the gift of Pennsylvania; opening of the battle is presented by New York; a third, surrender of the Hessians, is given by Connecticut; and the inscription tablet is given by the Society of the Cincinnati in the State of New Jersey, who, in 1843, first agitated the subject of the erection of a memorial. A statue of Washington, 13 feet high, crowns the monument, and on each side of the door of entrance is placed a bronze statue of types of the Continental soldiery. On the right is a life-size statue of a Philadelphia city trooper who took part in the fight. His name was Blair McClenachan, and he was a member of the Sons of St. Patrick. The figure on the left is the gift of Massachusetts. It is modeled from a painting on ivory of John Russell, a private soldier of the splendid Marblehead Regiment, made up of fishermen. He was one of the soldiers who ferried Washington across the Delaware, and after the war he became captain of a sloop.

Judicial Decisions.—The Republican Committee of Essex County applied to the Supreme Court for writs of mandamus to compel the city and county clerks to issue general tickets for the election of members of Assembly from the county at large instead of by Assembly districts. It was stated that this was directed by the general election law of 1876, and that the system of election by districts, which had been employed for forty years, was unconstitutional. The court held that members of the House of Assembly must be chosen by elections at which all the people of the county may vote for or against all the members to which the county is entitled.

The Lumberville Delaware Bridge Company case was brought up as a test case to set aside the taxes levied by the State board under the act of April 18, 1884, against the 18 bridges that span Delaware river, as well as to determine the constitutionality of the act, under the Federal as well as the State Constitution. The Supreme Court held that the Federal Constitution will not invalidate a State tax imposed upon domestic corporations generally, because it incidentally affects one that, under State authority, is engaging in interstate commerce.

The Court of Errors and Appeals decided against the Merchants' Insurance Company of Newark in 4 suits brought by the city of Newark to recover tax due on several millions of horse-railroad bonds. This compels the payment of tax amounting to many thousands of dollars.

Suit was brought in the Supreme Court to have the race-track law providing for the granting of licenses declared unconstitutional, and the other two race-track bills with it, as they were part of the whole scheme. Arguments were heard in June, but the decision of the court was not announced until after the November elections. The court held that the laws were unconstitutional.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fé.

Government.—The following were the Territorial officers during the year: Governor, William T. Thornton, Democrat; Secretary of State, Lorion Miller; Auditor, Demetrio Perez; Treasurer, Rufus J. Palen; Solicitor-General, Edward L. Bartlett; Adjutant-General, W. S. Fletcher; Superintendent of Public Instruction, Amado Chavez; Secretary of the Bureau of Immigration, Max Frost; Chief Justice, Thomas Smith; Associate Justices, William D. Lee, Albert B. Fall, Edward P. Seeds, Alfred A. Freeman.

Finances.—The Auditor reports that during the forty-third fiscal year warrants were issued as follow: Penitentiary, \$34,106.08; Capitol current expense, \$4,668.92; salary fund, \$301.66; court fund, \$72,606.13; miscellaneous, \$28,572.81; Territorial institutions, \$21,860.68; compensation of assessors, \$9,315.40; transportation of convicts, \$2,820.60; interest on warrants, \$6,570.45; school fund (proceeds of licenses to insurance agents), \$419.50; pay of officers and employees of thirtieth Legislative Assembly, \$17,728.80; special appropriations, \$5,686.05; license fund, \$329.75. Warrants were also issued against the balance of funds of forty-second fiscal year to the amount of \$20,898.45; against the deficit funds of 1889 and 1890 to the amount of \$4,098.04, and against general funds, in settlement of accounts prior to March 3, 1889, to the amount of \$31.50; total, \$259,899.61.

The Territorial indebtedness Aug. 29, 1893, was: Capitol-building bonds, \$200,000; Penitentiary-building bonds, \$109,000; current-expense bonds, \$150,000; on all these bonds the rate of interest is 7 per cent. Provisional indebtedness fund, \$150,000; Capitol contingent bonds, \$50,000; insane-asylum bonds, \$25,000; refunding bonds, \$95,000; on foregoing bonds interest is at the rate of 6 per cent. Casual deficit bonds, \$75,200, on which the interest is at the rate of 5 per cent.; and outstanding warrants, \$7,512.27. Total indebtedness, \$911,712.27. The Treasurer reports a cash balance of \$121,000 on June 30, 1893. The rate of taxation for all purposes is 0-01405 on the dollar, a trifle less than a cent and a half.

The assessed valuation on real estate, live stock, and other personal property amounts to \$41,602,198.41.

Banks.—Ten national banks in the Territory show an average reserve of 24-61 per cent.; loans and discounts, \$1,774,729.90; United States bonds to secure circulation, \$255,000; total resources, \$3,342,208.69; individual depositors, \$1,563,088.30. The amount deposited in savings banks June 1, 1892 was \$149,449 by 900 depositors, an average of \$166.05 each.

Education.—The revenue for the public schools is derived from a tax of 3 mills on the dollar of all taxable property, from a poll tax of \$1 on each voter, from the proceeds of certain fines, and from licenses. This revenue is apportioned to each county, and the share of each county is apportioned to the districts. The amount this year collected was \$275,747.58; the

balance on hand from last year was \$73,482.25; balance on hand Oct. 1, 1893, \$92,019.21. The number of school districts in the Territory is 582; teachers employed during 1893, 547, of whom 368 were men and 179 women; pupils enrolled, 21,690; average daily attendance, 14,160. The number of public schools is 519. All the text-books used are English, except a Spanish-and-English primer.

An act of the last Legislature provided for the holding of 5 normal institutes during vacation of each year. These were held at Las Lunas, beginning May 29; at Mora, beginning June 1; at Fernandez de Taos, beginning June 21; at Chama, beginning July 10; and at Roswell, beginning July 10. Each institute continues in session eight weeks, and tuition is free.

The School of Mines, at Socorro, opened for business Sept. 5, 1893. The session is to be of eight months' duration, and besides a preparatory department, courses in general chemistry, assaying, and metallurgy are provided. Tuition is free, but a matriculation fee of \$10 is charged. The building, which cost \$42,940.53, is T-shaped 135 feet long by 32 feet deep, with a central assay wing 54 feet long by 42 feet wide. It is of gray trachyte, in broken ashlar, trimmed with red sandstone.

The New Mexico Military Institute (formerly the Goss Military Institute), at Roswell, was made a Territorial institution by an act of the last Legislature. Military instruction is a prominent feature of this institution, and by act of Congress an army officer may be assigned as military instructor. Ample buildings have been provided. Last year there were 47 students.

An agricultural experiment station, with an appropriation of \$5,000, was established in San Juan County by an act of the last Legislature, and others at Taos and Rio Arriba. The Deaf, Dumb, and Blind Institute, at Santa Fé, was opened in September. There are 225 deaf and 300 blind persons in the Territory, and about 40 per cent. of them are of school age.

The United States Indian School, at Santa Fé, by direction of the Secretary of the Interior, has been changed into a normal training school for preparing Indians to take the place of white teachers in their own schools. The children who were in attendance have been distributed to other educational institutions.

Penitentiary.—The Penitentiary at Santa Fé has accommodations for 250 prisoners, and an additional building is in process of construction, in which United States prisoners will be confined. The labor of the convicts is employed wherever it is practicable. They are making the brick of which the new wall around the prison is being constructed, at the rate of 8,000 a day. A tile and drainage pipe manufacture has also been established. There remained in prison, July 1, 1893, Territorial prisoners, 130, all of whom were males. Of the United States prisoners, 16 were confined at the beginning of the year, 31 were received during the year, and 16 remained July 1, of whom 25 were males and 6 females.

Insane Asylum.—The Territorial Insane Asylum, at Las Vegas, was opened May 1, 1893. The present capacity is 55. The counties will be allowed one patient to every 3,000 of population. The cost of maintaining the patients is shown to

be \$24.00 a month each, or 83 cents a day. This includes every expense. The average number of patients treated was 35.

Court of Private Land Claims.—Under the act establishing this court, all claims for land grants not filed for settlement in the office of this tribunal prior to March 4, 1893, are forever barred, and the lands revert to the Government, becoming part of the public domain. The following is a summary made, Aug. 31, 1893, of all the claims presented, showing the acreage claimed in the cases disposed of, and also the acreage for which they have been approved: Cases filed, 262; grants confirmed, 23; grants rejected, 7; appealed to Supreme Court by claimants, 4; by United States, 4. Number of claims determined, 715; estimated number of acres claimed, 1,558,875; estimated number of acres confirmed, 815,839. By an amendment of this act the time for filing claims to small holdings was extended to Dec. 1, 1894.

Land Survey.—The last Congress appropriated \$20,000 to survey private land grants after their confirmation, and \$15,000 for the survey of public lands. During the year ending June 30, 1893, 2,343 miles of Government lines were surveyed and established; 376 plats were made, and 95 mineral locations surveyed; and 2,000 claims for survey of small farms were filed in the office of the Surveyor-General.

Minerals.—The capital invested in coal mining, Aug. 31, 1893, was \$3,574,863.38. Amount of coal produced during preceding year, 639,356 tons. Number of miners employed inside mines, 690; outside, 194; laborers inside mines, 159; total, 1,043. Carbonate and sulphate of soda, gypsum, alum, kaolin, and fire clays and graphite exist in large deposits. The total of precious metals produced in 1892 was \$1,850,000, of which 50.41 per cent. was gold. The annual production of precious stones, especially turquoises, is rapidly increasing.

Agriculture.—The crop report of the statistician of the Department of Agriculture shows that in New Mexico, in 1893, the average bushel yield of wheat was 16.8; of oats, 29.2; of barley, 21.6; of buckwheat, 95. The average condition of corn, Oct. 1, was 28; of Irish potatoes, 90; of sweet potatoes, 95; of sorghum, 95. New Mexico produced 515,000 bushels of wheat, 585,000 bushels of corn, and 225,000 bushels of oats.

Experiments on a large scale are being made with *cana-agria* (*Rumex hymenospales*), a sour dock, which grows wild throughout New Mexico, from which tannin is extracted. Under irrigation it matures in one year; without, in two years. The market value per ton, green, is \$6, or dried and sliced, \$65. It takes 3 tons of green to make 1 ton of dry, in which state it contains about 30 per cent. of real tannic acid.

Irrigation.—Gov. Thornton's report rehearses the need of the Territory for the establishment of irrigation reservoirs and canals and the steps that are being taken to supply it. He says the Pecos valley has the best and most extensive system of irrigation on this continent; 1,200 miles of canals have been completed, and the capacity of the storage reservoirs, to save the flood and storm waters, aggregates over 15,000,000,000 cubic feet; the canals cover 500,000 acres, nearly all in New Mexico. The farmers use

only an acre-foot of water per annum, or 42,260 cubic feet. This is about the lightest duty of water known on strictly farming lands. Sixty thousand acres of land have been disposed of to *bona fide* farmers, and 20,000 are now under cultivation. During last winter more than 250,000 fruit trees and vines were set out, and great numbers of shade trees.

In Grant County two important enterprises to save the underflow of Mimbres river are well under way. In San Juan County there is abundance of water. The arable area is only about 450,000 acres, and there is water for 2,000,000 acres. The irrigation works on the Maxwell grant are completed and colonization goes on steadily. Work is being done for reclaiming the Jornada del Muerto and the Armendaris land grants. Another irrigation enterprise is the reclamation of 30,000 acres on one of the Baca floats and on the Pablo Montoya grants by utilizing the waters of Canadian river. In Santa Fé County important works are in process of construction. One reservoir has been built to supply Santa Fé with water for domestic purposes and to irrigate about 2,000 acres of garden and fruit soil; another to cover 15,000 acres of splendid level mesa is to be built in the Arroya Honda, a natural storage basin.

An irrigation congress met in November at Deming, New Mexico, to consider, among other subjects, the devising of means to stop the unlawful diversion and use of the head waters of the Rio Grande, which diversion and use has caused a water famine in the Rio Grande valley south of Albuquerque.

Railroads.—The Pecos Valley Railroad has been completed, 97 miles, from Pecos City, Texas, to Eddy, New Mexico; it will run from Eddy to Roswell, 80 miles, with only three tangents, and thence to a junction with the Santa Fé route, thus completing the shortest inter-oceanic route in the United States.

Legislative Session.—The Legislature was in session eight weeks, adjourning on Feb. 23. Educational interests received much consideration, and various irrigation laws were passed. An effort was made to pass a law prohibiting gambling and making it a felony, but a compromise resulted only in doubling the license required from all those who keep gambling tables, requiring \$241 annually for each table. Among other bills passed were the following:

Creating the office of coal-oil inspector.

Providing that publication notice of service of process must be in both the English and Spanish languages where either party is of the Spanish-speaking race.

Providing for the election of boards of education.

Exempting from taxation for six years, from the beginning of their construction, all irrigation ditches, canals, and reservoirs.

Creating Guadalupe County out of a portion of the county of San Miguel.

Taxing sleeping-car companies.

Establishing branch experiment stations in Taos, Rio Arriba, and San Juan.

Facilitating the adjustment of land titles.

Providing for a county court in every county where the county seat has a population of 2,000 or more.

An act and resolution apportioning the \$62,000 returned by the United States to the Territory in repayment of the direct tax levied by the act of Con-

gress Aug. 5, 1861, as follows: For the use of the School of Mines, \$17,500; insane asylums, \$17,500; World's Columbian Commission, \$17,000; San Juan Experimental Station, \$5,000; and Deaf and Dumb Institute, \$5,000.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each national decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Roswell P. Flower, Democrat; Lieutenant-Governor, William F. Sheehan; Secretary of State, Frank Rice; Comptroller, Frank Campbell; Treasurer, Elliot Danforth; Attorney-General, Simon W. Rosendale; State Engineer and Surveyor, Martin Schenck; Superintendent of Public Instruction, James F. Crooker; Superintendent of Prisons, Austin Lathrop; Superintendent of Insurance, James F. Pierce; Superintendent of Public Works, Edward Hannan; Commissioner of Statistics of Labor, Charles F. Peck, who was succeeded on Jan. 20 by Thomas J. Dowling; Railroad Commissioners, Michael Rickard, S. A. Beardsley, and Alfred C. Chapin; Chief Judge of the Court of Appeals, Charles Andrews; Associate Judges, Robert Earl, John C. Gray, Rufus W. Peckham, Denis O'Brien, Francis M. Fitch, and Isaac H. Maynard.

Finances.—The balance in the treasury on Oct. 1, 1892, was \$3,448,063. The receipts for the fiscal year ended Sept. 30, 1893, were \$17,779,470, while the payments were \$18,034,174, and the balance was \$3,193,349.

The receipts were distributed as follow: From collateral inheritance tax, \$3,071,687, of which \$2,078,278 were paid in from New York County and \$346,216 from Kings; notaries' fees, \$46,221; salt duties, \$34,729; Auburn Prison earnings, \$3,535; Clinton Prison earnings, \$10,773; Sing Sing Prison earnings, \$7,585; sales by commissioners of the Land Office, \$24,334; taxes on corporations, \$1,668,911; taxes on organization of corporations, \$298,241; and pool tax on racing associations under the Ives pool law, \$21,574. The payments of the State Treasurer for the year ended Sept. 30 were: General fund, \$11,232,368; canal fund, \$1,576,137; common-school fund, \$670,727; free-school fund, \$3,911,568; United States deposit fund, \$300,453; college land scrip fund, \$229,800; literature fund, \$111,269; Normal University fund, \$19,000; and military record fund, \$1,848; total, \$18,053,174. The receipts for the last three months of 1893 were \$2,793,715, and the payments \$4,715,289, leaving a balance in the treasury on Jan. 1, 1894, of \$1,271,675.

The tax rate fixed by the Legislature was made up of 0.98 mill for school purposes, 0.33½ mill for the support of the insane, 0.37½ mill for canals, and the remainder, 0.89 mill, for general purposes, making a total direct tax rate of 2.58 mills. For the first time in seventy-five years the State is entirely free from debt. It is esti-

imated that the actual surplus on Sept. 30, 1894, will be \$3,089,177.

The active enforcement of the collection of the amounts under the corporation tax laws and the inheritance tax laws, for the fiscal year ending Sept. 30, 1893, exceeded the amount estimated by Comptroller Campbell in making up the tax rate by nearly \$2,000,000.

Wealth of the State.—At the meeting of the State Board of Equalization, which is composed of all the State officers with the exception of Governor, held in September, the assessors reported that during the year they examined and compared the values of about 5,000 parcels of property, in various counties, with assessments thereon. In 1891 the assessed value of real estate was \$3,526,645,815. In 1892 it was \$3,626,645,093, an increase of \$99,999,278. In 1892 the assessment of personal property amounted to \$405,095,684; in 1893, \$411,413,558, an increase of \$6,318,172. The apparent full value of the real estate for 1893 was fixed at \$5,508,133,953.

Savings Banks and Trust Companies.—From the annual statements of the New York city savings banks for the year ended Dec. 31, 1893, issued by the State banking department, it appears that the amount deposited in 25 banks was \$86,511,227, while the amount withdrawn was \$104,113,786. The returns of the trust companies in New York and Brooklyn, compared with the figures of 1892, show a gratifying improvement. Two more companies reported for 1893 than there were in operation in 1892. The resources of New York and Brooklyn companies in 1893 were \$21,500,185 greater than in 1892. And of these resources the two new companies contributed \$17,529,674, but though the total profits, amounting to \$7,373,469 in 1892, jumped in 1893 to \$16,216,554, being an increase of \$8,843,085, the new companies furnished but \$640,937 of this increase. The total resources of 28 companies in 1893 were \$346,821,468, compared with \$325,261,283 for 1892. Dividends from these companies declared during 1893 amounted to \$3,370,000, compared with \$1,672,500 in the year previous. Equally favorable is the showing of the profits, for from these companies the profits in 1893 was \$16,216,554, while in 1892 it was \$7,373,469.

Legislative Session.—The one hundred and sixteenth regular session of the Legislature began Jan. 3 and ended April 20. The number of new laws was 726. The Senate held over from the previous year, but the Assembly was the first one elected under the new apportionment, which gave a greater representation to the cities and less representation to the country districts. The Senate stood: Democrats, 17; Republicans, 14; Independent Republican, 1. The Assembly stood: Democrats, 74; Republicans, 54.

The act calling a constitutional convention was superseded by a new act making the number of delegates 165 instead of 171, all of them to be elective. Each of the 32 Senate districts was to elect 5 delegates, and the number of delegates at large was fixed at 15. The election was held Nov. 7, the Republicans electing 105 delegates and the Democrats 70. The convention will be held in Albany in May, 1894.

The village of Olean, in Cattaraugus Co., was given a city charter.

The following laws relating to New York city were enacted:

Authorizing the issue of \$150,000 in bonds for the Castle Garden Aquarium; providing for a vice-president in the Park Board; giving the consent of the State for the purchase by the United States of the Bowling Green site for a customhouse; providing that the city shall only use and occupy the surface under and through which the Croton aqueduct runs, which it has acquired in fee; providing for the removal of the City Hall to Central Park, or for its removal by a private person or corporation who shall agree to re-erect and maintain the building so that it shall present the same external appearance as now; providing that any assistant to the corporation counsel may perform any of the duties of the corporation counsel when so empowered by the corporation counsel; extending for one year, from Nov. 1, the term of office of the New York City Board of Electrical Control, and providing that the terms of the present members of the board shall expire on Nov. 1; providing for indexing and reindexing records in the New York County Clerk's office, and in the Register's and Comptroller's offices; providing for an additional bureau in the law department, to be known as the Bureau of Street Openings; providing for the addition of the 42d Street reservoir site to Bryant Park; authorizing the issue of \$500,000 in bonds for improving the sanitary condition of the common-school buildings; giving copyists and art students free admission to the Metropolitan Museum of Art on the two pay days in each week; ceding to the United States lands near Forts Hamilton and Wadsworth for harbor defense; providing for a driveway along Harlem river; appropriating \$250,000 for a soldiers' and sailors' memorial arch, the location not being defined in the bill; allowing the construction of railroads on bridges over the East river.

A law was passed prohibiting the selling of pools in pool rooms. The general excise law of 1892 was amended in several respects. It is now provided that licenses shall be granted only to those actually in the business; that licenses may be revoked if the premises are used for unlawful purposes; that revoked licenses can be restored only by order of the court; that no saloon shall be within 200 feet of the "principal," instead of the "nearest," door of a church; that hotel licenses shall be \$500, instead of \$250; and that, in New York city, from \$10 to \$30 may be charged for a transfer of license.

A pharmacist can no longer hold both a druggist's and a storekeeper's license.

The banking law was amended in these respects: Requiring a minimum capital of \$25,000 in places of fewer than 1,500 population, \$50,000 between that population and 30,000, and \$100,000 in all other places; authorizing savings banks to invest in the stocks or bonds of Boston, Worcester, St. Louis, Cleveland, Detroit, Providence, and New Haven.

The stock corporation law was amended so that the sale of franchises and property and the purchase of stock in another corporation must be genuine transactions; also so that a two-thirds vote may increase or diminish the capital stock. Hereafter a majority vote may establish a quorum in societies and clubs.

A special committee of the Senate made an investigation into the combinations to advance the price of coal; and a bill was passed to prevent monopolies in articles of general necessity.

A law was passed allowing the Mayor of Brooklyn to appoint an inspector of coal to protect purchasers in regard to weight.

Other laws were as follow: Allowing the uncontested portions of a will to stand; forbidding the removal or altering of books to defraud creditors; enabling persons qualified to take real estate by descent to devise the same without regard to residence or citizenship; forbidding misrepresentation of the circulation of a newspaper.

The city of Syracuse was authorized to have electrical subways. Laws were passed authorizing a village to contract with electric-light companies to an amount not exceeding 2½ mills for every dollar of taxable property within the village. Laws were passed for protection of the water supply in Brooklyn and New York city; and under the law for the latter many sources of contamination in Putnam and Westchester Counties have been removed. The laws relative to public health were codified.

The statutory revision commission presented 16 bills, of which only 6 became laws. The 6 were: The public buildings law, the agricultural law (in two parts), the public health law, the military code, the amendments to the code of civil procedure as to surrogates, and the miscellaneous amendments to the penal code. The village law was amended so that any woman over twenty-one years of age who is a resident is eligible to the office of village clerk. The treasurer of each county and the comptroller of the city of New York shall retain 5 per cent. on the first \$50,000 paid under the direct inheritance tax law, 3 per cent. on the next \$50,000, and 1 per cent. on all additional sums; but in Erie and Monroe Counties the fees shall belong to the counties. An unexpended balance of about one half of the original appropriation of \$8,000 was reappropriated to continue the publication of the colonial statutes.

The revised statutes were amended in several important respects. Police justices in Brooklyn are allowed to solemnize marriages. The surviving parent is given larger powers of guardianship. Marriages are forbidden between uncles and nieces and between nephews and aunts. The miscellaneous amendments to the penal code, chapter 692, refer more particularly to the election law, the communication with prisoners, the evasion of civil rights, the setting fire to forest lands, the discharging of firearms, the meddling with steam pipes, the sending of messenger boys to disreputable places, the misconduct of veterinary surgeons, the using of false marks in manufacturing, the trespassing on Indian lands, and the unauthorized wearing of the badge of the Loyal Legion.

All the laws relating to the National Guard were recast into the military code, which became a law. The city of Brooklyn was authorized to issue \$100,000 in bonds to erect a soldiers' and sailors' monument. The sum of \$213,747 was appropriated for the expenses of the railroad strike in Buffalo in August, 1892. Appropriations for new armories or for repairing old armories were made as follow: Glens Falls, \$32,000; Amsterdam, \$25,000; Albany, \$22,000; Hornellsville, \$25,000; Niagara Falls, \$30,000; the city of Brooklyn was allowed to expend an additional \$200,000 on the Fourteenth Regiment Armory.

A new law requires two exits from all mines;

and another compels the equipment of freight cars with automatic couplers.

A codification of all the agricultural laws was passed. The supply bill gave \$15,000 for the maintenance of farmers' institutes, under the direction of the State Agricultural Society; \$4,500 for the State Weather Bureau; and \$50,000 to Cornell University for dairy husbandry. Hereafter no State money shall be expended for any substitute for butter. The keeper of a hotel or restaurant is forbidden to furnish imitation butter or cheese to his employees. A charter was given to the Beet Sugar Co-operative Community.

The Legislature of 1892 appropriated \$3,000 toward procuring an accurate topographical map of the State, and this year an appropriation of \$30,000 for the same purpose was made. The work is a joint one between the United States and New York State. Nine surveying parties are at work at various parts of the State—at Niagara Falls, at Oswego, at Watertown, in Franklin County, in the Mohawk valley, and along the route of the Champlain Canal. These parties are working under the scheme of co-operation between the State and the National Government. The State pays the expenses of the engineers, and the United States pays their salaries.

A law was enacted which, in its first stages, affected only Young Men's Christian Associations and Catholic Unions, but afterward it was made general. This provided that the real property of a corporation organized exclusively for the moral and mental improvement of men and women, or for religious, charitable, missionary, hospital, educational, patriotic, historical, or cemetery purposes, and used exclusively for such purposes, shall be exempt from taxation; if a portion only of a building is used for such purposes, then that portion alone shall be exempt. Church property is exempt, although the title may be in the name of a bishop. A law was passed to prevent a repetition of the Tilden will case, providing that no gift, grant, bequest, or devise to religious, educational, charitable, or benevolent uses, which shall in other respects be valid under the laws of this State, shall be deemed invalid by reason of the indefiniteness or uncertainty of the persons designated as the beneficiaries thereunder in the instrument creating the same.

The sum of \$100,000 was given for a new normal school in Jamaica.

All attempts to replace the paper ballot with the blank ballot failed, as did also a bill requiring all voters in the rural districts to register in person.

The usual large appropriation for the improvement of the canals was not made. The sum of \$6,000 was appropriated for improving the westerly channel of the Hudson at Coxsackie; \$6,000 for improving the easterly channel at Stuyvesant; and \$4,000 for repairing the dikes at Mull's Light, Pitoway Island, and Greenbush. The appropriation for continuing work on the Capitol was \$700,000.

The Legislature held memorial exercises for James G. Blaine, George William Curtis, Francis Kernan, ex-Speaker James W. Husted, and Senator Edward P. Hagan.

Apportionment.—The State apportionment, based on the national census of 1890, after con-

siderable legal agitation, was adjusted in compliance with decisions by the Court of Appeals.

The World's Fair.—During March the Legislature appropriated a second \$300,000 for the expenses of the State exhibit at Chicago, and in consequence New York had a building which was said to be the finest single piece of architecture at the fair. Efforts were made to save the building, and it was given to the women of Chicago, but they were unable to accept it. It had served its purpose and was destroyed. Among the exhibits of the Woman's Board at the fair was the collection of a library of books written by women. From this State went a collection of about 2,500 volumes written by New York women. The claim was made for it that it was absolutely complete. On its return, this collection was given a permanent home in the State library.

Education.—The number of children attending the common schools during 1893 was 1,083,228, an increase of 10,135 over the previous year. The number of school age was 1,892,388, showing that 809,160 children—nearly half the children of school age—were educated in private or parochial schools, or were not in school at all. The total amount expended for public schools during the year was \$21,901,678.72, an increase of \$767,162.98 over the amount expended in the previous year. The larger part of this sum was raised by local taxation.

Lunacy.—The gradual transfer of the care of the insane to the State commission, as provided for by the law enacted in 1890, has been successfully accomplished, but not without considerable difficulty. On Oct. 1, 1893, 8 great hospitals, costing \$10,426,127, containing about 9,000 insane patients, became a State charge, and for their support the Legislature appropriated \$1,548,000 for the year beginning with that date.

Crime.—According to the report submitted with the Governor's message, the number of convicts in the three State prisons on Sept. 30, 1893, was 3,491, being 104 less than on the same date of the previous year, and the lowest since 1889. Of this number 1,306 were employed in productive industries on Sept. 30, 1893, compared with 2,162 in 1892. This falling off could not but affect the prison receipts from industries. At the same time the employment of convict labor in building shops at Clinton and Auburn prisons has saved the State about \$46,000. The average cost of care and maintenance for the fiscal year was \$137.04 for each convict.

National Guard.—The supervision of the State militia is chiefly under the charge of the adjutant-general on the Governor's staff. The present incumbent is Maj.-Gen. Josiah Porter. According to his annual report there are about 650,000 men in the State subject to military duty. The State Guard comprises 11 regiments, 3 battalions, 44 separate companies, 5 batteries of light artillery, 1 troop of cavalry, and 3 signal corps. During the year the 69th Regiment was reduced to a battalion of 5 companies, the 8th Regiment to a battalion of 4 companies, and the 35th Separate Company, Ogdensburg, and the 45th Separate Company, Cortland, were disbanded. The General Government has adopted a new magazine small arm for the army.

The strength of the guard at the time of the

general muster was as follows: Cavalry, 107; infantry, 12,084; artillery, 392; signal corps, 88; naval militia, 428; total, 13,045. With but few exceptions, the percentage of attendance at the annual muster and inspection was good. None of the regiments had 100 per cent. present, but a number of separate organizations did. So did 4 companies (F, G, H, and I) of the 7th Regiment, each of which had 103 men on its roll. The largest companies are the 19th, of Poughkeepsie, and the 21st, of Troy. Each has 104 enlisted men on its roll. In the muster of the 21st every man was present.

Labor Troubles.—Matters pertaining to this subject are submitted to a State board of mediation and arbitration, which consists of William Purcell, Gilbert Robertson, and Edward Feeney. They report that during the year the most important strike was that of the Lehigh Valley Railroad during November, of which it is estimated that the cost to the company was over \$600,000, while the men lost \$300,000. The last sum includes \$140,000 paid out of brotherhood treasuries as relief money to strikers.

Railroads.—The management of the railroads is under the supervision of 3 commissioners. The present incumbents are Michael Rickard, Samuel A. Beardsley, and Alfred C. Chapin. According to their report, the figures, which are tabulated up to June 30, show that the gross earnings from operations of roads were \$234,354,615; gross expenses, \$157,128,964; net earnings, \$77,225,650. There are 47 street railroads operated by the overhead electrical trolley system, and 3 operated by the cable system.

Factory Inspection.—The State Factory Inspector is James Connolly, from whose report it appears that 11,068 factories, workshops, and sweat shops were visited during the year. In these places there were 412,237 persons employed, 138,708 of whom were women and girls. These persons were classified as to ages as follow: Females under twenty-one, 48,954; females under sixteen, 6,660; males under eighteen, 10,986; males under sixteen, 7,204; total children under sixteen, 13,864.

The report shows the number of children under sixteen employed in 1893 to have been a fraction under 34 in each 1,000 persons, against 38 in 1,000 in 1892.

Banking Department.—This is under the management of Charles M. Preston. In his report for the year ending Sept 30 he says:

During the very trying period of the last year, with 208 discount banks in operation, there were but 5 suspensions, as follow: The Canal Street Bank, New York city; the Cataract Bank, Niagara Falls; Queen City Bank, Buffalo; the Madison Square Bank, New York city; and the Commercial Bank, Brooklyn, having an aggregate capitalization of \$1,608,000. The Queen City Bank, after having remained closed for about two months, resumed business with a capital of \$300,000. Sixteen new banks, including the Queen City Bank, of Buffalo, which has resumed, and one individual banker have been organized during the last year, with a combined capital of \$2,150,480. The resources and liabilities of the banks on Sept. 19, 1893, were \$251,560,578. The increase of capital amounted to \$200,000 during the year. The net increase in State bank capital during the year was \$703,480.

Agriculture.—A department having charge of the interests of the farming population was

established in response to a suggestion made by Gov. Flower last year. The most interesting feature of the first annual report has to do with suppressing the sale of oleomargarine, which was contested by the manufacturers of that article. Armour & Co. brought action in the circuit court of the United States against the commissioner, seeking to enjoin him from enforcing the law. In the mean time the department procured and introduced in Congress an act subjecting oleomargarine and all imitation butter and cheese, upon its entry into the State, to all laws of the State passed as police regulations, whether in original package or not, and irrespective of the interstate commerce law.

During the year 1,155 cheese factories produced 110,448,691 pounds of cheese; 255 butter factories, 14,024,019 pounds of butter; and 213 factories, where both butter and cheese are made, produced 5,473,338 pounds of butter and 20,542,619 pounds of cheese.

The progress desired in vinegar inspection was not accomplished, owing to the contest as to the constitutionality of the law, which was finally determined by the General Term in November in accordance with the views of the department.

Canals.—The total tonnage carried on all the canals was 4,331,963, an increase of 49,968 tons over the preceding year. It was distributed as follows: Products of the forest, 1,030,604 tons; products of agriculture, 1,544,146 tons; manufactures, 66,892 tons; merchandise, 216,013 tons; and other articles, 1,474,308 tons; total, 4,331,963 tons. The amount of freight carried by the various canals was as follows: Erie Canal, 3,235,726 tons; Champlain Canal, 848,965 tons; Oswego Canal, 92,634 tons; Black River Canal, 115,877 tons; and Cayuga and Seneca Canal, 38,761 tons; total, 43,321,963 tons.

During the season of canal navigation the number of bushels of grain received at the port of New York was 108,962,706, of which the canals carried 43,076,900, or slightly over 39½ per cent. The cost of superintendence, ordinary repairs, and maintenance of the canals during the fiscal year was \$726,057.47. This is the lowest expenditure for these purposes in seven years. In addition, the Legislature appropriated \$780,000 for improvements. These are now under way and will increase the efficiency of the canals. Experiments authorized by the Legislature as to the feasibility of using electricity as a motive power on canals demonstrated, by experiments that were made on the Erie Canal near Rochester, that by the trolley system the cost of transportation may be lessened at least 25 per cent., and that the increase in speed may be augmented at least 30 per cent.

Fisheries.—The commissioners having in charge the care of the fish interests report that they planned during 1893 to hatch at least 100,000,000 fry, and they succeeded in distributing over 80,000,000 of the best varieties of fishes in the waters of the State. The total amount of fry hatched and distributed in the waters of the State was 50 per cent. in excess of the hatching and distribution of any previous year. Eighteen million whitefish were planted in Lake Ontario. The commissioners have devoted much time to the protection and distribution of food fishes.

Forest Preservation.—On the recommendation of the Governor, a forest commission was created, having for its objects: 1. The securing of tracts of the Adirondack forests owned by individuals or private associations as part of the State forest preserve; these to be guarded against denudation by a contract between the owners and the State whereby, in consideration of forest protection furnished by the State and exemption from State taxation, the owners and their grantees would refrain from removing the timber, except under conditions imposed by the State. 2. The acquiring by the State of a considerable revenue by granting permission to fell trees above a certain diameter on State lands, and to remove the timber. The commission report that 225,000 acres of Adirondack land have been offered to the State upon the terms of the proposed contract, and that standing spruce timber exceeding 12 inches in diameter has been sold on 17,468 acres of State land, from which it is expected that the first year's cutting will yield to the State a revenue of \$52,400.

Political.—The Democratic Convention was held in Saratoga Springs on Oct. 5-6, when a platform was adopted, of which the prominent features were a rehearsal of what the Democratic party had done for New York, telling how

It put New York entirely out of debt. It gave the people the lowest tax rates in a generation. It increased the tax receipts from corporations and inheritances by over \$3,500,000.

It enacted a scheme for the preservation of the Adirondack and Catskill forests.

It established a State department of agriculture.

It maintained an efficient management of the canals, and endeavored to increase their usefulness by the introduction of new motive powers.

It abolished the iniquitous "sweating system" in the manufacture of garments.

The platform further recommended tariff reform and the repeal of the Sherman bill, and closed by praising the administrations of President Cleveland and Gov. Flower. Besides nominating 15 delegates at large to the Constitutional Convention, the following ticket was chosen by acclamation: Judge of the Court of Appeals, Isaac H. Maynard; Secretary of State, Cord Meyer, Jr.; Comptroller, Frank Campbell; State Treasurer, Hugh Duffy; Attorney-General, Simon W. Rosendale; and State Engineer and Surveyor, Martin Schenck.

Almost simultaneously the Republican State Convention was held in Syracuse, over which Frank Brundage presided.

The platform adopted attacks the State organization, Judge Maynard, the last Legislature, and the State government. Its declaration of principles pledges the candidates nominated to nonpartisanship as a State canvassing board, and the Republican Legislature and State department officers, if elected, to the strictest economy. It pledges reforms in the election law, and promises nonpartisan election boards. It further pledges advocacy of such provisions of the Constitution as shall result in establishing home rule in every city and village in the State.

The following ticket was nominated: Judge of the Court of Appeals, Edward T. Bartlett; Secretary of State, John Palmer; Comptroller, James A. Roberts; State Treasurer, Addison B.

Colvin; Attorney-General, Theodore E. Hencock; Engineer and Surveyor, Campbell W. Adams.

Candidates for the various offices were also put in nomination by the Prohibition party, the People's party, and the Socialist party. A short canvass followed, in which the contest practically reduced itself to a fight for and against Isaac H. Maynard, the Democratic candidate for Judge of the Court of Appeals. The election was held on Nov. 7, when the vote given to Bartlett was 579,222, against 478,158 for Maynard. The other Republican State candidates were elected by pluralities from 23,000 to 35,000. Local candidates for State Senators and Assemblymen were also chosen.

As returned by the State Board, the Senate will stand—Republicans 18, Democrats 18, Independent 1; the Assembly—Republicans 74, Democrats 52.

On Jan. 17 the Legislature chose Edward Murphy, Jr., Democrat, as United States Senator, to succeed Frank Hiscock. The ballot was: Edward Murphy, Jr., 90 votes; Frank Hiscock, 64 votes; and Whitelaw Reid, 1 vote.

Election Troubles.—Subsequent to the election in November serious charges were made in the public press that the privilege of voting had been denied in the township of Gravesend to those who were politically opposed to John Y. McKane. At the instigation of Mr. McKane, who is the "boss" of that place, reputable citizens were driven from the polls, and thus deprived of their rights. In consequence, James W. Ridgway, District Attorney of Kings County, made request of Gov. Flower that he would suggest the names of one or more capable and honest lawyers whom he could appoint as his assistants, and to whom he could turn over the entire cares and responsibility of collecting the evidence and conducting the prosecutions of all persons who had been guilty of violating the laws in the election troubles in Kings County.

In compliance with this the Governor named George G. Reynolds and Edward M. Shepard, and with their aid McKane was brought to trial.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, Thomas F. Gilroy; President of the Board of Aldermen, George B. McClellan; Register, Ferdinand Levy; and Sheriff, John J. Gorman, all of whom are Tammany Democrats, and, with the exception of the sheriff, entered on the duties of their offices on Jan. 1, 1892.

Finances.—The condition of the city debt on Dec. 31, 1893, is shown in the table on top of next page.

During the year the cost of permanent improvement amounted to \$11,456,075.69, for which amount bonds were issued. The redemption of other bonds and the revenues of the sinking fund lacked \$2,132,840.19 of that sum, and in consequence the city debt has been increased to that extent. The interest charges on bonds maturing previous to and in the year 1904, bearing interest at 4, 5, 6, and 7 per cent., amount to \$3,429,780.08 annually, and these bonds could be refunded for long-period bonds issued at a rate of interest not exceeding 3 per cent., thereby saving \$1,745,689.63. Legislation should be had authorizing the Comptroller to refund, whenever practicable, the city's higher-rate se-

FUNDED DEBT.	Outstanding			
	Dec. 31, 1892.	Issued during 1892.	Redeemed during 1892.	Outstanding Dec. 31, 1893.
1. Payable from the sinking fund, under ordinances of the Common Council.....	\$4,267,200 00			\$4,267,200 00
2. Payable from the sinking fund, under provisions of chapter 884, section 8, Laws of 1878, and section 176, New York City Consolidation act of 1892.....	9,700,000 00			9,700,000 00
3. Payable from the sinking fund, under provisions of chapter 884, section 8, Laws of 1878, and section 192, New York City Consolidation act of 1892, as amended by chapter 178, Laws of 1889.....	43,548,024 95	\$8,025,427 28	\$14,500 00	51,858,952 23
4. Payable from the sinking fund, under provisions of chapter 79, Laws of 1889.....	9,806,000 00	8,500 00		9,806,500 00

Net funded debt, Dec. 31, 1893.....			\$100,762,407 51	

curities into 3-per-cent. bonds having forty or more years to run. Nearly \$20,000,000 of revenue bonds, the interest on which approximated \$300,000, were issued in 1893 to pay the expenses of the city until the receipts from taxation became available. The financial stringency made it necessary in some cases for the city to pay 6 per cent. interest. During the past fifty years the money borrowed in anticipation of the collection of taxes has cost the city in interest almost \$15,000,000. The tax rate for 1893 was \$1.82 on each \$100 of assessment, which was the lowest rate known in this city for thirty years.

Board of Estimate and Apportionment.—This body, consisting of the Mayor, the President of the Board of Aldermen, the Comptroller (Theodore W. Myers), and the President of the Department of Taxes and Assessments (Edward P. Barker), allowed the following amounts for 1894: Mayoralty, \$28,000; Common Council, \$88,000; Finance Department, \$302,200; interest on city debt, \$5,134,199.59; redemption of principal of city debt, \$1,877,000.44; State taxes, \$4,112,266.62; rents, \$141,480; armories and drill rooms—rents, \$27,175; armories—wages, \$59,196; judgments, \$125,000; Law Department, \$206,900; Department of Public Works, \$8,061,960; Department of Public Parks, \$1,177,195; street improvements, \$359,360; Charities and Correction, \$2,295,675; Health Department, \$425,080; Police Department, \$5,139,147.64; Department of Street Cleaning, \$2,367,390; Fire Department, \$2,240,397; Building Department, \$204,700; Tax Department, \$128,220; Board of Education, \$4,634,134.27; College of the City of New York, \$150,000; Normal College, \$125,000; printing, stationery, and blank books, \$272,200; municipal service examining boards, \$25,000; coroners, \$54,700; commissioners of accounts,

\$32,500; sheriff, \$122,932; register, \$130,000; Bureau of Elections, \$374,450; preservation of records, \$45,430; street and park openings, \$100,000; jurors' fees, \$65,000; salaries, city courts, \$383,300; salaries, judiciary, \$1,161,890; miscellaneous, \$134,794.69; libraries, \$40,000; charitable institutions, \$1,312,384.44; total, \$38,664,257.69. Deduct general fund, \$3,600,000; grand total, \$35,064,257.69.

This statement shows that the amount allowed for 1894 is \$38,664,257.69, which is reduced by deducting the general fund made up by receipts from various sources during the year, including the unexpended balance of previous years amounting to \$3,600,000. The total amount to be raised by taxation is \$35,064,257.69, which, as compared with the allowance made for 1892, shows an increase of \$1,620,103 over the amount given last year; but as there was available from the general fund \$3,266,725.13, the absolute increase was \$886,824.14, which is more than made up by an increase of \$567,808.29 in the State tax, \$377,979.34 in the fund for the redemption of the city debt, and \$189,617.50 in the interest fund, all items mandatory upon the board and entirely apart from current expenses. Deducting these items, the budget shows a net decrease for 1894 of \$244,576.99 on current expenses.

Wealth of the City.—This department is a county trust, and is cared for by three tax commissioners, including Edward P. Barker, John Whalen, and Joseph Blumenthal, of whom the first named is president. They report the total valuations of real and personal property as assessed for taxation in 1893 at \$1,933,518,528.90, as against \$1,828,264,275 in 1892, showing a total increase of \$105,254,253.90, which is distributed as follows: Real estate, \$57,677,790; banks, \$10,299,703.90; corporations—resident, \$12,559,815;

nonresident, \$3,811,846; personal—resident, \$19,681,406; and nonresident, \$1,223,693.

Public Works.—This department is under the charge of a commissioner appointed by the Mayor, independent of the Board of Aldermen. He holds office for four years, and receives a salary of \$8,000. The present incumbent is Michael T. Daly, who succeeded Thomas F. Gilroy when the latter became Mayor, on Jan. 1, 1893, and was again appointed to that place on May 1. The headquarters are at 31 Chambers Street. During 1893 the report of the department shows that the average daily water supply received and distributed was 174,000,000 gallons, which was furnished by natural flow except during the summer months, when 12,754,000,000 gallons of water was drawn from the storage reservoirs and lakes. The capacity of the aqueducts is 400,000,000 gallons. The length of water mains laid during the year is 10,630 lineal feet, making 715 miles of water mains in the city. About \$80,000 has been expended on the improvement of the Croton watershed. The contract for the 155th Street viaduct was made July 14, 1890, and the structure was completed and opened to the public on Oct. 2, 1893, the total cost of which to date is \$730,000. Work is in progress under the contract for building a new bridge over the Harlem river at Third Avenue, the cost of which will be \$1,222,000, and it is believed that it will be completed by the close of 1895. The contract for a drawbridge over the United States Ship Canal, to connect the Harlem and Hudson rivers, was made April 13, 1893. Shortly afterward the work was begun, and it is now progressing favorably. The Criminal Court building is completed, except minor interior details. The cost of the building is \$1,500,000, and it is considered the cheapest public building ever erected in this city. The city is lighted by 24,312 gas lamps, 2,436 electric lamps, and 152 naphtha lamps. The annual cost of lighting the city is: Gas, \$495,000; electricity, \$408,000. The area and mileage of new pavements laid during 1893 exceed those of any previous year in the history of the city. To replace worn-out pavements, 336,650 square yards of granite block and 226,359 square yards of asphalt pavement were laid. Of pavements on new streets, 53,415 square yards of granite block and 26,793 square yards of asphalt were laid. The area and mileage of various kinds of pavement in this city are: Improved specification stone blocks, 216.50 miles; old square stone blocks, 66.73 miles; asphalt, 52.26 miles; macadam, 20.80 miles; cobblestone, 0.27 mile; total, 356.56 miles. Asphalt work is done in Paris for \$3.42 a square yard, and the cost of maintenance is reported at a price that in fifteen years would amount to \$4. a total of \$7.42 a square yard. In this city the asphalt pavement is laid at an average cost of \$3.85 a square yard, under contracts guaranteeing that it will be kept in order for fifteen years without additional cost to the city. In extending and improving the sewerage system, about 7 miles of new sewers and culverts, with 67 receiving basins, were built. There are now 456.37 miles of sewers in the city. An experiment was made of treating sewage and drainage by the Wolfe electrozone process, the result of which has been to destroy bacteria and clarify the water or

liquid sewage, so as to render it practically harmless.

Public Parks.—This department is under the direction of a board of 4 commissioners, consisting of Abram B. Tappan, President, who receives a salary of \$5,000 a year, and Nathan Straus, Paul Dana, and George C. Clausen, who succeeded Henry G. Winthrop on May 1, 1893. The Secretary of the Board is Charles DeF. Burns, and the headquarters are at 31 Chambers Street. During the year the department has cared for more than 40 parks and plazas in the city, besides 10 parks and parkways north of the Harlem river. All roads and paths have been repaired to the full extent of the appropriation for the year. Rutgers Park has been thrown open to the public, and a large amount of construction work has been accomplished on the addition to the East River Park. The operations in the way of constructing and maintaining roads and bridges have furnished and continue to furnish employment for over 2,000 people. The Castle Garden Aquarium has been visited by specialists from other countries, and the construction so far as it has progressed has been approved. Its cost will be upward of \$250,000, and it is hoped that the aquarium may be opened in May. The obelisk in Central Park has been coated with paraffin, to preserve it from the action of the elements. This has cost \$2,000, and an aluminium cap, gilded, has been placed upon it at a cost of \$150, thus restoring one of its ancient features.

Building Department.—This department is under the control of a commissioner, who receives a salary of \$5,000 a year. The present incumbent is Thomas J. Brady, with headquarters at 220 Fourth Avenue.

During the year there were filed in this department plans for the erection of 2,275 houses at an estimated cost of \$34,859,318, and 2,014 plans for alterations at an estimated cost of \$6,804,527. Among the new buildings recently completed or about to be occupied are the Manhattan Life Insurance building, at the corner of Broadway and Exchange Place; the Postal Telegraph building, at the corner of Broadway and Murray Street; the Shoe and Leather Bank, at the corner of Broadway and Chambers Street; the Criminal Courts building, at the corner of Center and Franklin Streets; the Bowery Savings Bank building, at the corner of Bowery and Grand Street; the Bank for Savings, at the corner of 22d Street and Fourth Avenue; the Metropolitan Life Insurance building, at the corner of 23d Street and Madison Avenue; the Hotel Waldorf, at the corner of Fifth Avenue and 33d Street; the Herald building, at the corner of Broadway and 35th Street; the Empire Theater, at the corner of 40th Street and Broadway; the New Netherlands Hotel, at the corner of 59th Street and Fifth Avenue; and, besides numerous magnificent residences—such as that of Cornelius Vanderbilt, at the corner of 57th Street and Fifth Avenue, and that of John Jacob Astor, at the corner of 65th Street and Fifth Avenue—there must be mentioned the Teachers' College, on the Boulevard and Morningside Heights.

Vital Statistics.—The Board of Health consists of the President of the Board of Police, the health officer of the port, and two commission-

ers, one of whom must have been for five years a practicing physician. The commissioner who is not a physician is president of the board, and receives a salary of \$5,000, while the other member is paid \$4,000. The *ex-officio* commissioners receive no salary. The officials during 1893 were as follow: President Charles G. Wilson, Dr. Joseph D. Bryant, who resigned, and was succeeded on March 30 by Dr. Cyrus Edson, Health-Officer William T. Jenkins, and President of the Board of Police James J. Martin. The secretary of the board is Emmons Clark, and the headquarters are at 301 Mott Street. The vital statistics were as follow:

ITEMS.	1892.	1893.
Deaths under one year.....	11,896	11,105
Deaths under five years.....	18,654	17,872
Total deaths.....	44,370	44,829
Total reported births.....	49,447	51,516
Total reported marriages.....	16,001	16,144
Total reported stillbirths.....	8,573	8,686
Death rate per 1,000 living.....	24.26	23.46

The principal causes of death were as follow: Pneumonia, 6,476; phthisis, 5,101; diarrhoeal diseases, 3,314—under five years, 2,901; Bright's disease and nephritis, 2,561; heart disease, 2,376; diphtheria, 1,982; bronchitis, 1,569; croup, 585; scarlet fever, 551; whooping cough, 540; cerebro-spinal meningitis, 467; measles, 387; typhoid fever, 380; influenza, 220; typhus fever, 201; malarial fever, 133; and smallpox, 100. Besides the foregoing, there were 43 fatal sun-strokes, 47 homicides, 813 suicides, and 1,565 fatal accidents.

Police.—This department is controlled by a board of 4 commissioners appointed by the Mayor for a term of six years, who receive a salary of \$5,000 each. The board during 1893 consisted of James J. Martin, president, John McClave, John C. Sheehan, and Charles F. McLean. The superintendent of police is Thomas F. Byrnes, and the headquarters are at 300 Mulberry Street. The force on Jan. 1, 1894, consisted of a superintendent, 4 inspectors, 37 captains, 163 sergeants, 28 detectives, 179 roundsmen, 3,296 patrolmen, 82 doormen, 15 surgeons, 20 matrons, 13 persons in telegraph office, a chief of the Bureau of Elections, and 29 clerks—a total of 3,930. During the year 53 members of the force died, 96 were retired, and 16 were dismissed.

Fires.—This department is under the control of a board of 3 commissioners, as follow: John J. Scannell, president, Anthony Eickhoff, and S. Howland Robbins, who was succeeded on May 1 by Henry Winthrop Gray, each of whom receives a salary of \$5,000 a year. The chief of the department is Hugh Bonner, and the headquarters are at 157 East 67th Street. The force on Jan. 1, 1894, included 1,056 officers and men, 58 engine companies (including 3 fireboats), 22 hook and ladder companies, 92 steam fire engines (including 24 spare ones), 3 fireboats, 4 water towers (including 1 spare one), 84 hook and ladder trucks (including 11 spare ones), and 405 horses. During the year there were 4,132 fires, of which 3,681 were confined to the point of starting, 233 were confined to the building, and 49 extended to other buildings. Of the total number, 169 were not in buildings. It is

estimated that the losses by fire in 1893 amounted to \$5,630,937, the insurance on the buildings and other property burned or damaged being \$80,447,194. The average loss at the fires for the year was \$1,362.42. There were 4,454 alarms sent out. The underground telegraph system has 386 alarm boxes, 53 apparatus houses, and 5 fire-department buildings. Thirty schoolhouses and 4 hospitals are now connected by telegraph through subways and subsidiary ducts by means of 86 miles of cable, having 799½ miles of conductors. Telegraph poles to the number of 259 and 182½ miles of wire were taken down during the year. There was received for licenses, permits, and penalties, \$48,153.80.

Electrical Subways.—This department is under the control of a board of 4 commissioners, consisting of the Mayor, Jacob Hess, Theodore Moss, and Walton Storm. The office is at 1266 Broadway. During the year 100½ miles of telegraph and telephone subway and 49½ of light and power subways were laid. There are now in the city 874 miles of the former and 820 miles of the latter. There are 32,600 miles of wire in the telegraph and telephone subways, and 1,300 in the light and power subways. The city has now 6,790 arc lamps and 268,000 incandescent lights. There are nearly 10,000 telephones operated through the subways. The board has removed 1,407 poles and 960 miles of wire without expense to the city. The total number of poles removed since the board came into existence is 17,272, and the total miles of wire 23,320.

Docks.—This department is under the control of 3 commissioners, each of whom receives a salary of \$5,000 a year. In the early part of 1893 the commissioners were Edwin A. Post, president, James Matthews, and J. Sergeant Cram; but subsequent to May 1 the board became J. Sergeant Cram, president, Andrew J. White, and James J. Phelan. Office, Pier A, North river. The work of 1893 included preparation of a plan for improvement of the North river front from Charles Street to West 23d Street, adapted to the requirements of the conditions and commerce of this port. This plan proposes accommodations for docking the largest existing vessels at a minimum expense, and an increase of wharfage room of more than 3 miles. The expenditures of the Dock Department amounted to \$2,595,801.93, of which \$783,478.12 were for acquired property, \$1,557,350.96 for construction, and \$254,972.85 for maintenance and repairs of the whole water front. The gross revenue was \$1,786,196.13, an increase of more than \$100,000 over any previous year. Applications for the rental of 10 of the new piers are in hand, for 2 of which \$60,000 a year each is offered, and the improvement will tend to enhance the commercial supremacy of the city. In carrying it out, no additional appropriation will be asked for.

Street Cleaning.—This department is managed by a single commissioner, who receives a salary of \$6,000 a year. At the beginning of 1893 Thomas S. Brennan held the place of commissioner, but later he gave way to William S. Andrews. Office, Room 187, Stewart Building. During the year more than 109,852½ miles of streets have been swept, and 1,564,088 cart loads

of material, including ashes, garbage, and street sweepings, have been collected. Of this amount, 1,491,021 loads have been sent to sea, and the remainder has been used for filling in lots. The amount of snow and ice removed was 86,155 cart loads. The department has swept 382.76 miles of paved streets daily, and removed the ashes and garbage from 594.44 miles of street. It has seized and removed 1,042 vehicles, of which 697 were redeemed at a cost of \$1,282. There was collected \$85,269.68 for the privilege of trimming scows and sorting out the bones and other material worth saving, and \$1,676.87 from auction sales of old material. The total expenditures to Dec. 1 were \$2,054,152.83, out of \$2,367,390 allowed by the Board of Estimate and Apportionment.

Monuments.—During the year an unusual number of monuments were added to those that already adorn the highways of the metropolis. Among these, the first in point of time was the unveiling of a bronze tablet by the veterans of the Seventh Regiment, on the southeast corner of Fulton and Nassau Streets. This event took place on the evening of April 19, which was the sixty-ninth anniversary of the organization of the regiment, and the thirty-second anniversary of the regiment's departure for Washington at the outbreak of the civil war in 1861. The tablet is of bronze, 5 feet high and 2½ feet wide. It bears the inscription: "On this site, the old Shakespeare Tavern, was organized the Seventh Regiment, National Guard, State of New York, Aug. 25, 1824. This tablet was erected by the Veterans of the Seventh Regiment, 1898." A monogram of the initial of the organization and the number 7, with a representation of the old tavern, all in bas-relief, combine to make a fine piece of art. Encircling the monogram are the words, "Pro patria et gloria."

A monument to the memory of John James Audubon, the distinguished ornithologist, was raised over his remains in Trinity Cemetery on April 26. A popular subscription of \$10,000 was collected by a committee appointed by the New York Academy of Sciences, in co-operation with committees named by other scientific organizations. The memorial is in the form of a cross of North river blue stone, at the base of which is a likeness of Audubon carved in stone, and his name beneath. The pedestal is of granite. On the evening of the same day a memorial meeting was held in the American Museum of Natural History, when a eulogy on Audubon was delivered by Daniel G. Elliot, a former president of the American Ornithologists' Union.

On April 27, in accordance with a special act of the State Legislature passed in 1891, a monument erected by the Commonwealth to the memory of John Ericsson was transferred to the city. The statue, which represents a heroic figure of the great inventor, is 8 feet 3 inches high, stands on a well-proportioned pedestal of granite 8 feet 9 inches high, and cost \$10,000. On each of the four faces of the pedestal there are bronze panels 27 by 12 inches, presenting in low relief views of the engagement between the "Monitor" and the "Merrimac," the first screw steamship, the "Princeton," and various other inventions of Ericsson. Both the statue and the

panels are by J. Scott Hartley. The monument stands just north of the Whitehall boat basin, and about fifty feet west of the United States Barge Office, facing the Battery. The formal ceremonies included the presentation of the monument by the State represented by Ashley W. Cole, and its acceptance by Paul Dana, President of the Park Commissioners, followed by an oration on the life-work of Ericsson by his biographer, Col. William C. Church.

On Evacuation Day, Nov. 25, the Sons of the Revolution continued their work of commemorating important events in the War of Independence by unveiling five tablets, as follow:

At Broadway and 43d Street, with the inscription, "Near this spot, Sept. 15, 1776, the day before the battle of Harlem, Gen. George Washington and Gen. Israel Putnam met and consulted during the movement of the American army."

At Golden Hill, John Street, with the inscription, "Here, Jan. 18, 1770, the fight took place between the Sons of Liberty and the British Regulars (Sixteenth Foot). First blood shed in the War of the Revolution."

At southeast corner Washington and Laight Streets, with the inscription, "To commemorate the landing of Gen. George Washington at the foot of Laight Street, North river, accompanied by the troop of Philadelphia City Horse, on Sunday, July 28, 1775, on his way to take command of the American army at Cambridge, Mass."

At No. 1 Broadway, with the inscription, "Here stood the house (Kennedy) once occupied by Gen. George Washington and Gen. George Clinton as headquarters during the Revolutionary War. In the Bowling Green, opposite, the leaden statue of George III, King of England, was destroyed by the people, July 9, 1776, and later made into bullets for the American army."

At 153d Street and Eleventh Avenue, Battle of Harlem Heights, with the inscription, "In Memory of Col. Thomas Knowlton and Major Andrew Leitch, of the American Army, killed near this spot, Sept. 16, 1776, at the Battle of Harlem."

Subsequently, on the same day, a bronze heroic statue of Nathan Hale, by Frederick MacMonnies, was unveiled at the southwest corner of City Hall Park. It was presented to the city by President Tallmadge on behalf of the Sons of the Revolution, and accepted by Mayor Gilroy. Suitable addresses followed by Gen. Oliver O. Howard and Edward E. Hale, a descendant of the hero.

A bronze statue of Roscoe Conkling, by John Q. A. Ward, was unveiled on Dec. 3 at the southeast corner of Madison Square, without any ceremony. The site of the monument is the spot where Mr. Conkling was overcome by the blizzard, March 12, 1888, and contracted the illness that ended his life.

The formal presentation of a bust erected by the Hancock Memorial Committee, aided by the W. S. Hancock Post, No. 259 G. A. R., in Hancock Square, at the intersection of Manhattan and St. Nicholas Avenues, took place in the Governor's Room, City Hall, on Dec. 30. The presentation speech was made by Gen. Horace Porter, and on behalf of the city and the Park Commissioners the gift was accepted by Mayor Gil-

roy. The memorial consists of a bronze bust 4½ feet high, supported by a granite pedestal 10 feet high. The bust, pedestal, and pediment are together 16 feet high. The bust was made from a plaster cast taken from life by Wilson McDonauld in the year when Gen. Hancock was a candidate for President. The original bronze is now in the Metropolitan Art Museum.

The Grant Monument.—At the annual meeting of the Grant Monument Association, held on Feb. 28, it was reported that during the past year the State Legislature had authorized an increase of the number of trustees to 100, and the by-laws had been so amended as to provide that all officers and members should serve without compensation. A total amount of \$399,320 had been received from 17,118 subscribers. Adding to the above receipts the balance turned over by the previous boards, gives a total amount of \$506,857, while the disbursements during the year have been only \$30,798, leaving a balance of \$475,058, which is mainly deposited with four prominent trust companies of this city, which allow interest at the rate of 3 per cent. per annum. The amount now on hand will substantially complete the monument save for a small additional amount for a sarcophagus and the decoration for the interior of the crypt. The completion of the work will be pushed with all haste consistent with economy and good workmanship, and it is expected that the monument will be finished by the fall of 1895. A very interesting feature decided upon during the year is the roll of living veterans of the war, made up of the signatures of the individuals, which will rest in a specially provided niche in the crypt. The parchment pages of this roll of honor are being rapidly perfected.

The Columbus Celebration.—In honor of the discovery of the New World by Christopher Columbus in 1492, the United States, in accordance with an act of Congress passed on April 25, 1890, extended an invitation to the great nations of the world to join in an international naval display to be held in New York harbor, beginning April 26. This event was originally intended to have inaugurated the celebrations which were to have culminated in the opening of the World's Fair in Chicago in 1892, but the postponement of that event for one year resulted in a similar postponement of the naval celebration. The rendezvous of the review fleet was held in Hampton Roads on April 24, and there, under the command of Rear-Admiral Gherardi, the senior officer in the United States navy, was gathered the finest fleet of American war vessels ever seen together, with representatives from the leading foreign nations, including the Spanish caravels. These strange craft, built in Carraca by the Spanish Government, are models, as near as could be ascertained, of the original vessels with which Columbus made his voyage. Also, they bear the names of the original fleet—the "Santa Maria," the "Pinta," and the "Nina." They crossed the Atlantic in safety, reaching Hampton Roads in due time, whence they were conveyed to New York, where they arrived on April 24.

On the morning of April 25 the caravels were towed to their places in the Hudson river, opposite 92d Street, where they formed the head of the line. As they passed Forts Wadsworth and

Hamilton, and then old Castle William, they received recognition by salutes from the cannon of these fortresses, which were acknowledged in like method from their tiny swivel guns. At noon, on the picturesque heights of the Navesink Highlands, where the twin lighthouses stand, a new flagstaff, 135 feet high, had been erected, and at the appointed time the Paul Jones flag, that once floated over the "Bon Homme Richard," was raised. Appropriate addresses by John Winfield Scott and Albert Shaw followed. Soon the fleet came in sight, led by the flagship "Philadelphia," and, as the vessels one by one passed the venerable ensign, loud-mouthed cannon from friend and stranger greeted the Stars and Stripes. As the great vessels swung into their anchorage just below the Narrows the forts took up the sounds, and answering cannon acknowledged the salutes fired in honor of the United States. Then a committee, consisting of George B. McClellan, President of the Board of Aldermen, J. W. Miller, Commandant of the State Naval Reserve, and Howard Carroll, representing the Columbian Entertainment Committee, visited each vessel and formally bade them welcome in the name of the municipality.

Wednesday.—On the morning of April 26 the ceremonies began with the unveiling, at 10 A. M., of the monument raised to the memory of Captain Ericsson, followed at the conclusion of the addresses by a salute of 21 guns fired by the monitor "Miantonomoh," stationed off Governor's Island. Meanwhile the combined fleets had slowly got into position, and, forming in double column off Norton's Point, began their advance into the harbor and up the Hudson river. The port column, composed of the American fleet, was led by the "Philadelphia," which was Admiral Gherardi's flagship. It was divided into two squadrons. The first, commanded by Admiral Benham, was headed by his flagship, the "Newark," while the second, commanded by Admiral Walker, was headed by his flagship, the "Chicago." The starboard column was headed by the British cruiser, the "Blake," commanded by Sir John Hopkins, a vice-admiral in the English navy. The advance continued until the "Philadelphia" and the "Blake" reached their anchorage off 88th Street. As the columns proceeded up the bay a distance of 600 yards was maintained until they passed the Battery, when the distance was decreased to 400 yards, while the vessels kept 300 yards of clear water between them until they reached the buoys by which their respective anchorages were designated.

The following is the order in which the ships of the Columbian review fleet were ranged: West column—"Philadelphia," "Newark," "Atlanta," "San Francisco," "Bancroft," "Bennington," "Baltimore," "Chicago," "Yorktown," "Charleston," "Vesuvius," "Concord"; "Nuevo de Julio" (Argentine); "Van Speijk" (Holland); "Kaiserin Augusta," "Seeadler" (German); "Miantonomoh." East column—"Blake," "Australia," "Magicienne," "Tartar" (British); "Dimitri Donskoi," "General Admiral," "Rynda" (Russian); "Aréthuse," "Hussard," "Jean Bart" (French); "Etna," "Giovanni Bausan" (Italian); "Infanta Isabel," "Reina Regente," "Neuva España" (Spanish); "Aquideban," "Tiradentes," "Republica" (Brazil).

Thursday.—In accordance with a bill passed by the Legislature and signed by the Governor, this day was observed as a legal holiday throughout the State. It was the day of the celebration toward which all previous events were but preliminary. The fleets of the world were to be reviewed by the President of the United States, for which purpose he came from Washington attended by his Cabinet to thus honor the nations that had sent their representatives. Orders had been issued that at 8 A. M. each vessel was to hoist colors and dress ship. The review was announced to begin at 10.30 A. M., but the weather was unfortunate, and, owing to a belief that it would clear, a postponement until 1 P. M. was obtained early in the forenoon. Promptly at the postponed time Mr. Cleveland and his party reached the "Dolphin," the reviewing boat, and as the blue presidential flag went to the peak, a gun from the "Miantonomoh" announced to the fleet that the review had begun. The "Dolphin," carrying the President and his party, was followed by the "Blake," on board of which were the diplomatic corps; then came the "Monmouth" with the guests of the city, including many Senators and congressmen, and a number of officers of the army and navy, and finally the "General Meigs" with the Duke of Veragua and his attendants. The reviewing party then entered midway between the two lines of war ships. As they approached, the band on each vessel played the national air of the country to which it belonged, the officers and marine guard on the poop deck saluted, the sailors manned the yards, while the men on the rail, both starboard and port, faced the reviewing ship. As the "Dolphin" passed, a salute of 21 guns was fired by each vessel in honor of the President. When the "Dolphin" passed the big "Blake" and the majestic "Philadelphia," and heard the flagship's music, she steamed up to a point within 300 yards of the "Santa Maria" and came to an anchor. A few minutes later the barges of admirals and gigs of captains put off from every ship in the fleets and headed for the "Dolphin," where for over an hour the President and his Cabinet held a reception to the commanding officers of the fleet. Mr. Cleveland then returned to the city. While the reception was in progress the "Philadelphia" steamed up the Hudson to a point abreast of Gen. Grant's tomb, and fired a salute of 21 guns in honor of the natal day of the hero. An exhibition of search lights and night signals was given by the war vessels, beginning at 8 P. M. The rain of the day had settled into a mist, and the river was dark with fog, but suddenly, at the time appointed, a great beam of light flashed along the line and settled on the "Miantonomoh." Then from every vessel in the fleet there burst strong flashes of light, and it seemed as if the sun had broken out from beneath a cloud, for the darkness had vanished, and it was light as day. Some of the vessels displayed arc lights, some sent out 2 lights, some sent out 4, each apparently playing at cross purposes. Then came the illumination with colored lights, and the outlines of the vessels appeared in red, then green, and finally white light. The admirals, the staff officers, and the captains of the naval vessels were guests of the city at a ball given in Madison Square Garden. The Garden became fairly land. Unique arrange-

ments of flowers, novel effects with miniature electric lamps, brilliant designs with flags and banners, delighted the eye and pleased the fancy. From the keystone of the arch hung an electrically lighted cupid, and revolving electric stars, which changed color at each revolution, were placed on the faces of the base. High above the platform at the Madison Avenue entrance was the emblem, "Greeting of the New World," in white flame. Beneath this stood the Mayor of the municipality to receive his guests. These included the President of the United States, the Governor of the State, the Duke of Veragua, and, besides the foreign officers, representatives of the best-known New York families. From 11 to 1 dancing and banqueting continued, and then the President departed, bringing to a close the greatest of the many great entertainments that have been held in New York city.

Friday.—It was early morning when preparations were begun for the continuation of the celebration, and at 9 A. M. the marines and sailors began to land at the piers of the streets below 42d Street for the land parade. Shortly before 11 o'clock a start was made at the corner of Fifth Avenue and 42d Street. At the head of the procession was Roswell P. Flower, Governor of New York and commander in chief of the State forces, with his staff, and escorted by New York's Troop A of the Dragoons. He was followed by the commanding officers of the foreign and United States vessels in carriages. Then came, in 4 battalions, a brigade of sailors and marines from the United States war vessels, forming the first division. A second division included the foreign marines and sailors from the visiting war ships, and finally, under command of Gen. Louis Fitzgerald, the National Guard of the State. It was estimated that there were 12,000 men in line, and the procession moved down Fifth Avenue to Waverly Place, thence to Broadway, past the stand in front of City Hall, where the Mayor reviewed the parade, thence down Park Row to Broadway, ending at the Battery. The President arrived at City Hall, and was to have been among those who reviewed the procession, but his presence was necessary in Chicago to open the World's Fair there, and he left before the head of the line reached City Hall. In the evening a formal banquet, in which 450 persons participated, was given by the Chamber of Commerce to the visiting naval officers.

The Viking Ship.—This vessel, 75 feet long, 16 feet beam, drawing 4 feet of water, and carrying 200 yards of canvas, was built in Norway in imitation of the early vessels with which the Norsemen discovered America. It left Bergen, Norway, on April 30, under command of Magnus Anderson, with a crew of 12 men, under orders to proceed to Chicago by way of New London and New York. It reached New London on June 13, and New York four days later, whence after a short stay it proceeded to Chicago by way of the St. Lawrence river and the Great Lakes. While in New York the ship was visited by many persons, and both the captain and crew were made the recipients of numerous courtesies, both public and private.

Political.—The election of 1893 was held on Nov. 7, when the following were voted for:

Democratic.—Comptroller, Ashbel P. Fitch;

Sheriff, Charles M. Clancy; District Attorney, John R. Fellows; Surrogate, John H. V. Arnold; Judge of the Court of Common Pleas, Miles Beach; Justices of the City Court, James M. Fitzsimons and Lewis J. Conlin; and Coroners, Edward T. Fitzpatrick and William H. Dobbs; also for a justice of the district court in each judicial district, for a Senator and 5 district delegates to the Constitutional Convention from each senatorial district, for 80 members of Assembly, 15 delegates at large to the Constitutional Convention, and a commissioner of street improvements.

Republican.—Comptroller, Henry C. Robinson; Sheriff, Thomas L. Hamilton; District Attorney, Charles H. Murray; Surrogate, William H. Townley; Judge of the Court of Common Pleas, Mortimer C. Addoms; Justices of the City Court, William M. K. Olcott and John O'Connell; and Coroners, Edgbert P. Fritz and Peter H. McDonald; also for a justice of the district court in each judicial district, for a Senator and 5 district delegates to the Constitutional Convention from each senatorial district, for 80 members of Assembly, 15 delegates at large to the Constitutional Convention, and a commissioner for street improvements.

Prohibition.—Comptroller, Frederick C. Albrecht; Sheriff, William Smagg; District Attorney, Atkinson Sharnberg; Surrogate, Thomas D. Stetson; Judge of the Court of Common Pleas, Charles E. Manierre; Justices of the City Court, Alfred L. Manierre and James H. Laird; and Coroners, J. Howard Yarnall and George C. Needham; also for a justice of the district court in each judicial district, for a Senator and 5 district delegates to the Constitutional Convention from each senatorial district, for 30 members of Assembly, 15 delegates at large to the Constitutional Convention, and a commissioner for street improvements.

Socialist Labor.—Comptroller, Theodore Birk; Sheriff, Samuel Jacobson; District Attorney, Howard Balkam; Surrogate, Charles Franz; Judge of the Court of Common Pleas, Isaac Bennett; Justices of the City Court, Enoch K. Thomas and Henry Foth; and Coroners, George C. Stiebling and Woldemar Dorfmann; also for a justice of the district court in each judicial district, for a Senator and 5 district delegates to the Constitutional Convention from each senatorial district, for 30 members of Assembly, 15 delegates at large to the Constitutional Convention, and a commissioner for street improvements.

People's Party.—Comptroller, H. Alden Spencer; Sheriff, John Haggerty; District Attorney, Thomas J. Sandford; Surrogate, Wilbur Aldrich; Justices of the City Court, Nicholas Aleinikoff and Edward W. Chamberlain; and Coroners, Edward B. Foote, Jr., and Walter C. Moore; also for a Senator and 5 district delegates to the Constitutional Convention from each senatorial district, for 30 members of Assembly, 15 delegates at large to the Constitutional Convention, and a commissioner for street improvements.

Of the foregoing, the Democratic candidates were successful except with the candidates for the 15 delegates at large to the Constitutional Convention and with the nominees for members of the Assembly for the Eleventh, Twenty-third,

and Twenty-seventh Districts in which cases the Republican candidates were elected.

On March 21 a special election was held to fill the vacancy in the Ninth Senatorial District resulting from the death of Edward P. Hagan, and Thomas F. Cunningham (Democrat) was elected, receiving 14,805 votes against 2,054 for Edward L. Montgomery (Republican), 228 for George W. Needham (Prohibition), and 360 for William F. Miller (Populist).

NICARAGUA, a republic in Central America. The legislative power is vested in a Senate of 18 members, elected for six years, and a House of Representatives having 21 members, whose term is four years. The President's term is four years also. Dr. Roberto Sacaza was elected President in 1892. The active army has a legal strength of 1,200 men, besides which there is a reserve of 10,000 men and a National Guard or militia force of 5,000 men. Two thirds of the revenue is derived from monopolies of liquors, tobacco, and gunpowder, and the other third from import duties and a tax on cattle.

The area of the republic is 49,500 square miles. The population in 1889 was 282,845, consisting of 136,249 males and 146,596 females, besides 30,000 wild Indians. The chief industries are the raising of cattle, of which there are 400,000 head, and the cultivation of coffee and bananas, and gold mining. The production of coffee in 1891 was 113,000 quintals. The export of coffee in 1890 was valued at \$2,487,646. The total value of the exports was \$3,534,137, of which \$1,169,051 went to the United States, \$863,432 to Germany, \$793,249 to France, and \$461,634 to Great Britain. The total value of imports was \$2,536,820, of which \$995,855 came from Great Britain, \$597,043 from the United States, \$531,277 from France, and \$495,218 from Germany. In 1891 the total imports were \$2,738,500, and the exports \$2,376,500. There are 91 miles of railroads and 1,700 of telegraphs.

Revolution.—Exhausted and impoverished by the internecine struggles of former times, Nicaragua has for many years been free from serious revolutionary outbreaks. The Nicaragua Canal enterprise, which seemed to insure the conditions of lasting peace and progress, indirectly contributed to the greatest revolution that has taken place since the dictatorship of Walker, in 1856, for it encouraged the Government to undertake extravagant public works and waste the public funds and incur new debts in a way that produced widespread and profound dissatisfaction. The Constitution provides that when the President dies or absents himself from the country his successor is to be chosen by lot from among 5 Senators appointed by the vote of the Senate at the beginning of the presidential term. Dr. Sacaza, a distinguished surgeon, was chosen in this manner on the death of President Evaristo Carazo, in August, 1889. Sacaza's accession gave much general satisfaction, as he had few enemies, not being a party leader, and the preceding Administration had been weak and unpopular. Soon, however, he antagonized the prominent politicians by calling into his councils men of little weight, thinking that he could rule alone and create a personal following that would insure his election for a regular term. As the time

for election drew near he saw that coercive means were necessary to accomplish his object. In August, 1891, he arrested and exiled some of the most prominent men in the country, including Ex-President Zavala, and in a fight resulting from his arbitrary proceedings José Pasos and other well-known citizens were killed. These acts made him exceedingly unpopular, but he succeeded in being elected by the means commonly used, drafting men opposed to him into the army to deprive them of their votes and releasing those who would vote for him, making wholesale promises of patronage and contracts, buying up or suppressing newspapers, and exiling the leaders of the opposition. After his election the era of extravagance and jobbery was begun. Railroad concessions were granted merely to give employment to partisans. Contracts were awarded to favorites and relatives for all kinds of unnecessary work and supplies, for example, to furnish wood to the national railroad in quantities sufficient to last a score of years. The treasury was soon depleted, and then friends of the President were commissioned to negotiate loans, the largest part of which is said to have gone into their own pockets. Finally the treasury became bankrupt and the Government was unable to pay the railroad and other employees. It obtained \$400,000 from the Bank of Nicaragua, mortgaging the national railroad for the loan and paying exorbitant interest, expunging for the purpose the clause in the bank's charter fixing a legal rate.

The indignation roused by these proceedings at last drove the leaders of the numerous parties to unite for the overthrow of Sacaza. Joaquin Zavala took the lead, having at his back a large section of the Progressist Conservatives. With these were leagued the *Iglesieros* or Clericals and the Liberals under the leadership of Santos Zelaya, both strong in Sacaza's own province. In March the Government seized a large quantity of arms that were secreted in the city of Leon and arrested Ex-Minister Duarte and Col. Anastacio Ortiz. The revolution begun in the city of Grenada, the headquarters of the Progressists, where the barracks were seized by the insurgents on April 28, 1893. Masaya was also seized at the same time. In both places the garrisons surrendered without resistance. This was followed by the occupation of Matagalpa, Rivas, Jinotepe, Chantelos, and San Juan del Sur, and afterward of the forts on the San Juan river and Greytown, the eastern entrance of the Nicaragua Canal. The bishop, supported by the best citizens of Leon and Chinandega, the only departments that Sacaza still held, requested him to resign and let the strife be ended by a presidential election, but he refused decidedly. The whole eastern and southern part of the country had risen against the President, and his troops surrendered everywhere without a blow, while he was confined to the northwestern corner. Senators and Deputies in the capital suspected of sympathizing with the rebellion were thrown into prison unless they sought an asylum in the foreign legations and consulates. Ex-President Cardenas found such an asylum after escaping from prison. The troops that remained loyal out of the army of 10,000 still outnumbered the forces raised by the revolutionists; but Zavala,

having behind him the wealthy men, and being able to draw supplies from the principal parts of the country, soon got his men into better physical and moral condition than the spiritless forced levies on whom Sacaza had to depend. The revolutionists organized a Provisional Government, of which Santiago Morales was President, and Zavala, the real head, while Eduardo Montrel was made commander-in-chief. Sacaza withdrew his troops from Leon and other points to the capital and raised a forced loan of \$600,000 to carry on the war. The revolutionists seized the steamboats of the Nicaragua Canal Company on Lake Nicaragua, which enabled them to concentrate at Grenada, whence they advanced upon the capital. To supplement the rifles and cannon captured in the Government forts by Gen. Gutierrez and Col. Malaver, Gatling guns and other arms and ammunition were obtained in New York and introduced through Greytown and the San Juan river. The armies confronted each other near Masaya, where the revolutionists occupied strong strategic positions. They had about 2,000 men, with 2 Krupp cannon, 5 brass field pieces, and some machine guns. The Government had over 3,000 men with 6 Krupp guns. Several unimportant engagements had been fought in which the rebels were successful. President Sacaza made himself more unpopular by treating prisoners cruelly, while his adversaries uniformly acted with humanity. They were unable to arm more than a quarter of the volunteers who presented themselves, and were able thus to select an army of the best material and hold back a reserve equal to the force that was in the field. On May 19 the Government troops attacked the intrenched position of the revolutionists at Barranca. The battle was fought mainly with artillery, and the Krupp guns of the Government, though commanded by an experienced French officer, were badly served, while the rebel battery, well posted on Coyetepe hill, made terrible havoc, though firing only 60 shots to 240 from the other side. Supported by its batteries, the Government column advanced twice toward the position of the enemy, and was twice broken and forced to turn back by the destructive raking fire of the rebel artillery. The object of the Government was to gain possession of Barranca pass, through which the railroad runs and from which roads lead to various parts of the eastern country. The battle was renewed on May 20. After opening with a cannonade, the Government troops, 1,800 strong, advanced courageously in the face of an artillery fire and attempted to storm the rebel position at Barranca pass, but were repelled with heavy loss. Reforming, a detachment, for a diversion, attacked the enemy on the Tisna road, and later another concentrated attack was delivered against the main position of the revolutionists, which met with no better success. By the middle of the afternoon the victory of the revolutionists was complete and the Government forces retreated in disorder, having lost nearly half their number by battle and desertion. There were 155 killed and 267 wounded, while the revolutionists lost only 12 killed and 8 wounded, most of them officers. The Government had 2,500 troops in the battle

and the revolutionists 1,500, but the latter were protected by covered intrenchments.

Lewis Baker, the United States minister, who had previously tried to mediate, persuaded both parties to agree to an armistice and the appointment of peace commissioners. He presided over the commission, which consisted of 3 officers from each side. It met at Sabana Grande, and after consulting for two days, reached an agreement under which Sacaza, on May 30, resigned the presidency in favor of Senator Salvador Machado, who was to serve until a constituent assembly should have been elected, a new constitution adopted, and under it a regular government constituted. The treaty provided that the Provisional President should appoint only one member of his Cabinet, while the revolutionists were entitled to name three, thus insuring them a controlling voice in the council. The Provisional Government was organized and installed in the public buildings in the capital. Both armies were to be paid off and disbanded. The costs of the war incurred on both sides were to be borne by the Government and made a part of the public debt. Before the revolutionary army was disbanded it was allowed to enter Managua in triumph. While the troops, 3,500 strong, were marching past the police station a shot was fired into their ranks, and without orders the soldiers fired back; the police returned the fire, and the fusillade continued until they were overcome and many police, soldiers, and spectators were killed.

The people of Leon were not satisfied with the outcome of the war, which restored the control of national affairs to their old enemies, the Grenadinos. The more eager and determined among them proceeded secretly to enroll and arm volunteers. No overt act was committed till July 12. Acting-President Machado, Gen. Avilez, the commander-in-chief of the forces, and the Minister of Foreign Affairs in the Provisional Government, who were visiting Leon on that day, endeavoring to gain the good will of the malcontents, were made prisoners and placed in confinement. At the same time the military barracks were seized, which were given up without resistance, and five steamers on Lake Managua were taken, to be used in transporting troops. Col. Ortiz, the leader of the revolt, was the military governor of the province. His army numbered about 10,000 well-armed men, while the Government had rifles for not more than 7,000. The rebels captured the port of Corinto, which the Provisional Government declared closed to prevent the customs revenue from being collected by them, also the town of Chinandega, and fortified themselves at Momolombo, on Lake Managua. Ortiz proclaimed himself Provisional President of Nicaragua. The Cabinet decided to give Zavala and Montrel full charge of the Government and extraordinary powers to organize forces and direct operations against the Leon revolutionists. Gen. Avilez succeeded in escaping from prison and took command of the troops of the Provisional Government. A conference of leading men of the republic, which was called at Managua to aid in reorganizing the Government, on July 17 nominated Joaquin Zavala Provisional President with dictatorial powers. He appointed a Cabinet, in which he

retained Anselmo H. Rivas as Minister of State and Frederico Solarzano as Minister of War, making the latter also Minister of the Interior. Santos Zelaya and fifty prominent men in the Liberal party declared in favor of the rebellion and went to Leon to aid in the revolution. Provisional-President Zavala sent proposals of peace to Leon and issued a manifesto promising complete amnesty and security to all persons engaged in the revolt. He left one place in the Cabinet vacant to be given to a citizen of Leon if the rebels should lay down their arms. There came no reply to the peace proposals of Zavala. On July 22 the revolutionists bombarded the village of Mateare, where the Government troops were encamped, on the south side of Lake Managua, near the capital. The fire was returned and two of the steamers were struck by shells from the Krupp guns. Re-enforcements were sent up to Mateare, and Gen. Avilez went to the front to take command. A severe battle was fought in which 5,000 men were said to have been engaged, including 600 Hondurians under Policarpo Bonilla, who fought with the troops from Leon. During the fight a detachment of the Government troops deserted to the enemy. Gen. Zelaya, whose bold and skillful tactics had helped more than anything else to win the battle of Barranca against Sacaza's superior forces, was the victor. The army of Gen. Avilez was driven from its position after a long and stubborn fight and retired upon Managua. The loss of life was heavy on both sides. On July 25 the revolutionists threw 30 shells from their steamers into Managua, killing 5 persons. The Government forces evacuated the capital, retiring to Grenada. Several engagements took place, in all of which the generals of the Provisional Government were outmaneuvered. On July 31 a treaty of peace was signed on terms satisfactory to the Progressists and Liberals alike, but not to the Conservatives. Under it 1,000 of Zavala's men were disarmed at once, and all the troops on both sides were disbanded within a week. The Leon Junta assumed control of the Government. Martial law, which had been in force since April 28, was revoked. A general amnesty was proclaimed. The war expenses of both parties were made a charge upon the Government. Elections for a constituent assembly were fixed for Aug. 27, and the meeting for Sept. 15. Santos Zelaya was proclaimed Provisional President. The voting was very light and the candidates of the Liberal party were elected without opposition. The Constituent Assembly granted to Gen. Zelaya extraordinary powers in dealing with political disturbers, and also power to levy forced loans.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Elias Carr, Democrat; Lieutenant-Governor, Richard A. Doughton; Secretary of State, Octavius Coke;

Treasurer, Samuel McD. Tate; Auditor, Robert M. Furman; Attorney-General, Frank I. Osborne; Superintendent of Public Instruction, John C. Scarborough; Commissioner of Agriculture, John Robinson; Railroad Commissioners, J. W. Wilson, J. W. Mason, and E. C. Biddingfield; Chief Justice of the Supreme Court, James E. Shepherd; Associate Justices, Walter Clark, Alphonso C. Avery, James C. MacRae, and Armistead Burwell.

Finances.—The following statement shows the transactions of the treasury for the fiscal year ending Nov. 30, 1893: Balance, Nov. 30, 1892—educational fund, \$28,568.83; public fund, \$310,400.93; total, \$338,969.76. Receipts—educational fund, \$31,087.19; public fund, \$1,181,066.34; total, \$1,212,153.53. Disbursements—educational fund, \$26,909.77; public fund, \$1,284,024.41; total, \$1,310,934.18. Balance, Nov. 30, 1893, \$240,189.11.

Valuations.—The assessed valuation of property in the State for 1893 was as follows: Land, \$114,328,255; town property, \$40,755,459; personal property, \$82,410,049; railroad property, \$23,654,345; Pullman cars, \$82,568; telegraph property, \$193,352; steamboat and canal property, \$293,698; total, \$261,717,726.

Legislative Session.—The regular biennial session of the General Assembly met on Jan. 4 and adjourned on March 6. A new revenue law and a new law regulating assessment of property and collection of taxes were enacted. The revenue law fixes the poll tax at \$1.24 on each taxable poll, and provides that the proceeds shall be devoted to education and support of the poor. The *ad valorem* tax is fixed at 22 cents on each \$100 for State purposes, 34 cents for Confederate pensions, and 16 cents for public schools. License and privilege taxes are imposed on a great variety of occupations and business enterprises. An elaborate law establishing and regulating State banks was adopted, to take effect as soon as Congress shall repeal the tax on State bank notes. The time within which holders of State bonds may comply with the law for readjusting the State debt was extended to Jan. 1, 1895. The laws governing the State Prison were superseded by a new enactment, which provides for a board of directors and a superintendent to be appointed by the Governor, with the advice and consent of the Senate. The superintendent shall, with the consent and approval of the board, appoint all subordinate officials. He shall employ all convicts within the prison wall, or on farms leased or owned by the institution, and shall make contracts on remunerative terms with persons or corporations, in order to employ and support as many of the able-bodied convicts on public works as the interests of the State will permit. He may, with the consent of the Governor and by order of the board of directors, erect additional shops at the prison, and lease and equip farms whenever it becomes necessary to keep the convicts employed.

A salutary law for the protection of accused persons from mob violence provides that "every person who shall conspire to break or enter any jail, or other place of confinement of prisoners charged with crime or under sentence, for the purpose of killing or otherwise injuring any prisoner therein confined, and every person who

engages in such breaking or entering with intent to kill or injure any prisoner, shall be guilty of a felony," and shall be fined not less than \$500, and imprisoned not less than two nor more than fifteen years. It is made the duty of any prosecuting officer in the State who hears of the commission of such a crime to investigate the circumstances and bring criminal proceedings against the guilty persons. The superior court of any county adjoining that in which the offense is committed shall have jurisdiction of the case.

A State board of health was established. The Governor was requested to set apart in the autumn of each year a day to be known as Arbor Day, and to recommend its observance.

The sum of \$35,000 for each of the years 1893 and 1894 was appropriated for the support, completion, and improvement of the School for the Deaf and Dumb, and the sum of \$5,000 for each of these years for completing and furnishing the building for the Agricultural College.

Other acts of the session were as follow:

Making it a misdemeanor for any person to leave any child or children confined in any building and unattended, so as to expose such child or children to danger by fire.

Directing the removal of the Colored Normal School from Warrenton to Franklinton.

Dividing the crime of murder into two degrees.

Authorizing the State Railroad Commission to provide rules and regulations for the handling of baggage.

Authorizing the Railroad Commission to assess steamboat property.

Establishing the words "Esse quam videri" as the State motto.

Repealing the act of 1891 requiring railroads to redeem unused tickets.

To establish a true meridian in the several counties for the correct retracing of surveys.

Amending the insurance law.

Authoring the acceptance of surety companies as sureties on official bonds.

Authorizing disabled ex-Confederate soldiers to peddle without a license.

Providing a new law for the government of the State militia.

Establishing a naval battalion to be attached to the State militia.

To prevent fraudulent assignments by debtors.

To provide for the revocation of interests limited to persons not in being.

To prohibit the sale of deadly weapons to minors.

Railroads.—Since Dec. 31, 1891, 165 miles of new road have been completed and put in operation in the State. Of this total, 114 $\frac{1}{2}$ miles were completed in 1892, and 51 miles this year, before the end of the fiscal year. Several roads have heretofore, by reason of the provisions of their charters, enjoyed either partial or entire exemption from taxation, and this fact has been a source of continued dissatisfaction and strife. Recently the Raleigh and Gaston Railroad was induced to surrender its chartered rights to exemption from taxation. Subsequently the Wilmington and Weldon Railroad surrendered its claims to exemption both from taxation and from the regulation of its tariff rates by the railroad commission. Finally the only remaining exempted road, the North Carolina, through the efforts of the Governor, has very lately surrendered its rights without a contest, and will be subject to taxation in 1894.

James City Dispute.—On April 24 Gov. Carr issued orders to the Adjutant-General directing that the State militia be dispatched to James City for the purpose of aiding the local authori-

THE NEW SEAL OF NORTH CAROLINA.

ties in enforcing obedience to the courts of law. This place is on Trent river, opposite New Bern, and is inhabited by a large negro population. It was settled in 1663 by negro families, who were removed thither from New Bern by "General" James. They erected rude cabins and made themselves thoroughly at home, believing they had been given the land by the United States Government. Other negroes soon entered the place, and before many days had passed a large settlement had gathered—all believing the Government had given to them the land. But "General" James was no general, and had no authority to give away the land.

The negroes named the village, after their benefactor, James City. They drew up a system of government, and elected aldermen and policemen, and the population increased rapidly.

About ten years ago James A. Bryan undertook to regain the land. James City fought the case through several courts, and finally the Supreme Court decided, beyond all dispute, that the land on which James City is built is the legal property of Mr. Bryan. Thereupon Mr. Bryan endeavored to come to an amicable settlement with his tenants, but without success.

Finally the sheriff and posse went from New Bern to James City to evict the negroes, but people gathered from all quarters, and a mob of more than a thousand negroes prevented the officers from acting. As the negroes firmly declared their intention of resisting eviction, there was no course left but to call in the militia. Gov. Carr accompanied the troops, and on April 25 held several conferences with the negroes and Mr. Bryan, which resulted in an amicable adjustment, the negroes agreeing to sign leases for three years, paying rent at 30 cents to one dollar a month.

The Waldensians.—In the spring of this year a small colony of these people, from Eu-

rope, settled in Burke County, at a place called by them Waldese.

State Seal.—This year the Legislature adopted a State motto, and provided that it should be a part of the State and of the coat of arms. The seal in its new form is presented in the accompanying illustration.

Industrial.—There are one or more cotton mills in each of 43 counties, and a total of 140 in the State, besides several in construction. In these mills are nearly 10,000 looms and over 500,000 spindles, consuming last year 165,200 bales of cotton. In addition there are 13 woolen mills, 57 factories that make carriages and buggies, 32 that make wagons, 25 that make furniture, 6 that make hubs and spokes, and 34 that make sash, doors, and blinds. There are 28 canning factories for vegetables and 14 for oysters, 14 cotton-seed oil factories, 54 fertilizing factories, and several that make barrels and crates and baskets and brooms.

The tobacco factories exceed in number and capital those of any State in the Union. There are 110 producing plug tobacco and 9 producing smoking tobacco. Durham alone sold 11,000,000 pounds of tobacco last year, and paid to the Government for stamps \$616,129; Winston paid more, and Asheville sold over 5,000,000 pounds of leaf tobacco.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles; population, according to the census of 1890, 182,719. Capital, Bismarck.

Government.—The following were the State officers during the year: Governor, Eli C. D. Shortridge, Independent; Lieutenant-Governor, Elmer D. Wallace; Secretary of State, C. M. Dahl; Treasurer, Knud J. Nomland; Auditor, Arthur W. Porter; Attorney-General, William H. Standish; Commissioner of Agriculture and Labor, Nelson Williams; Commissioner of Insurance, James Cudde; Superintendent of Public Instruction, Laura J. Eisenhuth; Railroad Commissioners, Peter Cameron, Nils P. Rasmussen, Benjamin B. Stevens; Chief Justice of the Supreme Court, Guy C. H. Corlies; Associate Justices, Alfred Wallin, J. M. Bartholemew.

Valuations.—The total assessed valuation of property for 1893 as equalized by the State board was \$90,105,280, of which the valuation of personalty was about \$23,000,000. Included in the assessment were 176,490 horses, 6,738 mules, 280,731 cattle, and 44,902 swine. The tax rate for 1893 was 4 mills on the dollar for State purposes and $\frac{1}{2}$ mill for interest on the public debt.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 3 and ended on March 3. The choice of a successor to United States Senator Lyman R. Casey was one of the duties of the session. On the first joint ballot, Jan. 18, the following vote was cast: For William N. Roach, Democrat, 23; Walter Muir, Independent, 17; J. H. Worst, Republican, 18; Lyman R. Casey, 11; Richard T. Kingman, Republican, 7; W. J. Anderson, Republican, 2; James R. Smith, Republican, 9; scattering, 4. Although the Republicans had a majority in joint convention, they were hopelessly divided, and as a result 61 ballots were taken before a choice was made. Several times during the balloting the Democrats and Independents united

in supporting John D. Benton, Democrat. On Jan. 26, pursuant to a call signed by 37 members, the first Republican caucus was held, which resulted in the nomination of Senator Casey on the third ballot. On the same day 14 Republicans who had not signed the call held their own caucus, but adopted no definite line of action. On the twenty-eighth ballot, Jan. 27, Casey received 37 votes. He continued to receive the full vote of the caucus for several days, but as the remaining Republicans refused to yield to the will of the majority, he released his supporters from their obligations and abandoned the contest. On the condition of his withdrawal, substantially all the Republican members had been induced to come into a new Republican caucus, but the same hopeless differences appeared as before. After holding several sessions, and after 73 ballots had been taken without result, the attempt to make a party nomination was abandoned. Balloting then continued day after day in the joint session of the Legislature without result until Feb. 20, when, on the sixty-first ballot, 10 Republicans deserted their party and united with the Democrats and Independents in electing W. N. Roach, Democrat. The latter received 60 votes on this ballot, Casey 23, John Miller 16, scattering 3.

The legislative results of the session include several measures affecting railroads. One of these fixes the maximum freight rates for transportation of coal between points within the State. Another requires intersecting railroads to construct and maintain tracks for transfer of cars and traffic from one line to the other. For the purpose of constructing a State elevator at Duluth or Superior, \$100,000 was appropriated, to be expended under the direction of a board of commissioners. Only North Dakota wheat shall be handled by this elevator, and the charges for service shall be fixed by the commissioners.

An act establishing courts of conciliation provides for the election biennially in each town or city of 4 commissioners of conciliation. It is also provided that at the time of issuing the summons in any civil action begun before a justice of the peace, the justice shall issue a subpoena summoning 2 of the commissioners of conciliation elected for the town, village, or city where the action is brought, to appear before him. If both parties appear they shall go before the justice and the 2 commissioners summoned, as aforesaid, and state their differences, which statements shall be reduced to writing by the justice and entered on his docket and shall constitute the pleadings in the case. After hearing and considering all the evidence offered, it shall be the duty of the justice and commissioners to the best of their abilities to persuade the parties to agree to an amicable settlement. If the parties are not able to agree to an amicable settlement, the case shall be adjourned for trial by the ordinary method.

The law providing for the disposal of the State school lands was amended and revised, and the Australian ballot law was perfected in matters of detail. The legal rate of interest was fixed at 7 per cent., and any rate greater than 12 per cent. was declared to be usury.

Provision was made for the appointment of a commission to revise and codify the State laws. Cities were authorized to levy an annual poll tax of \$1.50.

For the purpose of constructing a south wing to the State Capitol the sum of \$50,000 was appropriated, to be obtained by the issue of 44 per-cent. State bonds. The sum of \$15,000 was appropriated in aid of the State exhibit at the World's Columbian Exposition, and an appropriation of \$55,000 was made for the erection of a dormitory and other buildings at the Agricultural College.

The constitutional amendment prohibiting lotteries, which was passed by the Legislature of 1891, was approved at this session and is now ready for submission to the people. Other acts of the session were as follow:

Providing for the levy of a county tax, of not less than one mill on the dollar, for improving county highways.

Authorizing the refunding of outstanding city bonds and warrants.

Requiring every deputy, clerk, or subordinate to any State, county, or municipal officer to be a resident of the State and a citizen of the United States; or if an alien, to have declared his intention to become naturalized.

To provide for better enforcement of the laws punishing cruelty to animals.

Fixing June 30 as the end of the fiscal year.

Regulating the manner of transferring corporate interests in real estate.

Establishing an experiment station for irrigation.

Providing for the location of the State School of Forestry.

Constituting the superintendent of irrigation and forestry the fish and game commissioner, and providing for stocking and maintaining fish hatcheries, and for the protection of fish in North Dakota streams.

To prevent the spread of contagious diseases among domestic animals.

Revising the law regulating the descent of estates.

To provide for the collection of vital statistics.

Establishing a weather and crop service for the collection and dissemination of crop statistics and meteorological data.

Railroads.—On June 30, 1893, the total railroad mileage operated in the State was 2,223 miles, a gain of 99 miles during the year preceding. The number of railroad employees within the State was 3,586. The capacity of the various grain elevators and warehouses operated along the lines of these railroads on June 30, 1893, was as follows: On the Northern Pacific and branches, 5,948,000 bushels; on lines of the Great Northern, 12,081,000 bushels; on lines of the Minneapolis, St. Paul and Sault Ste. Marie, 377,000 bushels; on line of the Chicago, Minneapolis and St. Paul, 579,000 bushels; and on line of the Chicago and Northwestern, 110,000 bushels; making a total elevator and warehouse capacity within the State of 89,511,000 bushels, an increase of 976,000 bushels in 1892-'93.

Limitations of the Governor's Authority.

—Near the close of the legislative session of this year Gov. Shortridge sent to the Senate the names of certain persons nominated by him as trustees of the Penitentiary and as trustees of the Agricultural College at Fargo. These nominations the Senate refused to confirm, whereupon, after the close of the session, the Governor nominated anew the same persons and issued commissions to them. To these new appointees the acting trustees of these institutions refused to surrender their offices, claiming that their successors could only be qualified by the con-

current action of the Governor and the Senate. This legal point was brought before the State Supreme Court for decision in May, in a case involving the rights of the Penitentiary board. It was then decided that the Governor could appoint only with the concurrence of the Senate, and that the former Penitentiary trustees could hold over until their successors were qualified according to the Constitution. Shortly after this decision the Governor notified the Agricultural College trustees that they were suspended pending an investigation into the affairs of their office. The State examiner was placed in charge, and as a result of the inquiry, the Governor, on Sept. 7, dismissed the board from office, on the alleged ground of misconduct and incompetency, and appointed a new board. The old board questioned the power of the Governor to remove them, and the Supreme Court was again appealed to. In November this court again thwarted the efforts of the Governor by deciding that he had no power to remove the board.

The Prohibitory Law.—In May the State Supreme Court rendered a decision in the case of *State vs. Barnes*, upholding the legality of the prohibitory law.

NORTHWEST TERRITORIES. The Government of the Northwest Territories—comprising the provinces of Assiniboia, Alberta, Saskatchewan, and Athabasca (see map in "Annual Cyclopædia" for 1891, page 480)—though administered by a lieutenant-governor and a legislative assembly, is more immediately under the control of the Dominion Government than that of the other provinces. The capital is Regina. The Government of this region, with an area of 431,000 square miles and a scattered population of about 110,000, is under the supervision of the Department of the Interior at Ottawa.

The term of Hon. Joseph Royal, appointed Lieutenant-Governor in 1888, expired in July, 1893, and he was succeeded in that office on Nov. 1 by Hon. Charles Herbert Mackintosh, member of Parliament for the city of Ottawa. Lieut.-Gov. Mackintosh has been long identified with journalism in Canada, and since 1874 has been chief editor of the Ottawa "Daily Citizen." He first entered the Parliament of Canada in 1882.

Legislative Assembly.—The third session of the second Legislative Assembly opened on Dec. 7 and closed on Dec. 31, 1892. The following were elected as Executive Committee: Messrs. F. W. G. Haultain, J. R. Neff, T. Tweed, and Hillyard Mitchell. The functions of this executive committee are to advise the Lieutenant-Governor in the expenditure of funds.

The legislation of the session comprised 38 ordinances, the most important being those respecting education. In this department important changes were effected, the principal being the substitution of a Council of Public Instruction, composed of the members of the Executive Committee and 4 appointed members, 2 Protestants and 2 Roman Catholics, in place of the former board of education. During 1892 there were 249 schools in operation, with 295 teachers and 6,170 pupils, an increase of 27 schools, 28 teachers, and 718 pupils compared with the returns for the year before. Fifty-three new schools were opened last year.

Products.—The raising of live stock is one of the most important industries of the Territories. The grazing lands are principally in the Province of Alberta and in the southern portion of Assiniboia. The numbers of the various kinds of live stock in those districts in 1892 were: Cattle, 139,283; horses, 20,579; sheep, 80,087. The total of live stock in the Territories in 1893 was estimated at 314,949 head. The number of grazing leases in force in the Territories in 1892 was 142, covering an area of 1,801,209 acres.

The total catch of fish last year in the Territories was estimated at 19,836,800 pounds, valued at \$793,549. Whitefish and pike are the staple fish, of the former of which a catch of 11,435,000 pounds was returned, and of the latter 8,000,000 pounds. The Indians, especially in the north Saskatchewan district, live on fish.

The sawmill returns gave the following quantities of building material as having been manufactured and sold in 1892 in the 5 agencies of Manitoba, Assiniboia, Alberta, Saskatchewan, and British Columbia: Sawed lumber, 40,672,928 feet manufactured, 43,527,156 feet sold; shingles, 6,546,000 manufactured, 7,018,500 sold; laths, 1,195,150 manufactured, 1,535,190 sold. No account is taken of the cut of logs, large quantities of which are exported.

Last spring the President of the Canadian Pacific Railway, in his reply to the address of the Legislature of the Northwest Territories complaining of the ruinous freight rates on wheat and coal, declared that the railway company suffered an actual loss in transporting wheat from that country.

During 1892 the following railway lines were completed: Calgary and Edmonton, High River to Macleod, and the Canadian Pacific Railway Souris Branch road from Oxbow to Estevan.

Surveys.—Much work was done during 1893 in connection with topographical surveys and explorations in the Northwest. Some time ago R. G. McConnell was sent by the Canadian Government on an exploring expedition to the Mackenzie river district. In October, 1893, he returned to Vancouver and reported that he had discovered the source of Mackenzie river to be a lake at the head of Findley river; and that gold was found in paying quantities for 250 miles along the course of the latter stream.

Mormons.—Of the various colonies established in the Northwest, the most interesting as well as the most prosperous is the Mormon settlement at Lee's Creek, Alberta. It numbers now about 1,000 persons, and the abandonment of the special tenet of their faith (polygamy) has left them without any very distinguishing feature. They are singularly economical, ingenious, and progressive, and, as a result of their industry and intelligent operations, are in a very prosperous condition.

NOVA SCOTIA, an eastern province of the Dominion of Canada; area, 20,907 square miles; population in 1891, 450,523. Capital, Halifax.

Legislation.—The third session of the thirtieth General Assembly of the Province of Nova Scotia was opened by Lieut.-Gov. Daly on Jan. 19, 1893, and closed on April 28. In his opening address he said:

I desire to avail myself of your advice in a matter of immediate importance, and therefore have summoned you to meet at an earlier date than usual. While the present condition of business throughout the province is not satisfactory, there are indications to justify the expectation of an early improvement. One of the most important items in the revenue—that of receipts from mines and minerals—fall considerably short of the estimates last year, partly on account of diminished mining operations, and partly owing to the large quantity of coal which came under the enactment exempting current contracts from the increased royalty. During the past year, for the first time since the union of the provinces, an issue of Nova Scotia Government debentures was offered in the London money market. It is gratifying to know that these securities were promptly taken up, and the credit of the province fully established in England. I have learned with pleasure of the recent completion of the new railway from Eureka to Sunny Brae, built under contract with my Government, and of the opening, in connection therewith, at the new village of Feron, of extensive works for the development of the iron deposits of Pictou County.

I have much gratification in informing you that, encouraged by the provisions of the Mines and Mineral act of last session, capitalists have come forward to undertake extensive coal-mining operations. I invite your most careful consideration to a bill which will be submitted to you to confirm the arrangements which my Government has made with the parties who have undertaken this very important work.

Chief among the measures of the session was one for further encouragement of coal mining in the province. Since the passing of that act there has been a marked improvement in this industry, and the railway to Louisburg, soon to be completed, will lead to extensive coal mining in Cape Breton. Several measures were passed relating to the railways between Halifax and Yarmouth, which will probably lead to an early settlement of the claims of the province and several municipalities against one of the roads, and to the consolidation of the whole line. An act was also passed changing the fiscal year. It now begins on Oct. 1 and ends on Sept. 30, so that reports for 1893 of the various departments of the Government will only be for nine months. An act passed for the collection of debts will afford a more simple and inexpensive method of collection. Altogether 211 bills were passed during the session, the ones of most public importance, in addition to those already mentioned, being the following:

- To incorporate the Provincial Manganese Company.
- For the incorporation of Congregational churches.
- To incorporate the Coast Railway Company.
- Several acts to incorporate coal and iron companies.
- To incorporate the Nova Scotia Timber Company.
- To incorporate the Acadia Land Company.
- To incorporate the Atlantic and Inland Railway Company.

Finances.—The expenditure of the province for the year ending Dec. 31, 1892, amounted to \$322,461.82; the revenue to \$769,975.42; liabilities, \$3,138,751.50; assets, \$1,506,619.07; and the net debt to \$1,632,142.43.

Assessed Values.—The assessed value of real estate, personal property, and income for the cities and towns of the province for last year was \$40,495,175, and for the municipalities \$43,534,476. The assessed values are usually on a basis of half the actual value.

Education.—The number of schools in operation in the province last year was 2,281; number

of pupils enrolled, 102,586; teachers employed, 2,340, including 1,691 women. The average salary for male teachers of the first class was \$488.95; for female teachers, \$295.77. The expenditure by the Provincial Government for public education last year was \$216,429.73, and local expenditure \$580,145.12.

Minerals.—The product of the principal minerals of the province for 1892, compared with 1891, was as follows:

PRODUCTS.	1892.	1891.
Gold, oz.	19,998	28,391
Iron ore, tons.	75,000	57,811
Coal raised, tons.	1,942,780	2,044,784
Coke made, tons.	55,000	84,184
Gypsum, tons.	162,235	161,934
Copper ore, tons.	26	900

The sale of coal for 1892 amounted to 1,752,934 tons, of which 623,978 tons were home sales, 746,087 tons sold to the Province of Quebec, and 13,883 tons to the United States. The revenue derived by the province last year from royalty on minerals and fees in connection therewith was about \$171,000.

Insane.—The number of patients admitted to the Nova Scotia Hospital for the insane during last year was: Females, 57; males, 44. And the total of all patients in the hospital for the year was: Females, 170; males, 184. During the year 42 patients were discharged as cured.

Fisheries.—The fishing industry is the most valuable of the province, the product for 1892 being estimated at \$6,340,724, and for 1891 at \$7,011,300. The decrease in the product for 1892, compared with the preceding year, was largely made up by the shortage in the mackerel fishing, which had fallen off over \$700,000 from the value of the catch for the year before. The catch of lobsters also fell short of that of the previous year by over \$150,000; but cod, haddock, pollack, and hake fisheries showed an improvement. The following is the value of the principal products of the fisheries for last year: Salmon, \$86,368; mackerel, \$694,416; herring, \$705,784; cod, \$2,526,406; haddock, \$494,957; hake, \$184,573; pollack, \$174,045; halibut, \$156,055; lobsters, \$945,273; fish oil, \$90,078.

Railways.—The gross earnings of the railways of the province for which returns were received last year were: Windsor and Annapolis Railway, \$316,687; Western Counties, \$104,648; Cumberland Coal and Railway Company, \$61,203; International, Cape Breton, \$23,463; Macan & Joggins, \$20,217; Nova Scotia Central, \$43,256. The number of miles of railway open in the Province last year was 362, an increase of 14 over the mileage of the year before. This enumeration is limited to provincial railways. Altogether there are about 560 miles of railway in the province.

The work of constructing a new railway, to be known as the Stewiacke Valley and Lansdowne, was recently begun, the province granting a subsidy of \$3,200 per mile.

Manufactures.—The following are close approximations of the manufactures of the province for 1893: Number of establishments, 10,873; capital invested, \$20,907,614; number of employees, 37,065; wages paid, \$7,550,092; value of products, \$32,577,354.

OBITUARIES, AMERICAN, for 1893.

Allen, William Henry Harrison, jurist, born in Winhall, Bennington County, Vt., Dec. 10, 1829; died in New York city, April 23, 1893. He was graduated at Dartmouth College in 1851, and was admitted to the bar of Sullivan County, N. H., in 1858. From November of that year till September, 1863, he held clerkships in various county courts, and then till December, 1865, he was a paymaster in the Union army. He was judge of probate from 1867 till 1874, and register of bankruptcy from 1867 till 1876. In the latter year, by general request of the Sullivan County bar, he was appointed Associate Justice of the Supreme Court of New Hampshire, an office he retained till within a short time of his death.

Ames, Frederick Lothrop, capitalist, born in North Easton, Mass., June 8, 1835; died on a Fall River steamer on Long Island Sound, Sept. 12-13, 1893. He was a son of Oliver and Sarah Lothrop Ames, and cousin of Oliver Ames, Governor of Massachusetts in 1886-'88. He prepared for college at Phillips Exeter Academy, and was graduated at Harvard in 1854. Though anxious to study law, he yielded to the wishes of his father, and entered on a business career in the Ames manufactory in North Easton. In 1863 he became a member of the firm, the name of which was changed in 1876 from Oliver Ames & Sons to Oliver Ames & Sons Corporation, of which he was made treasurer. Besides his interest in this corporation, Mr. Ames acquired large holdings of stock in about 75 railroad companies, and was an active director in numerous other financial and manufacturing corporations. Mr. Ames was considered the wealthiest man in Massachusetts. He inherited \$5,000,000 or \$6,000,000 from his father; owned real estate in Boston assessed in 1892 at \$6,100,700; and was credited by the "street" with possessing an estate estimated at from \$25,000,000 to \$50,000,000. To Harvard University and to various institutions in Boston and North Easton, Mass., he had been a liberal benefactor for many years, always giving without ostentation. After his death it was reported that the donor of \$500,000 to Harvard for building, equipping, and maintaining a reading room was Mr. Ames, and that the necessary legal papers were awaiting his signature at the time of his death.

Armstrong, David Hartley, legislator, born in Nova Scotia, Oct. 21, 1812; died in St. Louis, Mo., March 18, 1893. He received an academic education in Readfield, Me.; taught school for eighteen years; and, removing to St. Louis in 1837, opened and conducted in the following year the first public school established by law in Missouri. In 1847 he was appointed comptroller of the city as a Democrat; in 1848 and 1849 was reappointed; in 1854 was appointed by President Pierce postmaster of St. Louis; and from October, 1877, till March 3, 1879, filled the vacancy in the United States Senate caused by the death of Lewis V. Bogy. During the civil war he was imprisoned for sympathy with the Confederacy. Subsequently he aided B. Gratz Brown and other Democrats in organizing the Liberal party. He was also at one time receiver of the Missouri Pacific Railroad.

Armstrong, Samuel Chapman, educator, born in Wailuku, Maui, Hawaii, Jan. 30, 1839; died in Hampton, Va., May 11, 1893. He was the son of Richard Armstrong, one of the first American missionaries to the Sandwich Islands, and the founder of the educational system of the kingdom. He was educated in local schools and in Oahu College, Honolulu, till 1860, when, on the death of his father, he came to the United States and entered Williams College, where he was graduated in 1862. Immediately after leaving college he organized Company D, of the 125th

New York Infantry, with which he was assigned to the Army of the Potomac. At Harper's Ferry he was taken prisoner, and held three months. He then served to the close of the war, and was mustered out of the volunteer service with the rank of brigadier-general in November, 1865. He was one of the first officers to volunteer and qualify for command of colored troops, and the last two years of his service were spent with them, his last active commission being that of colonel of the 8th United States Colored Infantry. His service with the colored troops and the deep interest he took in them attracted the attention of Gen. O. O. Howard, who, in March, 1866, induced him to enter the employment of the Freedman's Bureau. He was at first charged with the oversight of all the colored people in 10 counties in Virginia, and made his headquarters at Hampton, where a large number of refugees had gathered. After two years of skillful and fruitful administration there, during which he elaborated a progressive scheme for the education of the poor colored people, he secured the aid of the American Missionary Association and of personal friends at the North, and established the school that subsequently became the Hampton Normal and Agricultural Institute. As its name suggests, the institution was designed to afford education, make teachers, and render graduates self-supporting. In this cause he labored till death. For the first ten years the beneficiaries were exclusively negroes. Then the United States Government, noting his remarkable success, arranged to have Indian children taught there also, and since 1878 the two races have studied and worked side by side without friction. At the time of Gen. Armstrong's death the institution had nearly 200 Indian and between 500 and 600 colored youth, and about 100 teachers and employees.

Ashcroft, Edward H., inventor, born in Whitehouse, near Belfast, Ireland, March 19, 1819; died in Lynn, Mass., Aug. 11, 1893. He came to the United States with his parents in 1832, and for many years assisted his father in the manufacture of silk handkerchiefs. Subsequently he became proficient in color mixing, designing on wood, and wood engraving, and in the Harrison presidential campaign manufactured the "Tippecanoe and Tyler too" handkerchief. In 1849 he fitted out the first large sailing vessel with supplies for California; in 1850 was offered and declined the presidency of the first life-insurance company organized in the United States; and in 1851-'81 was engaged in manufacturing the Ashcroft fusible plug for use in steam boilers and the Ashcroft steam gauge, both his own inventions.

Auchmuty, Richard Tylden, philanthropist, born in New York city, in 1831; died in Lenox, Mass., July 18, 1893. He received a collegiate education; studied architecture, and was for many years in partnership with James Renwick; served with the Union army in the field from the beginning of the civil war till 1864, and was then employed in the War Department in Washington till the close of the war. He retired from business after the war, and with his wife applied himself to the development of Lenox as a model summer and autumn resort, and to works of benevolence. In 1881 long and thoughtful investigations culminated in the establishment by himself and wife of the New York Trade Schools, at First Avenue and 67th Street, on a plan entirely original, and already productive of large results. He desired to afford young men instruction in certain trades, and to enable young men already in them to further improve themselves, and planned his system for manual and scientific teaching so that not only can skill be acquired quickly, but the reason why work should be done in a certain way is made plain. The branches

taught are bricklaying, plastering, plumbing, carpentry, house and sign painting, fresco painting, stone cutting, blacksmithing and tailoring. To the establishment and support of this institution he and his wife gave largely from their private means. The average annual attendance, exclusive of the students of architecture of Columbia College, is about 525. In 1889 the institution was incorporated, and Mr. and Mrs. Auchmuty added \$160,000 to their previous gifts, and in April, 1892, J. Pierpont Morgan endowed it with a gift of \$500,000.

Avery, George Whitefield, physician, born in Hampton, Conn., Sept. 27, 1834; died in Hartford, Conn., Feb. 22, 1893. He was graduated at the Yale Medical School in 1861, and on the outbreak of the civil war was appointed assistant surgeon of the 9th Connecticut Volunteers. After a short hospital service at Ship Island he was ordered to duty in New Orleans, under Gen. Butler, who placed him in charge of the St. James Hospital, and afterward of the Marine Hospital. He greatly aided Gen. Butler in effecting sanitary reforms in the city, was surgeon of the New Orleans Volunteers in 1864-65, served a year as sheriff after the war, and remained in the city, engaging in private practice and rendering important services through the epidemics of cholera and yellow fever, till 1871, when he removed to Hartford. For many years before his death he was physician at the American Asylum for the Deaf and Dumb.

Barrymore, Georgiana Drew, actress, born in Philadelphia, Pa., in 1856; died in Santa Barbara, Cal., July 2, 1893. She was a daughter of Mr. and Mrs. John Drew, and sister of John and Sydney Drew, all well-known actors. She made her first appearance on the stage at the Arch Street Theater, Philadelphia, then under her mother's management, in 1874, in "The Ladies' Battle," and remained in her mother's stock company for several years. In 1878 she was married to Maurice Barrymore, the actor. During her theatrical career she supported Edwin Booth, Lawrence Barrett, John McCullough, Miss Modjeska, her brother John, and her husband, and was popularly in "Pique," "Diplomacy," "The Wages of Sin," "Moths," "L'Abbe Constantine," "The Senator," "Mr. Wilkinson's Widow," and her last appearance in New York city, in 1892, in "Settled out of Court."

Bartlett, Joseph Jackson, military officer, born in Binghamton, N. Y., Nov. 4, 1804; died in Baltimore, Md., Jan. 14, 1898. He received an academic education, studied law in Utica, was admitted to the bar in Syracuse, and began practicing in Binghamton in 1834. In May, 1861, he entered the Union army as major of the 37th New York Volunteers; in September following was promoted colonel, and in October, 1862, was commissioned brigadier general. He took part in the first battle of Bull Run, commanded his brigade in the 1st division of the old 6th Corps on the Peninsula, at Crampton's Pass, Antietam, Fredericksburg, Chancellorsville, Gettysburg, and Mine Run; was placed in charge of the "veteran brigade of Griffin's division of the new 5th Corps in 1864; held the right of the Union line at Bethesda Church on June 3, 1864; was in the assault on Petersburg on June 18 following; and at the surrender of Gen. Lee held the rank of major-general. Under President Johnson he held the office of United States minister to Sweden, and in President Cleveland's first administration he was Deputy Commissioner of Penitents.

Bartlett, William Helms Chambers, mathematician, born in Lancaster, Pa., in September, 1804; died in Yonkers, N. Y., on Feb. 11, 1893. He accompanied his parents to St. Louis, Mo., whither they removed shortly after his birth, and there he received his early education. Through the influence of Thomas H. Benton he received an appointment to the United States Military Academy at West Point, where he was graduated in 1826, standing first in his class, which rank he had held during the four years of his course; also he was one of the few who passed through that institution without having received a

demerit. His roommates at West Point were Leonidas Polk and Albert S. Johnston. During 1824-'26—his last two years as a student—he was Acting Assistant Professor of Mathematics, and after graduation he remained at the academy until 1829, partly in that capacity and partly as Assistant Professor of Engineering. For a time during 1829 he was engaged in the construction of Fort Monroe, Va., and during 1829-'32 he was similarly occupied at Fort Adams, Newport, R. I. He then served as assistant to the chief of engineers in Washington, D. C., whence, in 1834, he returned to

West Point, becoming Acting Professor of Natural and Experimental Philosophy. In 1834 he secured an appointment from President Jackson to the full possession of the chair, and thenceforth he continued at the academy until 1871, when he was retired with the rank of colonel. Selecting Yonkers, N. Y., as his place of residence, he accepted an appointment as secretary to the Mutual Life Insurance Company of New York city, which place he then held for twenty-two years, during which time he prepared various tables in order to facilitate their office work, and an elaborate report showing the working of that corporation for thirty-one years. In 1840 he was sent abroad to examine the European observatories, with a view of improving the course of instruction at West Point. On his return he submitted a report which suggested a plan for an observatory in Washington, D. C. Of his other work, there is worthy of mention a paper on the "Expandibility of Coping Stones," contributed to the "American Journal of Science" in 1832, and a paper on "Strains on Rifle Guns," contributed in 1846 to the "Memoirs of the National Academy of Sciences." His text-books, originally written for the students at West Point, were very successful, passing through several editions. They included "Treatise on Optics" (New York, 1839); "Synthetical Mechanics" (1850); "Analytical Mechanics" (1853); "Spherical Astronomy" (1854); and "Acoustics and Optics" (1855). The degree of A. M. was conferred on him by the College of New Jersey in 1837, and that of LL. D. by Geneva (now Hobart) College in 1847. He was a member of the American Philosophical Society, the American Academy of Arts and Sciences, and in 1868 was one of the original incorporators of the National Academy of Sciences named by act of Congress.

Battin, Joseph, civil engineer, born near Philadelphia, Pa., in 1807; died in New York city, Aug. 29, 1883. He was educated for a civil and mechanical engineer, was the first man to demonstrate the practicability of carrying water from Lake Erie, through a tunnel, to supply Buffalo, on the system now used in Chicago, built the Albany, N. Y., gas works in 1844, and subsequently gas works at Washington, D. C., Syracuse, N. Y., and Paterson, N. J., gas and water works at Charleston, S. C., Scranton, Pa., and Elizabeth, N. J., and the water works at Rochester and Buffalo, N. Y., and invented the coal breaker and a steam road carriage. He acquired a large fortune, and in 1874 settled in Elizabeth, N. J., to manage the water works, which he practically owned. He gave the city a building for a high school that cost \$340,000, the Elizabeth Hospital, \$25,000, and various sums to a number of local charities. In 1880 he became interested in the faith-cure movement, and began giving so liberally to its promoters that the aid of the courts was invoked by his family to prevent the dissipation of his property.

Beale, Edward Fitzgerald, military and naval officer, born in Washington, D. C., Feb. 4, 1822; died there, April 22, 1898. He was graduated at the United States Naval Academy in 1842, and at the beginning of the Mexican War was ordered to duty in California under Commodore Robert F. Stockton. On Dec. 7, 1846, he distinguished himself by charging through a body of Mexican soldiers at San Pasquale and San Bernardino and carrying intelligence to San Diego of the perilous situation of the American army under Gen. Kearney, for which gallantry he was presented by his brother officers with a sword inscribed with the story of his act, and in February following was selected by Commodore Stockton as bearer of official dispatches to Washington. After the war he resigned his naval commission and was appointed Superintendent of Indian Affairs for California and New Mexico. He is credited with having brought the first specimens of gold from California to the East, and with having made the report which first led to the gold fever. He was commissioned a brigadier-general in the army, and appointed by President Pierce superintendent of the wagon road in California. In 1861 President Lincoln appointed him surveyor-general of California and Nevada, but he declined the office to enter the Union army, in which he served through the civil war. After the war he engaged extensively in stock raising and wool growing near Los Angeles, Cal., till 1876, when President Grant, with whom he had been on terms of unusual intimacy for many years, appointed him United States minister to Austria. He remained in Vienna one year, then resigned, and subsequently spent the most of his time in California.

Beard, James Henry, painter, born in Buffalo, N. Y., in 1814; died in Flushing, L. I., April 4, 1898. He was of English-Scotch ancestry, his father having been descended from Sir James Beard, of England, and his mother from Sir Lochlain Maclean, of Scotland. The family removed to Ohio, and settled finally in Cincinnati, where James Henry devoted himself to portrait painting with great success. We owe to his skillful brush much of our familiarity with the outward appearance of Henry Clay, John Quincy Adams, and other public men who gave him sittings. In 1846 he exhibited in the National Academy, New York city, a painting called "The Carolina Emigrants," and in 1848 he became an honorary member of the Academy. In 1870 he removed his residence to New York, and in 1878 he was elected to full membership in the Academy. He achieved success in animal painting, to which he devoted himself in his later years. His best known works include "A Peep at Growing Danger" (1871); "The Widow" (1872); "A Mutual Friend," "The Parson's Pets" (1875); "Attorney and Clients," "Out all Night," and "There's Many a Slip" (1876); "Consultation" and "Blood will tell" (1877); "Don Quixote and Sancho Panza" (1878); "Don't you know me?" (1879); "Heirs at Law" (1880); "Which has Pre-emption?" (1881); "You can't have this Pup" (1882); "My Easter's all spoilt" and "I don't believe One Word of it" (1883); "The Detected Poacher" (1884); "Don't you come here" and "The Mississippi Flood" (1885); "A Barnyard," "Li yer gimme some! Say!" (1886).

Beauregard, Pierre Gustave Tontant, military officer, born in St. Martin's Parish, La., May 28, 1818; died in New Orleans, La., Feb. 20, 1893. He was graduated at the United States Military Academy and appointed a brevet 2d lieutenant of artillery in 1838; was promoted 1st lieutenant and transferred to the corps of engineers in 1839; distinguished himself in the Mexican War, where he won the brevet of captain for gallantry at Contreras and Churubusco, and of major for Chapultepec, where he was twice wounded; was engaged in constructing fortifications on the Gulf of Mexico after the war; and for five days in January, 1861, was superintendent of the Military Academy. He resigned his commission after the secession of Louisiana in February following; was appointed com-

mander of the Confederate forces at Charleston, S. C.; and there opened the hostilities of the civil war by bombarding Fort Sumter, on April 11. After the evacuation of the fort by Major Anderson, Gen. Beauregard was transferred to Virginia, where he commanded the Confederate forces in the battle of Bull Run, on July 21. In March, 1862, he was ordered to the Army of the Mississippi, under Gen. Albert S. Johnston, and in April following fought the battle of Shiloh, gaining a victory over the National forces the first day, but being defeated by Gen. Grant on the second day. Failing health kept him from active duty till June, 1863, when he took charge of the defense of Charleston against the combined land and naval forces.

He remained in command there till April, 1864, when he was ordered to Richmond, to strengthen its defenses. On May 16, he attacked Gen. Butler in front of Drury's Bluff, and forced him back to his intrenchments between the James and the Appomattox rivers. In anticipation of Gen. Sherman's successful march through the Carolinas, he ordered Gen. Hardee to evacuate Charleston, which was done, Feb. 17, 1865. He attempted to aid Gen. Joseph E. Johnston in opposing Gen. Sherman, but in April surrendered with the former to the latter. After the war he became President of the New Orleans, Jackson and Mississippi Railroad Company, Adjutant-General of the State, and a manager of the Louisiana State Lottery. He published "The Principles and Maxims of the Art of War" (Charleston, 1863) and "Report of the Defense of Charleston" (Richmond, 1864), and was the last survivor of the full generals of the Confederacy.

Bedford, Gunning S., jurist, born in New York city, in 1837; died there, Oct. 29, 1893. He was a son of Dr. Gunning S. Bedford, well known in his day as a physician and medical writer, and a great-grand-nephew of Gunning Bedford, one of the framers of the Federal Constitution. He was graduated at Columbia College in 1855, and at the Harvard Law School in 1859; was admitted to the bar in New York city in 1859; was assistant district attorney in 1865-'69; city judge in 1869-'74; in private practice, 1874-'85; and assistant district attorney from 1885 till his death. At a stated meeting of the New York Academy of Medicine, on May 18, 1871, Judge Bedford received the compliment of a resolution thanking him for the vigorous and effective manner in which, in his official capacity, he had co-operated with the medical authorities in their efforts to check the crime of abortion.

Beers, William H., insurance officer, born in Philadelphia, Pa., April 16, 1823; died in New York city, Nov. 16, 1893. He received a public-school education; served some time in the United States navy; became a clerk in the New York Life Insurance Company in 1853; and was its president from 1885 till Feb. 10, 1892. In 1891 the New York "Times" charged him with gross mismanagement of the company's affairs, for which he brought two actions for libel against that newspaper, aggregating \$1,750,000. Both of these suits were withdrawn; the superintendent of the State Insurance Department investigated the charges, and in his report so criticized Mr. Beers's methods that the latter resigned the presidency. The board of directors then made a contract with Mr. Beers by which he was to serve the company in an advisory capacity for life, at an annual salary of \$37,500, one half his former salary as presi-

dent. After his resignation the board of directors was reorganized; John A. McCall, formerly superintendent of the State Insurance Department, was elected president, and the pension voted Mr. Beers on his retirement was pronounced invalid by the State Supreme Court.

Bell, Charles H., lawyer, born in Chester, N. H., Nov. 18, 1823; died in Exeter, N. H., Nov. 11, 1893. He was graduated at Dartmouth College in 1844; studied and practiced law in Somersworth and Exeter; was solicitor for Rockingham County in 1855-'65; elected to the State House of Representatives in 1858, 1859, and 1860, and speaker in the last term; State Senator in 1863-'64; and again representative in 1872-'78. In March, 1879, he was appointed by Gov. Prescott United States Senator to fill the vacancy made by the expiration of Senator Wadleigh's term before the convening of the Legislature. From June, 1881, till June, 1883, he was Governor of New Hampshire, and in 1889 was President of the State Constitutional Convention. He had been President of the State Historical Society for many years, and editor of the "Exeter News-Letter;" and had published "The History of Exeter," "The Bench and Bar of New Hampshire," and "Memoirs of John Wheelwright."

Berdan, Hiram, inventor, born in Plymouth, Mich., about 1823; died in Washington, D. C., March 31, 1893. He was brought up on his father's agricultural and stock-breeding farm near Rochester, N. Y., and displayed a strong taste for mechanical investigation from early youth. He was educated at Hobart College, where he made unusual progress in mathematics, and spent all his leisure in fashioning original mechanical contrivances. Beyond his skill as a marksman there was nothing to distinguish him till the outbreak of the civil war, when his proposition to organize a regiment of personally selected marksmen was approved by the War Department. He was appointed colonel of the 1st Regiment of United States Sharpshooters in April, 1861, and armed it with a rifle of his own invention, fed by metallic cartridges, also invented by him. At Chancellorsville he won the brevet of brigadier-general of volunteers, and at Gettysburg that of major-general. The Berdan sharpshooter was the first repeating rifle put into actual and effective service. After the war he went to Russia, and spent several years superintending the manufacture of his rifle for the re-equipment of the army. He returned home about 1888 to apply himself to other inventions, and to prosecute his suit against the Federal Government for infringing his patents by incorporating the principal features of his repeating rifle in the Springfield arm. He sued for nearly \$500,000 damages, and a year before his death the United States Court of Claims gave him a judgment against the Government for \$100,000. His latest inventions were a twin-screw, armored, semisubmarine gunboat; a long-range finder; several forms of torpedoes; a torpedo boat designed to evade projected nets; and a distance fuse for shrapnel shells.

Billings, Edward Coke, jurist, born in Hatfield, Mass., Dec. 3, 1829; died in New Haven, Conn., Dec. 1, 1893. He was graduated at Yale in 1853, and at Harvard Law School in 1855, and practiced in New York city till 1865, when failing health led him to seek a Southern home, and he settled in New Orleans. There, as a member of the firm of Sullivan, Billings & Hughes, he had a large practice in the settlement of claims growing out of the civil war. He also became active in public matters during the reconstruction period, and in the presidential controversy of 1876, acting as counsel in the Republican interest in the latter. In 1876 he was appointed judge of the United States district court for the Eastern District of Louisiana, and he held this office till his death. See also his name in GIFTS AND BEQUESTS.

Bingham, George B., military officer, born in Rochester, N. Y., April 29, 1821; died in Westborough, Mass., Aug. 7, 1893. He removed to Milwaukee in 1841; was one of the first men in Wisconsin to volunteer for the Union army in 1861; was commissioned captain of

Company A, 1st Wisconsin Infantry; and was mustered out of the service at the close of the war with the brevet rank of brigadier-general. In 1878 he removed to Kansas, and in 1881 made his home in Westborough.

Bishop, Richard Moore, merchant, born in Fleming County, Ky., Nov. 4, 1812; died in Jacksonville, Fla., March 2, 1893. He was educated for mercantile business; followed it for several years in his native State, and since 1848 had been established in Cincinnati. In 1859 he was elected Mayor of Cincinnati, and in 1877 Governor of Ohio, both times as a Democrat. As mayor he received and entertained with much pomp the Prince of Wales and his suite, and enforced the Sunday ordinances with greater vigor than any of his predecessors. He was a promoter of important state and municipal enterprises; succeeded Alexander Campbell as President of the General Christian Missionary Convention; and was President of the great National Commercial Convention in Baltimore in 1871.

Bissell, William Henry Augustus, clergyman, born in Randolph, Vt., Nov. 10, 1814; died in Burlington, Vt., May 14, 1893. He was graduated at the University of Vermont in 1836; studied theology while teaching in the Episcopal institutes in Burlington, Vt., and Troy, N. Y.; was ordained deacon Sept. 29, 1839, and priest Aug. 2, 1840; and was rector of Trinity Church, West Troy, N. Y., 1841-'45, Grace Church, Lyons, N. Y., 1845-'48, and Trinity Church, Geneva, N. Y., 1848-'68. On June 3, 1868, he was consecrated second Protestant Episcopal bishop of the diocese of Vermont, and continued in that office till his death.

Black, Henry M., military officer, born in Pennsylvania, Jan. 15, 1827; died in Chicago, Ill., Aug. 5, 1893. He was graduated at the United States Military Academy, and appointed brevet 2d lieutenant 4th United States Infantry in 1847; was promoted 2d lieutenant 7th Infantry the same year, 1st lieutenant 9th Infantry in 1855, captain in 1856, major 7th Infantry in 1863, lieutenant-colonel 4th Infantry in 1868, and colonel 23d Infantry in 1882; and was retired Jan. 15, 1891. He served in the volunteer army as colonel of the 6th California Infantry from 1863 till Oct. 27, 1865, and received brevets of lieutenant-colonel and colonel March 13, 1865, for faithful and meritorious services during the civil war. His army service comprised duty in the Mexican War in 1846-'48; on the frontier in 1848-'61; on the Pacific coast in 1861-'64; as commandant of cadets at the Military Academy in 1864-'68; and with his regiment till his retirement.

Blankenship, James Alexander, sculptor, born in Frozen Island, Prince George County, Va., in 1859; died in New York city, July 1, 1893. He was brought up on his father's plantation, and exhibited a talent for modeling in clay at an early age. When thirteen years old he completed his first important figure—a negro boy resting on a hoe—which was purchased by William Corcoran for his art gallery in Washington. This was followed by the widely known figure of a negro boy pulling a thorn from his foot. His work attracted the attention of Edward Valentine and Moses Ezekiel, the sculptors, who invited him to New York city, where he studied with Mr. Valentine till he was sixteen years old. Subsequently he took a course with Chapu, in Paris. In 1890 he returned to New York city, and was appointed Professor of Sculpture in the New York Institute of Artists and Artisans. His last works were the designs of the allegorical statues of "Patriotism," "Tradition," and "Theology," on the Administration Building, and the allegorical group on the Electricity Building, both at the Columbian Exposition, and an incomplete study for a statue to Gen. J. E. B. Stuart, to be erected in Richmond. Just before his death he received a medal from the World's Fair Commissioners.

Blatchford, Samuel, jurist, born in New York city, March 9, 1820; died in Newport, R. I., July 7, 1893. He was graduated at Columbia College in 1837, studied law with his father and uncle, comprising the

firm of R. M. & E. H. Blatchford, and became secretary to William H. Seward when the latter was elected Governor of New York. From 1845 till 1854 he practiced law in Auburn, N. Y., with the firm of which Gov. Seward and Christopher Morgan were members, and in the latter year returned to New York city, and with Clarence A. Seward and Burr W. Griswold formed the firm of Blatchford, Seward & Griswold. While achieving success in general practice, it was his application to admiralty law that gave him the widest repute. Under appointment by Judge Samuel Nelson as reporter of the United States Circuit Court for the 2d Judicial Circuit, he began in 1852 the compilation of "Blatchford's Reports" of cases in that court, which were continued till 1888. In 1855 he also began the publication of reports of admiralty cases in the United States District Court of the Southern District of New York, known as "Blatchford & Howland's Reports." Further compilations were "Blatchford's Prize Cases," in the district and circuit courts, prepared for the Department of State, "General Statutes of New York," and "New York Civil and Criminal Justice." On May 3, 1867, he was appointed by President Johnson judge of the United States District Court for the Southern District of New York, to succeed Judge Samuel R. Betts, resigned. His opinions while on this bench are given in "Benedict's District Court Reports." In March, 1878, President Hayes appointed him judge of the United States Circuit Court for the Second Circuit, to succeed the late Judge Alexander S. Johnson. His opinions here are given in "Blatchford's Circuit Court Reports," also in the "Federal Reporter." Judge Blatchford held this office till March, 1882, when, on the retirement of Associate-Justice Ward Hunt from the bench of the United States Supreme Court, and the refusal of Roscoe Conkling to accept the office in succession, President Arthur tendered him the vacant seat on the bench, and he accepted it. In this court he continued to give close attention to admiralty cases, and also rendered important decisions on bankruptcy, copyright, patent, and libel causes. He received the degree of LL.D. from Columbia College in 1867, and was a trustee of that institution from that year till his death.

Bolton, Sarah Tittle, author, born in Newport, Ky., Dec. 18, 1815; died in Indianapolis, Ind., Aug. 4, 1893. She removed with her parents to Madison, Ind., in early life; began contributing verse to a local newspaper in 1831; married Nathaniel Bolton, then an editor; accompanied him to Geneva, Switzerland, where he was United States consul in 1856-'57, and while abroad continued to contribute to American newspapers. Collections of her poems, of which the war song "The Union Forever," "Paddle your own Canoe," and "Left on the Battlefield," are the most widely known, were published in New York city in 1865, and in Indianapolis in 1886.

Bonaparte, Jerome Napoleon, military officer, born in Baltimore, Md., Nov. 5, 1830; died in Beverly, Mass., Sept. 2, 1893. He was a grandnephew of the Emperor Napoleon I, and grandson of Jerome Bonaparte, King of Wurtemberg, and of Elizabeth Patterson, of Baltimore. He was graduated at the United States Military Academy in 1852; served on the Texas frontier till 1854; resigned, and entered the French army as a lieutenant of dragoons; distinguished himself at Balaklava, Inkerman, and Sebastopol; and received the decoration of knight of the French Legion of Honor, the Crimean medal from Queen Victoria, and the Medjidil order from the Sultan of Turkey. In 1856-'57 he took part in the Algerian campaign, and in 1859 was in the Italian campaign against Austria, receiving both French and Italian decorations for his services. He was in the Empress's Guard in 1867-'70; was promoted colonel; and, escaping with difficulty from the Commune, returned to the United States in 1871. While in France he appealed to the highest tribunals to establish his right to use the name of Bonaparte, and they decided

in his favor, but dynastic reasons prevented any further action.

Bond, Hugh Lennox, jurist, born in Baltimore, Md., Dec. 16, 1828; died there, Oct. 24, 1893. He was a son of the Rev. Thomas Emerson Bond, for many years editor of the "Christian Advocate," and was graduated at the University of the City of New York in 1848. Returning to Baltimore, he studied law and was admitted to the bar, where he soon gained high rank. From 1860 till 1868 he was judge of the criminal court of Baltimore, and since 1869 had been United States circuit judge for the 4th Judicial Circuit. While judge of the criminal court he ordered the release of many citizens who had been arrested for displaying the American flag, and urged the enlistment of slaves in the Union army. His most signal distinction was his administration of the law in the famous Kuklux trials in South Carolina, over which he presided with great dignity and utter fearlessness. In 1876, when the Supreme Court of South Carolina had imprisoned the presidential electoral board and a writ of *habeas corpus* had been sworn out for their release, he ordered the discharge of the board on the ground that they had officially exercised a Federal function and were not amenable to State law for its performance.

Boynton, Edward Outhole, military officer, born in Vermont, in 1824; died in Newburgh, N. Y., May 13, 1893. He was graduated at the United States Military Academy and appointed brevet 2d lieutenant in the 2d United States Artillery in 1846; took part in the Mexican War, and was wounded at Churubusco; was Assistant Professor of Chemistry, Mineralogy, and Geology at the Military Academy in 1848-'55; accompanied the expedition against the Seminole Indians in Florida in 1855-'56; and resigned from the army to accept a professorship in the University of Mississippi in the latter year. In 1861 he lost this office because of lack of sympathy with the secession movement, and on Sept. 23 was reappointed to the army as captain in the 11th United States Infantry. He was on duty at the Military Academy through the war, was brevetted major, U. S. A., for services in 1865, and resigned in 1872. Subsequently he was superintendent of the Newburgh water works. He published works on military and philosophical subjects.

Brugaldi, Marquis Mario, architect, born in Milan, Italy, in 1806; died in New York city, Oct. 24, 1893. He removed to New York city in 1832, bringing with him a reputation as a decorative artist and architect, and was soon established in professional work. Besides decorating many private dwellings and designing other structures, he prepared the plans for the National Theater, the Richmond Hill Theater, the Eagle Theater in New York city, and the Stewart building on lower Broadway. About 1848 he was summoned to Rio de Janeiro by the Emperor of Brazil, where he planned, superintended the erection, and decorated the interior of the new palace. From Brazil he went to Spain, where he built the Theater Royal in Madrid, and the theater in Barcelona; thence to England, and designed the seat of the Duke of Hamilton and other costly edifices; then to Milan, where he decorated the Arcade of Victor Emmanuel; and returning to New York city decorated the residence of Alexander T. Stewart. Subsequently the marquis was Col. Mapleson's principal scenic artist during that manager's operatic engagements.

Bridge, Horatio, naval officer, born in Augusta, Me., April 8, 1806; died in Athens, Pa., March 13, 1893. He was graduated at Bowdoin College, in the class with Nathaniel Hawthorne and Henry W. Longfellow, in 1825; was admitted to the bar in 1828, and practiced in Augusta for ten years; and entered the United States navy as paymaster in 1838. He made a three years' cruise in the Mediterranean in the "Cyane," and one of two years off the coast of Africa in the "Saratoga"; was at the Portsmouth Navy Yard in 1849-'51; was chief of the Bureau of Provisions and Clothing of the Navy in 1854-'69; chief inspector of provisions and clothing in 1869-'73; and

was then retired as pay director, with the relative rank of commodore. In 1845 he published the "Journal of an African Cruiser," edited by Nathaniel Hawthorne.

Brockett, Miss Pierpont, author, born in Canton, Conn., Oct. 16, 1820, died in Brooklyn, N. Y., Jan. 18, 1898. He was educated at Brown University, graduated at the Yale Medical School in 1843, practiced for four years, was lecturer on physiology and anatomy at Georgetown College, Kentucky, in 1844-'45, was a publisher in Hartford, Conn., in 1847-'50; and was a commissioner to investigate idiosyncrasy in Connecticut in 1854-'56. At times between 1856 and 1878 he was employed on Appleton's "American" and "Annual" cyclopedias, and from 1878 till 1883 on "Johnson's Universal Cyclopaedia." As editor or contributor he was connected with many magazines, reviews, and other publications. Among the many works of which he was author wholly or in part, were: "Geographical History of New York" (1847); "Pioneer Preacher" (1856); "History of Education" (1859); "Eighty Years' Progress of the United States" (1861); "Life of Lincoln" (1865); "Our Great Capitals" (1866); "Woman's Work in the Civil War" (1867); "Men of our Day" (1868); "Women: Her Rights, Wrongs, Privileges, and Responsibilities" (1869); "The Year of Battles" (1872); "One and her Peoplers" (1874); "Our Country's Wealth and Influence" (1881); "Our Western Empire" (1881-'82); "Descriptive America" (1884-'85); and "The Great Metropolis" (1888).

Brown, Simon, military officer, born in New Hampshire, in 1812, died in St. Clair, Mich., March 17, 1883. He removed to Michigan in 1835; was commissioned major of the 6th Michigan Cavalry at the beginning of the civil war, promoted colonel of the 11th Michigan Cavalry in 1862, brevetted brigadier-general for distinguished services at Marion, Va.; and took part in 78 battles and skirmishes.

Burke, Denis P., military officer, born in Cork, Ireland, April 19, 1841, died in New York city, Oct. 19, 1898. He removed to New York city in 1866, and was engaged in the dry-goods business till the beginning of the civil war. He was among the first to enlist in the company of the 6th Regiment, of which Gen. Thomas F. Meagher went out as captain; served to the close of the war, and for gallantry at Harrison's Landing, Antietam, Gettysburg, the Wilderness, Todd's Tavern, Spotsylvania, Cold Harbor, Petersburg, and Fort Sedgwick, he rose from the rank of second lieutenant to that of brevet brigadier-general. At Gettysburg he was personally commended by Gen. Hancock on the field, and his brevet of brigadier-general was conferred on that commander's recommendation. In 1866 he returned to Ireland, where he was arrested on suspicion of being a Fenian, and was imprisoned for seven months. He returned to New York city in 1868, supported the candidacy of Gen. Grant for the presidency, and after the election received a clerkship in the New York tax commissioner's office. For several years before his death he was employed in the New York customhouse.

Butler, Benjamin Franklin, lawyer, born in Deerfield, N. H., Nov. 3, 1818, died in Washington, D. C., Jan. 11, 1898. His father was Captain John Butler, who served at New Orleans under Gen. Jackson. Benjamin was graduated at Colby University (then Waterville College), Maine, in 1836, and was admitted to the bar in 1840. He began practice in the town of Lowell, Mass., and soon became eminent, especially in criminal cases. He was a Democrat, and almost from the outset of his career took an active part in political affairs. In 1853 he was elected to the Massachusetts House of Representatives, and in 1860 to the State Senate. In 1860 he was delegate to the Democratic National Convention at Charleston, S. C., and was with the portion that reassembled at Baltimore after the break made by the resolution in regard to secession. He took an active part in the proceedings for a time, but finally announced the withdrawal of

the Massachusetts delegation, on the ground that there had been a withdrawal in part of a majority of the States. In closing, he said that he also withdrew upon the ground that he would not sit in a convention where the African slave trade, which is piracy by the laws of my country, is approvingly advocated." The Democrats of Massachusetts nominated him for Governor that year, but he was defeated. In April, 1861, when President Lincoln issued the first call for troops, Gen. Butler (then brigadier-general of militia) offered his services and was put in command of the eighth Massachusetts Regiment. On the 17th of April he marched to Annapolis, and was given command of the district of Annapolis, which contained Baltimore. On May 13 he entered that city at the head of 900 men, and occupied it without opposition. On the 16th he was promoted to major-general, and assigned to command of Fort Monroe and the Department of Eastern Virginia. When slaves who had escaped from their masters' plantations came within his lines and their return was demanded, they were withheld on the ground that the slaves were held as property, and were therefore contraband of war. From this incident the term "contrabands" soon became popular, and was used throughout the National armies and the North to designate fugitive slaves. In August, 1861, Gen. Butler commanded an expedition that captured Forts Hatteras and Clark, on the North Carolina coast. His next work was to return to Massachusetts to get recruits for an expedition to the mouth of the Mississippi, in which he was successful, and on March 23, 1862, sailed with his command for Ship Island. On April 17, after Farragut had passed the forts and captured New Orleans, Gen. Butler went up the Mississippi with his forces, and on May 1 occupied the city. Here he showed great ability in ruling a turbulent populace. He compelled the rich secessionist to assist the poor, instituted the strictest sanitary regulations, caused the city, armed the free colored men, caused one Mumford to be hanged for hauling down the United States flag from the mast, and issued an order intended to prevent women from insulting the soldiers in the streets. The last two orders raised a furious discussion, and Jefferson Davis issued an order denouncing him as an outlaw and setting a price on his head. On May 11, 1862, Gen. Butler seized \$200,000 that had been deposited in the office of the Dutch consul, on the ground that it was intended for the purchase of arms for the Confederacy. The foreign consuls all entered a protest, and, on examination, the Government caused the money to be returned. On Dec. 16 he was recalled. He always contended that the act was done at the instigation of Louis Napoleon, who supposed Gen. Butler to be hostile to his schemes in Mexico. Near the close of 1863 he was given command of the troops in the Department of Virginia and North Carolina, afterward called the Army of the James. When Gen. Grant planned his great campaign in the spring of 1864, he designed to have all the National armies move at once against the forces of the Confederacy, to prevent the latter from being massed at any one point. The part assigned to the Army of the James was to move westward, south of James river toward Petersburg and the southern defenses of Richmond, virtually attacking Lee's army in the rear, while the Army of the Potomac attacked it in front. But in this Gen. Butler was thwarted by Gen. Beauregard, who threw up an impassable line of defenses across the peninsula between

the James and the Appomattox. In October, 1864, Gen. Butler was sent to New York city, where election riots were apprehended. In December he commanded an expedition against Fort Fisher, the chief defense of Wilmington, N. C., but was unsuccessful, and was removed from command by Gen. Grant. He returned to Massachusetts, but continued to take an interest in public affairs, and in 1866 was elected to Congress by the Republicans. He was returned for twelve years with but one intermission of two years, between 1875 and 1877. In 1868 he was an active manager of the movement that led to the impeachment of President Johnson. In 1871 he was a candidate for Governor of Massachusetts, but was defeated. In 1879 when he had changed his politics, he was again a candidate for Governor on the Greenback and Democratic tickets, but was again defeated. In 1882 the Democrats united upon him and secured his election, although they lost the rest of their ticket. While in that office he brought a charge against the Tewksbury almshouse of gross mismanagement, and a long investigation followed in the Legislature, but the charge was not sustained. In 1883 he was renominated, but was defeated. In 1884 the Greenback and Antimonopolist parties united upon him as their candidate for the presidency of the United States, and they gave him 133,825 votes. He married, in 1842, Sarah Hildreth, daughter of Dr. Israel Hildreth, of Lowell, Mass. She had been an actress for several years previous to her marriage, but retired from the stage then, and died in April, 1876.

Buttre, John Chester, steel engraver, born in Auburn, N. Y., June 10, 1821; died in Ridgewood, N. J., Dec. 2, 1893. He studied drawing and engraving on wood, and on removing to New York city, in 1841, applied himself to engraving on steel, with large success. An original method of treating portraits, by which he secured a peculiar tint and a remarkably lifelike expression, early won for him wide celebrity, which was shown in the sale of his first notable engraving, a life-size portrait of President Buchanan, in 1858. During the civil war he produced portraits of the leaders in the National and Confederate armies, and other celebrities, including a striking one of President Lincoln. In the line of studies he produced "The Empty Sleeve," "Welcome Home," "Martha Washington," "The Old Oaken Bucket," and "The First Step." He also engraved President Lincoln's Proclamation of Emancipation on a plate measuring 2 by 3 inches. In 1880-'81 he published portraits of nearly 250 well-known citizens of the United States, under the title of "The American Portrait Gallery," in 3 volumes, with text by his daughter Lillian, and shortly after Gen. Grant's death he published his last engraving, a vignette of the great soldier.

Bynner, Edwin Lassetter, author, born in Brooklyn, N. Y., Aug. 5, 1842; died in Boston, Mass., Aug. 5, 1893. He was graduated at the Harvard Law School; was admitted to the bar; and practiced in Boston, St. Louis, and New York city till 1886, when he gave up law for literature. He gave special attention to the colonial history of New England. Besides writing the chapters on the topography and landmarks of the provincial period in the "Memorial History of Boston," he published the historical novels "Nimrod" (1877); "Tritons" (1878); "Damen's Ghost" (1881); "Agnes Surriage" (1886); "Penelope's Suitors" (1887); "The Begum's Daughter," a narrative of social life in New York city at the time it was passing from Dutch to English occupation (1889); "The Chase of the Meteor, and Other Stories" (1891); and "Zachary Phips" (1892).

Camp, Hiram, manufacturer, born in Plymouth, Mass., April 9, 1813; died in New Haven, Conn., July 9, 1893. He was a nephew of Chauncey Jerome, the first clockmaker in New England; was apprenticed to the new industry; bought out the business on the removal of the firm to New Haven in 1851; organized a new company in 1853, and remained at the head of it till 1892. He supported a city and two Sunday-school missionaries in other States; founded

the Mount Hermon Boys' School at Gill, Mass.; co-operated with Dwight L. Moody in establishing the Northfield Seminary for Young Women, and gave the Moody institutions nearly \$100,000. An appeal against the probate of his will, which contained bequests to charitable and religious organizations aggregating \$100,000, was filed by his family.

Campbell, Douglas, lawyer, born in Cherry Valley, N. Y., in 1839; died in Schenectady, N. Y., March 7, 1893. He was a son of Judge William M. Campbell, of the Superior and Supreme Courts of New York, and was graduated at Union College in 1860. At the beginning of the civil war he entered the Union army, and was rapidly advanced till he attained the rank of major and the command of the 21st United States Colored Infantry, when ill health caused him to resign. He then studied law at Harvard, and began practicing in New York city in 1866. His financial success at the bar enabled him to retire from practice a few years ago and to give his whole attention to some historical studies he had begun more than twenty years before. As a result of these studies, and of prolonged personal research in the libraries of the United States, London, Leyden, and the Hague, he published "The Puritan in Holland, England, and America: An Introduction to American History" (New York, 1892), which drew from Mr. Gladstone a letter of gratification and approval.

Campbell, James, lawyer, born in Philadelphia, Pa., Sept. 1, 1812; died there, Jan. 27, 1893. He was educated by private tutors, and was admitted to the bar in 1834. While a member of the Board of Education he introduced the resolution which gave the city its Girls' Normal School. In 1841-'51 he was judge of the Court of Common Pleas by appointment, and in the latter year, when the office became elective, he was defeated for the office by Judge Richard Coulter, the Native American candidate. Soon afterward he was appointed by Gov. Bigler Attorney-General of the State, and held the office till March 4, 1853, when President Pierce appointed him Postmaster-General. He served through the entire administration. In the decade preceding the civil war he was a vigorous leader of the Pennsylvania Democracy. In 1862 he was defeated for the United States senatorial nomination by Charles R. Buckalew; in 1873 declined a seat in the State Constitutional Convention; and subsequently practiced law.

Cappa, Carlo Alberto, bandmaster, born in Alessandria, Sardinia, in 1834; died in New York city, Jan. 6, 1893. He was the son of an officer in the Sardinian army, and was educated in the Royal Academy of Asti, to which only the sons of soldiers are admitted. On leaving the academy he entered the band of the 6th Lancers in the Sardinian army, and became first trombone player. In 1856 he enlisted as a musician on the United States frigate "Congress," then at Genoa, and after a two years' cruise settled in Philadelphia. His first engagement was with Kendall's band, with which he made a tour of the principal cities, and he then played with Shelton's New York band till its leader, Grafulla, was appointed leader of the 7th Regiment band, when he accompanied him. In 1881 he succeeded to the leadership of this band, and held it till his death. In 1869 he also became first trombone player in Theodore Thomas's orchestra, remaining seven years. He was also connected with the Mapleson orchestra and the Philharmonic Societies of New York and Brooklyn. In 1891 he was made a cavalier of Italy by King Humbert.

Carroll, Samuel Sprigg, military officer, born in Washington, D. C., Sept. 21, 1832; died there, Jan. 28, 1893. He was graduated at the United States Military Academy and appointed a brevet 2d lieutenant in the 9th United States Infantry in 1856; was promoted 2d lieutenant 10th Infantry the same year, 1st lieutenant and captain in 1861, and lieutenant-colonel 21st Infantry in 1867; and was retired with the rank of major-general June 9, 1869. In the volunteer service he was commissioned colonel 8th Ohio Infantry, Dec. 7, 1861, was promoted brigadier-

general, May 12, 1864, and was mustered out, Jan. 15, 1866. During the civil war he was brevetted major, May 3, 1863, for gallantry at Chancellorsville; lieutenant-colonel, July 8 following, for Gettysburg; colonel, May 5, 1864, for the Wilderness; and brigadier-general and major-general, U. S. A., and major-general, U. S. V., March 13, 1865, for Spottsylvania and meritorious services during the war. He was wounded at Rapidan, in the Wilderness, and at Spottsylvania, and was retired for disability, as major-general, before he was thirty-seven years old.

Cass, Augustus Ludlow, naval officer, born in Newburgh, N. Y., Feb. 3, 1818; died in Washington, D. C., Feb. 17, 1893. He was appointed a midshipman in the United States navy, April 1, 1828; was promoted passed midshipman, June 14, 1834; lieutenant, Feb. 25, 1841; commander, Sept. 14, 1855; captain, Jan. 2, 1863; commodore, Dec. 8, 1867; and rear-admiral, May 24, 1872; and was retired Feb. 3, 1875. During his active career he was on sea duty twenty-three years and six months, on shore or other duty thirteen years and eight months, and was unemployed twenty-two years and seven months. He was engaged in the South Sea exploring expedition in 1837-'42; was present at the capture of Vera Cruz, Alvarado, and Tabasco, in the Mexican War; lighthouse inspector in 1853-'57; in the Paraguay expedition in 1859; fleet captain of the North Atlantic blockading squadron, and present at the capture of Forts Hatteras and Clark in August, 1861; commanded the blockade of New Inlet, N. C., in 1863; chief of the Ordnance Department in 1869-'73; and commander of the naval force at Key West during the excitement following the capture of the "Virginia" by the Spaniards in 1874.

Caddear, John W., painter, born in New York city, June 25, 1811; died in Saratoga, N. Y., Aug. 17, 1893. When fifteen years old he began studying steel engraving with Peter Maverick, and subsequently was for many years in the employ of the American Bank Note Company. While so employed he became an excellent draughtsman, and took up the study of oil painting, spending 1840-'42 in study in Europe, and 1857-'58 sketching in Switzerland. He was elected an associate of the National Academy of Design in 1835, and a full member in 1851. His numerous paintings include: "A Swiss Lake" (1868); "Genesee Meadows" (1871); "September Afternoon" (1874); "Trout Brook" (1875); "Ulleswater, England" and "Autumn" (1876); "Lake Leman" and "A Scene in New Hampshire" (1877); "View on Chemung River" (1878); "View of the Rocky Mountains" (1881); "Scene on Long Island" (1883); "Early Autumn" (1884); "Genesee Valley" (1885); "Early Summer, Long Island Sound" (1886); and "Summer Day," exhibited 1893.

Chipman, John Logan, lawyer, born in Detroit, Mich., June 5, 1830; died there, Aug. 17, 1893. He received a common-school and university education; became explorer in the Lake Superior region for a mining company in 1846; and was admitted to the bar in 1854. In the latter year he took part in negotiating a treaty with the Ottawa and Chippewa Indians of Michigan, and in settling the claims of the Chippewas. From 1856 till 1861 he was city attorney of Detroit; in 1863 was elected to the Legislature; in 1866 was defeated as Democratic candidate for Congress; in 1879 and 1885 was elected judge of the Superior Court; and in 1886, 1888, 1890, and 1892, was elected to Congress from the 1st Michigan District as a Democrat. His last committee service was as chairman of the joint Committee on the Election of President and Vice-President and Representatives in Congress, and on the Committee on Foreign Affairs.

Coleman, William T., merchant, born in Cynthiana, Ky., Feb. 29, 1824; died in San Francisco, Cal., Nov. 22, 1893. In early youth he engaged in lumbering in St. Louis, went through the full course in the St. Louis University in two years, and began studying law, but was soon compelled by failing health to abandon it. He then spent several years in lumber-

ing in the forests of Wisconsin. In 1849 he became one of a party who made the overland trip to California, and while his companions went direct to the mines he opened several stores for the sale of mining supplies. The assault on Mr. Jansen, a well-known merchant of San Francisco, in February, 1851, led to a determination on the part of the law-abiding citizens to rid the community of its large criminal element, and to the formation of the famous Vigilance Committee, of which Mr. Coleman was one of the foremost members. In 1856 the committee was revived with Mr. Coleman at its head, in consequence of the murder of James King, of William, a conspicuous editor. Mr. Coleman resisted great pressure against interfering with "the people," had charge of the trials, directed the execution of the murderers, and prevented the committee from taking any action that would precipitate trouble with the United States authorities. From 1857 till 1864 he lived in New York city, but continued to direct the business of the firm of William T. Coleman & Co. in San Francisco. While in New York city he aided materially in suppressing the draft riot, contributed liberally to patriotic benefactions, and after the war headed the movement to aid the stricken people of the South. In 1877 and 1878 he left his business affairs at the request of citizens of San Francisco and organized the Committee of Safety to fight Dennis Kearney and his sand-lots mob. In this, as in previous emergencies, he was highly successful. In 1888 his firm failed with liabilities of about \$2,000,000, but it made a compromise with its creditors, and in 1892 Mr. Coleman personally liquidated his entire indebtedness, more than he was legally bound to pay, with interest.

Colliau, Victor, inventor, born in Paris, France, in 1828; died in Detroit, Mich., Jan. 17, 1893. He belonged to a family of ironmasters who for three generations had conducted extensive works near Paris. His grandfather was the first to make wire nails by machinery, and his father the first to make wire rope similarly. He was educated in chemistry and engineering, and had charge of his father's establishment for several years; became a mining superintendent in West Virginia in 1857; and invented an improvement on a French system for saving fuel in iron melting and the well-known Colliau cupola.

Collier, Thomas Stephens, author, born in New York city, Nov. 4, 1842; died in New London, Conn., Sept. 21, 1893. He was educated in the common schools of New York city, and entered the United States navy at the age of fourteen as an apprentice. In 1866 he was appointed boatswain, and he was retired in October, 1883, on account of disabilities received in the service. His long service in the navy gave him the advantage of visiting those ports that are reached by our naval vessels, and he spent several years in Japan. He began writing at an early age, and was for many years a constant contributor to periodicals, and several of his poems attained a deserved popularity. He was an earnest bibliophile, and a collector of china. After his retirement from the navy he devoted his time to literary work and to his collection of books, china, and coins. In 1889 he published his collected poems under the title of "Song Sprays." He had been secretary of the New London County Historical Society since its foundation, and was an authority on the early publications of this country, having made them his especial study.

Colton, Joseph Hutchins, cartographer, born in Springfield, Mass., July 15, 1800; died in Brooklyn, N. Y., July 19, 1893. He kept a country store in Lenox, Mass., from 1820 till 1829, and established himself in New York city as a maker and publisher of maps in 1830. This business he followed with success till age compelled him to relinquish active management to others, and his varied geographical publications had large sales and wide reputation. Through his long life he had been interested deeply in religious, temperance, antislavery, and musical movements.

Comegys, Joseph Parsons, jurist, born in Cherbourg, Kent County, Del., Dec. 29, 1813; died in Dover,

Del., Feb. 1, 1893. He was a son of Cornelius P. Cornegys, Governor of Delaware in 1837-'41; received a classical education; and was admitted to the bar in 1835. In 1835 and 1843 he was elected to the Legislature; in 1852 was appointed one of a commission of three lawyers to revise the State statutes; in 1856-'57 served in the United States Senate, filling the vacancy caused by the death of his law preceptor, John M. Clayton; and on May 18, 1876, was appointed Chief Justice of Delaware.

Converse, Emma M., writer, born in Salem, Mass., in 1820; died in Whitefield, N. H., Sept. 6, 1893. In early life she was engaged in a wide range of educational work; for more than forty years she was employed in literary pursuits; and for the last sixteen years she had made a specialty of astronomical writings and calculations. She had contributed to the "Atlantic Monthly," the "Scientific American," and the "Youth's Companion," and translated several foreign works.

Corse, John Murray, military officer, born in Pittsburg, Pa., April 25, 1835; died in Winchester, Mass., April 27, 1893. He entered the United States Military Academy in 1853, but left before graduating, studied law in Albany, N. Y., was admitted to the bar in 1860, and began practicing in Burlington, Iowa. Immediately after the attack on Fort Sumter he entered the Union army as major of the 6th Iowa Infantry, with which he served through the Frémont campaign in southwest Missouri. After this he was appointed judge advocate and inspector-general on Gen. Pope's staff, and served through the New Madrid and Island No. 10 campaigns. He distinguished himself at Shiloh, and was promoted lieutenant-colonel. At the request of Gen. Sherman he then rejoined his regiment, and with it took part in the Corinth campaign and the Memphis and Vicksburg sieges, receiving promotion to colonel, and, for gallantry at Jackson, brigadier-general. As commander of the 4th Division of the 15th Army Corps he took his command from Memphis to Missionary Ridge, where, while leading the assault, he had a leg broken by a shell. After three months' absence he returned to the field and became inspector-general on Gen. Sherman's staff. On July 22, 1864, after Gen. McPherson had been killed in front of Atlanta, Gen. Logan requested the appointment of Gen. Corse to the command of a division, and he was assigned to the 2d Division of the 16th Army Corps. After the fall of Atlanta the Confederates under Gen. Hood moved rapidly north, with the intention of seizing the Federal supplies at Allatoona, in the Kennesaw mountains. More than 1,000,000 rations, besides other property, were stored there in charge of a small garrison under Col. Tourtellotte. Gen. Sherman, anticipating the movement, telegraphed to Gen. Corse at Rome to hasten to Allatoona and protect the stores. He reached the forts with 1,500 men on Oct. 5, and found that the outposts had already been attacked. Soon the Confederate force under Gen. French appeared, and after a stubborn resistance, in which Gen. Corse was shot in the face and lost an ear, the Confederates carried the lower fort and made a rush for the upper one. Gen. Sherman, hastening to Gen. Corse's relief, telegraphed from a hilltop in sight of Allatoona Pass, "Hold the fort, for I am coming!" and Gen. Corse has been credited with replying, "I am short of a cheek bone and an ear, but am able to whip all hell yet." Altogether the battle for the supplies lasted for five hours, and the Confederates were obliged to withdraw, with a loss of about 2,000 men, nearly as many as Corse's total force, while the defenders lost 707 men. The saving of these supplies made possible Sherman's march to the sea, and for this defense Gen. Corse was promoted major-general. Subsequently he accompanied Gen. Sherman on his march to the sea and through the Carolinas, and served in the army till 1866. After the war he was collector of internal revenue in Chicago, became interested in railroad construction and management, and in 1886 was appointed postmaster of Boston.

Craven, John Joseph, physician, born in Newark, N. J., in September, 1822; died in Patchogue, Long Island, N. Y., Feb. 14, 1893. In early life he was employed for many years in an extensive chemical manufactory, and while there carried on experiments in magnetism which had a large influence in the subsequent development of the electrical science. In 1846 he superintended the building of the first telegraph line between New York and Philadelphia, using many devices of his own invention. He was the first to insulate telegraph wires with gutta-percha, the patent for which was denied him on a technicality; the first to perfect a submarine cable for telegraphic purposes; and the first to use glass on telegraph poles to prevent the grounding of the wires. He spent two years in California during the gold excitement, and on his return studied medicine. In 1861 he was appointed surgeon of the 1st New Jersey Volunteers. Soon afterward he was the fifth candidate in the field to qualify for appointment as brigade surgeon, and was assigned to the charge of the medical department of the expedition to South Carolina under Gen. Horatio G. Wright. In 1862 he was appointed medical director of the Department of the South, and had the care of all of Gen. Q. A. Gilmore's force, then investing Fort Pulaski. In September of the same year he was made medical purveyor of the department. He directed the medical equipment of the expedition against Fort Wagner and Fort Sumter, and remained at Hilton Head till May, 1864, when he was appointed medical director of the 10th Army Corps. In January, 1865, he was assigned to duty as medical purveyor of the Department of Virginia and North Carolina, with headquarters at Fortress Monroe. Under this assignment and special orders he had full charge of Jefferson Davis during his incarceration in the fortress. He was brevetted lieutenant-colonel, Dec. 16, 1865, for meritorious services during the war. After the war he published "The Prison Life of Jefferson Davis"; was postmaster at Newark; and sanitary expert at the Jersey City stockyards.

Crittenden, Thomas Leonidas, military officer, born in Russellville, Ky., May 15, 1819; died in Annandale, Staten Island, N. Y., Oct. 23, 1893. He was a son of United States Senator John J. Crittenden, and a cousin of President Zachary Taylor; studied law, and was elected commonwealth attorney of Kentucky in 1842. On Oct. 4, 1847, he was appointed lieutenant-colonel of the 8d Kentucky Infantry, took part in several minor engagements in Mexico, was aid-de-camp to Gen. Taylor during the battle of Buena Vista, and was mustered out of the service July 21, 1848. In the following year President Taylor appointed him United States consul at Liverpool, where he served till 1853. On Sept. 27, 1861, he was appointed a brigadier-general of United States Volunteers; July 17, 1862, was promoted to major-general; Dec. 13, 1864, was mustered out of the volunteer service; July 28, 1866, was commissioned colonel of the 82d United States Infantry; March 15, 1869, was transferred to the 17th Infantry; and May 19, 1881, was retired. He distinguished himself at Shiloh; commanded the 2d Corps of the Army of the Tennessee, when forming the left wing of Gen. Buell's army; was brevetted brigadier-general, U. S. A., for gallantry at Stone River; commanded the left wing of Gen. Rosecrank's army at Chickamauga; and in the Virginia campaign of 1864 commanded a division in the 9th Army Corps. After the war he was stationed at Forts Grant, Arizona, Abercrombie, Dakota, and other frontier posts, and at Governor's Island, New York harbor, till retired.

Cutter, Eunice Powers, abolitionist, born in Warren, Mass., Oct. 16, 1819; died there, May 10, 1893. She received a good education; became preceptress of the old Quabog Seminary in Warren; married Calvin Cutter, M. D.; and from 1848 till 1857 lectured before the ladies of New England on the laws of health. In 1857 she removed to Kansas with her husband, and there both became active in the anti-slavery movement. She made cartridges for John Brown which

were used in the Ossawatimie fight, and subsequently brought the first free-soil messages through the Kansas lines to Chicago. Afterward she aided her husband in preparing his text-book on physiology and anatomy; in 1871 took charge of the revision of this work; and since 1880 had written a history of Warren and two histories of Worcester County.

Dales, John Blakely, clergyman, born in Kortright, Delaware County, N. Y., Aug. 6, 1815; died in Chautauqua, N. Y., Aug. 28, 1893. He was graduated at Union College in 1835, and at the Theological Seminary of the Associate Reformed Presbyterian Church, Newburgh, N. Y., in 1839; was pastor of the Second United (formerly the First Associate Reformed) Presbyterian Church in Philadelphia, Pa., since 1840; and was part editor of the "Christian Instructor" from 1846 till 1879. He also was Professor of Church History and Pastoral Theology in the Newburgh Theological Seminary in 1867-'76; moderator of the General Assembly in 1867; and corresponding secretary of the Board of Foreign Missions of the United Presbyterian Church since 1859. He received the degree of D. D. from Franklin College, Ohio, in 1853, and, among other works, published "History of the Associate Reformed Church and its Missions" (Xenia, 1859) and a "Church Manual" (1884).

Dally, Abram, soldier, born in New York city, Aug. 12, 1795; died in Brooklyn, N. Y., Feb. 15, 1893. In 1812 he enlisted in the 11th New York Heavy Artillery, and during the war with Great Britain was on duty at Fort Gansevoort and at the blockhouse in what is now Central Park. In 1850 an association was formed of veterans of 1812, and he rose steadily in rank in it from corporal to brigadier-general. He had been engaged in a variety of business undertakings, and since 1871 had been receiving a pension of \$6 per month from the Government. He was the last survivor in the vicinity of New York city of the War of 1812. For many years he was a familiar figure on national holidays, when, attired in full uniform, he hoisted the American flag at the old blockhouse and at the Battery.

Day, Henry, lawyer, born in South Hadley, Mass., Dec. 25, 1820; died in New York city, Jan. 9, 1893. He was graduated at Yale University in 1845; had charge for two years of the Fairfield Academy, Connecticut; spent a year in the Harvard Law School; and was admitted to the bar and became a member of the firm of Lord, Day & Lord, in New York city, in 1848. The style of this firm has since undergone no change, and at the time of Mr. Day's death he was its senior member. While attaining unusual distinction as a counselor in general civil law practice, he was noted for many years as an expert in ecclesiastical law. He was an "Old School" Presbyterian; several times a delegate to the General Assembly; a member of the committee appointed to attempt to reconcile the differences between the two branches; and the author of the articles of union which were ratified by the joint assembly in Pittsburg, Pa., in 1869. He had been a director of Princeton Theological Seminary since 1865, and of Union Seminary since 1870. Besides several legal works he published "The Lawyer abroad; or, Observations of the Social and Political Conditions of Various Countries" (1874) and "From the Pyrenees to the Pillars of Hercules" (1883).

Deady, Matthew P., jurist, born in Easton, Md., May 12, 1824; died in Portland, Ore., March 24, 1893. In early life he was by turns a forge helper, blacksmith, farm laborer, student, and teacher. He was admitted to the bar in Ohio in 1847; was an Oregon pioneer in 1849; opened a school in the village of Lafayette; and in 1850 began practicing law, was elected to the Territorial Legislature, and prepared for publication the first volume of the local laws. In 1851 he was re-elected to the Legislature; in 1852 was president of the council; in 1853 was appointed a judge of the Supreme Court of the Territory; in 1857 was president of the convention which framed the present Constitution of the State; and from 1859 till his death was United States district judge. As

judge of the Supreme Court he organized courts in the five counties of the Territory, in each case opening the records with his own hand. Besides his judicial labors, he was appointed a commissioner to prepare a civil code in 1862. In 1864 he completed the civil code and the code of criminal procedure. Subsequently he compiled all the laws of the State, and in 1874 made further codifications. He was president of the board of regents of the State University and of the Portland Library Association.

Deems, Charles Force, clergyman, born in Baltimore, Md., Dec. 4, 1820; died in New York city, Nov. 18, 1893. He was graduated at Dickinson College in 1839; was licensed as an itinerant minister of the Methodist Episcopal Church, South, while in his senior year; began preaching in New York city, and spent a year in North Carolina as general agent of the American Bible Society. In 1842 he became Professor of Logic and Rhetoric in the University of North Carolina; in 1845 resigned to take the chair of Chemistry in Randolph-Macon College; in 1850-'55 was President of Greensborough Female College; and from 1866 till his death was pastor of the Church of the Strangers in New York city. His intimacy with Cornelius Vanderbilt led the latter to build and endow Vanderbilt University in Nashville, Tenn., and to purchase the old Mercer Street Presbyterian Church in New York city, endow it, and settle it on Dr. Deems for life, with its board of trustees as residuary legatees. In 1881 he was active in organizing the American Institute of Christian Philosophy, of which he was president from its first meeting till his death. His church held a special thanksgiving service in 1887, in commemoration of the close of the twenty-first year of his service with it, and on June 20, 1893, he and his wife celebrated their golden wedding. He received the degree of D. D. from Randolph-Macon College in 1850, and that of LL. D. from the University of North Carolina in 1877. Dr. Deems was widely known as an editor and author. In 1846-'51 he edited "The Southern Methodist Episcopal Pulpit"; in 1849-'52, "The Annals of Southern Methodism"; in 1876-'79, "Frank Leslie's Sunday Magazine"; and from 1883, "Christian Thought," the organ of the Institute of Christian Philosophy. He published "Triumph of Peace, and Other Poems" (New York, 1840); "Life of Adam Clarke, LL. D." (1840); "Devotional Melodies" (Raleigh, 1842); "Twelve College Sermons" (Philadelphia, 1844); "The Home Altar" (New York, 1850); "What Now?" (1853); "Hymns for All Christians" (1869; new edition, 1881); "Forty Sermons preached in the Church of the Strangers" (1871); "Jesus" (1872; new edition, and title changed to "The Light of the Nations," 1880); "Weights and Wings" (1872); "Sermons" (1885); "The Gospel of Common Sense"; "The Gospel of Spiritual Insight"; "Chips and Chunks for Every Fireside"; and "My Septuagint" (1892).

De Mille, Henry Churchill, dramatist, born in North Carolina, in 1850; died in Pompton, N. J., Feb. 10, 1893. He was graduated at Columbia College in 1875, and for three years taught in Lockwood Academy, Brooklyn, being also vice-principal there the most of the time. From 1878 till 1882 he taught in the Columbia College Grammar School, and was then appointed examiner of plays in the Madison Square Theater. In 1883 his first play, "Delmar's Daughter," was produced at that theater, and in the following year his second, "Sealed Instructions." He also appeared on the stage in 1884 in "Young Mrs. Winthrop." The same year he formed a partnership with Charles Barnard, and "The Main Line" was produced. His next partnership was with David Belasco, and resulted in a series of successful plays, including "The Wife," "Lord Chunkey," "The Charity Bull," and "Men and Women." He personally adapted "The Lost Paradise" from the German.

Densmore, Amos, inventor, born in Rochester, N. Y., in 1824; died in New York city, Oct. 14, 1893. He was employed for several years with his father in

running a sawmill and wooden bowl factory; in 1862 joined four brothers in operating oil wells in Oil Creek, Pa.; in 1866 began to manufacture oil tanks for transportation by railroad according to an original invention; was associated with his brother James in inventing the present Remington typewriter; and, after receiving royalties thereon till 1888, sold out his interest, and introduced the Densmore typewriter, of which he was the principal inventor.

Dodge, John Wood, painter, born in New York city, in 1806; died in Pomona, Tenn., Dec. 17, 1893. In early life he became a painter of miniature portraits on ivory, and he followed that art till it was superseded by photography. During this period he painted portraits of Andrew Jackson, Henry Clay, and other public men. For several years prior to the civil war he was engaged in the nursery business in the Cumberland mountain region of Tennessee; but his Union sentiments made that locality inhospitable during the war, and he removed to New York city, and when nearly sixty years old resumed painting. Two years afterward he settled in Chicago, where he remained till his return to his old Southern home. After many years of miniature work, he undertook larger portraits in oil, and his last canvas exhibited at the National Academy of Design was a life-size portrait of Henry Bergh. His last work, a unique composite picture, was finished in his eighty-eighth year, and is now in the collection of William Ziegler, of New York city.

Doolittle, Theodore Sanford, educator, born in Ovid, Seneca County, N. Y., Nov. 30, 1836; died in New Brunswick, N. J., April 18, 1893. He received his preliminary education at Ovid Academy, and was graduated at Rutgers College in 1859, and at the New Brunswick Theological Seminary in 1862. After spending two years as pastor of the Reformed Church in Flatbush, Long Island, he became Professor of Rhetoric, Logic, and Metaphysics in Rutgers College in 1864, and held the chair till his death. He had also been vice-president of the institution since 1890, and several times acting president. He received the degree of D. D. from Wesleyan University in 1872, and LL. D. from Union College in 1891. Dr. Doolittle was one of the founders of "The Rutgers Quarterly," now "The Targum"; was an editor of "The Christian at Work," and its regular expounder of the International Sunday-school Lessons; had published "An Account of the Centennial Celebration at Rutgers College" (1870); a "History of Rutgers College" (United States Bureau of Education), and "Across the Continent," and left a more extended history of the college in manuscript.

Doubleday, Abner, military officer, born in Ballston Spa, N. Y., June 26, 1819; died in Mendham, N. J., Jan. 26, 1893. He was graduated at the United States

Military Academy and appointed a brevet 2d lieutenant in the 3d United States Artillery in 1842; was promoted 2d lieutenant 1st Artillery, Feb. 24, 1845; 1st lieutenant, March 3, 1847; captain, March 3, 1855; major 17th Infantry, May 14, 1861; lieutenant-colonel, Sept. 20, 1863; colonel 35th Infantry, Sept. 15, 1867; assigned to the 24th Infantry, Dec. 15, 1870; and was retired Dec. 11, 1873. He was brevetted lieutenant-colonel, Sept. 17, 1862; colonel, July 2, 1863; and brigadier-general and major-general, March 13, 1865. His first active service was with the 1st Artillery, with which he was connected through the Mexican War, and

distinguished himself in the battle of Monterey and in the operations preceding and during the battle of Buena Vista. In 1852 he was appointed by the United States Senate a commissioner to go to Mexico and investigate an alleged fraudulent claim, and on his return was voted the thanks of Congress. He was also president of an important military commission in Philadelphia ordered by the War Department. During 1856-'58 he was in the Seminole campaign in Florida, and in 1861 was second in command in Fort Sumter during its first bombardment, and was given by Major Anderson the honor of sighting and firing the first gun in its defense. After the evacuation and his transfer to the infantry, he served first in the Shenandoah Valley and then in the defense of Washington, where he commanded the forts and batteries on the Potomac. In the early part of 1862 he commanded a brigade on the Rappahannock, and from May till September one in the northern Virginia campaign, including the second battle of Bull Run. In the battle of Antietam he was at the head of the division which held the extreme right of the line, opened the battle, and captured 6 flags. He was commissioned a major-general of volunteers, Nov. 29, 1862. At the battle of Chancellorsville he succeeded Gen. John F. Reynolds as commander of the 1st Army Corps, when that officer was appointed to the head of the right wing. At Gettysburg, on the first day, he was ordered to re-enforce Gen. Buford's cavalry on the ridge west of the seminary, and when Gen. Reynolds was killed Gen. Doubleday took his place temporarily, and under him the 1st Corps captured Archer's brigade and the greater part of Davis's brigade, and almost annihilated that of Iverson. On the second day he assisted in regaining an important position the enemy had captured, together with 6 guns. On the third day, when Gen. Pickett was making his great charge, Gen. Doubleday's front line suddenly wheeled and covered a vulnerable point so effectively that the advance of the Confederates was repulsed. After the war he was in command at Galveston, and superintendent of the general recruiting service in San Francisco. In April, 1865, on invitation from the War Department, he accompanied the expedition that raised over Fort Sumter the same flag that had floated there during the first bombardment. Gen. Doubleday published several works on military and sanitary matters, including "Reminiscences of Forts Sumter and Moultrie in 1860-'61," and "Chancellorsville and Gettysburg." He was an accomplished French and Spanish scholar, and had become deeply interested in the study of Sanskrit.

Doubleday, Ulysses, military officer, born in Auburn, N. Y., Aug. 31, 1824; died in Tryon, N. C., Feb. 11, 1893. He was a brother of Gen. Abner Doubleday; received an academical education; and entered the banking business in New York city. At the beginning of the civil war he went to the field with the 4th New York Artillery, of which he was commissioned major in January, 1862. On Sept. 15, 1863, he was appointed lieutenant-colonel of the 3d United States Colored Infantry, and on Oct. 8, 1864, colonel of the 45th Colored Infantry. He commanded a brigade in the battle of Five Forks, and for distinguished gallantry there was brevetted brigadier-general on March 11, 1865. After the war he was a member of the Stock Exchange in New York city till 1882, when he removed to the pine region of North Carolina for his health, and there engaged in lumbering and building. He contracted his fatal illness while attending his brother's funeral. He built a portion of the city of Asheville, which is named Doubleday after him.

Drexel, Anthony Joseph, banker, born in Philadelphia, Pa., in 1826; died in Carlsbad, Bohemia, June 30, 1893. He was the second son of Francis Martin Drexel, founder of the banking house of Drexel & Co., in Philadelphia; was educated in his father's counting room; and on the death of the elder Drexel, in 1863, Anthony Joseph and his oldest brother Francis succeeded to the management and greatly enlarged the scope of the business. The firm have

been known all over the world for their large operations. In 1876 it united with the Rothschilds and other great financial houses in forming a syndicate which placed on the market for the United States Government \$300,000,000 in 44-per-cent. bonds; in 1878 the same syndicate took and placed \$50,000,000 more bonds; in 1879 it bought outright \$15,000,000 worth of New York Central Railroad stock; in 1886 the firm became members of the American committee of the syndicate formed for building the Panama Canal; in 1886 also it undertook the sale of \$20,000,000 of the bonds of the Louisville and Nashville Railroad Company; and in 1891, in connection with the Brown Brothers, it negotiated the entire loan of \$9,500,000 which the Philadelphia and Reading Railroad Company required to carry out its scheme of reorganization. Mr. Drexel was a man of large and studied benevolence, and was a promoter of numerous institutions in his State and city that appealed to his sympathy. His most noted benefaction was the establishment in Philadelphia of the Drexel Institute of Art, Science, and Industry, for both sexes, which was dedicated Dec. 17, 1891. The land and buildings cost \$550,000, and he gave the institution an endowment fund of \$1,000,000. He bequeathed \$1,000,000 to trustees, with directions to pay \$100,000 to the German Hospital in Philadelphia; to use the income of the remainder for the erection of an art gallery, museum, or other public institution in connection with the Drexel Institute; and, in case the projected art gallery or museum should not require the whole income, to use the surplus for the establishment of a Drexel Hospital. In connection with George W. Childs, he also founded the Childs-Drexel Home for Aged Printers, in Colorado Springs, Col., which was dedicated May 12, 1892.

DuPont, A. V., philanthropist, born in Wilmington, Del., in 1833; died in Louisville, Ky., May 16, 1893. He was engaged for many years in the manufacture of paper in his native city, and in recent years held a controlling interest in the street railroads of Louisville, and a large interest in those of St. Louis and New Orleans. Shortly before his death he deeded to the city of Louisville a thoroughly equipped manual-training school, of which the building cost \$75,000.

Dwenger, Joseph, clergyman, born in St. John's, Ohio, in 1837; died in Fort Wayne, Ind., Jan. 22, 1893. He was educated at Holy Trinity School in Cincinnati; completed his studies for the Roman Catholic priesthood in the Seminary of Mount St. Mary's of the West; was ordained a priest, Sept. 4, 1859; and for three years was a professor and director in the Seminary of the Precious Blood. He was then assigned to missionary work, and for some time was connected with the seminary at Carthage. From 1867 till 1872 he labored among the mission stations in Ohio, Indiana, and Kentucky. On April 14, 1872, he was consecrated second Bishop of Fort Wayne, Ind., and became the youngest member of the hierarchy in the United States. In 1874 he accompanied the American pilgrims to Rome as superior; in 1883 made an official visit thither; in 1884 attended the third Plenary Council in Baltimore; in 1885 went to Rome again as the representative of the American hierarchy; and in 1888 repeated the journey on official business.

Dwight, John Sullivan, musical critic, born in Boston, Mass., May 13, 1813; died there Sept. 5, 1893. He was graduated at Harvard College in 1832; took a course in the Divinity School; was pastor of the Unitarian church in Northampton, Mass., for two years; was a founder and active member for five years of the Brook Farm community; and in 1848 returned to Boston and engaged in literature. While at Brook Farm he taught Latin, Greek, German, and music. In Boston he became a contributor to the "Harbinger," the "Dial" (organ of the Transcendentalists), the "Christian Examiner," and other periodicals, writing on literary, philosophical, art, and musical topics. He suggested the establishment of low-priced concerts of orchestra and chamber music, and was a founder of the Harvard Musical Association. On April 10, 1892,

he published the first number of "Dwight's Journal of Music," which he edited nearly thirty years, the last number appearing on July 16, 1881, and for many years this was the only musical journal in the United States. During his career both as editor and lecturer he supported Bach, Handel, and Beethoven, and opposed the music of the future as represented by the works of Wagner, Berlioz, and Rubinstein. He translated the minor poems of Goethe and Schiller; wrote, among other poems, "God save the State"; and at the time of his death was completing Charles C. Perkins's "History of the Handel and Haydn Society, 1815-1890."

Eastman, Timothy C., merchant, born in Croydon, N. H., May 30, 1821; died in Tarrytown, N. Y., Oct. 11, 1893. In early life he was a farmer and carpenter in his native village, and in 1849 removed to Cleveland, Ohio, and began trading in cattle. He established headquarters in New York city in 1859; made his first exportation of meat to England, consisting of 50 carcasses of beef and a few sheep, in 1875; and organized companies in the United States and in England to carry on the business in 1889.

Edgerton, Joseph Ketohum, lawyer, born in Chazee, Vt., Feb. 16, 1818; died in Boston, Mass., Aug. 25, 1893. He studied law in New York city, and in 1839 was admitted to the bar. In 1844 he removed to Fort Wayne, Ind., which place was his residence until his death, and there he formed a law partnership with Gov. Samuel Bigger. In 1855 he was elected President of the Fort Wayne and Chicago Railroad, then in process of construction and greatly embarrassed. He proposed its consolidation with three other lines, under one corporation, from Pittsburg to Chicago, since known as the Pittsburg, Fort Wayne and Chicago Railway, and this union secured the completion of the entire line and its subsequent great prosperity. He was elected vice-president of the consolidated company, and in 1857 and 1858 he was its financial agent in New York. In 1859 he had charge of its legal department, and in the same year was appointed receiver of the company, which office, in order to compromise differences, he later resigned in favor of William B. Ogden, of Chicago. In politics he had previously been a Whig, but in 1860 he entered the Democratic party, and in 1862 was elected to Congress. In 1866, on a large tract of land which he owned in Allen County, Ind., he established the Woodburn Lumber and Stave Mills. In the same year he became President of the Grand Rapids and Indiana Railroad Company, then greatly embarrassed, with a land grant liable to immediate forfeiture, and without a mile of road built. In 1871, after five years of service, he left the company with a restored and protected land grant and 200 miles of road in operation. Between 1860 and 1872 he traveled extensively in Europe and his own country. In 1871 he assisted in establishing the Fort Wayne Steel Plow Works, and later he became their sole owner. He was for many years a member of the vestry of Trinity Episcopal Church, and in 1879 was president of the board of trustees of the Fort Wayne Medical College. After 1862 he did not resume the practice of his profession, and he took no active part in politics after 1865.

Eichberg, Julius, musical composer, born in Düsseldorf, Germany, June 13, 1824; died in Boston, Mass., Jan. 19, 1893. He began to play the violin in public when seven years old; was permitted to play before the Emperor Nicholas of Russia at a court concert soon afterward; was educated in Mayence and in the Brussels Conservatory of Music, and took the first prize of the institution for violin playing and composition in 1843. He was Professor of the Violin in the Conservatory in Geneva, and closely identified with the progress of music in that city for eleven years. In 1857 he made a trip to the United States for his health, and from 1859 till 1866 was director of music in the Boston Museum. In 1867 he was appointed director of the newly established Conservatory of Music in Boston, and was also elected supervisor of music in the public schools of the city. Among his

compositions were the operas "The Doctor of Alcantara" (1862), "The Rose of Tyrol," "A Night in Rome," and "The Two Cadis."

English, Earl, naval officer, born in Crosswicks, N. J., Feb. 18, 1824; died in Washington, D. C., July 16, 1893. He was appointed a midshipman in the United States navy, Feb. 25, 1840; was commissioned passed midshipman, July 11, 1846; master, March 1, 1855; lieutenant, Sept. 14 following; lieutenant-commander, July 16, 1862; commander, July 25, 1866; captain, Sept. 28, 1871; commodore, March 25, 1880; rear-admiral, Sept. 4, 1884; and was retired, Feb. 18, 1886. During his active career in the navy he was on sea service twenty-seven years and four months, on shore or other duty fifteen years and eleven months, and was unemployed nine years and seven months. He served on the Pacific coast till 1846; through the Mexican War; made a series of deep-sea soundings between Newfoundland and Ireland in 1852; was wounded in the attack on the barrier forts near Canton, China, in 1857; and was on duty in the Gulf of Mexico during the greater part of the civil war. On Feb. 18, 1868, he gave asylum on his ship, the "Iroquois," at Osaka, to the defeated Tycoon of Japan. His last service prior to retirement was as commandant of the European squadron.

Enochs, William H., lawyer, born near Middleburg, Noble County, Ohio, March 29, 1842; died in Ironton, Ohio, July 12-13, 1893. He was brought up on a farm; received a common-school education; enlisted as a private in the Union army in 1861, and was promoted through all the grades to that of colonel and brevet brigadier-general of volunteers; and was graduated at the Cincinnati Law School in 1866. He was elected to Congress in 1890 and 1892 from the 12th Ohio District as a Republican, and served on the committees on public buildings and grounds, and on militia. He was found dead in bed on July 13.

Evans, Frederick William, elder of the New Lebanon Shakers, born in Leominster, Worcestershire, England, June 9, 1808; died in Lebanon, N. Y., March 6, 1893. He emigrated to the United States in 1820; was apprenticed to the hatter's trade; and read and studied till, to use his own words, "I became a materialist, a socialist, a land reformer, and an infidel to all the popular church and state religions of Christendom." On finishing his apprenticeship he made a long journey on foot through the West, and went down the Mississippi to New Orleans. During this journey he was converted to the socialistic theories of Robert Owen, and to communism while visiting the community at Massillon, Ohio. In 1829 he returned to England, where he remained a year; then returned to New York, and assisted his brother George, and others, in perfecting plans for a new community. While in search of a suitable location, he visited the United Society of Believers at Mount Lebanon, and was so impressed with the candor, simplicity, and principles of the community that he united with it and "became a Shaker." In 1838 he was chosen elder of the North Family, and in 1858 first elder of 8 of the other families, and he resided with the North Family till his death. During his career as a Shaker he lectured and wrote frequently on the principles, the mission, and the practical results of such communal life. His publications included: "Compendium of Principles, Rules, Doctrines, and Government of Shakers," with Biographies of Ann Lee and Others" (New York, 1859); "Autobiography of a Shaker" and "Tests of Divine Revelation" (1869); "Shaker Communism" (London, 1871); "Religious Communism," a lecture delivered in London (1872); and "Second Appearing of Christ" (1873). He also edited and published, with Antoinette Doolittle, "The Shaker and Shakeress," a periodical (1873-75). His "Autobiography of a Shaker" was first published in "The Atlantic Monthly."

Farmer, Moses Gerrish, electrician, born in Boscawen, N. H., Feb. 9, 1820; died in Chicago, Ill., May 25, 1893. He was graduated at Dartmouth College, where he had given special attention to chemistry and elec-

tro-magnetism, in 1844, and spent two years teaching in Elliot, Me., and Dover, N. H., and in lecturing. While in Dover he invented several forms of electromotors, one of which he used on a miniature railway and another to drive a vertical lathe in his experimental workshop. Both of these motors were devised primarily to illustrate his lectures on electro-magnetism, in which he also showed that the electric current could be used for discharging torpedoes and in submarine blasting. On his miniature railway he carried the first passengers ever transported by electricity in this country. About this time he also constructed an electric clock, and invented the sickle-shape climbers for telegraph linemen. In 1847 he removed to Framingham, Mass., and there in the following year invented the telegraph fire alarm with its striking machine. In 1851 he planned and built the telegraph fire-alarm system in Boston, which was the pioneer of the system now in general use, and on finishing it was appointed its superintendent. The following year he built a telegraph line for Prof. A. D. Bache, of the United States Coast Survey, connecting the Cambridge Observatory with the Boston office, and constructed for the late Admiral Wilkes a chronograph designed to determine the velocity of sound. An electro-magnetic drill for stonework, the synchronous multiplex telegraph, and the multiple system of vats in series for the electro-deposition of copper and other metals, were invented and constructed in 1853. In 1856 he invented the printing telegraph; in 1858, a system of duplex telegraphy; in 1859, patented another form of the duplex telegraph, and illuminated his house in Salem with the incandescent electric light on a plan of his own; in 1865, invented a thermo-electric battery and constructed the first dynamo machine; in 1872, invented the four-function relay for the guidance of the Lay movable torpedo; in 1874, patented an adjusting electric lamp with carbon points; and in 1881, invented an electric motor for use on elevated railways. From 1872 till 1881 he was electrician at the United States Naval Torpedo Station at Newport, R. I. At the time of his death he was examining at the Columbian Exhibition the triumphs of the science he had made his life study and done so much to promote.

Farwell, Nathan Allen, lawyer, born in Unity, Me., Feb. 24, 1812; died in Rockland, Me., Dec. 9, 1893. He received a common-school education, followed the sea for several years, was admitted to the bar and settled in Rockland to practice, and entered political life about 1850. In 1854, 1861, and 1862 he was elected to the State Senate as a Republican in 1860, 1863, and 1864 to the Lower House; and in 1861 was President of the Senate. He was a delegate to the National Republican Convention in Baltimore in 1864, and to the Loyalists' Convention in Philadelphia in 1866, and from Dec. 5, 1864, till March 3, 1867, he filled the vacancy in the United States Senate caused by the resignation of William Pitt Fessenden. For many years before his death he was largely interested in the shipping trade and in marine insurance.

Feuardent, Gaston L., archaeologist, born in Cherbourg, France, in 1843; died in New York city, June 12, 1893. His grandfather was a noted antiquary, and his father is now an art dealer in Paris and an expert in antiquities for the Louvre. Gaston was associated with his father till 1868, when he went to London and represented him there till 1876, being employed for a considerable period by the British Museum as an expert in numismatics. He removed to New York city in 1876, became a member of the Numismatic Society in the following year, and for many years was engaged in business as a dealer in coins and antiquities. At the request of the late Lieutenant-Commander Gorringe, he examined critically the coins found at the site of the obelisk, now in Central Park, and wrote a valuable monograph on them and on the inscriptions on the obelisk. In 1884 he attacked the authenticity of the Cesnola Cyprian collection in the Metropolitan Museum of Art, and lost a suit for libel that

was brought against him in consequence. He was an enthusiast in his studies, and was familiar with the numismatic and antiquarian collections of all the large museums in Europe.

Field, Benjamin Hazard, philanthropist, born in Yorktown, N. Y., May 2, 1814; died in New York city, March 17, 1893. He received an academical education; removed to New York city, and entered his uncle's mercantile office in 1831; became a partner in the firm in 1832; assumed the entire management in 1838; admitted his son, Cortlandt De P. Field, into partnership in 1861; and retired from the business soon afterward. From that time till his death he applied himself to philanthropic work. He was active in founding the Home for Incurables in Fordham, and was its president till his death; was president for many years of the New York Eye and Ear Infirmary, of the New York Historical Society, and of the St. Nicholas Society; was Vice-President of the American Society for the Prevention of Cruelty to Children, of the Sheltering Arms, and of the Children's Fold; was a founder and for several years President of the New York Free Circulating Library; and was a trustee or director of the Roosevelt Hospital, the American Museum of Natural History, the Good Samaritan Dispensary, the New York Institution for the Instruction of the Deaf and Dumb, the Working Women's Protective Union, and of other charitable institutions. To all these institutions he gave liberally of his time and means. He also spent more than \$100,000 in erecting and maintaining a public school near his birthplace. Mr. Field was a Fellow of the American Geographical Society, and the senior member of the New York Chamber of Commerce.

Fischer, Gustavus, educator, born in Berlin, Germany, in June, 1815; died in New Brunswick, N. J., Sept. 16, 1893. He was educated at the Universities of Berlin and Göttingen, making specialties of law, philosophy, philology, and music, and in 1848, on the breaking out of the revolution, entered political life and was elected to Parliament. On the dispersion of the "rump" Parliament he removed to Switzerland, whence he came to the United States in 1850. In 1858 he was appointed Professor of Modern Languages in Rutgers College, and also became teacher of French and German in a private seminary for young ladies in New Brunswick. He held his chair in the college till 1869, and on resigning spent the remainder of his life in musical study.

Fish, Hamilton, statesman, born in New York city, Aug. 3, 1808; died in Garrison's, N. Y., Sept. 7, 1893. He was a son of Nicholas and Elizabeth Stuyvesant Fish, received his early education at private schools,

was graduated at Columbia College in 1827, and was admitted to the bar in 1830. In 1834 he entered into active political life by becoming the Whig candidate for the Legislature and meeting defeat. Eight years afterward he was elected to Congress from the 6th District over John McKeon, the Democratic candidate. Toward the end of this term William W. Campbell, who represented the Native American ideas, was nominated by the Whigs as his successor, and Mr. Fish was persuaded by his friends to stand as an independent candidate, and as such he was defeated. In 1846 he received the Whig nomination for Lieutenant-Governor on the ticket with John Young for Governor. Mr. Young was elected, but Mr. Fish, who had denounced the principles of the antirenters, was defeated. In the following year his successful Democratic competitor, Addison Gardiner, was appointed a judge of the

State Court of Appeals, and, resigning the office of Lieutenant-Governor, Mr. Fish was chosen in his place. In 1848 he defeated John A. Dix and Reuben H. Walworth for Governor, the former representing the Van Buren and the latter the Cass Democracy, and in 1851 was elected United States Senator to succeed Daniel S. Dickinson. In the Senate he acted with the Republican party and opposed the repeal of the Missouri Compromise. At the close of his term he undertook to retire from public life, and went to Europe, but returned shortly before the beginning of the civil war, and took an active part in the presidential campaign in favor of Abraham Lincoln, though he had been known as a supporter of William H. Seward. In January, 1862, Secretary Stanton appointed Bishop Ames and Mr. Fish commissioners to relieve the sufferings of the Union soldiers imprisoned in Richmond and elsewhere, and, though the Confederate authorities refused to allow them to pass the lines, their mission was productive of great good, in that it led to a system for exchanging prisoners which was observed to the close of the war. In 1868 Mr. Fish was conspicuous among those who advocated the choice of Gen. Grant for the presidency, and he bore an influential part in the campaign. After his inauguration, President Grant first appointed Elihu B. Washburn his Secretary of State. A week later Mr. Washburn was appointed minister to France, and, resigning the portfolio of State, was succeeded by Mr. Fish. By reappointment Mr. Fish held the office till March 12, 1877, and then retired to private life. On Feb. 9, 1871, he was appointed one of the commissioners on the part of the United States to negotiate the treaty of Washington, which he signed on May 8. When the Geneva tribunal was arbitrating the "Alabama claims," he procured the adoption by the tribunal of a rule providing that the United States Government should not be held responsible for indirect damages arising from Fenian raids or Cuban filibustering expeditions. He effected a settlement of the long-standing boundary dispute with Great Britain, by which the United States received the island of San Juan, and in November, 1873, negotiated with the Spanish minister in Washington a settlement of the international contentions growing out of the "Virginian" affair. He also successfully resisted the effort of Great Britain to change the terms of the extradition treaty. Early in his career as secretary he formulated a system of examinations for applicants for appointment to consular offices, to test their knowledge of subjects connected with consular service. Mr. Fish was an original trustee of the Peabody Educational Fund, President of the New York Historical Society, President-General of the Society of the Cincinnati, and President of the Board of Trustees of Columbia College. He bequeathed \$50,000 to Columbia College unconditionally, \$5,000 to St. Luke's Hospital, and \$2,000 to the Bellevue Training School for Nurses.

Fisher, George Jackson, physician, born in Westchester County, N. Y., Nov. 27, 1825; died in Sing Sing, N. Y., Feb. 3, 1893. He was graduated at the Medical Department of the University of the City of New York in 1849, and had resided in Sing Sing since 1851. In 1874 he was elected President of the State Medical Society, and in 1876 was a delegate from the society to the International Medical Congress in Philadelphia. He had served several times as a volunteer surgeon for the United States Sanitary Commission during the civil war; was for more than twenty years a brigade surgeon of the National Guard of New York, and a United States examining surgeon in the Pension Bureau; and had collected a library and private museum which were widely known in medical and surgical circles. Dr. Fisher was author of many works, including "Biographical Sketches of Deceased Physicians of Westchester County," "Animal Substances employed as Medicines by the Ancients," "A Brief History of the Discovery of the Circulation of the Blood," "Teratology," and "History of Surgery." He died from blood poisoning following a surgical operation.

cessor, and Mr. Fish was persuaded by his friends to stand as an independent candidate, and as such he was defeated. In 1846 he received the Whig nomination for Lieutenant-Governor on the ticket with John Young for Governor. Mr. Young was elected, but Mr. Fish, who had denounced the principles of the antirenters, was defeated. In the following year his successful Democratic competitor, Addison Gardiner, was appointed a judge of the

Fox-Kane, Margaret, spiritualist, born in Bath, Canada, in 1836; died in Brooklyn, N. Y., March 8, 1893. She was the last of the famous Fox sisters, formerly widely known as spiritualistic mediums. In 1847 her father removed to Hydeville, N. Y., with his wife and daughters, Leah, Margaret, and Catharine (see **FOX-JENCKEN, CATHARINE**, in the "Annual Cyclopaedia" for 1892, page 546), and soon afterward, it was alleged, they began to hear mysterious rappings in various parts of their house. On the night of March 31, 1848, while a terrific gale was raging, the rappings were of unusual frequency and vigor, and while the parents were searching the house for a cause Margaret declared that she saw a spirit, and that as often as she motioned it rapped. The mother inquired the ages of her children, and the correct number of years was successively announced by distinct raps. Neighbors and friends of the family were called in, and, as no cause could be discovered, it was decided to send Margaret and Catharine to the home of their sister Leah who had married and settled in Rochester. The alleged effect was that the rappings continued in the Hydeville house, and also began in the Rochester house. Both curiosity and excitement followed the announcement of the manifestations; visitors began crowding the house, forcing the sisters to hold regular *séances*, and the mystery of the "Rochester rappings" attracted the attention of investigators and scientists from all parts of the United States and from Europe. It was said that the sisters had the power of discovering murderers, revealing a variety of mysteries, and forecasting events. Their fame so increased that they were induced to travel, and they gave many *séances* in the United States and abroad. Leah died in November, 1890, and Catharine in July, 1892. In 1856 Margaret became acquainted with Dr. Elisha Kent Kane, the arctic explorer, and subsequently she claimed that she had been married to him according to the Quaker rite, though his relatives never acknowledged the marriage. About the time of her alleged marriage Margaret withdrew from public life, and lived for several years on property left her by Dr. Kane, while Catharine continued the *séances* interruptedly till about 1888. In that year Margaret published an "exposure," in which she declared that the rappings had been produced by means of a dislocated big toe on one of her feet, frequent practice having enabled her to produce audible sounds at will. This exposure was subsequently retracted, and the remainder of her life was passed in destitution, relieved by the kindness of the friends among whom she died.

Francis, Joseph, inventor, born in Boston, Mass., March 12, 1801; died in Cooperstown, N. Y., May 10, 1893. He showed a marked interest in boat-building

early in life; exhibited a fancy boat of his own construction at a fair when eleven years old, and won a prize with another in a public competition when eighteen. Soon afterward he was employed by the Navy Department at the Portsmouth Navy Yard to build wooden lifeboats for the frigate "Santee" and the battle ship "Alabama." His work there gave him a high reputation, and greatly stimulated his natural gift for invention. In 1842 he

invented and constructed a metallic life car, the first one ever built, and, failing to dispose of it satisfactorily to the Government, he sent it to the New Jersey coast, near Long Branch, and kept it in service at his own expense. There was no occasion to use it till

in January, 1850, when the British emigrant ship "Ayrshire" was wrecked on Squan Beach in a violent storm, and then it was the means of saving 200 out of a total of 201 persons on the vessel. He then extended the application of corrugated metal to the construction of steamboats, floating docks, harbor buoys, and pontoon wagons, receiving decorations, valuable presents, and other honors from various European sovereigns, and having scarcely any notice of his work taken officially in his own country. It was not till age had compelled him to cease work that the United States Government sought to do him honor. On Aug. 27, 1888, Congress passed an act ordering the striking of a special gold medal for presentation to him as "the inventor and framer of the means for the life-saving service of the country." This medal, which cost \$3,000, was presented to him by President Harrison in the Blue Parlor of the White House on April 12, 1890. A further honor was extended to him on April 1, 1892, when the United States Senate unanimously voted him the freedom of its chamber, and suspended business to give him a reception.

Fraser, James Somerville, jurist, born in Hollidaysburg, Pa., July 17, 1824; died in Warsaw, Ind., Feb. 20, 1893. He removed to Wayne County, Ind., in 1837, defrayed the cost of his legal education by teaching, and was admitted to the bar in 1845, settling in Warsaw to practice. In 1847, 1848, and 1854 he was a member of the State Legislature, and in his last term was chairman of the committee that prepared the bill that became the present public-school law of Indiana. In 1851 he was elected prosecuting attorney for his county; in 1862 was appointed assessor of internal revenue; and from 1865 till 1871 was a judge of the Supreme Court of the State. Under the treaty of 1871 between the United States and Great Britain, President Grant appointed him one of the commissioners on the part of the United States to adjust claims for and against the British Government for damages growing out of the civil war. Judge Fraser was also in the employ of the United States Treasury Department from 1873 till 1875 in the adjustment of claims for cotton captured or destroyed by the National troops during the war. In 1879, 1880, and 1881 he was one of three commissioners employed, under appointment by the Supreme Court, in revising and codifying the laws of Indiana.

Fryer, Pauline Oushman, scout, born in New Orleans, La., June 10, 1833; died in San Francisco, Cal., Dec. 2, 1893. She was of Spanish parentage, and for several years before the civil war was an actress of much popularity on the variety stage, especially in the South. Her intimacy with the roads in Tennessee, Georgia, Alabama, and Mississippi made her a valuable aid to the National armies. She entered the service as a scout and spy, and for some time afterward continued her theatrical performances in Southern cities to enable her to gain information of contemplated Confederate movements. In May, 1863, she was captured while in the Confederate lines in Tennessee, and was tried by court-martial and condemned to be hanged; but before the day set for her execution the National troops drove the Confederates out of Shelbyville, where she was imprisoned, and released her. She rendered very important service to the Army of the Cumberland, and was widely known as Major Pauline Oushman. After the war she lectured, and wrote a book on her war experiences, and a few years before her death she married her second husband, James Fryer, of Arizona.

Garrett, Emma, educator, born about 1848; died in Chicago, Ill., July 18, 1893. She was the Principal of the Home for the Training in Speech of Deaf Children in West Philadelphia, and had achieved such success in her special work that she was induced to remove her entire school to Chicago, where it constituted one of the most striking exhibits in the educational department of the exposition. She had been engaged in this line of instruction for fifteen

years, and had served in the Institution for the Deaf and Dumb in Philadelphia, in a special branch school, and as Principal of the Pennsylvania Oral School for the Deaf, which was established by philanthropic citizens expressly for her, and which was awarded a medal by the judges of the Paris Exposition of 1889. For nearly two years she had been in charge of a home at Bala, West Philadelphia, which was conducted on advanced features of her original and unique plan. A severe siege of nervous prostration, increased by the excitement of the exposition, affected her mentally and led to suicide.

Genth, Frederick Augustus Louis Charles William, chemist, born in Waechtersbach, Hesse-Cassel, May 17, 1820; died in Philadelphia, Pa., Feb. 2, 1893. He was descended from an old Hessian family, and his father

was a Government official having charge of the forests. From boyhood his powers of observation were trained by his father, who encouraged his growing interest in botany, mineralogy, and other natural sciences. His early education was obtained at the gymnasium in Hanau, whence in 1839 he passed to the

University of Heidelberg. Two years later he went to Giessen, studying there under Liebig, and then to Marburg, where he completed his studies under Bunsen, and in 1846 received the degree of Ph. D. He was then appointed *privat-docent* and continued at Marburg for nearly three years, serving also as assistant to Bunsen. In 1848 he resigned his university appointment and came to the United States, establishing himself in Philadelphia as an analytical chemist. Soon afterward he was called to the charge of the Washington mines, Davidson County, N. C., where he remained till 1851. He then returned to Philadelphia and resumed his practice as an analyst. In 1872 he became Professor of Chemistry and Mineralogy in the University of Pennsylvania, which chair he held until 1888. Prof. Genth was chemist to the Geological Survey of Pennsylvania, and also from 1877 to 1884 he served in similar capacity the Pennsylvania Board of Agriculture. He served as a juror on chemical matters at the World's Fair held in Philadelphia in 1876. In 1875 he became a member of the American Association for the Advancement of Science, and in 1888, at the request of the chemical section, was made a fellow of the association. In the domain of mineral chemistry he was easily the first authority in the United States, and his "Contributions to Mineralogy," fifty-four in number, originally published in Liebig's "Annalen," were, subsequent to his arrival in the United States, contributed to the "American Journal of Science." The identification of 23 new mineral species was due to his researches. In the "American Contributions to Chemistry," Benjamin Silliman says that he "has no superior in this country as an analytical chemist." The ammonia-cobalt bases, originally discovered by him in 1846, were subsequently more fully studied with Wolcott Gibbs, and in joint authorship they published "Researches on the Ammonia-Cobalt Bases" (Washington, 1856), forming a portion of the ninth volume of the "Smithsonian Contributions to Knowledge." His separate papers were over one hundred in number, and included the following larger works: "Tabellarische Uebersicht der Wichtigsten Reactionen welche Basen in ihren Salzen zeigen" (Marburg, 1845); also the same in relation to "Acids" (1845); "Minerals of North

Carolina," being Appendix "C" of the "Report on the Geology of North Carolina" (Raleigh, 1875); "First and Second Preliminary Reports on the Mineralogy of Pennsylvania" (Harrisburg, 1875-'76); "Minerals and Mineral Localities of North Carolina" (Raleigh, 1881); and "Minerals of North Carolina," being Bulletin No. 74 of United States Geological Survey (Washington, 1891).

Gibbons, Abby Hopper, philanthropist, born in Philadelphia, Pa., Dec. 7, 1801; died in New York city, Jan. 10, 1893. She was a daughter of the late Isaac T. Hopper, a well-known abolitionist and philanthropist, and the widow of James Sloan Gibbons (see "Annual Cyclopædia" for 1892, page 548). She was of Quaker parentage and devoted her life to educational and benevolent work, taking a special interest in matters relating to hospital management. She labored earnestly to promote the welfare of the colored people before, during, and after the civil war, and because of the prominence in this work of her husband and herself their home in New York city was sacked by a mob during the draft riots in 1863. She aided her father in planning and establishing the Women's Prison Association and the Isaac T. Hopper Home, and was a manager of the New York Infant Asylum and the Diet Kitchen Association. Largely through her persistent efforts the New York Legislature established the State Reformatory for Women and Girls, and authorized the appointment of matrons in police stations to look after female prisoners. As long as her strength permitted she visited regularly the institutions in which she was interested.

Giles, Chauncey, clergyman, born in Charlemont, Mass., May 11, 1818; died in Philadelphia, Pa., Nov. 6, 1893. He was educated at Williams College, spent three years in teaching in his native State, and from 1836 till 1852 conducted private schools in various towns in Ohio. In the latter year he was ordained into the first grade of the ministry of the Church of the New Jerusalem in Cincinnati, where he preached for ten years. In 1858 he was elected President of Urbana University; in 1868 was consecrated as ordaining minister (now known as general pastor) in Philadelphia; in 1864-'78 was pastor of the New Jerusalem Church in New York city; and from 1878 till his death pastor of the First Church in Philadelphia. He was chosen president of the General Convention of the Church in 1875, and had been re-elected annually ever since. He was also for some years editor of the "New-Church Messenger" and the "Children's New-Church Magazine." Mr. Giles was a forcible and prolific writer. More than 200 of his sermons have been published in tract and book form, and several of them, including "Man as a Spiritual Being" (1868), were translated into foreign languages and widely circulated.

Goddard, Thomas Poynton Ives, philanthropist, born in Providence, R. I., in 1833; died there, March 30, 1893. Under the firm name of Goddard Brothers, he was associated with three brothers in cotton manufacturing in the Blackstone valley, and in numerous manufacturing and business interests in Massachusetts and other States. All the brothers became very wealthy, and gave liberally to local charitable and educational institutions. Thomas was a founder of the Rhode Island Hospital and of the Butler Hospital for the Insane; was a fellow of Brown University; and was an officer in several financial institutions and in organizations connected with the Protestant Episcopal Church.

Goebel, Henry, electrician, born in Springer, Hanover, Germany, April 20, 1818; died in New York city, Dec. 4, 1893. He was apprenticed to a watchmaker and optician, invented many devices in the mechanism of clocks and watches and experimented with optical instruments of his own construction, and became interested in electricity while attending the Hanover Technical School. In 1849 he removed to New York city, and in the following year resumed experimenting with incandescent lights. His first lamps were made from eoligne bottles with a thick

wire, subsequently replaced by a thin copper one, inside. As this arrangement worked unsatisfactorily, he sought a substitute for the wire filament, and by a chance incident discovered that a piece of carbonized wood, used instead of a strip or loop of wire, would produce an excellent light. To secure a perfect vacuum in the bottles he invented a mercury pump. While the piece of wood gave him the light he sought, he found that it was apt to become broken by expansion or contraction under changes of the temperature; and to overcome this difficulty he conceived the idea of making his carbonized-wood filaments in the shape of a homeshoe or a hairpin. Before the civil war he constructed a telescope 20 feet long with an 18-inch object glass, mounted it on a wagon provided with a battery and a row of his electric lamps, and when business was dull gave exhibitions in the vicinity of Union Square or Cooper Institute. In 1881 he became interested in a company organized to manufacture electric lamps, but it soon failed for lack of capital. In January, 1893, in one of the many suits brought by the Edison Electric-Light Company against other corporations, for infringement of patents, it was set up as a defense that Goebel, and not Edison, was the inventor of the incandescent electric lamp, and the foregoing statements, among others, were made in support of the allegation. Mr. Goebel personally asserted that he had made the lamps before Mr. Edison was born; and in the case of the Edison Company against the Columbia Incandescent Company of St. Louis, it was claimed that Judge Hallett had expressed his belief that Goebel was twenty-five years ahead of Edison in the invention. The question of priority of invention had not been judicially settled at the time of this writing.

Goodwin-Talcott, H. Bradbury, author, born in Cheshire, Me., in 1827; died in Boston, Mass., June 1, 1893. Before her marriage to George C. Goodwin she wrote stories and sketches over the initials H. F. B., and subsequently published the novels "Madge," "Sherbrooke," "Dr. Howell's Family," "One Among Many," "Christine's Fortune," and "Dorothy Gray." Many of her works appeared in the "Wingood Series." She had taught school in Bangor, Me., been Principal of the Charlestown (Mass.) Female Seminary, and traveled and studied in England, France, Germany, Italy, and Spain. During the last sixteen years she had been intimately associated with Wellesley College.

Gould, Walter, painter, born in Philadelphia, Pa., in 1829; died in Florence, Italy, in January, 1893. He studied painting with Thomas Sully and J. R. Smith; was elected to the Artists' Fund Society of Philadelphia in 1846; had studios in Philadelphia and in Petersburg, Va.; and went to Europe in 1849, where he passed the remainder of his life. He had spent many years in Asia Minor and in Constantinople, and for more than forty years had lived in Florence, painting portraits and original compositions on Oriental subjects. He was the *doyen* of the American art colony of Florence in Howells's novel "Indian Summer."

Gregg, Alexander, clergyman, born in Society Hill, S. C., Oct. 8, 1819; died in Galveston, Texas, July 11, 1893. He was graduated at South Carolina College in 1838, began studying law, was admitted to the bar, and became a candidate for orders in the Protestant Episcopal Church in 1843. In 1846 he was ordained deacon, and in the following year priest, and was rector of St. David's Church in Cheraw, S. C., till 1859, when he was elected first Bishop of Texas, an office he held till his death. In 1857-'59 he was a clerical trustee of the University of the South from South Carolina, and for many years he was also its proctor. In 1874 the diocese of Texas, which had comprised the whole State, was divided, two missionary jurisdictions being set off, and his diocese reduced to its present dimensions. His many writings include "History of Old Cheraw" (1867); "A Brief Sketch of the Church in Texas" (1884); two triennial charges; and special sermons and addresses.

Green, Norvin, executive officer, born in New Albany, Ind., April 17, 1818; died in Louisville, Ky., Feb. 12, 1893. As a boy he was engaged in flat-boating on the Mississippi river, and subsequently earned money to pay for a medical education by chopping wood on a large contract. He was graduated in medicine at the University of Louisville in 1840, and practiced in that city for several years. He then entered political life, and served three years in the Legislature as a Democrat. In 1853 he was appointed a United States commissioner in charge of the building of the customhouse and post-office in Louisville, and about the same time became one of the lessees of the telegraph line between Louisville and New Orleans. Subsequently he was elected President of the Southwestern Telegraph Company, and when it was merged into the American Telegraph Company he was elected vice-president. In 1866 the American, United States, and Western Union lines were consolidated, and Dr. Green was vice-president till April 23, 1878, when he succeeded William Orton in the presidency and held the office till his death.

Grooms, James Black, lawyer, born in Elkton, Md., April 4, 1838; died in Baltimore, Md., Oct. 4, 1893. He was educated at the College of New Jersey, studied law with his father, and was admitted to the bar in 1861. He made rapid progress in his profession; became an active worker in the Democratic party; was elected to the State Constitutional Convention in 1867, and to the Legislature in 1871 and 1883; was a Liberal presidential elector in 1872; and was chosen by the Legislature to fill the unexpired term of Gov. William Pinckney White, who had been elected United States Senator, in 1874. On March 4, 1879, he entered the United States Senate, where he served the full term of six years, and on its expiration was appointed collector of the port of Baltimore.

Hagen, Hermann August, entomologist, born in Königsberg, Prussia, May 30, 1817; died in Cambridge, Mass., Nov. 9, 1893. He was graduated in Medicine at the University of Königsberg in 1840; continued his studies in Berlin, Vienna, and Paris, and began practicing in his native city in 1843. For several years he had also studied entomology, and in 1834 published his first paper on "Prussian Odontata." In 1867 Prof. Louis Agassiz invited him to take charge of the entomological department in the Museum of Comparative Zoology in Cambridge. In 1870 he was chosen Professor of Entomology in Harvard University, and held that chair till his death. He received the degree of Ph. D. from the University of Königsberg; was a member of the American Philosophical Society, a fellow of the American and corresponding member of the New York Academies of Science, and honorary member of entomological societies in various parts of the world; and had published several hundred technical articles and "Bibliotheca Entomologica."

Hagner, Peter Valentine, military officer, born in Washington, D. C., Aug. 28, 1815; died there, March 11, 1893. He was graduated at the United States Military Academy and appointed a brevet 2d lieutenant in the 1st United States Artillery in 1836; was promoted 2d lieutenant a month afterward; transferred to the ordnance in 1838; promoted 1st lieutenant in 1840, captain in 1851, major in 1861, lieutenant-colonel in 1863, and colonel in 1867; and was retired June 1, 1881. He was brevetted captain, April 18, 1847, for gallantry at Cerro Gordo; major, Sept. 18 following, for Chapultepec; and colonel and brigadier-general, March 13, 1865, for faithful services in the ordnance department during the civil war. Immediately after graduation he took part in the campaign against the Seminoles in Florida; during the Canada border disturbances in 1837-'38 was on frontier duty; in the Mexican War was attached to the siege train in Gen. Scott's army, and was wounded in the assault on the city of Mexico.

Hall, Benjamin Homer, author, born in Troy, N. Y., Nov. 14, 1830; died there, April 6, 1893. He was graduated at Harvard College in 1851; admitted to

the bar in Troy in 1856; and was city clerk in 1858-'59, and city chamberlain in 1874-'77 and 1884-'85. He contributed frequently in prose and verse to newspapers and magazines, and was widely known for his historical researches and writings. His publications include: "A Collection of College Words and Customs" (Cambridge, 1851; revised edition, 1856); "History of Eastern Vermont" (New York, 1858; 2-vol. edition, Albany, 1865); "Bibliography of the United States: Vermont" (New York, 1860); and contributions to the "Harvard Book" (Cambridge, 1875) and to the "History of Rensselaer County, N. Y.," (Philadelphia, 1880).

Hambricht, Henry A., military officer, born in Pennsylvania in 1819; died in Lancaster, Pa., Feb. 19, 1893. He served in the Mexican War, and reached the rank of 1st lieutenant in the 2d Pennsylvania Volunteers in 1846-'48; was offered and declined appointment as 2d lieutenant 6th United States Infantry, March 23, 1861; commissioned captain 11th Infantry, May 14 following; transferred to 29th Infantry, Sept. 21, 1866; promoted major 32d Infantry, Jan. 27, 1869; and was retired May 6, 1879. In the volunteer service he was appointed captain 1st Pennsylvania Infantry, April 29, and colonel 79th Infantry, Oct. 18, 1861, and was brevetted brigadier-general, June 7, 1865. He received brevets in the regular army of major, Dec. 31, 1862, for the battle of Murfreesborough; lieutenant-colonel, Sept. 20, 1863, for Chickamauga; and colonel, Sept. 1, 1864, for the Atlanta campaign.

Hamilton, Morgan Calvin, pioneer, born near Huntsville, Ala., Feb. 25, 1809; died in San Diego, Cal., Nov. 21, 1893. He received a common-school education, removed to the republic of Texas in 1837, and soon became active in political affairs. In 1839-'45 he was a clerk in the War Department of the republic, and during the three last years was Acting Secretary of War. In September, 1867, he was appointed comptroller of the State treasury by the commander of the 5th Military District; in 1868 was a delegate to the State Constitutional Convention; on the readmission of Texas into the Union he was elected United States Senator as a Republican, taking his seat March 31, 1870; and on the expiration of the term was re-elected for that ending March 3, 1877. After leaving the Senate he retired to private life.

Hancock, John, lawyer, born in Jackson County, Ala., Oct. 29, 1824; died in Austin, Texas, July 19, 1893. He was educated in Alabama and Tennessee; was admitted to the bar in Winchester, Tenn., in 1846; removed to Texas in 1847; was judge of the 2d District Court of the State in 1851-'55; and resumed practice till 1861. Refusing to take the oath of allegiance to the Confederacy, he was expelled from the Legislature and soon afterward removed to Mexico. After the war he returned; was a member of the State Constitutional Convention of 1866; was elected to Congress from the 10th District as a Democrat in 1870, 1872, 1874, and 1882.

Harvey, Hayward Augustus, inventor, born in Jamestown, N. Y., Jan. 17, 1824; died in Orange, N. J., Aug. 28, 1893. He was a son of Gen. Thomas W. Harvey, inventor of the gimlet-pointed screw; received an academical education in Poughkeepsie, N. Y., and became a draughtsman in a manufacturing establishment in New York city in 1844. In 1850 he was appointed superintendent of a wire factory in Somerville, N. J.; in 1852 entered the Harvey Steel and Iron Company, of Jersey City; in 1854, on the death of his father, he founded the Wamung Steel Company, of Connecticut; and in 1865 the Continental Screw Company, of Jersey City. For several years his inventive skill was exercised in perfecting methods of making wood screws, of hardening the steel used in the manufacture of mechanical tools, and of promoting other mechanical labor. In 1888 he took out patents for his process of hardening steel and of raising steel of a low grade to a higher one. At this time the United States Navy Department was seeking for the new war vessels an armor-plate material superior to that in general use. Mr. Harvey

believed his steel-hardening process, at first applied to tool steel only, could be adapted to the manufacture of armor plates for war vessels, and, organizing the Harvey Steel Company, with works at Brill Station, near Newark, N. J., he produced in 1889 the first "Harveyized" steel plate, 3 inches thick. In a comparative test with the compound armor plate of England, the Creuzot all-steel armor plate of France, and the hitherto superior nickel-steel plate of the United States, at the Indian Head proving grounds, the Harveyized plate was pronounced superior to all the others. On the strength of this test the United States Government adopted the Harvey plates, and their manufacture for the war vessels began in 1890. Since then England, Russia, and other foreign Governments have subjected the Harvey system to the severest test with uniformly favorable results, and the United States bought it outright. Mr. Harvey had taken out nearly 150 patents.

Hastings, Serranus Clinton, jurist, born in Watertown, N. Y., Nov. 22, 1814; died in San Francisco, Cal., Feb. 18, 1893. He received an academical education, became principal of an academy in Norwich, N. Y., in 1834; and was admitted to the bar in Burlington, then in Wisconsin Territory, in 1837. Soon afterward he was commissioned a justice of the peace, and in 1838, when the Territory of Iowa was created from that of Wisconsin, he was elected to the first Territorial Legislature of the former. He remained in the Legislature or the Council continuously till 1846, when Iowa was admitted to Statehood; was one of the first Representatives in Congress from the new State; and in 1848 was appointed Chief Justice of the Supreme Court of Iowa. In the following year he resigned, and removed to California, settling in Benicia. Within a few months he was elected by the Legislature the first Chief Justice of the Supreme Court of California. He served one term of two years, then served a similar term as Attorney-General of the State, and in 1853 retired to private life, and busied himself thereafter with real-estate investments. Judge Hastings will long be warmly remembered in San Francisco as the founder of the Hastings College of Law.

Hatch, Rufus, financier, born in Wells, York County, Me., June 24, 1832; died in New York city, Feb. 23, 1893. He spent his early years on his father's farm and as a grocery clerk in Kennebunkport; removed to Rockland, Ill., and entered a grocery store in 1851; and while working there joined the corps of engineers who made the surveys for the Beloit and Madison Railroad, the first one built in Wisconsin, and began selling agricultural produce on commission. In the last he was so successful that he removed to Chicago in 1854, and became a heavy grain operator and a founder of the Board of Trade. At the close of the Crimean War the firm of which he was a member failed with heavy liabilities; but he assumed the entire indebtedness, and in 1862 paid it in full with interest. While in Chicago he became acquainted with Henry Keep, then a large operator in railway properties, who induced him to remove to New York city in 1862, and started him in the stock-brokerage business. He became a member of the leading commercial exchanges; was an organizer of the Open Board of Brokers, subsequently consolidated with the New York Stock Exchange; managed the famous "deal" in the Chicago and Northwestern Railway stocks, by which he and his associates made large fortunes; in 1868; was elected managing director of the Pacific Mail Steamship Company; lost heavily in the Jay Cooke panic of 1873; and failed for a large amount in 1876. He then engaged in the cattle industry in the West; again paid his debts in full and with interest; resumed operations in New York city; met his last financial reverse in the failure of the Northern Pacific Railroad Company in 1883, and eventually paid the greater part of that indebtedness. He was a man of large humor, of bold and original action; deeply interested in religious and musical matters; and exceedingly benevolent.

Hatlestad, Ole J., clergyman, born near Stavanger, Norway, Sept. 30, 1823; died in Decorah, Iowa, Sept. 7, 1893. He emigrated to the United States in 1846, and went to Muskego, Wis., where they joined a small settlement of his countrymen. In 1847 he became a teacher at Jefferson Prairie, Wis., and also conducted devotional services on Sunday. In 1850 he removed to Racine, where, in company with his brother-in-law, Hon. K. Langland, he published "Nordlyset," the first Norwegian newspaper in this country. He also organized there a Lutheran congregation. In 1853 he was called to Leland, Ill., and in 1854 was ordained as a minister in the Lutheran Church. He was President of the Norwegian Augustana Synod from 1870 to 1880, when he declined reelection on account of feeble health; but in 1888 he was again re-elected, and he served in that capacity until 1890, when the synod was merged in the United Norwegian Lutheran Church in America. In 1887 he published a "History of the Norwegian Augustana Synod and the Lutheran Church in America," in the Norwegian language.

Hay, Charles Augustus, educator, born in York, Pa., Feb. 11, 1821; died in Gettysburg, Pa., June 26, 1893. He was graduated at Pennsylvania College, Gettysburg; spent two years studying in Germany, and became Professor of Hebrew, German, and New Testament Exegesis in the Gettysburg Theological Seminary in 1845. In 1848-'49 he held a pastorate in Hanover, Pa., and in 1850-'65 one in Harrisburg; and was Professor of Hebrew at Gettysburg from 1865 till his death. He received the degree of D. D. from Pennsylvania College in 1859. His publications include an individual translation of Luther's "Commentary on the Sermon on the Mount"; a translation, with Prof. Dr. H. E. Jacobs, of Schmid's "Doctrinal Theology of the Evangelical Lutheran Church" (Philadelphia, 1875); and "Life of Captain Sees" (Harrisburg, 1867).

Hodgson, Telfair, clergyman, born in Columbia, Va., March 14, 1840; died in Sewanee, Tenn., Sept. 11, 1893. He was graduated at the College of New Jersey in 1859; served through the greater part of the civil war as a chaplain in the Confederate army; was rector of a Protestant Episcopal parish in Keyport, N. J., in 1866-'71; professor in the University of Alabama in 1871-'73; assistant in Christ Church, Baltimore, in 1873-'74; rector of Trinity Church, Hoboken, in 1874-'78; and Vice-Chancellor of the University of the South in 1878-'90. On resigning from the University he founded the "Sewanee Review" and became its editor. He received the degree of D. D. from the University of the South in 1878, and LL. D. from Hobart College. His service in the University of the South will long be remembered by reason of his gift to it of the Hodgson Library.

Holley, Bessie, philanthropist, born in Lyons, N. Y., in 1817; died in New York city, Jan. 12, 1893. She was the daughter of Myron Holley, a well-known reformer of fifty years ago; spent her early life in Rochester, N. Y.; and was graduated at Oberlin College in 1839. Soon afterward, in company with an intimate associate, Miss Putnam, she began traveling about the country and delivering antislavery lectures. She continued this work till the beginning of the civil war, and after its close she settled in West Virginia and opened a school in Lottsburg for poor colored children. Her first schoolhouse was burned by indignant white citizens, but she bought a tract of land, erected another building, and continued to teach in it till within a few weeks of her death. Miss Holley had written considerably in prose and verse. Her last composition, a sonnet to "A Summer Dawn in Virginia," was typical of the results of her labor in the cause of humanity.

Hooper, Lucy Hamilton Jones, author, born in Philadelphia, Pa., Jan. 20, 1835; died in Paris, France, Aug. 31, 1893. She began writing verse at an early age, and contributing to "Godey's Lady's Book"; married Robert M. Hooper in 1854; and since his appointment as United States vice-consul-general

in Paris, in 1874, had resided in the French capital. In 1864 she was associate editor of "Our Daily Fare," a publication issued in connection with the United States Sanitary Commission Fair in Philadelphia, and published her first collection of poems, "Poems, with Translations from the German." On the establishment of "Lippincott's Magazine," in 1868, she became its associate editor, and held the post till her first trip to Europe, in 1870. Subsequently settling in Paris, she became the correspondent of several American periodicals, including the Philadelphia "Daily Evening Telegraph," the Baltimore "Gazette," the American issue of the "Art Journal," "Appleton's Journal," and "Lippincott's Magazine." For eighteen years she had never missed a weekly letter in the Philadelphia "Telegraph," and in her last, written two days before her death, she bade farewell to her American readers, saying that before they read it she would have passed away. She published a second collection of "Poems" (1871); a translation of Daudet's "Le Nabob" (1879); and a novel, "Under the Tricolor" (1880).

Hosford, Eben Norton, chemist, born in Moscow, Livingston County, N. Y., July 27, 1818; died in Cambridge, Mass., Jan. 1, 1893. He was graduated at the Rensselaer Polytechnic Institute in 1838; was Professor of Mathematics and Natural Sciences in the Albany Female Academy in 1840-'44; spent two years in Giessen in the study of analytical chemistry and in experimental research in the Liebig laboratory; and on his return was elected Rumford Professor of Science applied to the Arts in Harvard College. Soon afterward he submitted to Abbott Lawrence a plan for a department of analytical and applied chemistry, which led to the establishment of the Lawrence Scientific School in Cambridge. He remained at Harvard sixteen years, constantly making experiments, putting new chemical ideas into practical use, and taking out about thirty patents, more than one half on chemical compounds of every-day utility. On resigning his chair in Harvard he engaged in business as a manufacturing chemist and became wealthy. More than thirty years ago he published an account of the result of many successful experiments for stilling waves by spreading oil on the surface of the water; in recent years had given much time to geographical and archaeological studies; and among other works published a complete lexicon of five Indian languages. He was deeply interested in the cartography of New England, and for many years carried on investigations which resulted in his announcement of the discovery of the site and walls of the ancient city of Norumbega, on Charles river, at Watertown, Mass., and the erection of a memorial tower to mark the site of the ancient fort in 1889. In the latter part of his life he did much to promote the prosperity of Wellesley College, of whose board of visitors he had been president since the organization of the institution, and evidences of his generosity are seen in nearly every department.

Humphreys, Edward Rupert, educator, born in England, March 1, 1820; died in Boston, Mass., March 20, 1893. He was graduated at Cambridge University, where he had included medicine among his studies, and when twenty-four years old was appointed director of education of Prince Edward Island. In 1848 he resigned, to become headmaster in classics in Merchiston Castle Academy, near Edinburgh, and from 1852 till 1859 was headmaster in ancient languages in the Cheltenham Grammar School. While in Scotland he was elected a fellow of the Educational Institute, and received the degree of LL. D. from King's University and King's College; and while in Cheltenham was elected President of the College of Preceptors of London. He removed to Boston, Mass., in the early part of the civil war, and spent the remainder of his life there, chiefly engaged in literary work. Besides writings on Masonic subjects, he published "Lessons on the Liturgy of the Protestant Episcopal Church" (Boston, 1860); "Essays on the Education of Military Officers" (1862);

"The Higher Education of Europe and America" and "America, Past, Present, and Prospective" (1870); and "Manual of Political Economy" (1855).

Hyatt, James William, financier, born in Norwalk, Conn., Sept. 19, 1837; died there, March 12, 1898. He received a common-school education; went to work in a lumber yard; was a clerk in the banking house of Legrand B. Lockwood & Company in New York city from 1860 till 1872; returned to Norwalk, and was chosen Vice-President of the Danbury and Norwalk Railroad Company in 1873, and became president of the corporation in 1881. In 1875-'76 he was a member of the Connecticut Legislature; in the latter year was appointed by the Governor State bank commissioner; in 1883 was elected State Senator; in the following year was reappointed bank commissioner; and in January, 1887, was appointed United States bank examiner for the States of Connecticut and Rhode Island. In May following he was appointed Treasurer of the United States, and held the office till the close of that Administration in 1889. In 1890 he became President of the Fairfield County National Bank in Norwalk.

Ingalls, Rufus, military officer, born in Denmark, Me., Aug. 23, 1820; died in New York city, Jan. 16, 1893. He was graduated at the United States Military Academy and appointed a brevet 2d lieutenant in the United States Rifles in 1843; was promoted 2d lieutenant 1st dragoons in 1845, 1st lieutenant 1847, captain and assistant quartermaster 1848, captain 1st Dragoons 1854, major and quartermaster 1862, lieutenant-colonel and deputy quartermaster-general July 28, 1866, colonel and assistant quartermaster-general the day following, and brigadier-general and quartermaster-general Feb. 23, 1862; and was retired July 1, 1883. In the volunteer service he was appointed colonel and aid-de-camp on the staff of Gen. McClellan, Sept. 28, 1861; was promoted brigadier-general, May 23, 1863; and was mustered out, Sept. 1, 1866. He won the brevets of 1st lieutenant, Feb. 4, 1847, for gallant conduct in the conflicts of Embudo and Taos, New Mexico; lieutenant-colonel, colonel, and brigadier-general, July 6, 1864, for distinguished services during the war; and of major-general, U. S. A. and U. S. V., March 13, 1865, for meritorious services during the war. Gen. Ingalls served with Col. Steptoe in his expedition across the continent after the Mexican War; was on the staff of Gen. Harney at Fort Vancouver during the San Juan excitement; and, after being sent to re-enforce the garrison in Fort Pickens in April, 1861, served to the close of the war with the Army of the Potomac.

Isaak, Adam, Jr., composer, born about 1864; died in Baltimore, Md., Sept. 5, 1893. He displayed unusual musical ability in early childhood, learned to play every orchestral instrument, was for several years leader of the orchestra in Harris's Academy of Music and in Albaugh's Lyceum Theater in Baltimore, received the diploma of distinction on finishing the course in the Peabody Conservatory of Music in 1882, and was Professor of Theory, Harmony, and Score Writing in that institution from 1890. He was a composer of much merit, and will be remembered best by his successful opera, *The Tar and the Tartar*.

Jardine, Edward, military officer, born in Brooklyn, N. Y., Nov. 2, 1828; died in New York city, July 16, 1893. He entered the military service of the State as a private in 1849, and at the outbreak of the civil war raised and equipped a company of volunteers, with which he joined the 8th New York Volunteers, which afterward became famous as the Hawkins Zouaves. Attached to the command of Gen. Burnside, he was put in charge of the landing force which attacked Fort Clark and Fort Hatteras, in the Roanoke campaign, and subsequently he took part in the battles of Antietam, Fredericksburg, Camden, Elizabeth City, and Suffolk, and was several times wounded. In 1863 he returned to New York city, and was engaged in reorganizing his old command for re-enlistment when the draft riots broke out. Though unattached to any command, he speedily mustered about

200 of his former comrades, placed himself at their head, and on July 15 attempted to disperse the mob that had gathered at First Avenue and 19th Street, about 10,000 strong. Failing to receive support, his little band was soon put to rout. Many were killed, nearly all the others were wounded, and the commander received wounds in the head and thigh which ultimately caused his death. For his services in the field and during the draft riots Congress passed a special act recognizing his bravery and granting him a pension of \$100 a month for life, and he was retired with the brevet rank of brigadier-general. After the war he was clerk of the New Jersey Assembly, editor and publisher of the Jersey City "Times," and a weigher in the New York customhouse.

Jenkins, Thornton Alexander, naval officer, born in Orange County, Va., Dec. 11, 1811; died in Washington, D. C., Aug. 9, 1893. He was appointed a midshipman in the United States navy, Nov. 1, 1828; was promoted passed midshipman, June 14, 1834; lieutenant, Dec. 9, 1839; commander, Sept. 14, 1855; captain, July 16, 1862; commodore, July 25, 1866; and rear-admiral, Aug. 15, 1870; and was retired, Dec. 11, 1873. During his active career he was on sea service sixteen years and eleven months, on shore or other duty twenty-five years and seven months, and was unemployed twenty-one years and eight months. It fell to his lot to perform a large amount of duty of historical interest. As a midshipman he took part in the suppression of the Nat Turner insurrection in 1831, and, soon afterward, in the search for pirates off the coast of Cuba. From 1834 till 1842 he was employed in hydrographic, topographic, and geodetic work on the coast survey, and in 1845 began his great work in connection with the United States lighthouse system. He was sent to Europe to examine and report on the lighthouse systems of Great Britain and the Continent, and in the following year made a most comprehensive report, which covered the entire system of illuminants, towers, lightships, beacons, buoys, and lighthouses abroad. In the Mexican War he was executive officer of the sloop of war "Germantown" and commander of the storeship "Relief" and commanded part of the forces employed in the capture of Tuspan and Tabasco. In 1848-'62 he was assistant to Prof. Bache, then engaged in meteorological and hydrographic observations, and in taking deep-sea temperatures in the Gulf Stream, and using in the work a vessel designed by Lieut. Jenkins. A part of this time he also acted as secretary of the temporary lighthouse board. In 1852, on the creation of the permanent board, he was appointed its secretary, in recognition of his invaluable report on the lighthouse systems of Europe. Though strongly inclined to the scientific pursuits of peace, his service in behalf of the lighthouse system, of which the London "Times" said "he may be regarded as the chief organizer," was constantly being interrupted by other sea duty. In 1858-'60 he commanded the sloop of war "Preble" in the Paraguay expedition, on the Brazil station, on the coast of Central America, and in the Gulf of Mexico. He was present at the capture of the armed vessels "Miramon" and "Marquis of Havana" during the siege and bombardment of Vera Cruz by the insurgent forces of Gen. Miramon, and took both vessels as prizes to New Orleans. He was also instrumental in saving the forts at Key West and Dry Tortugas from being captured by an expedition sent thither from

New Orleans before the civil war actually opened. In January, 1861, he was again appointed secretary of the lighthouse board, and for more than a year was on special and secret service for the Naval and Treasury Departments. His most distinguished service in the civil war was as fleet captain and chief of staff of Farragut's squadron in the Mississippi; as commander of the naval forces at the capture of Port Hudson; as commander of the 2d Division of Farragut's fleet in Mobile Bay; and as the naval officer in charge of the city and bay after the surrender. In 1865-'69 he was chief of the Bureau of Navigation and Detail; in 1869 resumed duty as secretary of the lighthouse board; and in 1871-'73 commanded the Asiatic squadron. On March 25, 1874, he was appointed by President Grant commissioner to represent the Navy Department at the Centennial Exhibition. Admiral Jenkins was a member of many historical and scientific associations.

Joachimssen, Priscilla J., philanthropist, born in Plymouth, England, in 1825; died in New York city, July 24, 1893. She was brought to the United States when an infant, and married Philip J. Joachimssen (see the "Annual Cyclopaedia" for 1890, p. 651) in 1843. With her husband she was a founder of the Hebrew Sheltering Guardian Society, having a model orphan asylum in Eleventh Avenue, between 150th and 151st Streets, New York city, and was its president till her death. She was also a founder of the Jewish Lying-in Asylum; of the Home for Aged and Infirm Hebrews, of which she was president for five years, and of the Deborah Nursery, and was an active worker in many of the largest charitable enterprises in the city. It is said that many wealthy merchants in New York city to-day owe their prosperity to her good offices and other aid.

Johnston, John Taylor, philanthropist, born in New York city, April 8, 1820; died there, March 24, 1893. He was a son of John Johnston, a Scotch merchant in New York city, and a founder of the University of the City of New York; was graduated at that institution in 1839; studied law at Yale and in New York city; and was admitted to the bar in 1843. After practicing about four years, he was induced to accept the presidency of the Somerville and Easton Railroad Company, then controlling a short and comparatively insignificant line. Under his management the property was developed into what is now known as the Central Railroad of New Jersey. He was president of the corporation continuously from 1848 till 1877, when, after sacrificing a large part of his fortune to save the credit of the company, he resigned his office, and the property was placed in the hands of a receiver. For many years he had been deeply interested in art, and had been gathering a collection of paintings which became widely known for its extent and merit. One day in each week his gallery in New York was opened to the public, and once a year he gathered in it the artists of the city and vicinity. In the effort to save the railroad company and to reimburse a number of people of small means who had invested in stocks of the company on his advice, he sold the majority of his paintings at auction in 1876, receiving nearly \$400,000 for them. After retiring from the presidency he spent the remainder of his life in promoting the interests of the various educational and benevolent institutions with which he had long been associated. He was an organizer of the Metropolitan Museum of Art, and its president till 1883, and an active member of the governing boards of the University of the City of New York, the Presbyterian Hospital, the Woman's Hospital, St. Andrew's Society, and several boards of the Presbyterian Church. He gave liberally to these and other institutions in life, and bequeathed \$10,000 each to the museum and the university.

Jones, Charles Colcock, historian, born in Savannah, Ga., Oct. 28, 1831; died in Augusta, Ga., July 19, 1893. He was graduated at the College of New Jersey in 1852; read law; was graduated at the Harvard Law School in 1855; and was admitted to the bar in

Savannah the same year. During the civil war he served in the artillery branch of the Confederate army, reaching the rank of colonel, and being chief of artillery during the siege of Savannah. After the war he practiced law in New York city till 1877, when he returned to Georgia. He received the degree of LL. D. from the University of the City of New York in 1880, and from Oxford University, Georgia, in 1882. Mr. Jones was a prolific writer of history, biography, and archaeology. Among his best-known publications were: "Indian Remains in Southern Georgia" (Savannah, 1859); "Ancient Tumuli on the Savannah River" (New York, 1868); "Historical Sketch of Toneo-Chi-Chi, Mico of the Yamacraws" (1868); "Antiquities of the Southern Indians, particularly of the Georgia Tribes" (1873); "The Siege of Savannah in 1779" and "The Siege of Savannah in December, 1864" (1874); "De Soto's March through Georgia" (1880); "History of Georgia" (1883); "The English Colonization of Georgia" (1887); and "Negro Myths from the Georgia Coast" (1888).

Kelton, John Cunningham, military officer, born in Delaware County, Pa., June 24, 1828; died near Washington, D. C., July 15, 1893. He was graduated at the United States Military Academy, and appointed a brevet 2d lieutenant 6th United States Infantry in 1851; was promoted 2d lieutenant in December of the same year, 1st lieutenant in 1855, captain and assistant adjutant-general, Aug. 8, 1861; major, July 17, 1862; lieutenant-colonel, March 23, 1866; colonel, June 15, 1880; and brigadier-general and adjutant-general, June 7, 1889; and was retired June 24, 1892. He was brevetted lieutenant-colonel, colonel, and brigadier-general, March 13, 1865, for "most valuable and arduous services both in the field and at headquarters." After graduation he was employed in duty on the frontier in Minnesota, at Jefferson Barracks, Mo., and in Kansas till 1857; was then detailed to the Military Academy as instructor in infantry tactics and the use of small arms, where he remained till 1861; and passed the remainder of his military career in the adjutancy on the field and in Washington. On his retirement Secretary of War Elkins issued a general order to the army complimentary to him. From his retirement till his death he was governor of the National Soldiers' Home near Washington.

Kenna, John Edward, lawyer, born in Valcoulon, Va. (now West Virginia), April 10, 1848; died in Washington, D. C., Jan. 11, 1893. He was brought up on a farm, served in the Confederate army, and was wounded in 1864. Subsequently he attended St. Vincent's College, in Wheeling, and was admitted to the bar in Charleston, W. Va., June 20, 1870. In 1872-'77 he was prosecuting attorney for Kanawha County; in 1875 was elected by the bar of Lincoln and Wayne Counties to hold the circuit courts of those counties; in 1876, 1878, 1880, and 1882 was elected to Congress as a Democrat; and in 1883 and 1889 was elected United States Senator to succeed Henry G. Davis.

Kip, William Ingraham, clergyman, born in New York city, Oct. 3, 1811; died in San Francisco, Cal., April 7, 1893. He was graduated at Yale College in 1831, and at the General Theological Seminary in 1835; was ordained deacon and priest in the Protestant Episcopal Church the latter year; was rector of St. Peter's Church, Morristown, N. J., in 1835-'36, assistant minister of Grace Church, New York city, in 1836-'37, and rector of St. Paul's Church, Albany, N. Y., in 1837-'53; and was consecrated Missionary Bishop of California in 1853, and elected first bishop of that diocese in April, 1857. His jurisdiction extended over the whole State till 1874, when on a divi-

sion of the diocese the northern part of the State was constituted a missionary jurisdiction. Bishop Kip actively administered his episcopal jurisdiction till his death. He received the degree of S. T. D. from Columbia College in 1847, and of LL. D. from Yale in 1872. In 1880 he was appointed a member of the Board of Examiners at the United States Naval Academy, and in 1883 of the board at the United States Military Academy. Among his numerous publications were: "The Lenten Fast" (1843); "Double Witness of the Church" (1844); "Christmas Holidays in Rome" (1845); "Early Saint Missions" (1846); "Early Conflicts of Christianity" (1850); "Catacombs of Rome" (1854); "The Unnoticed Things of Scripture" (1868); "Olden Times in New York" (1872); "The Church of the Apostles" (1877); and "Early Days of my Episcopate" (1892).

Kirkham, Ralph Wilson, military officer, born in Springfield, Mass., Feb. 20, 1821; died in Oakland, Cal., May 24, 1893. He was graduated at West Point in 1842; served through the Mexican War, in which he won the brevets of 1st lieutenant and captain for gallantry at Contreras, Churubusco, Molino del Rey, and Chapultepec, and at the capture of Mexico city; and while in that country made an ascent of Popocatepetl. In 1848-'49 he was acting assistant adjutant-general at St. Louis, and in 1864 he was ordered to the Pacific coast, where he served as chief quartermaster of the Department of the Pacific till the close of the civil war. In 1865 he was brevetted brigadier-general for faithful service. After the war he remained in California, acquired wealth, and collected one of the finest private libraries, especially on military subjects, in the country.

Ladd, William Sargent, banker, born in Holland, Vt., Oct. 10, 1826; died in Portland, Ore., Jan. 6, 1893. He removed to Portland in 1851; engaged in mercantile business till 1859, and then organized the banking house of Ladd & Tilton, at the head of which he remained till his death. He built the first brick building in Portland, acquired large wealth, and for many years had been in the habit of giving to charitable enterprises one tenth of his annual net income. He bequeathed \$450,000 to trustees to be used for charitable and educational purposes.

Lamar, Lucius Quintus Cincinnatus, jurist, born in Putnam County, Ga., Sept. 1, 1825; died in Vineville, Ga., Jan. 23, 1893. He was graduated at Emory College in 1845, studied law in Macon, was admitted to the bar there, and removed to Oxford, Miss., to practice in 1847. Soon afterward he became Professor of Mathematics in the State University, and an editorial writer on the "Southern Review."

He held these posts but a short time, returning to Georgia and resuming practice in Covington. In 1853 he was elected

to the Legislature, and, after serving for two years, again removed to Mississippi, where he was elected to Congress in 1857 and 1859. While in Congress he was a vigorous advocate of slavery and State rights. In 1860 he resigned, to become a member of the Secession Convention of Mississippi, and in 1861 entered the Confederate army. During 1863-'64 he was a special representative of the Confederacy in Europe, and while he successfully aided in the floating of loans he failed to secure the recognition of the Confederacy as an independent government. In 1866 he was elected Professor of Political Economy and Social Science in the State University of Mississippi, and in the following year was transferred to the chair of Law. In 1872 he was again elected to Congress as

a Democrat, and in 1874 was re-elected. His course here was one of hard work in committees, and nothing occurred to call the attention of the country particularly to him till April 27, 1874, when he delivered a eulogy on Charles Sumner, which was widely copied and admired for its eloquence and liberal tone, though for a time its liberality was distasteful to his constituency, by some of whom an unsuccessful attempt was made to defeat his re-election. In 1877 he entered the United States Senate, where at the first opportunity he placed himself on record as an uncompromising opponent of the inflation or debasement of the national currency. His conduct in this respect led to a repudiation of his views in many public meetings throughout his State, and the Legislature formally directed him to give his influence and votes against the principles he had enunciated in the Senate, or resign his seat. He firmly declined to do either, and in a memorable speech in the Senate, referring to the legislative instructions, he stated his convictions of what was right with so much clearness that he was warmly congratulated by Democrats and Republicans alike for his independent stand. In 1882 the Legislature re-elected him to the Senate by an increased majority after he had made a canvass of the State on the various issues raised against him. In 1885 President Cleveland appointed him Secretary of the Interior Department, and in December, 1887, he was made an associate justice of the United States Supreme Court.

Lamb, Martha Joan Reade Nash, historian, born in Plainfield, Mass., Aug. 13, 1829; died in New York city, Jan. 2, 1893. She received a thorough education in the English branches and in modern languages, began writing on historical subjects at an early age, and married Charles A. Lamb in 1852. After her marriage she lived for eight years in Chicago, Ill., where she was a founder of the Home for the Friendless and the Half-Orphan Asylum, and was secretary of the Sanitary Commission Fair in 1863. She removed to New York city in 1866, and from that date gave her time wholly to literary work. Since 1883 she had been editor of the "Magazine of American History." She was a member of nearly thirty historical and other learned societies. Besides papers on historical and other subjects in magazines, Mrs. Lamb was author of 8 books for children (1869-'70); "Spicey," a novel (1873); "The History of the City of New York" (2 vols., New York, 1877, 1881); "The Homes of America" (1879); "The Christmas Owl" (1881); "The Christmas Basket"; "Snow and Sunshine" (1882); "Wall Street in History"; and "Historical Sketch of New York," for the tenth census (1883).

Lamberton, Robert Alexander, educator, born in Carlisle, Pa., Dec. 6, 1824; died in South Bethlehem, Pa., Sept. 13, 1893. He was graduated at Dickinson College in 1843; was admitted to the bar of Dauphin County in 1846; and was a member of Gov. Curtin's military staff in the civil war. He practiced law till 1880, when he was elected President of Lehigh University, and continued in that relation till his death. When he accepted the presidency the institution had 200 students enrolled on its register, and at his death it had 631 students, 37 professors and instructors, valuable grounds and buildings, and an important library. He received the degree of LL. D. from the University of Pennsylvania in 1880.

Lamon, Ward H., lawyer; died in Martinsburg, W. Va., May 8, 1893. He was a practicing lawyer in Bloomington, Ill., at the time Abraham Lincoln was elected President of the United States, and, because of his friendship and his great size and strength, was selected by Mr. and Mrs. Lincoln to be the personal escort of the President-elect on the journey to the national capital. After the inauguration he was appointed marshal of the District of Columbia, and he held the office till after the President's assassination. He continued to reside in Washington till within a few years, when he removed to Martinsburg, W. Va. A biography of President Lincoln by

him (first volume only) was severely criticized by the friends of the President because of its unfriendly tone, after what was known to have been a long and very intimate acquaintance between the President and Mr. Lamson.

Lane, Louis, painter, born in Walden, Warrumburg, Feb. 29, 1812, died in New York city, May 7, 1893. At the age of sixteen he had become proficient in pastel work. He continued his art study in Paris and Stuttgart, removed to Philadelphia in 1838, and, after a trip to Italy in 1841, settled in New York city. He was a member of the Century Club since 1848, and an associate of the National Academy of Design since 1852. His chief paintings included "Blind Nydia," "Mad of Saragossa," "Mary Stuart Distributing Gifts," "Romeo and Juliet," "Joseph's Daughter," and "Portrait of a Child."

Lanyon, Lucy, poet, born in Beverly, Mass., in 1826; died in Boston, Mass., April 17, 1888. On the death of her father she accompanied her mother to Lowell, where she attended the grammar school till obliged

to go to work in a cotton-mill. There she soon became one of the most popular contributors to the Lowell "Offering," a magazine conducted by the mill girls. Her writings attracted the attention and won for her the friendship of John G. Whittier. About 1846 she went to Illinois, where she studied for three years in the Monticello Academy and applied all her leisure

to teaching. She then returned to Massachusetts and taught for six years in Wheaton Seminary. In 1863, on the establishment of "Our Young Folks," she became assistant editor, and soon afterward she was appointed editor. She conducted the publication with high credit till 1874. Her writings, which were very numerous, included "Ships in the Mist, and Other Stories" (1859), "Poems" (1868); "An Idyl of Work," a retrospect of her factory life (1875), "Childhood Songs" (1877), "Wild Roses of Cape Ann, and Other Poems" (1880); "New England (Girthing)" (1884), "As It is in Heaven" (1891), and "The Unseen Friend" (1892). She also edited several collections of poetry, among them "Breathings of a Better Life" (1867), "Hillside and Seaside in Poetry" (1876); and "Roadside Poems for Summer Travelers" (1877). A complete collection of her poetical works to that time was published in 1884.

Larimore, Richard Ludlow, jurist, born in Astoria, Long Island, N. Y., Sept. 6, 1830, died in New York city, Sept. 13, 1893. He was graduated at Rutgers College in 1850, studied law in New York city, and was admitted to the bar there in 1852. In 1870 he was elected a judge of the Court of Common Pleas as a Democrat, in 1870 was assigned by Gov. Tilden to duty as one of the judges of the Supreme Court, in 1884 was re-elected for a term of fourteen years, and in 1891 resigned on account of ill health, after having served for a year as chief justice of the Court of Common Pleas, succeeding Judge Charles P. Daly. He had been interested deeply in the educational affairs of the city, and had served as a trustee of the 11th and 19th Ward schools, as a commissioner of education in 1861-'64 and 1868-'70, and as president of the board in his last year of service. Judge Larimore was a member of the State Constitutional Convention of 1867 and of its Committee on Education and Literature. He received the degree of LL. D. from the University of the City of New York in 1870.

Lee, Mary W., army nurse, born in Ardmore, County Tyrone, Ireland, in 1816; died in Philadelphia, Pa., Aug. 8, 1893. She was brought to the United States when a child. In 1863 she became a volunteer nurse in the Union army. Her first service was in the hos-

pital transport at Harrison's Landing, and from this point she followed the army through victory and defeat to the close of the war. She particularly distinguished herself in the campaign that ended with the battle of Antietam, and in that struggle was conspicuous for her tender ministrations to the wounded. She also rendered invaluable services at Fredericksburg and Chancellorville, and at the hospital center of the army after Gettysburg, the Wilderness, and Spottsylvania. After the surrender at Appomattox she went to Richmond and served in the hospitals there. On June 12, 1891, the survivors of the 72d Pennsylvania Volunteers gave her a reception and made her several presents, and on July 4 she unveiled the regimental monument at Gettysburg.

Leitchfield, Alfred H., manufacturer, born in Warwick, R. I., April 2, 1829, died in Pawtucket, R. I., Dec. 21, 1893. He was engaged in manufacturing and banking, was division inspector of the Rhode Island militia, with the rank of colonel, in the civil war; was a member of the lower branch of the State Legislature in 1876-'77, and of the State Senate in 1878-'79; and was elected Governor of the State as a Republican in 1880, 1881, and 1892.

Leitch, Frederick Thomas, military officer, born in New York city, Aug. 17, 1820; died there, Jan. 4, 1893. He entered the Union army at the outbreak of the civil war as adjutant of the 15th New York Volunteers, and before he had completed three months of service he was appointed captain, assistant adjutant-general, and assistant chief of staff of Gen. Fitz John Porter's command. He took part in all the engagements of the Army of the Potomac; was brevetted brigadier general for bravery in the battle of Fair Oaks, and was present at the surrender of Lee's army. A shot in the face in the battle of Spottsylvania Courthouse was the ultimate cause of his death.

Leitch, Samuel, naval officer, born in Norwalk, Conn., Jan. 24, 1803; died in Flushing, Long Island, N. Y., July 5, 1893. He was appointed a midshipman in the United States navy, July 12, 1820; promoted lieutenant, May 17, 1828, and commander, Oct. 18, 1830, retired, Oct. 1, 1844, and commissioned commodore, to rank with those of his original date, March 12, 1867. In 1821-'25 he served in the West Indies; in 1831-'32 on the Brazilian station, in 1834-'36 on the Pacific station, in 1838-'39 with Commodore Jones's exploring expedition, and during the Mexican war assisted in the capture of Vera Cruz, Tuxpan, and Tabasco, and blockaded the Tabasco river for six months. During the civil war he blockaded Wilmington and Beaufort, N. C., York river and Newport News, and the approach to Cape Henry, Va.; and while lying off Beaufort commanded the flotilla, assisted in the capture of Fort Macon by the military and naval forces, and with Gen. Parks signed the terms of surrender on the part of the United States.

Low, Abel, Abbot, merchant, born in Salem, Mass., Feb. 7, 1811, died in Brooklyn, N. Y., Jan. 7, 1900. He received a public-school education; became a clerk in a mercantile house engaged in the South American trade; removed to Brooklyn and joined his father in business in 1829; spent 1833-'40 in business in Canton, China; and returning to Brooklyn, established himself as a tea merchant. Subsequently, with his brother Josiah, and his brother-in-law E. H. R. Lyman, he organized the firm of A. A. Low & Bros., built about a dozen ships to accommodate his trade with China and the East, and made his firm a leader in its line. He became a member of the New York Chamber of Commerce in 1844, and its president in 1843 and 1846, was a founder of Greenwood Cemetery; trustee of the Packer Institute, Brooklyn Library, Long Island Historical Society, Brooklyn Hospital, Society for Improving the Condition of the Poor, and of other benevolent and financial institutions, chiefly in Brooklyn. He never held a political office. During life he gave a generous support to the charitable and educational institutions with which he was connected, and he made the following public bequests: Chamber of Commerce of New

York, \$20,000; Packer Institute, \$20,000; Female Employment Society, Brooklyn, \$15,000; Brooklyn Hospital, \$10,000; St. Phœbe's Mission, Brooklyn, \$10,000; First Unitarian Church, Brooklyn, \$7,500; and Long Island Historical Society, \$5,000. He was the father of Seth Low, President of Columbia College.

Lupton, Nathaniel Thomas, chemist, born in Virginia, Dec. 19, 1830; died in Auburn, Ala., June 12, 1893. He was graduated at Dickinson College in 1849, and, after spending two years in study in Heidelberg, became Professor of Chemistry and Geology in Randolph-Macon College and in the Southern University of Alabama. In 1871 he was elected President of the State University of Alabama, taking also the chair of Chemistry; in 1875 he became Professor of Chemistry in Vanderbilt University, where he remained eleven years; and in 1885 was appointed State Chemist of Alabama and Professor of Chemistry in the Agricultural College of that State, holding both offices till his death. Dr. Lupton was chairman of the chemical section of the American Association for the Advancement of Science in 1877; vice-president of that association in 1880; and Vice-President of the American Chemical Society in 1889. He was author of "The Elementary Principles of Scientific Agriculture."

Lyman, Theodore Benedict, clergyman, born in Brigh-ton, Mass., Nov. 27, 1815; died in Raleigh, N. C., Dec. 18, 1898. He was graduated at Hamilton College in 1837, and at the General Theological Seminary in 1840; was ordained deacon in the Protestant Episcopal Church in 1840, and priest in 1841; was rector of St. Paul's Church in Hagerstown, Md., in 1840-'50, and of Trinity in Pittsburg, Pa., in 1850-'60; and was instrumental in establishing the American chapel in Rome, Italy, during a residence in Europe in 1860-'70. From 1870 till 1873 he was rector of Trinity Church in San Francisco; 1873-'81 was Assistant Bishop of North Carolina; and from 1881 till his death was bishop of that diocese, preferring that jurisdiction to the new one of East Carolina, which was created from his former diocese in 1888. He spent 1886-'87 abroad, having succeeded the Bishop of Long Island in charge of American Episcopal churches in Europe.

MaBryde, Margaretta Macaulay, philanthropist, born in New York city, in 1841; died there, Feb. 8, 1893. Possessing large means, she gave the greater part of her life to benevolent work, established the first woman's lodging house in the city, founded the Riverside Rest Association, was active in the Charity Organization Society, and was a voluntary collector for the Penny Provident fund.

McOoy, William D., educator, born of free colored parents in Cambridge City, Ind., Nov. 14, 1853; died in Monrovia, Liberia, May 14, 1898. He was educated in the public schools of Boston; began teaching in Sidney, Ohio, in 1872; removed to Helena, Ark., the same year, and taught school; was a member of the city council for two years, city recorder four years, and superintendent of public schools one year; and from 1879 till January, 1892, was engaged in educational work in Indianapolis, Ind. He was then appointed by President Harrison to be United States minister to the Republic of Liberia. At the time of his death he was preparing to return home for a visit. He was the fourth United States minister to Liberia to die at his post in the last twelve years.

McKannan, William, jurist, born in Washington, Pa., Sept. 27, 1816; died in Pittsburg, Pa., Oct. 27, 1893. He was graduated at Washington and Jefferson College in 1833; took a post-graduate course at Yale; studied law with his father, and was admitted to the bar in 1837. In 1869 he was appointed by President Grant judge of the United States Circuit Court for the 9th District, comprising the States of Pennsylvania, New Jersey, and Delaware; and in 1889 resigned, and was succeeded by Judge Acheson.

McMahon, Lawrence S., clergyman, born in the province of New Brunswick, in 1835; died in Lakeville, Conn., Aug. 21, 1893. He came to the United States

when four years old; received his preliminary education in the public schools of Boston; was a student in the College of the Holy Cross in Worcester, and in Montreal and Baltimore; and took his theological course in the College of Aix, France, and in Rome. He was ordained to the priesthood of the Roman Catholic Church in Rome in 1860, and on returning to the United States was stationed at the cathedral in Boston till 1863, when he went to the field as chaplain of the 28th Massachusetts Volunteers. After the war he held pastorates in Bridgewater and New Bedford, and on the creation of the see of Providence he was appointed vicar-general to Bishop Hendricken. On Aug. 10, 1879, he was consecrated the fifth bishop of the diocese of Hartford, Conn., and held the office till his death. He received the degree of D. D. from Rome in 1873. During his administration he gave more than \$100,000 to the fund for the erection of the Hartford cathedral, and lived to see the completion of that work.

McMichael, William, lawyer, born in Philadelphia, Pa., March 4, 1841; died in New York city, April 20, 1898. He was a son of the Hon. Morton McMichael, a widely known politician and journalist of his day, and was graduated at the University of Pennsylvania in 1859. On the day after the firing on Fort Sumter he enlisted in the Commonwealth Artillery of Philadelphia; soon afterward was commissioned a lieutenant; became a member of the staff of Gen. Charles F. Smith, and afterward of Gen. Lew Wallace, when commanding the army of the Cumberland; and was taken prisoner in the battle of Shiloh and confined for four months in Selma prison. On his release and exchange he was promoted colonel, and appointed adjutant-general on the staff of Gen. Henry W. Halleck. At the close of the war he returned to Philadelphia, completed his interrupted law studies, and, after admission to the bar, was appointed assistant district attorney. In 1871 he was appointed by President Grant United States minister to Santo Domingo, and on his return became United States District Attorney for the Eastern District of Pennsylvania. He removed to New York city in 1881; was appointed by President Garfield a member of the Board of Indian Commissioners in 1882; and, as the Republican candidate in an overwhelmingly Democratic district, was defeated for Congress in 1891.

Macomber, Francis Allen, lawyer, born in Alabama, Genesee County, N. Y., April 5, 1837; died in Rochester, N. Y., Oct. 13, 1893. He received his early education in the academy at Wyoming, N. Y., and was graduated at the University of Rochester in 1859. He was a member of the Phi Beta Kappa Society, and received the degrees of A. M. and LL. D. He was admitted to the bar, and practiced law for seventeen years till 1878, when he was elected a justice of the Supreme Court of New York for the term of fourteen years. In 1892 he was re-elected for a like term by the unanimous choice of the Republican and Democratic parties. In 1889 he was assigned by the Governor to be one of the justices of the General Term of the Supreme Court, and upon his re-election he was continued as a member of that appellate court. For about twenty-three years, and till his death, he was an active member of the Board of Trustees of the University of Rochester, and during most of that time he was a member of its Executive Committee. Justice Macomber was a man of broad learning, a judge of high probity, sagacity, and profound wisdom. He won the affection and respect of his associates upon the bench and of his brethren at the bar, and had the confidence and esteem of all who knew him.

Magrath, Andrew Gordon, jurist, born in Charleston, S. C., Feb. 8, 1813; died there, April 9, 1893. He was graduated at South Carolina College in 1831, took a course in the Harvard Law School, and was admitted to the bar in 1835. In 1840 and 1842 he was elected to the Legislature, and then practiced law till 1856, when President Pierce appointed him United States district judge for South Carolina. He held this office till the election of Abraham Lincoln, when he re-

signed, and was elected a delegate to the convention which adopted the ordinance of secession. From the organization of the Confederate Government till November, 1864, he was one of the Confederate judges for South Carolina; then was elected Governor by the Legislature; and after Lee's surrender, in 1865, he was arrested by the Federal authorities, and confined in Fort Pulaski till December. Since the war he had confined himself to law practice.

Mattson, Hans, pioneer, born in Christianstadt, Sweden, in 1832; died in Minneapolis, Minn., March 5, 1893. When seventeen years old he entered the Swedish artillery, and after serving two years emigrated to the United States, where he picked up odd jobs in Boston and other cities for a year or two, was a cabin boy on a Southern steamer for nearly a year, and then made his way to Galesburg and Moline, Ill. In the latter place his father joined him with several Swedish companions, and the party pushed on to Minnesota, took up claims in Goodhue County, and founded the present flourishing community of Vasa. In 1857 the pioneers were swamped in the reaction from the Western land speculation, and Hans moved to Red Wing and began studying law. He was admitted to the bar in the following year, and elected county auditor in the next, and held the office till the second call for volunteers in 1861, when he organized a company of fellow Swedes, and as its captain was mustered into the Union service with the 3d Minnesota Volunteers. He served till the close of the war, received the surrender of Gen. Jeff. Thompson and his command at Batesville, Ark., in 1865, and attained the rank of colonel. In 1866 he became editor of the "Svenska Amerikaner," and a member of the State Board of Emigration; in 1869 was elected Secretary of State of Minnesota; in 1870-'73 was European agent for Jay Cooke; and in 1876-'81 was publisher of the "Stats Tidning" in Minneapolis, and an editor of the "Svenska Tribunen" in Chicago. In July, 1881, he was appointed by President Garfield United States consul-general in India, and it is said that his commission bore the last official signature of the murdered President. He remained in Calcutta two years; was re-elected Secretary of State in 1886 and 1888; and during the past two or three years had been engaged in the banking business.

Mendes, Abraham Pereira, clergyman, born in Kingston, Jamaica, Feb. 19, 1825; died in New York city, April 4, 1893. When twenty years old he was sent to London to be educated for the Jewish ministry, and there studied with Rabbi Mendola, then chief of the Portuguese and Spanish Jews in England, and with Rabbi D. A. de Sola, whose daughter he subsequently married. On receiving his diploma he returned to Jamaica and began preaching in Montego Bay, being one of the first rabbis to preach to the Jews in the English instead of the more common Spanish language. Soon afterward he returned to England, where he was successively rabbi of the congregation in Birmingham, President of Northwick College in London, and chief rabbi of the Portuguese and Spanish Jewish communities. In 1883 he came to the United States, and had since been rabbi of the congregation in Newport, R. I. Dr. Mendes was author of many religious works, including "The Post-Biblical History of the Jews" and "The Law of Moses," a catechism, and of several schoolbooks.

Marlweather, David, legislator, born in Louisa County, Va., Oct. 30, 1800; died near Louisville, Ky., April 4, 1893. He received a country-school education, became a fur trader when eighteen years old, was one of a party who built the first hut on the site of the city of Council Bluffs, and when twenty-one years old went to work on his father's farm in Kentucky. In 1832 he was elected to the Legislature, and by re-elections served for fifty-five years, besides holding other offices. In 1849 he was a member of the State Constitutional Convention; in 1852 was elected United States Senator for the unexpired term of Henry Clay; and in 1854-'57 was Governor of the Territory of New Mexico. In 1885 he was a candidate for the fourteenth

time for the Legislature, and, meeting his first defeat, retired from political life to his farm.

Merrill, Margaret Manton, journalist, born in England, in 1859; died in New York city, June 19, 1893. She came to the United States with her parents at an early age; was graduated at the University of Minnesota in 1876; spent a year in travel in Europe; and then undertook a course at the Women's Medical College in Chicago, but was forced by ill health to abandon it. After publishing a temperance paper in Denver she made an elocutionary and lecturing tour of Australia, worked as literary, art, and dramatic critic on several newspapers in San Francisco, and removed to New York city in 1887. Subsequently she became a successful writer of stories for children. Her most recent stories were "The Soul of a Violin" and "The Story of Sarah Jenkins." In 1892 she wrote and presented with success in New York and London a historical impersonation of Mary Queen of Scots the night before her execution.

Millard, Henry B., physician and medical writer, born near Utica, N. Y., in 1833; died in Paris, France, Sept. 14, 1893. He was graduated at Hamilton College in 1855, and in medicine at the University of the City of New York in 1858; began practicing as a homoeopath and as assistant to Dr. Gray, the leader of the "new school" in New York city; and returned to the allopath school in 1887. Among other offices he was Professor of the Practice of Medicine in the Medical College and Hospital for Women, and was a member of the State Board of Examiners. Dr. Millard was probably best known for his special study of diseases of the kidneys, and for his writings. His "Treatise on Bright's Disease of the Kidneys" gained the gold medal of the New York Medico-Chirurgical Society, and is a standard authority, and the "Millard Test for Albumin," therein given, met with general acceptance. Among the large number of his professional publications were: "A Monograph on Aconite," "The Climate and Statistics of Consumption," "A Paper on Diphtheria," "The Thermo-Cautery in Disease," "Researches in the Minute Anatomy of the Epithelia of the Kidney," "On the Exclusion of Albumin in the Diagnosis of Interstitial Nephritis," "Albumin and its Nomenclature and Tests, and the Significance of Albuminuria," "The Most Sensitive and Credible Tests for Albumin," "On the Treatment of Sciatica and Neuralgic Affections by Congelation with the Chloride of Methyl," "Cocaine as a Local Anesthetic in the Use of the Thermo-Cautery," "The Habitat and Treatment of the Oxyuris or Ascaris Vermicularis," and "Artificial Alimentation in Cases of vomiting from Pregnancy."

Moore, Orren O., journalist, born in New Hampton, N. H., Aug. 10, 1839; died in Nashua, N. H., May 12, 1893. He received a public-school education; learned the printer's trade; entered journalism, and in 1869 established the "Nashua Daily Telegraph," which he edited till his death. He was a representative in the General Court in 1873, 1874, 1875, and 1887; tax commissioner in 1877; State Senator in 1878-'79; chairman of the State Railroad Commission in 1884-'87; and was elected to Congress as a Republican in 1890, serving on the Committees on Pacific Railroads, on District of Columbia, and on Enrolled Bills. He was widely known as a political orator.

Mordecai, Benjamin, philanthropist, born in Charleston, S. C., in 1809; died in New York city, March 30, 1893. At the beginning of the civil war he was considered the wealthiest merchant in Charleston. He supported the Confederacy with great liberality, and organized a series of stores throughout South Carolina in which people could buy food and clothing at the cost of importation. After the war he spent some time in Canada, and, returning to South Carolina, gave his time and the remnant of his wealth to the development of local industries. Among other enterprises he established the great Kalmia cotton mill plant.

Morgan, George Washington, military officer, born in Washington County, Pa., Sept. 20, 1820; died in Fort Monroe, Va., July 27, 1893. In 1836 he enlisted in a

company raised by his brother for the Texan army, and, after reaching the rank of captain, resigned. In 1841 he entered the United States Military Academy, but left it before graduation to take up the study and practice of law at Mount Vernon, Ohio, where he subsequently lived. At the beginning of the Mexican War he was first appointed colonel of the 2d Ohio Volunteers, and afterward colonel of the 15th United States Infantry. He distinguished himself at Contreras and at Churubusco, where he was wounded, and returning home the Legislature voted him its thanks and brevetted him brigadier-general for his gallantry. In 1856 he was appointed United States consul at Marseilles, and from 1858 to 1861 he was United States minister to Portugal. He hastened home at the beginning of the civil war, was immediately commissioned a brigadier-general of volunteers, served first with Gen. Don C. Buell, and in March, 1862, was appointed commander of the 7th Division of the Army of the Ohio, with instructions to occupy Cumberland Gap. Subsequently he served under Gen. Sherman at Vicksburg, and, under assignment to the 18th Army Corps, commanded the force which captured Fort Hinman, Ark. In 1863 he resigned from the army on account of ill health; in 1865 was defeated as Democratic candidate for Governor of Ohio; and in 1866 and 1870 was elected to Congress, where he served on the Committee on Foreign Affairs, on Military Affairs, and on Reconstruction.

Morton, Louis Mills, chemist, born in Athol, Mass., in 1835; died in Auburndale, Mass., April 26, 1898. He was graduated at the Massachusetts Institute of Technology in 1875; continued his studies and received the degree of Ph. D. in the University of Göttingen in 1879; held the chair of Industrial Chemistry in the Institute of Technology in 1879-82.

Mullaney, Patrick John (known in religion as Brother *Assaria*), educator, born in Killemain, County of Tipperary, Ireland, June 28, 1847; died in Plattsburg, N. Y., Aug. 20, 1898. He removed to the United States in 1850, made his preparatory studies in the Academy of the Christian Brothers in Utica, entered the novitiate of that order in New York city in 1862, and finished his studies in Rock Hill College, near Baltimore. Directly afterward he became Professor of Mathematics in the college, and subsequently was its president for several years. In 1877 he went to Europe and spent much time in studying French and English literature. He returned to the United States in 1888, and became Professor of Rhetoric and English Literature in the De la Salle Institute, New York city, holding the chair till his death. He was one of the founders of the Catholic Summer School in Plattsburg, was an accomplished lecturer, and at the time of his death he had just finished a course of lectures at the Summer School. He was widely regarded as one of the highest authorities in the world on pedagogics. For many years he had been a voluminous writer of books and of essays for American and foreign magazines, including the "American Catholic Quarterly Review," the "North American Review," the "Forum," and the "Fortnightly" and "Contemporary" reviews of London. Among larger works he had published the "Philosophy of History," "Development of English Thought," "Style, as found in Herbert Spencer's Works," and "Phases of Thought and Criticism," and had in course of preparation "The History of Education from the Earliest Ages to the Present Day" and a "History of English Literature." Among his special lectures were: "Psychological Aspects of Education," before the Regents of the University of New York (1877); "Literary and Scientific Habits of Thought," before the International Congress of Education (1884); "The Relation of Church and State," before the Farmingham School of Philosophy (1890); and "Religion in Education," before the New York State Teachers' Association (1891).

Murdoch, James Edward, actor, born in Philadelphia, Pa., June 25, 1811; died in Cincinnati, Ohio, May 19, 1898. He was a son of Thomas Murdoch, a book-

binder, whose trade he learned and followed for a short time, abandoning it to prepare for the stage, for which he showed a natural taste. After several successful appearances on the amateur stage, he first came before the public as a professional on Oct. 13, 1829, when he played the part of Frederick in "The Lover's Vows," in the Arch Street Theater, Philadelphia. His first ventures with stock companies were disappointing, but he attracted the attention of Edwin Forrest, who, two or three years afterward, invited him to play the part of Pythias to his own Damon. This engagement gave him a hold on public regard, and till 1840 he appeared in the large cities in a variety of leading tragic and comic characters. In 1840, while managing the National Theater in Boston, he retired from the stage, and for five years applied himself closely to study, to lecturing, and to teaching elocution. In 1845 he reappeared in the Park Theater, New York city, as Hamlet, and in the next fifteen years was constantly before the public in the United States and in Europe. During the civil war he gave readings in all the large cities of the North for the benefit of the United States Sanitary Commission, nursed the sick and wounded Union soldiers, and for some time was a volunteer aid on the staff of Gen. William S. Rosecrans. After the war he retired to his farm near Cincinnati, where he engaged in grape growing. In 1879 he delivered a course of lectures before the Philadelphia School of Oratory. His most successful appearances were in the parts of Romeo, Charles Surface, Don Felix, Rover, Alfred Evelyn, and Vapid; and his last one was as Hamlet and Charles Surface at a benefit given him in Cincinnati on April 28, 1887. Mr. Murdoch was associated with William Russell in the publication of "Orthophony, or Culture of the Voice" (Boston, 1845), and "The Stage" (Philadelphia, 1880).

Neill, Edward D., clergyman, born in Philadelphia, Pa., in 1828; died in St. Paul, Minn., Sept. 26, 1898. He was educated at Amherst College and at the University of Pennsylvania, and became the first Protestant clergyman in Minnesota in 1849. He was author of historical works, notably a "History of Minnesota," first published in 1875; 8th edition, 1898.

Newall, McFadden Alexander, educator, born in Belfast, Ireland, Sept. 7, 1824; died in Havre de Grace, Md., Aug. 14, 1898. He was graduated at Trinity College, Dublin; was for some time a tutor in the family of the Earl of Dufferin; removed to the United States in 1848; was Professor of Natural Science in Baltimore City College in 1850-'54; and subsequently held the same chair in Lafayette College. In 1865 he was appointed Principal of the Maryland State Normal School; in 1868, State Superintendent of Public Instruction; and in 1877 was President of the National Educational Association. Prof. Newall was associated with Prof. William R. Creery in editing "The Maryland Series" of school text-books, was sole author of several similar works, including six "Newall Readers," and for a long time was editor of the "Maryland School Journal."

Newhall, James Robinson, historical writer, born at Lynn, Mass., Dec. 25, 1809; died there, Oct. 24, 1898. He was a lineal descendant of Thomas Newhall, the first white child born in Lynn, and in 1824 was apprenticed to the printer's trade in the office of the Salem "Gazette." Subsequently he was foreman in a book-publishing house in Boston, and a newspaper editorial writer in New York city. In 1847 he was admitted to the bar, and afterward practiced in Lynn, and held a judgeship for thirteen years. His publications included "The Essex Memorial" (1838); "Lou: or the Jewels of the Third Plantation" (1862); "The History of Lynn" (1865); and the "Centennial Memoir of Lynn" (1876).

Newson, Thomas McLean, author, born in New York city, Feb. 22, 1827; died in Malaga, Spain, March 30, 1898. He learned the printer's trade in the office of the "Derby Journal" in Birmingham, Conn.; established the first daily penny newspaper in Connecticut; was secretary of the first editorial association

there, and became active as a politician and lecturer. In 1853 he removed to St. Paul, Minn.; in the following year established the "Daily Times" there; and in 1856 was the sole representative of the newly formed Republican party in its first national convention. On Nov. 26, 1862, he was commissioned captain and commissary of subsistence in the Union army; fitted out Gen. Sibley's Indian expedition with nearly 400,000 rations; became chief of the commissariat at St. Cloud, where he supplied twelve different military posts; and afterward was on duty at Forts Ripley and Snelling. In 1866 he commanded a company which explored the Vermilion lake region, prospecting for precious metals, and later he spent much time prospecting in the Black Hills. President Harrison appointed him United States consul at Malaga, Spain, in the summer of 1891, and he died at his post. He was author of "Thrilling Scenes among the Indians," drawn from personal observations; "Pen Pictures and Biographical Sketches of Old Settlers of St. Paul from 1838 to 1857"; "Recollections of Eminent Men"; "Indian Legends"; and "Heleopa."

Nussbaum, Isaac, philanthropist, born in Bavaria; died in Albany, N. Y., May 21, 1893. He came to the United States in 1848; was aid-de-camp to Gov. Horatio Seymour in 1862-'64; was also on the staffs of Govs. Hoffman, Tilden, and Robinson; and founded the Jewish Home for the Aged in Albany.

Osborne, Edward B., journalist, born in Northampton, Mass., Aug. 3, 1814; died in Albany, N. Y., July 20, 1893. When thirteen years old he was apprenticed to the printer's trade in the office of the Northampton "Gazette." In 1836 he became publisher of the Quincy "Patriot," which supported John Quincy Adams in his canvass for Congress; then went to the Danbury "Times" in the same capacity and remained till 1853; removed to Poughkeepsie; purchased the "American"; changed its name to the "Dutchess County Democrat," and combined it with the "Telegraph" in 1856; and was editor of the latter newspaper till 1883, when he retired from active business. He was a member of the New York Assembly in 1844-'85 and 1889; clerk of Dutchess County in 1886-'89; and State Senator in 1890-'92, obtaining his seat after a contest.

Otis, Charles G., manufacturer, born in Troy, N. Y., in 1831; died in Brooklyn, N. Y., Aug. 7, 1893. He was the elder of the two sons of Elisha G. Otis, who in 1854 established in Yonkers, N. Y., the nucleus of the present great elevator works. He entered his father's factory about 1856, and was joined by his brother, Norton P. Otis, in 1858. On the death of their father, in 1861, the sons conducted the business till 1867, when, in consequence of the great demand for passenger and freight elevators caused by the erection of monster buildings, they organized a stock company, of which Charles became president and Norton secretary and treasurer. The company was highly successful, repeatedly enlarged its plant, built branch works in Chicago to accommodate its business in the Western States, and placed its elevators in nearly every large city in the world. Probably the most noted success of the company was the equipment with its elevators of the Eiffel Tower at the Paris Exposition in 1889.

Owens, John G., archaeologist, born in Louisburg, Pa., in 1866; died in Honduras, Central America, Feb. 18, 1893. He was graduated at Bucknell University in 1887; had been a teacher in the South Jersey Institute; was completing his third year as a graduate student in Harvard; and at the time of his death was in charge of the Honduras expedition under the auspices of the Peabody Museum of American Archaeology and Ethnology of Harvard University. Early in the previous winter he had explored the ancient ruined city of Copan, and on his last expedition he had made special explorations of the old city of Quirigua and taken molds of the great carved monoliths or stone idols of that neighborhood, from which casts were to be made and set up as supplementary to the ruins of Yucatan on the exhibition grounds in Chicago.

Pardee, Dwight Whitfield, jurist, born in Bristol, Conn., Feb. 10, 1822; died in Hartford, Conn., Oct. 6, 1893. He was graduated at Trinity College in 1840; served two terms as State Senator; was judge of the Superior Court of Connecticut in 1863-'74; an associate justice of the Supreme Court of the State in 1874-'89; and then declined reappointment.

Parsons, George Frederic, journalist, born in Brighton, England, June 15, 1840; died in New York city, July 19, 1893. He was educated by private tutors, apprenticed in the mercantile marine service in 1856, and promoted to first mate before reaching his majority. In 1862 he went with his father to British Columbia, attracted by the Fraser river gold excitement, and, failing in his first business venture, established and edited for two years the "North Pacific Times." He removed to San Francisco in 1865, and for seventeen years was engaged in editorial work in that city and in Sacramento. In 1882 he removed to New York city, and became an editorial writer on the "Tribune" and a contributor to various publications. Mr. Parsons had collected a valuable library, especially of works relating to witchcraft and occultism.

Patterson, James Willis, Senator, born in Henniker, N. H., July 2, 1823; died in Hanover, N. H., May 4, 1893. He was graduated at Dartmouth in 1843, and studied for the ministry, but was not ordained. He was a tutor in Dartmouth in 1852-'54, Professor of Mathematics there in 1854-'59, and Professor of Astronomy in 1859-'65. He was Secretary of the State Board of Education for five years. He was a member of the New Hampshire Legislature in 1862, was then elected to Congress as a Republican, and in 1866 was chosen United States Senator for the term ending March 4, 1873. He was author of the bill constituting consular clerkships, and also of that establishing colored schools in the District of Columbia, and was chairman of the Committee on Retrenchment and Reform, and of that on the District of Columbia. In 1872 it was discovered that various members of Congress had held stock in a joint stock company called the Crédit Mobilier of America, which had been the construction company of the Union Pacific Railroad; and this was held to be highly improper, because the value of the stock might be greatly affected by their votes. An investigation was ordered, which in the House of Representatives resulted in the formal censure of two members. The report of the Senate committee (Feb. 27, 1873) closed with a resolution to expel Senator Patterson, but the resolution was not adopted, and in a few days his term expired. Later and very thorough investigation shows that Mr. Patterson's supposed connection with the affair can all be explained, and that the committee's report, in seeking to make a scapegoat of him, was grossly unjust. He had been a regent of the Smithsonian Institution in 1864-'65, and a delegate to the loyalist convention in Philadelphia in 1866. In 1877 and 1878 he was again a member of the Legislature of his State, and in 1885 he was appointed State Superintendent of Public Instruction, which office he held as long as he lived. Iowa College gave him the degree of LL. D. in 1866. Mr. Patterson made a fine appearance on the platform, and was one of the most agreeable and convincing of orators. In 1880 he delivered the address at the unveiling of the soldiers' monument in Marietta, Ohio.

Peabody, Andrew Preston, educator, born in Beverly, Mass., March 19, 1811; died in Boston, Mass., March 10, 1893. He was graduated at Harvard in 1828, and at its Divinity School in 1832; then spent a year as tutor in mathematics in the college; and in 1833 was chosen junior pastor of the South Unitarian parish in Portsmouth, N. H., and within three weeks became sole pastor. He held this charge without interruption till 1860, when he succeeded Bishop Huntington as Plummer Professor of Christian Morals in Harvard, and also as preacher to the college, and held these offices till 1881, when, resigning to give his whole attention to a mass of literary work he had in preparation, he was unanimously elected professor emeritus. He received the degree of D. D. from Harvard Col-

lege in 1852, and LL. D. from the University of Rochester in 1863. Twice while holding his professorship in Harvard he was acting president. He was a frequent contributor to the "Whig Review" in 1837-'59; was editor of the "North American Review" in 1852-'61; and was a periodical contributor to the "Christian Examiner," the "New England Magazine," the "American Monthly," and to other publications of a religious and educational character. Among his numerous books were: "Lectures on Christian Doctrine" (Boston, 1844); "Sermons of Consolation" (1847); "Conversation: Its Faults and its Graces" (1856); "Christianity the Religion of Nature" (1864); "Sermons for Children" (1866); "Reminiscences of European Travel" (New York, 1868); "Manual of Moral Philosophy"; "Christianity and Science" (Boston, 1874); "Christian Belief and Life" (1875); "Harvard Reminiscences" (1888); and "Harvard Graduates whom I have known" (1890).

Peters, John G., bacteriologist, born in New York city in 1819; died in East Williston, Long Island, N. Y., Oct. 21, 1893. He was graduated at the New York College of Physicians and Surgeons; took post-graduate studies in Berlin and Vienna; and had been in practice in New York city since 1842, beginning as a homoeopath and becoming an allopath. For many years he had made a special study of Asiatic cholera, and he had collected the largest library on that subject in the United States. He assisted Dr. Edmund C. Wendt in preparing a treatise on cholera, and in 1866 published "Notes on Asiatic cholera," which has become a standard work. In 1873 he visited the cholera-stricken cities in the Southern and South-western States, and his report was published by order of Congress. Five years afterward he rendered invaluable service in checking the spread of yellow fever. He suggested new remedies in the treatment of consumption, Bright's disease, and membranous croup; published treatises on diseases of the brain and nervous system; assisted Dr. A. S. Witherspoon in translating Rokitsansky's "Pathological Anatomy"; and published "Materia Medica" (1856-'80).

Peters, Thomas McClure, clergyman, born in Boston, Mass., June 6, 1821; died in Peekskill, N. Y., Aug. 12-13, 1893. He was graduated at Yale University in 1841, and at the General Theological Seminary of the Protestant Episcopal Church in New York city in 1847; and was ordained on June 27 of the latter year. He had been a lay reader in the parish of St. Michael, New York city, since 1842, and after ordination he was chosen assistant rector there, and on Sept. 25, 1858, rector. He held this charge till his death, and also that of archdeacon of the diocese of New York from 1892. He received the degree of S. T. D. from Trinity College, Hartford, in 1865. Dr. Peters was a founder of the City Mission, and of the Sheltering Arms; president of the Children's Fold, the Shepherd's Fold, and the Home of Rest for Consumptives; director of the Manhattan Hospital; and member of the New York Historical and Genealogical Societies.

Pillsbury, Gilbert, abolitionist, born in Hamilton, Mass., Feb. 23, 1813; died in North Abington, Mass., Jan. 3, 1893. He was a brother of Parker Pillsbury, and was graduated at Dartmouth College in 1840. Prior to the beginning of the civil war he taught in the Ellington (Conn.) Academy, and in New Jersey; and with his wife founded and conducted a young ladies' seminary in Ludlow, Mass. He was also an earnest member of the band of Massachusetts abolitionists, and made many sacrifices for the anti-slavery cause. On the organization of the Freedmen's Bureau he was appointed one of its agents, and assigned to duty, first at Hilton Head, and afterward at Charleston. With his wife he was active in the work of educating the freedmen; and at Charleston he was placed in charge of the orphan asylum, and also of abandoned property. During the reconstruction period he aided in framing the new Constitution of South Carolina; was Mayor of Charleston three years; and at the close of his term was presented by the citizens with a gold watch and a gold-headed cane.

Pinneo, Timothy Stone, grammarian, born in Milford, Conn., Feb. 18, 1804; died in Norwalk, Conn., Aug. 2, 1893. He was graduated at Yale in 1824, and later in the medical department; practiced in the South for several years; became Professor of Belles-lettres in Marietta College, Ohio; and on removing to Cincinnati began compiling text-books on grammar which greatly simplified that study. He published about fifty books in all, and most of them were translated into foreign languages, including Japanese. His principal works were "Pinneo's Series of Grammars," "Pinneo's False Syntax," "Pinneo's Composition Book," and all but the first of the series of "McGuffey's Readers."

Pixley-Fulford, Annie, actress, born in New York city, in 1855; died in London, England, Nov. 8, 1893. She was educated at the Convent of Notre Dame, in San José, Cal., and made her first appearance in public as a singer in an amateur entertainment in San Francisco. A juvenile concert troupe was organized, consisting of Annie, her sisters Minnie and Lucy, and their brother Augustus, and successful entertainments were given in the principal mining towns of California, and in Oregon and British America. In 1871 she married Robert Fulford, and in 1876 she made her first appearance on the dramatic stage, in "Snowflake," in the San Francisco Grand Opera House. She and her husband played together in a stock company for three years; then she bought a dramatization of Bret Harte's "M'liss," and set out on a starring tour, with her husband as business manager. She first appeared in this play in New York city on Sept. 23, 1878, at Niblo's, and in the next ten years presented it with great financial success in all the large cities. She then produced "The Deacon's Daughter," and alternated that with "M'liss" and a season of comic opera in 1891 till shortly before her death.

Prescott-Shepherd, Marie, actress, born in Paris, Ky., in 1853; died in New York city, Aug. 23, 1893. She was a daughter of Judge Victor Prescott, and made her first appearance on the stage as Lady Macbeth in the Grand Opera House, Cincinnati, in 1876. Her success in this led to a longer engagement, in which she played the parts of Lady Teazle, Lady Gay Spanker, and Meg Merrilies. In the following year she went to the Brooklyn Theater, playing Mother Fadet to Maggie Mitchell's "Fanchon"; and when Miss Mitchell played a round of her favorite characters in the Standard Theater, New York city, Miss Prescott supported her. Subsequently she supported John McCullough as leading woman, and Salvini; appeared in "Rose Michel"; produced "Vera, the Nihilist," by Oscar Wilde, and "A Moral Crime" at the Union Square Theater; and in 1886 began a starring tour of Western and Southern cities, with Robert D. Shepherd, known on the stage as Robert D. McLean (whom she married in 1892), producing Shakespearean plays chiefly. In 1892 she and her husband appeared in two of her adaptations, "Cleopatra," and "L'Absintheur."

Puttkamer, Albert von, clergyman, born in Potsdam, Germany, Oct. 4, 1806; died in West Farms, N. Y., March 21, 1893. Graduating at the Military Institute in Berlin, he was commissioned a 2d lieutenant in the King's Guard. In 1836 he resigned, removed to the United States, and became a teacher in Lawrenceville, N. Y. The following year he was received into the Baptist Church, and, with an appointment as agent and colporteur of the Tract Society, engaged in missionary work among his fellow-countrymen. In New York city he organized the First German Baptist Church, which was the first church exclusively for Germans in that denomination organized in the United States, and after ordination became its pastor. Subsequently he organized the German Baptist Church in Buffalo, and was its pastor fourteen years, and similar churches in Cincinnati and Albany, remaining with the latter eleven years. At the beginning of the civil war he entered the Union army as a chaplain, but soon afterward exchanged the commission for that of a captain of artillery under Gen.

Hunt. He took part in several engagements, and in the battle of Chancellorsville commanded three batteries. Soon after this battle he resigned, and resumed his pastorate in Albany. About 1882, on the occasion of a reunion of the Puttkamer family, he revisited his former home, and was astonished by an announcement that during his residence in the United States he had inherited and then forfeited by his absence the large family estate in Pomerania, which included about 50 villages, and yielded a vast revenue. The property had been secured by a relative, who successfully resisted dispossessing measures, and refused to make him an allowance of \$4,000 per annum, which he agreed to take in lieu of his claim. He then returned to the United States, and continued in the ministry till 1888, when the infirmities of age led him to retire.

Queen, Walter W., naval officer, born in Washington, D. C., Oct. 6, 1824; died there, Oct. 24, 1898. He was appointed a midshipman in the United States navy, Oct. 7, 1841; was promoted passed midshipman, Aug. 10, 1847; master, Sept. 15, 1855; lieutenant, the following day; lieutenant-commander, July 16, 1862; commander, July 25, 1866; captain, June 4, 1874; commodore, Feb. 9, 1884; rear-admiral, Aug. 28, 1886, and was retired Oct. 6, 1886. During his naval career he was on sea service eighteen years, on shore or other duty sixteen years, and was unemployed seventeen years. In the Mexican War he was attached to the frigates "Cumberland" and "Ohio"; served in the fort at Point Isabel during the battles of Palo Alto and Resaca de la Palma; and took part in the attacks on Alvarado, Tampico, Tusan, and Vera Cruz. In 1848 he was dismissed from the navy for fighting a duel, but in 1858 he was reinstated. During the civil war he participated in the re-enforcement of Fort Pickens; commanded the 2d Division of Porter's mortar flotilla in the bombardment of Forts Jackson and St. Philip in April, 1862, and in the attack on Vicksburg in June, 1863; and commanded the gunboat "Wyalusing" in the engagement with the Confederate ram "Albemarle" and her consorts "Bomshell" and "Cotton Plant" on May 5, 1864, when the ram, to prevent capture, sought refuge in Roanoke river. His last service was as commandant of the navy yard at Washington, D. C., in 1885-'86.

Reason, Charles L., educator, born in New York city, of free colored parents, refugees from Hayti, in July, 1818; died there, Aug. 16, 1898. He was educated in the old Quaker school in Mulberry Street, and in 1832 became a teacher in the Quaker school in Laurens Street. With his salary he paid for advanced private instruction, and became an accomplished mathematician and linguist. In 1833 he was appointed a teacher in a school for colored children, conducted as a part of the public-school system. For thirty years he was principal of Colored Grammar School No. 2, and since 1888 had been principal of Grammar School No. 80. In all, he had been a public-school teacher for fifty-seven years, and was, in point of service, the oldest public-school teacher in New York city.

Reynolds, Lovell K., naval officer, born in Keokuk, Iowa, in 1857; died in Washington, D. C., Feb. 16, 1898. He was appointed a cadet in the United States Naval Academy, from Alabama, June 5, 1871; was graduated, June 20, 1876; promoted ensign, Dec. 28, 1878; lieutenant in the junior grade, Jan. 9, 1886; and lieutenant, June 25, 1891; and had been in command of the United States Coast-Survey steamer "Endeavor" since July 26, 1890. On Nov. 24, 1879, the "Constellation," to which he was attached, sighted the Hungarian bark "Olivia" in distress in a heavy storm off the Azores. Ensign Reynolds volunteered to go to the relief of the ship with a boat's crew, and reached the "Olivia" in time to rescue her captain and crew of eleven men. For this heroic act he received the thanks of the Austrian Government and the decoration of the Royal and Imperial Order of Francis Joseph, the Life-Saving Benevolent Association of New York presented him with a gold medal,

and he was also given the special medal authorized by Congress for rescuing life. Subsequently he was a member of the Greeley Relief Expedition, and was one of the first to reach the survivors.

Roberts, Milton Josiah, surgeon, born in Norwalk, Ohio, in 1850; died in New York city, April 26, 1893. He was educated at Cornell University, and in medicine, at the University of the city of New York; became an assistant of Prof. Sayre, under whom he developed a special taste for orthopaedic surgery, and, in surgical operations, of Dr. George M. Beard; was appointed Professor of Orthopaedic Surgery in the University of Vermont, visiting orthopaedic surgeon to the city hospitals on Randall's Island, and consulting orthopaedic surgeon to the Woman's Hospital in Brooklyn; and established and edited the "Annals of Surgery," a technical periodical of high merit. He also invented a number of devices and apparatus to facilitate surgical work and to relieve deformities and suffering, notably a spinal corset.

Robinson, Alfred Peter, jurist, born in Georgetown, Del., Feb. 17, 1842; died there, March 1, 1893. He was admitted to the bar of Sussex County in April, 1868; began practicing in partnership with his father, and continued alone after the latter's death, in 1866; was appointed Deputy Attorney-General in 1875; and became Chief Justice of Delaware, Jan. 26, 1893.

Robinson, William Mattison, journalist, born in Meredith, N. H., in 1840; died in New Orleans, La., Aug. 18, 1898. He was apprenticed to the printer's trade, and worked at the case and on newspapers in Boston till the beginning of the civil war, when he enlisted in the 8th Massachusetts Battery. Subsequently he joined the 10th United States Heavy Artillery, with which he won the brevet rank of major. After the war he settled in New Orleans, re-entered journalism, and was engaged in it till his death, serving many years on the staff of the "Republican" and for the last thirteen on that of the "Picayune." During his residence in New Orleans he held several Federal and State offices.

Roots, Logan H., philanthropist, born in Perry County, Ill., March 26, 1841; died in Little Rock, Ark., May 30, 1893. He became principal of the high school in Duquoin, Ill., in 1861; was graduated at the Illinois State Normal University in 1862; aided in organizing and enlisted in the 81st Illinois Volunteers immediately after leaving the university; was chief depot commissary for General Sherman's army on its march to the sea; and served to the close of the war. He then settled in Arkansas, engaged in planting and trading, became active in politics after the passage of the reconstruction acts, and was elected to Congress from the 1st Arkansas District as a Republican in 1866 and 1868. On the expiration of his second term he applied himself to the development of Arkansas, and acquired an estate valued at \$1,400,000. In his will he directed that his estate be held intact till the year 1914, one half of the income up to that time going to his wife and daughters, one tenth to be applied to charitable and humanitarian purposes, two tenths to a brother and sister, the remaining two tenths to be invested. He authorized the income of \$20,000 to be paid to the city of Little Rock for the period of twenty years for the support of the poor and needy, and directed that after the year 1914 the residue of his estate, after payment of specific legacies of \$500,000, be paid to the city for park and hospital purposes, provided the State, county, or city will raise an equal fund, otherwise the proposition to be made to the city of Hot Springs or Eureka Springs. It was thought that the residue would amount to about \$700,000.

Rusk, Jeremiah McLain, agriculturist, born in Morgan County, Ohio, June 17, 1830; died in Viroqua, Wis., Nov. 21, 1893. He received a common-school education, was brought up on a farm, and on removing to Vernon County, Wis., in 1853, was successively engaged in farming and in conducting a hotel. In 1855 he became sheriff, and in 1861 was sent to the Legislature. Early in 1862 he raised the 25th Wisconsin

Volunteer Infantry for the National army, and accompanied it to the front as its major. He was promoted lieutenant-colonel in August, 1863, and as commander of the regiment took part in Sherman's Meridian campaign and in movements connected with the Atlanta campaign. After the death of Gen. McPherson he held the command on the front, and in the march to the sea had the advance of the 17th Corps. He was complimented in general orders for his services; was brevetted colonel and brigadier-general, to date from March 13, 1865; and on being mustered out of the service, in June following, was presented with a handsome testimonial by the officers of his regiment. Returning home, he was elected bank comptroller of Wisconsin in 1865 and 1867, and member of Congress, as a Republican, in 1871, 1873, and 1875. While in Congress he served as chairman of the Committee on Pensions; opposed the back-pay bill, and after it had passed covered his back pay into the Treasury. In 1881 he was elected Governor of Wisconsin, and in 1884 and 1886 was re-elected. While Governor, he suppressed an anarchist outbreak by ordering the militia to fire on the crowd the moment violence was attempted, and in a threatened railroad riot refused to call out troops, declaring that the men on strike needed bread, not bayonets, and forced a settlement of the claims of the discontented workmen. In 1888 he was a candidate for the Republican nomination for President, and after the election of Gen. Harrison Gen. Busk was appointed secretary of the newly created Department of Agriculture, and he held the office to the close of President Harrison's Administration. For a portrait, see "Annual Cyclopædia" for 1889, page 804.

Sanford, Edward Isaac, jurist, born in New Haven, Conn., in 1826; died there, July 13, 1893. He was graduated at Yale College in 1847, and at its law school a few years afterward; was a State Senator in 1864-'65; was appointed a judge of the Superior Court of Connecticut by Gov. English in 1867; and held the office till the legislative dead-lock in 1890-'91, when Gov. Bulkeley renominated him, but he was not confirmed.

Saulsbury, Eli, lawyer, born in Misspillion Hundred, Kent County, Del., Dec. 29, 1817; died in Dover, Del., March 22, 1893. He was the fourth of five sons of William Saulsbury, a farmer; received a public and private school education; took a partial course at Dickinson College; studied law with his youngest brother, Willard, afterward Chancellor of the State and United States Senator; and was admitted to the bar in 1845. He settled in Dover to practice, and soon entered political life. In 1853 and 1854 he was elected to the Legislature; in 1871 to the United States Senate, to succeed his brother Willard; and in 1876 and 1883 was re-elected Senator. In the Senate he opposed the act to enforce the provisions of the 14th amendment to the Federal Constitution, and the presence of Federal troops at the organization of the Louisiana Legislature. His last service was as chairman of the Committee on Engrossed Bills, and as member of the Committees on Foreign Relations, on Post-Offices and Post Roads, and on Privileges and Elections. The contest in Delaware in 1871 for the United States senatorship was in many respects remarkable. Willard Saulsbury was a candidate for re-election, and had the support of Sussex County. His brother Gove, who had just completed his term as Governor, was put in nomination by Kent County. New Castle County was divided, part of the delegates favoring Willard, another part Gove, and a third part hoped for a compromise candidate, and suggested Eli. On the first and second ballots the vote stood 14 for Gove, 13 for Willard, and 3 for Eli. The latter then consented to stand as compromise candidate against his two brothers, and on the fourth and last ballot won by a vote of 16 to 14 for Gove.

Sawyer, Henry W., civil war veteran, born in Lehigh County, Pa., in 1827; died in Cape May, N. J., Oct. 16, 1893. He was a member of the 1st New Jersey Cavalry; was one of the guards selected to protect the

national Capitol on the night of April 19, 1861; and was taken prisoner by the Confederates in the battle of Brandy Station, June 9, 1863, and sent to Libby Prison. While in confinement he and Capt. Flynn, of the 51st Indiana Volunteers, were drawn by lot to be executed, but both were saved by the interference of a Roman Catholic priest as the men were riding on their coffins to the place of execution. President Lincoln heard of the case, and notified the Confederates that he would cause two Confederate prisoners to be shot if Flynn and Sawyer were executed. Mr. Sawyer was subsequently exchanged, reached the rank of colonel, and received a medal and the thanks of Congress. For many years he was superintendent of the Life-Saving Service on the New Jersey coast.

Schaff, Philip, clergyman, born in Coire, Canton Graubunden, Switzerland, Jan. 1, 1819; died in New York city, Oct. 20, 1893. He was graduated at the University of Berlin in 1841, after taking courses in Coire College, Stuttgart Gymnasium, and the Universities of Tübingen and Halle, and then spent a year in European travel as tutor to a Prussian nobleman. In 1842 he returned to the University of Berlin as lecturer on Biblical exegesis and Church history; in 1844 was ordained in Elberfeld, and the same year removed to Merceburg, Pa., under appointment as professor in the theological seminary of the German Reformed Church of the United States. Within a year he was placed on trial for heresy, because of the liberal opinions expressed in his opening address on "The Principle of Protestantism as related to Romanism and the Present State of the Church," but was acquitted by the Synod of York, Pa., and continued his relations at the seminary till 1863.

In 1854 he was selected to represent the German Reformed Church of the United States at the ecclesiastical diet in Frankfurt, and at the Swiss pastoral conference in Basel; and while in Europe he lectured on "America" in Berlin and other cities, and received the degree of D. D. from the University of Berlin. His work at Merceburg terminated in 1863, when the seminary building was turned into a military hospital. He then removed to New York city, where, in 1864, he was appointed secretary of the Sabbath Committee, and during the five years that he held this office he lectured on Church history at the theological seminaries in Andover, Hartford, and New York city. He also revisited Europe twice during this period, in 1865 and 1869. In 1870 he was elected Professor of Sacred Literature in Union Theological Seminary, New York city, an office he held actively till the spring of 1893, when he was retired as professor emeritus. He was one of the founders and honorary secretary of the American branch of the Evangelical Alliance, and went to Europe in 1869, 1872, and 1873 to arrange for the general conference of the Alliance, which was held in New York city in October, 1873. In 1871 he was one of the delegates of the Alliance to plead with the Emperor of Russia for a concession of religious liberty to Russian subjects in the Balkan provinces; in 1875 a delegate to the meeting in London which organized the Alliance of the Reformed Churches, and two years afterward to its first general council, in Edinburgh; in 1880 was chairman of the programme committee for the second general council in Philadelphia; and in 1879 and 1884 was a delegate to the general conferences of the Evangelical Alliance in Basel and Copenhagen respectively. When the English Committee on Bible Revision was organized the members sought Dr.

Schaff's co-operation, and on the organization of the American committee in 1871 he was chosen its president. To this great work he applied himself with unflagging zeal, and when the actual revision was finished he was sent to England to arrange for its publication. While on this mission, in 1875, he attended a conference of the Old Catholics, Greeks, and Protestants, in Bonn, called with a view to promote Christian unity among those Churches. Two years previously he had sought to arouse interest in plans for Church unity by establishing the "Kirchenfreund," a German monthly periodical. In 1888 he founded the American Society of Church History, and became its first president. He also was engaged with Prof. Henry B. Smith in editing the "Philosophical and Theological Library." His last public appearance was at the Parliament of Religions in Chicago, in September, 1893, where, though suffering from a paralytic stroke, he was anxious to raise his voice in behalf of religious liberty. With all his exacting duties Dr. Schaff was an indefatigable editor and writer. He edited the Anglo-American adaptation of Lange's "Critical, Theological, and Homiletical Commentary on the Bible," in 25 vols. (New York and Edinburgh, 1864-'80; new edition, 1886); the "Popular Illustrated Commentary on the New Testament," in 4 vols. (New York and Edinburgh, 1878-'88; reissued as "International Revision Commentary on the New Testament," New York, 1882 *seq.*); with Arthur Gilman, "Library of Religious Poetry" (New York, 1881; new edition, 1886); "The Schaff-Herzog Encyclopedia of Religious Knowledge," 8 vols. (New York and Edinburgh, 1884); and other works. His best-known individual writings are: "History of the Apostolic Church" (Mercersburg, 1851); "History of the Christian Church" (New York, 1858 *seq.*); "The Creeds of Christendom" (New York and London, 1877; 4th ed., 1884); "A Companion to the Greek Testament and the English Version" (New York and London, 1888; revised edition, 1885); "Bible Dictionary" (Philadelphia, 1890; 3d ed., revised, 1885); "Historical Account of the Work of the American Committee of Revision of the English Version" (1885); "Church and State in the United States" (1888); "The Renaissance" (1891); and "A General Introduction to the Study of Theology, Exegetical, Historical, Systematic, and Practical" (1893).

Schofield, John, jurist, born in Clark County, Ill., in 1834; died in Marshall, Ill., Feb. 13, 1893. He was brought up on a farm; studied law and taught a district school in 1851-'54; and was graduated at the Louisville Law School, admitted to the bar, and elected State attorney for the 4th Judicial Circuit in 1856. In the latter year also he became active in politics and made speeches for James Buchanan. He was elected to the Legislature in 1860, and to the State Constitutional Convention in 1869; was general solicitor for Illinois for the Vandalia Railroad Company in 1870-'73; was elected judge of the Supreme Court of Illinois in 1873, and re-elected in 1879 and 1888.

Scudder, Edward W., jurist, born in Scudder's Falls, Mercer County, N. J., Aug. 12, 1822; died in Trenton, N. J., Feb. 3, 1893. He was graduated at the College of New Jersey in 1841; studied law with William L. Dayton, and was admitted to the bar in 1844; was a State Senator in 1863-'65, and president part of that time; was appointed a judge of the Supreme Court of New Jersey in 1869, and was re-appointed in 1876, 1883, and 1890.

Seaton, Henry E., botanist, born in Indianapolis, Ind., April 15, 1869; died in Cambridge, Mass., April 30, 1893. He was graduated at Wabash College in 1890; immediately appointed first assistant to his teacher, Prof. John M. Coulter, the botanist, went to the University of Indiana as instructor in botany and curator of the herbarium when Prof. Coulter was elected president of the institution in 1891; and accompanied a scientific expedition to Mexico, where he made a collection of plants on Mount Orizaba, in the summer of that year. On his return, and while preparing his report for publication, he spent some time in the Har-

vard herbarium, comparing some of its specimens with his collections. While so engaged his methods of work attracted much attention, and led to his being offered the post of assistant curator of the Gray Herbarium, which he accepted in September, 1892. The results of his botanical researches were embodied in two papers published in the "Proceedings" of the American Academy of Arts and Sciences.

Seney, George Ingraham, financier, born in Astoria, Long Island, N. Y., May 12, 1826; died in New York city, April 7, 1893. He was graduated at the University of the City of New York in 1847. After being employed in several banks in New York city and Brooklyn, he was appointed paying teller in the Metropolitan Bank of New York in 1853. He was made cashier in 1857, and president in 1877, and held the latter office till the suspension of the bank in 1884. At this time he had acquired a large fortune and a wide reputation for benevolence. As the suspension of the bank was caused by the failure of a brokerage firm in which members of his family were interested, he immediately resigned the office of president and conveyed to the bank his costly residence in Brooklyn, and other property, including many paintings. Subsequently he aided largely in bringing about the resumption of the bank, and resided in New York city. A few years before the failure he had become interested in railway operations, principally in the South and West, and in 1883-'84 he managed the construction of the New York, Chicago and St. Louis Railroad, popularly known as the "Nickel-plate" road, which was sold and became a part of the Vanderbilt system. His early railway operations were not successful, but he was credited with having made a large fortune with the Nickel-plate venture. In his most prosperous days, or between 1879 and 1884, he gave away about \$2,000,000, his principal gifts being \$500,000 for the establishment of the Seney Hospital in Brooklyn; \$500,000 to Wesleyan University; \$500,000 for the establishment of the Methodist Orphan Asylum in Brooklyn; \$250,000 to Emory College and Wesleyan Female College in Macon, Ga.; \$100,000 to the Long Island Historical Society; \$60,000 to the Brooklyn Library; \$50,000 to the Drew Theological Seminary in Madison, N. J.; \$25,000 to the Industrial School for Homeless Children in Brooklyn; and \$25,000 to the Brooklyn Eye and Ear Infirmary. In 1885 he sold at auction 285 paintings, for which he received \$406,910; and in 1887, after he had again begun collecting, he presented twenty valuable paintings to the Metropolitan Museum of Art.

Seymour, Mary F., journalist, born in Aurora, Ill., in 1847; died in New York city, March 21, 1893. She was educated in Wilbraham, Mass., and in Somerville, N. J.; became a public-school teacher in Jersey City, N. J.; resigned on account of ill health, and studied law and stenography; was the first woman ever appointed a commissioner of deeds in New Jersey; and was one of the first to obtain employment in a business office as a stenographer and typewriter. She removed to New York city and opened a training school for young women in 1881, and established "The Business Woman's Journal" in 1888, subsequently changing its name to "The American Woman's Journal," which she edited very successfully till her death. She was an expert stenographer and typewriter, a successful teacher of those branches, and a member of the Women's Press Club and the Association of American Authors.

Shattuck, George Cheyne, physician, born in Boston, Mass., in 1813; died there, March 22, 1893. He was graduated at Harvard College in 1831, and at Harvard Medical School in 1835, and spent three years in study in Paris and London. On his return he began practicing in Boston in partnership with his father. In 1849 he succeeded Dr. Oliver Wendell Holmes as visiting physician at the Massachusetts General Hospital, and he held the office for thirty-six years; in 1857 was chosen Professor of Chemical Medicine in the Harvard Medical School, and was after

ward transferred to the chair of the Theory and Practice of Medicine; and in 1872-'74 was President of the Massachusetts Medical Society. In 1845 he founded the Church of the Advent, in 1856 established the widely known St. Paul's School in Concord, N. H., and for nearly fifty years had been a delegate to the various conventions of his Church.

Shepard, Elliott Fitch, lawyer, born in Jamestown, N. Y., June 25, 1844; died in New York city, March 24, 1898. He was a son of Fitch Shepard, a banker and President of the National Bank-note Company, received his preliminary education in the Jamestown public schools, and was graduated at the University of the City of New York in 1855. He then began studying law with Judge William Strong, was admitted to the bar in 1858, and subsequently formed a partnership with his preceptor. At the beginning of the civil war he received an appointment with the rank of colonel on the staff of Gov. Morgan. He was assigned to recruiting duty, and, besides raising the 51st New York Volunteers, which became known as the Shepard Rifles, he was instrumental in enlisting nearly 50,000 men for the Union armies. After the war he practiced law till 1884. During this period he became attorney for the New York Central and Hudson River Railroad Company; was active in organizing the New York State Bar Association, of which he was elected the first president; labored successfully to secure the passage by the New York Legislature of an act creating a court of arbitration for the settlement of purely commercial difficulties out of the regular courts; and was appointed by President Hayes United States Attorney for the Southern District of New York, but was not confirmed. He spent 1884-'87 in travel in Europe, on his return made a trip to Alaska, and in 1888 became proprietor and editor of the "Mail and Express" newspaper. In the management of this newspaper, which he sought to make a clean and highly moral periodical for Christian families, he indulged in a number of peculiarities, such as printing a text from the Bible daily at the head of the editorial page, spelling Rome, Roma, and Sunday, Sunday, and bitterly assailing all that concerned the Roman Catholic Church. He also opposed all Sunday travel and traffic, and, securing the control of the Fifth Avenue stage line, persistently refused to allow a stage to be run on the Sabbath, though the line was operated at a heavy annual loss to him. Col. Shepard married in 1868 the eldest daughter of William H. Vanderbilt, who received from her father an inheritance of several million dollars. He was exceedingly generous in life to charitable and religious institutions, and bequeathed \$100,000 to the trustees of the Presbytery of New York for its general evangelical work, and also \$50,000 for the special benefit of the Seventh Presbyterian Church in New York city and \$100,000 to St. Paul's Institute in Tarsus, Asia Minor. He also directed that his interests in the "Mail and Express" and the stage line be retained as long as those corporations refrained from work of any kind on Sunday, and he stipulated that should his trustees dispose of those interests it should be only on the condition that the purchasers should never operate the properties on that day.

Shipman, George E., physician, born in New York city, March 4, 1820; died in Chicago, Ill., Jan. 20, 1893. He was graduated at the University of the City of New York in 1839; took his medical course in the College of Physicians and Surgeons; and, after practicing in Peoria, settled in Chicago in 1846. At that time there were not more than half a dozen regular practicing physicians of the homeopathic school west of Buffalo, and when the homeopaths began to gain in number in his section he was active in organizing them into local societies. In 1851 he aided in the formation of the Western Homeopathic Association; in 1854 established the first homeopathic hospital in Chicago; in 1855 became an incorporator and one of the first trustees of Hahnemann College, and afterward its Professor of Materia Medica and Therapeutics; and in 1857 was appointed a mem-

ber of the homeopathic board, which was permitted by the city council to attend the patients in the new city hospital. In 1871 he established the Foundlings' Home at his own expense, and conducted it till its incorporation, when he became its superintendent. To this charity he gave the remainder of his life.

Smith, Edmund Kirby, military officer, born in St. Augustine, Fla., May 16, 1824; died in Sewanee, Tenn., March 28, 1898. He was a son of Joseph Lee Smith, the first presiding judge of the United States District Court for Florida, and was graduated at West Point in 1845.

He entered the army as a brevet 2d lieutenant in the 6th United States Infantry, then under Gen. Taylor in Mexico; took part in the battles of Palo Alto and Resaca de la Palma; was promoted 2d lieutenant, and assigned to the 7th Infantry, in which he distinguished himself in the taking of Monterey; and received the brevet of 1st lieutenant for bravery at Vera Cruz and Cerro Gordo, and of captain for Contreras. In 1849-'52 he was Assistant Professor of Mathematics in the United States Military Academy; in 1855 was promoted captain in the 2d United States Cavalry; on May 12, 1859, was severely wounded in a battle with the Comanche Indians in Texas; and in 1861 was promoted major, was thanked for his services against the Indians by the Legislature of Texas, and, on the secession of Florida, resigned his commission in the army. He immediately offered his services to the Confederate authorities; was commissioned a colonel of cavalry; and was promoted brigadier-general, June 17, 1861; major-general, Oct. 11 following; lieutenant-general, Oct. 9, 1862; and general, Feb. 19, 1864. He was first assigned to duty under Gen. Johnston at Harper's Ferry, and at Manassas, or the first Bull Run, was severely wounded. In February, 1862, he was placed in command of the Confederate forces in the neighborhood of Cumberland Gap, and in the following summer led the advance of Gen. Bragg's army in the Kentucky campaign, marching through the gaps in the Cumberland mountains, and coming upon the Federal army under Gen. William Nelson, near Richmond, Ky., on Aug. 29. On the following day he gave battle to the Federal troops near Mount Zion Church, 6 miles from Richmond, and defeated them, and when Gen. Nelson retreated to Richmond, Gen. Smith made another and successful attack. Gen. Smith then pushed forward, having planned to attack Cincinnati, but when within easy marching distance of that city he failed to receive the support from Gen. Bragg that he had expected, and, retiring, directed his march to Frankfort, where he arrived prior to Gen. Bragg. Early in January, 1863, he was summoned to Richmond, Va., owing to recent changes made in army commands, and was assigned to the command of the department west of the Mississippi, with headquarters in Alexandria, La. He there, under instructions, organized a government for the territory of Louisiana, Texas, Arkansas, and the Indian Territory; shipped large quantities of cotton to Europe, and imported foreign machinery, by running the blockade at Galveston; and did much to develop the mining and manufacturing resources of that section. In the latter part of 1863 and the early part of 1864 his chief duty was to resist the advances of Gen. Banks, whom he defeated in April, 1864, while on his Red river campaign. In May, 1865, Gen. Smith surrendered his army, the last of all the Con-

federate troops to lay down their arms, at Baton Rouge, to Gen. Canby. After the war he was elected President of the Atlantic and Pacific Telegraph Company; was Chancellor of the University of Nashville in 1870-75; and since 1875 had been Professor of Mathematics in the University of the South in Seawane, Tenn.

Smith, Elizabeth Oakes Prince, author, born in North Yarmouth, Me., Aug. 12, 1806; died in Hollywood, Carteret County, N. C., Nov. 15, 1898. She married, early in life, Seba Smith, the journalist, who became widely known by his writings under the pen name of "Major Jack Downing," and for many years was associated with him in his editorial work in Portland, Me., and in New York city. She was the first woman in the United States who ever appeared as a public lecturer, and was also one of the first woman preachers. Among her publications were: "Riches without Wings" (Boston, 1838); "The Sinless Child," poems (New York, 1841); "Stories for Children" (Boston, 1847); "Woman and her Needs" (1851); "Hints on Dress and Beauty" (1852); "Bald Eagle" (London, 1867); and the tragedies "The Roman Tribune" (1850) and "Old New York" (1858).

Smith, Horace, manufacturer, born in Cheshire, Mass., in 1808; died in Springfield, Mass., Jan. 15, 1898. Early in life he entered the United States armory in Springfield as a machinist, and while there invented a hammer check machine for Government use. In 1840 he removed to Norwich, Conn., and in 1852 to Worcester, Mass., where he became acquainted with D. B. Wesson, with whom he worked on a revolving repeating gun. About this time he invented metallic cartridges. In 1854 he and Wesson invented and began manufacturing a repeating rifle; in 1857 they formed the firm of Smith & Wesson, which has since been engaged in manufacturing firearms; and in 1874 Mr. Smith retired from active partnership. He left an estate estimated at \$8,000,000, and bequeathed his entire property, excepting \$10,000 for his brother, to charitable and religious institutions.

Smith, Melancton, naval officer, born in New York city, May 24, 1810; died in Green Bay, Wis., July 19, 1893. He was the third of his name, the grandson of a member of the Continental Congress, and the son of an officer in the regular army in the War of 1812-15. He was appointed a midshipman in the United States navy, March 1, 1826;

was promoted passed midshipman, April 28, 1832; lieutenant, March 8, 1837; commander, Sept. 14, 1855; captain, July 16, 1862; commodore, July 25, 1866; rear-admiral, July 1, 1870; and was retired, May 24, 1871. During his naval career he was on sea service nineteen years and two months, on shore or other duty seven years, and was unemployed thirty years and eight months. From 1826 till 1839 he was on duty in the Pacific and West India

squadrons, at the naval school, and at the navy yards in Brooklyn and Pensacola. In June, 1839, he was ordered to the "Poinsett," to cooperate with the land forces in the campaign against the Seminole Indians in Florida, and at one time during these operations he commanded a fort and a twenty-oared barge. During the next fifteen years he was on duty with the Mediterranean squadron twice, and at the Brooklyn and Pensacola navy yards, on store and receiving ships, and as a light-house inspector. From May 1, 1861, till June 22, 1863, he was attached to the Gulf blockading squadron, and at different times commanded the steamers "Massachusetts," "Mississippi," and "Monongahela." While on the "Massachusetts," he engaged a fort on

Ship Island and three steamers and a revenue cutter off the island, on July 9, 1861; fought the Confederate steamer "Florida," in Mississippi Sound, Oct. 26; and captured a two-gun battery at Biloxi, La., Dec. 31. With the "Mississippi" he passed Forts Jackson and St. Philip with Farragut, and destroyed the Confederate ram "Manassas," April 24, 1862; took part in all the operations of the squadron till March 14, 1863; and then, when his vessel grounded in attempting to pass the batteries at Port Hudson, and was being mercilessly shelled by the Confederates, he set her on fire in four places and escaped with his officers and crew. Admiral Farragut highly praised him for destroying the "Manassas," and approved his course in burning and abandoning the "Mississippi." His principal service in the war after this was his engagement with the Confederate ram "Albemarle" in Albemarle Sound, and recapture of the steamer "Bombshell," May 5, 1864, and his participation, while commanding the frigate "Wabash," in the attacks on Fort Fisher in December, 1864, and January, 1865. He was commandant of the Brooklyn Navy Yard in 1870-72, and after retirement was governor of the Naval Asylum in Philadelphia.

Snell, George, architect, born in London, England, in 1820; died in Boston, Mass., Feb. 23, 1893. He was graduated at the Institute of Civil Engineers in London, winning the Telford medal for excellence in architecture; removed to Boston in 1849, and there built Music Hall, the granite bank building on State Street, and many buildings on Beacon Street in the neighborhood of Dartmouth Street. He received the medal of the Massachusetts Humane Society for rescuing a man from drowning in Jamaica Pond in 1858; was a proficient etherist; and was an active member of the principal social clubs of Boston.

Sorin, Edward, clergyman, born in Ahuille, near Laval, France, Feb. 6, 1814; died in Notre Dame, Ind., Oct. 31, 1893. He was educated at Precique and at the Seminary of Le Mans; was ordained a priest in 1838; entered the congregation of the Holy Cross in 1839; and with six companions of the congregation removed to the United States in 1842. Bishop Hallandière offered them a wild tract of land on St. Joseph river, which they accepted, and Father Sorin there founded Notre Dame, with its university of that name and its associated institutions, and also the order of the Sisters of the Holy Cross. In 1868 Father Sorin was elected superior-general of the congregation for life by the chapter-general of the order; in 1879 the mother house of the order was transferred from Paris, France, to Notre Dame; and in 1885 the golden jubilee of the founder was celebrated with much ecclesiastical pomp.

Spencer, George Elipha, lawyer, born in Jefferson County, N. Y., Nov. 1, 1836; died in Washington, D. C., Feb. 19, 1893. He was educated at Montreal College, Canada, and removed to Iowa, where he was chosen secretary of the State Senate in 1856, and was admitted to the bar in 1857. In 1862 he entered the Union army as a captain and assistant adjutant-general of volunteers; in 1863 recruited the 1st Alabama Cavalry, U. S. V., and was commissioned its colonel; in 1864 commanded a brigade of cavalry on Sherman's march to the sea; and in July, 1865, resigned from the army with the brevet of brigadier-general. He was appointed United States register in bankruptcy for the 4th Alabama District in May, 1867; was elected to the United States Senate as a Republican in 1868; and was re-elected in 1873, serving till March 8, 1879. In his last term he was chairman of the Committee on Military Affairs, and a member of the Committee on the District of Columbia. After completing his term he became conspicuous in the exposure of the Star-Route postal frauds, and in the legislation resulting in the reduction of letter postage to 2 cents.

Spicer, Eliza, navigator, born in Noank, New London County, Conn., in April, 1825; died in Brooklyn, N. Y., Feb. 15, 1893. He went to sea as a cabin boy

on a coaster; developed unusual nautical ability for one of his years; and, after sailing to the principal ports on the Atlantic and Pacific coasts, and to the West Indies and China, became captain of a bark when twenty-two years old. He commanded in turn the "Fanny," "Hound," "Samuel Willetts," and "Mary L. Sutton"; was one of the first sailing masters to take advantage of the compulsory opening of the ports of Japan to trade; commanded the Federal transport "Victor" in the early part of the civil war; was for some time in charge of the steamships of the Mallorys, of Mystic, Conn., and after the war became a partner in the firm. On the death of Charles H. Mallory, Captain Spicer became the head of the firm, and President of the New York and Texas Steamship Company, an office he held at his death. Captain Spicer was a man of large generosity. During his lifetime he presented the Polytechnic Institute of Brooklyn with a valuable library as a memorial to his son; erected a public library in Mystic, Conn.; and gave the town of Groton, Conn., a valuable farm with suitable buildings for the benefit of its poor; and he bequeathed \$5,000 for the support of the Groton farm, \$10,000 to the Spicer Library in the Polytechnic Institute, \$10,000 to No. 11 School in the Noank district, and \$25,000 to the Spicer Library in Mystic.

Stanford, Leland, philanthropist, born in Watervliet, N. Y., March 9, 1824; died in Palo Alto, Cal., June 20, 1893. He was brought up on a farm, was admitted to the bar in 1849, removed to Port Washington, Wis.,

to practice, and made the overland trip to California and engaged in gold mining in 1852. In 1856 he settled in San Francisco and established a commercial house, in which he acquired a large fortune. He became actively interested in the agricultural and manufacturing development of California, and early in his residence there was convinced both of the desirability and the practicability of a transcontinental railway. In 1860 he entered public life as a delegate to the Re-

publican National Convention, and in the following year he was elected Governor of California. In 1861 also he was elected president of the newly organized Central Pacific Railroad Company, formed for the purpose of building a railway across the Sierra Nevada mountains. With him were associated Charles Crocker, Mark Hopkins, and Collis P. Huntington. In the division of the preliminary work Mr. Stanford had charge of all that related to legislation, and he secured the passage of a bill by Congress in 1862, according to which, on the construction and equipment of 40 miles of the road and the establishment of a telegraph service for that distance, the Government would issue bonds to aid the company, at the rate of \$16,000 a mile to the foot of the mountains, and \$48,000 a mile over and through them. Each of the four men agreed to pay personally the cost of construction of a fourth part of the road, and Mr. Stanford's section was that over the mountains. Under his personal supervision 550 miles were built in two hundred and ninety-three days. The road of the Central Pacific Company extended from San Francisco to Ogden, and that of the Union Pacific Company from Ogden to Omaha. The Central Pacific completed its work on May 10, 1868, and three years afterward Mr. Stanford drove the last spike at Promontory Point, Utah, which connected the rails of the two companies. The construction of the road across the mountains was a marvel of engineering, because of the natural obstacles, and more than

\$20,000,000 were spent on a stretch of roadway of 100 miles. In 1884 and 1890 Mr. Stanford was elected United States Senator, and at the time of his death he was chairman of the Committee on Public Buildings and Grounds, and a member of the Committee on Civil Service and Retrenchment, on Education and Labor, on Fisheries, and on Naval Affairs. From the beginning of his business prosperity he was noted for large and quietly bestowed gifts to deserving public purposes. The death of his only son in 1885 led him to concentrate his future benefactions in an educational institution, to be open to both sexes and to provide the highest possible university training. With his wife, he deeded to trustees, for the establishment of the Leland Stanford Junior University, his Gridley farm of 21,000 acres, with a market value of \$1,500,000, his Vina farm of 55,000 acres, market value \$1,800,000, his Palo Alto farm of 7,000 acres, market value \$2,100,000, and other property representing an aggregate value of \$20,000,000. The corner stone of the first building was laid May 14, 1887, and the institution was formally opened Oct. 1, 1891. His great gift to the university was supplemented by a bequest of \$2,500,000. Everything that Senator Stanford did was on a remarkably large scale. His Vina farm was the largest vineyard in the world; his love of horses made him unapproachable as a breeder; and the university has the largest individual endowment of any public institution in existence.

Starey, Alfred Butler, editor and author, born in Nottingham, Eng., Aug. 2, 1853; died in New York city, Aug. 7, 1893. He studied at Exeter College, Oxford, and was graduated in 1878. Shortly after leaving college he came to this country and was a private tutor for several years. The short stories for children which he wrote at this time were so well received that he was encouraged to choose literature as a profession. He was introduced to the house of Harper & Brothers by letters from England, and entered their employ in 1878. His ability was immediately recognized, and he was promoted rapidly through various departments, until, in 1885, he was made editor of "Harper's Young People," which place he retained until his death. While still serving in his clerical capacity with the Harpers he entered the lists under an assumed name, and with his "Sword of Hildebrand" won the prize offered for the best children's story submitted. His editorial work during the last seven years of his life completely absorbed him, and he wrote but little. For several years Mr. Starey was secretary of the National Tennis Association, and his love of outdoor sports made him a ready sympathizer with like tastes in the young, and led him to make many innovations in the magazine. He was also a member, and at one time secretary, of the Authors Club. He never married.

Stearns, Oakman Sprague, educator, born in Bath, Me., Oct. 27, 1817; died in Newton Center, Mass., April 20, 1893. He was graduated at Waterville College in 1840, and at Newton Theological Seminary in 1846; was instructor in Hebrew in the latter institution in 1846-'47; pastor of Baptist churches in South bridge, Mass., in 1847-'54, in Newark, N. J., in 1854-'55, and in Newton Center in 1855-'68; and had been Professor of Old Testament Interpretation in the Newton Seminary since 1868. He received the degree of D. D. from Colby University in 1863. Dr. Stearns was regarded as the leading authority among Baptists in the United States on the Old Testament; had translated Sartorius's "The Person and Word of Christ" (Boston, 1848); and among numerous writings had published "A Syllabus of the Messianic Passages in the Old Testament" (1884).

Stephenson, John, manufacturer, born in County Armagh, Ireland, July 4, 1809; died in New Rochelle, N. Y., July 31, 1893. He accompanied his parents to New York city in 1811, was educated in the old Wesleyan Seminary there, and, finding mercantile life uncongenial, was apprenticed to a coachmaker. In 1831 he established a similar business for himself. Soon afterward he built the first omnibus ever seen

in New York city, and patented and built the first street car constructed in the United States. The success of these two vehicles led him to confine himself to their manufacture. He built up a vast business, shipped stages and street cars to nearly all parts of the civilized world, was burned out several times, and attended to his business till within a few days of his death.

Stone, Lucy (Blackwell), reformer, born in West Brookfield, Mass., Aug. 13, 1818; died in Dorchester, Mass., Oct. 18, 1893. She came of patriotic and fighting stock, for her grandfather was a colonel in the Revolutionary War, and subsequently led 400 men in Shay's rebellion. Her father was a farmer. She determined to obtain a collegiate education, being first moved thereto by a desire to read the Bible in the original, and learn for herself the significance of the passages relating to the equality rights of the sexes. She went to Oberlin College, Ohio, and was graduated there in 1847. After leaving college she became an avowed champion of woman's rights. In fact, to use the language of Mrs. Stanton, she was the first who "really stirred the nation's heart on the subject of woman's wrongs." In the year of her graduation she lectured on this theme in her brother's church, in Gardner, Mass., and in 1848 she went upon the lecture platform in behalf of the Massachusetts Antislavery Society, and traveled extensively through the Eastern and Western States and Canada, presenting her special subject of woman's rights as occasion offered. In 1855 she married Henry B. Blackwell, but before doing so made an agreement with him that she retain her maiden name with the prefix Mrs. They removed to New Jersey, and some years later, when property on which she refused to pay taxes had been seized in default of such payment, she published a protest against "Taxation without representation." In 1869 she formed the American Woman's Suffrage Association; in the year following she became coeditor of the "Woman's Journal" in Boston, and in 1872 she became its editor in chief, which place she filled for many years, her husband and her daughter being associated with her. From 1867 to 1892 she was again a lecturer, traveling and speaking in behalf of the woman-suffrage amendments. She was an officer and moving spirit in local, State, and national suffrage associations and meetings, and saw great changes wrought in that movement.

Strain, Patrick, clergyman, born in Derrydrum-muck, County Down, Ireland, Nov. 27, 1822; died in Lynn, Mass., Feb. 7, 1893. He removed to Salem, Mass., in 1841; was educated for the Roman Catholic priesthood at the Sulpician College and the College of St. Hyacinthe in Montreal, and at the Seminary of St. Sulpice in Paris; was ordained a priest in 1850; and was assigned to the small joint parish of Chelsea and Lynn in 1851. His labors there were fruitful. In 1862 he rebuilt the church in Lynn, which had been burned down, and the Church of St. Thomas, in Nahant, was built under his administration. In 1887 he was appointed missionary apostolic to the Holy See, and permanent rector in Lynn; on Feb. 17, 1891, he was created a domestic prelate to Pope Leo; and on May 24 following, after an audience with the pope, he celebrated mass in St. Peter's, in Rome. He was given a memorable reception by his parishioners on his return.

Taylor, James Wickes, consular officer, born in Penn Yan, Yates County, N. Y., in 1819; died in Winnipeg, Manitoba, Canada, April 28, 1893. He was graduated at Hamilton College in 1839; studied law in Cincinnati in the same office with Salmon P. Chase, with whom he held a lifelong intimacy; became editor of the Cincinnati "Signal" in 1848; and entered political life as a member of the Ohio Constitutional Convention in 1850. In 1851-'54 he edited a newspaper in Sandusky, and in 1854, when Mr. Chase was elected Governor, he appointed Mr. Taylor State librarian. He removed to St. Paul, Minn., in 1856, intending to practice law, but in the following year was chosen secretary of the St. Paul

and Pacific Railway. From this office he was called to Washington, D. C., where he was special agent of the Treasury Department in 1860-'70. While there he also acted as Commissioner of Mining Statistics, and drew up the Mineral Lands act of Congress. In September, 1870, President Grant appointed him United States consul at Winnipeg, where he remained till his death. For promptly communicating intelligence of a projected Fenian raid into Manitoba he received the thanks of the British Government. Consul Taylor had published a "History of Ohio" from its settlement to its admission into the Union; "Alleghania, or the Strength of the Union and the Weakness of Slavery in the Highlands of the South"; and "Forest and Fruit Culture in Manitoba."

Thorne, Charles Robert, actor, born in New York city, in 1814; died in San Francisco, Cal., Dec. 13, 1893. He made his first appearance on the stage as Octavian in "The Mountaineers" at the Park Theater in New York in 1830, and for more than fifty years remained on the stage, playing in all parts of the world and in a large variety of characters. At various times he was manager of the Chatham Street Theater, Astor Place Opera House, and Lyceum Theater in New York city; the American and Metropolitan Theaters in San Francisco; the Federal Street Theater and Howard Athenaeum in Boston; and the Union Theater in Leavenworth, Kan. His first wife was Maria Ann Mestayer, whom he married in Richmond, Va., in 1830. She retired from the stage in 1864, and died in 1881. Their four sons—Charles Robert, Jr. (died in 1863), William H., Edwin Forrest, and Thomas (died in China)—possessed much of their parents' dramatic ability, and made creditable appearances on the stage.

Thornton, Harrison R., missionary, born in Hampden-Sidney, Va., about 1838; died in Cape Prince of Wales, Alaska, Aug. 19, 1893. He was a son of Col. John Thornton, and a brother of James Thornton, Professor of Mathematics in Hampden-Sidney College, and of William Thornton, Professor of Applied Mathematics in the University of Virginia. He was appointed to the mission station at Cape Prince of Wales, Alaska, in 1890, and was the only white man among 35,000 Eskimo Indians. He married Miss Neda Pratt, of Auburn, Me., who was connected with the American Missionary Society, in 1892. Mr. and Mrs. Thornton were engaged in educating the Indians, and had built a schoolhouse, which was largely attended for six months in the year. For several months Mr. Thornton had been laboring earnestly to break up the liquor traffic among the natives, and by so doing had made many enemies. He was shot dead by one of three native boys. The next day two of the boys were caught by the natives and shot to death, and a party was organized to search for the third.

Thwing, Edward Payson, clergyman, born in Ware, Mass., Aug. 25, 1830; died in Canton, China, May 9, 1893. He was graduated at Harvard in 1855, and at Andover Theological Seminary in 1858; was pastor of the Congregational Church in Quincy, Mass., in 1862-'67; of the Tolmers Square Church in London, England, in 1867-'68; and of the Church of the Covenant in Brooklyn, N. Y., subsequently; and was Professor of Vocal Culture in Gorham Seminary, Maine, in 1870-'74, and of Sacred Rhetoric in the Tabernacle Free College in Brooklyn in 1874-'78. While in Brooklyn he studied medicine, and was graduated at the Long Island College Hospital. For many years he had been in the habit of visiting London and preaching each summer. In 1891, while making a tour of China, he became impressed with the need of hospitals and asylums there constructed and conducted on modern plans, and in 1892 he returned and undertook the building of a model asylum in Canton. He was a frequent contributor to newspapers and magazines, and had published "Drill Book of Vocal Culture and Gesture," "Outdoor Life in Europe," "Bible Sketches," etc. His wife, SUSAN MARY (WAITE) THWING, born in Portland, Me., about 1840; died in Canton, China, June 18, 1893.

Towle, George Makepeace, author, born in Washington, D. C., Aug. 27, 1841; died in Brookline, Mass., Aug. 8, 1893. He was graduated at Yale with the Townsend premium for the best composition in 1861, and at Harvard Law School in 1863; practiced in Boston for two years; was on the editorial staff of the "Post" one year; and was United States consul in Nantes, France, in 1866-68, and in Bradford, England, in 1868-70. Returning to Boston, he became managing editor of the "Commercial Bulletin" and foreign editor of the "Post." In 1877 he published monographs on the "Eastern Question," and edited Harvey's "Reminiscences of Daniel Webster," and in the following year began a series of biographical narratives of early explorers, under the title "Heroes of History." His "Life of Disraeli" appeared in 1879, and was followed by "Certain Men of Mark," dealing with European statesmen. In 1885 he began a "Timely Topics Series," treating European and Asiatic politics. He also published "Young People's History of England" (1886) and "Young People's History of Ireland" (1887); and at the time of his death had completed two of a three-volume series on "The Literature of the English Language." Since 1881 he had frequently appeared on the lecture platform. He was a Republican in politics, and had been a delegate to the National Convention (1888), a presidential elector, and a State Senator (1890 and 1891).

Townsend, Edward Davis, military officer, born in Boston, Mass., Aug. 22, 1817; died in Washington, D. C., May 11, 1893. He was graduated at West Point in 1837, and commissioned a 2d lieutenant in the 2d United States Artillery; was promoted 1st lieutenant, Sept. 16, 1838; captain, April 21, 1849; lieutenant-colonel, March 7; colonel, Aug. 3, 1861; and brigadier-general, Feb. 22, 1869; and was retired, June 15, 1880. He was brevetted brigadier-general, U. S. A., for faithful service during the war, Sept. 24, 1864, and major-general for distinguished service in the adjutant-general's department during the war, March 13, 1865. Gen. Townsend served in the Seminole campaign in Florida in 1837-38; on the frontier during the Canadian disturbances in 1838-41; was assigned to the general staff as assistant adjutant-general in 1848; was adjutant of the division of the Pacific for five years; and was chief of staff to Gen. Scott at the time of the latter's retirement in 1861. The greater part of his service and his most important work were performed in the adjutant-general's department, and through the civil war he was officially the principal executive officer of the War Department. Gen. Townsend published "Catechism of the Bible—the Pentateuch" (New York, 1859); "Catechism of the Bible—Judges and Kings" (1862); and "Anecdotes of the Civil War in the United States" (1864).

Troy, John M., painter, born in Illinois, about 1842; died in Ocean Springs, Miss., March 20, 1893. He served in an Illinois regiment in the civil war; studied painting in Paris in 1866-76; and on his return established himself as a portrait painter in St. Louis. A bench show of dogs in 1877 led him to abandon portraiture for animal painting, and in this line he became widely known. He had painted all the famous dogs owned in the United States, had been frequently a judge in horse and dog shows, and was considered an authority on the anatomy of the horse and the dog. He had exhibited at the Paris Exposition, and was completing a painting for the Columbian World's Exposition at the time of his death. Besides his animal portraits he had painted "The Dairymaid," "Eastern Field Trials," "Home for the Holidays," and "Long Time between Drinks."

Tupper, Henry Marty, educator, born in Monson, Mass., in 1831; died in Raleigh, N. C., Nov. 11, 1893. He was graduated at Amherst College and at the Newton Theological Seminary; entered the ministry of the Baptist Church in 1862; and soon afterward enlisted as a private in the National army and served till the close of the war. In October, 1865, he went to Raleigh as an agent of the American Baptist Home

Missionary Society, and with the aid of the colored people there cut the timber and erected a building, which was used as a schoolhouse on week days and as a church on Sundays. Through his efforts Shaw University was chartered in 1866. The work of constructing the brick buildings of what is now one of the largest colleges for colored youth in the world was immediately begun, with the aid of money subscribed in New York and New England. Under Dr. Tupper's direction the students themselves mainly erected the buildings now constituting the university, and after the institution was well established Dr. Tupper gradually substituted Southern for Northern instructors. His administration as president was successful. At the time of his death the university had mechanical, medical, legal, and theological departments, grounds and buildings valued at about \$200,000, and 500 students of both sexes, and had graduated nearly 5,000 teachers, clergymen, and physicians.

Unnever, John Gerhard, sculptor, born in Copenhagen, Denmark, July 16, 1822; died in New York city, Feb. 12, 1893. He was a pupil of Thorwaldsen, under whose eye he produced many classical figures of merit, including Apollo, Hebe, and Venus. In 1853, when the figures of the Twelve Apostles were sent from Thorwaldsen's Museum in Copenhagen to New York, Mr. Unnever was selected as their custodian. He also received from Thorwaldsen the exclusive privilege of reproducing his figures and of using his models. Under this concession he opened a studio in New York city, where he duplicated in plaster many of his master's works. He also edited two illustrated books on Thorwaldsen's life and work.

Upham, James, clergyman, born in Salem, Mass., Jan. 23, 1815; died in Chelsea, Mass., May 4, 1893. He was graduated at Waterville College (now Colby University) in 1835, and at Newton Theological Seminary in 1839; was ordained to the ministry of the Baptist Church in 1840; held brief pastorates in Manchester, N. H., and Millbury, Mass.; was Principal of the Farmington Academy, and professor in the Baptist Theological Institution in Thomaston, Me.; and was a professor in the New Hampton (N. H.) Literary and Theological Institution for twenty years, and its president five years. Subsequently he was editor of the "Watchman and Reflector," in Boston; of the "Religious Herald," in Richmond; and of the Health Department of the "Youth's Companion," in Boston.

Urner, Nathan Dana, journalist, born in Cincinnati, Ohio, in 1840; died in New York city, Feb. 19, 1893. In 1862 he removed to New York city and became a reporter on the "Tribune." He first distinguished himself and exhibited his peculiar humor by writing a description of the burning of Barnum's Museum on July 13, 1865, which was thrillingly realistic. His particularization of the escape of the animals from the roof, through windows, and down the fire ladders, was most ludicrous from its sober and earnest tone. The report was widely copied, and Mr. Barnum incorporated it in his "Autobiography." Mr. Urner served the "Tribune" for some time as city editor, and was Horace Greeley's private secretary during the preparation of the first volume of his "American Conflict." Subsequently he engaged in general literary work. Several of his sketches and poems have been published in collections for recitation.

Vermilye, Thomas Edward, clergyman, born in New York city, Feb. 27, 1803; died there, March 17, 1893. He was graduated at Yale in 1821, and was ordained to the Presbyterian ministry in April, 1825. In January, 1826, he became pastor of the Vandewater Street Presbyterian Church in New York; in 1830 of a Congregational church in West Springfield, Mass.; in 1835 of the Dutch Reformed church in Albany, N. Y., and in 1839 of the Middle Dutch Church in New York. He maintained his connection with the Collegiate Reformed Dutch Church till his death, and was its senior pastor. On Oct. 29, 1889, the consistory of the Collegiate Reformed Dutch Church held a public service to commemorate his fifty years of serv-

ice in that church. He received the degree of D. D. from Rutgers and Union Colleges in 1839, and LL. D. from Jefferson College in 1856.

Voss, Richard, manufacturer, born in Whitesborough, N. Y., Sept. 2, 1830; died in Nyack, N. Y., Feb. 25, 1893. He commanded the 71st New York Volunteers in the civil war, and for many years remained at the head of the regiment after its reorganization as a part of the National Guard of the State. Col. Voss invented a number of car-spring appliances, and manufactured car-springs for forty years.

Vought, Walter, physician, born in Buffalo, N. Y., in 1862; died in New York city, Sept. 24, 1893. He was graduated at the Sheffield Scientific School in 1882, and at the College of Physicians and Surgeons of the City of New York in 1885; spent a year in special study in Heidelberg and Vienna; and on his return to New York was appointed chief of the clinic of nervous diseases in the Vanderbilt Clinic. He was in charge of the quarantine station on Fire Island during the cholera excitement of 1892, and contracted a fatal attack of typhoid fever while attending a patient. Dr. Vought was recognized in his profession as an exceptional diagnostician in nervous diseases, and had published "A Chapter on Cholera for Lay Readers," "A Study of the Organisms found in the Blood after Malarial Fever," and a description of several cases of the rare disease known as acromegalia.

Walker, Alexander, journalist, born in Fredericksburg, Va., Oct. 13, 1819; died in Fort Scott, Ark., Jan. 24, 1893. He was graduated in law at the University of Virginia, and removed to New Orleans to practice in 1840. He soon became active in journalism and politics, was editor at various periods of the "Jeffersonian," the "Delta," the "Picayune," the "Times," and the "Herald," of New Orleans, and of the "Enquirer," of Cincinnati; was for some time a city judge; was a member of the Louisiana Convention that adopted the ordinance of secession; and was author of "Jackson and New Orleans" (New York, 1856), "Life of Andrew Jackson," "Butler and New Orleans," "The Battle of Shiloh," "Duelling in Louisiana," "The Story of the Plague," a History of the Yellow Fever Epidemic of 1852," and other historical works.

Walker, John G., military officer, born in Cole County, Mo., July 22, 1822; died in Washington, D. C., July 20, 1893. He was educated at the Jesuit College in St. Louis; was appointed a lieutenant in the 1st United States Mounted Rifles in 1843; served through the Mexican War, in which he was wounded, and promoted captain; and was afterward employed in several Indian campaigns. In 1861 he resigned his commission, and was appointed colonel of the 2d Virginia Infantry in the Confederate service. He was wounded at Malvern Hill, commanded the division that occupied Loudoun Heights at the capture of Harper's Ferry, was promoted major-general, fought with his division at Milliken's Bend, Bayou Bourbeaux, Plaquemine, Pleasant Hill, and Jenkins Ferry, and commanded the district of Louisiana and the Department of Louisiana and Texas. After the war he was United States consul-general at Bogotá, and the special commissioner of the Department of State to invite the South American republics to send representatives to the Convention of American Republics in Washington. He was highly complimented by Secretary Blaine for the tact shown in this mission.

Waters, Horace, manufacturer, born in Jefferson, Lincoln County, Me., Nov. 1, 1812; died in New York city, April 22, 1893. He was engaged in mercantile business till 1847, when he began selling pianos for a Boston manufacturer. In 1850 he undertook manufacturing for himself in New York city; in 1855 failed in business; in 1858 began publishing the "Sunday-School Bell," the first hymn and tune book of its kind, with the profits from which he re-established himself; in 1875 again failed; and in 1884 organized a corporation to continue the business. Mr. Waters was an early antislavery man, an original member of the Prohibition party, a liberal supporter

of Baptist Church enterprises, and the chief promoter of the Waters Normal Institute in Winton, N. C.

Waterston, Robert Cassie, clergyman, born in Kennebunk, Me., in 1812; died in Boston, Mass., Feb. 21, 1893. Early in life he became superintendent of the Sunday school of Father Taylor's Bethel Church in Boston; subsequently he studied theology in Cambridge, and in 1839 he was ordained pastor of the Pitts Street Chapel, where he labored among the poor for six years. He was a member of the Boston school committee for ten years, and a pleasing extempore speaker. He was author of "Thoughts on Moral and Spiritual Culture" (Boston, 1842); "Arthur Lee and Tom Palmer" (1845); memoirs of Charles Sprague, George Sumner, William Cullen Bryant, and George B. Emerson; and numerous poems and hymns. He bequeathed \$40,000 conditionally, and, after the death of his widow, his library and collections of pamphlets, manuscripts, and autographs, to the Massachusetts Historical Society, and \$10,000 and his collections of birds, shells, fossils, and minerals to the Society of Natural History.

Webster, Brastus Durbin, journalist, born in Aurora, N. Y., April 16, 1827; died in Washington, D. C., March 22, 1893. He learned the printer's trade in the office of the Buffalo "Express," established an anti-slavery newspaper in Springfield, N. Y., in 1849, founded the Omaha "Republican" in 1859, and was a delegate from Nebraska to the National Republican Convention in 1860. In 1861-'65 he was private secretary to Secretary Seward, and during this period he delivered Messrs. Mason and Slidell, the Confederate commissioners, to the commander of the British man-of-war "Rinaldo," and was sent on a secret mission within the Confederate lines in Florida and Georgia. In 1865 he was appointed United States consul at Bradford, England; in 1867, deputy surveyor of the port of New York; in 1868, assessor of internal revenue for the Thirty-second District of New York; in 1873, State superintendent of immigration; and in 1877, inspector of internal revenue. He was a delegate at large from Nebraska to the National Republican Convention in 1892.

Weed, Harriet Ann, amanuensis, born in Rochester, N. Y., Feb. 6, 1819; died in New York city, Nov. 1, 1893. She was the eldest daughter of Thurlow Weed, was educated at the Albany Female Academy, and from the time she left school till the death of her father was his private secretary. She had charge of all his extensive correspondence, and aided him in receiving the public men who for more than a generation thronged his home. In 1861 she accompanied her father on his secret mission to Great Britain and France, undertaken at the request of President Lincoln, for the purpose of creating a better feeling toward the National cause on the part of the governments of those countries. After her father's death, in 1882, she completed his unfinished "Autobiography" (Boston, 1882).

Wellstood, John Gelke, steel engraver, born in Edinburgh, Scotland, Jan. 18, 1813; died in Greenwich, Conn., Jan. 21, 1893. He removed to New York city in 1833, was apprenticed to the trade of a bank-note engraver, and organized the firm of Wellstood, Benson & Hanks in 1847. Subsequently the firm name was changed to Wellstood, Hanks, Hay & Whiting, and it continued to be the principal bank-note engraving concern in the country till 1854, when it was merged in the incorporation of the American Bank-Note Company. Mr. Wellstood was superintendent of the lettering department in the corporation till 1871, when he withdrew, and founded the Columbia Bank-Note Company, of Washington, D. C. While president of the Columbia company he designed and engraved a large number of plates for the "greenback" notes. His skill was attested by the detail of the lathe work, the intricate pattern of the backs, and the execution of the letters and counters, or figures, no two of which were alike. In 1879, when the Government began engraving its own plates, he returned to the American Bank-Note Com-

pany, and remained with it till his death. He was an expert detector of counterfeit paper money.

White, William Thomas, physician, born in Richmond, Me., July 7, 1829; died in New York city, Sept. 17, 1893. He began studying medicine in Bowdoin College, and was graduated at the New York Medical College in 1856. He served in the hospitals on Ward's and Blackwell's islands for two years, and as surgeon in chief of the Panama Railroad Company, at Panama, for three and a half years, and at Aspinwall for five years, and settled in New York city in 1865. In 1866-78 he was an attending physician at Demilt Dispensary; in 1876-'80, visiting surgeon to the Presbyterian Hospital; and from 1879 till his death he was a visiting surgeon to the Charity Hospital on Blackwell's Island. Dr. White was most widely known as editor of the "Medical Register," a post he had held for sixteen years.

Whithead, William, naval officer, born in Philadelphia, Pa., in 1840; died at League Island Navy Yard, Philadelphia, Jan. 8, 1893. He was appointed an acting midshipman in the United States navy, Sept. 23, 1856; was promoted midshipman, June 15, 1860; master, Aug. 31, 1861; lieutenant, July 16, 1862; lieutenant-commander, July 25, 1866; commander, June 4, 1874; captain, Sept. 4, 1887; and since Nov. 26, 1892, had been commandant of the League Island Navy Yard. During the civil war he was attached to the "Dakota," "Sonoma," the ironclad "Passaic," on which he served in the attack on Charleston and in other actions on the Atlantic coast, and to the flagship "Pawnee" in the engagements at Stony river and at Tioga creek. In 1866 he accompanied the ironclad "Monadnock" on her perilous trip from New York city around Cape Horn to California. While in command of the "Quinnebaug," of the Mediterranean squadron, in 1881-'83, he forced the authorities of Alexandria to surrender the wife of an American citizen, Stone Bey, under threats of shelling the city.

Wiltse, Gilbert O., naval officer, born in Binghamton, N. Y., Nov. 26, 1838; died in New York city, April 26, 1893. He was appointed an acting midshipman in the United States navy, Sept. 20, 1855; was promoted midshipman, June 9, 1859; lieutenant, Oct. 31, 1861; lieutenant-commander, Jan. 6, 1866; commander, Nov. 8, 1873; captain, Jan. 26, 1887; and at the time of his death was on waiting orders. He was on duty on the "St. Lawrence" during the engagement between the Confederate "Merrimack" and the "Congress" and "Cumberland" in Hampton Roads in March, 1862, and took part in the engagement of the monitors with Forts Sumter and Moultrie in November, 1863. On Feb. 5, 1891, he was assigned to the command of the "Boston," and he was at Valparaiso when the mob attacked the men of the "Baltimore" in the streets of that city. His last active service was at Honolulu, where, on Jan. 16, 1893, marines were landed from his ship, the American flag was raised, and a conditional protectorate over the Hawaiian Islands was established in the name of the United States Government. Soon after this incident Capt. Wiltse was detached from his command and placed on waiting orders.

Wolle, Francis, botanist, born in Jacobsburg, Northampton County, Pa., Dec. 17, 1817; died in Bethlehem, Pa., Feb. 10, 1893. He was a nephew of Peter Wolle, at the time of his death, in 1871, the senior bishop of the Moravian Church in Europe and America; was educated in the Moravian school in Bethlehem; taught in the schools in Nazareth and Bethlehem; was vice-principal of the Moravian seminary for young ladies in 1857-'61, and principal in 1861-'81; and was ordained to the ministry of the Moravian Church in 1861. In 1852 he patented in the United States, and afterward in all the principal countries of Europe, a machine for making paper bags, the first of its kind. He derived a considerable income from royalties on the sales of the machine. During the greater part of his life he was deeply interested in botanical study. He published papers in the "Bul-

letin of the Torrey Botanical Club"; "Desmids of the United States, and List of Pedicularum," with 1,100 illustrations on 53 colored plates, from original sketches (Bethlehem, 1864); "The Fresh-Water Algae of the United States," with 2,800 illustrations (2 vols., 1887); and "Diatomaceae of North America."

Wood, Horace G., lawyer, born in Woodstock, Vt., July 9, 1831; died in Dublin, N. H., Jan. 8, 1893. He was educated and admitted to the bar in his native State; was a member of the Legislature for several terms, and acquired a large railroad and corporation practice. During a period of retirement from practice because of failing health he applied himself to legal authorship, and published, among other works, "Nuisances," said to be the first elaborate treatise on the subject; "Limitations"; "Landlord and Tenant"; "Master and Servant"; "Evidence"; "Mandamus"; and "Railroads." During the last eight years Mr. Wood practiced in New York city.

Woolsey, Abby Howland, philanthropist, died April 7, 1893. She was an original member of the New York State Charities Aid Association, and had been a member of its board of managers and librarian for twelve years, and a member of its committee on hospitals for twenty years. She was author of "A Century of Nursing, with Hints toward the Organization of a Training School" (1876); "Lunacy Legislation in England"; "Handbook for Hospital Visitors" (1877); and "Hospital Laundries" (1890).

Wright, James, photographer, born in England; died in Brooklyn, N. Y., Feb. 4, 1893. He served the British War Office as a photographer during the Crimean War, and the United States War Department in the same capacity during the civil war, and in the latter was attached to the headquarters of the Army of the Potomac. After the war he devised a method of photographing on wood, both direct and in enlarged and reduced reproduction, for the benefit of engravers on wood, and he had been employed since in his special work for the principal illustrated periodicals.

Young-Man-Afrad-of-His-Horses, hereditary chief of the Sioux Indian nation, born about 1835; died at Pine Ridge agency, S. Dak., July 15, 1893. He was a son of a famous warrior, A-Man-Afrad-of-His-Horses, who died in 1889, at the age of ninety-two, and whose life was intimately connected with the frontier history of the Northwest since the early days of the century. Besides his rank as hereditary chief of the whole Sioux nation, the son was the active chief of the Ogallala tribe. Within recent years he had become a thoroughly civilized and friendly Indian, had made frequent visits to Washington on business concerning his people, and had rendered valuable services to Gens. Crook and Miles, particularly to the latter during the "Messiah dance" excitement in 1890-'91.

Webb, Eckford, shipbuilder, born in New York city, April 8, 1825; died in Brooklyn, N. Y., Sept. 27, 1893. He was the eldest son of Isaac Webb, a noted shipbuilder; was brought up in his father's shipyard; and on the death of the elder Webb, in 1848, he established himself in the same business in Greenpoint. He not only built nearly all the East river ferryboats, but turned out several gunboats for the Government during the civil war, including the famous "Chippewa," and after the war built several of the Pacific mail steamers. In 1871 he constructed the caissons on which the towers of the East River Bridge rests, the largest work of their kind ever known. In recent years he retired from the shipbuilding business, and engaged in the manufacture of paints and oils.

Young, William C., civil engineer, born in Youngstown, Ohio, Nov. 25, 1799; died in New York city, Dec. 22, 1893. In 1816 he was attached to the party that made a survey of the islands in Lake Ontario, and in 1817 to the one that made the first survey for the Erie Canal. He was graduated at the United States Military Academy in 1822, was assigned to the Third Artillery, and resigned in 1826 to engage in civil engineering. He became a pioneer in railroad construction; was the first to use cross ties in place of the stone blocks and foundations previously used to

anchor the rails; completed the Saratoga and Schenectady Railroad in 1839, later the line from Schenectady to Utica, and the Hudson River road in 1851; and was President of the Hudson River Railroad Company for two years. Next he was the builder and for some time President of the Panama Railroad, and afterward was superintendent of the western division of the New York Central Railroad. He was the oldest living graduate of West Point.

OBITUARIES, FOREIGN, FOR 1893.

Adolf, Georg, Prince of Schaumburg-Lippe, born at Buckeburg, Aug. 1, 1817; died there, May 8, 1893. He married Hermine, Princess of Waldeck-Pyrmont, and leaves several sons, of whom Georg, born Oct. 5, 1845, succeeds him.

Alexander of Battenberg, Prince, ex-Prince of Bulgaria, born April 5, 1857; died in Gratz, Austria, Nov. 17, 1893. He was the second son of Prince Alexander of Hesse and of Julie, Princess of Battenberg, a daughter of Count Maurice de Hauke, once Minister of War in the Kingdom of Poland. He was trained in the German military service, which he entered in 1870; joined the Russian army in 1877; accompanied the Grand Duke Nicholas in the Turkish campaign; and on April 29, 1879, was elected by the Grand Sobranje to be the first Prince of Bulgaria, and was approved by the Czar, the Sultan, and the powers. He incurred the displeasure of the present Czar by joining the National party of Bulgaria in refusing to submit to the tutelage of Russian officers, and a rupture took place after the Roumelian revolution and the union of the two Bulgarias. This led to the Servian war of 1885, which Alexander won by the rapidity with which he brought up the Roumelian militia at Slivnitsa. A military conspiracy was formed against Prince Alexander by Russian sympathizers and hirelings in the army, and on Aug. 20, 1886, he was kidnaped. His captors liberated him, but he found his position intolerable, and abdicated. Prince Bismarck, in 1888, prevented on political grounds a marriage between Alexander and Princess Victoria of Prussia. In 1890 he abandoned his princely rank and title for the purpose of contracting a marriage with Johanna Loisinger, a singer.

Ali bin Said, Sultan of Zanzibar, born in 1855; died March 5, 1893. He was the brother of the Sultans Burghash and Khalifa, and succeeded the latter on Feb. 18, 1890. During his reign an arrangement was made between Germany and England whereby the latter established a protectorate over Zanzibar, and in October, 1891, assumed the administration.

Andrae, O. U. Danish statesman, born in 1812; died in Copenhagen, Feb. 3, 1893. He was an officer of the army and professor in the military school in early manhood; entered the Folkething, and took a prominent part in its proceedings and those of the Landthing after 1848; was often called into the Cabinet; and in 1856 was Prime Minister. He was one of the first advocates of proportional representation, and was a mathematician of the first rank.

Apolloni, Achilles, Italian prelate, born in Agnani, May 13, 1822; died in Rome, April 3, 1893. He was educated at the College of Noble Ecclesiastics, and was appointed domestic chaplain to the Pope; became apostolic delegate to Macerata, and afterward canon of St. Peter's. In 1868 he was made auditor of the *rota*; in 1884, *vice-camerlengo*; and on May 24, 1889, was created a cardinal deacon.

Ballance, John, Premier of New Zealand, born in County Antrim, Ireland, in March, 1839; died in Auckland, April 27, 1893. He was educated at a national school, and was trained to the business of an ironmonger, which he followed in his own country and in Birmingham, England, until he emigrated to New Zealand in 1866. There he was first a sheep farmer, then opened a jewelry store in Wanganui, and finally succeeded with a newspaper, the "Herald," established in the same town. He was elected to the House of Representatives in 1875 as an advocate of a central administration; became Minister of Education in 1878, and afterward Colonial Treasurer;

resigned in July, 1879, because he could not approve the arbitrary proceedings of Sir George Grey; was Minister of Native Affairs and of Defense and Lands in the coalition Cabinet of Sir Robert Stout and Sir Julius Vogel in 1884-'87; led the Opposition against Sir Harry Atkinson, and became Premier in January, 1891.

Bloch, Charles Bell, English sculptor, born in 1832; died in London in October, 1893. His busts, statues, and groups were very numerous. He executed a colossal statue of Lord Beaconsfield for the city of Liverpool, and one of Queen Victoria for India; also a monument of Jenny Lind.

Bleichroeder, Gerson, Baron von, German banker, born in December, 1822; died in Berlin, Feb. 20, 1893. The firm of which he was the head became connected with the Rothschilds as early as 1828. Under his management it grew from small beginnings to the leading banking house of Berlin before the war of 1866, during which it was intrusted by the Prussian Government with all its financial operations. Bleichroeder's financial knowledge was so esteemed by the Emperor Wilhelm I and Prince Bismarck, who was his friend, that they summoned him to Versailles to determine the amount of indemnity that should be demanded of France and the manner in which it should be paid. For this service he received the Iron Cross, a rare honor for a man in private life. He left nearly 100,000,000 marks.

Brabourne, Edward Hugessen Knatchbull-Hugessen, Baron, English statesman, born in 1829; died Feb. 6, 1893. He was the son of a Kentish baronet, was educated at Eton and at Magdalen College, Oxford, where he took his degree in 1850, and in 1857 was elected to Parliament as member for Sandwich. Under Lord Palmerston in 1859 and Earl Russell in 1866 he was a Lord of the Treasury, became Under Secretary for the Home Department in 1866, and again under Mr. Gladstone in 1868, and Under Secretary for the Colonies in 1871. In 1880 he was raised to the peerage, and almost immediately he deserted the Liberal party and became a strong Conservative. In later years he wrote and spoke against home rule, and was prominent in the Liberty and Property Defense League. He was the author of quaint books for children, fairy tales for the most part, including "Stories for our Children" and "Friends and Foes of Fairyland," also of a "Life of Cromwell" and many political pamphlets. His literary knack may have been inherited from his maternal great-aunt, Jane Austen, whose letters he edited.

Broadwood, Henry Fowler, English piano-maker, born June 6, 1811; died July 8, 1893. He was the grandson of John Broadwood, the first piano-maker of the name, who came to London in 1769. Henry Broadwood was one of the most skillful and scientific of piano-makers, and introduced many improvements in the art. He entered his father's factory at the age of twenty-one, and in 1836 became a partner in the Broadwood firm, devoting his attention at first to improving the structure of concert grands. In 1843 he produced a square piano with an iron frame, and in the same year a grand piano with iron frame, the first of the kind. His long life was given to the study of his art, and he was always ready to welcome the discoveries of others. He was liberal-minded in the conduct of his business, and his artistic sentiment was quite as marked a feature as his profound knowledge of music.

Brown, Ford Madox, English painter, born in 1820; died in London, in October, 1893. He was once one of the chiefs of the English pre-Raphaelite movement. His last works adorn the museum and the city hall of Manchester. His earlier pictures were marked by dramatic interest, as "Romeo and Juliet," "Elijah and the Widow's Son," "Lear dividing his Kingdom," and his later works, as "Haydée," "Pieta," and "Farewell to England," in the pre-Raphaelite manner, were highly imaginative and original. In later life he neglected his art to propagate his philosophical theories and socialistic doctrines.

Cabat, Nicolas Louis, French painter, born in Paris, Dec. 24, 1812; died there, March 13, 1893. He studied with Camille Fiers, and joined Huet in abandoning the traditions of the classical school of Poussin and Claude Lorrain and introducing a new method of landscape painting. He devoted himself to the interpretation of the scenery of the banks of the Indre and the Meurthe and the landscapes of Normandy, and when he began to exhibit, in 1833, his canvases were criticised for their realism. After a few years he went to Italy, and there fell into the conventional manner, and when he returned others had outstripped him in realistic treatment.

Calthrop, Claude, English painter, born in 1854; died in London, April 11, 1893. He was a clever painter of costumes, and pleased the public with his sentimental and historical *genre* pictures.

Cardere, Justus, German biologist, born in Munich, in 1854; died in Strasburg, July 13, 1893. He was a son of Moritz Carriere and a grandson of Justus Liebig. He studied zoology, anatomy, and physiology in Munich, went to Strasburg after graduating, in 1880, as assistant in the Zoological Institute, became a tutor in the university there, and in 1885 professor. He devoted himself to minute biological observations. In 1885 he published a work on the comparative anatomy of the organs of sight in all orders of animals. Later he studied the development of a bee in all the least details and phenomena.

Charcot, Jean Martin, French neurologist, born in Paris, Nov. 25, 1825; died Aug. 18, 1893. He took his doctor's degree in 1825, was appointed on a hospital staff in 1856, became a professor in 1860, was called to the Salpêtrière in 1862, and in 1880 founded there the first clinic for nervous disease. Dr. Charcot was a physician of the highest scientific reputation, an author of treatises on the maladies of old age, nervous affections, and diseases of the liver when he first became known to the general public through his experiments in the Salpêtrière hospital in hypnotism and mental suggestion. His original writings on ataxy, lesions of the spinal cord, insanity, aphasia, hysteria, and general neurosis are scarcely less valuable than clinical experiments on hypnotic phenomena.

Christian, G. P., English theologian, born about 1820; died May 20, 1893. He was educated at Oxford, became a fellow of Oriel College, was ordained in 1844, was a tutor for many years, and took charge of a rural parish in 1860, from which he retired in 1875. He published a treatise on "Logical Method," and a series of university sermons on "The Letter and the Spirit," and a "Dialogue on the Divine Providence," in which he anticipated some of the conclusions of the higher criticism.

Clark, Sir Andrew, English physician, born in 1826; died in London, Nov. 30, 1893. He studied in Edinburgh and London, taught anatomy and pathology, intending to devote himself to the latter study, was compelled by circumstances to enter into practice, and became one of the busiest and most noted physicians in England. He lectured at the London Hospital, and wrote extensively, especially on diseases of the respiratory, renal, and digestive organs.

Cole, Vincent, English painter, born in Portsmouth, in 1833; died in London, April 6, 1893. He was the son and pupil of George Cole, a noted painter of landscapes, and began to exhibit in 1853. In 1860 he obtained a medal of the Society of Arts for "A Surrey Cornfield," and afterward exhibited similar subjects in the Academy, of which he became an associate in 1870 and a full member in 1880. Departing from his common range of subjects, he obtained a great success a few years before his death with his large painting "The Pool of London," which was purchased for the South Kensington Gallery.

Colladon, Daniel, Swiss physicist, born in Geneva, in 1802; died there, July 3, 1893. He was for some time a professor in the Paris École des Arts, and afterward Professor of Mechanics in Geneva. In 1826 he published his researches in photometry and on the effect of electric currents on the magnet. He gained emi-

nence by his researches into the propagation of sound in water and his experiments on the compressibility of liquids. He was also the inventor of the luminous fountain, in which light is reflected from the parabolic wall of water, and of the method of using compressed air in boring tunnels, having begun the study of this problem in 1849, and developed the apparatus that was used in the Mont Cenis and St. Gothard tunnels. He first lighted Geneva with gas in 1843.

Considerant, Victor Prosper, French author, born in Salino, Jura, Oct. 12, 1806; died in Paris, Dec. 27, 1893. He became a convert to the socialistic doctrines of St. Simon in early life, was a disciple of Fourier, and after the latter's death undertook to edit his paper, "La Phalange." After the revolution of 1848 he was a member of the Constituent Assembly and of the Legislative Assembly under the republic. In 1849 he went to Belgium, and afterward to the United States, where he hoped to propagate Fourierism. He did not return to France till 1869. Of his socialistic writings the principal ones are "Principles of Socialism" and "Theory of the Laws of Property and of the Laws of Labor."

Cowper, Edward Alfred, English inventor, born in London, Dec. 10, 1819; died there in May, 1893. He was the son of a professor of engineering who made useful improvements in the printing press. During his seven years' apprenticeship with John Braithwaite he invented the fog signals used on railroads, and in 1846 he invented an improved chair for rails. He helped to design the machines for making the iron framework of the great building for the exhibition in Hyde Park. He designed also the wrought-iron roof with a great span for the Birmingham railroad station. In 1851 he established himself as a consulting engineer in London. He invented a regenerative firebrick hot-blast furnace in 1857, which he continued to improve up to 1887; also a compound engine with an intermediate receiver, and in 1868 a bicycle wheel with rubber tire and steel spokes. In 1879 he produced an electrical writing telegraph.

Cox, Samuel, English theologian, born near London, in 1826; died March 30, 1893. He was educated for the Baptist ministry in the college at Stepney, and became pastor of a church at Nottingham, where he remained till 1888. After publishing a book entitled "The Private Letters of St. Paul and St. John," and a number of volumes on biblical exegesis and theology, he founded, in 1875, the "Expositor," which had on its staff the leading English writers on divinity and religion. He retired from the editorship in 1885. Among his numerous works the most widely read was "Salvator Mundi."

Crawley, Richard, English poet, born in 1843; died in April, 1893. He was educated at University College, Oxford, where he was graduated with honors in 1865, became a fellow of Worcester College, and in 1868 published "Horse and Foot," a satire after the manner of Pope that was considered brilliant. "Venus and Psyche" (1871) was not so much admired. In 1874 he published a translation of Thucydides. "The Younger Brother," an archaic drama of the style of the Elizabethan writers, was published in 1878. After that he devoted his attention to life insurance.

Cumming, Sir Arthur, English admiral, born in 1819; died in London, Feb. 30, 1893. He entered the navy in 1832, and during the war in Syria was made a lieutenant for his extraordinary courage and address in leading, as a volunteer, the Turkish landing party in the attack on Sidon. Not long afterward, in South America, he boarded a Spanish slaver, and before his men could follow their boat swung off, but he shot the helmsman, and with his pistol kept the crew at bay while he put the wheel about until his boat was once more alongside. He was promoted Commander in 1846, commanded a steamer on the coast of Africa, assisted in the blockade of the Gulf of Riga, and afterward commanded a floating battery in the Black Sea during the Crimean War, was admiral commanding in India in 1872-75, became a vice-admiral in 1876 and an admiral in 1880, and retired in 1882.

Darcell, Alfred, French archaeologist, born in Rouen, in 1818; died in Paris, May 28, 1893. He became attached to the Louvre in 1862, was appointed director of the Gobelins in 1872, and in 1885 was made director of the Cluny Museum, which he has enriched by judicious purchases and the encouragement of donations, and has thoroughly rearranged and classified. He was eminent as an authority on mediæval antiquities, on which he wrote numerous books, also a history of the national manufactures of tapestry.

Delpit, Albert, French *littérateur*, born in New Orleans, Jan. 30, 1849; died in Paris, Jan. 4, 1893. He was educated in France, and returned to Louisiana to take charge of his father's business, but soon went back to Paris, where he contributed to literary journals. In 1872 he published "L'Invasion," a volume of verse. He had served with distinction in the war of 1870, gaining the cross of the Legion of Honor. He wrote a score of novels, some of which were dramatized, but was more successful in the sketches and essays that he contributed to the "Revue des deux mondes," the "Gaulois," and "L'Événement," a volume of which was published in 1881 under the title of "Les Dieux qu'on brise."

Derby, Edward Henry Smith Stanley, Earl of, born at Knowsley, in July, 1826; died there, April 31, 1893. He was educated at Rugby and Trinity College, Cambridge, where he took several prizes and both classical and mathematical honors. Destined for a political career, he offered himself as a Protectionist candidate for Lancaster in March, 1848, the year of his graduation, and was beaten by a bare majority, but in December of the same year, while he was absent on a long tour of travel through the United States, Canada, and the West Indies, he was elected at King's Lynn, which he represented in Parliament till he became a peer. In 1849 he visited South America, and for many years he traveled frequently, studying foreign countries and all parts of the British Empire. His maiden speech in the House of Commons was a sober, closely reasoned plea for the protection of the sugar interests of the West Indian colonies, delivered on May 31, 1851. In 1851-'52 he visited India. When his father, the fourteenth Earl of Derby, became Premier for the first time, he was appointed Under Secretary for the Colonies, in March, 1852. Lord Stanley was not a very sound Tory. If he spoke or wrote on the politico-social questions that most interested him he expressed himself like a Radical of the type of Cobden or Mill, as when he pleaded for exempting Nonconformists from ecclesiastical taxation, or for opening museums on Sundays, or advocated a conscience clause for state-aided schools. Hence Lord Palmerston in 1855 offered him the office of Colonial Secretary, which he declined. This post fell to him in 1858, when his father took office as Prime Minister for the second time, but soon he exchanged it for the Secretaryship of State for India, and carried through the bill transferring the Government from the East India Company to the Crown with much tact and skill. His reputation as a debater was enhanced by his arguments on the Reform bill and the Irish Church bill of the Liberal Government. When he took office again it was as Minister for Foreign Affairs. His efforts to preserve neutrality were severely criticized by those who believed in a strong and bold foreign policy, as in abandoning the Cretan insurgents to the mercy of the Turkish soldiery, and in attempting to settle the Luxembourg question by the temporizing expedient of a collective guarantee. The Alabama award was laid at his door, because he had yielded the position that Lord Russell had taken and admitted the principle of arbitration. Yet, on the whole, his two years at the Foreign Office were successful, and when Disraeli returned to power in 1874, Lord Derby, who had become a member of the House of Lords on the death of his father, in 1869, was called to his former post, in which he had to deal with a more difficult situation than before. Andrassy's note and the Bulgarian atrocities roused a strong public sentiment against his policy, and when all his efforts to preserve peace proved futile and his predictions

failed, after the Russians crossed the Danube, in June, 1877, differences arose between him and Lord Beaconsfield, who was bent on resisting the advance of Russia, and in company with Lord Salisbury he resigned. He returned to office for a short time, but withdrew when Lord Beaconsfield insisted on warlike preparations after the signing of the treaty of San Stefano. Having broken with the Conservative leaders, he soon became a professed Liberal, and took office under Mr. Gladstone as Secretary for the Colonies. His Radical sympathies and cautious temper caused him to withstand the popular drift toward Jingoism in South Africa, as elsewhere. He believed that there was work to do for civilization within the limits of the United Kingdom, and that the British Empire already had black men enough. After the fall of the Gladstone Government he took no prominent part in politics, and when the party divided on the home-rule question he parted from Mr. Gladstone, though he voted for the Irish land bill of 1870. Till Lord Hartington entered the House of Lords as Duke of Devonshire he led the Liberal Unionists in that Chamber. Lord Derby was an industrious member of several royal commissions, an earnest Chancellor of the University of London, and a liberal contributor to benevolent enterprises. He married the Dowager Marchioness of Salisbury in 1870, but had no children. His brother, Lord Stanley of Preston, Governor-General of Canada, succeeded to the earldom.

Dhuleep Singh, Maharajah, deposed Indian prince, born in 1838; died in Paris, Oct. 23, 1893. His father, Dhuleep Singh, who had united the Sikh nation, established his dominion over most of the Punjab, and created an army as powerful as that of the British in India, died when Dhuleep was less than a year old. He was proclaimed Maharajah in 1843 under the regency of his mother. Court intrigues and misgovernment had weakened the organization of the state. The Sikh army was eager for the inevitable conflict with the British, who had already invaded Afghanistan, crushed Sind, and attacked Beluchistan. In 1845 the Rani sanctioned the passage of the Sutlej by the ill-provisioned and disorganized troops, whose bravery and fanaticism made poor amends for the discipline and generalship of the discarded French officers. The British beat in every battle, and demanded the cession of much territory, and an indemnity in money which could only be settled by the cession of much more. In 1848 the British invaded the country on some pretext, and annexed it in 1849, deposing Dhuleep Singh, on whom a pension of £40,000 a year was settled. He went to England, embraced the Christian religion, obtained advances for the purchase and improvement of a country estate after he came of age, and dispensed magnificent hospitality until he was told that he had used up his fortune and could obtain no more funds from the Indian Government. He married a Christian in 1864, by whom he had two children. Dhuleep Singh considered himself robbed. The Indian Government had taken his family estates and private property, including the principal salt mines in India and the Kohinoor diamond, which was coolly handed over to the British Crown. In 1885 he made a formal demand for a settlement of his claims, and on its rejection he set out for India, but the Indian authorities stopped him at Aden.

Dondukoff-Korsakoff, Prince, Russian soldier and administrator, born in 1822; died in St. Petersburg, April 27, 1893. He entered the army at an early age, fought the mountaineers of the Caucasus, distinguished himself in the Crimean War, and rapidly rose to the rank of general. As Governor of Kieff he promoted Pan Slavist ideas, and after the peace of San Stefano, in 1878, was made Governor-General of the Principality of Bulgaria. In this capacity he sought to prevent the execution of the decision of the Berlin Congress to divide Bulgaria. He incurred the reproach of the Czar, but was retained in his post until Alexander of Battenberg was elected and installed as Prince of Bulgaria, the Czar having declined to

sanction his own election. On his return to Russia he was appointed Governor of Kharkoff, and in January, 1882, civil governor and commander in chief in the Caucasus.

Dufour, Jean Étienne, Swiss statesman, born near Geneva, in 1840; died in Yverdon, in September, 1893. He was a gardener's son, who grew up an active and intellectual youth and plunged into politics at the time when the Genevan citizens began to rebel against the Radical régime of Jean Fazy. The Conservative and Liberal coalition chose Dufour for its leader, and thus he became the president of the cantonal State Council and a member of the National Council when his party gained the ascendancy. He had been chosen president of the commission for the national exhibition at Geneva in 1893, and had done much of the preparatory work of organization when he was surprised by death.

Edelsheim-Gyula, Baron Leopold, Austrian general, born in Carlsruhe, in 1827; died in Buda-Pesth, March 27, 1893. He entered the Austrian army as a cadet, rose rapidly, distinguished himself at Magenta and Solferino in 1859, held an important command in the war of 1866, and after its close was appointed inspector of cavalry and charged with the thorough reorganization of that arm of the service. Having completed this task, he resigned in 1875, and soon afterward he was appointed to the supreme military command in Hungary.

Ernst II, Duke of Saxe-Coburg-Gotha, born in Coburg, June 21, 1818; died at Reinhardtbrunn, Aug. 22, 1893. He was a year older than his only brother Albert, the Prince Consort of England. In 1842 he married Princess Alexandrine of Baden, who bore him no children. He succeeded his father, Ernst I, in 1844. In 1868 his name was proposed for the vacant throne of Greece, which he refused for state reasons. He was an earnest defender of state rights in Germany, a prince of liberal ideas, a great friend of art and artists, and a composer of no mean ability, as well as an author. In 1887 he published three volumes of memoirs. He is succeeded by his nephew Alfred, Duke of Edinburgh, Prince of Great Britain and Ireland, who is married to the Grand Duchess Marie Alexandrovna, sister of the Czar, and has one son, Alfred, born in 1874.

Faider, Charles, Belgian jurist, born in Trieste, in 1811; died in Brussels, April 12, 1893. He was the son of a Belgian functionary of the first empire, was admitted to the bar at Brussels in 1832, entered the magistracy, became Attorney-General at Brussels, and from Oct. 18, 1852, till March 30, 1855, held the portfolio of Justice in the Cabinet of Henri de Brouckere. He succeeded Matthieu Leclercq as Procureur-Général. In 1858 he presided over the congress on literary property at Brussels. He was learned in all departments of the law, and in the laws of all nations and ages, and was the author of many memoirs treating of provincial and communal institutions and their history, and of customary laws, primary education, and the civil status of religious corporations.

Ferry, Jules, French statesman, born in St. Dié, Vosges, April 5, 1832; died in Paris, March 17, 1893. He studied law in Paris, plunged into political journalism, becoming a writer for "Le Temps" in 1865, and made himself famous in 1868 by a satirical pamphlet on the extravagant outlay on the rebuilding of Paris, to which he gave the title "Les comtes fantastiques d'Hausmann," parodying "Les comtes fantastiques d'Hoffmann." He had been an unsuccessful candidate for the Corps Législatif in 1863. After this hit he was elected in Paris in 1869 as a Radical Democrat, and was one of the Deputies who called for the dissolution of the Chamber and free elections, and in 1870 opposed the war with Germany. When the republic was proclaimed the Paris Deputies were all called into the Government of National Defense, to which he was appointed secretary, being charged also with the administration of the Seine. He displayed great energy and personal courage in contending with the insurgent National Guards and the Commune, and

when he succeeded Arago in the central mayoralty, on Oct. 31, 1870, he ordered the distribution of bread, and defended the Hotel de Ville against a body of National Guards who attempted to overthrow the Provisional Government. He resigned his official functions when, after the peace, he was elected Deputy for the Vosges. In May, 1871, he accepted the office of Prefect of the Seine, but his resolute proceedings during the siege had made him obnoxious to the populace, and within two weeks he was replaced. His unpopularity stood in the way of his appointment as minister to Washington. In the Chamber he could not work harmoniously with Thiers, and therefore he was appointed minister to Athens, where he remained till the fall of Thiers. After his return he became a leader of the Republican Opposition, being elected President of the Republican Left. He was prominent in every parliamentary crisis that occurred during the presidency of MacMahon, and was one of the foremost of the 393 Deputies who voted down the Duc de Broglie's ministry in 1877. He devoted himself especially to financial questions, serving industriously on the Budget Committee and as President of the Tariff Commission. When the Republic was made definitive and Grévy was elected President, Jules Ferry came to the front as one of the most important members of Grévy's first Cabinet. As Minister of Education he reopened the religious question, and exasperated the Catholics by proposing in 1879 his bill to regulate the right of the clergy to teach, and of the free universities to confer degrees, especially by the famous Article VII of the bill directed against the Jesuits, which prohibited teaching in public or private establishments by members of unauthorized religious congregations. The bill passed the Chamber by a large majority, but was rejected by the Senate on the recommendation of a committee containing several moderate Republicans, and having Jules Simon for its chairman. In 1880, when he was Minister of Education under M. de Freycinet, the bill was again brought in and lost by a small majority in the Senate. Ferry then proceeded to expel the Jesuits under old laws that had become obsolete. The Radicals in the Cabinet resigned because he did not proscribe the other unauthorized congregations as well. Ferry then formed a Cabinet, and rigorously carried out the principle of Article VII. He acknowledged the leadership of Gambetta, and was not less energetic and more combative than his leader in pursuing the ideal of a genuine republic free from socialistic tendencies, but purely secular and democratic, and safe from monarchical and clerical reactionary influences. When he was Premier, he planned with Barthélemy St-Hilaire the annexation of Tunisia, knowing that Germany would not and that England and Austria could not object, that Turkey's protest would be futile, but that the friendship of Italy would have to be sacrificed. In November, 1881, having been a year in office, he retired on being attacked on account of the Tunisian expedition, willingly making way for the Gambetta ministry. When Gambetta died, in the following year, Ferry succeeded to the leadership of the Opportunists. He joined the Freycinet Cabinet as Minister of Instruction after the fall of Gambetta's ministry, then remained for about a year out of office, and on the defeat of the Fallières ministry assumed the premiership and the Ministry of Public Instruction. This he exchanged for that of Foreign Affairs. Capt. Henri Rivière having perished in Tonquin, the victim of his own foolhardy courage, the whole public clamored for the vindication of French prestige. Ferry saw in French India, as in Tunisia, an outlet for the martial and ambitious spirit that was likely to plunge the country unprepared into another trial of arms with Germany. He hesitated at first, perceiving that operations in Tonquin would be useless unless they resulted in the conquest and organization of the country. When they were at last undertaken on an adequate scale, and the eyes of the French people were opened to the magnitude of the sacrifice that was required, then the strongest and deepest political senti-

ment of the nation recoiled from Ferry. He who was calculating and sagacious, and contemptuous of fitful gusts of political sentiment, and scornful of politic concessions or pretended concessions to popular passion, had offended every element that was moved by sentiment and passion—the Monarchists and Catholics, even the Radical freethinking foes of the Church, the Socialist opponents of a bourgeois republic, and finally the protagonists of revenge and the great body of people in every party animated by the sentiment of which they made capital. When Gen. Négrier's dispatch announcing the defeat at Langson, in 1884, was published, Ferry's Cabinet was overthrown. He, the "Ton Kiniois," was execrated for having dissipated in distant colonial adventures the military strength that should have been husbanded for the recovery of the lost provinces, for having wasted blood and treasure, and involved the country in responsibilities that delayed for a long time the day of revenge, either tricked by Bismarck, or perhaps sympathizing with his policy, hence either a fool or a traitor. For the next eight years, while the republic moved more smoothly along the groove into which Ferry, more than any other man, had engineered, while his Tonquin policy was carried out, and the apostles of revenge were covering their cause with ridicule, while the policy of the Government grew more candidly pacific, and a war undertaken in the heat of passion became remote from the public mind, more reflecting after the recovery of financial strength and military equality with Germany than before, whenever the "Ton Kiniois" raised his voice in public or in Parliament he was assailed with yells and insults that drowned his words. The thinking Republicans who had stood by his side in the political conflicts in which he had taken the most aggressive part, and exposed himself as a mark for hatred and abuse, gave him many votes for President of the republic when Grévy resigned. He received 212 ballots to Carnot's 303, and 148 given to Gen. Saussier, but withdrew from the contest rather than expose the republic to the danger of civil war. A few days later he was fired upon in the lobby of the Chamber by a man named Aubertin, who was found to be insane. From that time he submitted to ignominy and ostracism with scarce a protest, remaining usually silent in his place in the Chamber, to which his faithful constituents of the Vosges continued to elect him. He was a determined opponent of the pretensions of Boulanger, and stung him by the epithet of "St. Arnaud of the music halls" into sending a challenge, but the duel did not take place. In 1893 he was elected President of the Senate, and sober Republicans counted the reacquisition of his keen intellect and strong character for the service of the state almost a compensation for the losses resulting from the Panama exposure, but only a few weeks after his political rehabilitation he died.

Fox, Sir William, New Zealand statesman, born in Durham, England, in 1812; died near Auckland, June 23, 1893. He was graduated at Oxford in 1832 and called to the bar in London in 1842, emigrated to New Zealand, became an agent, and in 1849 the chief agent of the New Zealand Company, went to England to press the claims of the colony for self-government, and when responsible government was conceded was the first Premier of the colony from May till June, 1856. In 1861-'62 he was again Premier, in 1863-'64 Colonial Secretary, in 1869-'72 Premier once more, and in March, 1873, assumed the premiership for the fourth time, resigning a month afterward in favor of Sir Julius Vogel. After retiring from politics he devoted himself to the propagation of temperance principles.

Franceschi, Jules, French sculptor, born in Bar-sur-Aube, Jan. 11, 1825; died in the beginning of September, 1893. He was the son of Italian parents, but became a naturalized Frenchman, and studied sculpture with Rude. He produced a large number of works that were well esteemed, among them a portrait of Mme. Carvalho, the singer, and won medals in 1861, 1864, and 1865.

Franks, Adolphe, French scholar and journalist, born in Liacourt, Meurthe, Nov. 9, 1809; died April 10, 1893. He was of Jewish extraction. In 1854 he took charge of the course on the law of nations and of nature in the College of France. For some time he was editor of the "Journal des Débats." His principal works are "Dictionnaire des Sciences Philosophiques" and "La Kabbala, ou la Philosophie religieuse des Hébreux."

Froebel, Julius, German journalist, born in Griesheim, in 1806; died in Zurich, Switzerland, Nov. 7, 1893. He was educated at Munich and Berlin, settled in Zurich in 1833, and for several years taught geography and natural science in the university, founded a Radical newspaper in 1839, and in 1844 a publishing office for contraband political writings, went to Saxony in 1845, was elected to the National Assembly at Frankfurt in 1848, returned to Switzerland after the suppression of the revolution, and then emigrated to America, where he traveled extensively, founded a paper in San Francisco in 1855, and engaged in industrial enterprises in New York. Attempting to return to Germany in 1857, he was expelled, and went to England. In 1867 he started a Liberal paper in Munich, the "Süd-Deutsche Presse," and after 1873 was German consul at Symrna and subsequently at Algiers. He published a book of American travels.

Galt, Sir Alexander Tilloch, Canadian statesman, born in Chelsea, England, Sept. 6, 1817; died in Montreal, Sept. 19, 1893. He was educated in England and Canada, entered the Canadian Parliament in 1849, and from 1858 till 1864 was Minister of Finance. In 1867 he filled the same post for a few months. In 1880 he became Canadian commissioner in London, and in 1881 represented the Dominion in the monetary conference at Paris.

Ghiassoni, Antonio, Italian poet, born in Lecco in 1824; died in Caprino Bergamasco, Lombardy, in July, 1893. He was a singer in early life, and his barytone voice was admired in Italian cities and was heard at the Italiens in Paris in 1851. He was also a Republican journalist, and was imprisoned at Milan. He was one of a party that went to defend Rome when it was besieged by the French, and was arrested by them and deported to Corsica. Having lost his voice by bronchitis, he became a writer of romances, which were published in a Milanese magazine, and a librettist for Italian composers. He wrote more than sixty books of operas, including "Aida," "Lituani," and others, for Giuseppe Verdi.

Giordani, Luigi, Italian prelate, born in Codifume, Oct. 13, 1822; died in Ferrara, April, 1893. He was Archbishop of Ferrara, and was created a cardinal on March 14, 1887.

Gizadet, Paul, French engraver, born in Neuchâtel, Switzerland, March 8, 1821; died in Paris, in March, 1893. He was the son and the grandson of celebrated engravers. In 1842 he exhibited engravings of pictures painted by his brother Karl, and subsequently here produced Delaroche's picture of "Marie Antoinette au Tribunal," the "Escamoteur" and "Cinquante" of Knaus, Brion's "Noce en Alsace," Dubufe's "Enfant prodige," and other paintings.

Gonzalez, Manuel, ex-President of Mexico, born near Matamoros, in October, 1820; died in the city of Mexico, in March, 1893. He first became known in 1843 as one of Father Javanta's ruthless guerrillas. During the revolutionary wars he won a high reputation for bravery and ability, and lost his right arm in battle. He was governor of the palace in 1867-'71; was arrested for complicity in the disappearance of Maximilian's plate, escaped, and joined the forces of Porfirio Diaz;

fought with Diaz again in 1876, and by his timely arrival with 3,000 cavalry won the battle of Lomas de Teocac, which made Diaz President. He became Minister of War, and in June, 1880, succeeded Diaz, who was not eligible for a second term. The disastrous financial experiments that marked his administration and his attempt to settle the English debt made him so unpopular that he resigned the presidency in favor of Diaz on Nov. 30, 1884.

Gordon, J. R. H., English electrician, died in London, Feb. 3, 1893. He contributed papers to the "Philosophical Transactions" on electricity, lectured on that and other branches of physical science in university extension courses, and became subsequently an active electrical engineer. He was the author of "A Physical Treatise on Electricity and Magnetism" (1880).

Hamley, Sir Edward B., English general and military writer, born in 1834; died in London, Aug. 12, 1893. He served as a captain in the Crimean War. In the campaign in Egypt against Arabi Pasha, in 1882, he commanded a division with which he broke through the center of the enemy at the battle of Tel-el-Kebir. He gained a high reputation as Professor of Military History. As British commissioner for the demarcation of the Turkish boundary after the treaty of Berlin he was not successful. Sir Edward Hamley was the author of a work on the military operations and career of Wellington and an account of the siege of Sebastopol, also of two romances and some books of literary biography. He was a Conservative member of Parliament for Birkenhead, and wrote much against Irish home rule.

Hefele, Karl Josef, German ecclesiastical historian, born in 1809; died in Rottenburg, June 5, 1893. Dr. Hefele became Professor of Church History in the Roman Catholic faculty of Tübingen in 1840. He wrote a life of Cardinal Ximenes, published in 1844. In 1855 appeared the first volume of his "History of the Councils of the Church," which has been translated into English and French. He was made Bishop of Rottenburg in 1869, and in the Œcumenical Council of 1870 stood out resolutely against the dogma of papal infallibility, yielding only after the promulgation of the decrees.

Higginbotham, George, Australian statesman and jurist, born in Dublin, Ireland, in 1827; died in Melbourne, Victoria, Jan. 1, 1893. He was educated in Trinity College, Dublin; was called to the bar in London in 1853; went to Victoria in 1854; and, before he built up a successful law practice, wrote political articles for the "Argus," having been trained to newspaper work as law reporter for the London "Morning Chronicle." He discussed the problems of government that arose, and in 1860 entered the Legislative Assembly, where he distinguished himself as a bold and original political thinker who cherished high hopes for the future of Australia. He was Attorney-General in 1863-'68, when the Home Government persisted in vetoing the protective tariff, but at last gave way and recalled the Governor. In 1880 he was appointed a judge, and in 1888 Chief Justice.

Holst, Hans Peter, Danish poet, born in Copenhagen, Oct. 22, 1811; died there, June 2, 1893. He studied at the University of Copenhagen, became a teacher at the Academy of Cadets, and first became known as a poet in 1839 through an elegy on Frederick VI. Most of his subsequent lyric and dramatic works celebrated events connected with the history of his country or its sovereigns. He laid down his professorship in 1841 to edit the "Berlingske Tidende," and in 1875 he was appointed the official dramatic poet of the court theater. Besides poetry and plays he wrote novels after the model of Andersen. His best productions were his ballads.

Jennings, Louis John, English author and politician, born in London, in 1836; died there, Feb. 9, 1893. He was editor for a time of the New York "Times," in 1863-'68, and after his return to England was employed as reader for the publishing house of Murray and as the representative of the New York "Herald."

From 1865 till his death he represented Stockport in Parliament as a Conservative. He edited the "Croker Papers," and wrote "Field Paths," "Rambles among the Hills," and "Eighty Years of Republican Government in the United States."

Jowett, Benjamin, English Greek scholar, born in London, in 1817, died in Oxford, Oct. 1, 1893. He studied at Balliol College, Oxford, was graduated with honor, became a tutor of Greek, and attained a high reputation. He performed important services on the commission presided over by Macaulay, which determined the intellectual standards for admission into the East India service. From 1855 he was Professor of Greek at Oxford, and in 1870 he was elected master at Balliol. Soon after he was appointed professor his views on the inspiration of the Scriptures gave rise to a lively controversy; and in consequence he was finally excluded from the university pulpit. Prof. Jowett published a commentary on St. Paul's epistle to the Thessalonians, several theological treatises, and translations of the "Dialogues" of Plato and of some of the writings of Aristotle and Thucydides. He introduced the earnest study of Plato into Oxford University, and was accustomed to say, "Aristotle is dead, but Plato lives."

Kemble, Frances Anne, English actress, born in November, 1809, died in London, Jan. 15, 1893. She was the daughter of Charles Kemble, a graceful comedian, and a niece of John Philip Kemble and

Mrs. Siddons. Her father would not train his daughter for the stage, but when his management of Covent Garden Theater, in 1839, had brought him to bankruptcy he called for her services and those of her mother, who had retired long before. She played Juliet, and afterward Belvidera in "Venice preserved," and Euphrasia in the "Grecian Daughter," electrifying the London audiences and being greeted as a second Mrs. Siddons. In 1830 and 1831 she added the rôles of Lady Macbeth, Calista in the "Fair Penitent," Lady Townley in the "Provoked Husband," Mrs. Haller in "The Stranger," Mrs. Beverley in "The Gamester," and Juliana in "The Honeymoon." In 1832 she won admiration in the original parts of Julia in Sheridan Knowles's "Hunchback," and the Duchess de Guise in an adaptation of the "Henri III" of Alexandre Dumas, and produced a tragedy of her own called "Francis I," which was not well received. In the autumn of that year she went to the United States with her father, making her debut in the Park Theater, New York, as Bianca in "Fazio," and entrancing the people of that city and those of Boston and Philadelphia still more. In 1834 Fanny Kemble retired from the stage for a long period, having become the wife of Pierce Butler, a

Southern planter. Her married life was not happy, and eventually she obtained a divorce and reappeared in London in 1847 at the Princess's Theater, only to discover that her prestige and her powers were gone; nor had she much better success at first in Shakespearean readings. From that time she lived most of the time in the United States, engaged in literary composition, and occasionally appearing in public as a reader. She was the author of "A Journal of a Residence in America," "The Star of Seville," "A Year of Consolation," translations of Schiller's "Marie Stuart," and Dumas's "Mademoiselle de Belle Isle," "Residence on a Georgia Plantation in 1838-39," "Notes on Some of Shakespeare's Plays," and three remarkable autobiographical works entitled "Records of a Girlhood," "Records of Later Life," and "Further Records."

Lacressonnière, the stage name of **Louis Leost de la Pennerie**, French actor, born in 1819; died in Paris, June 10, 1898. He was trained for a commercial career, which he abandoned for the theatre, spending a year at the Conservatoire after acting for a few months at the Gaiété. He performed various rôles in the provinces, achieved a success at the Ambigu, acted at the Théâtre Historique, and soon was intrusted with the principal parts in most of the new plays of Alexandre Dumas and François Soulié. He appeared later at the Porte Saint-Martin and the other chief theaters.

Le Gendre, **Léonce**, French painter, born in 1830; died in Tournai, July 10, 1898. He produced many remarkable paintings, which were acquired by Rothschild and other French collectors. At the time of his death he was director of the Academy of Design at Tournai.

Leinster, **Gerald Fitzgerald**, Duke of, born Aug. 16, 1851; died in London, Dec. 1, 1898. He was descended from a Florentine adventurer, one of the famous Gherardini family who accompanied the Normans to England. Maurice Fitz Gerald in the next century established the English rule in Ireland. The Fitz Gerald was made Earl of Kildare in 1816, and Dukes of Leinster in 1766. The late duke succeeded his father in 1887, and is succeeded by Maurice, Marquis of Kildare, born March 1, 1887, the eldest son of his marriage with Lady Hermione Duncombe, a celebrated beauty.

Locke, **Arthur**, English journalist, born in Greenwich, July 2, 1828; died in London, June 23, 1898. He was the son of a civil commissioner of Greenwich Hospital, was educated at Charterhouse and at Pembroke College, Oxford, where he was graduated in 1851, was engaged for a short time in a mercantile employment at Liverpool, emigrated to Australia, where he wrote for the press, and after various adventures there and in India returned to England in 1861, and contributed reviews to the "Times" from 1865 till 1870, when the "Graphic" was founded and he became its editor, in which post he remained till failing health compelled him to resign, in 1891. He was the author of "Stephen Scudamore," "On a Coral Reef," and other works of fiction.

Lonlay, **Dick de**, the pseudonym of **Georges Hardouin**, French soldier, author, and artist, born in St. Malo, in 1846; died in Moscow, Oct. 1, 1898. He served in the imperial guard in France, afterward took service in a regiment of the Don Cossacks, and returning to France took part in the Tunisian campaign. He published many narratives of modern feats of arms, illustrating his own books. In 1893 he was editor of the "Drapeau," the organ of the League of Patriots. A critic of his book "Français et Allemands" accused him of compiling his works, upon which he brought suit in 1889, and after losing his case he went back to Russia.

Lubke, **Wilhelm von**, German art critic, born in Dortmund, Jan. 17, 1826; died in Karlsruhe, April 5, 1898. He was the son of a teacher of exceptional attainments, and he himself showed remarkable and versatile talents in his boyhood, playing the most difficult pieces on the organ, and carrying on anonymously a

religious controversy in the newspaper with the parish priest. He studied philology in Bonn and Berlin, became a writer for art journals, having given up his place as a teacher in the gymnasium to follow aesthetics as a profession, eked out his living by giving lessons on the piano and in singing, obtained commissions to draw and describe churches for atlases of architecture, and printed in 1852 a short introduction to the study of mediæval church architecture, and in the following year his work on mediæval art in Westphalia gave him a high standing among writers on art. In 1855 he published a handbook of architecture, the first illustrated book of the kind, and the first one that was intended for popular readers. It had a great sale, although it was free from all the literary embellishments and artifices that are used in popularizing technical subjects. In 1857, after having begun his "Denkmäler der Kunst," he was appointed tutor in the Berlin Academy of Architecture. In 1860 appeared his "Grundriss der Kunstgeschichte," of which ten large editions have been sold. It was followed by a work on the history of architecture, and in 1863 by one on the history of sculpture. In 1860 he went as professor to Zurich, returning in 1866 to Germany to lecture in the technical high school at Stuttgart. In 1868 appeared his treatise on the history of the Renaissance in France, and in 1873 that on the history of the Renaissance in Germany. In 1878 he published a work on the history of painting in Italy. In 1885 he left Stuttgart to accept the professorship of the History of Art in Karlsruhe.

McCall, **E. W.**, English missionary, born in 1821; died in Paris, May 12, 1898. He was the son of an Independent minister and theologian, and was a minister himself at Sunderland and other places, until he visited Paris in 1871, and was encouraged to return and devote himself to the propagation of evangelical religion by seeing the general revolt against the Catholic Church among the working people, and their tendency toward atheism. In this work he was supported by subscriptions from Great Britain and America. He established 43 missions in Paris, 89 in other French towns, and 6 in Algeria and Tunis. His benevolent and educational work among the debased population commanded general approbation, and won for him the ribbon of the Legion of Honor.

Macpherson, **William**, Scottish jurist, born in Aberdeen, in 1818; died in London, April 20, 1898. He was educated at Charterhouse and Trinity College, Cambridge, was called to the bar in 1837, and in 1841 published a learned treatise on the law of infants. He went to India in 1846, prepared while acting as master in chancery a standard work on Indian civil procedure, returned to Europe at the end of twelve years, and was invited by John Murray to take the editorship of the "Quarterly Review," which he held for six years, resigning then in order to devote his attention wholly to his duties as secretary of the Indian Law Commission. Subsequently he practiced law, writing a standard work on the practice of the Judicial Committee, and later was legal adviser and then judicial secretary to the India Office.

Madrid, **Margarita**, Princess of Bourbon-Parma and Duchess of wife of Don Carlos, the Spanish pretender, born in Lucca, Jan. 1, 1847; died in Viareggio, Italy, Jan. 29, 1898. She was the daughter of the Duke of Parma, who was assassinated in 1854, by Princess Louise of France, the sister of the Comte de Chambord, by whom her four children were adopted. In 1867 she married Don Carlos, head of the Spanish Bourbons, who was the nephew of the Comtesse de Chambord. After the collapse of the Carlist insurrection of 1873 she lived with her husband in France until he was expelled, in 1881. After the death of the Comtesse de Chambord she became the owner of Frohsdorf, where she spent her summers with her five children.

Marshall, **Arthur Milnes**, educator, born June 8, 1859; died in Cumberlandshire, England, Dec. 31, 1898. He was graduated at St. John's College, Cambridge, in 1874; studied at Dr. Dohrn's zoological station in

Naples in 1875; in that year and 1876 assisted the late Prof. Balfour at Cambridge in organizing the classes in comparative morphology; entered at St. Bartholomew's Hospital in 1877; was appointed Professor of Zoology in Owens College, Manchester. He was secretary, and afterward chairman, of the General Board of Studies, in organizing the courses of study for the Victoria University. He was the author of several papers in scientific journals dealing with the early stages of development of the nervous system of a book on the frog, and, jointly with Mr. Hunt, of a work on practical zoology. Passing the Christmas holidays at Westdale Head, Cumberland, he suffered a fatal fall in climbing the peak of Scafell.

Martos, Christine, Spanish statesman, born in 1832; died in Madrid, Jan. 18, 1893. He became a Republican journalist at an early age, was condemned to death for participation in the rebellion of 1866, and escaped to France; returned in 1868 after the dethronement of Queen Isabella, and took a prominent part in politics till the restoration in 1875, when he retired to devote himself to the practice of law, in which he was very successful. In 1879 he returned to the Cortes, declared for the monarchy of King Alfonso, and attached himself to Sagasta's party. He was a powerful, original, and independent speaker, not a docile partisan, but yet was intrusted with the portfolios of Justice and Foreign Affairs, and several times was elected President of the Chamber.

Martos, Hermann, German author and educator, born in Trebnitz, Jan. 7, 1818; died in Leipzig, May 22, 1893. He studied theology in Halle, became a country teacher, and wrote a book called "Naturstudien," in which he described with fine literary art the plants and animals of his country, and the scenes of nature in a picturesque, imaginative, and highly poetical style. He became director of the high school for girls in Halberstadt, and exhibited such power and skill to stimulate, interest, and instruct, and had given so much study to the art of teaching, that he was called to the University of Leipzig as Professor of Pedagogics. His principal other works, besides text-books of zoology and reading, are "Bunte Blätter" and "Deutscher Wald und Hain."

Maupassant, Guy de, French novelist, born in 1850; died in Paris, July 6, 1893. He was a descendant of an old Norman noble family, and when a clerk in the Ministry of Education showed his attempts in prose and poetry to Flaubert, who told him to work hard and train himself for fiction. He went back to Normandy and practiced for seven years before his master allowed him to come before the public with "Boule de Soif," the best story in a collection called "Les Soirées de Medan," written entirely by young disciples of the naturalistic school, and published in 1880 under the auspices of Zola. This was followed by a volume of coarse and cynical naturalistic poetry, "Des Vers" (1880), elaborated with exquisite art. In the next eleven years he turned out short stories and novels with astonishing rapidity, 30 volumes altogether, all ripe and finished products. In his later and longer stories he departed from the trivial and ignoble subjects and the graphic and dramatic treatment of the naturalistic school, to deal more analytically with deeper problems of human nature. Maupassant was

one of the masters of modern French style, free from every artifice or mannerism, producing his descriptive and dramatic effects with familiar words and phrases as simple and lucid as the language of Rousseau or Voltaire. The best of his other works are: "La Maison Tellier" (1881); "Mlle. Fifi" (1882); "Contes de la Bécausse" (1883); "Une Vie" (1883); "Claire de Lune" (1883); "Les Scieurs Rondels" (1884); "Monsieur Parent" (1886); "Mont-Oriel" (1887); "La Petite Roque" (1888); "Bel-Ami"; "Pierre et Jean" (1888); "Fort comme la mort" (1889); "L'Inutile Beauté" (1890); "Notre Cœur" (1890). Incessant strenuous mental exertion resulting in nervous exhaustion, Maupassant resorted to drugs to stimulate his flagging brain until his mind gave way, and for the last two years of his life he was confined in an insane asylum. His comedy "La Paix du Ménage" was produced a few weeks before his death.

Mans, Henri, Belgian engineer, born in Namur, Oct. 22, 1808; died in Ixelles, July 18, 1893. He was employed in most of the great works of engineering executed during his active life in Belgium, and his invention and resources were sought often in aid of novel projects undertaken in other countries, such as the piercing of the railroad tunnels in Switzerland, for which he invented valuable appliances and machinery.

Masade, Charles de, French author, born in Tarn-et-Garonne in 1820; died in Paris, April 27, 1893. He was the son of a judge and the grandson of a member of the Convention of 1793. Going to Paris after studying law at Toulouse, he wrote for "La Presse" and the "Revue de Paris," and afterward for the "Revue des deux mondes," to which he contributed the political chronicle from 1852 to 1858 and from 1869 till the time of his death. He published a history of the Franco-Prussian War and a biography of Thiers. He was elected to the Academy in 1862.

Merivale, Charles, English historian, born in Devonshire, in 1808; died Dec. 27, 1893. He was educated at Harrow and Haileybury, and at St. John's College, Cambridge, where he was graduated in 1830 with high honors, became a fellow and tutor, and in 1838-40 was university preacher. He was Hulsean lecturer in 1861 and Boyle lecturer in 1865, chaplain of the House of Commons from 1863 till 1865, and in the latter year was appointed Dean of Ely. Dean Merivale was the author of "Fall of the Roman Republic" (1853); "History of the Romans under the Empire" (1850-52); "Conversion of the Roman Empire" (1864); "Conversion of the Northern Nations" (1865); a translation of the "Iliad" (1869); and "A General History of Rome" (1875).

Minto, William, British educator and author, born in 1845; died in Aberdeen, in March, 1893. As professor of Logic and English in the University of Aberdeen he had a wide reputation, and he was also the author of numerous works, including several novels.

Miribel, Marie Françoise, French general, born in Montbonnet, Isère, in 1831; died in Paris, Sept. 12, 1893. He studied at the Polytechnic School in Paris and the Artillery School in Metz, was commissioned a lieutenant of artillery in 1855, and departed for the Crimea. In the Italian war of 1859 he served in the horse artillery and was severely wounded at Solferino. He went with Bazaine to Mexico as a captain and received a disabling wound in the assault of Puebla, in consequence of which he was assigned to bureau duty in the War Office. Later he was military attaché of the embassy at St. Petersburg. When the Franco-German War broke out, Miribel, who held the rank of lieutenant-colonel, applied for an assignment to active service. His desire was not gratified till after the fall of the empire, when the Government of National Defense gave him a command. He was prominent in the defense of Paris, especially in the battles of Malmaison, Champigny, and Buzenval, and aided in the suppression of the Commune, after which he was made a colonel, and in 1875 a general. In November, 1881, when the Gambetta ministry was formed, he was selected to be chief of the newly organized general staff. This post he held till his death.

and cynical naturalistic poetry, "Des Vers" (1880), elaborated with exquisite art. In the next eleven years he turned out short stories and novels with astonishing rapidity, 30 volumes altogether, all ripe and finished products. In his later and longer stories he departed from the trivial and ignoble subjects and the graphic and dramatic treatment of the naturalistic school, to deal more analytically with deeper problems of human nature. Maupassant was

He worked out the plan for the mobilization of the French army in the event of war, and is supposed to have completed a plan of campaign to be followed in case another war with Germany should break out. His death was the result of a fall from his horse.

Moleschott, Jacob, Dutch physiologist and member of the Italian Senate, born in Bois-le-Duc in 1822; died in Rome, May 20, 1893. He studied natural science and medicine at Heidelberg, practiced medicine in Utrecht, returned to Heidelberg as Professor of Anatomy, Physiology, and Anthropology in 1847, resigned in 1854 on receiving a warning from the Government on account of the materialistic tendency of his writings, became Professor of physiology at Zurich in 1856, went in the same capacity to Turin in 1861, was nominated a Senator in 1876, and in 1879 became Professor of Physiology in the University of Rome. The Italians were proud of their adopted citizen, and in the Senate he influenced legislation by elucidating social questions with his scientific knowledge.

Moore, Albert, English painter, born in 1851; died in September, 1893. His delicate coloring, resembling the art of the Japanese, was appreciated by connoisseurs in England and on the Continent.

Mortemart, René de Rochechouart, Duc de, French statesman, born in Paris, March 10, 1804; died there, May 23, 1893. Descended from a feudal house of Poitou founded in the eleventh century, he was allied by blood with the Crussols, Montmorencys, and other ancient noble families. He was educated at the military schools of St. Cyr and Saumur, and received a commission in the lancers of the guard, which he resigned in 1828. Just before the abdication of Louis Philippe he had been elected a Deputy for the Rhône, and as such he sat in the Constituent Assembly among the members of the Legitimist Opposition. From 1861 till 1863 he sat in the Corps Législatif. He served in the Franco-German War as colonel and chief of staff in the First Army of Paris, was retired in 1871, and was elected Deputy for the Rhône in the National Assembly. He succeeded to the title and estates on the death of his great-uncle in 1875, and was chosen President of the Cercle Agricola.

Motley, Thomas, English author, born in Gainborough, in 1806; died in Cheltenham, June 17, 1893. He was educated at the Charterhouse school and at Oriel College, Oxford, where he took his degree in 1828, and in the following year was chosen a fellow, and was thus closely associated with the leaders of the Oxford movement for the revival of patristic theology and pre-Reformation religion. He accepted a college living in 1832, and in 1836 took charge of the decayed parish of Cholderton, resigned his fellowship, and married a sister of John Henry Newman. Having edited the "British Critic" for two years, and then become in 1844 a writer for the "Times" on religious and various other subjects, he resigned his pastorate in 1847 and went to London to devote himself entirely to journalism. He was an indefatigable writer, and the anonymous articles that he contributed to the "Times" till near the time of his death were as rich and choice as anything that appeared in that paper, owing their interest to their ingenious, versatile, witty, scholarly, and polished style rather than to sound and consistent reasoning. He undertook clerical work again at Plymtree, Devonshire, in 1868, retiring in a few years on account of infirmity and failing eyesight. His letters from Rome to the "Times" during the Vatican Council in 1869-70 were published in book form. Not long before his death he published a volume of "Reminiscences" dealing with the Tractarian movement, and two volumes of introspective speculative theology entitled "The Word" and "The Creed, or a Philosophy," in which his charming tempered and refined style was first revealed under the author's name.

Mottelshap, Henry, English classical scholar, born in Kettering, in 1839; died in Oxford, July 10, 1893. He was educated at Durham school and Charterhouse and at Oxford, where he took high honors, became a fellow at Lincoln, was assistant master at Harrow in

1868-73, then tutor at Oxford, and in 1878 was elected Corpus Professor of Latin. He published lectures on "Ancient Lives of Vergil" and other classical subjects, and amassed materials for a great Latin dictionary which the Oxford press is expected to print.

Nicholson, Alexander, Scottish writer, born in the island of Skye, at Husabost, in 1827; died in Edinburgh, Jan. 14, 1893. He studied first theology, but abandoned his intention of entering the ministry of the Free Church on account of doctrinal difficulties, turned to the law, and was admitted as an advocate in 1860, having previously edited since 1855 the Edinburgh "Guardian," and assisted Sir William Hamilton in the chair of Logic and Prof. MacDougall in the chair of Moral Philosophy. As a legal practitioner he was unsuccessful, but he held the office of sheriff substitute, first in Dumfriesshire and then in Greenock, from 1872 till 1889. He was assistant commissioner in the Duke of Argyll's education commission of 1865, when he prepared an admirable report on the people of the Highlands, and in 1883 was a member of the crofters commission. He was one of the editors of the eighth edition of the "Encyclopædia Britannica," contributed frequently to the "Scotsman," wrote many delightful songs both in English and Gaelic, published a collection of Gaelic proverbs, and revised the Gaelic version of the Bible for the Society for Promoting Christian Knowledge.

Nissel, Franz, Austrian dramatist, born in Vienna, March 14, 1831; died in Gleichenberg, July 21, 1893. His first play was a drama of peasant life, "Ein Wohlthäter," produced in the Vienna Court Theater in 1856. The heroic tragedies in verse that followed, "Heinrich der Löwe" (1858) and "Perseus von Macedonien" (1862), were not successful. "Agnes von Meran" obtained a prize, but on account of its repulsive theme was not well adapted for the stage. None of the managers cared for his plays because they were too grandiose for the modern taste, though his fellow-poets thought it hard that his rare merits should be thus neglected. When Wilbrandt became director of the Vienna Court Theater he staged the rejected "Zauberin am Stein," and it had a great success. His comedy "Ein Nachtlager Corvino" was also accepted. His select dramas were published in 1892. He left "Mahomet" and several others that have not been played or published.

Otto, Paul, German sculptor, born in 1847; died in Berlin, in April, 1893. He designed the Humboldt statue in Berlin and the statue of Victor Emmanuel at Rome, where he resided thirteen years, returning to Berlin in 1886. His design for a statue of Luther to be erected in Berlin gained the first prize.

Palmer, H. S., English military engineer and explorer, born in 1838; died in Tokio, Japan, March 11, 1893. He was the son of a distinguished officer of the Madras staff, entered Woolwich in 1856, obtained a commission in the engineers, and was sent to British Columbia, afterward spent twelve years in the ordnance survey of England, and in 1869 took joint command of the Mount Sinai expedition with Sir Charles Wilson. In 1882 he went to New Zealand to make observations of the transit of Venus. Subsequently he took up his residence in Japan, where he was engaged in constructing water works.

Paris, Louis Equivoix de, French statesman, born in Aurillac, April 13, 1815; died in Paris, April 9, 1893. He studied law, political economy, and natural philosophy in Strasburg and Paris, graduating in 1841. He was a member of the Constituent and National Assemblies, was made chief of the financial section in the Council of State after the *coup d'état*, presided over the same department in the ministry of Ollivier, after having been Minister of Public Instruction, and after the fall of the empire retired into private life. He was the author of important treatises on taxation, the monetary policies of France and Germany, political science, etc., and of a biography of Gustavus Adolphus.

Paris, François Edmond, French naval commander and writer, born in March, 1806; died in Paris, in

April, 1898. He entered the navy in 1820, accompanied Dumont d'Urville as ensign on his voyage of discovery in 1826, became a lieutenant in 1832, navigated to China the "Archimède," which was the first steamer that doubled the Cape, was promoted captain in 1846, and in the Crimean War commanded a vessel with such ability as to gain the grade of rear-admiral, and was made vice-admiral in 1864. He was the author of a dictionary of steam navigation and a treatise on the screw propeller.

Parke, Thomas Heale, Irish African explorer, born in Drumona, County Roscommon, in 1857; died Sept. 9, 1893. He was educated as a surgeon, received a commission on the medical staff of the British army in 1881, went to Egypt in 1882, and distinguished himself in the campaign, in the cholera epidemic, and in the expedition for the relief of Gen. Gordon. In 1887-'89 he crossed Africa with Henry M. Stanley, and performed an important part in the Emin Pasha relief expedition with skill and courage. He published several works, of which the last was "Guide to Health in Africa" (1893).

Paulet, Lord William, English general, born July 7, 1804; died in London, May 9, 1898. He was a son of the thirteenth Marquis of Winchester, was educated at Eton, entered the army in 1821, was promoted at the usual rate of speed, was made equerry of the Duke of Cambridge in 1851, served through the Crimean War, was commander at Scutari in 1856, and after that saw no more active service, but held high appointments at home and was employed in diplomatic capacities. He became colonel of the Durham Light Infantry in 1864, was made a general in 1874, and in 1886 a field marshal.

Pearson, Emma Maria, English philanthropist and writer, died in Florence, Italy, in June, 1898. She was the daughter of a naval officer, became a nurse of the Red Cross, and gained a reputation in the Franco-German War by her services in nursing the sick and wounded at Sedan and Orleans. Afterward she engaged in the same work in Serbia and elsewhere. She wrote much for the "St. James Gazette" and other periodicals, and published a book of travels.

Petrie, John, British artist, born in Edinburgh, March 17, 1839; died in Hastings, England, Feb. 21, 1898. He learned to paint in Edinburgh under the instruction of Robert Scott Lauder and John Ballantyne, and at the age of nineteen exhibited there a "Scene from the Fortunes of Nigel." At twenty-one he exhibited "The Armorer's" at the Royal Academy, and the honor that he got from this picture determined him to establish himself in London. He was elected an associate of the Royal Academy in 1866 and an academician in 1873. Besides historical scenes based largely on Sir Walter Scott's novels, he painted some humorous compositions and many portraits. Among the best known of his works are "Jacobites," "Treason," "Hunted Down," "Juliet and Friar Lawrence," "The Flag of Truce," "Terms to the Besieged," "A Sword-and-Dagger Fight," "The Disgrace of Cardinal Wolsey," "Touchstone and Audrey," "Sanctuary," "The Death Warrant," "A State Secret," "The Vigil," "Interview of the Duke of Monmouth with James II," "The Defiance," and "Bonnie Prince Charlie." The last two were exhibited at Chicago.

Pike, Richard, arctic navigator, born in Carbonear, Conception Bay, in 1884; died in St. John, Newfoundland, May 4, 1898. He followed the sea from his early youth; first took command of a sealing steamer in 1869; and in 1881 conveyed the Greely expedition to its destination in the "Proteus." In 1883 he took the search expedition of Lieut. Garlington, which ended in failure. In 1891 he landed Lieut. Peary's exploring expedition to McCormack Bay, and in 1892 went north again with the expedition for Peary's relief.

Place, Charles Philippe, French prelate, born in Paris, Feb. 14, 1814; died in Rennes, March 5, 1898. He studied law, and took his degree in 1841; afterward entered the French diplomatic service, and soon abandoned this to take holy orders. He was an able

preacher, and in 1878 was made Archbishop of Rennes. He was created a cardinal on June 7, 1886, at the same time as Archbishop Gibbons.

Potter, George, English trade-unionist, born in Kenilworth, in 1832; died in London, June 3, 1898. He served his apprenticeship with a carpenter of Coventry; went to London in 1854; became a leader of the trade union, and was the directing spirit in the lock-out of the building trades in 1859. He also headed the workmen who welcomed Garibaldi. As editor of the "Beehive" and the "Industrial Review," and a contributor to various periodicals, he established a high reputation as a writer on social and labor reform and an exponent of the old trade-unionism. He opened the first trade-union congress in London in 1868; was an unsuccessful candidate for Parliament in 1874, and again in 1886; and was a member from 1873 till 1882 of the London School Board.

Pratt, Anne, English botanist, born in Strood, near Rochester, in 1806; died July 27, 1898. She published "Flowers and their Associations" at the age of twenty, and, devoting her life to the study of plants, wrote with a deep knowledge and love of nature "The Field, the Garden, and the Woodland," "Wild Flowers," "Catechism of Botany," "Poisonous Plants," "Common Things of the Seashore," and other books, which were illustrated with her own artistic sketches. Her principal work was one on "Flowering Plants and Ferns of Great Britain," illustrated with colored plates, which she revised for re-issue in a popular edition in 1880.

Pritchard, Charles, English astronomer, born Feb. 29, 1808; died in Oxford, May 28, 1898. He was graduated at Cambridge in 1830; was chosen a fellow of St. John's College; for many years was head master of Clapham Grammar School; and in 1870 was elected Savilian Professor of Astronomy at Oxford, where he superintended the new observatory. In conjunction with Prof. Pickering, of Harvard, he determined the magnitude of all the stars of the Northern Hemisphere that are visible to the naked eye, and received a medal from the Royal Astronomical Society in 1886 for his discoveries in stellar photometry, and was president of the society for that year. He preached often before Oxford and Cambridge Universities, wrote many astronomical articles in cyclopædias, described his experiments and discoveries in the "Transactions of the Astronomical Society," and published, in 1890, "Occasional Thoughts of an Astronomer on Nature and Revelation."

Rae, John, Scottish arctic explorer, born in the Orkney Islands, in 1813; died in London, July 21, 1898. He studied medicine in Edinburgh, obtained his surgeon's diploma in 1833, was appointed surgeon on a ship of the Hudson Bay Company, began his geographical explorations in 1846 by surveying 700 miles of the northern coast of America, filling the gap between Parry's and Ross's discoveries, went with Sir John Richardson in search of Sir John Franklin in 1843, visiting the coast between the Mackenzie and Coppermine rivers, set out in command of an expedition in 1850 and explored Wollaston Land and the coast east of the Coppermine, with Victoria Land, and undertook a third search expedition in 1853, when he proved King William's Land to be an island, and found evidence that Franklin's ships were lost. Dr. Rae's narratives were not universally believed.

Romaine, W. G., English administrator, born about 1825; died in the beginning of May, 1898. He was a barrister without practice, but with many friends, when the British army departed for the Crimea in 1854, and, being fond of travel and adventure, he obtained the appointment of deputy judge-advocate. There he devoted himself voluntarily to the task of making comfortable and feeding the wounded of both sides. On his return he presented himself as a Liberal candidate in Clapham, but was defeated by a few votes. From 1857 till 1869 he was permanent Secretary of the Admiralty, and then he was appointed Judge-Advocate General of India. In 1876 he went to Egypt as a member of the Conseil du Trésor,

of which he became president, and subsequently, under the joint control, he was the English Comptroller-General till 1879, when he retired.

Ruchonnet, L., Swiss statesman, born in England, in 1835; died in Bern, Sept. 21, 1898. He was the son of Swiss parents, who sent him to Lausanne for his education. Embracing the profession of the law, he distinguished himself at the bar by his eloquence, and became chief of the Radical Democratic party. He passed successively through all elective offices, becoming President of the Council of State in 1878, then a member of the Federal Council, and in 1884 President of the Swiss Confederation. He was the representative of the Canton of Vaud, where he founded important credit and savings institutions, and regulated the waters of Lake Geneva. He was minister successively of Public Instruction, Commerce, and Justice and Police, and was the author of improvements in agricultural education, the management of railroads, and other branches.

Schaeffhausen, Prof., German anthropologist, died in Bonn, in February, 1898. He gained a world-wide reputation by his discoveries in the valley of the Rhine, which he thoroughly explored in search of prehistoric remains. He discovered the lake dwellings of Andernach and the famous Neanderthal skull. As professor at Bonn he made one of the completest collections of prehistoric skulls in existence.

Scheurl, Christoph Gottlieb Adolf von, German jurist, born in Nuremberg, Jan. 7, 1811; died there, Jan. 24, 1898. He studied and taught in the University of Erlangen, where he became extraordinary professor in 1840, and in 1845 ordinary Professor of Roman and Ecclesiastical Law. As a Deputy in the Bavarian Chamber in 1845-'49 he labored on the reform of criminal law procedure. His best-known works are "Lehrbuch der Institutionen" (1850); "Beiträge zur Bearbeitung des römischen Rechts" (1854-'86); and "Das gemeine deutsche Eherecht" (1882).

Schmerling, Anton von, Austrian statesman, born in Vienna, Aug. 23, 1805; died there, May 23, 1898. He studied law in the Vienna University, practiced in the provincial courts, became a counselor of the Court of Appeals in 1846, and in 1848 was sent to Frankfurt to represent his Government in the draughting of a German Constitution. He was chosen President of the Federal Diet, and afterward was elected a member of the German National Assembly. Opposing the Prussian hegemony, he resigned the post of Minister of the Interior at the end of 1848, took his place in the Austrian Imperial Assembly, and returned to Frankfurt as Austrian plenipotentiary. When the King of Prussia was elected German Emperor, in 1849, Schmerling returned to Vienna and became Minister of Justice in the Cabinet of Prince Schwarzenberg. Resigning for political reasons in 1851, he became President of the Court of Cassation. In 1861 he was called to the head of the Government as Minister of State, and endeavored to carry out a policy of constitutional reform and the unification of the empire as a single constitutional state. The Hungarians would not accept his programme of amalgamation, and in July, 1865, he had to retire. He became President of the Supreme Court, was a member of the Bohemian and the Lower Austrian Diets, was appointed a life member of the Upper House in 1867, and after 1879 was the leader of the Opposition to the federal policy of Count Taaffe.

Schoelcher, Victor, French statesman, born in Paris, July 21, 1805; died there, Dec. 26, 1898. He was the son of a manufacturer of porcelain to whom the industry is indebted for various improvements. Visiting the United States and Cuba in 1829, he became impressed with the inhumanity of slavery, and wrote several works advocating abolition. In 1848, as under secretary of the Ministry of Marine and the Colonies, he proposed the decree proclaiming the principle of emancipation in all French dominions. He was expelled from France after the *coup d'état*, and afterward from Belgium, took up his residence in England, and did not return to France till after Se-

dan. During the siege of Paris he served as a colonel on the general staff of the National Guard. After the establishment of the republic he was elected a Deputy for the Seine, and in December, 1875, was chosen a Senator.

Schnitz, Albert, known also under the pen name *San Marte*, German philologist, born in Schwedt, on the Oder, May 18, 1802; died in Magdeburg, June 3, 1893. He studied law and followed a judicial career, devoting his leisure time to the study of old German, French, Celtic, English, and Polish literature. In 1837 a pamphlet criticising official regulations led to his transfer to Bromberg from Magdeburg, and after his return, in 1843, he was appointed to a post in the educational department of the province. He published a translation of "Parcival" (1832); a life of Wolfram von Eschenbach (1836-'42); "Die Arthur-Sage" (1842); "Groepolens Nationalisagen, Märchen, und Legenden" (1842); "Beiträge zur bretonischen und Keltisch-germanischen Heldensage" (1847); "Die polnische Königsage," "Sagen von Merlin" (1858); also translations of "Gudrun," and other old legends, a treatise on mediæval arms, and a critical account of the old German heroic legends.

Ségalas, Anna, French poetess, born in Paris, in 1814; died there, Sept. 6, 1898. She was the daughter of an author, and published her first volume of verse when seventeen years old. She married not long afterward a lawyer, but continued to write, and was at one time very popular. Among her poetical works are "Les Algériennes," "Oiseaux de Passage," and "La Faune." She wrote also "Mystères de la Maison," "Magicienne d'Aujourd'hui," and other romances, many stories for children, and the plays "Loge d'Opéra" and "Trembleur," which were produced at the Odéon.

Shapstone, Sir Theophilus, South African statesman, born in 1817; died in Durban, Natal, June 24, 1893. He became interpreter of the Kaffir language for the Cape Government at the age of eighteen, served on the staff of Sir Benjamin D'Urban during the Kaffir War, accompanied the military expedition to Natal in 1838, and held various posts afterward under the Natal Government, becoming Secretary for Native Affairs in 1856. In 1873 he went to Zululand to install the King, and in 1874 was called to England to confer with the Colonial Secretary on native affairs. His advice coincided with the imperialistic policy of the Beaconsfield Government, and in 1876 he was selected to conduct negotiations between the Zulus and the Transvaal Republic, which ended in his annexing the Transvaal to the British Empire on April 12, 1877. He retired in 1879, but officiated at the restoration of Cetewayo in Zululand in 1888.

Smith, Sir William, English lexicographer, born in 1812; died Oct. 7, 1898. He compiled "Dictionary of Greek and Roman Antiquities," "Dictionary of Greek and Roman Biography and Mythology," and a useful Latin-English lexicon. He was till his death the publisher of the "Quarterly Review."

Spaventa, Silvio, Italian patriot, born in the Abruzzi, in 1823; died in Rome, June 20, 1898. He was educated at Montecassino and Naples; became Professor of Philosophy at Montecassino in his twenty-fourth year; returned to Naples in the following year to aid in the revolutionary movement; was compelled to flee to Tuscany; returned when the Constitution was proclaimed; bore a prominent part in the struggle for freedom; was condemned to the galleys, and only liberated in 1859 to be sent with others to South America. The prisoners mutinied, and forced the captain of the ship to set them ashore at Cork, whence Spaventa returned to Italy, where he took part in the war of liberation, and afterward became head of the Department of Jurisprudence.

Stefan, Prof., Austrian physicist, born near Klagenfurt, in 1835; died in Vienna, in January, 1898. He studied physics and mathematics, and was appointed Professor Ordinarius of the University of Vienna in 1866. He was distinguished in various branches of physical science. He was a member of the commis-

sion for the study of the physical conditions of the Adriatic Sea, President of the Scientific Committee in the Electrical Exposition, President of the International Conference on the Diapason, and secretary of the section of mathematics and physics in the Austrian Academy of Science.

Symonds, John Addington, English critic and historian, born in Bristol, in 1840; died in Rome, Italy, April 19, 1893. He was the son of a physician, who was known as a philosopher; was educated at Harrow and Balliol College, Oxford; won the university prize for an English essay on the Renaissance, and was elected a fellow of Magdalen College, where he plunged into the studies that had first attracted him, and produced an "Introduction to the Study of Dante," and essays on the Italian and Latin writers of the fifteenth and sixteenth centuries. He wrote "Studies of the Greek Poets," several volumes of original and translated poems, besides lives of Shelley and Sidney, translations of Cellini's autobiography and Count Carlo Gozzu's memoirs, "Michelangelo," a volume on "Shakespeare's Predecessors in the English Drama," "Sketches and Studies in Italy," "Italian By-Ways," and a "History of the Renaissance in Italy," supplemented by "The Catholic Reaction."

Taine, Hippolyte Adolphe, French philosopher and critic, born in Vouzier, Ardennes, April 21, 1826; died in Paris, March 6, 1893. He distinguished himself as a student in the Collège Bourbon, and entered the École Normale with the ambition to become a

philosopher. After the war he lectured on philosophy, and in 1871 went to Oxford to deliver a course on French literature, publishing "Notes sur l'Anglisme" after his return. When his name was presented to the French Academy, in 1874, the shallow and conventional Caro was elected instead by the Conservatives, who not long afterward glorified Taine for the searching criticism which he applied to revolutionary leaders and their actions in his great work on the French revolution, and the succeeding volumes of his still incomplete "Origines de la France Contemporaine." He was elected to the Academy in 1878, and exercised a strong influence in that body.

Te Kooti, Maori chief, born on the North Island of New Zealand, about 1830; died there, April 17, 1868. In 1846 he was arrested and exiled to Chatham Island, being suspected of sympathy with the Hauhau uprising against the British. Escaping two years later, he collected 200 Maoris, who fought the British troops until they were driven into the mountains. In November, 1866, while the troops were suppressing an insurrection elsewhere, Te Kooti and his band descended on the white settlers who occupied their lands at Poverty Bay, and killed 22 of them. A price of £5,000 was put upon his head, but he cunningly evaded every attempt to capture him, and when the feeling of revenge had died out he was pardoned.

Tirard, Pierre Emmanuel, French statesman, born in Geneva, Switzerland, Sept. 27, 1827; died in Paris, Nov. 4, 1893. He was the son of French parents, and in 1844 went to Paris, where he followed the business of a watchmaker until he entered into municipal politics, in 1868. In 1871 he was elected a Deputy. He entered the Cabinet as Minister of Agriculture and Commerce in 1879. In 1882 he was Minister of Commerce in the Cabinet of M. de Freycinet, and when Duclerc formed a Cabinet he made Tirard Minister of Finance, a post that he retained in the two succeeding ministries of Fallières and Ferry. In 1888 he became a Senator. On the accession of M. Carnot to the presidency, in 1887, Tirard was called into his first Cabinet as Minister of Finance, and when it was defeated he formed a ministry, taking the portfolio of Commerce. In March, 1890, he went out of office. He wrote several works on politics and finance.

Trépoignant, Comte Henri de, French statesman, born in 1815; died June 10, 1893. He entered the school of St. Cyr when it was open only to the Legitimist aristocracy, to which his family belonged, and with a dozen more was expelled on account of his liberal political principles. The electors of the Côtes du Nord chose him to represent them in 1848 in the Legislative Assembly, where he supported the Government of Gen. Cavaignac. After the proclamation of the empire his opposition to Louis Napoleon led to his incarceration in the prison of Vincennes. When the republic was restored in 1841 he was again elected a Deputy for the Côtes du Nord. He proposed in the National Assembly a famous law which provides that in case the Chambers are illegally dissolved or prevented from meeting, the councils general shall each delegate two of its members to meet and provide provisionally for the administration of the country. He was subsequently elected Senator.

Technikowsky, Constantin, Russian painter, died at an advanced age in Moscow, in April, 1893. His genre paintings were prized by collectors, and passed from his atelier into their hands without appearing at exhibitions. From 1871 till 1881 he was inspector of the School of Painting, Sculpture, and Architecture in Moscow.

Technikowsky, Peter Ilitch, Russian composer, born in Wotkinsk, Wiatka, in 1840; died in St. Petersburg, Nov. 7, 1893. His father became director of the Technological Institute in St. Petersburg in 1850, and educated his son for the higher public service in the School of Jurisprudence. When he had completed the course of study, in 1859, he was appointed to a post in the Ministry of Justice. This he relinquished in 1863 in order to enter as a student the newly established Conservatoire of Music, where he learned

professor, but his thesis on La Fontaine's fables, with which he earned his doctor's degree in 1858, had such a success that he devoted himself to literature. An essay on Livy was crowned by the French Academy in 1864. Then a disciple of Hegel, he attacked the system of Cousin in 1864 in a short work on the French philosophers of the nineteenth century. Attracted by the English philosophers, he became engrossed in the study of English literature, and in 1864 published his "History of English Literature," in which he ingeniously attributes the character of every author and the style of his writings to his social and natural environment. This theory he expounded also in his lectures on the philosophy of art and taste, which he delivered as Professor of the History of Art at the École des Beaux Arts. Bishop Dupanloup denounced his position as atheistic, and for a long time the French Academy was unwilling to admit him on that account. He published two volumes of Italian travels in 1866, and in 1867 a biting satire on French society, entitled "Vie et Opinions de Thomas Graindorge." In 1870 appeared the fruits of his philosophical and psychological reflections in the work "De

harmony and counterpoint under Zarenba and composition under Anton Rubinstein. Taking his diploma in 1865, and a medal for his cantata on Schiller's ode "An die Freude," he was called by Nicholas Rubinstein to the new Conservatory of Moscow, where he was Professor of Harmony, Composition, and the History of Music from 1866 till 1878, after which he devoted himself entirely to composition, living in St. Petersburg, Italy, Switzerland, and Kieff. His music is strikingly Slavonic in spirit and character, reproducing in an elaborate and gorgeous orchestration the melody and rhythm of popular songs and dances and the harmonic sequences of the old Russian Church music. Tchaikowsky died of cholera. His compositions include "Opritchnik," "Vakula," the "Enchantress," and six other operas and ballets, six symphonies, and numerous symphonic poems, concertos, suites, and other orchestral works.

Uzes, Jacques Marie Gerard de Orussel, Duc d', French explorer, born in Paris, Nov. 19, 1868; died in Cabinda, Portuguese Congo, June 20, 1898. He went to Africa with a well-equipped expedition, which he intended to lead across the continent. Ascending the Congo as far as Brazzaville, he found he could not proceed to the lakes on account of the Arab uprising. Hearing of the troubles of Liotard on the Ubangi, he placed his men and supplies at the disposal of the French authorities, joined the forces of Liotard, helped to chastise the aggressive tribes, and on Feb. 19 set out for the coast, suffering from fever and exhaustion, of which many of his party had died, but he also expired before he could embark.

Van Bysselberghe, Francis, Belgian electrician, born in Ghent, Aug. 25, 1846; died in Antwerp, Jan. 7, 1893. He was appointed a professor in the school of navigation at Ostend when scarcely seventeen years old, and taught physics in the industrial school of that place. At nineteen he obtained the diploma of hydrographic engineer, and already his inventive genius manifested itself in a meteorograph and other instruments that were immediately adopted and rendered important services to navigation. His original inventions attracted the notice of men of science, and he was attached to the Royal Observatory at Brussels. Thenceforth he occupied himself solely with electricity. His most famous invention was a system for telephoning to long distances over telegraph wires without interruption of the telegraphic service, which was first applied on Sept. 26, 1884, in the line between Antwerp and Brussels. His last was a hydro-electric system for lighting and distribution of power.

Vizetelly, Henry Richard, English publisher, born in London, England, June 30, 1820; died at Tilford, near Farnham, Jan. 1, 1894. He was the first to introduce the works of Edgar Allan Poe to English readers, and was also the original publisher in England of Mrs. Stowe's "Uncle Tom's Cabin." In 1843 he founded the "Pictorial Times," the pioneer journal of the British pictorial press, and afterward he became editor of the "Illustrated Times," in which capacity he opposed the newspaper stamp duty and ventured to publish his paper without the excise stamp (1855). It was largely through his efforts that this tax was abolished. Some years later (1858) he became secretary of the movement for abolition of the duty on paper, which was opposed as a tax on knowledge, and this was finally repealed (1861). In 1867 he published his "Story of the Diamond Necklace, told chiefly by the Aid of Original Letters." This work comprised a sketch of the life of the Countess De La Motte, and reached its third edition in 1890. Prior to the Franco-German War he became a contributor to the "Times" and the "Pall Mall Gazette," and also translated Topin's "Man with the Iron Mask." He was appointed special correspondent of the "Illustrated London News" at Paris in 1866, and held this place for ten years. He experienced all the horrors and privations of the siege of Paris. At the close of the war he turned his attention to the study of wines, and during the next seven years published several monographs on this subject.

He was appointed representative of Great Britain at the Vienna (1873) and Paris (1878) expositions, and acted on the jury for wine exhibits. For his services in Vienna he was created Chevalier of the Order of Francis Josef I, of Austria. In 1879 he published two volumes entitled "Berlin under the New Empire," the result of a prolonged stay in Germany. Subsequently he told the story of the siege of Paris in his work, "Paris in Peril" (2 vols.), and an exhaustive "History of Champagne" followed (1882). On his return from the Continent Mr. Vizetelly resumed publishing, and issued for the first time to English readers the novels of Count Leo Tolstoi, the Russian romanticist, and translations from eminent French authors. He also issued George Augustus Sala's and E. C. Grenville Murray's books, after which came the "Mermaid Series" of unexpurgated best plays by the old dramatists, those of Christopher Marlowe forming the initial volume. In 1888 he boldly ventured to place on the English market the realistic novels of Emile Zola, which he continued to publish uninterruptedly for seven years, when he experienced a systematic persecution that culminated in his imprisonment in Holloway Castle as a first-class misdemeanant. While there incarcerated Mr. Vizetelly began his reminiscences, "Glances back through Seventy Years" (2 vols., 1893), in which he records with a free hand the vicissitudes of his career.

Wachtel, Theodor, German tenor singer, born in Hamburg, in 1823; died in Berlin. He began life as a groom. When he was seventeen years old some one connected with the theater who heard him sing persuaded him to take lessons. In a few years he was one of the foremost German opera singers. He came to the United States in 1871, and again in 1875.

Waldeck-Pyrmont, George Victor, Prince of, born in Arolsen, Jan. 13, 1831; died in Marienbad, Bohemia, May 12, 1893. His father having died when he was thirteen years old, his mother became Regent. He married, in 1853, a niece of the Duke of Nassau, by whom he had two daughters, one of whom is the Queen Regent of the Netherlands and one the widow of the Duke of Albany, and a son, Friedrich Adolf, who succeeds him. He gave up his substantial sovereign rights to Prussia in 1867, retaining the Crown domains, which Prince Bismarck tried afterward to induce him to relinquish.

Warnots, Henry, Belgian singer, born in Saint-Trond, in 1829; died in Brussels, March 12, 1893. He won prizes at the Brussels Conservatory for singing, harmony, and the piano, went upon the lyric stage, and won success in France, not by the strength of his voice, but by the science of his diction and modulation and the warmth of his dramatic interpretations. Returning to Brussels he became first tenor in the Flemish opera, Professor of Singing in the Conservatory, and director of choral societies. In training a chorus he was excelled by none.

Westwood, John Obadiah, English entomologist and archaeologist, born in Sheffield, Dec. 22, 1805; died in Oxford, Jan. 2, 1893. He was trained as a solicitor and became a member of a London firm, but gave his mind up to science and literature. Having a high reputation as an entomologist, he was called to Oxford in 1858 to be curator of the collections which he and Hope had made, and in 1861 he was appointed a professor. He was an expert in the archaeology and paleography of art, and wrote upon the illumination of Irish and Anglo-Saxon manuscripts, ancient illustrations in sacred books, inscriptions on stones in Wales, carved ivories, etc.

Whipple, G. M., English astronomer, born in 1843; died in Richmond, Feb. 8, 1893. He was director of the observatory at Kew, and author of numerous treatises on solar physics.

Yvon, Adolphe, French painter, born in Eschwiller, Moselle, in 1817; died in Passy, in September, 1893. He was a pupil of Paul Delaroche, acquired a reputation as a painter of historical subjects and military portraits, was sent by the Government to the Crimea in 1855, and there painted the "Capture of the Mala-

koff Tower," which hangs in the Versailles museum with his "Retreat from Russia." He took the grand medal of honor at the exposition of 1887. Among his portraits those of the Prince Imperial (1861) and Paul Bert (1880) are noteworthy. His "Seven Capital Sins," after Dante, is a famous series of drawings.

Agliata, Tommaso, Italian prelate, born in Bonifacio, Corsica, Oct. 29, 1833; died in Rome, May 10, 1898. He was the son of a fisherman, who showed such intellectual promise that he was educated for the Church, studying in Rome, where he became a naturalized citizen, and entered the Dominican order. He became a distinguished professor of theology, combating traditionalism and ontologism, was consecrated Bishop of Frascati, and on May 12, 1879, was raised to the cardinalate and made Prefect of the Congregation of Studies.

Borlita, José, Spanish poet, born in Valladolid, Feb. 21, 1818; died in Madrid, Jan. 23, 1893. He was intended by his family for a lawyer, and for two years he tormented himself with the ungrateful study; then he quarreled with his father, and went to Madrid in 1837, starved, and wrote verses, gained some reputation by an elegy on the tragic death of the poet Larra, and in 1840 won success and fame with his admirable "Cantos del Trovador." In 1844, after producing several heroic poems and legends, he brought out his tragedy of "Don Juan Tenorio," the greatest dramatic success of modern times. Another drama, "El Zabatero y el Rey," has also been extremely popular in Spanish-speaking countries. In his lyric poetry his extravagance of metaphor and sentiment, which mark him as a genuine Spanish poet of the old line, appeals less to the modern reader than the imagination and romantic passion, equally characteristic of the great age of Spanish literature, in his amatory and religious legends and national epics.

OHIO, a Central Western State, admitted to the Union in 1803; population, according to last census (1890), 3,666,719, it being the fourth in rank of the States. Capital, Columbus.

Area.—There is a discrepancy in the official reports of the area of the State. According to the latest report of the United States Geological Survey, the gross area is 41,060 square miles, of which 40,760 is land surface and 300 water surface. The annual report of the United States Land Office for 1892 gives the area as 39,972 square miles. The report of the Secretary of State of Ohio gives the surface, including Lake Erie to the boundary line, as 42,500 square miles. The chief topographer of the United States Geological Survey says the exact facts can not be obtained, since the position of the State boundaries on the east, west, and south is not known accurately, but the figures given in the Geological Survey's bulletin were determined with considerable care and are probably nearer right than any others.

Government.—The government during 1892 was as follows: Governor, William McKinley; Lieutenant-Governor, Andrew L. Harris; Secretary of State, Samuel H. Taylor; Auditor of State, Ebenezer W. Poe; Treasurer of State, William T. Cope; Attorney-General, John K. Richards; Commissioner of Common Schools, Oscar T. Corson; Judges of Supreme Court, Joseph P. Bradbury, Marshall J. Williams, William T. Spear, Jacob F. Burket, Franklin J. Dickman, Thaddeus A. Minshall; Clerk of Supreme Court, Josiah B. Allen. All the State and Supreme Court officials were Republicans.

Finances.—During the fiscal year ending Nov. 15, 1893, the total receipts of the State were \$6,808,569.17. Of this sum, \$6,052,156.54 was

received from all sources during the year, and the remainder (\$756,411.63) was on hand at the close of business hours on Nov. 15, 1892. The total expenditure during the year was \$6,190,229.40. The total receipts of the sinking fund for the year ending Nov. 15, 1893, were \$511,284.98, which, with the balance remaining from the previous year, gives a total credit to that fund of \$995,051.27. The disbursements for the year, including the redemption of \$250,000 of the State funded debt, were \$597,230.89, leaving a balance of \$397,790.38. The total receipts of the State common-school fund for the year ending Nov. 15, 1893, were \$1,723,626.04, which, with the balance remaining in that fund, make a total credit of \$1,761,226.97. The amount distributed to the several counties on the *per capita* basis of \$1.50 for each school youth during the year was \$1,704,808.50, leaving \$56,418.47.

State Institutions.—The reports of the managements of the several State benevolent and punitive institutions for the fiscal year ending in November, 1893, show the inmates at the close of the year and the *per capita* cost of each during the year to have been as follow: Ohio Penitentiary, convicts, 1,756; *per capita* cost, \$146.79; earnings for the year, \$295,451.49. Columbus Asylum for the Insane, 1,120 inmates; *per capita* cost, \$154.99. Cleveland Asylum for the Insane, 863 inmates; *per capita* cost, \$155.96. Toledo Asylum for the Insane, 1,182 inmates; *per capita* cost, \$119.63. Athens Asylum for the Insane, 814 inmates; *per capita* cost, \$131.75. Dayton Asylum for the Insane, 788 inmates; *per capita* cost, \$145.81. Longview Asylum for the Insane, 897 inmates; *per capita* cost, \$160.79. Soldiers' and Sailors' Home, 1,101 inmates; *per capita* cost, \$141.25. Soldiers' and Sailors' Orphans' Home, 914 inmates; *per capita* cost, \$157.89. Ohio Institution for the Education of the Deaf and Dumb, 383 inmates; *per capita* cost, \$184.92. Ohio Institution for the Education of the Blind, 248 inmates; *per capita* cost, \$170.63. Ohio Working Home for the Blind, 81 inmates; *per capita* cost, \$151.45. Ohio Institution for Feeble-Minded Youth, 900 inmates; *per capita* cost, \$137.58. Girls' Industrial Home, 341 inmates; *per capita* cost, \$100.90. Boys' Industrial School, 726 inmates; *per capita* cost, \$78.34. The Board of State Charities reported that the total number of persons maintained during the year in State asylums, homes, penitentiary, reformatories, county homes, infirmaries, jails, workhouses, and by out-door relief and soldiers' relief commissions was 149,440, and the total cost \$3,939,139.15.

Farm Statistics.—The annual returns to the Secretary of State by the assessors of farm property include the following: Horses, 842,209, valued at \$44,160.679; cattle, \$1,339,569, value, \$22,312,002; sheep, 3,729,542, value, \$9,289,942; hogs, 1,139,551, value, \$5,331,283. Wheat—acres sowed, 2,632,548; bushels produced, 38,381,598; average yield per acre, 14.58 bushels. Corn—acres planted, 2,458,380; bushels produced, 81,892,100; average yield per acre, 33.31 bushels. Oats—acres sowed, 827,623; bushels produced, 22,351,473; average yield per acre, 27 bushels. Potatoes—acres planted, 118,189, yielding 8,889,136 bushels, an average of 74.79 bushels per acre. Tobacco was raised in 55 counties of the State.

The total acreage planted was 46,986, yielding an average of 865 pounds an acre.

Mining.—The report of the chief inspector of mines gives the year's product of coal as 14,599,908 tons, a gain of 1,549,721, compared with the preceding year. Ninety-one new mines were opened during the year, 30 remained suspended, and 46 were either worked out or abandoned. At the close of the year there were 892 mines in the State, and of these 832 were in operation.

The World's Fair.—The official report of the representation of Ohio at the World's Fair calls attention to the fact that the State had collective exhibits in every department of the exposition, prepared under the auspices and at the expense of the board of managers. Ohio was the only State, excepting Pennsylvania, that had exhibits in every department and section, and was the only State that was represented by an exhibit from every one of its public institutions.

Legislative Session.—The adjourned session of the General Assembly began on Jan. 8 and ended on April 27. It passed 374 acts, including the following:

Imposing a collateral inheritance tax.
Requiring certain qualifications of railroad conductors, locomotive engineers, and flagmen.

To provide for the safety of mechanics and others engaged in the work of constructing buildings.

To correct abuses existing in the way of retaining wages under various pretexts from minors.

To provide for a State Board of Arbitration for the settlement of differences between employers and their employees.

To establish a uniform system of keeping time throughout the State of Ohio, making nineteenth-century time the legal time.

To prohibit the docking of horses.

To require railroad corporations to equip and furnish all cars used in their service with air brakes and automatic couplers, and their engines with power brakes.

To provide for cumulative sentences to workhouses.
Providing for return and taxation of gross premium and assessment receipts of foreign insurance companies and associations.

Establishing standard weights of a bushel.

To limit the manufacture of knit and woolen goods in penal, reformatory, and charitable institutions.

To tax the business of trafficking in cigarettes or cigarette wrappers.

To compel elementary education of children.

Amending the law of libel so that the defendant may prove the truth of the matter charged as defamatory.

To provide for the return for taxation purposes of the stock and business of express, telephone, and telegraph companies.

Political.—The first of the political conventions was the Republican, held at Columbus, June 7 and 8. The platform adopted by unanimous vote approved and reaffirmed the platform of the national Republican Convention of 1892, commended the administration of Benjamin Harrison as President, and of William McKinley as Governor of Ohio, and the action of the General Assembly of Ohio in passing certain laws. It also declared in favor of "biennial sessions of the General Assembly in obedience to the original purpose of the present Constitution." On national questions it said:

We favor the policy of full and adequate protection to American labor and industries. The best exemplification of the principle of protection and reciprocity

that has found expression in the statutes is the McKinley act. We cordially declare our adhesion to the doctrines of that great measure and favor such amendments thereto for protection as time and experience may show to be advisable.

We condemn the bill passed by the Democratic majority in the House of Representatives of the last Congress and the present avowed policy of the Democratic party to place wool on the free list as an unjust and ruinous attack on all the agricultural industries of the country. We insist on such full and adequate protection for the wool industry as will enable American farmers to supply the wool required for consumption in the United States.

We endorse the policy of the national grange "that all tariff laws shall protect the products of the farm as well as the products of the factory."

We believe in a free ballot and fair count, and we favor such legislation as will secure these results for every voter in the United States.

We adhere to the Republican policy of granting pensions to the wounded and disabled Union soldiers and sailors of the late war and the widows and orphans of such as are deceased, and we condemn the unfriendly and unjust policy already made manifest by the present Democratic Administration.

We favor honest money, composed of gold, silver, and paper, maintained at equal value and under national and not State regulation.

We denounce the avowed purpose of the Democratic party to repeal "the prohibitory 10-per-cent tax on State bank issues."

The convention renominated all the occupants of the offices to be voted for—William McKinley for Governor, Andrew J. Harris for Lieutenant-Governor, William T. Cope for Treasurer of State, John K. Richards for Attorney-General, Joseph P. Bradbury for Judge of Supreme Court, Frank J. McCulloch for Board of Public Works, and F. B. McNeal for Dairy Commissioner.

The Prohibition Convention was held at Cleveland, June 27 and 28. There was a long and heated discussion of the platform, which as passed included the following:

The liquor traffic must and shall be destroyed. We utterly reject all plans for regulating or compromising with this traffic, whether such plans be called local option, taxation, license, or public control.

No citizen should be denied the right to vote on account of sex.

Tariff should be levied only as a defense against foreign governments which levy tariffs upon or bar out our products from their markets. The residue of means necessary for an economical administration of the Government should be raised by an equitable adjustment of taxes upon the property and incomes of the people.

Railroads, telegraph, and all other natural monopolies should be controlled, or if necessary owned, by the people, so as to fully protect the public from extortion or unjust discrimination.

We stand unequivocally for the American public schools taught in the English language, and are opposed to any appropriation of public money for sectarian schools.

The candidates nominated were: For Governor, Gideon P. Macklin; Lieutenant-Governor, Seth H. Ellis; Treasurer, Abram Ludlow; Attorney-General, S. E. Young; Judge of Supreme Court, J. A. Gallaher; Dairy and Food Commissioner, Seth H. Todd; Member of Board of Public Works, Enos H. Brosius.

The People's Party Convention was held at Columbus, July 4, and the following ticket was placed in nomination: For Governor, John T. Brocken; Lieutenant-Governor, M. B. Cooley;

Treasurer, William H. Taylor; Attorney-General, J. H. Rhodes; Judge of the Supreme Court, C. T. Clark; Member Board of Public Works, Matthew Baber; Food and Dairy Commissioner, Thomas N. Hickman.

The Democratic Convention was held at Cincinnati, Aug. 9 and 10. The platform included the following:

We hereby approve the platform of the Democratic party adopted by the National Convention at Chicago, and especially those portions of it referring to the tariff and to the currency legislation. We congratulate the country upon the early prospects of measures of relief as outlined by the President's late message to Congress, and we have confidence that the Democratic Congress will devise laws to furnish such relief.

The financial situation is the unfortunate legacy of Republican administration. It is the natural result of the McKinley tariff, the Sherman silver law, extravagance of the party lately in power, and the creation and fostering of trusts and corrupt combinations by that party, all combining to shake credit, to create distrust in the money of the country, and to paralyze its business.

We believe in a just and liberal recognition of the claims of the veterans, and favor granting them all that patriotism could ask, all that national gratitude would demand. But the granting of pensions on fraudulent claims for partisan purposes or on department decisions in contravention of law, as practiced under the last Administration, needs to be investigated and corrected.

We condemn the unbusinesslike administration of State affairs under Gov. McKinley.

The following ticket was nominated: For Governor, Lawrence T. Neal; Lieutenant-Governor, William A. Taylor; Judge of Supreme Court, John W. Sater; Treasurer, B. C. Blackburn; Attorney-General, John P. Bailey; Member Board of Public Works, Louis B. Wilhelm; Food and Dairy Commissioner, P. H. McKeown.

The canvass was carried on almost exclusively on national issues, the identity of the Republican candidate for Governor with the new tariff making the election turn largely on the tariff question. The fact that the Democratic candidate for the same office was credited with writing the tariff plank in the last Democratic national platform still further emphasized that issue. The result was the largest Republican plurality in the State since 1863. The vote for Governor was: McKinley (Republican), 433,342; Neal (Democrat), 352,347; Macklin (Prohibition), 22,406; Bracken (People's), 15,563. McKinley's plurality, 80,995. The other candidates on the Republican ticket were elected by pluralities ranging from 75,043 to 77,794. A Legislature overwhelmingly Republican was also elected, the Senate standing 26 Republicans to 5 Democrats, and the House 85 Republicans to 22 Democrats. Two proposed constitutional amendments were defeated for lack of a constitutional majority. The taxation amendment received 322,422 affirmative and 82,281 negative votes, and the single legislative district amendment 322,877 affirmative and 81,481 negative votes.

OKLAHOMA, a Territory of the United States, organized by act of Congress approved May 2, 1890; area (including Greer County, claimed by Texas), 33,719 square miles; population (including Greer County), according to the census of 1890, 61,834. In 1893 the population was estimated by the Governor at 151,213, and that of the Cherokee strip at 100,000. Capital, Guthrie.

Government.—The following were the Territorial officers during the year: Governor, Abraham J. Seay, Republican, succeeded in May by William C. Renfrow, Democrat; Secretary, Robert Martin, succeeded in September by Thomas J. Lowe; Treasurer, Samuel Murphy, succeeded in January, 1894, by M. L. Turner; Auditor and Superintendent of Public Instruction, J. H. Parker; Attorney-General, Charles Brown, succeeded in July by Charles A. Galbraith; Chief Justice of the Supreme Court, Edward B. Green, succeeded in September by Frank Dale; Associate Justices, John H. Burford and John G. Clark, succeeded in June by Frank Dale, who was promoted in September to be Chief Justice, and was succeeded by Henry W. Scott. Late in December an act was passed by Congress providing for the appointment of two additional justices, thereby increasing the court to five members; but up to the close of the year, however, no appointment had been made.

Finances.—Up to April 1, 1893, Territorial warrants to the amount of \$47,184.89 had been issued, of which \$19,868.59 had been redeemed. At that date the treasury had not received returns from the Territorial tax levied in 1892. There was due the Territory \$34,455.54 from this source, and from insurance licenses \$1,500, making a total prospective revenue of \$35,955.54, with which to meet the warrants outstanding. The Territorial debt, incurred this year for constructing buildings for educational institutions, amounts to \$48,000. The county and municipal debts are heavy, owing to the necessity of extensive public improvements at the first settlement. The county debt is estimated at \$560,660, and the municipal debt at \$229,000. The title to much of the real estate in the Territory is still held by the United States, and it is not taxable. For 1893 the tax rate was fixed at 3 mills for general purposes, $\frac{1}{4}$ mill for the Normal School, and $\frac{1}{4}$ mill for the Territorial University.

Legislative Session.—The second Territorial Legislature began its session at Guthrie on Jan. 11, and adjourned on March 11. Politically, its members were divided as follows: Council—7 Republicans, 6 Democrats; House—12 Republicans, 10 Democrats, 4 Populists. An organization of the Council was promptly effected by the Democrats voting with and for W. A. McCartney, Republican, as president, and thereby defeating the Republican caucus candidate. In the House there was a long deadlock over the choice of a permanent presiding officer. After 149 ballots had been taken, in which J. M. Stovall, Democrat, generally supported the Republican candidate, the contest was ended by the action of M. L. Stanley, Republican, in casting his vote for T. R. Waggoner, Independent Democrat, giving him, with the aid of Democratic and Populist votes, the requisite majority. The legislative work of the session consisted chiefly in revising and correcting the hastily prepared code of laws enacted by the first Legislature. The Kansas civil code of court procedure was adopted in its entirety. A new revenue law was enacted, containing full provisions for assessment of property and collection of taxes, and for equalization of local assessments by a Territorial board. The annual tax rate for Territorial purposes was limited to 3 mills on the dollar,

with one half mill additional for the erection and support of a normal school and one half mill for the erection and support of a Territorial university. The homestead mortgage exemption and the tax on mortgages were eliminated from the law, and all barriers to the free influx of foreign capital were removed. An independent school-district law was passed, making provision for the issue of school-district bonds. The election law was amended so as to cut off unnecessary expenses attending its operation. A new township-organization law and a new road and bridge law were enacted. The sum of \$15,000 was appropriated to secure an exhibit for the Territory at the World's Columbian Exposition, and \$10,000 was set apart for buying seeds for distribution among needy settlers in the western counties. Arrangements were made to publish the Supreme Court reports, and the fund derived from the sale of these books was devoted to the establishment of a Territorial library. A committee was appointed to compile anew the Territorial statutes.

Other acts of the session were as follow:

To authorize cities, towns, and villages to construct water works.

Adopting the mistletoe as the floral emblem of the Territory.

To provide for the establishment and maintenance of a Territorial library.

Declaring gaming illegal.

Establishing a permanent grand seal for the Territory.

Education.—The Legislature this year authorized the issue of Territorial bonds to the amount of \$48,000 for the purpose of raising money to complete and furnish buildings for the higher educational institutions. For the university, at Norman, the issue of \$18,000 in bonds was authorized; for the normal school, at Edmond, \$15,000; and for the Agricultural and Mechanical College, at Stillwater, \$15,000. The university building was completed and opened on Sept. 6, and the normal-school building also was completed before the end of the year. The Agricultural and Mechanical College derives substantial aid from the Federal Government, in addition to the Territorial support. Each of these institutions had about 100 pupils at the close of the year.

Charities.—As there is no institution for the insane in the Territory, all patients are maintained at a private institution at Jacksonville, Ill. At the close of the year there were 53 Oklahoma patients in this institution. The cost to the Territory for their support in 1893 was \$9,351, and for transportation \$6,750.

Prisons.—At the close of the year 35 Oklahoma convicts were confined at the Kansas Penitentiary at Lansing. The Territory had paid up to Sept. 30 for transportation of these convicts \$1,185, and for their maintenance \$2,275.

Agriculture.—The acreage of the various farm products for 1893 is estimated to be as follows: Corn, 284,354 acres; wheat, 222,310 acres; oats, 109,374 acres; cotton, 21,311 acres; sorghum, 18,755 acres; millet, 14,121 acres; broom corn, 4,422 acres; potatoes, 6,890 acres. The total farm acreage was 2,372,482 acres, and the cash value of farms \$13,022,345. The number of horses in the Territory was 35,878; mules, 9,496;

milch cows, 27,145; other cattle, 96,072; sheep, 86,073; swine, 55,310.

Settlement of the Cherokee Outlet.—The tract known as the Cherokee Outlet or Strip embraces an area of 9,409 square miles, or nearly half of the whole area opened to settlement in Oklahoma prior to this year. It extends from the part of Oklahoma first settled north to Kansas, east to Arkansas river, and west to Beaver County. In December, 1891, a treaty was made, subject to the approval of Congress, between commissioners of the United States and the Cherokee chieftains, by which this tract was to be purchased and opened for settlement. On Jan. 16, 1893, a bill ratifying this agreement passed the House of Representatives, but in the Senate, where 2 other bills having the same object were pending, amendments were proposed and action was delayed until the last day of the session. Long before this time the people of the Territory and of the neighboring counties in Kansas and Missouri had become impatient at the delay, and, at a convention at Guthrie on Jan. 18, their representatives joined in resolutions urging immediate action by Congress. At that time it was estimated that nearly 20,000 people were temporarily living on the borders of the Outlet awaiting its opening to settlers. The bill authorizing the opening, which finally passed both Houses of Congress on March 3 in the form of a rider to the Indian appropriation bill, modified in many particulars the commissioners' agreement. By its terms, \$295,736 was appropriated to be paid to the Indians at once, and the Secretary of the Interior was authorized to contract with the Indians to pay \$8,300,000 in 5 annual installments, beginning on March 4, 1895, interest to be paid at the rate of 4 per cent. on these deferred payments. It was provided that the acceptance of any of the money appropriated should operate as a ratification by the Cherokee nation of its agreement of December, 1891, as modified by the act and as a complete relinquishment of its title; and that upon the payment of said sum of \$295,736 the tract should become a part of the public domain. The President was authorized, at any time within six months after the acceptance of the act by the Indians, to open the lands for settlement by proclamation. By the same act an appropriation of \$30,600 was made to the Tonkawa Indians for their reservation land, and \$80,000 to the Pawnees for a similar purpose. On May 19 a formal agreement was signed at Washington by the Cherokee chieftains and by the Secretary of the Interior, in which the modifications made by Congress were accepted and the territory ceded to the United States. On Aug. 23 President Cleveland issued his proclamation opening this tract and the Tonkawa and Pawnee reservations to settlement on Sept. 16, at 12 o'clock noon. This announcement was the signal for a rush of intending settlers to the borders of the Outlet. Before the day for opening arrived more than 100,000 people had gathered at points on the north and south boundaries, prepared to enter at the signal and eager to secure possession of the choicest lots. It is estimated that 30,000 people made the race from Arkansas City into the territory, 15,000 from Caldwell, 25,000 from Orlando, 10,000 from Hennessey, 7,000 from

Stillwater, 10,000 from Kiowa, 3,000 from Hunnewell, and from 5,000 to 6,000 from other points. The total number was nearly double the crowd that raced into Oklahoma when it was first opened. The greatest rush was into the eastern portion of the country, which contains by far the most fertile and best watered farming lands.

Seven counties were formed out of this tract by the Secretary of the Interior, and their county seats located before the settlement took place. The letters from K to Q, inclusive, were used to designate these county divisions until the settlers shall select names. After the first wild scenes attending the entry, the work of erecting towns and farmhouses began. A number of thriving villages soon sprang up at the several county seats, among them the villages of Perry, Enid, Alva, and Woodward. Before the end of the year Gov. Renfrow had appointed the various county officials, town officers had been chosen, and the machinery of local government was in full operation.

Statehood.—There appears to be some difference of opinion in the Territory as to the manner in which Statehood should be attained, or, in other words, whether the Indian Territory should form with Oklahoma one State, or whether Oklahoma alone should be admitted. On Aug. 8 a convention of representative citizens of Oklahoma met at El Reno for the purpose of considering this problem, at which, after prolonged discussion, a majority of the members declared themselves in favor of a single State for both Territories. A committee was appointed to confer with the governors of the 5 Indian tribes and to arrange, if possible, for a constitutional convention representing both Territories, which should frame a proposed government for the new State. This plan appears not to have been accomplished; but on Sept. 30 an interterritorial Statehood convention met at Purcell, in the Indian Territory, at which delegates from both Territories were present, and at which the following resolution was adopted:

That we favor the passage by Congress of an enabling act empowering a constitutional convention to be called creating a State from the present Territory of Oklahoma and the Indian Territory as provided in the Carey bill.

A memorial to Congress in favor of single Statehood was also adopted as representing the sentiment of the Indian Territory. On Oct. 28 a second interterritorial convention met at Kingfisher, in Oklahoma, at which the Choctaw and Chickasaw nations were represented by delegates. This convention also resolved in favor of a single State. In spite of these public expressions, a considerable number of Oklahoma people are opposed to any union with the Indian Territory whatever, while others prefer to wait until the lands within that Territory have been apportioned and held in severalty.

The Sooner.—By the term "sooner" is designated a class of persons who have entered and located claims upon any part of the public domain prior to the time fixed by law for its opening to settlers. At the first settlement of Oklahoma, and at each subsequent opening of reservation lands, those people who sought to

obey the strict letter of the law often found, on rushing over the border and reaching the nearest town site, that the best lots had already been located by "sooners." Much strife and litigation necessarily resulted from this condition. There could be no question, under the statutes authorizing these settlements, that persons wrongfully within the territory to be opened prior to its opening would forfeit all right to acquire title; but the question arose whether persons rightfully within the territory could, after the time for opening had arrived, proceed to locate upon it. This question was brought before the United States Supreme Court in the case of *Smith vs. Townsend*, and decided, on April 3 of this year, against the "sooners" rights. The plaintiff was a section hand on the Atchison, Topeka and Santa Fé Railroad, whose right of way ran through the country opened on April 23, 1889. Being on that day rightfully upon this right of way, he stepped off after the hour of noon and located a claim on an adjoining tract of land. The Court said:

The evident intent of Congress was by this legislation to put a wall around this entire territory and disqualify from the right to acquire under the homestead laws any tract within its limits every one who was not outside of that wall on April 22. When the hour came the wall was thrown down, and it was a race between all outside for the various tracts they might desire to take to themselves as homesteads.

Colored Convention.—In April a Territorial convention representing the colored citizens of the Territory met at Guthrie, and, after a full discussion, organized a Territorial league for mutual protection and advancement. It declared that

The objects of the league are to protest against taxation without representation; to secure a more equitable distribution of school funds in those sections where separate schools exist; to insist upon a fair and impartial trial by a judge and jury of peers in all causes of law wherein we may be a party; to resist by all legal and reasonable means mob and lynch law whereof we are made the victims, and to insist upon the arrest and punishment of all such offenders against our legal rights; to resist the tyrannical usages of all railroad, steamboat, and other corporations, and the violent or unlawful conduct of their employees in all cases where we are concerned.

The Indian Territory.—This Territory, which may be admitted to the Union at an early date, either separately or as a part of Oklahoma, contains a population of about 250,000, of whom about 50,000 are members of the Indian tribes. The remaining 200,000 are citizens of the United States who have been invited there by the laws enacted by the tribes. They are tradesmen, mechanics, and farmers, to whom is largely due the progress that the tribes have made in recent years in the development of their resources. The area of the Territory is 30,913 square miles, divided among the five nations, as follows: Choctaws, 10,450; Cherokees, 7,851; Chickasaws, 7,287; Creeks, 4,750; Seminoles, 585.

ONTARIO. Legislative.—The Provincial Legislature was opened by Lieut.-Gov. Sir George Airey Kirkpatrick, April 4, in the new Parliament buildings, Toronto, and was closed May 27. Sir George was appointed Lieutenant-Governor in 1892, after the death of Sir Alexander Campbell. The new Lieutenant-Governor

has been prominent in Canadian public life for many years. He entered the Dominion Parliament in 1870, and was a member of that body until appointed to his present office, and was Speaker of the House in 1883-'86. He commanded the Wimbledon Rifle Team in 1876, was a commissioner at the Colonial and Indian Exhibition, London, in 1886, and was knighted in 1893. The following extracts from the Lieutenant-Governor's opening address include its chief points of interest:

It is to me a source of historical interest to remember that I am addressing the Legislative Assembly of this province in the first year of the second century of the existence of representative government in Canada. The progress of events from the first Parliament, opened by Gov. Simcoe, at Niagara, in 1792, to the opening of this Parliament to-day, shows what great strides have been made toward the development of the country and the enlargement of the privileges of citizenship under the Constitution given to us by the Imperial Parliament.

It affords me pleasure to state that the harvest of the past year, while not so abundant as that of 1891, was still a satisfactory one. The general awakening of agriculturists in the province to the importance of the dairy industry and its more extended development is apparent from the increasing number of creameries and cheese factories established during the year.

The salutary effect of the Insurance Corporations' act of last session have already been distinctly seen. A firm administration of the act has excluded from Ontario numerous fraudulent or speculative societies that professed to secure to persons of small means large sums in the form of endowment on life insurance.

The active work of the session was in the direction of modifying existing legislation rather than in passing new enactments. Private legislation comprised about half the work. Druggists, architects, embalmers, and milkmen were refused the special privileges which they sought, and a bill requiring the examination of railway engineers, conductors, and brakemen was withdrawn, owing to the feeling of opposition to it in the Legislature. Charitable organizations, which heretofore have found their sphere of usefulness narrowed by a lack of authority, have been empowered to enforce the acceptance of their benevolent acts.

The agitation for decentralizing the courts led the Legislature to extend to local judges the power to hear arguments on injunction proceedings with the consent of both parties, and judges were also empowered to enforce their orders when acting as arbitrators or in other semi-judicial capacities. Sheriffs were empowered to seize and sell mortgages, and the lien law was so amended as to prevent employers of labor from depriving workmen of their wages. The season for hunting deer was extended five days, and now exists from Oct. 20 to Nov. 15; the number of ducks that may be killed by one sportsman has been increased to 400, and any foreigner who has paid the license fee may now export 50 ducks. The system of minority representation adopted for the city of Toronto has been discredited, both because it had the appearance of securing party advantage and on account of the by-elections.

The question of prohibition was extensively discussed, and attained greater prominence owing to the fact of its being practically adopted

as a plank in the political platform by Sir William R. Meredith and the Conservative Opposition, of which he is the leader. The outcome of the discussion was the final adoption of a resolution that the subject be submitted to the people at the municipal elections in January, 1894.

Not the least important act of the session was the one providing for the establishment of a large national park of 1,466 square miles in the Nipissing district. It is to be at once a sanitarium, a game and fish preserve, and a forest reservation. The acts of the session of greatest general interest not referred to in the above *résumé* are:

To incorporate the Pembroke Southern Railway Company.

To incorporate the Sudbury and Nipissing Railway Company.

To incorporate the Lake Superior and Algoma Colonization Railway Company.

Respecting the Sault Ste. Marie and Hudson's Bay Railway Company.

To extend the time of vesting of estates in heirs and devisees.

To incorporate the Strathroy and Western Counties Railway Company.

For the relief of loan companies incorporated out of Ontario.

Respecting the erection of a lunatic asylum at Brockville.

The following cash bonuses were voted to railways:

To the Irondale, Bancroft and Ottawa Railway Company, \$45,000; to the Kingston, Napanee and Western Railway Company, for extension of the road to iron-ore deposits near the village of Tweed, \$90,000; and to the Central Counties Railway Company, \$96,000.

The following were the most important grants made for the year ending Dec. 31, 1893:

To defray the expenses of the Executive Council and the Attorney-General's office, \$26,650; to defray the expenses of legislation, \$121,700; to defray the expenses of the Supreme Court of Judicature, \$58,750; to defray the expenses of miscellaneous criminal and civil justice, \$320,384; to defray expenses of public and separate schools, \$242,197; to collegiate institutes and high schools, \$100,000; inspection of normal, high, model, public, and separate schools, \$58,300; normal and model schools, Ottawa and Toronto, \$50,980; superannuated public and high school teachers, \$61,300; maintenance of the insane and repairs to buildings, \$645,577; hospitals and charities, \$64,582; in aid of agriculture, \$176,837; institutions for the deaf and dumb and blind, \$97,936; to defray the expenses of the Crown Lands Department, \$183,909.

To meet these and other sums voted, Parliament granted out of the consolidated revenue fund of the province \$3,651,789.65.

Finances.—The total receipts for the year ending Dec. 31, 1892, were \$4,662,921.57, and the total expenditure for the same year was \$4,063,951.68. The revenue of Ontario for the year ending Dec. 31, 1893, was estimated by the Treasurer at \$4,030,572.80, and the expenditure at \$3,559,185.

Education.—Objections have been urged against changes made in books used in the schools, notably in the history of England, from which certain passages, claimed to be offensive to Roman Catholics, were eliminated. Similar objections were made against the selected Bible readings issued some time ago by the Depart-

ment of Education for use in the schools of the province. It was claimed that Roman Catholics had their separate schools supported by Government and municipal grants, in which they could prescribe the books to be used and the course of study to be pursued, and that it was manifestly unfair to emasculate history and leave the teachings of the Bible doubtful, to suit the prejudices of those who rarely sent their children to the public schools, and, when they did so, did it to suit their own convenience.

From the last annual report of the Minister of Education, it appears that the number of children of school age in the province was 615,781; the number of those registered in the schools was 491,741; the average attendance of rural pupils was 48 per cent., of towns 61 per cent., and of cities 67 per cent. The number of female teachers was 68 per cent. of the entire number employed—8,290; the number of school-houses, 5,876; and the total sum expended for educational purposes for the year was \$5,189,063. As a rule, the schools throughout the province were kept open the full year; 57 per cent. of the public schools used the authorized Scripture readings, 37 per cent. the Bible, and 93 per cent. of all the schools were opened and closed with prayer. The number of separate schools in the province was 289.

The Minister of Education also reported that during the past ten years (1883 to 1892, inclusive) the mechanics' institutes and free libraries of Ontario issued 8,196,509 volumes of books, and that their total receipts amounted to \$1,062,692.

Hospitals.—The Inspector of Prisons and Public Charities, in his last annual report, stated that 29 hospitals received aid from the province, the amount in 1892 being \$99,341.79, or almost \$10,000 more than for the preceding year. The number of patients in the hospitals in 1892 was 11,404, an increase of 881 over 1891, and the daily cost per inmate was 79.31 cents. Two new hospitals were opened during the year—St. Joseph's, in Chatham, and the General Hospital at Stratford.

Of the entire expenditure of the province for 1892, nearly one dollar out of every four was for the maintenance of public institutions for the care of the dependent. In 1891 there were 3,888 patients in the insane asylums of the province, in 1892 4,072, and the *per capita* cost for maintenance for the year was \$135.15. At Mimico buildings were recently erected, where the chronic insane are provided with comfortable homes, and a new asylum is being built at Brockville.

New Parliament Building.—In the spring the new building erected for the provincial Parliament in Toronto was completed, at a cost of \$1,250,000. The plan of the building was by K. A. Waite, of Buffalo, and the work of construction was begun in 1886. The architectural design of the building is Romanesque, its principal frontage is 435 feet, with a depth of 260 feet, and the main plan forms a double letter E, inclosing within its walls over 75,000 square feet. The center facade measures 120 by 125 feet, and rises to a height of nearly 200 feet.

Fisheries.—Next to agriculture, the fishing industry is the most important of the province. The value of the product for 1892 amounted to \$2,042,198, and for the year before to \$1,806,389.

The most important fish were trout, of which the value for the year was \$633,755; whitefish, \$631,291; herring, \$372,686; pickerel, \$146,671; and coarse fish, \$107,377. During the year 2,790 persons were employed in the fisheries. The increase in the catch over that of the previous year was noticeable in almost every kind of fish taken, but especially in whitefish, salmon trout, and herring.

Agriculture.—The value of farm lands in the province is decreasing, notwithstanding the fact that farming operations have been generally rewarded with good crops. The chief cause is the lower prices received for farm produce and the opening up of Manitoba and the Northwest for settlement. The following table gives the area and produce of the principal field crops of Ontario for 1892 and 1893, with the yearly average for the twelve years 1882-'93:

CROPS.	Area.	Produce.	Value per acre.
Fall wheat.....	1892..... 912,964	17,745,549	19.3
	1893..... 908,022	20,492,071	21.5
	1882-'93..... 908,078	19,219,174	20.0
Spring wheat.....	1892..... 534,721	4,795,488	11.3
	1893..... 681,203	8,220,765	12.1
	1882-'93..... 536,081	6,442,208	12.0
Barley.....	1892..... 607,815	8,406,688	12.0
	1893..... 466,285	12,774,715	24.4
	1882-'93..... 697,916	17,064,488	25.7
Oats.....	1892..... 1,004,644	20,794,429	20.7
	1893..... 1,461,409	66,779,158	44.3
	1882-'93..... 1,702,518	59,954,851	34.6
Rye.....	1892..... 68,494	994,771	14.5
	1893..... 78,073	1,192,704	15.3
	1882-'93..... 98,100	1,779,949	18.1
Pean.....	1892..... 78,741	14,664,565	19.3
	1893..... 774,732	14,194,489	18.7
	1882-'93..... 684,091	18,779,100	20.4
Buckwheat.....	1892..... 103,408	2,440,484	17.3
	1893..... 127,104	2,771,214	20.2
	1882-'93..... 79,209	1,506,738	19.0
Beans.....	1892..... 48,408	664,110	13.6
	1893..... 88,849	286,901	18.1
	1882-'93..... 20,076	491,181	17.1
Potatoes.....	1892..... 142,601	129,1218	10.5
	1893..... 142,706	12,299,417	84.9
	1882-'93..... 188,600	17,401,156	119.9

The value of the various kinds of live stock in the province in 1892 was as follows: Horses, \$55,812,920; cattle, \$45,548,475; sheep, \$8,500,557; hogs, \$5,479,063; poultry, \$2,091,450. The amounts received for the sale of live stock in 1892 were: Horses, \$4,280,132; cattle, \$15,979,135; sheep, \$2,640,190; hogs, \$8,775,853; poultry, \$778,308. The total wool clip for 1892 amounted to 5,843,706 pounds.

In 1892 there were 656 cheese factories operating in Ontario, the product for the year being 93,848,948 pounds, valued at \$8,950,939.

The area in orchard and garden in the province in 1892 was about 195,000 acres, and the yield of fruit for the year less than an average, excepting for grapes and small fruits, which yielded well.

There are in the province about 200,000 beehives, and the product of honey for 1892 was estimated at 6,843,770 pounds.

Timber Sales.—The sale of timber lands forms the most important source of provincial revenue. The mileage sold in 1892 was 633; the total price realized, \$2,315,000; the average price per mile, \$3.657; and the highest price per mile, \$17,500. The best average price per mile ever obtained before was \$2,839, and the highest

price \$6,300. These sums are paid for a yearly license to cut timber, and the purchasers, in addition to this, pay large sums by way of dues and ground rents.

Loan and Investment Companies.—Seventy-six loan, building, and investment companies doing business in Ontario made returns to the Government for 1892. The total capital subscribed for all the companies was \$80,278,277; liabilities to stockholders, \$45,893,742; liabilities to the public, \$77,727,428; total liabilities, \$123,621,170; secured loan assets, \$109,251,079; property assets, \$14,370,091. The loans granted by 54 companies reporting for 1892 amounted to \$19,768,025, and for 1891 to \$16,797,699.

Manufactures.—The chief manufacturing industries of Ontario are the making of agricultural implements, railroad rolling stock (including locomotives), cotton factories, woolen factories, tanneries, furniture factories, flax works, ordinary iron and hardware works, paper and pulp factories, and wooden ware. The number of manufacturing establishments in the province in 1893 has been estimated at 35,028, the capital invested at \$182,603,340, the number of men employed at 170,226, the wages paid for the year at \$53,207,710, and the value of the products at \$245,100,267.

Political.—Since 1872 the Liberal party has held the reins of power in the Provincial Government without interruption. But Ontario, though ever since then invariably returning a majority of Liberals to the local Parliament, has almost invariably returned a majority of Conservatives to the Dominion Parliament. In Dominion politics it has been generally Conservative, and in provincial politics Liberal. The Opposition in the Parliament of Ontario is led, as it has been for many years past, by Sir William R. Meredith (recently knighted).

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 96,030 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; and 313,767 in 1890. Capital, Salem.

Government.—The following were the State officers during the year: Governor, Sylvester Pennoyer, Democrat; Secretary of State, Auditor, and Insurance Commissioner, George W. McBride, Republican; Treasurer, Philip Mettschau, Republican; Attorney-General, George E. Chamberlain, Democrat; Superintendent of Public Instruction, E. B. McElroy, Republican; Adjutant-General, R. W. Mitchell, Democrat; Railroad Commissioners, H. B. Compson, I. A. Macrum, James B. Eddy; Pilot Commissioners, John F. Brown, B. F. Packard, and John Fox, Republicans; Chief Justice of the Supreme Court, William P. Lord; Associates, Robert S. Bean and Frank A. Moore, all Republicans.

Finances.—The total valuation of taxable property was \$168,088,905. A surplus of \$13,448.32 remained from the tax levy of 1893. The whole amount to be raised for 1894 is \$722,782.29, which amounts to a levy of 4 $\frac{1}{2}$ mills, and gives, with the surplus of 1893, \$736,230.61 for expenses of the coming year. Unexpended balances of the appropriation for 1891-'92 amount to \$47,624.50, of which \$42,478.53 was used for expenses of 1893, leaving \$5,145.97 that may be used for the expenses of this year.

Mortgage Indebtedness.—The Government bulletin on statistics of farms and homes gives the indebtedness of Oregon as averaging \$73 per head of population, and the ratio to assessed value as 8.11 per cent. The existing mortgage debt of Oregon Jan. 1, 1890, was \$22,928,437, of which \$15,983,361, or 69.71 per cent., is on acres, and \$6,945,076, or 30.29 per cent., is on lots. Of the 22,553 mortgages in force, 16,250, or 72.05 per cent., are on acres, and 6,303, or 27.95 per cent., are on lots. Mortgages in force cover 2,528,820 acres and 15,360 lots. The average rate of interest on the existing mortgage debt is 9.46 per cent.; on acres, 9.39 per cent.; on lots, 9.59 per cent. There was no legal limit to the rate of interest in Oregon until 1863, when all rates above 12 per cent. became usurious, and since 1880 the highest legal rate of interest was 10 per cent. The debt of over \$61,000,000 incurred in this State during the ten-year period bore 24 different rates of interest, and besides this, \$104,260 was not subject to any interest. The highest rate discovered was 36 per cent.

Banks.—From official data, it appears that 16 banks in the State suspended between Jan. 1 and Sept. 1, and none had resumed at the latter date. The Oregon National Bank was reopened soon afterward.

Militia.—The Adjutant-General's enrollment of men liable to military duty amounts to 44,444. The United States census of 1890 gives 88,000 in round members as the force of men in Oregon available for military duty. This difference is accounted for by the State exemptions for military duty. The State enrollment includes men from twenty-one to forty-five years of age, while that of the Government includes men from eighteen to forty-five, and allows no exemptions. The organized militia at the close of 1893 amounted to 1,406 men, with 175 officers. There are 3 regiments of infantry, 2 troops of cavalry, 1 battery of artillery, and 1 independent battalion of 2 companies. During the past year the National Guard has been equipped in a more complete manner than in any period of its history.

State Institutions.—The whole number of patients in the Insane Asylum at the end of the year was 920, of whom 635 were men and 285 women. The Legislature provided for a branch asylum in eastern Oregon. The bill appropriates \$165,000. A single building is called for by the bill, to be planned with a view to future additions.

The Legislature made provision for the establishment of a soldiers' home. The trustees decided to place it at Roseburg. This was contrary to the letter of the State Constitution, which requires that all public institutions provided for by the Legislative Assembly shall be at the seat of government, and Salem appealed to the courts to have the constitutional provision enforced. An injunction was granted, and an appeal was taken by the trustees to the Supreme Court.

The State Prison had 366 inmates at the close of 1893. The whole number of years of service, aside from life sentences, was 1,352 $\frac{1}{2}$. Of the convicts, 31 were sentenced for murder. The earnings for the quarter ending June 30 were \$3,093.39, of which \$2,523.04 was for convict

labor furnished the foundry. The expenses for the same period were \$10,652.

An addition was built during the year to the State Reform School at Salem. An industrial building, to be used for shops exclusively, will soon be erected. There were 72 boys in the school at the time of the report.

Education.—At the close of the fall term in December the State University at Eugene had enrolled 88 students in the collegiate department and 115 in the preparatory course. J. W. Johnson, who has been president during the seventeen years of the existence of the university, retired in September, taking the chair of Latin, and Charles H. Chapman, from Johns Hopkins University, was inaugurated president.

Portland University received during the year a liberal bequest from James Abraham, to be used for founding and sustaining a school of theology.

The Legislature appropriated \$26,000 for improvements at the State Agricultural College at Corvallis. Of the first year's class of 130, about 100 were young men, and 69 of these were taking the mechanical course. A class of 18, the largest ever graduated, took their diplomas in June.

The total enrollment for the year at the State Normal School, at Monmouth, exclusive of the training department, was 262.

The Indian School, at Chemawa, had an attendance in March of 318, as many as could be accommodated. There are 6 teachers for the common and high school branches, and 15 for industrial teaching. The superintendent said: "The report that we give good board, clean lodging, and three square meals on Sunday is a great drawing card for the youthful Indian, and instead of drumming up pupils we have to turn away many who voluntarily make application to enter the school."

Railroads.—The Oregon Pacific was sold, Dec. 15, by the sheriff at Corvallis, for \$200,000, the buyers acting for a joint committee of the bondholders and holders of receivers' certificates. Just before the sale, attorneys representing the Giant Powder Company and the owners of the Willamette Valley and Cascade Mountain Wagon Road Company gave notice to intending purchasers of their claim in the property. On Dec. 26 the sale was set aside by Judge Fullerton, who said that those most interested in the confirmation or rejection of the sale were the labor and supply creditors, and that they seemed to oppose the confirmation.

The Coos Bay, Roseburg and Eastern Railroad had cars running in May to Coquille City from Marshfield and for some distance above Coquille City. Coquille City is 18 miles from Marshfield, and Myrtle Point is 9 miles above the former place. The distance from Myrtle Point to Roseburg is about 60 miles, with the Coast mountains intervening.

Salmon.—A dispatch from Astoria of July 26 says: "The total Columbia river salmon pack to date is 195,000 cases, with only thirteen days' more fishing to close the season. An approximate estimate of this year's total pack on the Columbia places the figures at 281,000 cases, inclusive of the catch at the Cascades. This, when compared with the output of the past four-

teen years, is the most startling falling off that has ever occurred in the history of the industry on the coast."

Sugar Beets.—The agricultural experiment station furnished to farmers in various parts of the State, in 1891, imported sugar-beet seeds with directions for cultivation. The analysis of the returns from 12 counties gave an average of 14.13 per cent. sugar, of an average purity of 78.08. Beets should contain not less than 12 per cent. sugar, the typical beet weighing about 600 grammes having 14 per cent. sugar and a purity of about 80.

Wool.—This year has been especially hard for the wool grower. The record of local sales was down in July and August to about 1,000,000 pounds a week, against a usual 3,000,000 to 4,000,000 for the same period, though the yield was unusually large. The report of the trade at The Dalles for the year, compared with that of 1892, was as follows: In 1892 5,532,000 pounds were received and paid for at an average of 16 cents a pound, making cash received \$865,120; mutton, 130,000 head, at \$2.25 each, \$292,500; wool pelts, at 11½ cents a pound, 6 pounds each, \$41,400; making a total of \$1,219,020.

In 1893 the amount was as follows: Wool received, 5,120,000 pounds, and placed at 7 cents a pound, \$358,750; mutton sheep, at average of \$1.50 each (170,000), \$255,000; wool pelts, 19,000, 6 pounds each, at 4 cents a pound, \$46,080; total receipts, 1893, \$659,830.

Lumber.—A report of the Consul-General at Melbourne gives some details of the trade in Pacific coast lumber in Australia:

What is known to the trade as Oregon has become a standard building timber, and the demand for it will keep pace with whatever building or improvement is done in the colonies. This is shown by the importations into the colony of Victoria during the past seven years, the greatest period of building and improvement the colony has ever known. The importations of Oregon, which amounted in 1866 to 81,341,179 superficial feet, rose to 55,487,694 superficial feet in 1888, but has since declined to 12,000,000 superficial feet in 1892, and it is estimated that there are in importers' and trade hands about 12,000,000 superficial feet, which, with from 3,000,000 to 5,000,000 feet afloat, will furnish a full supply for twelve months or more to come, as the normal consumption is not more than that amount per annum.

The Capitol.—The State Capitol, which was begun in 1873 on the site of the old State House, which had been burned, is now complete, the Legislature of 1891 having appropriated \$100,000 for the dome. This is of iron and steel, is 54 feet in the clear, and reaches a height of 100 feet from the ridge of the roof. The building is 275 by 136 feet, 3 stories in height, and is of brick and stone. The cost has come within the original estimate of \$500,000.

Wagon-Road Lands.—The Supreme Court decided in March, against the California and Oregon Land Company, to set aside and declare void the title of the Land Company to tracts in Oregon purchased by the company from persons acquiring title from grantees under what are known as the wagon-road land grants, under acts of Congress, and the decision of the lower court is affirmed. This is the end of a long series of suits looking to the forfeiture of the several land grants of the different wagon-road

companies. The decision covers nearly 5,000,000 acres of fertile lands in Oregon, affecting the interests of several thousand people.

Tax Suits.—Two cases of importance to cities in the State were tried in the circuit court at Astoria in May. The first case was brought by 15 property holders against the city for alleged excessive taxation. The tax list of 1891 was lost or stolen from the city offices, and in consequence of this no tax was collected in that year at all. As a result, the present tax was placed at 17 mills in order to cover the expenses of both years' taxation. Judge McBride held that before the plaintiffs could restrain the city from collecting the taxes assessed against them, they must show an unconditional offer to pay a reasonable sum as taxes. The complaints alleged that the plaintiffs had tendered certain sums, but had demanded receipts in full of their taxes as a condition of payment. The court held that nothing short of an unconditional offer to pay a certain sum was sufficient to give the plaintiffs standing in a court of equity. The demurrers were sustained and the injunctions dissolved.

The other case was brought by 5 residents of Court Street to restrain the chief of police from selling property on delinquent assessments for the improvement of that street. The complainants alleged objections involving the whole system of municipal law. This also was decided against the plaintiffs on the ground that they made no protest while the work was going on, although they knew that the authorities were proceeding, with the understanding that adjacent property would be liable for the expense.

This opinion is of the most vital importance to this city. Had it been in favor of the complainants, the municipality, it is said, would have been beggared.

Opium Smuggling.—A widespread conspiracy for smuggling Chinamen and opium into the country was alleged to have been discovered this year. The officials accused were mostly in Washington, but opium smuggling on an extensive scale, as well as bringing in Chinamen, was also charged against residents of Portland. The trial of William Dunbar for the alleged offense was going on in the Federal court at Portland in December. The principal witness against him was a former partner, who pleaded guilty, as did five others who were indicted. In all, more than 20 persons were under indictment in December.

Two additional revenue cutters were ordered to the Washington and Oregon coast.

The Indians.—The allotment of lands in severalty to the Indians on the Umatilla reservation has made some change for the better. The allotment was completed and the final report sent in Dec. 11, 1892, and the report was approved April 12, 1893. The total number of Indian men, women, and children who secured allotments was 1,033, not counting the married women.

The State Grange.—This organization met at The Dalles in May. Resolutions were adopted favoring the free coinage of silver, the right of women to sign petitions for and against the licensing of saloons, the re-enactment of the mortgage-tax law, the election of United States Senators by a vote of the people, and the open-

ing of Columbia river to free navigation; censuring President Cleveland for disregarding laws made by Congress, and signed by his predecessor, for the deportation of unregistered Chinese; condemning dealing in futures and demanding anti-option laws; advocating the ownership of railroads by the United States Government; in favor of the completion of the Nicaragua Canal with American funds.

The World's Fair.—The State had no building at the fair, but a very satisfactory exhibit. The display of fruits was especially fine. The prune-growing industry was well represented. The mineral and forestry and grain exhibits were also very good. The premiums included 17 for fruits, 23 in the department of agriculture, 12 in the fisheries department, 10 in the mining, 2 in the forestry, 4 in the educational, and 2 for a collection of Oregon flora. About \$25,000 was left of the appropriation made for the exhibit by the Legislature.

Labor Troubles.—The substitution of Japanese for white workmen on the Southern Pacific at Drain, in March, caused riotous proceedings on the part of the discharged workmen or their sympathizers. The Japanese were stoned while at work, and their houses were bombarded at night. They were removed to Roseburg, and an appeal made to the United States marshal. The section boarding house was covered with oil and set on fire. It was denied that either this or the persecution of the Japanese was the work of the discharged men. The marshal placed deputies at Drain to protect the property of the company. The Governor objected to the action of the marshal, on the ground that the Federal Government has no right to interfere so long as the sheriff is able to maintain peace, unless the United States mail is interfered with.

A demonstration against the Chinese employed in hopyards took place in September near Hubbard. Two hop houses where Chinamen were employed were burned, and 18 men were arrested for making a raid on the Chinamen.

Storm.—A heavy storm, on Nov. 25, caused great damage in and about Astoria. At one time the water line of the vessels in port was exactly flush with the level of the docks. Over 40 dikes were so damaged as to be made useless. The large jetty at the mouth of the river also suffered disaster. Large masses of piling, unable to withstand the enormous strain, gave way and were thrown headlong into the ocean, carrying with them over 1,000 feet of the railroad track and making a gap of nearly 1,200 feet in the line of the jetty. The rock work was left intact.

Legislative Session.—The Legislature convened Jan. 9, and adjourned Feb. 18. The joint ballot was divided by parties as follows: Republican, 54; Democrat, 28; People's, 4; Citizens'-Democrat, 3; Democrat-People's, 1; total, 90.

The mortgage-tax law was repealed, and the clause providing for deduction of indebtedness from assessments for taxation. This does not exempt mortgage notes from taxation.

Employees of business concerns that fail are protected by a law requiring receivers to issue certificates of indebtedness to employees for wages due.

An act was passed regulating the amount to be paid on a policy of insurance, called the "val-

ued-policy law." This law was protested against by insurance officers, on the grounds shown in the following extract from an opinion given by one of them: "The public good requires that no man should be permitted to profit by burning his property and endangering that of his neighbors at the same time. The Oregon law is similar to others, and its results are not likely to differ from those in Wisconsin and Ohio, where State officers are urging repeal. Fire losses have constantly increased in those States. . . . To inspect every risk is impracticable, for it would take an army of inspectors to do the work. This gives a person an opportunity to misrepresent and overinsure his property, and in 99 cases out of 100 where overinsurance occurs it is due to misstatements made to the companies."

The Pacific Insurance Union gave notice in June that an additional charge of 10 per cent. of the premium should be collected and remitted by agents for Oregon on policies taking effect on and after July 1, 1893, "to cover additional hazard created by the Oregon valued-policy law."

A joint memorial to Congress was adopted, asking for the issue of fractional currency to the amount of \$50,000,000, and one in favor of free coinage of silver.

Eight sections of the Penitentiary laws were repealed by a bill appropriating \$190,000 for establishing a jute-mill plant at the prison, \$40,000 of the appropriation to be expended for jute, together with whatever else remains of the \$190,000 after payment is made for the machinery, freight, buildings, raw materials, and the necessary skilled labor.

The fee system for county officers was abolished, and salaries were fixed for those officers in the various counties instead.

A portion of Clackamas County was detached and joined to Multnomah County, including the city of Sellwood.

A bill to insure purity in foods repeals exist-

ing legislation on the subject and makes it unlawful to sell or expose for sale any unwholesome, unclean, tainted, diseased foods or medicines.

It was enacted that women over the age of twenty-one years who are citizens of the United States and of the State shall be eligible to all educational offices within the State. Many maintain that it is in conflict with that section of the Constitution which provides that "no person shall be elected or appointed to a county office who is not an elector of the county."

An act regulating executions on dormant judgments supersedes the former statute.

The State Board of Charities and Corrections was abolished.

A bill appropriating \$60,000 for a World's Fair exhibit was passed, vetoed by the Governor, and again passed. No buildings were to be erected with it. An appropriation of \$40,000 for the equipment of the State militia took the same course.

The appropriations made a total of \$1,400,000, in round numbers, for the biennial period.

Other acts make the following provisions:

A dower bill amends the existing statutes by giving a widow one-half instead of one third of the estate or inheritance; one half instead of one third of the residue from the satisfaction of a mortgage after her husband's death; one half of the rents on the estate she lives on after his death; one half of the mesne earnings of the estate when she has to sue other heirs for it.

It was made unlawful for any person over the age of sixteen years, with or without malice, purposely to point or aim any firearm, either loaded or empty, at or toward another person, except in self-defense, on pain of \$10 to \$500 fine or ten days' to six months' imprisonment, or both.

The road laws were amended so that county courts may in their discretion levy a tax upon all the taxable property in the county not to exceed 5 mills, and in addition a poll tax of \$2.

P

PANICS, FINANCIAL, OF THE NINETEENTH CENTURY. During this century there have been 13 important crises in this country, including the panic of 1893. The direct influences exerted were, in the majority of cases, apparent at the time of the occurrences or were disclosed immediately subsequent thereto. But sometimes there were contributory causes which were not recognized as important until shown to be controlling factors after investigation into the reasons for the abnormally slow growth of confidence succeeding the crises, and then efforts were made to remedy the evil. But even these remedies were not always effective in preventing panics from similar causes. The theory of the periodicity of panics obtains with many writers, and the recurrence of these crises after regular intervals would seem to prove its correctness. As it has been shown by experience that panics are not preventable, measures have been devised to lessen their force. The most effective of these was adopted in the crises of 1873, 1884, 1890, and 1893, by the New York

Clearing House Association. Promptly upon the appearance of the panic, one of the standing committees arranged for the issue of clearing-house loan certificates, based upon 75 per cent. of the assets of all the banks in the association, which certificates were made available in settlement of balances, and were issued to such banks as applied for them, after examination into the condition of the institution. By this plan all the banks were united for mutual protection, and runs upon any one or more of them were unlikely to prove disastrous. The certificates served another and still more useful purpose in the panic of 1893. Foreign bankers desiring to import gold deposited securities with their banks, against which the institutions obtained loan certificates. The banks then loaned to the bankers for fixed periods, at an agreed-upon rate, money with which to procure the gold. The plan of issuing clearing-house loan certificates was successfully adopted in the last panic in Boston, Philadelphia, Pittsburg, and other cities, and doubtless it will become more general.

Panics from 1800 to 1856.—At the beginning of the century the principal banking institution was the Bank of the United States, chartered in 1791. The country had been drained of gold through its overvaluation by England, the bank of that country having been in a state of suspension since 1797, and the specie in circulation was chiefly silver, of which the bank held about \$15,000,000. The note circulation at this time was \$10,500,000, and coin \$17,500,000. The bank materially contributed to the prosperity of the country, raising public and private credit from a prostrate to a very high condition. The charter expired in 1811, and on the refusal of Congress to renew it, local banks in large numbers were organized. The embargo of 1808 reduced imports from \$78,856,442 for the year ending Sept. 30, 1807, to \$43,992,586 in the following year, and exports fell to \$9,433,546 from \$48,699,592 in 1807, partly because of nonintercourse, and also in consequence of agricultural depression, and serious commercial troubles followed. In 1809 imports fell to \$38,602,469, while exports rose to \$31,405,702, but during this and the succeeding year specie was heavily exported to adjust foreign balances, the excess of imports over exports for three years ending Sept. 30, 1810, having been \$60,897,837. The currency was redundant, bank notes amounting to \$26,000,000, and on the declaration of war with England the country was involved in all the embarrassments that naturally result from a disordered circulation. The war began in 1812, and the note issues had then increased to about \$35,000,000. In the absence of a national currency, the Government was forced to rely upon the local banks for loans, and these institutions, being unequal to the demands, were, with the exception of those in the New England States, forced to suspend in August, 1814, when the currency had been increased to nearly \$70,000,000, of which \$51,500,000 was paper. Treasury notes were then resorted to by the Government. These were issued in great volume, and, not being convertible into coin, soon began to depreciate, especially toward the Canada frontier, where the war raged and where money was most wanted. These Treasury notes could not legally be used as currency, and they were available only for the procurement of bank paper. After the war imports were largely increased, and exports were \$64,781,896 in 1816, against \$6,782,272 in 1814, the export movement being stimulated by bad crops in Europe. But the adverse foreign trade balance rapidly accumulated, amounting to \$182,695,896 between 1815 and 1819; the war had created a debt which at the end of 1817 was \$103,466,633; during the conflict the note circulation had been increased to \$77,000,000. Speculation had advanced prices of all agricultural products, and economical conditions were such as to precipitate another panic in 1818, and the local banks of the country, except those of New England, again suspended, causing widespread distress. A bill for a national bank with a capital of \$30,000,000 passed Congress in January, 1815, but was vetoed. In 1816 the application was renewed. The capital was then fixed at \$35,000,000, of which \$7,000,000 was to be subscribed by the Government, and the bill became a law April 10, 1816, the institu-

tion being known as the Bank of the United States. After some time spent in making preparations, which included imports of about \$7,000,000 in gold, business was begun, and when the panic of 1818 came the bank was obliged to meet the demands for specie, at the same time reducing its circulation and discounts. The operations of the bank attracted the attention of Congress, and an investigation disclosed violations of the charter in purchasing \$2,000,000 of the public debt and in not requiring full payment of stock in cash. This inquiry brought about a change in the bank's management, and it was then found that nearly \$100,000,000 of circulation had been issued by the institution and its branches. The change in the administration of the bank was followed by salutary reforms. The panic had been very severe, extending, according to the report of a committee of the House of Representatives, from the largest to the smallest capitalists and affecting every branch of business. After the panic there was a slow recovery, during which new banks were organized all over the country. In New York institutions with an aggregate of over \$50,000,000 capital were formed; new industrial and other corporations were founded the stock of which was largely oversubscribed for, and money became very plentiful. The bank mania was at its height when, in July, 1825, there came a commercial crisis caused by wild speculation in cotton, which had a depressing effect upon manufactures of that staple, and the trouble was intensified by the expansion of bank notes. In the following year there was a recovery, and no further disturbance occurred until 1828, when an excessive issue of paper money and drafts by the Bank of the United States and its branches indirectly affected the local banks and brought about a minor crisis. Then money again became abundant, and the country was apparently prosperous until November, 1831, when there was another minor crisis, resulting in monetary stringency, which was relieved by the issue of draughts by the Bank of the United States. This action of the bank, however, was severely criticised by President Jackson, and in 1832 the Secretary of the Treasury notified the managers that the Government intended, whenever it had representatives, to redeem half of the 3-per-cent. stocks in cash. The bank officials requested a delay of three months, which was granted, and the bank then began to foster land and other speculations, and at the same time made application for a renewal of its charter, which would expire in 1836. Congress complied, but the President refused to sign the bill, and in 1833 he ordered the withdrawal of the Government deposits from the bank, and they were so withdrawn after considerable opposition and delay. The business of the country was exceedingly prosperous, thus increasing the requirements for money, and the threatened liquidation of loans by the national bank in order to comply with the orders for the withdrawal of Government deposits was viewed with apprehension. The national revenues had increased so rapidly that \$28,101,645 was, by authority of an act passed June 23, 1836, distributed among the several States in proportion to the population; the public debt had been reduced to \$33,733 at

the beginning of 1835, and it was only \$37,513 on Jan. 1, 1836, against \$127,334,934 on the same date in 1816, which was the maximum. This generally prosperous condition fostered wild speculation in lands, mines, canals, and railroads, construction of the latter being 1,273 miles in 1836, against 23 miles in 1830; capital came in large amounts from England for investment, and the Bank of England, in order to check this movement, advanced its discount rate. This aided in precipitating the crisis of 1837. The conviction that a new national bank to take the place of the United States Bank would not be chartered led to the creation of local institutions with an aggregate capital of \$125,000,000, and there was a liberal issue of notes. Imports increased from \$103,208,521 in 1834 to \$168,238,675 in 1836, and the adverse trade balance that year was \$61,316,995. The advance in the Bank of England rate therefore had a startling effect. Banks generally suspended payment, notes fell as low as 20 per cent. discount, exchange on London and Paris rose sharply, gold and silver were hoarded, cotton was almost unsalable, failures were numerous and important, distress prevailed everywhere, and the panic was at its height in April, when the New York banks began to suspend payment. They soon resumed, but resumption was not general because of the suspension of the Bank of the United States, and it was not until the following year that specie payments were resumed in New York. After the panic there was a gigantic speculation in cotton, encouraged by the operations of Mr. Nicholas Biddle, of the Bank of the United States, who co-operated with foreign capitalists and advanced money to planters upon their crops, thus causing the investment of vast sums of money, reported as between \$150,000,000 and \$200,000,000. Then came a short crop of only 400,000 bales, one fifth less than was expected, and an advance in the price was looked for, but in vain. Europeans became alarmed and withdrew from their speculative ventures, and then followed the panic of 1839, which resulted in the complete liquidation of the Bank of the United States. The monetary stringency here caused a rise in interest rates to 20 per cent., and discounts for the best paper advanced to 15 and 25 per cent. The acute stage of the panic soon passed. The failures from 1837 to 1839 were 33,000, involving \$440,000,000, and 55 banks with a capital of \$67,036,265 suspended.

Panic of 1867.—The panic of this year found the country in an exceedingly prosperous condition. Railway extensions had been checked to some extent, and a more conservative feeling prevailed regarding these enterprises. There were no indications of the coming crisis, and a contraction of loans by the New York banks early in August attracted little attention, although one reason assigned therefor was that the failure of a heavy produce house revealed the fact that this line of business was not particularly good. Four years before, a law went into effect requiring every bank in the city to make weekly statements of its average condition as to loans, specie, circulation, and deposits, and this salutary law not only operated as a check upon reckless banking, but, aided by the operations of the New York Clearing House Associa-

tion, which was organized in October of that year, it kept the business public informed of the condition of the institutions, and tended to inspire confidence in them. The loans of Aug. 8 were reported at the then unprecedented amount of \$122,077,262. By the 15th they had been reduced to \$121,241,472, and in the interval there had been news of a defalcation in one of the leading railroad companies, which caused a slight flurry in the stock market. On Aug. 24 the announcement of the suspension of the Ohio Life and Trust Company had a startling effect in New York. It was not a bank of issue, neither was it a discounting of bills, but it was a large borrower from other institutions, and its affairs were supposed to be conducted on the conservative plan of trust companies. The bankers and exchange dealers of Ohio and elsewhere extensively bought its draughts for remittance, and there was not a bank in New York with Western connections that had not these draughts sent in payment for collections or for deposit to be drawn against by remitters. The consequences of the failure were therefore widely distributed among the New York banks, several of which were large lenders to the company. The concern had borrowed also of individual bankers, exchange dealers, and stock houses, hypothecating not only its own collaterals, but the property of its dealers. The panic that followed the news of the failure was intensified by the disclosure that the entire capital of \$2,000,000 had been virtually embezzled. This induced the bank managers in New York promptly to adopt measures for self-protection; loans were called, and the panic spread rapidly. Money on call, and even on undoubted collateral, rose rapidly to from 3 to 5 per cent. a month, and on ordinary security and on mercantile paper money could not be obtained at any rate. By Sept. 5 the loans of the city banks had been reduced to \$112,221,365, nearly \$10,000,000 less than on Aug. 5, while the deposits had been drawn down an equal amount. The panic had then become general. The purchase and transportation of produce practically ceased; the failure of the Bank of Pennsylvania in Philadelphia was followed by that of other banks in that city, and by those in Baltimore and of other Southern Atlantic cities, and commercial business everywhere was suspended. On Oct. 14 the banks of New York suspended specie payments, and the acute stage of the panic was then reached. The banks resumed Dec. 11, and the abundant crops materially aided in a general recovery. After the New York banks suspended specie payments there was a unanimous agreement that they would receive and pay out notes as usual, and also would receive at par notes of all the banks of the State secured in the bank department at Albany, and likewise the notes of certain safety-fund banks. One effect of the panic was to reduce the Government's revenues below expenditures, and the report of the fiscal year showed \$68,969,212 receipts and \$71,274,587 expenses.

The news of the crisis here reached London toward the end of October, and on the 27th the Borough Bank of Liverpool, and on Nov. 9 the Western Bank of Scotland, were forced into liquidation, as it was known that they were largely involved in transactions in New York.

The bullion in the Bank of England was reduced to £6,484,095, and the minimum rate of discount was advanced to 10 per cent.

1858 to 1867.—After the panic of 1857 the recovery was comparatively rapid, aided by abundant crops. The public debt was increased by the issue of Treasury notes in 1857 from \$28,699,832 in that year to \$64,842,288 on Jan. 1, 1860. The largest amount of these notes outstanding at any time was \$52,778,900. In 1858 a 5-per-cent. fifteen-year loan amounting to \$20,000,000 was issued. In 1859 political movements indicated that the tension between the two great parties in the country was growing more severe, threatening speedy rupture. The presidential election of 1860 was the most exciting ever known in the country, and the choice of Mr. Lincoln was regarded in financial circles as almost certain to result in violent rupture of the Union. The outbreak of the civil war, in April, 1861, precipitated a panic in stocks, and, indeed, in every security in the country, and at the same time it had a paralyzing effect upon all business. The number of stocks then actively dealt in on the exchange was about 37, and the number of members fewer than 250. Speculative interest centered upon only a few of these stocks, notably Harlem, Erie, Lackawanna, Michigan Southern, Delaware and Hudson, Fort Wayne, Illinois Central, and Ohio and Mississippi. There were occasional wide fluctuations in some of these, and one feature was the Harlem corner, which culminated in June, 1864, when the price was forced to 285. The rapid increase in the public debt from \$58,496,838 on Jan. 1, 1860, to \$524,176,412 on the same date in 1862, and the expected authorization of an issue of \$150,000,000 demand notes, in addition to the \$50,000,000 authorized by the act of July 17, 1861, brought about a general suspension of specie payments, and speculation in gold began early in January, 1862. The movements in it thereafter during the war were influenced by the varying fortunes of the armies, by the increase in the public debt, and by the issues of paper currency by the Government. There were minor crises following important battles that resulted adversely to the national forces, and sharp declines succeeding victories; and even after the war was ended the speculation continued, at times assuming large proportions, affecting important interests, and embarrassing the Government. In April, 1864, the price of gold in currency advanced to 171, and Secretary Salmon P. Chase, regarding the advance as part of a conspiracy to depress the credit of the Government, asked Hon. Reverdy Johnson, chairman of the Senate Finance Committee, to introduce a bill prohibiting speculation in gold. A measure having this object in view passed the Senate April 16 and the House June 14, and it was signed by President Lincoln June 17. It forbade the making of contracts for future deliveries of gold, or upon any other terms than the actual delivery of the metal, imposed severe penalties for violation of the law, and declared void all contracts made contrary to the act. While the bill was pending gold continued to advance, touching 190 in May and 197½ June 16. The dealings in the metal up to this time were in the offices of the bullion dealers. Transactions then ceased there, but trading was conducted upon the street, and by the end of

June the price had reached 250. This continued advance deranged all business operations based upon gold throughout the country, and members of Congress were petitioned to repeal the gold bill. On June 22 Senator Reverdy Johnson introduced a bill to repeal the act. On July 1 he obtained unanimous consent for its consideration, asserting that the universal impression was that the prohibitory law was doing nothing but mischief; a vote was taken without debate, the bill passed the Senate, was sent to and concurred in by the House, and was signed by the President July 2. Then, speculation in gold again being free, trading was resumed. The price advanced July 11 to 285—the highest on record—influenced by the issue of new loans and by manipulation. On the surrender of Gen. Lee there was a sharp fall of 9 points, followed by a rapid rise on the news of the assassination of President Lincoln. Soon after the war the speculation in stocks became an important feature, stimulated by liberal additions to the list, by the inflation of the currency, and by the distribution of enormous stock dividends, and the tone was generally buoyant.

1868 to 1872.—In 1868 the list of active stocks embraced 108 issues. In that year the operations of Messrs. Jay Gould, James Fisk, Daniel Drew, Cornelius Vanderbilt, and Henry Keep exerted an important influence upon the speculation, and Erie stock began to be enormously increased, causing wide fluctuations. There were corners in Erie, in Chicago and Northwestern, and in Milwaukee and St. Paul. The most important event of 1869 was the Black Friday panic of Sept. 24, which resulted from an attempt by Jay Gould to corner gold, which rose to 162½, and then rapidly fell to 133 because of sales of the metal by the Government. Clearings at the Gold Exchange bank were made impossible, a receiver was appointed, and failures of stock houses occurred because of the stringency in money and the consequent derangement of business on the exchanges. The panic was brief, but it left the market feverish, and its influences were felt in the ensuing year when the speculation was comparatively quiet. The Chicago fire panic of Oct. 9, 1871, which resulted in a loss of \$150,000,000, caused a general decline in stocks and the suspension of several insurance companies. The Boston fire panic, Nov. 10, 1872, had a brief unsettling effect, as also did the Northwest corner Nov. 23, when the price of the stock was advanced to 230. The most sensational event of the year was the arrest of Messrs. Gould and Smith in the Erie suit, and the restitution by Mr. Gould of about \$9,000,000, claimed by the stockholders. The market was in a state of tension at the end of 1872, and speculators looked to the Treasury Department for relief, expecting that some portion of the \$44,000,000 legal-tender notes in the department would be reissued.

Panic of 1873.—In January the most important event was the formation of a syndicate to negotiate the remaining 5-per-cent. United States bonds. Manipulation of money in the following month, which forced the rate to the equivalent of 96 per cent. per annum, temporarily disturbed the markets, and this manipulation was renewed in April, when a rate equal to

276 per cent. per annum was recorded, causing failures of stock houses and a panicky market. In June there was an increase of about \$10,000,000 in bank reserves, which contributed to easier money, but in August loanable funds grew active again, and there was a partial corner in gold, which was broken by Government sales of about \$6,000,000. The great panic in September was precipitated by the suspension of the Warehouse and Security company, which had loaned money to a construction company engaged in building the Missouri, Kansas and Texas Railway, the Warehouse and Security company taking bonds of the road, which they were unable to sell because of the derangements in the money market. This was followed by a general shock accompanied by a rapid decline in stocks, which was accelerated by vigorous bearish demonstrations. Then came the suspension of Kenyon, Cox & Co., of which Mr. Daniel Drew was a special partner, and then followed the failure of Jay Cooke & Co., which brought about a general crash. On the 20th the Union Trust Company, of New York, suspended, partly in consequence of the announcement of a defalcation of \$400,000 by the cashier, but mainly because of the inability of the Lake Shore and Michigan Southern to pay a loan of \$1,750,000, and also the refusal of Assistant-Treasurer Thomas Hillhouse to buy \$1,000,000 Government bonds which were offered by the Trust Company two hours before the time named in his instructions for the purchase of bonds. Then followed the failure of the National Bank of the Commonwealth, and the excitement was so intense that the solvency of nearly every bank in the city began to be doubted. Bank officials suggested that under the circumstances, it would be well to close the Stock Exchange, and the governors of that institution thereupon decided to suspend the business. On the following day President Grant and the Secretary of the Treasury came to New York and conferred with business men, who asked that the Treasury transfer money to the banks and issue \$20,000,000 of the \$44,000,000 legal-tender reserve. This request was refused, and the only relief the Treasury was willing to give was through the purchase of bonds and the payment of legal tenders therefor; but this measure was ineffective because the banks had no bonds to sell. The savings banks, however, took advantage of the offer, and at the same time gave the customary notice to depositors intending to withdraw their money. The bank clearing house promptly made arrangements for an issue of loan certificates against 75 per cent. of assets of all the banks in the association, such certificates being applicable only for the settlement of bank balances, and eventually \$22,410,000 of these certificates were issued. The banks declined to pay legal tenders for checks, and sought to obtain these notes by collecting bonds from various sources for sale to the Government; but the Treasury soon after decided to suspend purchases of bonds, claiming that the currency balance was low and that there was no authority for encroaching upon the \$44,000,000 reserve. This decision served to intensify the gravity of the situation; legal-tender notes commanded a premium of from 2 to 3 per cent., the domestic and foreign exchanges were thrown

into confusion, and business generally was prostrated. The Stock Exchange reopened on the 30th, and the excitement then partially subsided, but the markets were feverish until the close of October, when there was a better feeling, aided by the receipt of about \$9,000,000 gold from Europe.

The crisis of 1873 broke up a large number of speculative combinations and discouraged non-professional operations. The passage by Wisconsin and other States of Granger laws had a disturbing influence, particularly as on appeals to the State courts the cases were decided against the railroads. Decreased earnings resulting from the depression in business, the freight war between the trunk lines, receiverships for the Erie and the Wabash, and other influences contributed to depress prices of stocks, and in many cases lower figures were recorded than during the panic of the previous year. Early in 1875 Mr. Jay Gould obtained control of the Union Pacific, and gradually the market improved toward the close of the year. In 1876 an unfavorable effect was produced by another trunk-line freight war, which continued throughout the greater part of the year, and by the collapse of the anthracite-coal combination, and depression prevailed until about the middle of 1877. There was no panic, but a general shrinkage of values. Commodore Vanderbilt died in January, and in March the trunk-line agreement of Dec. 16, 1876, which settled the principle of one rate to the seaboard, for which he had so vigorously contended, was abandoned and the strife was renewed. The Central New Jersey was placed in the hands of a receiver in February, the Reading had to obtain extensions, and the Lackawanna and the Delaware and Hudson were compelled to issue new mortgages. Railroad earnings showed a steady decrease, and the bears pushed their advantage to the utmost. In June the trunk lines made a new agreement on freight rates; reports of an abundant harvest were received in July; the telegraph consolidation was completed in August, and there was then a strong combination operating to advance stocks, and the rise was only temporarily checked by the serious labor strikes.

1879 to 1883.—Specie payments were resumed January 1, 1879, the Treasury having accumulated for the purpose \$129,485,563. An arrangement was made by which all draughts on the Treasury held by the New York Clearing-House banks, and those held by the Treasury on the banks, were paid in United States notes, thus aiding in establishing confidence in the ability of the Treasury to maintain specie payments with \$346,681,016 United States notes outstanding. Resumption was a complete success, and this fact tended to revive speculation in stocks. The winter of 1880-'81 was very severe, and the Northwest railroad traffic was obstructed until May. Then came a partial failure of the crops and a great drought in the West. Business on the Stock Exchange was unprecedentedly large during the first half of the year, and speculation was stimulated by consolidations and increases of capital stocks and bonds, and by the operations of bull combinations. President Garfield was shot July 2, 1881. Then followed a panicky decline in values, and the market was feverish

while he lingered. One feature in 1882 was the panic in Paris, resulting from the collapse of the Union Générale and of other similar concerns. This crisis caused an advance in the Bank of England rate of discount to 6 per cent. and started a drain of gold from New York, which continued until August. The requirements of the English Government for military operations in Egypt in July brought the Bank of England reserve down to £9,712,012 by Nov. 8, and a 5-per-cent. discount rate was maintained from Sept. 20 to the end of the year. Foreign bankers were under engagement to supply Italy with gold at the time and after the crisis in Paris, and they arranged to procure part of the gold from New York, materially contributing to the large shipments hence during the summer. In 1883 the market began very sensibly to feel the effect of the construction of many new railroads and of the consolidations and combinations during the previous two years, and the floating of vast amounts of new stocks and bonds upon which dividends or interest could not be earned. The public held the mass of these securities, but they did not realize their danger until after September, 1882, and many were lulled into security by the phenomenally large railroad earnings in the winter of 1882-'83.

Panic of 1884.—The panic of 1884 began on May 5, when the Marine National Bank suspended in consequence of the speculations of its president, James D. Fish, with the house of Grant & Ward, which for months had been carrying on a series of operations upon a fictitious basis, but which, it is claimed, were conducted solely by Ferdinand Ward without the knowledge of his partner. The markets were recovering from the shock of the bank failure and the disclosures regarding this firm, when there came news of the defalcation of John C. Eno, President of the Second National Bank, involving about \$4,000,000. These events created a very distrustful feeling, and from the fact that Mr. George I. Seney, President of the Metropolitan National Bank, was understood to be an extensive operator in stocks, deposits in that institution were withdrawn, precipitating its failure, on the 14th, together with that of Nelson Robinson & Company and six other brokerage firms. As an indirect result of the panic, the Erie defaulted upon its interest. The financial depression that followed the crisis lasted until the end of June, when a recovery began, and before the middle of July the immediate effects of the panic had disappeared, the banks of the city became stronger, and confidence was partially restored. This trouble was in no sense a commercial crisis. The coinage of standard dollars under the act of Feb. 28, 1878, had resulted in the accumulation at the end of January of \$123,474,748, and the certificates then in circulation against these dollars amounted to \$110,187,051, making the currency redundant. Then followed as another disturbing factor the decision of the United States Supreme Court in the Juilliard legal-tender case, finally settling the constitutionality of legal-tender paper money, which decision served to call the attention of the public to the fact that, as said by the "Financial Chronicle," "all reliance upon any constitutional inhibition to do anything whatever with

the currency which Congress may have a whim to do must be abandoned henceforth and forever." Early in April the House of Representatives passed the bill providing for the redemption of the trade dollar. A sharp fall in grain and provisions in March was followed by bank failures and suspensions of private banking firms in the West, the former being mainly due to speculations by managers of the institutions, but the decline in grain did not encourage the export movement; gold continued to move to Europe in moderately large amounts, and the net shipments for the year up to the end of April were about \$31,750,000. On the announcement of the suspension of the Metropolitan National Bank the Clearing House Association decided to issue loan certificates under regulations similar to those adopted in 1873, and the first issue was \$3,820,000 to the Metropolitan Bank on May 15 and the last June 6, when there were outstanding \$18,640,000 out of the total of \$24,915,000. The decline in stocks which followed the panic continued until the end of June. The grain crops of the year were abundant. The yield of wheat was estimated by the Bureau of Agriculture at 512,763,900 bushels against 420,154,500 in 1883, while that of corn was placed at 1,795,000,000 bushels, an increase of 244,461,537 over 1883, and the cotton crop indicated 5,900,000 bales, or 200,000 more than that of the previous year. But these large crops brought a shrinkage in prices, and in London wheat fell to the unprecedented figure of 31s. 6d. a quarter. The panic of 1884 may be regarded as an incident following the decline in stock values from the culminating point in July, 1881, and the crisis was precipitated by the exposure of financial frauds of almost unprecedented magnitude.

1885 to 1889.—Little progress was made in 1885 toward substantial recovery until June, when the negotiations for the settlement of the West Shore troubles began to be felt, and prices improved. On the announcement in August of the sale of the South Pennsylvania to the Pennsylvania Railroad Company, and of the foreclosure of the West Shore and its lease to the New York Central, the market advanced, and the rise was stimulated by the formation of a pool among the trunk lines for the maintenance of rates. In 1886 the market was dull and irregular, tending downward until the middle of May, influenced by labor strikes on the Missouri Pacific and other roads in the Southwest, in Chicago, Milwaukee, and New York, and the anarchist outrages in Chicago, May 4. Leading staple products were very low, imports largely exceeded exports, and gold flowed to Europe at the rate of about \$5,000,000 a month. The year 1887 opened with depression, influenced by the coal-handlers' strike, followed by that of the freight handlers in this city. The Interstate-Commerce bill and European war rumors had some effect, and the market was generally lower until the end of February. The Interstate-commerce law went into effect April 5, but the operation of the long- and short-haul clause was suspended for ninety days, and the tendency of the market was upward until June 14, when there came a collapse of the corner in coffee, followed on the next day by that of the

wheat corner in Chicago, which resulted in the failure of the Fidelity National Bank of Cincinnati. There was a fall of 41 per cent. in Manhattan Elevated, Mr. Cyrus W. Field being compelled to sell 50,000 shares to Mr. Gould. The market was thrown into a partial panic June 24, and it was very sensitive when the announcement was made of the failure of Henry S. Ives to perfect his deal in the Baltimore and Ohio. The boldness of this operation and the disclosures of the weakness of this railroad corporation exerted a very depressing influence. Late in August, Grovesteen and Pell, bankers of the Rome and Decatur, failed under circumstances that called for a close scrutiny of collaterals by money lenders.

At the opening of 1888 the strike on the Reading was a disturbing factor, and the market was very dull until March, when the strike of engineers on the Chicago, Burlington and Quincy sharply depressed prices, and then came the extraordinary blizzard, March 12, which caused a suspension of business for three days and great loss to the railroads. The first improvement in the market came after the announcement by the Secretary of the Treasury, April 17, that he would begin to purchase bonds daily on the 23d, but the advancing tendency was checked by the middle of May, and then followed a decline caused by the reduction in the Chicago, Burlington and Quincy dividend and the loss of earnings by the Atchison, Topeka and Santa Fé.

The most important event in 1889 was the formation, in January, of the Interstate Railway Association, for the maintenance of rates on the Western and on the trunk lines. This had a good effect until it was counteracted by the unfavorable financial situation of the Atchison, Topeka and Santa Fé. The plan of reorganization of that road was announced in October. It proved to be one of the most successful schemes ever presented, and it was virtually perfected before the end of the year.

1890.—The market grew strong after the money pressure relaxed early in this year, but there was a check to the improvement after the 10th, when it was announced that no interest would be paid on any of the Reading income bonds. This led to selling of these securities for European account, and the market was further unsettled later in the month by an attempt to wreck the Sixth National Bank, which resulted in the failure of 2 small institutions. A steady decline in the surplus of the city banks, the passing of the dividend on Chicago and Illinois, and a sharp fall in Tennessee Coal and Iron from 86 to 51 contributed to keep the market feverish in February, but in March the tendency was strongly upward.

In the middle of June the market began to be affected by exports of gold and by the switchmen's strike at Cleveland. The passage of the Silver-Purchase bill, which was signed July 14, had no immediate effect, and the market was unfavorably influenced by the advance in discounts in London, caused by the crisis in Buenos Ayres and by liberal selling of stocks for European account, which was the chief disturbing factor for the remainder of the summer and in the autumn. The Baring crisis, Nov. 15, affected

every financial center in the world. The house of Baring Bros., of London, had by 1889 become heavily committed to financial enterprises in the Argentine Republic and in Uruguay, and when the embarrassments of Argentine grew acute, about the middle of 1889, the fall in the securities of that country became rapid, and gold was so largely withdrawn from London that on the last day of that year the Bank of England advanced its rate of discount to 6 per cent. During 1890 there were eleven changes in the bank rate, from 6 to 3, and then to 6 again.

1891-'92.—The leading features abroad in 1891 were the successful negotiation by France of a loan for 868,750,000 francs, and by Germany of 400,000,000 marks; the return by the Bank of England, in the original packages, of the £8,000,000 gold borrowed of the Bank of France during the Baring crisis: a panic, March 6, at Buenos Ayres; a semipanic at Paris, March 12, caused by the embarrassment of the Société des Dépôts et Comptes Courants; the suspension, on the 27th, of the Bank of Leghorn; a movement of gold in April from the principal European centers to St. Petersburg caused by protests by Jewish bankers against Russian persecution of the Jews and the refusal of these bankers to negotiate a Russian loan, but later the Finance Minister of the Czar announced that only a part of the \$22,500,000 deposited at the European capitals would be withdrawn, and the excitement thereupon subsided. In November there was a crisis at Vienna due to war rumors, and a popular demonstration against President Fonseca of Brazil led to his resignation. The European crops of grain were largely deficient, while those in America were abundant, and while there were political and financial troubles in almost every other part of the world, the United States were peaceful and prosperous. Gold exports began in February and continued until the end of August, amounting to about \$65,476,000, chiefly to Berlin, and much of it was attracted by the virtual premium paid for it by foreign bankers who were strengthening their position in anticipation of the withdrawal by Russia of her balances at the European capitals. After August gold was returned to this country, and by the end of the year imports had amounted to \$32,957,000. Money was in fairly good supply, the exception being a flurry on Sept. 22, when 25 per cent. was recorded in consequence of the failure of S. V. White in his attempt to corner October corn. In 1892 the country felt in a more marked degree than in any of the preceding years the evil effects of the silver legislation of 1878 and of the silver-purchase law of 1890, and the efforts of the Treasury Department were from time to time during the year directed to the maintenance of the parity between gold and silver obligations. From February to the end of the year there was almost a steady movement of gold to Europe attracted by the demands of Austro-Hungary, which empire was preparing for placing the currency upon a gold basis. Twice during the year the passage by Congress of a bill for the free coinage of silver was defeated only by a combination of opposing interests, and each time the advocates of free coinage rallied for a further effort. These movements could not fail to attract attention in Eu-

rope, and they were regarded as positive indications that this country was rapidly approaching a silver basis. Consequently there was free selling of all classes of American securities, and an indisposition even temporarily to hold any of our railroad properties. The Brussels monetary conference was convened Nov. 22, delegates being appointed at the invitation of the United States for the purpose of discussing measures for a freer use of silver as currency; but after the consideration of various plans an adjournment was had until May of the following year. Our money market was comparatively easy until December, influenced by the supply of Treasury notes resulting from the monthly purchases of silver. Large exports of gold continued, and a low reserve of free gold in the Treasury caused an advance on the 19th to 40 per cent., but the final rate for the year was 5 per cent. On July 2 news of the passage in the Senate of a bill for the free coinage of silver had a depressing effect until the 13th, when the measure was defeated in the House of Representatives, and thereafter to the close of the month the market was strong.

The effect of the large crops of 1891 was shown in railroad earnings during the first half of 1892, the tonnage and exports of breadstuffs being very heavy.

For an account of the panic of 1893, see the article *FINANCIAL REVIEW*, in this volume.

PARAGUAY, a republic in South America. The Legislature consists of a Senate of 13 members and a Chamber of Deputies having twice as many. The President, who serves four years, is Juan G. Gonzalez, elected in 1890.

The population is about 330,000, living on an area of 253,100 square kilometres. There are about 17,000 alien residents, including 5,000 Argentines, 2,500 Italians, 1,500 Spaniards, and 1,250 Germans. The number of immigrants in 1892 was 539. Asuncion, the capital, has 24,000 inhabitants. The standing army numbers 1,314 infantry and 347 cavalry and artillery, with 20 guns. The naval force consists of a single river-gunboat.

The receipts of the Government in 1892 amounted to 2,731,507 pesos, of which 2,130,741 pesos were derived from customs and 363,202 pesos from sales and leases of public lands. The total expenditure was 3,829,569 pesos, including 797,609 pesos of extraordinary expenditures. Of the ordinary expenditures, amounting to 3,031,960 pesos, 1,101,011 pesos were for internal administration, 943,583 pesos for war and marine, 519,059 pesos for justice, worship, and public instruction, 250,735 pesos for finances, and 217,572 pesos for foreign relations. The foreign debt on Jan. 1, 1893, amounted to 26,523,712 pesos and the internal debt to 746,841 pesos. Between 1890 and 1892 the Government issued 7,300,000 pesos of inconvertible paper currency.

Agriculture and stock-raising are the principal industries. In the autumn of 1893 promising copper mines were discovered. Manufacturing is carried on to a fair extent. The imports for 1892 were valued at 2,197,000 pesos, and the exports at 9,270,000 paper pesos, the premium on gold ranging from 600 to 660 per cent. About half of the imports are British manufactures, chiefly textiles.

Two hundred and eighty-four steamers and

86 sailing vessels, having a total measurement of 122,093 tons, were entered at the port of Asuncion from foreign ports in 1892. There are 252 kilometres of railroad, running from Asuncion to Pirapo. Besides the telegraph line erected along the railroad another was put up in 1884 from Paso de la Patria to Asuncion, placing Paraguay in telegraphic communication with other countries. Over this line 12,203 dispatches were sent in 1892, paying 18,832 pesos. The post-office in 1891 forwarded 470,185 domestic and 628,938 foreign letters; the receipts were 117,211, and expenses 183,299 francs.

PARKMAN, FRANCIS, American historian, born in Boston, Mass., Sept. 16, 1823; died there, Nov. 8, 1893. His ancestors on his father's side included Ebenezer, clergyman and author, and Francis, clergyman and founder of

FRANCIS PARKMAN.

a Harvard professorship of pulpit eloquence and pastoral care; and on his mother's side the eloquent John Cotton, and John, his son, a minister, who frequently preached to the Indians in their own tongue, and revised and corrected Eliot's Indian Bible; and Josiah, also a missionary to the Indians, who prepared a vocabulary of the Massachusetts tribes. Francis Parkman was graduated at Harvard College in 1844, after which he read law for two years. He had traveled in Europe in 1843-'44, and in 1846 he set out on a journey to the then trackless and unknown West, in company with his cousin, Quincy Adams Shaw. Although then but twenty-three years old, he had already formed a settled purpose which is best shown in his preface to the fourth edition, dated 1872, of his earliest volume, "The Oregon Trail." He says:

The following sketches appeared in 1847. A summer's adventures of two youths just out of college might well enough be allowed to fall into oblivion were it not that a certain interest will always attach to the record of that which has passed away never to return. . . . As regards the motives which sent us to the mountains, our liking for them would have sufficed; but in my case another incentive was added. I went, in great measure, as a student, to prepare for a literary undertaking of which the plan was already formed, but which, from the force of inexorable circumstances, is still but half accomplished. It was this that prompted some proceedings on my part which, without a fixed purpose in view, might be charged with youthful rashness. My business was observation, and I was willing to pay dearly for the opportunity of exercising it.

The hardships of that journey broke down a constitution that had been always delicate; but

the optimism of his nature appears in the preface to another volume, where he again mentions his hindrances from lack of health. He says:

For about three years, the light of day was insupportable, and every attempt at reading or writing completely debarred. Under these circumstances the task of sifting the materials and composing the work was begun and finished. The papers were repeatedly read aloud by an amanuensis, copious notes and extracts were made, and the narrative written down from my dictation. This process, though extremely slow and laborious, was not without its advantages, and I am well convinced the authorities have been more minutely examined, more scrupulously collated, and more thoroughly digested than they would have been under other circumstances.

To tell the story of the French in North America was the task he set himself; and, in spite of the great obstacles, the painstaking search was made which is described in the preface to his "Pioneers of France in the New World." He says:

The earlier period of New France was very prolific in a class of publications which are often of much historic value, but of which many are exceedingly rare. The writer has at length gained access to them all. Of the unpublished record of the colonies, the archives of France are of course the grand deposit; but many documents of important bearing on the subject are to be found scattered in public and private libraries, chiefly in France and Canada. The task of collection has proved abundantly irksome and laborious. . . . If at times it may seem that range has been allowed to fancy, it is so in appearance only, since the minutest details of narrative or description rest on authentic documents or on personal observation. To those who have aided him with information and documents the extreme slowness in the progress of the work will naturally have caused surprise. This slowness was unavoidable. During the past eighteen years the state of his health has exacted throughout an extreme caution in regard to mental application, reducing it at best within narrow and precarious limits, and often precluding it. Indeed, for two periods, each of several years, any attempt at bookish occupation would have been merely suicidal. A condition of sight arising from kindred sources has also retarded the work, since it has never permitted reading or writing continuously for much more than five minutes, and often has not permitted them at all.

With unflinching perseverance he set himself to the task of collecting until he had copies—from Europe, Canada, and the United States—of material to the amount of 8,400 pages, as well as magazines, newspapers, and books without number.

His "Oregon Trail," first appeared in the "Knickerbocker Magazine," and made an immediate reputation. His home was for many years at Jamaica Plain. His love of Nature, fostered from childhood, had served him as health restorer and recreation. He devoted himself to horticulture and gave us one new flower at least—a lily that bears his name. He published a volume entitled "The Book of Roses," and also a single novel, "Vassali Morton," and contributed many articles to contemporary literature. Mr. Parkman received the degree of LL.D. from Magill University and Harvard and Williams Colleges. He married, in 1859, Catherine Bigelow, who died in 1867. For many years he spent his winters in Boston and his summers at Jamaica Plain, and in pursuance of his historical studies he visited France

five times. His completed historical works, which can be read separately or as a series, are: "The California and Oregon Trail" (1849); "The Conspiracy of Pontiac" (1851); "Pioneers of France in the New World" (1865); "Jesuits in North America" (1867); "Discovery of the Great West" (1869); "The Old Régime in Canada" (1874); "Count Frontenac and New France under Louis XIV" (1877); "Montcalm and Wolfe" (1884); and "A Half Century of Conflict" (1892).

PARLIAMENT OF RELIGIONS, THE WORLD'S, met in Chicago, Ill., Sept. 11. The object of the assemblage was the presentation and discussion of the religious systems and creeds of the world by representative adherents thereof. The following religious systems and sects, among others, were represented: The Confucians; the Northern Buddhists; the Buddhists of Japan (five sects); the Jain Association of India; the Orthodox Brahmanical Society of India; the Brahma-Somaj of India; the Theosophists of India; the Parsees and Zoroastrians; the Shinto, Tendai, and Shingen sects of Japan; the Mohammedans; the Christian Churches of the Latin, Greek, and Armenian rites; the Protestant denominations; the Hebrews; the Free Religious Association; and the Agnostics. The hymn "Praise God from whom All Blessings flow" was sung, and the Lord's Prayer was recited by Cardinal Gibbons at the opening of the parliament, after which addresses of welcome were made by President C. C. Bonney, of the World's Congress Auxiliaries, and the Rev. Dr. J. H. Barrows, Chairman of the General Committee of the parliament. Responses were made by foreign delegates.

The general subject of the second day's session was "The Existence and Attributes of God," and was discussed in papers on "The Rational Demonstration of the Being of God," by Father Augustine F. Hewitt; "The Moral Evidences of a Divine Existence," by the Rev. Alfred Moberg, D.D., of London; "The Harmonies and Distinctions in the Theistic Teaching of the Various Historic Faiths," by Prof. M. Valentine; "The Theology of Judaism," by Rabbi Isaac M. Wise; "The Ancient Religion of India and Primitive Revelation," by the Rev. Maurice Phillips; "Idealism, the New Religion," by Dr. Adolf Brodbeck; "The Faith of Islam," by Justice Ameer Ali, of Calcutta; "The Religious Belief of the Hindus," by Mainul N. Dvivedi, of Calcutta; and "The Argument for the Divine Being," by the Hon. W. T. Harris. On the third day, under the general heading of "Man's Place in the Universe, and the Immortality of the Soul," the principles of the Brahma-Somaj were presented by Protap Chunder Mozoomdar; "The Foundation of the Orthodox Greek Church," by the Most Rev. Dionysius Latas, Archbishop of Zante; "Man from a Roman Catholic Point of View," by the Rev. William Byrne; "Human Brotherhood, as taught by the Religions based on the Bible," by the Rev. H. Kohler; "Confucianism," by Pung Quang Yu, of China; "Concessions to the Religious Ideas of Natives," by the Rev. T. E. Slater, Christian missionary in India; "Japanese Buddhism" and "The Real Attitude of Japan toward Christianity," by Zenshiro Noguchi and K. R. Harai; "Shintoism," by Shibata Relichi; "The Supreme End and Office of Religion," by the Rev. Father Elliott; "The Argument of Immortality," by the Rev. Philip Moxom, D.D.; "The Soul and its Future Life," by the Rev. S. N. Warner; and "The Brotherhood of Man, and Toleration for Various Religions," by Bishop Arnett, of the African Methodist

Episcopal Church. The papers of the fourth day concerned the views held of man in different religious systems, and the provision made in his behalf. They included: "The Needs of Humanity, and what the Catholic Church does in their behalf," by Cardinal Gibbons; "Religion essentially characteristic of Humanity," by the Rev. Lyman Abbott, D. D.; "The Divine Basis of the Co-operation of Men and Women," by Mrs. Lydia H. Dickinson; "Religious Intent," by the Rev. E. L. Rexford, D. D.; "The Spiritual Forces in Human Progress," by the Rev. E. E. Hale, D. D.; "Orthodox Judaism, its Attitude and Relation to the Past, and its Future," by Rabbi H. Pereira Mendes; "The Certainties of Religion," by the Rev. Joseph Cook, D. D.; and "A History of Buddhism and its Sects in Japan," by Horin Toki. On the succeeding days papers were read on "What the Dead Religions have bequeathed to the Living," by the Rev. G. S. Goodspeed; "Comparative Theology," by Prof. T. B. Thiele; "The Points of Contact and Contrast between Christianity and Mohammedanism," by the Rev. George Washburn, D. D.; "The New Religion," by Mrs. Ormiston-Chant; "Confucianism," by Kung Hsien Ho; "Comparative Study of the World's Religions," by Mgr. C. d'Harlez; "Truthfulness of Holy Scripture," by the Rev. C. A. Briggs, D. D.; "The Catholic Church and the Scriptures," by the Rt. Rev. Mgr. Seton; "The Greatness and Influence of Moses," by Rabbi G. Gottheil; "The Need of a Wider Conception of Revelation," by Prof. J. Estlin Carpenter; "Christianity as Interpreted by Literature," by the Rev. T. T. Munger, D. D.; "Study of the Sacred Books of the World as Literature," by Prof. M. S. Terry, D. D.; "Influence of the Hebrew Scriptures," by Dr. A. Kohut; "Character and Degree of the Inspiration of the Christian Scriptures," by the Rev. Frank Sewall; "The Outlook of Judaism," by Miss Josephine Lazarus; "Jewish Contributions to Civilization," by Prof. D. C. Keane; "Christ, the Unifier of Mankind," by the Rev. G. D. Boardman, D. D.; "The Future of Religion," by M. M. Snell; "The Religion of Science," by Dr. Paul Carus; besides several papers bearing on the present religious condition of America and other countries, the present outlook of religion, the reunion of Christendom, the attitude of Christianity toward other religions, and the universal elements in religion.

Several of the papers were read in the absence of their authors. The following formula was adopted as a possible basis for universal religious co-operation: "Recognizing all humanity as one family, we welcome light from every source, and earnestly desire to grow in knowledge of truth and the spirit of love, and to manifest such growth by helpful service." Besides the general sessions, 48 special denominational congresses were held in connection with the parliament.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles; population, according to the census of 1890, 5,258,014. Capital, Harrisburg.

Government.—The following were the State officers during the year: Governor, Robert E. Pattison, Democrat; Lieutenant-Governor, Louis A. Watres, Republican; Secretary of the Commonwealth, William F. Harry, Democrat; Treasurer, John W. Morrison; Auditor, Gen. D. McM. Gregg, Republican; Attorney-General, William U. Hensel, Democrat; Adjutant-General, Walter W. Greenland, Democrat; Secretary of Internal Affairs, Thomas J. Stewart, Republican; Superintendent of Public Instruction, D. J. Waller, Jr., till April, when his term expired and he was succeeded by Nathan C. Schaeffer; Insurance Commissioner, George B. Luper, Democrat; Superintendent of Banking, Charles Krumbhaar, Democrat; Secretary of Agriculture, Thomas J. Edge, Republican; Chief Justice of the Supreme Court, Edward M. Paxson, who resigned in February to take the receivership of the Reading Railroad; Associate Justices, James P. Sterrett, Henry Green, Henry W. Williams, James T. Mitchell, J. B. McCollum, and John Dean, all Republicans except Justice McCollum.

Finances.—The public debt at the close of the fiscal year ending Nov. 30, 1893, was \$8,288,061.28. The bonds and cash in the sinking fund aggregated \$5,883,064.61, which practical-

ly made the net debt \$2,404,996.67. The receipts for the year ending Nov. 30, 1893, were \$13,252,727.89. In reference to his estimates for the coming year the Treasurer says: "The estimates are conservative. Owing to the depression in business for the last six months of the fiscal year just closed, which has so seriously affected the business of all corporations and manufacturing companies, it is safe to assume that the revenues from these sources on capital stock and gross receipts will be greatly diminished, and if no revival in trade is soon experienced the decrease will be still more pronounced for the year 1894." The receipts for 1893, he says, are unprecedented in the history of the State, and can not be taken into account in making an estimate for the future, as the collections made through the Attorney-General's department, amounting to \$1,310,000, will not be repeated during the coming year.

The aggregate amount of revenues that will be paid into the treasury for the year ending Nov. 30, 1894, is estimated at \$11,805,500, and the expenditures at \$12,976,700. The personal-property tax is 4 mills on the dollar.

The accounts between the State and the city of Philadelphia, arising out of the defalcation of John Bardsley, late city treasurer, were settled Nov. 15, in accordance with a decision of the Supreme Court. The Philadelphia authorities paid into the State treasury \$525,962.43 and \$305,092.80 personal-property tax for 1890 and 1891 respectively. They also paid to the Commonwealth for the city of Philadelphia \$85,690.82, tax on loans for 1890, which the city had previously paid to Bardsley, but which he failed to pay to the Commonwealth and for which the Supreme Court held that the city was liable.

Valuations.—The schedule prepared for the use of the Board of Revenue Commissioners shows that in 1893 the personal property in the State subject to taxation aggregated \$607,320,458.83, the tax on which amounted to \$2,429,281.83, Philadelphia being the largest county in the State in wealth and population, naturally heading the list, its personal property aggregating \$299,391,627.50 and the tax \$1,197,566.51.
